 2. Entrapment Protection: Not more than 15 lbf (67 N) required to prevent stopped door from closing or opening.
- C. Configuration: Operator to control single swinging door.
1. Traffic Pattern: Two way.
 2. Operator Mounting: Surface.
- D. Configuration: Operator to control pair of swinging doors.
1. Traffic Pattern: Two way.
 2. Operator Mounting: Surface.
- E. Operation: Power opening and spring closing. When not in automatic mode, door operator shall function as manual door closer, with or without electrical power.
- F. Operating System: Electromechanical.
- G. Microprocessor Control Unit: Solid-state controls.
- H. Features:
1. Adjustable opening and closing speed.
 2. Adjustable opening and closing force.
 3. Adjustable backcheck.
 4. Adjustable hold-open time from zero to 30 seconds.
 5. Adjustable time delay.
 6. Adjustable acceleration.
 7. Obstruction recycle.
 8. On-off/hold-open switch to control electric power to operator.
- I. Activation Device: Push-plate switch to activate door operator.
- J. Exposed Finish: Finish exposed components with Class I, clear anodic finish.

2.2 POWER-ASSIST DOOR OPERATORS FOR SWINGING DOORS

- A. Standard: BHMA A156.19.
- B. Performance Requirements:
1. Opening Force:
 - a. Opening Force if Power Fails: Not more than 15 lbf (67 N) required to release latch if provided, not more than 30 lbf (133 N) required to manually set door in motion, and not more than 15 lbf (67 N) required to fully open door.
 - b. Accessible Interior Doors: Not more than 5 lbf (22 N) to push or pull door to fully open position.

2. Entrapment-Prevention Force: Not more than 15 lbf (67 N) required to prevent stopped door from closing or opening.
- C. Configuration: Operator to control single swinging door.
1. Traffic Pattern: Two way.
 2. Operator Mounting: Surface.
- D. Configuration: Operator to control pair of swinging doors.
1. Traffic Pattern: Two way.
 2. Operator Mounting: Surface.
- E. Operation: Power-assisted opening that reduces the force to open door and[**power-assisted**] spring closing. Pushing or pulling on door activates operator. Provide time delay for door to remain open before initiating closing cycle as required by BHMA A156.19. When not in automatic mode, door operator shall function as manual door closer, with or without electrical power.
- F. Operating System: Electromechanical.
- G. Microprocessor Control Unit: Solid-state controller.
- H. Features:
1. Adjustable opening and closing speed.
 2. Adjustable opening and closing force.
 3. Adjustable backcheck.
 4. Adjustable hold-open time from zero to 30 seconds.
 5. Adjustable time delay.
 6. Adjustable acceleration.
 7. Obstruction recycle.
 8. On-off/hold-open switch to control electric power to operator.
- I. Exposed Finish: Class I, clear anodic finish.

2.1 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
1. Extrusions: **ASTM B221 (ASTM B221M)**.
 2. Sheet: **ASTM B209 (ASTM B209M)**.
- B. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304, stretcher-leveled standard of flatness, in manufacturer's standard thickness.
- C. Brass Sheet: ASTM B36/B36M, Alloy UNS No. C26000 (cartridge brass, 70 percent copper), in manufacturer's standard thickness.

- D. Bronze Sheet: ASTM B36/B36M, Alloy UNS No. C28000 (muntz metal, 60 percent copper) or Alloy UNS No. C23000 (red brass, 85 percent copper), in manufacturer's standard thickness.
- E. Expanded Aluminum Mesh: Expanded and flattened aluminum sheet in accordance with the geometry of ASTM F1267.
- F. Polycarbonate Sheet: ASTM C1349, Appendix X1, Type II, coated, mar-resistant, UV-stabilized polycarbonate with coating on both surfaces.
- G. Fasteners and Accessories: Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.1 CONTROLS

- A. General: Provide controls, including activation and safety devices, in accordance with BHMA standards; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated. Coordinate activation and safety devices with door operation and door operator mechanisms.
- B. Motion Sensors: Self-contained, K-band-frequency, microwave-scanner units; fully enclosed in plastic housing; adjustable to provide detection field sizes and functions required by BHMA A156.10.
 - 1. Provide capability for switching between bidirectional and unidirectional detection.
 - 2. For one-way traffic, sensor on egress side shall not be active when doors are fully closed.
- C. Presence Sensors: Self-contained, infrared-scanner units; adjustable to provide detection field sizes and functions required by BHMA A156.10. Sensors shall remain active at all times.
- D. Photoelectric Beams: Pulsed infrared, sender-receiver assembly for recessed mounting. Beams shall not be active when doors are fully closed.
- E. Push-Plate Switch: Momentary-contact door control switch with flat push-plate actuator with contrasting-colored, engraved message.
 - 1. Configuration: Square push plate with 4-by-4-inch (100-by-100-mm) junction box.
 - a. Mounting: Recess mounted, semiflush in wall.
 - 2. Configuration: Rectangular push plate with 2-by-4-inch (50-by-100-mm) junction box.
 - a. Wall Mounting: Recess mounted, semiflush in wall.
 - b. Post Mounting: Recess mounted on post.
 - 3. Push-Plate Material: Stainless steel, brushed #4 finish.
 - 4. Message: International symbol of accessibility and "Push to Open."
- F. Touchless Switch: Hands-free activation door-control switch with flat motion sensor face-plate with contrasting-colored, engraved message.

1. Configuration: 4.56-by-4.56-inch (115.8-by-115.8-mm) (double gang) square face plate.
 - a. Mounting: Recess mounted in wall.
 2. Face-Plate Material: Stainless steel.
 3. Message: International symbol of accessibility and "Wave to Open" and wave symbol.
- G. Push-Button Switch: Momentary-contact door control switch with one red-button actuator; enclosed in nominal 2-by-4-inch (50-by-100-mm) junction box.
1. Provide faceplate engraved with "Press to Open" text and international symbol of accessibility in contrasting color.
 2. Provide blue plastic cover engraved with "Press Button to Open" in white text and international symbol of accessibility.
 3. Mounting: Recess mounted in wall.
 4. Faceplate Material: Stainless steel as selected by Architect from manufacturer's full range.

2.2 ACCESSORIES

- A. Signage: As required by cited BHMA standard for type of door and its operation.
1. Application Process: Operator manufacturer's standard process.
 2. Provide sign materials with instructions for field application when operators are installed.

2.3 FABRICATION

- A. Factory fabricate automatic door operators to comply with indicated standards.
- B. Form aluminum shapes before finishing.
- C. Fabricate exterior components to drain condensation and water-passing joints within operator enclosure to the exterior.
- D. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, finished to match operator.
- E. Provide metal cladding, completely covering visible surfaces before shipment to Project site. Fabricate cladding with concealed fasteners and connection devices, with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion, and with allowance for thermal expansion at exterior doors.

2.4 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying strippable, temporary, protective covering before shipping.
- B. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.

- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within range of approved Samples and are assembled or installed to minimize contrast.

2.5 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, door and frame preparation and reinforcements, and other conditions affecting performance of automatic door operators.
- B. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic door operator installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Install automatic door operators in accordance with manufacturer's written instructions and cited BHMA standard for type of door operation and direction of pedestrian travel, including signage, controls, wiring, remote power units if any, and connection to building's power supply.
 - 1. Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion.
 - 2. Install operators true in alignment with established lines and door geometry without warp or rack. Anchor securely in place.
 - 3. Low-Energy Door Operator Installation Standard: BHMA A156.19.
- B. Controls: Install activation and safety devices in accordance with manufacturer's written instructions and cited BHMA standard for operator type and direction of pedestrian travel.
 - 1. Power Connection: See Division 26 Sections for connection to electrical power distribution system.
- C. Activation and Safety Devices: Install devices and wiring according to manufacturer's written instructions and cited BHMA standard for type of operator and direction of pedestrian travel. Connect activation- and safety-device wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- D. Access-Control System: Connect operators to access-control system as specified in Division 28 Section "Access Control."

- E. Signage: Apply on both sides of each door as required by cited BHMA standard for type of door operator and direction of pedestrian travel.

3.3 FIELD QUALITY CONTROL

- A. Certified Inspector: Engage a Certified Inspector to test and inspect components, assemblies, and installations, including connections.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Test and inspect each automatic door operator installation, using AAADM inspection forms, to determine compliance of installed systems with applicable BHMA standards.
- C. Automatic door operators will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.4 ADJUSTING

- A. Adjust automatic door operators to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.
 - 1. Adjust operators on exterior doors for weathertight closure.
- B. After completing installation of exposed, factory-finished automatic door operators, inspect exposed finishes on doors and operators. Repair damaged finish to match original finish.
- C. Readjust automatic door operators after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles).
- D. Occupancy Adjustment: When requested within 12 months of date of Final Acceptance, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain automatic door operators.

END OF SECTION 08 71 13.13

SECTION 08 80 00 – GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:
 - 1. Storefront framing.
 - 2. Interior and Exterior Doors, except where noted otherwise.
 - 3. Interior borrowed lites; including glazed openings, transoms and sidelights, except where noted otherwise.
- B. Section includes transparent and translucent glass glazing for general and special purpose applications including; coated, float, heat-strengthened, impact resistant, insulating, low emissivity, laminated, spandrel and tempered glass.
- C. Section includes the manufacture, handle, deliver and install glazing systems as shown on the architectural drawings or as otherwise specified and in accordance with the requirements of the contract documents.

1.3 DEFINITIONS

- A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in the referenced glazing publications.
 - 1. For this specification, manufacturer shall be defined as the firm that produces the primary glass.
 - 2. For this specification, fabricator shall be defined as the firm that modifies the primary glass by coating, heat treating, laminating and creating insulating glass fabrications.
 - 3. For this specification, installer shall be defined as the firm who receives the glazing products from the fabricator and installs them on the project.
- B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C1036.
- C. IBC: International Building Code.
- D. Interspace or Airspace: Space between lites of an insulating-glass unit that contains dehydrated air or a specified gas.

- E. Annealed Glass: Raw glass with low residual stresses which enables cutting and fabrication. Annealing is a process of slowly cooling glass to relieve internal stresses after it is formed.
- F. Heat Strengthened (HS): Glass that has been heat-treated to have a surface compression between 3500 and 7500 psi and meet the requirements for ASTM C1048 kind HS. It is ~2-3 times the strength of annealed glass.
- G. Fully Tempered Glass (FT): Glass that has been heat-treated to have either a minimum surface compression of 10000 psi or an edge compression not less than 9700 psi in accordance with the requirements of ASTM C1048 kind FT or meet the requirements of ANSI Z97.1 or CPSC 16 CFR 1201 safety glazing standards.

1.4 COORDINATION

- A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 2. Review temporary protection requirements for glazing during and after installation.

1.6 ACTION SUBMITTALS

- A. Product Data: For each glass product and glazing material indicated.
- B. Shop Drawings: Provide elevations indicating the location and type of glazing material to be installed in each opening using the same designations on the documents.
- C. Glass Samples: For each type of the following products; 12 inches (300 mm) square.
 - 1. Each color and type of coated glass.
 - 2. Each type of laminated glass with colored or patterned interlayer.
- D. Glazing Accessory Samples: For gaskets sealants and colored spacers, in 12-inch (300-mm) lengths. Install sealant samples between two strips of material representative in color of the adjoining framing system.
 - 1. Provide each type and color of gaskets, sealants and colored spacers.
- E. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

1.7 INFORMATIONAL SUBMITTALS

- A. Delegated-Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed by an officer of the fabrication firm responsible for their preparation.
 - 1. Submit Glass Fabricator's Submittal Review indicating compliance with glazing standards established by the Glass Association of North America (GANA). Submittal to include connection details, framing details, thermal stress analysis and structural load analysis of the proposed glass types, configuration and sizes.
- B. Qualification Data: For glazing fabricator and installer.
- C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for all glass products, fabricated glass products, glazing sealants and glazing gaskets.
 - 1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.
- D. Provide certification that roller wave or ripple distortion is within specified limits for each piece of heat-treated flat float glass.
- E. Provide a copy of manufacturer's current ISO 9001 Certification certificate.
- F. Warranties: Sample of special warranties.

1.8 QUALITY ASSURANCE

- A. Fabricator Qualifications for Insulating-Glass Units with Low-E Coatings: A qualified insulating-glass fabricator who is approved and certified by coated-glass manufacturer. An experienced firm who has fabricated glazing similar in material, design, and extent to that indicated for this Project and whose work has resulted in glass fabrications with a record of successful in-service performance.
- B. Installer Qualifications: A qualified installer who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass and Metal (AG&M) contractors.
- C. Glass Testing Agency Qualifications: A qualified independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.
- D. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C1021 to conduct the testing indicated.
- E. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, whether glazing is for use in fire doors or other openings, whether or not glazing passes hose-stream test, whether or not glazing has a temperature rise rating of 450 deg F (250 deg C), and the fire-resistance rating in minutes.

- F. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Install glazing in mockups specified in Division 08 Section "Aluminum-Framed Entrances and Storefronts" to match glazing systems required for Project, including glazing methods.
 2. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed work.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.9 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
1. Testing will not be required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
 2. Use ASTM C1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
 3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
 4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
- B. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- C. Comply with insulating-glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.11 FIELD CONDITIONS

- A. Field Measurement: Verify field measurements with drawing dimensions prior to fabrication of glass products.
- B. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F (4.4 deg C).

1.12 WARRANTY

- A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form in which coated-glass manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.
 1. Warranty Period: Ten years from date of Final Acceptance.
- B. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
 1. Warranty Period: Five years from date of Final Acceptance.
- C. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.
 1. Warranty Period: Ten years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations for Glass: Obtain from single source from single manufacturer for each glass type.
 1. Obtain tinted glass from single source from single manufacturer.
 2. Obtain reflective-coated glass from single source from single manufacturer.
- B. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

2.2 PERFORMANCE REQUIREMENTS

- A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Delegated Design: Design glass, including comprehensive engineering analysis according to ASTM E1300 and applicable IBC code by a qualified professional engineer, using the following design criteria. Confirm glass thicknesses by analyzing Project loads and in-service conditions.
 - 1. Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design glazing.
- C. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined according to the IBC and ASTM E1300.
 - 1. Design Wind Pressures: Determine design wind pressures applicable to Project according to ASCE/SEI 7 "Minimum Design Loads for Buildings and Other Structures": Section 6.0 "Wind Loads.", based on heights above grade indicated and the information provided on the structural drawings.
 - a. Basic Wind Speed: As noted on the drawings.
 - b. Importance Factor: As noted on the drawings.
 - c. Exposure Category: As noted on the drawings.
 - 2. Vertical Glazing: For glass surfaces sloped 15 degrees or less from vertical, design glass to resist design wind pressure based on glass type factors for short-duration load.
 - 3. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch (25 mm), whichever is less.
 - 4. Differential Shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- E. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.
- F. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
 - 1. For monolithic-glass lites, properties are based on units with lites 6 mm thick.
 - 2. For laminated-glass lites, properties are based on products of construction indicated.
 - 3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
 - 4. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F (W/sq. m x K).

5. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
6. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

2.3 GLASS PRODUCTS, GENERAL

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
 1. GANA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
 2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR A7, "Sloped Glazing Guidelines."
 3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
 4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
- B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction or manufacturer. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- C. Glass shall be annealed, heat strengthened or tempered as required by codes and specified on drawings.
- D. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.
 1. Thickness of Tinted Glass: Provide same thickness for each tint color indicated throughout Project.
- E. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass (Kind HS), or fully tempered float glass (Kind FT) as needed to comply with "Performance Requirements" Article. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass (Kind HS) or fully tempered float glass (Kind FT) as needed to comply with "Performance Requirements" Article. Where fully tempered float glass is indicated, provide fully tempered float glass (Kind FT).
- F. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.

2.4 PRIMARY GLASS PRODUCTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following unless a specific product is named in the glazing schedule:
 1. Guardian Industries Corp.
 2. Cardinal Glass Industries, Inc.
 3. Pilkington North America
 4. Vitro Architectural Glass.

- B. Float Glass: ASTM C1036, Type I, Quality-Q3, Class 1 (clear) unless otherwise indicated.

2.5 FABRICATED GLASS PRODUCTS

- A. Fabricators: Subject to compliance with requirements, provide products by one of the following unless a specific product is named in the glazing schedule:

1. Cristacurva.
2. Glasswerks LA, Inc.
3. GTI; Glaz-Tech Industries.
4. Hartung Glass Industries.
5. J.E. Berkowitz
6. Northwestern Industries, Inc.
7. Oldcastle Building Envelope
8. Trulite Glass & Aluminum Solutions, LLC.
9. Viracon, Inc.
10. Advanced Glazings, Ltd.

- B. Heat-Treated Float Glass: ASTM C1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.

1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
2. Roller-Wave or Ripple: Maximum peak to valley rollerwave **0.003 inch (0.08mm)** in the central area and **0.008 inch (0.20mm)** within **10.5 inch (267mm)** of the leading and trailing edge for **¼ inch (6mm)** thick (Electronic read out per lite is required as a submittal of this fabrication tolerance.)
3. Maximum bow and warp **1/32 inch** per lineal foot (**0.79mm**) or ½ of the ASTM C1048 allowable specification.
4. All tempered architectural safety glass shall conform to ANSI Z97.1 and CPSC 16 CFR 1201.
5. Kind HS (heat-strengthened) float glass in place of annealed float glass where needed to resist thermal stresses induced by differential shading of individual glass lites and to comply with glass design requirements specified in Part 1 "Performance Requirements" Article.
6. For uncoated glass, comply with requirements for Condition A.
7. For coated vision glass, comply with requirements for Condition C (other coated glass).
8. Provide Kind FT (fully tempered) float glass in place of annealed or Kind HS (heat-strengthened) float glass where safety glass is indicated.

- C. Ceramic-Coated Spandrel Glass: ASTM C1048, Condition B, Type I, Quality-Q3, and complying with other requirements specified.

1. Shall comply with ASTM C1376 Standard for Pyrolytic and Vacuum Deposition Coatings on Glass and with ASTM C1048 Standard Specification for Heat-Treated Flat Glass – Kind HS, Kind FT Coated and Uncoated, Condition B.
2. Coated products to be magnetically sputtered vacuum deposition (MSVD)
3. Silk-screen pattern should be no more than **0.0625 inch (1.59 mm)** off parallel from locating glass edge and no more than **0.0125 inch (3.18 mm)** from edges other than locating glass edge.

4. There shall be a maximum of a **0.03125-inch (0.79 mm)** variation in dot, hole or line location.
- D. Laminated Glass: ASTM C1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
1. Construction: Laminate glass with polyvinyl butyral interlayer (PVB) to comply with interlayer manufacturer's written recommendations.
 2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
 3. Interlayer Color: Clear unless otherwise indicated.
 4. All laminated architectural safety glass shall conform to ANSI Z97.1 and CPSC 16 CFR 1201.
 5. Laminated Glass products shall be fabricated free of foreign substances and air or glass pockets in autoclave with heat plus pressure.
- E. Insulating-Glass Units: Shall comply with ASTM E2190 Standard Specification for Insulating Glass Unit Performance and Evaluation and ASTM E2188 Standard Test Method of Insulating Glass Unit Performance. Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E2190, and complying with other requirements specified.
1. Insulated Glass: General
 - a. The unit overall thickness tolerance shall be **-1/16 inch (1.59mm) / +1/32 inch (0.79mm)**. Unit constructed with laminated glass shall be **+/-1/16 inch (1.59mm)**.
 - b. Shall comply with ASTM E546 Standard Test Method for Frost Point of Sealed Insulating Glass Units
 - c. Shall comply with ASTM E576 Standard Test Method for Frost Point of Sealed Insulating Glass Units in the Vertical Position
 - d. Sealed Insulating Glass Units to be double sealed with a primary seal of polyisobutylene and a secondary seal of silicone.
 - 1) There shall be no voids or skips in the primary seal.
 - 2) Depth of secondary seal shall be as determined by the wind load analysis.
 - 3) Gaps or skips between primary and secondary sealant are permitted to a maximum width of **1/16 inch (1.59mm)** by maximum length of **2 inches (51mm)** with gaps separated by at least **18 inches (457mm)**. Continuous contact between the primary seal and the secondary seal is desired.
 - e. Spacer: Thermally broken aluminum.
 2. Desiccant: Molecular sieve or silica gel, or blend of both.

2.6 FIRE-PROTECTION-RATED GLAZING

- A. Fire-Protection-Rated Glazing, General: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252 for door assemblies and NFPA 257 for window assemblies.

2.7 GLAZING GASKETS

- A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal.
- B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned EPDM silicone or thermoplastic polyolefin rubber gaskets complying with ASTM C509, Type II, black; of profile and hardness required to maintain watertight seal.
- C. Lock-Strip Gaskets: Neoprene extrusions in size and shape indicated, fabricated into frames with molded corner units and zipper lock-strips, complying with ASTM C542, black.

2.8 GLAZING SEALANTS

- A. General:
 - 1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
 - 2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
 - 3. Sealant shall have a VOC content of 250 g/L or less.
 - 4. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.
- B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 100/50, Use NT.
- C. Glazing Sealants for Fire-Rated Glazing Products: Products that are approved by testing agencies that listed and labeled fire-resistant glazing products with which they are used for applications and fire-protection ratings indicated.

2.9 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800.

2.10 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
- D. Spacers: Elastomeric blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
- E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).
- F. Cylindrical Glazing Sealant Backing: ASTM C1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.
- G. Perimeter Insulation for Fire-Resistive Glazing: Product that is approved by testing agency that listed and labeled fire-resistant glazing product with which it is used for application and fire-protection rating indicated.

2.11 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of framing system manufacturer and referenced glazing publications, to comply with system performance requirements.
 - 1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
 - a. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.
- C. Grind smooth and polish exposed glass edges and corners.

2.12 MONOLITHIC-GLASS TYPES

- A. Glass Type (Interior Glazing): Clear fully tempered float glass.
 - 1. Thickness: 6.0 mm.
 - 2. Provide safety glazing labeling.

2.13 LAMINATED-GLASS TYPES

- A. Glass Type LG-1: Clear laminated glass with two plies of heat-strengthened float glass.
 - 1. Thickness of Each Glass Ply: 4.0 mm.

2. Interlayer Thickness: 0.060 inch (1.52 mm).
3. Interlayer material: PVB
4. Provide safety glazing labeling.

2.14 INSULATING-GLASS TYPES

A. Glass Type IG-1: Passive solar low-e insulating glass.

1. Basis of Design Product: Guardian SunGuard SNX 51/23
2. Overall Unit Thickness: 1 inch (25 mm).
3. Thickness of Each Glass Lite: 6.0 mm.
4. Outdoor Lite: Class 1 (clear) float glass, heat-strengthened float glass or fully tempered float glass as required to meet or exceed performance requirements included herein.
5. Tint Color: none.
6. Interspace Content: Air.
7. Indoor Lite: Class 1 (clear) float glass or heat-strengthened float glass as required to meet or exceed performance requirements included herein. Provide fully tempered float glass where indicated on the drawings or where required by the AHJ and code. Provide safety glazing labeling if tempered glass is required on the indoor lite.
8. Low-E Coating: Second surface.
9. Visible Light Transmittance: 51 percent minimum
10. Center-of-glass U-Factor: 0.29 maximum.
11. Solar Heat Gain Coefficient: 0.25 maximum

B. Glass Type IG-1S: Coated, low-e insulating spandrel glass.

1. Construction: Provide units that comply with requirements specified for insulating-glass units designated IG-1 except for indoor lite.
2. Indoor Lite: Ceramic- or silicone-coated spandrel glass.
 - a. Class 1 (clear) float glass or heat-strengthened float glass as required to meet or exceed performance requirements included herein.
 - b. Coating Location: Fourth surface
 - c. Color: Match GCC SX3524E808 Warm Gray.

2.15 INSULATING-LAMINATED-GLASS TYPES

A. Glass Type I-LG-1: Passive solar low-e insulating-laminated glass.

1. Basis of Design Product: Guardian Sunguard SNX 51/23
2. Overall Unit Thickness: 1-1/4 inches (32 mm).
3. Thickness of Each Glass Lite: 6.0 mm and 12 mm.
4. Outdoor Lite: Class 1 (clear) float glass, heat-strengthened float glass or fully tempered float glass as required to meet or exceed performance requirements included herein.
5. Tint Color: none.
6. Interspace Content: Air.
7. Indoor Lite: Class 1 (clear) laminated glass with two plies of float glass as required to meet or exceed performance requirements included herein. Provide fully tempered float glass where indicated on the drawings or where required by the AHJ and code. Provide safety glazing labeling on the indoor lite.

- a. Thickness of Each Glass Ply: 6.0 mm.
- b. Interlayer Thickness: 0.060 inch (1.52 mm).
- c. Interlayer material: Polyvinyl Butyral (PVB)
- 8. Low-E Coating: Second surface.
- 9. Visible Light Transmittance: 49 percent minimum
- 10. U-Factor: 0.29 maximum.
- 11. Solar Heat Gain Coefficient: 0.25 maximum

B. Glass Type I-LG-2: Passive solar laminated-insulating daylight-diffusing glass.

- 1. Basis of Design Product: Advanced Glazings Limited; Solera 35% diffusion IGU
- 2. Overall Unit Thickness: 1-5/16 inches (32 mm).
- 3. Thickness of Each Glass Lite: 6.0 mm and 12 mm.
- 4. Outdoor Lite: Class 1 (clear) float glass, heat-strengthened float glass or fully tempered float glass as required to meet or exceed performance requirements included herein.
- 5. Tint Color: none.
- 6. Interspace Content: Light diffusing assembly
 - a. Honeycomb transparent insulation core aligned perpendicular to glazing, filled with Aerogel, for TGU thermal insulation;
 - b. Translucent, non-woven veils permanently bonded to internal glass surfaces;
- 7. Indoor Lite: Class 1 (clear) laminated glass with two plies of float glass as required to meet or exceed performance requirements included herein. Provide fully tempered float glass where indicated on the drawings or where required by the AHJ and code. Provide safety glazing labeling on the indoor lite.
 - a. Thickness of Each Glass Ply: 6.0 mm.
 - b. Interlayer Thickness: 0.060 inch (1.52 mm).
 - a. Interlayer material: Polyvinyl Butyral (PVB)
- 8. Visible Light Transmittance: 35 percent minimum
- 9. U-Factor: 0.2 maximum.
- 10. Solar Heat Gain Coefficient: 0.33 maximum

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 - 2. Presence and functioning of weep systems.
 - 3. Minimum required face and edge clearances.
 - 4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

3.3 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.
- C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- G. Provide spacers for glass lites where length plus width is larger than **50 inches (1270 mm)**.
 - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 - 2. Provide **1/8-inch (3-mm)** minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
- I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- J. Set glass lites with proper orientation so that coatings face exterior or interior as specified.

- K. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
- L. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 GASKET GLAZING (DRY)

- A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- E. Install gaskets so they protrude past face of glazing stops.

3.5 CLEANING AND PROTECTION

- A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.
- C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.
- D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

- E. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Final Acceptance. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION 08 80 00

SECTION 08 87 00 – GLAZING SURFACE FILMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes
 - 1. Interior Window Film.
- B. Related Requirements:
 - 1. Division 08 Section “Glazing” for general glazing applications to receive architectural window film.

1.3 PERFORMANCE REQUIREMENTS

- A. Fire Performance: Surface burning characteristics when tested in accordance ASTM E84: Flame Spread: 25, maximum; Smoke Developed: 450, maximum.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
 - 1. Include location plans and elevations indicating which film types will be applied and where films will be applied.
- C. Samples: For each product and for each film color and texture specified.

1.5 INFORMATIONAL SUBMITTALS

- A. Product certificates.
- B. Sample warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance data.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: All primary products specified in this section will be supplied by a single manufacturer with a minimum of ten (10) years experience.

- B. Installer Qualifications: All products listed in this section are to be installed by a single installer with a minimum of five (5) years demonstrated experience in installing products of the same type and scope as specified.
 - 1. Provide documentation that the installer is authorized by the Manufacturer to perform Work specified in this section
- C. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.
 - 1. Finish areas designated by Architect.
 - 2. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.
 - 3. Refinish mock-up area as required to produce acceptable work.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store products in manufacturer's unopened packaging until ready for installation.

1.9 PROJECT CONDITIONS

- A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.10 WARRANTY

- A. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace components of film application that fail(s) in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Two year(s) from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: 3M Window Film.
- B. Other Acceptable Manufacturers: Subject to compliance with requirements, equivalent products manufactured by the following may be provided:
 - 1. CPFilms Inc.; LLumar Films

2.2 SINGLE PATTERNED FILM

- A. Fasara – Mist-S Decorative / Privacy Glazing Film:
 - 1. Ultraviolet Rejected (ASTM E903): Not less than 99 percent.
 - 2. Visible Light Transmission (ASTM E903, ASTM E308): Not more than 88 percent.
 - 3. Visible Light Rejected (ASTM E903): Not less than 9 percent.

4. Solar Heat Reduction: Not less than 8 percent.
5. Shading Coefficient at 90 Degrees (Normal Incidence) (ASTM E903): Not less than 0.95.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Cut film edges neatly and square at a uniform distance of **1/8 inch (3 mm)** to **1/16 inch (1.5 mm)** of window sealant. Use new blade tips after 3 to 4 cuts.
- C. Spray the slip solution, composed of one capful of baby shampoo or dishwashing liquid to 1 gallon of water, on window glass and adhesive to facilitate proper positioning of film.
- D. Apply film to glass and lightly spray film with slip solution.
- E. Squeegee from top to bottom of window. Spray slip solution to film and squeegee a second time.
- F. Bump film edge with lint-free towel wrapped around edge of a 5-way tool.
- G. Upon completion of film application, allow 30 days for moisture from film installation to dry thoroughly, and to allow film to dry flat with no moisture dimples when viewed under normal viewing conditions.

3.4 CLEANING AND PROTECTION

- A. Remove left over material and debris from Work area. Use necessary means to protect film before, during, and after installation.
- B. Touch-up, repair or replace damaged products before Final Acceptance.
- C. After application of film, wash film using common window cleaning solutions, including ammonia solutions, 30 days after application. Do not use abrasive type cleaning agents and bristle brushes to avoid scratching film. Use synthetic sponges or soft cloths.

END OF SECTION 08 87 00

SECTION 08 91 19 – FIXED LOUVERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Fixed, extruded-aluminum louvers.
- 2. Screens and blank-off panels for louvers.

- B. Related Sections:

- 1. Division 04 Section "Unit Masonry" for wall vents (brick vents) for masonry.
- 2. Division 07 Section "Metal Panels" for louvers integral with insulated metal panels.
- 3. Division 08 Section "Hollow Metal Doors and Frames" for louvers in hollow-metal doors.

1.3 DEFINITIONS

- A. Louver Terminology: Definitions of terms for metal louvers contained in AMCA 501 apply to this Section unless otherwise defined in this Section or in referenced standards.
- B. Horizontal Louver: Louver with horizontal blades; i.e., the axes of the blades are horizontal.
- C. Vertical Louver: Louver with vertical blades; i.e., the axes of the blades are vertical.
- D. Drainable-Blade Louver: Louver with blades having gutters that collect water and drain it to channels in jambs and mullions, which carry it to bottom of unit and away from opening.
- E. Wind-Driven-Rain-Resistant Louver: Louver that provides specified wind-driven-rain performance, as determined by testing according to AMCA 500-L.
- F. Windborne-Debris-Impact-Resistant Louver: Louver that provides specified windborne-debris-impact resistance, as determined by testing according to AMCA 540.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

- 1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.

- B. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.
 - 1. Show weep paths, gaskets, flashing, sealant, and other means of preventing water intrusion.
 - 2. Show mullion profiles and locations.
- C. Samples: For each type of metal finish required.

1.5 INFORMATIONAL SUBMITTALS

- A. Design Data for Louver Systems: Design louvers under direct supervision of the manufacturer employed Engineer. Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers. Design Data submittal shall be signed and sealed by a qualified professional engineer licensed in the state or district in which the project is located. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect. Design Data submission must be concurrent with the submission of corresponding Fabrication drawings. Fabrication drawings submitted without corresponding Design Data will be returned as “Not Reviewed”.
- B. Initial Certification Letter from Delegated-Design Professional: Prior to the submission of Shop Drawings, Product Data, Calculations and other required submittals, submit a Certification Letter from the responsible design professional. No shop drawings will be reviewed by the Architect prior to the submission and acceptance of this Certification Letter. The Certification Letter shall include the following:
 - 1. Signature and seal of the registered Professional Engineer (registered in the state or district in which the project is located).
 - 2. Statement that the Professional Engineer is fully experienced in the design louver systems.
 - 3. Statement that all calculations and shop drawings are in accordance with the Contract Documents and applicable building codes and have been prepared under the direction of the Professional Engineer.
 - 4. Statement that the Professional Engineer’s signature and seal shall appear on all design calculations and on all shop drawings.
 - 5. Statement that the design shall be in accordance with the aesthetic design intent of the project with the Architect having final authority in reference to aesthetic matters.
 - 6. Statement that the Professional Engineer will submit an additional signed and sealed letter at the completion of the work related to this section stating that the fabrication and installation of the louver systems have been performed in accordance with the Professional Engineer’s design.
- C. Product Test Reports: Based on evaluation of comprehensive tests performed according to AMCA 500-L by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency, for each type of louver and showing compliance with performance requirements specified.
- D. Windborne-debris-impact-resistance test reports.
- E. Sample Warranties: For manufacturer's special warranties.

1.6 RECORD SUBMITTALS

- A. Final Certification Letter from Delegated-Design Professional: After construction of the louvers is complete, submit a signed and sealed Certification Letter from the responsible design professional stating that the fabrication and installation of the louver systems have been performed in accordance with the Professional Engineer's design.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For louvers to include in maintenance manuals.
- B. Warranties: Final warranties to include in operation and maintenance manuals.

1.8 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.2/D1.2M.
 - 2. AWS D1.3/D1.3M.
 - 3. AWS D1.6/D1.6M.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.10 WARRANTY

- A. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Warranty Period: 20 years from date of Final Acceptance.
- B. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
 - 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested according to ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.

- c. Cracking, peeling, or chipping.
- 2. Warranty Period: 10 years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain louvers from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design louvers, including comprehensive engineering analysis by a qualified professional engineer, using structural and seismic performance requirements and design criteria indicated.
- B. Structural Performance: Louvers shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.
 - 1. Wind Loads: Determine loads based on pressures as indicated on structural Drawings.
- C. Windborne-Debris-Impact Resistance: Louvers located within **30 feet** of grade shall pass basic protection, when tested according to AMCA 540.
- D. Seismic Performance: As indicated on structural drawings.
- E. Louver Performance Ratings: Provide louvers complying with requirements specified, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width according to AMCA 500-L.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change (Range): **120 deg F**, ambient; **180 deg F**, material surfaces.
- G. SMACNA Standard: Comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" for fabrication, construction details, and installation procedures.

2.3 FIXED, EXTRUDED-ALUMINUM LOUVERS

- A. Horizontal Storm-Resistant Louver LV-01:
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Construction Specialties Inc., RSH-5700 or specified product by one of the following:

- a. Airolite Company, LLC (The); SCH-501.
 - b. Ruskin Company; EME520DD.
2. Louver Depth: **5 inches**.
 3. Frame and Blade Nominal Thickness: Not less than **0.060 inch** for blades and **0.075 inch** for frames.
 4. Louver Performance Ratings:
 - a. Free Area: Not less than **7.32 sq. ft.** (45.8% free area) for **48-inch-** wide by **48-inch-** high louver.
 - b. Air Performance: Not more than **0.015-inch wg** static pressure drop at **969-fpm** free-area intake velocity.
 - c. Wind-Driven Rain Performance: Not less than 99 percent effectiveness when subjected to a rainfall rate of **3 inches** per hour and a wind speed of **29 mph** at a core-area intake velocity of **780 fpm**.
 5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
- B. Horizontal, Sightproof Drainable-Blade Louver:
1. Basis-of-Design Product: Subject to compliance with requirements, provide Construction Specialties, Inc.; B5157 or specified product by one of the following:
 - a. Airolite Company, LLC (The); K605D.
 - b. Ruskin Company; ELF520DD.
 2. Louver Depth: **5 inches (127 mm)**.
 3. Frame and Blade Nominal Thickness: Not less than **0.080 inch (1.52 mm)** for blades and **0.080 inch (2.03 mm)** for frames.
 4. Mullion Type: Exposed.
 5. Louver Performance Ratings:
 - a. Free Area: Not less than 50% for **48-inch- (1220-mm-)** wide by **48-inch- (1220-mm-)** high louver.
 - b. Point of Beginning Water Penetration: Not less than **400 fpm (2.03 m/s)**
 - c. Air Performance: Not more than **-0.45 inch wg (111-Pa)** static pressure drop at **400-fpm (2.03-m/s)** free-area intake velocity.
 6. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.4 LOUVER SCREENS

- A. General: Provide screen at each exterior louver.
 1. Screen Location for Fixed Louvers: Interior face.
 2. Screening Type: Bird screening at mechanical intakes; insect screening at all others.
- B. Secure screen frames to louver frames with stainless-steel machine screws, spaced a maximum of **6 inches** from each corner and at **12 inches** o.c.
- C. Louver Screen Frames: Fabricate with mitered corners to louver sizes indicated.

1. Metal: Same kind and form of metal as indicated for louver to which screens are attached. Reinforce extruded-aluminum screen frames at corners with clips.
2. Finish: Same finish as louver frames to which louver screens are attached.
3. Type: Non-rewirable, U-shaped frames.

D. Louver Screening for Aluminum Louvers:

1. Bird Screening: Aluminum, **1/2-inch**- square mesh, **0.063-inch** wire.
2. Insect Screening: Aluminum or fiberglass, 20x20 mesh.

2.5 BLANK-OFF PANELS

A. Insulated, Blank-Off Panels: Laminated panels consisting of insulating core surfaced on back and front with metal sheets and attached to back of louver.

1. Thickness: **3 inches**.
2. Metal Facing Sheets: Aluminum sheet, not less than **0.032-inch** nominal thickness.
3. Insulating Core: extruded-polystyrene foam
4. Edge Treatment: Trim perimeter edges of blank-off panels with louver manufacturer's standard extruded-aluminum-channel frames, not less than **0.080-inch** nominal thickness, with corners mitered and with same finish as panels.
5. Seal perimeter joints between panel faces and louver frames with gaskets or sealant.
6. Panel Finish: Non-metallic 2-coat Kynar in color selected by Architect to match louvers.
7. Attach blank-off panels with sheet metal screws.

2.6 MATERIALS

- A. Aluminum Extrusions: **ASTM B221**, Alloy 6063-T5, T-52, or T6.
- B. Aluminum Sheet: **ASTM B209**, Alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer for required finish.
- C. Aluminum Castings: ASTM B26/B26M, Alloy 319.
- D. Fasteners: Use types and sizes to suit unit installation conditions.
1. Use Phillips flat-head tamper-resistant screws for exposed fasteners unless otherwise indicated.
 2. For fastening aluminum, use 300 series stainless-steel fasteners.
 3. For color-finished louvers, use fasteners with heads that match color of louvers.
- E. Postinstalled Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, made from stainless-steel components, with capability to sustain, without failure, a load equal to 4 times the loads imposed, for concrete, or 6 times the load imposed, for masonry, as determined by testing per ASTM E488, conducted by a qualified independent testing agency.
- F. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187.

2.7 FABRICATION, GENERAL

- A. Assemble louvers in factory to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- B. Vertical Assemblies: Where height of louver units exceeds fabrication and handling limitations, fabricate units to permit field-bolted assembly with close-fitting joints in jambs and mullions, reinforced with splice plates.
 - 1. Continuous Vertical Assemblies: Fabricate units without interrupting blade-spacing pattern.
 - 2. Horizontal Mullions: Provide horizontal mullions at joints.
- C. Maintain equal louver blade spacing to produce uniform appearance.
- D. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
 - 1. Frame Type: Channel unless otherwise indicated.
- E. Include supports, anchorages, and accessories required for complete assembly.
- F. Provide vertical mullions of type and at spacings indicated, but not more than recommended by manufacturer.
 - 1. Fully Recessed Mullions: Where indicated, provide mullions fully recessed behind louver blades. Where length of louver exceeds fabrication and handling limitations, fabricate with close-fitting blade splices designed to permit expansion and contraction.
 - 2. Semi-recessed Mullions: Where indicated, provide mullions partly recessed behind louver blades so louver blades appear continuous. Where length of louver exceeds fabrication and handling limitations, fabricate with interlocking split mullions and close-fitting blade splices designed to permit expansion and contraction.
 - 3. Exposed Mullions: Where indicated, provide units with exposed mullions of same width and depth as louver frame. Where length of louver exceeds fabrication and handling limitations, provide interlocking split mullions designed to permit expansion and contraction.
- G. Provide subsills made of same material as louvers for recessed louvers.
- H. Join frame members to each other and to fixed louver blades with fillet welds, threaded fasteners, or both, as standard with louver manufacturer unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.8 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

2.9 LOUVER ALUMINUM FINISHES

- A. Finish louvers after assembly.
- B. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
- C. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - 1. Color: As selected by Architect from full range of industry colors and color densities.
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2605 except with a minimum dry film thickness of **1.5 mils**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Color and Gloss: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.3 INSTALLATION

- A. Install louvers and accessories per approved submittals and louver manufacturer's written instructions.
- B. Locate and place louvers and vents level, plumb, and at indicated alignment with adjacent work.
- C. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
- D. Form closely fitted joints with exposed connections accurately located and secured.
- E. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

- F. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.
- G. Protect unpainted galvanized and nonferrous-metal surfaces that will be in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
- H. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Division 07 Section "Joint Sealants" for sealants applied during louver installation.

3.4 ADJUSTING AND CLEANING

- A. Clean exposed surfaces of louvers and vents that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.
 - 1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.
- B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
- C. Restore louvers and vents damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.
 - 1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

END OF SECTION 08 91 19

SECTION 09 29 00 - GYPSUM BOARD SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Interior gypsum board.
2. Specialty gypsum board
3. Gypsum shaft liner.
4. Cement board backing panels.
5. Gypsum board shaft wall assemblies.
6. Non-load-bearing steel framing systems for interior partitions.
7. Suspension systems for interior gypsum ceilings, soffits, and grid systems.
8. Marking and Identifying Fire and Smoke Rated Assemblies.

- B. Related Sections include the following:

1. Division 01 Section "Temporary Facilities and Controls" for moisture and mold field quality control procedures.
2. Division 05 Section "Cold-Formed Metal Framing" for exterior and interior load-bearing wall studs.
3. Division 06 Section "Sheathing" for gypsum sheathing for exterior walls.
4. Division 07 Section "Firestopping" for head-of-wall assemblies that incorporate gypsum board
5. Division 13 Section "Radiation Protection" for lead-lined gypsum wallboard

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

- B. System Assemblies:

1. Provide schedule of all UL approved system assembly numbers and descriptions for each UL approved wall assembly to be installed in the work.
2. Provide schedule of all STC assembly designs and descriptions for each required Sound Transmission Class wall to be installed in the work.

- C. Samples: For the following products:

1. Trim Accessories: Full-size Sample in 12-inch- (300-mm-)long length for each trim accessory indicated.

1.4 INFORMATIONAL SUBMITTALS

- A. Delegated Design: Provide load calculations for Grid Suspension System for Gypsum Board Ceilings (reference Part 2) which includes structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Load calculations for system, shall include those imposed by lighting, air distribution terminals, fire suppression and all other supplementary loads on the grid system.
- B. Provide Contractor's certification that all required rated assemblies are constructed in accordance with UL design tests or GA-600 including penetrations, door frames, etc., and that all rated door openings meet ASTM E152.
- C. Product Certificates: For each type of code-compliance certification for studs and tracks.
- D. Evaluation Reports: For embossed steel studs and tracks, firestop tracks, post-installed anchors, and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.5 QUALITY ASSURANCE

- A. Mockups: Before beginning gypsum board installation, install mockups of at least 100 sq. ft. in surface area to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Install mockups for the following:
 - a. Level 5 gypsum board finish indicated for use in exposed locations.
 - 2. Apply or install final decoration indicated, including painting and wall coverings, on exposed surfaces for review of mockups.
 - 3. Simulate finished lighting conditions for review of mockups.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.
- B. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Certified Steel Stud Association, the Steel Framing Industry Association or the Steel Stud Manufacturers Association.

1.6 STORAGE AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against damage from weather, condensation, direct sunlight, construction traffic, and other causes. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with ASTM C840 and GA 220 requirements or gypsum board manufacturer's written recommendations, whichever are more stringent.

- B. Do not install interior products until installation areas are enclosed and conditioned.
- C. Do not install panels that are wet, those that are moisture damaged, and those that are mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.
- D. Room Temperatures: For attachment of gypsum board to framing, maintain not less than **40° F (4° C)**. For finishing of gypsum board maintain not less than **50° F (10° C)** for 48 hours before application and continuously after until dry. Do not exceed **95° F (35° C)** when using temporary heat sources. Gypsum board shall not get wet.
- E. Ventilation: Ventilate building spaces as required to dry joint treatment materials. Avoid drafts during hot, dry weather to prevent finishing materials from drying too rapidly.

1.8 WARRANTY

- A. Provide 2 year written product and installation warranty in accordance with Division 01 "Product Requirements."
- B. Repair and/or replace any cracking, loosening, nail popping or other defects in the material or workmanship, including improper installation of framing, bracing and control joints, of the gypsum board systems during warranty period.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E90 and classified according to ASTM E413 by an independent testing agency.
- C. Horizontal Deflection: For wall assemblies, limited to 1/240 of the wall height based on horizontal loading of **5 lbf/sq. ft. (239 Pa)**.

2.2 GYPSUM BOARD, GENERAL

- A. Panel Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.3 INTERIOR GYPSUM BOARD

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Gypsum
 2. CertainTeed Corp.
 3. Georgia-Pacific Gypsum LLC, Subsidiary of Georgia Pacific
 4. Continental Building Products
 5. National Gypsum Company
 6. USG Corporation
- B. Interior Gypsum Board Density: Lightweight panel products are not acceptable. All gypsum board products shall have a minimum weight of 2.1 pounds per square foot of 5/8 inches thick board (40.3 pounds per cubic foot).
- C. Regular Type X: ASTM C1396/C1396M
1. Thickness: 5/8 inch (15.9 mm)
 2. Long Edges: Tapered
- D. Impact-Resistant Gypsum Board: ASTM C1396/C1396M gypsum board, tested according to ASTM C1629/C1629M.
1. Core: 5/8 inch (15.9 mm), Type X.
 2. Surface Abrasion: ASTM C1629/C1629M, meets or exceeds Level 3 requirements.
 3. Indentation: ASTM C1629/C1629M, meets or exceeds Level 1 requirements.
 4. Soft-Body Impact: ASTM C1629/C1629M, meets or exceeds Level 3 requirements.
 5. Hard-Body Impact: ASTM C1629/C1629M, meets or exceeds Level 3 requirements according to test in Annex A1.
 6. Long Edges: Tapered.
 7. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.
- E. Mold-Resistant Type: ASTM C1396/C1396M. With moisture- and mold-resistant core and surfaces.
1. Core: 5/8 inch (15.9 mm), Type X
 2. Long Edges: Tapered
 3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.4 SPECIALTY GYPSUM BOARD

- A. Glass-Mat Interior Gypsum Board: ASTM C1658/C1658M. With fiberglass mat laminated to both sides. Specifically designed for interior use.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Continental Building Products; Weather Defense Platinum Interior Type X
 - b. Panel Rey; Glass Rey Interior Sheathing Board
 - c. USG Corporation; Sheetrock Brand Glass-Mat Panels.
 - d. Certainteed Corporation; GlasRoc Interior Glass-Mat Panels Type X.

2. Core: **5/8 inch (15.9 mm)**, Type X.
3. Finishing:
 - a. Tape and spackle joints and screw holes per manufacturer's recommendation.
 - b. Apply skim coat to sheathing board using setting-type, sandable topping compound.

2.5 GYPSUM SHAFTLINER

- A. Gypsum Shaftliner Board, Moisture- and Mold-Resistant Type X: ASTM C1396/C1396M; manufacturer's proprietary fire-resistive liner panels with moisture- and mold-resistant core and surfaces.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Gypsum: M-BLOC Shaft Liner.
 - b. CertainTeed Corp.; ProRoc Moisture and Mold Resistant Shaftliner.
 - c. Georgia-Pacific Gypsum LLC, Subsidiary of Georgia Pacific; Dens-Glass Ultra Shaftliner.
 - d. Continental Building Products; Firecheck Moldcheck Type X Shaftliner.
 - e. National Gypsum Company; Gold Bond Brand Fire-Shield Shaftliner XP.
 - f. PABCO Gypsum; Pabcore Mold Curb Shaftliner Type X.
 - g. USG Corporation; Sheetrock Brand Mold Tough Gypsum Liner Panel.
 2. Core: **1 inch (25.4 mm)** thick
 3. Long Edges: Double bevel
 4. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.6 CEMENTITIOUS BACKING PANELS

- A. Cementitious Backer Units: ANSI A118.9 and ASTM C1288 or 1325, with manufacturer's standard edges.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. FinPan, Inc.; Util-A-Crete Concrete Backer Board
 - b. National Gypsum Company, Permabase Cement Board.
 - c. USG Corporation; DUROCK Cement Board.
 2. Thickness: **5/8 inch (1.59 mm)**.
 3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.7 TRIM ACCESSORIES

- A. Interior Trim: ASTM C1047. Provide longest possible lengths.
 1. Material: Galvanized or aluminum-coated steel sheet or rolled zinc.
 - a. USG Corporation
 - b. ClarkDietrick

- c. MarinoWare
2. Shapes:
- a. Cornerbead.
 - b. LC-Bead: J-shaped; exposed long flange receives joint compound.
 - c. L-Bead: L-shaped; exposed long flange receives joint compound.
 - d. U-Bead: J-shaped; exposed short flange does not receive joint compound.
 - e. Control joint: Zinc control joint.
 - f. Curved-Edge Cornerbead: With notched or flexible flanges

2.8 JOINT TREATMENT MATERIALS

- A. General: Comply with ASTM C475/C475M and GA 216.
- B. Joint Tape:
 - 1. Interior Gypsum Wallboard: Paper.
 - 2. Glass-Mat Faced Gypsum Board: As recommended by panel manufacturer.
 - 3. Tile Backing Panels: As recommended by panel manufacturer.
- C. Joint Compound for Interior Gypsum Wallboard: For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.
 - 1. Prefilling: At open joints beveled panel edges, and damaged surface areas, use drying-type taping compound, except use setting-type for abuse resistant drywall.
 - 2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use drying-type taping compound, except use setting-type for abuse resistant drywall.
 - 3. Fill Coat: For second coat, use drying-type, sandable topping compound, except use setting-type for abuse resistant drywall.
 - 4. Finish Coat: For third coat, use drying-type, sandable topping compound, except use setting-type for abuse resistant drywall.
 - 5. Skim Coat: For final coat of Level 5 finish, use setting-type, sandable topping compound.
- D. Joint Compound for Tile Backing Panels:
 - 1. Cementitious Backer Units: Setting mortar as recommended by backer unit manufacturer.
 - 2. Tile Setting Mortar: Per Division 09 Section "Tiling".

2.9 STEEL FRAMING SYSTEMS

- A. **Recycled Content of Steel Products:** Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Steel Stud Manufacturers Association (SSMA) nomenclature, as indicated in their Product Technical Guide, is used for identification of steel studs.
- C. Framing Members, General: Comply with ASTM C754 and ASTM C1007 for conditions indicated.

1. Steel Sheet Components: Comply with ASTM C645 and ASTM C955 requirements for metal unless otherwise indicated.
 2. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. ClarkDietrich Building Systems
 - b. Marino/Ware
 - c. Telling Industries
 3. Protective Coating: Minimum ASTM A653/A653M, G60, hot-dip galvanized unless otherwise indicated.
 - a. Equivalent coatings are not permitted.
- D. Steel Studs:
1. 36S137-33 (3-5/8" web depth stud with minimum base metal thickness of 0.033 inch, minimum flange width of 1.375" and minimum stiffening lip length of 0.375").
 - a. Other Web Depths: As indicated on Drawings.
- E. Runners:
1. Slip-Type Head Joints: Provide the following:
 - a. Single Long-Leg Runner System: Top runner with minimum 2-1/2-inch- (63.5-mm) deep flanges in thickness as scheduled below, installed with studs friction fit into top runner and with continuous bridging located within 12 inches (304.8 mm) of the top of studs to provide lateral bracing.
 - 1) Stud length up to 12'0": minimum top runner base metal thickness; .033 inch.
 - 2) Stud length 12'0" to 22'0": minimum top runner base metal thickness: .043 inch
 - 3) Stud length up to 24'0": minimum top runner base metal thickness: .054 inch.
 2. Partition top runner which does not extend to structure: 1-1/4 inch (31.75 mm) leg of thickness and size to match studs.
 3. Bottom Runner: 1-1/4 inches (31.75 mm) leg of thickness and size to match studs, typical.
- F. Concealed Blocking: See requirements for concealed blocking in Part 3 of this Section.
- G. Cold-Rolled Channel Bridging: Steel, 0.053-inch minimum base-metal thickness, with minimum 1/2-inch-(3.81 mm-) wide flanges.
1. Depth: 1-1/2 inches (3.81 mm).
 2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches (3.81 x 3.81 mm), 0.068-inch-thick, galvanized steel.
- H. Blocking and Strapping: Permitted only where interferences prevent the installation of Cold Rolled Channel Bridging noted above.
1. Blocking: 0.033 inch track sections clipped to studs.

2. Strapping: 2 - 12 inches wide steel strap bracing, 0.033 inch by 10 feet.
- I. Hat-Shaped, Rigid Furring Channels: ASTM C645.
 1. Minimum Base-Metal Thickness: 0.030 inch.
 2. Depth: 7/8 inch (22.23 mm).
- J. Resilient Clips: molded rubber and steel resilient sound isolation clips to receive 7/8 inch hat channel furring.
 1. Manufacturers:
 - a. Basis of Design: Pliteq GenieClip Resilient Sound Isolation Clip.
 - b. Other Acceptable Manufacturers subject to compliance with requirements:
 - 1) Acoustical Surfaces, Inc. RSIC-1
 - 2) Kinetics Noise Control Inc. Isomax
- K. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches (31.75 mm), wall attachment flange of 7/8 inch (22.23 mm), minimum uncoated-metal thickness of 0.018 inch (2.81 mm), and depth required to fit insulation thickness indicated.

2.10 GYPSUM BOARD SHAFT WALL ASSEMBLIES

- A. Fire-Resistance Rating: As indicated.
- B. STC Rating: As indicated.
- C. Studs: Manufacturer's standard profile for repetitive members, corner and end members, and fire-resistance-rated assembly indicated.
 1. Depth: As indicated.
 2. Minimum Base-Metal Thickness: 0.033 inch (0.84 mm).
- D. Runner Tracks: Manufacturer's standard J-profile track with manufacturer's standard long-leg length, but at least 2 inches (5.08) long and matching studs in depth.
 1. Minimum Base-Metal Thickness: 0.033 inch (0.84 mm).
- E. Protective Coating: Minimum ASTM A653/A653M, G60, hot-dip galvanized unless otherwise indicated.
- F. Room-Side Finish: As indicated.
- G. Shaft-Side Finish: Gypsum shaftliner board, moisture- and mold-resistant Type X.
- H. Concealed Blocking: See requirements for concealed blocking in Part 3 of this Section.

2.11 GYPSUM BOARD CEILING SUSPENSION SYSTEMS

- A. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.062-inch-(1.58 mm) diameter wire, or double strand of 0.048-inch-(1.22 mm-) diameter wire.
- B. Hanger Attachments to Concrete:
1. Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching wire hangers and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E488 by an independent testing agency.
 - a. Type: Cast-in-place anchor, designed for attachment to concrete forms or post-installed, expansion anchor.
 2. Powder-Actuated Fasteners: Suitable fastener for application indicated, fabricated from corrosion-resistant materials with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, a load equal to 10 times that imposed by construction as determined by testing according to ASTM E1190 by an independent testing agency.
- C. Wire Hangers: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.106 inch (2.69 mm) in diameter.
- D. Carrying Channels: Cold-rolled, commercial-steel sheet with a base-metal thickness of 0.053 inch (1.346 mm) and minimum 1/2-inch-(12.7 mm-)wide flanges, G40 (G60 where subject to moisture) galvanized steel.
1. Depth: 1-1/2 inches (12.7 mm).
- E. Furring: G40 (G60 where subject to moisture and under cement board) galvanized steel, hat channel, minimum size SSMA 150F125-33 (20 gauge structural, minimum 0.0329 inch uncoated steel thickness).
- F. In lieu of traditional carrying channel (black) iron and hat track, or stud and track suspension system, contractor may use suspended grid or "T-bar" construction. Should this option be elected, the contractor shall be responsible to provide load calculations for review and approval as required in Part 1 of this Section.
1. Grid Suspension System for Gypsum Board Ceilings: ASTM C645, direct-hung system composed of main beams and cross-furring members that interlock.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Armstrong World Industries, Inc.; Drywall Grid Systems
 - 2) Chicago Metallic Corporation; Drywall Grid System
 - 3) USG Corporation; Drywall Suspension System
 - b. T-bar construction shall meet or exceed all requirements of this specification and local codes.
 - c. Minimum G60 hot dipped galvanized coating and .0179 steel thickness before application of protective coating.

2.12 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written recommendations.
- B. Steel Drill Screws: ASTM C1002 unless otherwise indicated.
 - 1. Use screws complying with ASTM C954 for fastening panels to steel members from **0.033 to 0.112 inch (0.84 to 2.84 mm)** thick.
 - 2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
- C. Sound Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool. Blankets shall be the proper width and depth required to completely fill the stud/drywall cavity and prevent sag. Blankets installed where drywall is not applied on each side of the stud shall be mechanically held in place.
 - 1. For use in non-fire rated wall and ceiling assemblies.
 - 2. Basis of Design: Thermafiber Mineral Wool Batt
 - 3. Other acceptable manufacturers subject to compliance with requirements;
 - a. Roxul Mineral Wool Batt.
 - b. Johns Manville; Fiberglass Batts for Metal Framing.
 - c. Owens Corning; Fiberglass Thermal Batt for Metal Framing.
- D. Fire-Resistive Blankets: ASTM C665, Type I (blankets without membrane facing); consisting of slag wool or rock wool fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E84; passing ASTM E136 for combustion characteristics. Blankets shall be the proper width and depth required to completely fill the stud/drywall cavity and prevent sag.
 - 1. Fire-Resistance-Rated Assemblies: Install mineral-fiber as required to comply with the requirements of the approved assembly.
 - 2. Basis of Design: Thermafiber Mineral Wool Batt
 - 3. Other acceptable manufacturers subject to compliance with requirements;
 - a. Roxul Mineral Wool Batt.
- E. Isolation Strip at Exterior Walls: Provide one of the following:
 - 1. Asphalt-Saturated Organic Felt: ASTM D226, Type I (No. 15 asphalt felt), nonperforated.
 - 2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.
- F. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.
- G. Acoustical Joint Sealant: As specified in Division 07 Section "Joint Sealants"
- H. Thermal Insulation: As specified in Division 07 Section "Thermal Insulation."

- I. Vapor Retarder: As specified in Division 07 Section "Thermal Insulation."
- J. Fire Safing: As specified in Division 07 Section "Firestopping".

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and substrates to which gypsum board assemblies attach or abut, including hollow metal frames, cast-in-anchors, and structural framing, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of assemblies specified in this Section. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
- D. Commencement of installation indicates acceptance of substrate.

3.2 PREPARATION

- A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
 - 1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.
- B. Sprayed Fire-Resistive Materials: Coordinate with gypsum board shaft wall assemblies so both elements of Work remain complete and undamaged. Patch or replace sprayed fire-resistive materials removed or damaged during installation of steel framing and shaft wall assemblies to comply with requirements specified in Division 07 Section "Applied Fireproofing."
- C. After sprayed fire-resistive materials are applied, remove only to extent necessary for installation of gypsum board shaft wall assemblies and without reducing the fire-resistive material thickness below that which is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

3.3 APPLYING AND FINISHING PANELS, GENERAL

- A. Comply with ASTM C840.
- B. Extend gypsum board to height as indicated on drawing.

- C. Protect gypsum board products from direct exposure to rain, snow, sunlight, or other excessive weather conditions.
- D. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels, not less than one framing member.
- E. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than **1/16 inch (1.5875 mm)** of open space between panels. Do not force into place.
- F. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
- G. Form control and expansion joints with space between edges of adjoining gypsum panels.
- H. Cover both faces of support framing with gypsum panels in concealed spaces.
 - 1. Fit gypsum panels around ducts, pipes, and conduits.
 - 2. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow **1/4- to 3/8-inch-(6.35 to 9.53 mm-)**wide joints to install sealant.
- I. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments, except floors. Provide **1/4- to 1/2-inch- (0.64 to 1.27 mm-)**wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
- J. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
- K. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and with manufacturer's written recommendations for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.
- L. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

3.4 APPLYING INTERIOR GYPSUM BOARD

- A. Install interior gypsum board in the following locations:
 - 1. Type X: As indicated on Drawings and vertical surfaces unless otherwise indicated.
 - 2. Flexible Type: Apply in double layer at curved assemblies.
 - 3. Abuse-Resistant Type: As indicated on Drawings.
 - 4. Moisture- and Mold-Resistant Type: As indicated on Drawings.
 - 5. Acoustically Enhanced Type: As indicated on Drawings.
 - 6. Glass-Mat Faced Gypsum Type: As indicated on Drawings.

B. Single-Layer Application:

1. Apply single layer gypsum board in fire rated partitions as required by the fire resistance rated assembly.
2. Erect all gypsum board on ceilings perpendicular to framing with staggered end joints over supports.
3. End joints shall be avoided where possible. Apply single layer gypsum board in non-fire rated partitions either vertically with edges over framing or horizontally with ends over framing as required to minimize the number of end joints.
 - a. Install vertical boards in lengths required to exceed the ceiling height were possible.
4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

C. Multilayer Application:

1. On multi-layer partitions/walls, apply gypsum board panels per fire resistive rated assembly and STC rated assembly requirements.
2. On all other multi-layer partition/walls, apply the first layer in the opposite direction as second layer with all ends over framing. Erect the second layer either vertically with edges over framing or horizontally with ends over framing as required to minimize the number of end joints.
 - a. Install vertical boards in lengths required to exceed the ceiling height were possible.
3. Fastening Methods: Fasten base layers and face layers separately to supports with screws.

3.5 APPLYING TILE BACKING PANELS

- A. Cementitious Backer Units: Install compliant with ANSI A108.11 at showers, tubs and at all locations indicated to receive tile.
- B. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.
- C. Under all ceramic wall tiles, erect **5/8 inch-(1.59 mm-)** thick cement board with as few joints as possible. Apply rough side out. Where ceramic tile is not full height of wall, top of cement board shall be **2 inches (5.08 mm)** below top of ceramic. Embed **2 inch (5.08)** interior tape in a skim coat of dry-set cement mortar over the joints and corners.
- D. Shower Cubicles: Under ceramic tile, erect **5/8 inch-(1.59mm-)**thick cement board with single sheet covering full wall width, extending from shower receptor to ceiling and from corner to corner. Apply rough side out. Provide 1/4 inch wide open joints between shower receptor [bathtub rim] and wallboard. Joint to be filled with sealant. Embed **2 inch (5.08 mm)** interior tape in a skim coat of dry-set cement mortar over the joints and corners.
- E. Joints/Cement Board: Tape, fill, finish joints, corners, etc., to produce surface ready to receive surface finish. Full finishing must extend behind base to floor. Material shall be tile setting mortar with cement board tape; it shall not be sheetrock joint compound and paper tape.
- F. Treat cut edges and holes with sealant.

3.6 INSTALLING TRIM ACCESSORIES

- A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
- B. Control Joints: Location of control joints shall be consistent with lines of building spaces, in consistent pattern and as directed by Architect at **30 feet (914.4 cm)** o.c., maximum except provide control joints strike side of door frame on both sides of partition, extending from top of frame to **6 inches (15.24 mm)** above ceiling.
 - 1. Install vertical control joints in UL rated assemblies with additional type X drywall behind the control joint, as indicated, to preserve the integrity of the assembly.
- C. Interior Trim: Install in the following locations:
 - 1. Cornerbead: Use at outside corners unless otherwise indicated.
 - 2. LC-Bead: Use at exposed panel edges.
 - 3. Control Joint: Use at GWB control joints
- D. Aluminum Trim: Install in locations indicated on Drawings per manufacturer's instructions.
 - 1. Install horizontal trim in UL rated assemblies with an additional layer of type X drywall behind the trim or by installing the appropriately sized Blaze Frame FSB intumescent backer, per manufacturers written instructions.

3.7 FINISHING GYPSUM BOARD

- A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
- B. Prefill open joints, rounded or beveled edges, and damaged surface areas.
- C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.
- D. Joints/Gypsum Wallboard: Tape, fill, finish and sand joints, fasteners, corners, metal trim flanges, to produce surface free of visual defects ready to receive surface finishes. Full finishing shall extend behind base to floor. Tape and fill all joints in concealed locations. Treat all fastener heads in concealed locations with one coat of joint compound.
- E. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C840:
 - 1. Level 1: Ceiling plenum areas, concealed areas, and where indicated, unless a higher level of finish is required for fire-resistance-rated assemblies and sound-rated assemblies.
 - a. All joints and interior angles shall have tape embedded in joint compound. Surface shall be free of excess joint compound. Tool marks and ridges shall be acceptable.

2. Level 2: Where panels form substrate for tile and acoustical tile and where indicated on Drawings.
 - a. All joints and interior angles shall have tape embedded in joint compound and shall be immediately wiped with a joint knife or trowel leaving a thin coating of joint compound over all joints and interior angles. Fastener heads and accessories shall be covered with a coat of joint compound. Surface shall be free of excess joint compound. Tool marks and ridges are acceptable.
3. Level 3: For gypsum board surfaces receiving medium or heavy textured finishes before painting and for surfaces receiving heavy-duty wall coverings where lighting conditions are not critical.
 - a. All joints and interior angles shall have tape embedded in joint compound and shall be immediately wiped with a joint knife or trowel leaving a thin coating of joint compound over all joints and interior angles as described for Level 2. One additional coat of joint compound shall be applied over all joints and interior angles. Fastener heads and accessories shall be covered with two separate coats of joint compound. All joint compounds shall be smooth and free of tool marks and ridges.
4. Level 4: At panel surfaces that will be exposed to view unless otherwise indicated and unless scheduled to receive gloss or semi-gloss paint finishes.
 - a. All joints and interior angles shall have tape embedded in joint compound and shall be immediately wiped with a joint knife or trowel leaving a thin coating of joint compound over all joints and interior angles as described for Level 2. Two separate coats of joint compound shall be applied over all flat joints. One separate coat of joint compound shall be applied over interior angles. Fastener heads and accessories shall be covered with three separate coats of joint compound. All joint compounds shall be smooth and free of tool marks and ridges.
 - b. Primer and its application to surfaces are specified in Division 09 Section "Interior Painting."
5. Level 5: Where indicated on Drawings and Finish Schedule (Gloss and semi-gloss paint finishes require a level 5 finish).
 - a. All joints and interior angles shall have tape embedded in joint compound and shall be immediately wiped with a joint knife or trowel leaving a thin coating of joint compound over all joints and interior angles as described for Level 2. Two separate coats of joint compound shall be applied over all flat joints. One separate coat of joint compound shall be applied over interior angles. Fastener heads and accessories shall be covered with three separate coats of joint compound. A thin skim coat of joint compound shall be trowel-applied to the entire surface. Excess compound is immediately sheared off, leaving a film of skim coating compound completely covering the paper. As an alternate to a skim coat, a material manufactured especially for this purpose shall be applied. The surface shall be smooth and free of tool marks and ridges.
 - b. Primer and its application to surfaces are specified in Division 09 Section "Interior Painting."
 - c. See Finish Schedule and Division 09 Section "Interior Painting" for scheduled paint finishes which require a level 5 finish.

- F. Cementitious Backer Units: Finish according to manufacturer's written instructions.
- G. Glass-Mat Interior Gypsum Board: Finish according to manufacturer's written instructions.

3.8 FRAMED ASSEMBLY AND SHAFTWALL INSTALLATION, GENERAL

- A. Install framed gypsum board and shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated, manufacturer's written installation instructions, ASTM C754 and ASTM C1007 other than stud-spacing requirements.
 - 1. Gypsum Board Assemblies: Also comply with requirements in ASTM C840 that apply to framing installation.
- B. Install bracing at terminations in assemblies.
- C. Do not bridge building control and expansion joints with non-load-bearing steel framing or shaftwall assembly members. Frame both sides of joints independently.
- D. Do not attach runners, studs, bracing, or any other component of partition or ceiling system to ducts, pipes, equipment, etc. Attach only to building floors, walls or structural framing.
- E. Coordinate installation of bucks, anchors, blocking, electrical and mechanical work which are to be placed in or behind partition framing. Allow such items to be installed after framing is complete.
- F. Resilient Clips: Provide and install resilient clips and furring channels in strict accordance with manufacturer's recommendations as required to maintain the design intent for acoustical properties of the assembly. Do not use resilient clips which have been damaged or distorted in any way. Place resilient clips at the minimum spacing recommended by the manufacturer to achieve the required acoustical properties. Drywall attached to the resilient clip may not touch drywall on the adjoining wall. Do not load the resilient clip with drywall heavier than recommended by the manufacturer. Do not allow electrical junction boxes, etc. to be attached to the stud and also the drywall supported by the resilient clip. Use only non-drying non-skinning sealant around electrical boxes, etc. where they penetrate drywall supported by resilient clips. If the ceiling is also resilient, the walls and the ceiling cannot touch each other, i.e., install walls before ceiling.

3.9 INSTALLING STEEL FRAMING ASSEMBLIES

- A. Install framing system components according to spacing indicated, but not greater than spacing required by referenced installation standards for assembly types.
- B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
- C. Install studs so flanges within framing system point in same direction.
- D. Bracing: For partitions which do not extend to structure above, provide diagonal bracing spaced maximum 48 inches on centers on alternate sides of partitions and at double studs on each side of door frames, extending from top of partition to underside of structure above.

- E. Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above ceilings except where otherwise indicated. Continue framing around ducts penetrating partitions above ceiling.
1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies. Install with studs friction fit into top runner and with continuous bridging located within **12 inches (304.8mm)** of the top of studs to provide lateral bracing.
 2. Fasteners: Use fasteners to connect each flange of each stud to both top and bottom runners except do not fasten studs to top runner at slip-type head joint.
- F. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.
1. Install two studs at each jamb with “U-shaped” strap anchors to join studs together; space straps at maximum **24 inches (609.6 mm)** on center and maximum **4 inches (101.6 mm)** from end of studs.
 2. Base metal thickness of jamb studs shall be the greater of the thickness of adjacent studs or 0.033 inch.
 3. Install cripple studs at head adjacent to each strike side jamb stud, with a minimum **1/2-inch (12.7 mm)** clearance from jamb stud to allow for installation of control joint in finished assembly.
 4. Extend double jamb studs through ceilings and attach to top runner.
 - a. For partitions terminating at structure above, into a slip-type head joint, or
 - b. For partitions not terminating at structure above, fastened to top runner; diagonally brace double studs at each side of door frame to structure above.
- G. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
- H. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
- I. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
- J. Curved Partitions:
1. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
 2. Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of no fewer than two studs at ends of arcs, place studs **6 inches (152.4 mm)** o.c.
- K. Direct Furring:
1. Screw to wood framing.
 2. Attach to substrate with suitable fasteners spaced **24 inches (609.6 mm)** o.c., for concrete or masonry with screws designed for masonry attachment, or powder-driven fasteners spaced **24 inches (609.6 mm)** o.c.

L. Z-Furring Members:

1. Erect insulation, specified in Section 072100 "Thermal Insulation," vertically and hold in place with Z-furring members spaced **24 inches (609.6 mm)** o.c.
2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced **24 inches (609.6 mm)** o.c.
3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than **12 inches (304.8 mm)** from corner and cut insulation to fit.

M. Installation Tolerance: Install each framing member so fastening surfaces vary not more than **1/8 inch (3.175 mm)** from the plane formed by faces of adjacent framing.

N. Bridging: Install continuous horizontal cold rolled channel bridging within stud cutout:

1. Spaced **4 feet (1.22 m)** on center vertically for all partitions which do not have gypsum wallboard installed continuously on both sides of partition
2. Spaced **4 feet (1.22 m)** on center vertically where stud length exceeds **14 feet (4.27 m)**.
3. Within **1 foot (.31 m)** of the deflection track where partition is full height to structure above
4. Spaced **4 feet (1.22 m)** on center vertically where there is additional surface loading on the partition, including, but not limited to, ceramic tile, wall cabinets, countertops and lead lining.

O. Blocking/Strapping: Install continuous blocking and strapping only where interferences prevent the installation of bridging channels.

1. Install solid blocking **0.033-inch (.84 mm)**-thick runners at each end of wall and at every 8 feet on center maximum.
2. Install **0.033 inch (.84 mm)** continuous metal strapping fastened to each side of metal framing studs. Strapping shall be **2 inches (50.8)** wide minimum.

P. Flush Mounted Countertop Support: Each flush mounted countertop support shall be attached to two studs, each with minimum base metal thickness of **0.033 inch (.84 mm)**. Wood blocking which is of the full cross-sectional dimension of the stud and **12 inches (304.8 mm)** longer than the countertop support shall be provided in each stud. The countertop support shall be connected to the studs and blocking with minimum three bolts with double nuts or lock washers. Studs shall also be connected with minimum three U-shaped straps.

3.10 INSTALLING GYPSUM BOARD SHAFT WALL ASSEMBLIES

A. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.

1. Provide bracing where shaftwall exceeds **10 feet (304.8 cm)** in height.

- B. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices and similar items.
- C. Sound-Rated Shaft Wall Assemblies: Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly.
- D. Installation Tolerance: Install each framing member so fastening surfaces vary not more than **1/8 inch (3.18 mm)** from the plane formed by faces of adjacent framing.

3.11 INSTALLING CONCEALED BLOCKING

- A. Provide blocking concealed in partitions at every location where a fixture or other appurtenance is supported by the partition. Blocking shall be installed horizontally from stud to stud and be positively connected to each stud in a manner so that it supports each fixture or appurtenance. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved. Install blocking for support of all fixtures and other appurtenances including but not limited to toilet partitions, wall cabinets, countertops, casework, millwork, handrails, bumper rails, shelving, toilet accessories, mirrors, wall mounted equipment, hardware including wall door stops, and other wall mounted items. Contractor shall notify the Architect before installing fixtures or other appurtenances weighing in excess of 250 lbs.
 1. For fixtures or other appurtenances which weigh 25 lbs. or less attach directly to a minimum **0.033-inch-(.84 mm-)**thick, **3 5/8-inch-(92.08 mm-)**wide steel stud section or a 16 gauge cold rolled steel plate, minimum **6-inch-(152.4 mm-)**wide installed horizontally from stud to stud. Fasten with minimum two low profile pan head #8-18 screws at each stud.
 2. For fixtures or other appurtenances which weigh more than 25 lbs. but less than 250 lbs. or are supporting live loads of more than 25 lbs. (i.e. handrails) attach directly to one of the following:
 - a. Provide 2 x 10 nominal fire-treated wood blocking; attach blocking to each stud with minimum three **1¼-inch-(31.75 mm-)**long #10 wood screws; space top and bottom wood screws **½ inch (12.7 mm)** from end of wood; do not attach screws into wood end grain; avoid wood end grain by providing a minimum **0.033-inch- (1.17 mm-)**thick steel clip angle; install minimum three low profile pan head #8-18 sheet metal screws to connect steel clip angle to stud; kerf blocking to accommodate stud lip.
 - b. Provide **¾ inch x 24 inches (19.05 x 609.6 mm)** minimum wide fire-treated plywood blocking; attach blocking to each stud with minimum four 1” long #10 wood screws; space top and bottom wood screws ½” from end of wood; do not attach screws into wood end grain; avoid wood end grain by providing a minimum **0.033-inch-(1.17 mm-)**thick steel clip angle; install minimum four #8-18 sheet metal screws to connect steel clip angle to stud; kerf blocking to accommodate stud lip.
 - c. Manufactured wood plywood backing plate:
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following: ClarkDietrich Building Systems; Danback Fire-Treated Wood Backing Plate.
 - 2) Install Danback Backing plate per manufacturer’s written instructions and per published load data, but with a minimum of two screws per stud.

09 29 00 - 19 of 22

- d. Provide 0.054-inch-(1.37 mm)-thick nested steel stud and runner; secure stud to runner with 4- # 8 pan head framing screws top and bottom; connect blocking to studs with minimum 0.054 inch-(1.37 mm)-thick cold rolled plates; provide minimum three #8-18 low profile pan head framing screws in each cold rolled plate connection.
3. Shower Seat: Wall mounted shower seats shall be installed as follows:
 - a. Studs supporting the shower seat blocking (up to three) shall be minimum 0.033 inch (1.17 mm) thick, 3 5/8-inch-(92.08 mm)-wide steel studs with minimum of three "U" shaped strap anchors to join studs together. Extend the double studs from floor to 1/2 inch (13 mm) short of underside of structure above seated into 2-1/2 to 3 inch deep leg runner track. Maximum stud height shall be limited to 16 ft. 0 in (4.88 m).
 - b. Provide 2 x 10 nominal fire-treated kerfed wood blocking attached to double studs with a minimum three (3) 1 1/4-inch-(31.75 mm-) long #10 wood screws at each end of each piece of blocking; space top and bottom wood screws 1/2 inch (12.7 mm) from end of wood; do not attach screws into wood end grain; install minimum three #8-18 sheet metal screws at each steel stud/steel stud connection as required to secure a 20 ga. clip on the backside. Add an additional row of wood blocking as required to capture all shower seat attachment points.
 - c. Secure the shower seat to the wood blocking with the #14 x 2-1/2" stainless steel mounting screws furnished by the manufacturer.

3.12 INSTALLING GYPSUM BOARD CEILING SUSPENSION SYSTEMS

- A. Install suspension system components according to spacing indicated, but not greater than the following spacing:
 1. Hangers: 48 inches (121.92 cm) o.c.
 2. Carrying Channels (Main Runners): 48 inches (121.92 cm) o.c.
 3. Furring Channels (Furring Members): 16 inches (406.4 mm) o.c.
- B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.
- C. Suspend hangers from building structure as follows:
 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
 2. Where width of ducts and other construction within ceiling plenum produces hanger spacing that interferes with locations of hangers required to support standard suspension system members, the Contractor shall install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
 - a. Size supplemental suspension members and hangers to support ceiling loads within L/360 deflection limit.
 3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.

4. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
 5. Do not attach hangers to steel roof deck.
 6. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 7. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications
 8. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
 9. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
 10. Do not connect or suspend steel framing from ducts, pipes, or conduit.
- D. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.
- E. Seismic Bracing: Sway-brace suspension systems.
- F. Installation Tolerances: Install suspension systems that are level to within **1/8 inch in 12 feet (3.75 mm in 365.76 cm)** measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.
- G. Reinforce openings in ceiling suspension system which interrupt main carrying channels or furring channels, with lateral channel bracing. Extend bracing minimum **24 inches (609.6)** past each end of openings.
- H. Ceiling grillage for ceiling areas with large openings for recessed lighting or to meet HVAC requirements.
1. Main runner channels - **1-1/2 inches (38.1 mm)** deep, not over **48 inches (121.92 cm)** o.c. secured to structure with **3/16 inch x 1 inch (4.76 x 25.4 mm)** asphaltum coated steel flat bar hangers not over 4 feet o.c.
 2. Cross furring - **3-5/8 inch (92.08 mm)** stud channels at **24 inches (60.96 cm)** o.c., wire tied or clipped to **1-1/2 inch (38.1 mm)** runner channels
 3. Perimeter of recessed light and grille opening shall be formed with **3-5/8 inch (92.08 mm)** stud channels, tied into adjacent furring system. Provide **3/16 inch x 1 inch (4.76 x 25.4 mm)** asphaltum coated steel flat bar hangers at all corners with additional hangers at **4 feet (121.92 cm)** o.c. or as required to support lights, grilles or other items of equipment supported from the ceiling suspension system.

3.13 MARKING AND IDENTIFYING FIRE AND SMOKE RATED WALL ASSEMBLIES

- A. Provide stenciled identification on all fire walls, fire partitions, smoke barriers and smoke partitions, or on any other wall required to have protected openings or penetrations.
1. Stencil shall be located in accessible concealed floor, floor-ceiling or attic spaces, generally above the finished ceiling.
 2. Stencil shall be repeated at intervals not exceeding **30 feet (914 mm)** measured horizontally along the wall or partition.

3. Stencil shall include lettering not less than 3 inches in height, be visible from the floor and shall incorporate the suggested wording: “FIRE AND/OR SMOKE BARRIER—PROTECT ALL OPENINGS,” or other lettering height or wording approved by the Authority Having Jurisdiction.

3.14 MOISTURE AND MOLD FIELD QUALITY CONTROL

- A. Reference Division 01 Section “Temporary Facilities and Controls” for moisture and mold field testing and remediation procedures applicable to the work of this section.

3.15 PROTECTION

- A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.
- B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 09 29 00

SECTION 09 30 00 – TILING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes: Interior ceramic tile selection and installation.
 - 1. Tile.
 - 2. Waterproofing and crack isolation membrane.
 - 3. Setting materials and accessories.
 - 4. Metal edge strips.
- B. Related Sections:
 - 1. Division 09 Section "Gypsum Board Systems" for cementitious backer units.

1.3 DEFINITIONS

- A. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.
- B. Reference to the TCNA shall be defined in this section to mean the TCNA (Tile Council of North America) Guidelines, latest edition.
- C. Porcelain Tiles are ceramic tiles for wall and floor application and are pressed or extruded. Porcelain tiles are classified impervious per ASTM C373.
- D. Glazed Wall Tiles are nonvitreous ceramic tiles intended for interior use on walls only.
- E. Module Size: Actual tile size plus joint width indicated.
- F. Face Size: Actual tile size, excluding spacer lugs.
- G. Small Format Tile: Tile less than 15 inches in any one dimension, unless noted otherwise.
- H. Large Format Tile: Tile equal to or greater than 15 inches in any one dimension, unless noted otherwise.
- I. Lippage: The condition where one edge of a tile is higher than the adjacent tile edge, giving the finished surface an uneven appearance.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. With product data for each floor finish material specified, provide manufacturer's slip resistance data from tests performed by an independent testing agency in accordance with ANSI A137.1 dynamic coefficient of friction (DCOF) AcuTest. Provide field testing where manufacturers test data is not available.
- B. Shop Drawings: Show locations of each type of tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.
- C. Samples for Verification:
 - 1. Full-size units of each type and composition of tile and for each color and finish required.
 - 2. Full-size units of each type of trim and accessory for each color and finish required.
 - 3. Metal edge strips in 6-inch lengths.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.
- C. Product Certificates: For each type of product, signed by product manufacturer.
- D. Material Test Reports: For each tile-setting and -grouting product.
- E. Manufacturer shall certify that the type of tile to be installed is compatible with area in which it is to be installed, and that all materials to be used are mutually compatible.
- F. Warranties: Sample of special warranties.

1.7 CLOSEOUT DOCUMENTS

- A. Maintenance Data For Owner: For each type of tile to include in maintenance manuals, including slip-resistance maintenance requirements.
- B. Warranties: Final warranties to include in operation and maintenance manuals.

1.8 MAINTENANCE MATERIAL

- A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.
 - 2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Installer is a Trowel of Excellence member of the Tile Contractors' Association of America.
 - 2. Installer's supervisor for Project holds the International Masonry Institute's Foreman Certification.
 - 3. Installer employs Ceramic Tile Education Foundation Certified Installers].
- B. Dry-Laid Mockups: Lay out tiles in dry-laid mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Lay out mockup of each type of floor tile installation.
 - 2. Maintain dry-laid mockups in an undisturbed condition until equivalent areas of the completed Work are approved to serve as mockups.
- C. Slip Resistance Field Testing
 - 1. Slip Resistance Field Testing
 - a. Contractors, who fail to submit adequate slip resistance testing from product manufacturers, shall engage the services of a qualified testing agency to perform slip resistance field testing on the installed mockup.
 - b. Test results shall be provided to the Architect and Owner along with required product data.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1-12 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
- D. Store liquid materials in unopened containers and protected from freezing.

- E. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

1.11 FIELD CONDITIONS

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

1.12 SEQUENCING AND SCHEDULING

- A. Sequence installation with other work to minimize possibility of damage and soiling during remainder of construction period.

1.13 WARRANTY

- A. Ceramic Tile Manufacturers Standard Warranty: Manufacturer warrants that tile products will be free from defects for a period of one-year from date of Final Acceptance.
- B. Ceramic Tile Installers Warranty: Installer warrants that the tile installation will be free from defects in workmanship for a period of two years for the date of Final Acceptance.
- C. Waterproofing / Mortar / Grout Manufacturers System Warranty: Subject to the conditions and limitations stated below, the manufacturer warrants that the products listed on this document provided as a system will be free from manufacturing defects and will not break down or deteriorate under normal usage for a period of ten (10) years from the date of Final Acceptance when installed in accordance with the manufacturers written instructions and industry standard guidelines. Excluded from this warranty are exterior installations or installations submerged in liquid.

PART 2 - PRODUCTS

2.1 BASIS OF DESIGN MANUFACTURER PRODUCTS AND LEAD TIMES:

- A. Products listed as Basis of Design herein and on the Finish Schedule have been coordinated with other finishes and approved by the Owner for color and pattern in schemes throughout the project area.
- B. Proposed substitutions must be approved by the Owner and Architect prior to award or they will not be considered. The Contractor shall be responsible to match all listed characteristics, including color and pattern, to the satisfaction of the Owner and Architect. Submit products for consideration per the requirements of Division 01 Section "Substitution Procedures."

- C. Substitutions for Cause proposed after award shall be submitted for approval per the requirements of Division 01 Section “Substitution Procedures.” Substitutions for Convenience proposed after award will not be considered.
- D. Many Division 09 products are long lead. The Contractor is responsible to verify all lead times sufficiently in advance of submittal documents, mockups and need to avoid schedule conflicts. Neither the Owner nor Architect will be held responsible for inaction on the part of the Contractor in ordering material with enough lead time to avoid additional “quick ship” costs or delays to the construction schedule in order to accomplish all requirements herein.

2.2 PERFORMANCE REQUIREMENTS

- A. Dynamic Coefficient of Friction: For ceramic tile installed on floor surfaces.
 - 1. For floor products without manufacturers previous testing showing compliance:
 - a. Test floors wet and dry in accordance with ANSI A137.1 dynamic coefficient of friction (DCOF) AcuTest.
 - 1) Flooring products which are required to be field tested and do not satisfactorily pass field testing standards with a DCOF of 0.42 or higher will not be permitted to be installed on the project.
- B. Source Limitations for Tile: Obtain tile of each type and color or finish from one source or producer.
 - 1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.
- C. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each waterproofing and crack isolation membrane, self-leveling material, mortar, adhesive, and grout component from one manufacturer and each aggregate from one source or producer.
- D. Source Limitations for Other Products: Obtain each of the following products specified in this Section from a single manufacturer for each product:
 - 1. Joint sealants.
 - 2. Metal edge strips.

2.3 PRODUCTS, GENERAL

- A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
 - 1. Provide tile complying with Standard grade requirements unless otherwise indicated.
- B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced

by TCNA installation methods specified in tile installation schedules, and other requirements specified.

- C. **Factory Blending:** For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
- D. **Mounting:** For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.
 - 1. Where tile is indicated for installation in wet areas, do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.
- E. **Colors, Textures, and Patterns:** Where manufacturer's standard products are indicated for tile, grout, and other products requiring selection of colors, surface textures, patterns, and other appearance characteristics, provide specific products or materials complying with the following requirements:
 - 1. Match Architect's samples and/or selections.
- F. **Adhesives shall have a VOC** content of 65 g/L or less.

2.4 TILE PRODUCTS

- A. **Tile Type: Floor Tile {TF1}**
 - 1. **Basis-of-Design Product:** Subject to compliance with requirements, provide product(s) indicated on Finish Schedule.
 - 2. **Tile Composition, Face Size, Face and Finish** are all sub-products of the Basis of Design tile selected and included on the Finish Schedule.
 - 3. **Tile Color and Pattern:** Per Finish Schedule
 - 4. **Grout Color:** Per Finish Schedule
 - 5. **Trim Units:** Coordinated with sizes and coursing of adjoining flat tile where applicable. Provide shapes as follows, selected from manufacturer's standard shapes:
 - a. **Base Cove:** Cove, module size.
 - b. **Base Cap for Thin-Set Mortar Installations:** Surface bullnose, module size.
 - c. **External Corners for Thin-Set Mortar Installations:** Surface bullnose, module size
 - d. **Internal Corners:** Cove, module size
 - e. **Internal Corners:** Field-buttet square corners. For coved base and cap, use angle pieces designed to fit with stretcher shapes.
- B. **Tile Type: Wall Tile{TW1,TW2,TW3}**
 - 1. **Basis-of-Design Product:** Subject to compliance with requirements, provide product(s) indicated on Finish Schedule.
 - 2. **Tile Module Size, Thickness, Face and Finish** are all sub-products of the Basis of Design tile selected and included on the Finish Schedule.
 - 3. **Tile Color and Pattern:** See Finish Schedule

4. Grout Color: See Finish Schedule

2.5 TILE BACKING PANELS

- A. Cementitious Backer Units: See Division 09 Section "Gypsum Board Systems" for information regarding cementitious backer units.

2.6 WATERPROOFING AND CRACK ISOLATION MEMBRANE

- A. General: Manufacturer's standard product that complies with ANSI A118.10 Waterproofing Membranes for Thin Set Ceramic Tile and ANSI A118.12 Crack Isolation Membranes for Thin Set Ceramic Tile for high performance and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories as recommended by manufacturer.

- B. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Ardex America: Interior/Exterior: 8 + 9 Waterproofing and Crack Isolation Compound.
- b. Custom Building Products; Interior/Exterior: Redgard Waterproofing and Crack Prevention Membrane.
- c. Laticrete International, Inc.: Interior/Exterior: Hydro Ban Waterproofing and Crack Prevention Membrane.
- d. MAPEI Corporation:

1) Interior: Mapelastic Aquadefense® Waterproofing and Crack Prevention Membrane.

2. Application: Roller (brush or trowel if required by manufacturer).

3. Not for use over cracks greater than **1/8 inch (3 mm)**.

4. Maximum allowable concrete moisture content: 75% RH per ASTM F2170.

- a. Contractor Note: The waterproofing and crack isolation membrane is not designed to be a substitute for proper moisture mitigation. Where substrate moisture content exceeds manufacturer recommended levels, prepare substrate using moisture mitigation products and methods approved by the Architect.

- C. Cracks larger than 1/8 inch in width shall be repaired as recommended by the membrane manufacturer prior to the installation of the membrane. Repairs shall include, but not be limited to, epoxy joint fill, mesh joint bridging or other methods recommended by the manufacturer.

2.7 SETTING MATERIALS

- A. Portland Cement Mortar (Thick Set): Complies with ANSI 118.2 and ASTM C270.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Ardex America:
 - 1) Interior: AM 100 Rapid Set Mortar.
 - 2) Exterior: EB 2 Screed Cement.
 - b. Custom Building Products: Interior/Exterior: Thick Bed Mortar.
 - c. Laticrete International, Inc.: Interior/Exterior: 3701 Fortified Mortar Bed
 - d. MAPEI Corporation: Interior/Exterior: Topcem™ Premix (with Planicrete AC Exterior)
2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 3. Thickness: 3/4 inch (10 mm) to 2 inches (40 mm) and as per manufacturer's written instructions.
 4. Interior: Install over Waterproofing Membrane to create 1/4 inch per foot slope to drain.
 5. Exterior: Slope as indicated to create positive drainage.
 6. Exterior: Create slurry/bond coat over concrete from same material.
- B. Latex-Portland Cement Mortar (Thin Set – Small Format Tile): Complies with ANSI A118.4 Specifications for Modified Dry-Set Cement Mortar. A single-component, high-performance, polymer-modified thin-set mortar for installations of ceramic and porcelain tile less than 15 inches in any one dimension.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ardex America:
 - 1) Interior/Exterior: X5 Thin Set Mortar.
 - b. Custom Building Products:
 - 1) Interior: VersaBond Thin Set Mortar
 - 2) Exterior: Megaflex
 - c. Laticrete International, Inc.: Interior/Exterior: 254 Platinum Thin Set Mortar.
 - d. MAPEI Corporation:
 - 1) Interior: Ultraflex 2 Thin Set Mortar
 - 2) Exterior: Granirapid System.
 2. Install only at temperatures between 40°F and 95°F (4°C and 35°C) and as permitted by manufacturer.
 3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.
- C. Latex-Portland Cement Mortar (Medium Bed Thin Set – Large Format Tile): Complies with ANSI A118.4 Specifications for Modified Dry-Set Cement Mortar and ANSI A118.15 for Improved Modified Dry-Set Cement Mortar. A single-component, high-performance, polymer-modified thin-set mortar for installations of ceramic and porcelain tile equal to or greater than 15 inches in any one dimension.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ardex America: Interior/Exterior: X77 Microtec
 - b. Custom Building Products:
 - 1) Interior: Prolite LFT
 - 2) Exterior: Megalite
 - c. Laticrete International, Inc.:
 - 1) Interior: 4 XLT.
 - 2) Exterior: 255 Multimax
 - d. MAPEI Corporation:
 - 1) Interior: Ultraflex LFT
 - 2) Exterior: Granirapid System
2. Install only at temperatures between 40°F and 95°F (5°C and 35°C).
3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.

D. Self-Leveling Materials: Self leveling Portland cement based underlayments and manufacturer recommended primers shall be installed where existing floor conditions do not meet tile manufacturer's minimum flatness requirement to avoid uneven installation and lippage beyond specified levels.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ardex America: Interior: TL 1000
 - b. Custom Building Products: Interior: Levelite.
 - c. Laticrete International, Inc.: Interior: NXT Level Plus.
 - d. MAPEI Corporation: Interior: Novoplan 2 Plus
2. Prepare floors and prime per manufacturer's written instructions.

2.8 GROUT MATERIALS

A. Water-Cleanable Epoxy Grout: Complies with ANSI A118.3 Specifications for Chemical Resistant, Water Cleanable Tile-Setting and -Grouting Epoxy, with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ardex America: Interior/Exterior: WA Epoxy
 - b. Custom Building Products: Interior/Exterior: CEG Lite
 - c. Laticrete International, Inc.: Interior/Exterior: Spectralock Pro Premium
 - d. MAPEI Corporation: Interior/Exterior: Kerapoxy CQ

- B. Polymer-Modified Tile Grout: Complies with ANSI A118.7 Specifications for Polymer Modified Grouts for Tile.
 - 1. Products: Subject to compliance with requirements, provide product by one of the following:
 - a. Ardex America: Interior/Exterior: FL Sanded Grout
 - b. Custom Building Products: Interior/Exterior: Prism
 - c. Laticrete International, Inc.: Interior/Exterior: Permacolor Sanded Grout
 - d. MAPEI Corporation: Interior/Exterior: Ultracolor Plus Sanded Grout

2.9 ELASTOMERIC SEALANTS

- A. Manufacturers provide ASTM C920 Type S, Grade NS, Class 25 mildew resistant silicon sealants to match most of their grout colors. These may be substituted for the Division 07 mildew resistant sealants. Most manufacturers also provide latex sealants which match all of their available grout colors, but these should be avoided for application on floors.
- B. Provide and install One-Part, Mildew-Resistant Silicone Sealant per Division 07 Section “Joint Sealants” or 100% silicone sealants by the following:
 - 1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Ardex America: Interior/Exterior: SX 100% Silicon
 - b. Custom Building Products: Interior/Exterior: Commercial 100% Silicon
 - c. Laticrete International, Inc.: Interior/Exterior: Latisil 100% Silicon
 - d. MAPEI Corporation: Interior/Exterior: Mapesil 100% Silicon
 - 2.

2.10 MISCELLANEOUS MATERIALS

- A. Trowelable Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
- B. Metal Edge Strips: Angle or L-shaped, height to match stone tile and setting-bed thickness, metallic or combination of metal and PVC or neoprene base, designed specifically for flooring applications; exposed-edge material.
 - 1. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide Schluter Systems L.P. or a comparable product by one of the following:
 - a. Blanke Corporation.
 - b. Ceramic Tool Company, Inc.
 - 2. Refer to finish details on the Interior drawings for configurations.

- C. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

2.11 FABRICATION

- A. Joint Surfaces: Except for specified beveled or eased edges, if any, dress joint surfaces square for full depth of tile.
- B. Backs of Pieces: Gage units by dressing backs of pieces smooth and flat. When tested with a 24-inch (600-mm) straightedge, gap shall not exceed 1/32 inch (0.8 mm).

2.12 MIXING MORTARS AND GROUT

- A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
- B. Add materials, water, and additives in accurate proportions.
- C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.
 - 1. Verify that substrates for setting tile are firm, dry, clean, free of coatings that are incompatible with tile-setting materials including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
 - 2. Verify that concrete substrates for tile floors installed with adhesives bonded, mortar bed or thin-set mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.
 - a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
 - b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
 - 3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.

4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove coatings, including curing compounds and other substances that contain soap, wax, oil, or silicone, that are incompatible with tile-setting materials.
- B. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with thin-set mortar with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.
- C. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped **1/4 inch per foot (1:50)** toward drains.
- D. Lay out tile patterns by marking joint lines on substrates to verify joint placement at edges, corners, doors, and other critical elements.
 1. Notify Architect seven days in advance of dates and times when layout will be done.
 2. Architect may relocate specific tiles with other tiles of same type and will determine final location of each tile within indicated patterns.
 3. Identify each tile with a temporary number marked on face of tile that corresponds with an identical number marked on a layout drawing.
 4. Obtain Architect's approval of layout before starting tile installation.
- E. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

3.3 WATERPROOFING/CRACK-SUPPRESSION MEMBRANE INSTALLATION

- A. Install waterproofing and crack-suppression membrane to comply with TCNA Guidelines, ANSI A108.10 and A108.12 and manufacturer's written instructions to produce waterproof membrane of uniform thickness bonded securely to substrate.
- B. Prepare substrate per manufacturers written recommendations. Acid etching, adhesive removers, solvents and sweeping compounds are not acceptable means for cleaning the substrate.
- C. All concrete substrates must be solid, structurally sound, thoroughly clean, thoroughly cured, dry and free of oil, wax, grease, asphalt, latex and gypsum compounds, curing compounds, sealers and any contaminant that might act as a bond breaker. If necessary, mechanically clean the floor down to sound, solid concrete by shot blasting or similar as approved in writing by the manufacturer.
- D. Provide mesh in corners, over cracks and elsewhere membrane manufacturer recommends.

- E. Do not install tile over waterproofing and crack-suppression membrane until membrane has cured and been tested to determine that it is watertight.

3.4 SUBSTRATE LEVELING

- A. Substrate shall be leveled to both manufacturers and TCNA written requirements prior to the installation of ceramic tile.
 - 1. Substrate shall be thoroughly clean and free of all contaminate which might act as a bond breaker.
 - 2. Floor surface shall be shot blasted if recommended by the manufacturer to ensure proper bond.
 - 3. Substrates shall be dry and properly primed prior to the application of self-leveling products.
 - 4. Do not walk on or install ceramic tile before manufacturer's recommended times.

3.5 CERAMIC TILE INSTALLATION

- A. Comply with most current edition of TCNA's "Handbook for Ceramic Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 Series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.
- B. Wipe backs of tiles with a damp cloth to remove dirt and dust before units are installed.
- C. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
- D. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
- E. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.
- F. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
 - 1. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
 - 2. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.
- G. Joint Widths: Install tiles the joint widths indicated on the Finishes Schedule or Drawings.

1. Where joint widths are not indicated, consult the Architect for joint selection prior to proceeding.
- H. Lippage: In addition to the inherent warpage of the tile manufactured in accordance with ANSI 137.1, acceptable lippage for typical installations shall not exceed the following:
1. Pressed floor/Porcelain tile: All sizes with joint width less than 1/4 inch: 1/32 inch.
 2. Pressed floor/Porcelain tile: All sizes with joint width equal to or greater than 1/4 inch: 1/16 inch
- I. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.
1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
 2. Follow guidelines for expansion joints as described in TCNA EJ171.
 3. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."
 - a. Sealant colors shall be as selected by the architect.
- J. Metal Edge Strips: Install at locations indicated and where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with or below top of tile and no threshold is indicated.

3.6 CLEANING AND PROTECTING

- A. Remove and replace material that is stained or otherwise damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.
- B. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
1. Remove epoxy grout residue from tile as soon as possible.
 2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.
- C. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.
- D. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.

- E. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

3.7 **TILE INSTALLATION SCHEDULE:** The paragraphs below cover a range of warrantable tile installation systems. All warrantable systems shall, by definition, contain products from a single manufacturer. Products shall be as listed in Part 2 PRODUCTS above. The Contractor shall consult the Finish Schedule and drawings for tile finish locations. Not all scheduled systems will be included on the Finish Schedule and drawings.

A. Interior Floor Installations, Concrete Subfloor:

1. Small Format Tile installation in wet area over depressed slab:
 - a. Portland Cement Mortar (Thick Set): Complies with ANSI 108.2 and ASTM C270 Type S. Slope 1/4 inch in 1 foot to drain. Install reinforcing where required by manufacturer.
 - b. Waterproofing and Crack Isolation Membrane: Complies with ANSI 118.10 & 118.12. Fluid-Applied Membrane; Liquid-latex rubber or elastomeric polymer.
 - c. Latex-Portland Cement Mortar (Thin Set – Small Format Tile): Complies with ANSI A118.4. Polymer-modified thin-set mortar for installations of ceramic and porcelain tile less than 15 inches in any one dimension.
 - d. Water-Cleanable Epoxy Grout: Complies with ANSI A118.3. Tile-Setting and -Grouting Epoxy.
2. Large Format Tile installation in wet area over depressed slab:
 - a. Portland Cement Mortar (Thick Set): Complies with ANSI 108.2 and ASTM C270 Type S. Slope 1/4 inch in 1 foot to drain. Install reinforcing where required by manufacturer.
 - b. Waterproofing and Crack Isolation Membrane: Complies with ANSI 118.10 & 118.12. Fluid-Applied Membrane; Liquid-latex rubber or elastomeric polymer.
 - c. Latex-Portland Cement Mortar (Thin Set – Large Format Tile): Complies with ANSI A118.4. Polymer-modified thin-set mortar for installations of ceramic and porcelain tile equal to or greater than 15 inches in any one dimension.
 - d. Water-Cleanable Epoxy Grout: Complies with ANSI A118.3. Tile-Setting and -Grouting Epoxy.
3. Small Format Tile installation in wet or dry area over flat (non-depressed) slab:
 - a. Floor leveling material where required to achieve manufacturer recommended floor flatness and lippage.
 - b. Waterproofing and Crack Isolation Membrane: Complies with ANSI 118.10 & 118.12. Fluid-Applied Membrane; Liquid-latex rubber or elastomeric polymer.
 - c. Latex-Portland Cement Mortar (Thin Set – Small Format Tile): Complies with ANSI A118.4. Polymer-modified thin-set mortar for installations of ceramic and porcelain tile less than 15 inches in any one dimension.
 - d. Water-Cleanable Epoxy Grout: Complies with ANSI A118.3. Tile-Setting and -Grouting Epoxy.
4. Large Format Tile installation in wet or dry area over flat (non-depressed) slab:

- a. Floor leveling material where required to achieve manufacturer recommended floor flatness and lippage.
- b. Waterproofing and Crack Isolation Membrane: Complies with ANSI 118.10 & 118.12. Fluid-Applied Membrane; Liquid-latex rubber or elastomeric polymer.
- c. Latex-Portland Cement Mortar (Medium Set – Large Format Tile): Complies with ANSI A118.4. Polymer-modified thin-set mortar for installations of ceramic and porcelain tile equal to or greater than 15 inches in any one dimension.
- d. Water-Cleanable Epoxy Grout: Complies with ANSI A118.3. Tile-Setting and - Grouting Epoxy.

B. Interior Wall Installations, Cement Board Substrate:

- 1. Small Format Tile installation in wet area:
 - a. Waterproofing and Crack Isolation Membrane: Complies with ANSI 118.10 & 118.12. Fluid-Applied Membrane; Liquid-latex rubber or elastomeric polymer.
 - b. Latex-Portland Cement Mortar (Thin Set – Small Format Tile): Complies with ANSI A118.4. Polymer-modified thin-set mortar for installations of ceramic and porcelain tile less than 15 inches in any one dimension.
 - c. Water-Cleanable Epoxy Grout: Complies with ANSI A118.3. Tile-Setting and - Grouting Epoxy.
- 2. Large Format Tile installation in wet area:
 - a. Waterproofing and Crack Isolation Membrane: Complies with ANSI 118.10 & 118.12. Fluid-Applied Membrane; Liquid-latex rubber or elastomeric polymer.
 - b. Latex-Portland Cement Mortar (Medium Bed Thin Set – Large Format Tile): Complies with ANSI A118.4. Modified Dry-Set Thin-Set Mortar and ANSI 118.15 Improved Modified Dry-Set Cement Mortar for installations of ceramic and porcelain tile equal to or greater than 15 inches in any one dimension.
 - c. Water-Cleanable Epoxy Grout: Complies with ANSI A118.3. Tile-Setting and - Grouting Epoxy.
- 3. Small Format Tile installation in dry area:
 - a. Latex-Portland Cement Mortar (Thin Set – Small Format Tile): Complies with ANSI A118.4. Polymer-modified thin-set mortar for installations of ceramic and porcelain tile less than 15 inches in any one dimension.
 - b. Water-Cleanable Epoxy Grout: Complies with ANSI A118.3. Tile-Setting and - Grouting Epoxy.
- 4. Large Format Tile installation in dry area:
 - a. Latex-Portland Cement Mortar (Medium Bed Thin Set – Large Format Tile): Complies with ANSI A118.4. Modified Dry-Set Thin-Set Mortar and ANSI 118.15 Improved Modified Dry-Set Cement Mortar for installations of ceramic and porcelain tile equal to or greater than 15 inches in any one dimension.
 - b. Water-Cleanable Epoxy Grout: Complies with ANSI A118.3. Tile-Setting and - Grouting Epoxy.

END OF SECTION 09 30 00

SECTION 09 51 00 - ACOUSTICAL BAFFLE CEILINGS PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes acoustical baffle panels and exposed suspension systems for ceilings.
- B. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete at ceilings.
- C. Related Sections
 - 1. Section 09 20 00 - Gypsum Board, Framing & Accessories
 - 2. Division 23 – Heating, Ventilating and Air Conditioning (HVAC)
 - 3. Division 26 – Electrical
- D. AC: Articulation Class
- E. CAC: Ceiling Attenuation Class
- F. LR: Light Reflectance coefficient
- G. NRC: Noise Reduction Coefficient

1.3 REFERENCES

- A. ASTM E84-14 CLASS A / CAN ULC S102: Standard Test Method for Surface Burning Characteristics of Building Materials; 1991
- B. ASTM C423-90A: Standard Test Method for Sound Absorption Coefficients by the Reverberation Room Method; 1990

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

- C. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.
 - 1. Acoustical Baffle: Set of full-size Samples of each type, color, pattern, and texture.
 - 2. Exposed Suspension System Members, Moldings, and Trim: Set of 12-inch-long Samples of each type, finish, and color.
- D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each acoustical panel ceiling.
 - 1. Certification of Compliance to UL Classification to acoustic categories - NRC, CAC and AC.

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of acoustical ceiling panel and supporting suspension system through one source from a single manufacturer.
- B. Fire-Test-Response Characteristics: Provide acoustical panel ceilings that comply with the following requirements:
 - 1. Surface-Burning Characteristics: Provide acoustical panels with the following surface-burning characteristics complying with ASTM E1264 for Class A materials as determined by testing identical products per ASTM E84.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use. Maintain temperature and humidity as recommended by specified manufacturers.

1.8 WARRANTY

- A. The acoustical ceiling shall be warranted by the manufacturer for a period of fifteen years against sagging, warping, or shrinkage in conditions up to 90% relative humidity subject to normal allowable average manufacturing tolerances. Grid shall be warranted by the

manufacturer for a period of fifteen years against the occurrence of 50% red rust and sagging and warping. The subcontractor shall be responsible for any replacement.

1.9 COORDINATION

- A. Coordinate layout and installation of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.10 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Acoustic Baffles: Minimum 5% of each type installed.
 - 2. Suspension System Components: Minimum 5% of each type installed.

PART 2 - PRODUCTS

2.1 ACOUSTICAL BAFFLES, GENERAL

- A. Low Emitting Materials
 - 1. Products listed shall have a minimum VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - a. Acoustical sealant: 250 g/L or less.

2.2 ACOUSTICAL BAFFLES

- A. Manufacturer: Filzfelt, Akustika 25 Baffle (XC1)
- B. Other Acceptable Manufacturers: Subject to compliance with requirements.
 - a. Turf Design, Inc.; Slab
 - b. Armstrong World Industries, Inc.; Feltworks Blades
- C. Content: 100% Wool Design Felt and Akustika 25 substrate
- D. Baffle depth: See Finish Schedule
- E. Size: As Indicated on Drawings
- F. Spacing: As indicated on drawings
- G. System style: Manufacturer's standard

1. Complete hanging hardware including 5/16" 1525 mm of aircraft wire and adjustable fastener.
- H. Hardware colors: To be selected by architect.
- I. Baffle colors: As indicated on Finish Schedule
- J. Baffle thickness: 1.25" inch

2.3 METAL SUSPENSION SYSTEMS

- A. Attachment to Structure: Size for five times the design load indicated in ASTM C635, Table 1, "Direct Hung," unless otherwise indicated.
 1. Anchors in Concrete: Anchors of type and material indicated below, threaded for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing per ASTM E488 or ASTM E1512 as applicable, conducted by a qualified testing and inspecting agency.
 - a. Type: Postinstalled expansion anchors.
 - b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B633, Class Fe/Zn 5 for Class SC 1 service condition.
 2. Beam clamps of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 5 times that imposed by ceiling construction.
- B. Hanger Rods: Hangers shall be minimum 1/4" diameter galvanized steel rods. The use of steel wire as a hanger shall not be permitted. Mild steel, zinc coated or protected with rust-inhibitive paint.
 1. Hardware for connecting rods to carrying channels shall be Caddy Fastener 4B15LS or approved equivalent.
- C. Carrying channels shall be minimum 1 1/2" deep cold-rolled steel channel weighing 0.457 pounds per linear foot and shall be given an electro-galvanized, hot-dipped galvanized cadmium coating or zinc coating.
 1. Hardware for connecting carrying channels to metal suspension system main runners shall be Caddy Fastener LTGH or approved equivalent.
- D. Ceiling Suspension System: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C635.
 1. Suspension System:

- a. Provide suspension system recommended by manufacturer and complying with local codes.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.3 INSTALLATION

- A. General: Install acoustical baffle ceilings to comply with manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
- B. Suspend ceiling hangers from building's structural members and as follows:
 1. Install hanger rods plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 2. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
 3. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to post-installed mechanical anchors.
 4. Do not attach hangers to steel roof deck. Attach hangers to structural members.
- C. Lighting fixtures and air diffusers/grilles registers to be suspended independently from the baffles.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections and prepare reports:

1. Suspended ceiling system
 2. Hangers, anchors and fasteners
- B. Tests and Inspections: Testing and inspecting of completed installations of acoustical panel ceiling hangers and anchors and fasteners shall take place in successive stages, in areas of extent and using methods as follows. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations of acoustical panel ceiling hangers show compliance with requirements.
- C. Remove and replace acoustical panel ceiling hangers and anchors and fasteners that do not pass tests and inspections and retest as specified above.

3.5 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

3.6 ADJUSTMENTS

- A. Adjust any sags or twists which develop in the ceiling system(s) and replace any part which is damaged or faulty.

END OF SECTION 09 51 00

SECTION 09 51 13 - ACOUSTICAL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes acoustical panels and exposed suspension systems for interior ceilings.
- B. Related Sections include the following:
 - 1. Division 08 Section "Suspended Decorative Grids"
- C. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete at ceilings.

1.3 DEFINITIONS

- A. AC: Articulation Class
- B. CAC: Ceiling Attenuation Class
- C. LR: Light Reflectance coefficient
- D. NRC: Noise Reduction Coefficient

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Samples for Initial Selection: For components with factory-applied color finishes.
- C. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.
 - 1. Acoustical Panel: Set of full-size Samples of each type, color, pattern, and texture.

2. Exposed Suspension System Members, Moldings, and Trim: Set of 12-inch- (300-mm-) long Samples of each type, finish, and color.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 1. Ceiling suspension-system members.
 2. Structural members to which suspension systems will be attached.
 3. Method of attaching hangers to building structure.
 4. Carrying channels or other supplemental support for hanger-wire attachment where conditions do not permit installation of hanger wires at required spacing.
 5. Size and location of initial access modules for acoustical panels.
 6. Items penetrating finished ceiling and ceiling-mounted items including the following:
 - a. Lighting fixtures.
 - b. Diffusers.
 - c. Grilles.
 - d. Speakers.
 - e. Sprinklers.
 - f. Access panels.
 - g. Perimeter moldings.
 7. Show operation of hinged and sliding components covered by or adjacent to acoustical panels.
 8. Minimum Drawing Scale: 1/8 inch = 1 foot (1:96).
- B. Qualification Data: For installer and testing agency.
- C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each acoustical panel ceiling.
- D. Research/Evaluation Reports: For each acoustical panel ceiling and components and anchor and fastener type, from ICC-ES.
- E. Delegated-Design Submittal: For seismic restraints for ceiling systems.
 1. Include design calculations for seismic restraints including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- F. Field quality-control reports.

1.7 CLOSEOUT DOCUMENTS

- A. Maintenance Data: For finishes to include in maintenance manuals.
- B. Executed warranty

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Acoustical Ceiling Units: Full-size panels equal to 2 percent of quantity installed.
 - 2. Suspension-System Components: Quantity of each exposed component equal to 2 percent of quantity installed.
 - 3. Hold-Down Clips: Equal to 2 percent of quantity installed.
 - 4. Impact Clips: Equal to 2 percent of quantity installed.

1.9 QUALITY ASSURANCE

- A. Acoustical Testing Agency Qualifications: Qualified according to NVLAP for testing indicated.
- B. Installer Qualifications: Installer with at least 5-years of experience erecting ceilings of the type specified and is acceptable to the ceiling and grid manufacturer(s).

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

1.11 FIELD CONDITIONS

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use. Maintain temperature and humidity as recommended by specified manufacturers.
 - 1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

1.12 WARRANTY

- A. A1, A2: The acoustical ceiling shall be warranted by the manufacturer for a period of fifteen years against sagging, warping, or shrinkage in conditions up to 90% relative humidity subject to normal allowable average manufacturing tolerances. Grid shall be warranted by the manufacturer for a period of fifteen years against the occurrence of 50% red rust and sagging and warping. The subcontractor shall be responsible for any replacement.

1.13 COORDINATION

- A. Coordinate layout and installation of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.14 MANUFACTURER'S RECYCLING PROGRAM

- A. Manufacturer of ceiling tile shall have an established material reclamation and recycling program including:
 - 1. Job site reclamation of existing ceiling tile materials.
 - 2. Use of both preconsumer and post-consumer recycled materials in production of the ceiling tile.
 - 3. Provisions for reclamation of material supplied for this project at the end of its useful life.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Division 01 Section "Quality Requirements," to design seismic restraints for ceiling systems.
- B. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: Comply with ASTM E1264 for Class A materials.
 - 2. Smoke-Developed Index: 450 or less.
- C. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 ACOUSTICAL PANELS, GENERAL

- A. Source Limitations:
 - 1. Acoustical Ceiling Panel: Obtain each type from single source from single manufacturer.
 - 2. Suspension System: Obtain each type from single source from single manufacturer.
- B. Glass-Fiber-Based Panels: Made with binder containing no urea formaldehyde.
- C. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances, unless otherwise indicated.

1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches (400 mm) away from test surface per ASTM E795.
- D. Broad Spectrum Antimicrobial Fungicide and Bactericide Treatment: Provide acoustical panels treated with manufacturer's standard antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested according to ASTM D3273 and evaluated according to ASTM D3274 or ASTM G21.
- E. Antimicrobial Fungicide Treatment: Provide acoustical panels with face and back surfaces coated with antimicrobial treatment consisting of manufacturer's standard formulation with fungicide added to inhibit growth of mold and mildew and showing no mold or mildew growth when tested according to ASTM D3273 and evaluated according to ASTM D3274 or ASTM G21.

2.3 ACOUSTICAL PANELS FOR ACOUSTICAL PANEL CEILING

- A. Basis of Design: Armstrong World Industries, Inc.
- B. Other Acceptable Manufacturers/Products subject to compliance with requirements:
1. Decoustics
 2. CertainTeed Corporation.
 3. USG Interiors, Inc.
- C. Acoustical Ceiling Types

Type A1. #1910 square cut lay-in Ultima design, with HumiGuard Plus humidity resistance, DuraBrite finish, Bioblock white acrylic latex paint finish, on an acoustically transparent membrane (Type IV per ASTM E1264), square edge.
 Size: 24 inch x 24 inch x 3/4 inch
 Grid Size: 15/16
 Minimum UL certified acoustic values:
 LR: 0.88
 NRC: 0.75
 CAC: 35

Type A2. #673 square cut lay-in Kitchen Zone design
 Size: 24 inch x 24 inch x 5/8 inch
 Grid Size: 15/16
 Minimum UL certified acoustic values:
 LR: 0.89
 CAC: 33

- D. Color: White unless noted otherwise.
- E. Antimicrobial Treatment: **Broad spectrum fungicide and bactericide** based.

- F. Antimicrobial Treatment (Intercept): Provide acoustical panels treated with manufacturer's standard antimicrobial solution consisting of a synergistic blend of substituted ammonium salts of alkylated phosphoric acids admixed with free alkylated phosphoric acid that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria.

2.4 METAL SUSPENSION SYSTEMS, GENERAL

- A. Metal Suspension-System Standard: Provide manufacturer's standard, direct-hung, fully concealed, metal suspension system and accessories of type, structural classification, and finish indicated that complies with applicable requirements in ASTM C635/C635M.
 - 1. High-Humidity Finish: Where indicated, provide coating tested and classified for "severe environment performance" according to ASTM C635/C635M.
- B. Direct-Hung, Double-Web Suspension System: Main and cross runners roll formed from and capped with cold-rolled steel sheet, prepainted, electrolytically zinc coated, or hot-dip galvanized, G30 (Z90) coating designation.
 - 1. Structural Classification: Heavy-duty system.
 - 2. Access: [Upward] and end pivoted or side pivoted, with initial access openings of size indicated below and located throughout ceiling within each module formed by main and cross runners, with additional access available by progressively removing remaining acoustical tiles.
 - a. Initial Access Opening: In each module, 24 by 24 inches (610 by 610 mm).

2.5 SUSPENSION SYSTEM

- A. Basis of Design: Armstrong World Industries
- B. Other Acceptable Manufacturers subject to compliance with requirements:
 - 1. United States Gypsum Corporation
 - 2. Chicago Metallic Corporation
- C. Type conforming to ASTM C635 intermediate duty system.
- D. Grid: Nonfire-rated, hot-dipped galvanized exposed tee (except where noted otherwise); all components die cut and interlocking and rotary stitched.
 - 1. Armstrong Prelude XL 15/16 inch (24 mm) exposed tee system - for ceiling Type A1, A2
 - 2. Armstrong Drywall Furring System.
- E. Accessories: Stabilizer bars, furring clips, splices and edge moldings as required to complete and complement suspended ceiling grid system. 15/16 inch edge trim shall be hot dipped galvanized angle moulding.
- F. Materials/Finish: Commercial quality cold rolled steel hot dipped galvanized; paint finish on exposed surfaces to match ceiling.

- G. Carrying Channels and Hangers: Galvanized steel; size and type to suit application and to rigidly secure the complete acoustic unit ceiling system, with maximum deflection of 1/360. Hangers shall be minimum 12 gauge.
- H. For harsh environment conditions:
 - 1. Grid: Armstrong stainless steel Prelude Plus 7200 Series.
 - 2. Carrying Channels and Hangers: Stainless steel; size and type to suit application and to rigidly secure the complete acoustic unit ceiling system, with maximum deflection of 1/360. Hangers shall be minimum 8-gauge stainless steel.

2.6 ACCESSORIES

- A. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
 - 1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing according to ASTM E488/E488M or ASTM E1512 as applicable, conducted by a qualified testing and inspecting agency.
 - a. Type: Postinstalled expansion anchors.
 - b. Corrosion Protection: Carbon-steel components zinc plated according to ASTM B633, Class SC 1 (mild) service condition.
 - c. Corrosion Protection: Stainless-steel components complying with ASTM F593 and ASTM F594, Group 1 Alloy 304 or 316.
 - 2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to **10** times that imposed by ceiling construction, as determined by testing according to ASTM E1190, conducted by a qualified testing and inspecting agency.
- B. Wire Hangers, Braces, and Ties: Provide wires as follows:
 - 1. Zinc-Coated, Carbon-Steel Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper.
 - 2. Stainless-Steel Wire: ASTM A580/A580M, Type 304, nonmagnetic.
 - 3. Size: Wire diameter sufficient for its stress at three times hanger design load (ASTM C635/C635M, Table 1, "Direct Hung") will be less than yield stress of wire, but not less than **0.106-inch- (2.69-mm-)** diameter wire.
- C. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.
- D. Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.
- E. Angle Hangers: Angles with legs not less than **7/8 inch (22 mm)** wide; formed with **0.04-inch- (1-mm-)** thick, galvanized-steel sheet complying with ASTM A653/A653M, **G90 (Z275)** coating designation; with bolted connections and **5/16-inch- (8-mm-)** diameter bolts.

- F. Curved Wall Angles: For curved walls, use flexible (or preformed) wall angle. Do not "notch" straight sections.

2.7 METAL EDGE MOLDINGS AND TRIM

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Armstrong World Industries, Inc.
 - 2. CertainTeed Corporation.
 - 3. Fry Reglet Corporation.
 - 4. Gordon, Inc.
 - 5. Rockfon (Rockwool International).
 - 6. USG Corporation.
- B. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations complying with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for of suspension-system runners.
 - 1. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.
 - 2. Finish: **Painted white**
- C. Extruded-Aluminum Edge Moldings and Trim: Where indicated, provide manufacturer's extruded-aluminum edge moldings and trim of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, and attachment and other clips, complying with seismic design requirements.
 - 1. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
 - 2. Baked-Enamel or Powder-Coat Finish: Minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with ASTM C635/C635M and coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.8 ACOUSTICAL SEALANT

- A. Acoustical Sealant: As specified in Division 07 Section "Joint Sealants."

2.9 MISCELLANEOUS MATERIALS

- A. Acoustical Tile Adhesive: Type recommended in writing by acoustical tile manufacturer, bearing UL label for Class 0-25 flame spread.
- B. Staples: **5/16-inch- (8-mm-)** long, divergent-point staples.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
- B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Testing Substrates: Before adhesively bonding tiles to wet-placed substrates such as cast-in-place concrete or plaster, test and verify that moisture level is below tile manufacturer's recommended limits.
- B. Measure each ceiling area and establish layout of acoustical tiles to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width tiles at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.
- C. Layout openings for penetrations centered on the penetrating items.

3.3 INSTALLATION

- A. General: Install acoustical panel ceilings to comply with ASTM C636 per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
 - 1. Fire-Rated Assembly: Install fire-rated ceiling systems according to tested fire-rated design.
- B. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 - 2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 - 3. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 - 4. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and

- appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
5. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 6. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 7. Do not attach hangers to steel deck tabs.
 8. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 9. Space hangers not more than **48 inches (1200 mm)** o.c. along each member supported directly from hangers, unless otherwise indicated; provide hangers not more than **24 inches (200 mm)** from ends of each member.
 10. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- D. Supply hangers or inserts for installation to the respective section in ample time and with clear instructions for their correct placement. Provide additional hangers and inserts as required.
- E. Use inserts, pigtail wire or other approved methods of attaching hangers and suspension systems. Approved powder driven type method of attaching will be permitted. Hanging from ducts, pipes and other equipment will not be permitted.
- F. Hang independently of walls, columns, ducts, pipes, conduit, etc. Where carrying members are spliced, avoid visible displacement of the longitudinal axis or face plane of adjacent members.
- G. Except where specifically dimensioned otherwise, center ceiling system(s) on room axis leaving equal border pieces. Border pieces shall be a minimum of **6 inches (150 mm)** wide. Border pieces of tile with score lines shall visually be no less than **6 inches (150 mm)**. Install ceiling systems per reflected ceiling plans where included.
- H. Recessed lighting fixtures will be supported with clips from or on main runners or cross runners; support these fixture loads by providing supplementary hangers located within **6 inches (150 mm)** of each corner of fixture. Should additional support be required to prevent deformation of ceiling system, such supports will be provided under Division 26.
- I. Air diffusers/grilles/registers will be supported by the grid system with clips from or on main runners or cross runners; support these fixture loads by providing supplementary hangers located within **6 inches (150 mm)** of each corner of fixture. Should additional support be required to prevent deformation of ceiling system, such support will be provided under Division 23.
- J. Do not permit installation of other fixtures that cause main runners and cross runners to be eccentrically loaded. Where such fixture installation produces rotation of runners, provide stabilizer bars.

- K. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 2. Screw attach moldings to substrate at intervals not more than **16 inches (400 mm)** o.c. and not more than **3 inches (75 mm)** from ends, leveling with ceiling suspension system to a tolerance of **1/8 inch in 12 feet (3.2 mm in 3.6 m)**. Miter corners accurately and connect securely.
 3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
 4. Where bullnose concrete block corners occur, provide preformed closers to match edge molding.
- L. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- M. Install acoustical tiles in coordination with suspension system and exposed moldings and trim. Place splines or suspension-system flanges into kerfed edges of tiles so tile-to-tile joints are interlocked.
1. Fit adjoining tiles to form flush, tight joints. Scribe and cut tiles for accurate fit at borders and around penetrations through ceiling.
 2. Hold tile field in compression by inserting leaf-type, spring-steel spacers between tiles and moldings, spaced **12 inches (305 mm)** o.c.
 3. Protect lighting fixtures and air ducts according to requirements indicated for fire-resistance-rated assembly.
- N. Install acoustical panels with undamaged edges and fit accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
1. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension system runners and moldings.
 2. For reveal-edged panels on suspension system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
 3. For reveal-edged panels on suspension system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension system surfaces and panel faces flush with bottom face of runners.
 4. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
 5. Install hold-down clips in areas indicated, in areas required by authorities having jurisdiction, and for fire-resistance ratings; space as recommended by panel manufacturer's written instructions, unless otherwise indicated.
 6. Install clean-room gasket system in areas indicated, sealing each panel and fixture as recommended by panel manufacturer's written instructions.
 7. Protect lighting fixtures and air ducts to comply with requirements indicated for fire-resistance-rated assembly.
 8. Form expansion joints within system. Form to accommodate plus or minus **1/2 inch (13 mm)** movement and maintain visual closure.

- O. Connections to all equipment, devices, fixtures, grilles, registers, diffusers and other appurtenances mounted in the ceilings shall be flexible so that they do not restrict the movement of the unrestrained ceilings. The ceilings must be “free-floating” and the flexible connections must allow for a minimum free movement of the ceiling system of 3/8” in all directions.
- P. Terminal ends of main runners and cross members shall be tied together or have some other approved means to prevent their spreading; spreader bars, strut stabilizers or similar devices used to tie ends of main runners and cross members together to prevent their spreading shall occur within 8” of each wall or other structure which may penetrate the ceiling.
- Q. The terminal ends of suspension members, both main runners and cross runners, shall have a minimum of 3/8” clearance from the wall.
- R. Permanent runner end attachment (e.g., pop rivets) for grid alignment purposes shall not be permitted.
- S. Allow for ceiling movement at rigid penetrations through ceiling tiles such as sprinkler piping, columns and exhaust duct drops by providing an oversized hole in the ceiling tile. Provide suitable escutcheons or closure details to cover gaps from view.
- T. Ceiling suspension system hanger wires shall be provided at all four corners of all light fixtures.
- U. Lighting fixtures weighing less than 10 lb. shall have one No. 12 gauge safety wire connected from the fixture housing to the structure above. It is not necessary for these safety wires to be taut.
- V. Lighting fixtures weighing greater than 10 lb. but less than 56 lb. shall have, in addition to the requirements outlined above, two no. 12-gauge hanger wires connected from the fixture housing (not the detachable end plates) to the structure above that act as safety wires. It is not necessary for these safety wires to be taut.
- W. Lighting fixtures weighing 56 lb. or more shall be supported directly from the structure above by approved hangers.
- X. Pendant-hung lighting fixtures shall be supported directly from the structure above using no less than no. 9-gauge wire or an approved alternate support. The ceiling suspension system shall not provide any direct support.
- Y. Rigid conduit shall not be used for attachment of the fixtures.
- Z. Flexible sprinkler hose fittings, ceiling-mounted air terminals or other services weighing less than 20 lb shall be positively attached to the ceiling suspension main runners or to cross runners that have the same carrying capacity as the main runners.
- AA. Flexible sprinkler hose fittings, air terminals or other services weighing more than 20 lb. but less than 56 lb shall have, in addition to the above requirements, two no. 12-gauge hanger wires connected from the terminal or service to the ceiling system hangers or to the structure above that act as safety wires. It is not necessary for these wires to be taut.
- BB. Flexible sprinkler hose fittings, air terminals or other services weighing more than 56 lb. shall be supported directly from the structure above by approved hangers.

3.4 ERECTION TOLERANCES

- A. Suspended Ceilings: Install main and cross runners level to a tolerance of **1/8 inch in 12 feet (3 mm in 3.6 m)**, non-cumulative.
- B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of **1/8 inch in 12 feet (3 mm in 3.6 m)**, non-cumulative.

3.5 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
 - 1. Periodic inspection during the installation of suspended ceiling grids according to ASCE/SEI 7.
 - 2. Compliance of seismic design.
- B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- C. Perform the following tests and inspections of completed installations of acoustical panel ceiling hangers and anchors and fasteners in successive stages and when installation of ceiling suspension systems on each floor has reached 20 percent completion, but no panels have been installed. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations of acoustical panel ceiling hangers show compliance with requirements.
 - 1. Within each test area, testing agency will select one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for **200 lbf (890 N)** of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for **440 lbf (1957 N)** of tension.
 - 2. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.
- D. Acoustical panel ceiling hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.6 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.
- B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

3.7 ADJUSTMENTS

- A. Adjust any sags or twists which develop in the ceiling system(s) and replace any part which is damaged or faulty.

END OF SECTION 09 51 13

SECTION 09 62 53.13 - SHEET CARPETING – SYNTHETIC TURF

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. The work of this section includes:
 - 1. Synthetic turf carpet.
 - 2. Adhesives.

1.3 PREINSTALLATION MEETINGS

- 1. Review methods and procedures related to carpet installation including, but not limited to, the following:
 - a. Review delivery, storage, and handling procedures.
 - b. Review ambient conditions and ventilation procedures.
 - c. Review subfloor preparation procedures.

1.4 ACTION SUBMITTALS

- A. Product Data: Submit product data, including manufacturer's guide specifications product sheet and installation instructions for specified products.
- B. Shop Drawings: Submit shop drawings showing layout, profiles, and product components, including anchorage, accessories, finish colors, patterns, and textures. Include field markings and decorations as indicated on the Drawings.
- C. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
 - 1. Carpet: **12-inch (300-mm)** square or sufficiently sized to clearly indicate pattern Sample.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.

- B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency.
- C. Sample Warranties: Sample of warranties specified in this Section.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who has completed a minimum of five (5) successful installations of similar character in service for no less than five (5) years.
- B. Manufacturer's Qualifications: Manufacturer capable of providing field service representation during construction and approving application method.
- C. Certificates: Certification of performance characteristics specified in this document shall be provided by the manufacturer.
- D. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockups at locations and in sizes shown on Drawings.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For carpet to include in maintenance manuals. Include the following:
 - 1. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
 - 2. Precautions for cleaning materials and methods that could be detrimental to carpet.
- B. Executed Warranty.

1.8 DELIVERY, STORAGE & HANDLING

- A. Comply with the Carpet and Rug Institute's CRI 104.
- B. Deliver carpet in original mill protective covering with mill register numbers and tags attached.
 - 1. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
- C. Storage and Protection: Store materials at temperature and humidity conditions recommended by manufacturer and protect from exposure to harmful weather conditions.

1.9 PROJECT CONDITIONS

- A. Temperature Requirements: Maintain air temperature in spaces where products will be installed for time period before, during, and after installation as recommended by manufacturer.
- B. Field Measurements: Verify actual measurements/openings by field measurements before fabrication; show recorded measurements on shop drawings. Coordinate field measurements and fabrication schedule with construction progress to avoid construction delays.

1.10 FIELD CONDITIONS

- A. Comply with the Carpet and Rug Institute's CRI 104 for temperature, humidity, and ventilation limitations.
- B. Environmental Limitations: Do not install carpet until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- C. Do not install carpet over concrete slabs until slabs have cured, are sufficiently dry to bond with adhesive, and have pH range recommended by carpet manufacturer.
- D. Do not commence with carpet installation until painting, finishing work and all work in or behind carpet surface is complete and ceilings and overhead work, tested, approved and completed.
- E. Field Measurements: Field check area dimensions for establishing carpet starting points and balancing areas of the installation. Verify actual measurements/openings by field measurements before fabrication; show recorded measurements on shop drawings. Coordinate field measurements and fabrication schedule with construction progress to avoid construction delays.

1.11 WARRANTY

- A. Special Warranty for Carpet: Manufacturer agrees to repair or replace components of carpet installation that fail in materials or workmanship within specified warranty period.
 - 1. Warranty does not include deterioration or failure of carpet due to unusual traffic, failure of substrate, vandalism, or abuse.
 - 2. Failures include, but are not limited to, the following:
 - a. More than 10 percent loss of face fiber, edge raveling, snags, and runs.
 - b. Loss of tuft bind strength.
 - c. Excess static discharge.
 - d. Delamination.

1.12 Warranty Period: 5 years from date of Final Acceptance

1.13 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Synthetic turf flooring: Full-width rolls equal to 5 percent of amount installed for each type indicated, but not less than **10 sq. yd. (8.3 sq. m)**.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Provide synthetic turf flooring, which has been manufactured and installed to maintain performance criteria stated by manufacturer without defects, damage, or failure.
- B. Provide system that is compliant with NCAA and Owner requirements for playability and safety.

2.2 MANUFACTURER

- 1. Basis of Design Product: FIELD TURF; Fit Turf.
- 2. Other Acceptable Manufacturers: Subject to compliance with requirements, submit Substitution Request prior to bidding.
 - 1. ECORE; Rage Turf Rally
 - 2. PLAE; Attack system
- B. Two-Part Urethane adhesive.
 - 1. Two-component urethane moisture cured, non sag, permanently elastic adhesive.
 - 2. Manufacturers standard Part-A and Part-B.
- C. Color: As selected by Architect from manufacturer's full range

2.3 SYSTEM DESCRIPTION

- A. Polyethylene monofilament fiber, stabilized dual-woven polypropylene primary backing, and 5mm urethane foam secondary backing. Durable blades offer exceptional ball roll/bounce and eliminate post fibrillation. Attack feels softer to the touch than turf with polypropylene fibers. Pile's omnidirectional curl eliminates matting and resists weather, rot, mold, mildew, and fungus growth.
 - 1. Fiber Pile Height: 12mm.
 - 2. Urethane Foam Backing Thickness: 5mm.
 - 3. Face Weight: 48oz /sq. yard.
 - 4. Tuft Bind: Greater than 8lbs.
 - 5. Grab Tear Strength (Average): Greater than 200lbs.

6. Elongation to Break: Greater than 60 percent.
7. Yarn Breaking Strength: Greater than 19lbs.
8. Stitch Rate: 3in.
9. Machine Gauge: 3/16 in.
10. Flammability: Passes ASTM D2859

2.4 INSTALLATION ACCESSORIES

- A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet performance.
- B. Examine carpet for type, color, pattern, and potential defects.
 1. Turf manufacturer's representative shall thoroughly inspect all materials delivered to the site for both quality and quantity to assure that the entire installation shall have sufficient materials to maintain the schedule and proper mixing ratios.
- C. Weather/climatic conditions may be a factor in delay of installation but shall not warrant the accrual of additional liquidated damages. Should the ambient outdoor temperature fall below 45 degrees Fahrenheit, the Turf Contractor and Owner will discuss available options and/or stoppage of work. However, the final decision shall be at the Turf Contractor's discretion.
- D. Concrete Slabs: Verify that finishes comply with requirements specified in Section 033000 "Cast-in-Place Concrete" and that surfaces are free of cracks, ridges, depressions, scale, and foreign deposits.
 1. Moisture Testing: Perform tests so that each test area does not exceed **200 sq. ft. (18.6 sq. m)** and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of **3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m)** in 24 hours.
 - b. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
 - c. Perform additional moisture tests recommended in writing by manufacturers. Proceed with installation only after substrates pass testing.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. General: Comply with CRI Carpet Installation Standard, Section 7, "Site Conditions – All Installations" and with carpet manufacturer's written installation instructions for preparing substrates.
- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions **1/8 inch (3 mm)** wide or wider, and protrusions more than **1/32 inch (0.8 mm)**, unless more stringent requirements are required by manufacturer's written instructions.
- C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet manufacturer.
- D. Broom and vacuum clean substrates to be covered immediately before installing carpet.

3.3 INSTALLATION

- A. Comply with CRI Carpet Installation Standard and carpet manufacturer's written installation instructions for the following:
 - 1. Direct-glue-down installation.
- B. Comply with carpet manufacturer's written recommendations and Shop Drawings for seam locations and direction of carpet; maintain uniformity of carpet direction and lay of pile. At doorways, center seams under the door in closed position, unless noted otherwise in drawings.
- C. Do not bridge building expansion joints with carpet.
- D. Cut and fit carpet to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet manufacturer.
- E. Extend carpet into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.

3.4 FIELD MARKINGS AND DECORATIONS

- A. Field markings and decorations shall be installed in accordance with approved project shop drawings.

3.5 CLEAN UP

- A. All usable remnants of new material shall become the property of the Owner.

3.6 CLEANING AND PROTECTING

- A. Perform the following operations immediately after installing carpet:
 - 1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet manufacturer.
 - 2. Remove yarns that protrude from carpet surface.
 - 3. Vacuum carpet using commercial machine with face-beater element.
- B. Protect installed carpet to comply with CRI Carpet Installation Standard, Section 20, "Protection of Indoor Installations."
- C. Protect carpet against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet manufacturer and carpet adhesive manufacturer.

END OF SECTION 09 62 53.13

SECTION 09 65 13 - RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Thermoset-rubber base.
- 2. Rubber stair accessories.
- 3. Rubber molding accessories.

- B. Related Sections:

- 1. Division 09 Section "Resilient Flooring" for resilient floor coverings.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

- 1. Include product data specific to accessory adhesives for each specified product.

- B. Samples: For each exposed product and for each color and texture specified, not less than 12 inches (300 mm) long.

- C. Samples for Initial Selection: For each type of product indicated.

- D. Samples for Verification: For each type of product indicated and for each color, texture, and pattern required in manufacturer's standard-size Samples, but not less than 12 inches (300 mm) long.

- E. Product Schedule: For resilient base and accessory products. Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

- A. Provide Architect with test procedure or ASTM number, required results for acceptability accompanied by actual test results (from independent testing laboratory where required), and

certification from manufacturer that substrate is acceptable for installation of their materials. Tests include:

1. Moisture test - ASTM F1869 (Calcium Chloride Test)
2. ASTM F710
3. ASTM F2170
4. pH level test
5. Adhesive bond test

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Furnish not less than 10 linear feet (3 linear m for every 500 linear feet (150 linear m) or fraction thereof, of each type, color, pattern, and size of resilient product installed.

1.6 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
1. Coordinate mockups in this Section with mockups specified in other Sections.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 65 deg F (18 deg C) or more than 90 deg F (32 deg C).

1.8 FIELD CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F (21 deg C) or more than 95 deg F (35 deg C) in spaces to receive resilient products during the following periods:
1. 48 hours before installation
 2. During installation
 3. Until Final Acceptance

- B. Ensure concrete floors' pH levels do not exceed the written recommendations of the resilient flooring manufacturer and/or the adhesive manufacturer. Refer to resilient flooring manufacturer's written instructions for guidelines on acceptable pH levels.
- C. Ensure concrete floors to receive resilient flooring are free of coatings, finishes, dirt, curing compounds, or other substances which may affect the rate of moisture dissipation from the concrete or the adhesion of resilient flooring to the concrete.
- D. Install resilient flooring and accessories after the other finishing operations, including painting, have been completed. Close spaces to traffic during the installation of the flooring.
- E. After installation and until Final Acceptance, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F (13 deg C) or more than 95 deg F (35 deg C)

1.9 GUARANTEE/WARRANTY

- A. Special Warranty: Provide written warranty from manufacturer and Subcontractor in accordance with Division 01 "Product Requirements" and "Closeout Procedures". All materials shall be warranted for 2 years against manufacturing defects. The subcontractor shall be responsible for any replacement and for defective installation.

PART 2 - PRODUCTS

2.1 THERMOSET-RUBBER BASE {B1}

- A. Manufacturers
 - 1. Basis of Design Manufacturer: Johnsonite; a Tarkett company
 - 2. Other Acceptable Manufacturers: Subject to compliance with requirements:
 - a. Burke Mercer Flooring Products; Division of Burke Industries, Inc.
 - b. Flexco.
 - c. Roppe Corporation, USA
- B. Product Standard: ASTM F1861, Type TS (rubber, vulcanized thermoset), Group I (solid, homogeneous).
 - 1. Style and Location:
 - a. Style A, Straight: Provide in areas with carpet
 - b. Style B, Cove: Provide in areas with resilient floor coverings .
- C. Thickness: 0.125 inch (3.2 mm).
- D. Height: 4 inches(**102 mm**)

- E. Lengths: One length per surface.
- F. Outside Corners: Job formed.
- G. Inside Corners: Job formed.
- H. Colors: As indicated on Finish Schedule

2.2 RUBBER STAIR ACCESSORIES

- A. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.
 - 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- B. Manufacturers
 - 1. Basis of Design Manufacturer: Johnsonite; a Tarkett company.
 - 2. Other Acceptable Manufacturers: Subject to compliance with requirements:
 - a. Armstrong World Industries, Inc.
 - b. Burke Mercer Flooring Products; a division of Burke Industries Inc.
 - c. Flexco.
 - d. Nora Systems, Inc.
 - e. Roppe Corporation, USA.
 - f. VPI Corporation.
- C. Stair Treads: ASTM F2169.
 - 1. Type: TS (rubber, vulcanized thermoset).
 - 2. Surface Design:
 - a. Class 1, Smooth (flat).
 - b. Class 2, Pattern: Raised-diamond design.
 - 3. Manufacturing Method: Group 2, tread with contrasting color for the visually impaired.
 - 4. Nosing Style: Square, adjustable to cover angles between 60 and 90 degrees.
 - 5. Nosing Height: 1-1/2 inches (38 mm).
 - 6. Thickness: 1/4 inch (6 mm) and tapered to back edge.
 - 7. Size: Lengths and depths to fit each stair tread in one piece.
 - 8. Integral Risers: Smooth, flat; in height that fully covers substrate.
- D. Separate Risers: Smooth, flat; in height that fully covers substrate; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.
 - 1. Style: Toeless, by length matching treads.
 - 2. Thickness: Manufacturer's standard.

- E. Stringers: Height and length after cutting to fit risers and treads and to cover stair stringers, produced by same manufacturer as treads, and recommended by manufacturer for installation with treads.
 - 1. Thickness: Manufacturer's standard.
- F. Landing Tile: Matching treads; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.
- G. Locations: Provide rubber stair accessories in areas indicated.
- H. Colors and Patterns: As indicated on Finish Schedule.

2.3 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by manufacturer to suit resilient products and substrate conditions indicated.
 - 1. Adhesives shall have a VOC content of 50 g/L or less and 60 g/L or less for rubber stair treads.
- C. Stair-Tread-Nose Filler: Two-part epoxy compound recommended by resilient tread manufacturer to fill nosing substrates that do not conform to tread contours.
- D. Metal Edge Strips: Stainless steel
- E. Floor Polish: Provide protective liquid floor polish products as recommended by resilient stair tread manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Installation of resilient products indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
- B. Concrete Substrates for Resilient Stair Treads and Accessories: Ensure substrate surfaces are smooth, flat, and acceptable substrate. Prepare according to ASTM F710. Commencement of installation indicates acceptance of substrate(s).
 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 2. Perform an adhesive bond test, as recommended by the resilient flooring manufacturer, on subfloors to determine if surfaces are dry; free of curing and hardening compounds, old adhesive and any other coatings; and ready to receive resilient flooring.
 3. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 4. Alkalinity and Adhesion Testing: Perform pH test for alkalinity prior to the installation of resilient flooring. pH levels shall not exceed the written recommendations of the resilient flooring manufacturer and/or the adhesive manufacturer. Refer to resilient flooring manufacturer's written instructions for guidelines on acceptable pH levels.
 5. Moisture Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
 - a. Perform anhydrous calcium chloride test, ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - b. Perform relative humidity test using in situ probes, ASTM F2170. Proceed with installation only after substrates have maximum 75 percent relative humidity level measurement.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install resilient products until they are same temperature as the space where they are to be installed.
 1. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.
- E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

3.3 RESILIENT BASE INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient base.

- B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.
- C. Install resilient base in lengths as long as practicable without gaps at seams and with tops of adjacent pieces aligned.
- D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
- E. Do not stretch resilient base during installation.
- F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.
- G. Job-Formed Corners:
 - 1. Outside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches (76 mm) in length.
 - a. Form without producing discoloration (whitening) at bends.
 - 2. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches (76 mm) in length.
 - a. Miter or cope corners to minimize open joints.

3.4 RESILIENT ACCESSORY INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient accessories.
- B. Resilient Stair Accessories:
 - 1. Use stair-tread-nose filler to fill nosing substrates that do not conform to tread contours.
 - 2. Tightly adhere to substrates throughout length of each piece.
 - 3. For treads installed as separate, equal-length units, install to produce a flush joint between units.
- C. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor covering that would otherwise be exposed.

3.5 INSTALLATION - STAIR TREADS

- A. Install stair treads, one piece for full width of tread.
- B. Lightly sand back of each tread to remove any foreign matter and improve bond strength.

- C. Apply epoxy nose filler at nosing in accord with manufacturer's recommendations.
- D. Adhere over entire surface and fit accurately and securely.

3.6 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.
- B. Perform the following operations immediately after completing resilient-product installation:
 - 1. Remove adhesive and other blemishes from surfaces.
 - 2. Sweep and vacuum horizontal surfaces thoroughly.
 - 3. Damp-mop horizontal surfaces to remove marks and soil.
- C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, adhesive, and blemishes from resilient stair treads before applying liquid floor polish.
 - 1. As indicated by manufacturer
- E. Cover resilient products subject to wear and foot traffic until Final Acceptance.

3.7 WASTE MANAGEMENT

- A. Separate waste in accordance with the Waste Management Plan and place in designated areas in the following categories for reuse.
- B. Close and seal tightly all partly used adhesive containers and store protected in well-ventilated, fire-safe area at moderate temperature.

END OF SECTION 09 65 13

SECTION 09 65 16 – RESILIENT TILE AND SHEET FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Unbacked rubber sheet flooring.
 - 2. Solid vinyl floor tile.
- B. Related Sections:
 - 1. Division 09 Section "Resilient Base and Accessories" for resilient base, reducer strips, and other accessories installed with resilient floor coverings.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. With product data for each floor finish material specified, provide manufacturer's slip resistance data from tests performed by an independent testing agency in accordance with ANSI A326.3 dynamic coefficient of friction (DCOF) AcuTest. Provide field testing where manufacturers test data is not available.
- B. Shop Drawings: For each type of resilient sheet flooring.
 - 1. Include sheet flooring layouts, locations of seams, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
 - 2. Show details of special patterns.
- C. Samples: For each exposed product and for each color, texture, and pattern specified, in manufacturer's standard size, but not less than 6-by-9-inch (150-by-230-mm) sections.
 - 1. For heat-welding bead, manufacturer's standard-size Samples, but not less than 9 inches (230 mm) long, of each color required.
- D. Samples for Verification: In manufacturer's standard size, but not less than 6-by-9-inch (150-by-230-mm) sections of each different color and pattern of floor covering required.
 - 1. For heat-welding bead, manufacturer's standard-size Samples, but not less than 9 inches (230 mm) long, of each color required.

- E. Seam Samples: For seamless-installation technique indicated and for each floor covering product, color, and pattern required; with seam running lengthwise and in center of 6-by-9-inch (150-by-230-mm) Sample applied to a rigid backing and prepared by Installer for this Project.
- F. Product Schedule: For resilient floor coverings. Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

- A. Provide Architect with test procedure or ASTM number, required results for acceptability, accompanied by actual test results (from independent testing laboratory where required), and certification from manufacturer that substrate is acceptable for installation of their materials. Tests include:
 - 1. Moisture test – ASTM F1869 (Calcium Chloride Test)
 - 2. pH level test
 - 3. Adhesive bond test
- B. Qualification Data: For qualified Installer.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data For Owner: For each type of flooring to include in maintenance manuals, including slip-resistance maintenance requirements.
- B. Executed warranty

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Resilient Sheet Flooring: Furnish quantity not less than 10 linear feet (3 linear m) for every 500 linear feet (150 linear m) or fraction thereof, in roll form and in full roll width for each color, pattern, and type of floor covering installed.
 - 2. Floor Tile: Furnish one box for every 50 boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for floor covering installation and seaming method indicated.
 - 1. Engage an installer who employs workers for this Project who are trained or certified by resilient sheet flooring manufacturer for installation techniques required.
- B. Slip Resistance Field Testing

1. Contractors, who fail to submit adequate slip resistance testing from product manufacturers, shall engage the services of a qualified testing agency to perform slip resistance field testing on the installed mockup.
2. Test results shall be provided to the Architect and Owner along with required product data.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient floor coverings and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F (10 deg C) or more than 90 deg F (32 deg C). Store rolls upright.

1.9 FIELD CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F (21 deg C) or more than 85 deg F (29 deg C), in spaces to receive floor coverings during the following time periods:
 1. 48 hours before installation
 2. During installation
 3. 48 hours after installation
- B. After installation and until Final Acceptance, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F (13 deg C) or more than 95 deg F (35 deg C)
- C. Close spaces to traffic during floor covering installation.
- D. Close spaces to traffic for 48 hours after floor covering installation.
- E. Install floor coverings after other finishing operations, including painting, have been completed.

1.10 WARRANTY

- A. Flooring Manufacturers Standard Warranty: Manufacturer warrants that flooring products will be free from defects for a period of two-years from date of Final Acceptance.
- B. Flooring Installers Warranty: Installer warrants that the flooring installation will be free from defects in workmanship for a period of two years for the date of Final Acceptance.

PART 2 - PRODUCTS

2.1 BASIS OF DESIGN MANUFACTURER PRODUCTS AND LEAD TIMES:

- A. Products listed as Basis of Design herein and on the Finish Schedule have been coordinated with other finishes and approved by the Owner for color and pattern in schemes throughout the project area.
- B. Proposed substitutions must be approved by the Owner and Architect prior to award or they will not be considered. The Contractor shall be responsible to match all listed characteristics, including color and pattern, to the satisfaction of the Owner and Architect. Submit products for consideration per the requirements of Division 01 Section "Substitution Procedures."
- C. Substitutions for Cause proposed after award shall be submitted for approval per the requirements of Division 01 Section "Substitution Procedures." Substitutions for Convenience proposed after award will not be considered.
- D. Many Division 09 products are long lead. The Contractor is responsible to verify all lead times sufficiently in advance of submittal documents, mockups and need to avoid schedule conflicts. Neither the Owner nor Architect will be held responsible for inaction on the part of the Contractor in ordering material with enough lead time to avoid additional "quick ship" costs or delays to the construction schedule in order to accomplish all requirements herein.

2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For resilient floor tile, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.
 - 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- B. Dynamic Coefficient of Friction: For resilient flooring installed on floor surfaces.
 - 1. For floor products without manufacturers previous testing showing compliance:
 - a. Test floors wet and dry in accordance with ANSI A326.3 dynamic coefficient of friction (DCOF) AcuTest.
 - 1) Flooring products which are required to be field tested and do not satisfactorily pass field testing standards with a DCOF of 0.42 or higher will not be permitted to be installed on the project.

2.3 UNBACKED RUBBER SHEET FLOORING

- A. Products:
 - 1. Basis of Design: Ecore International, Basic Fit Rolls (RF1)
 - 2. Other Acceptable Manufacturers subject to compliance with requirements.

- a. Roppe Corp.; Recoil Fitness Flooring
 - b. Mannington Mills, Inc.; Reset
 - c. Johnsonite, a Tarkett company; Johnsonite Replay
- B. Product Standard: ASTM F1859.
- 1. Type: Type I, homogeneous rubber sheet floor covering
 - 2. Thickness: As standard with manufacturer
 - 3. Hardness: Manufacturer's standard hardness, measured using Shore, Type A durometer per ASTM D2240.
- C. Wearing Surface: Smooth
- D. Sheet Width: As standard with manufacturer
- E. Seamless-Installation Method: Heat welded
- F. Colors and Patterns: As indicated on Finish Schedule

2.4 SOLID VINYL FLOOR TILE

- A. Products:
- 1. Basis of Design: Interface, Inc., Level Set Natural Woodgrains (LVT1)
- B. Other Acceptable Manufacturers subject to compliance with requirements: ASTM F1700 Tile Standard: ASTM F1700.
- a. Mohawk Group; Large and Local Wood
 - b. Patcraft; a division of Shaw Industries, Inc.; Natural State 20 Click
 - c. Mannington Mills, Inc.; Spacia
- 2. Class: Class III, printed film vinyl tile
 - 3. Type: Type B, embossed surface
- C. Thickness: 4.5mm
- D. Size: 25cm by 1m (9.845 by 39.38 inches)
- E. Seaming Method: Standard
- F. Colors and Patterns: As indicated on Finish Schedule
- G. Products:
- 1. Basis of Design: Bentley Mills; Hybrid Vinyl Tile (HVT1)
- H. Other Acceptable Manufacturers subject to compliance with requirements. Tile Standard: ASTM F1700.

1. Class: Class III, printed film vinyl tile
 2. Type: Type B, embossed surface
- I. Thickness: 2.5mm
 - J. Size: 18 inches by 18 inches (45.72 cm by 45.72 cm)
 - K. Seaming Method: Standard
 - L. Colors and Patterns: As indicated on Finish Schedule

2.5 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by manufacturer to suit floor covering and substrate conditions indicated.
- C. Seamless-Installation Accessories for sheet flooring:
 1. Heat-Welding Bead: Manufacturer's solid-strand product for heat welding seams
 - a. Color: As indicated on Finish Schedule
 2. Chemical-Bonding Compound: Manufacturer's product for chemically bonding seams.
 3. Chemical-Bonding Compound shall have a VOC content of 510 g/L or less.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor coverings.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of floor coverings.

- B. Concrete Substrates: Prepare according to ASTM F710.
1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by resilient sheet flooring manufacturer. Do not use solvents.
 3. Alkalinity and Adhesion Testing: Perform tests recommended by resilient sheet flooring manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 9 pH.
 4. Moisture Testing: Perform tests so that each test area does not exceed 1000 sq. ft. (304.8 sq. m) , and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install floor coverings until they are same temperature as space where they are to be installed.
1. At least 48 hours in advance of installation, move flooring and installation materials into spaces where they will be installed.
- E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient sheet flooring.

3.3 RESILIENT SHEET FLOOR COVERING INSTALLATION

- A. Comply with manufacturer's written instructions for installing floor coverings.
- B. Unroll floor coverings and allow them to stabilize before cutting and fitting.
- C. Lay out floor coverings as follows:
1. Maintain uniformity of floor covering direction
 2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least 6 inches (152 mm) away from parallel joints in floor covering substrates
 3. Match edges of floor coverings for color shading at seams
 4. Avoid cross seams
- D. Scribe and cut floor coverings to butt neatly and tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, and door frames.
- E. Extend floor coverings into toe spaces, door reveals, closets, and similar openings.

- F. Maintain reference markers, holes, or openings that are in place or marked for future cutting by repeating on floor coverings as marked on substrates. Use chalk or other nonpermanent marking device.
- G. Install resilient sheet flooring on covers for telephone and electrical ducts and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of flooring installed on covers and adjoining flooring. Tightly adhere flooring edges to substrates that abut covers and to cover perimeters.
- H. Adhere resilient sheet flooring to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- I. Seamless Installation:
 - 1. Heat-Welded Seams: Comply with ASTM F1516. Rout joints and use welding bead to permanently fuse sections into a seamless floor covering. Prepare, weld, and finish seams to produce surfaces flush with adjoining floor covering surfaces.
 - 2. Install metal corners at inside and outside corners.

3.4 FLOOR TILE INSTALLATION

- A. Comply with manufacturer's written instructions for installing floor tile.
- B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
 - 1. Lay tiles square with room axis
- C. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.
 - 1. Lay tiles with grain running in one direction
- D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.
- E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.
- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device.
- G. Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in finished floor areas. Maintain overall continuity of color and pattern

between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.

- H. Adhere floor tiles to flooring substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.5 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protection of resilient floor coverings.
- B. Perform the following operations immediately after completing floor covering installation:
 - 1. Remove adhesive and other blemishes from floor covering surfaces
 - 2. Sweep and vacuum floor coverings thoroughly
 - 3. Damp-mop floor coverings to remove marks and soil
- C. Protect resilient floor coverings from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, visible adhesive and surface blemishes from floor covering before applying floor polish.
 - 1. Apply per manufacturer's recommendation.
- E. Cover resilient floor coverings until Final Acceptance.

END OF SECTION 09 65 16

SECTION 09 65 36 - STATIC-CONTROL RESILIENT FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Static-dissipative, solid vinyl floor tile

- B. Related Requirements:

- 1. Division 09 Section "Resilient Base and Accessories" for resilient base, reducer strips, and other accessories installed with static-control resilient flooring.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site

- 1. Review methods and procedures related to static-control resilient flooring
 - a. Examination and preparation of substrates to receive static-control resilient flooring.
 - b. Installation including seamless installation techniques.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

- 1. Include product data specific to resilient flooring adhesives for each specified product.
- 2. With product data for each floor finish material specified, manufacturer shall provide slip resistance data from tests performed by an independent testing agency in accordance with ANSI A326.3 dynamic coefficient of friction (DCOF) AcuTest. Provide field testing where manufacturers test data is not available.

- B. Shop Drawings: For each type of static-control resilient flooring. Include floor-covering layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.

- 1. Submit grounding diagram showing location of grounding strips and connections.

- C. Samples for Initial Selection: For each type of static-control resilient flooring.

- D. Samples for Verification: For each type of static-control resilient flooring, of size indicated below:
 - 1. Floor Tile: Full-size units.
- E. Seam Samples: For seamless-installation technique indicated and for each static-control resilient flooring product, color, and pattern required; with seam running lengthwise and in center of 6-by-9-inch (152-by-230-mm) Product Schedule: For static-control resilient flooring. Use same designations indicated on Drawings.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Provide Architect with test procedure or ASTM number, required results for acceptability, accompanied by actual test results (from independent testing laboratory where required), and certification from manufacturer that substrate is acceptable for installation of their materials. Tests include:
 - 1. Moisture test – ASTM F1869 (Calcium Chloride Test)
 - 2. pH level test
 - 3. Adhesive bond test
- C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for static-control resilient flooring.
- D. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data For Owner: For each type of flooring to include in maintenance manuals, including slip-resistance maintenance requirements.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for static-control resilient flooring
 - 1. Engage an installer who employs workers for this Project who are trained or certified by manufacturer for installation techniques required.
- B. Slip Resistance Field Testing

1. Contractors, who fail to submit adequate slip resistance testing from product manufacturers, shall engage the services of a qualified testing agency to perform slip resistance field testing on the installed mockup.
2. Test results shall be provided to the Architect and Owner along with required product data.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store static-control resilient flooring and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer but not less than 50 deg F (10 deg C) or more than 90 deg F (32 deg C).
 1. Floor Tile: Store on flat surfaces.

1.10 PROJECT CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F (21 deg C) or more than 85 deg F (29 deg C), in spaces to receive static-control resilient flooring during the following time periods:
 1. 48 hours before installation.
 2. During installation.
 3. 48 hours after installation.
- B. Until Final Acceptance, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F (13 deg C) or more than 95 deg F (35 deg C).
- C. Close spaces to traffic during static-control resilient flooring installation.
- D. Close spaces to traffic for 48 hours after static-control resilient flooring installation.
- E. Install static-control resilient flooring after other finishing operations, including painting, have been completed.

1.11 WARRANTY

- A. Flooring Manufacturers Standard Warranty: Manufacturer warrants that flooring products will be free from defects for a period of two-years from date of Final Acceptance.
- B. Flooring Installers Warranty: Installer warrants that the flooring installation will be free from defects in workmanship for a period of two years for the date of Final Acceptance.

PART 2 - PRODUCTS

2.1 BASIS OF DESIGN MANUFACTURER PRODUCTS AND LEAD TIMES:

- A. Products listed as Basis of Design herein and on the Finish Schedule have been coordinated with other finishes and approved by the Owner for color and pattern in schemes throughout the project area.
- B. Proposed substitutions must be approved by the Owner and Architect prior to award or they will not be considered. The Contractor shall be responsible to match all listed characteristics, including color and pattern, to the satisfaction of the Owner and Architect. Submit products for consideration per the requirements of Division 01 Section "Substitution Procedures."
- C. Substitutions for Cause proposed after award shall be submitted for approval per the requirements of Division 01 Section "Substitution Procedures." Substitutions for Convenience proposed after award will not be considered.
- D. Many Division 09 products are long lead. The Contractor is responsible to verify all lead times sufficiently in advance of submittal documents, mockups and need to avoid schedule conflicts. Neither the Owner nor Architect will be held responsible for inaction on the part of the Contractor in ordering material with enough lead time to avoid additional "quick ship" costs or delays to the construction schedule in order to accomplish all requirements herein.

2.2 PERFORMANCE REQUIREMENTS

- A. Static-Dissipative Properties: Provide static-control resilient flooring with static-control properties indicated as determined by testing identical products per test method indicated by an independent testing and inspecting agency.
 - a. Electrical Resistance: Test per ASTM F150 with 100-V applied voltage. Average greater than 1 megohm and less than or equal to 1000 megohms when test specimens are tested surface to ground.
 - b. Average greater than 1 megohm and less than or equal to 1000 megohms when installed floor coverings are tested surface to ground.
- B. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.
 - 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- C. Dynamic Coefficient of Friction: For resilient flooring installed on floor surfaces.
 - 1. For floor products without manufacturers previous testing showing compliance:
 - a. Test floors wet and dry in accordance with ANSI A326.3 dynamic coefficient of friction (DCOF) AcuTest.
 - 1) Flooring products which are required to be field tested and do not satisfactorily pass field testing standards with a DCOF of 0.42 or higher will not be permitted to be installed on the project.

2.3 STATIC-DISSIPATIVE RESILIENT FLOOR COVERINGS

- A. Static-Dissipative, Solid Vinyl Floor Tile: ASTM F1700, Class I (monolithic), Type A (smooth surface).
 - 1. Basis of Design: Forbo Colorex SD.
 - 2. Other Acceptable manufacturers subject to compliance with requirements herein and on Finish Schedule:
 - a. Flexco; Delane ESD
 - b. Tarkett; iQ Granit SD
 - c. Polyflor, Ltd., Distributed by Gerbert Limited; Finesse SD
 - 3. Thickness: In manufacturer's standard thickness, but not less than 0.08 inch (2.0 mm).
 - 4. Size: **24 by 24 inches (610 by 610 mm)**
 - 5. Colors and Patterns: Per Finish Schedule

2.4 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified portland cement or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.
- B. Static-Control Adhesive: Provided or approved by manufacturer; type that maintains electrical continuity of floor-covering system to ground connection.
- C. Grounding Strips: Provided or approved by manufacturer; type and size that maintains electrical continuity of floor-covering system to ground connection.
- D. Maintenance Floor Tiles: Special floor tiles inscribed "Conductive floor. Do not wax."
- E. Floor Polish: Provide protective, static-control liquid floor polish products as recommended by floor-covering manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer and manufacturer's representative present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion or static-control characteristics of floor coverings.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions and with oversight by manufacturer's representative to ensure adhesion of static-control resilient flooring and electrical continuity of floor-covering systems.
- B. Concrete Substrates: Prepare according to ASTM F710.
 - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - 2. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
 - 3. Moisture Testing: Perform tests recommended by manufacturer and as follows. Proceed with installation only after substrates pass testing.
 - a. Perform anhydrous calcium chloride test according to ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - b. Perform relative-humidity test using in situ probes according to ASTM F2170. Proceed with installation only after substrates have maximum 75 percent relative-humidity level measurement.
- C. Access Flooring Panels: Remove protective film of oil or other coating using method recommended by access flooring manufacturer.
- D. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
- E. Do not install static-control resilient flooring until it is same temperature as space where it is to be installed.
 - 1. Move static-control resilient flooring and installation materials into spaces where they will be installed at least 48 hours in advance of installation.
- F. Sweep and vacuum substrates to be covered by static-control resilient flooring immediately before installation.

3.3 INSTALLATION, GENERAL

- A. Install static-control resilient flooring according to manufacturer's written instructions and with oversight by manufacturer's representative.
- B. Embed grounding strips in static-control adhesive. Extend grounding strips beyond perimeter of static-control resilient floor-covering surfaces to ground connections.
- C. Scribe, cut, and fit static-control resilient flooring to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.
- D. Extend static-control resilient flooring into toe spaces, door reveals, closets, and similar openings. Extend static-control resilient flooring to center of door openings.

- E. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on static-control resilient flooring as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device.
- F. Install static-control resilient flooring on covers for telephone and electrical ducts, and similar items in installation areas. Maintain overall continuity of color and pattern with pieces of static-control resilient flooring installed on covers. Tightly adhere static-control resilient flooring edges to substrates that abut covers and to cover perimeters.
- G. Adhere static-control resilient flooring to substrates using a full spread of static-control adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 FLOOR-TILE INSTALLATION

- A. Comply with manufacturer's written instructions for installing floor tile.
- B. Lay floor tiles square with room axis. Match floor tiles for color and pattern by selecting floor tiles from cartons in same sequence as manufactured and packaged if so numbered. Discard broken, cracked, chipped, or deformed floor tiles.
- C. Lay static-dissipative, vinyl composition floor tiles with grain running in one direction. In each space where conductive, solid vinyl floor tile is installed, install maintenance floor tile identifying conductive floor tile in locations approved by Architect.

3.5 FIELD QUALITY CONTROL

- A. Testing: Owner will engage a qualified testing agency to test electrical resistance of static-control resilient flooring for compliance with requirements.
 - 1. Arrange for testing after static-control adhesives have fully cured and static-control resilient flooring has stabilized to ambient conditions and after ground connections are completed.
 - 2. Arrange for testing of static-control resilient flooring before and after performing floor polish procedures.
- B. Static-control resilient flooring will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protection of static-control resilient flooring.
- B. Perform the following operations immediately after completing static-control resilient flooring:
 - 1. Remove static-control adhesive and other blemishes from exposed surfaces.

2. Sweep and vacuum surfaces thoroughly.
 3. Damp-mop surfaces to remove marks and soil.
- C. Protect static-control resilient flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
1. Do not wax static-control resilient flooring.
 2. If recommended in writing by manufacturer, apply protective static-control floor polish formulated to maintain or enhance floor covering's electrical properties; ensure static-control resilient flooring surfaces are free from soil, static-control adhesive, and surface blemishes.
 - a. Verify that both floor polish and its application method are approved by manufacturer and that floor polish will not leave an insulating film that reduces static-control resilient flooring's effectiveness for static control.
- D. Cover static-control resilient flooring until Final Acceptance.

END OF SECTION 09 65 36

SECTION 09 66 23 - RESINOUS MATRIX TERRAZZO FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Thin-set epoxy-resin terrazzo flooring and base.

- B. Related Sections:

- 1. Division 07 Section "Joint Sealants" for sealants installed with terrazzo.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

- 1. Review methods and procedures related to terrazzo including, but not limited to, the following:
 - a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
 - b. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - c. Review special terrazzo designs and patterns.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

- 1. With product data for each floor finish material specified, manufacturer shall provide slip resistance data from tests performed by an independent testing agency in accordance with ANSI A326.3 dynamic coefficient of friction (DCOF) AcuTest. Provide field testing where manufacturers test data is not available.

- B. Shop Drawings: Include terrazzo installation requirements. Include plans, elevations, sections, component details, and attachments to other work. Show layout of the following:

- 1. Divider strips

2. Control-joint strips, including the location of shrinkage cracks and control joints in substrate.
 3. Repair of substrate cracks.
 4. Accessory strips
 5. Abrasive strips
 6. Stair treads, risers, and landings
 7. Precast terrazzo jointing and edge configurations
 8. Terrazzo patterns
- C. Samples: For each exposed product and for each color and texture specified, 6 inches (150 mm) in size.
- D. Samples for Verification: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected. Label each terrazzo sample to identify manufacturer's matrix color and aggregate types, sizes, and proportions. Prepare samples of same thickness and from same material to be used for the Work in size indicated below:
1. Terrazzo: 6-inch- (150-mm-) square Samples
 2. Accessories: 6-inch- (150-mm-) long Samples of each exposed strip item required

1.5 INFORMATIONAL SUBMITTALS

- A. Installer Certificates: Signed by manufacturers certifying that installers comply with requirements.
- B. Qualification Data: For qualified Installer.
- C. Material Certificates: For each type of terrazzo material or product, from manufacturer.
- D. Preinstallation moisture-testing reports.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data For Owner: For each type of flooring to include in maintenance manuals, including slip-resistance maintenance requirements.
- B. Executed warranty

1.7 QUALITY ASSURANCE

- A. Installer Qualifications:
 1. Engage an installer who is a contractor member of NTMA.
 2. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer's products.

- B. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups for terrazzo including accessories.
 - a. Size: Minimum 100 sq. ft. (9 sq. m) of typical poured-in-place flooring and base condition for each color and pattern in locations directed by Architect.
 - b. Include , first two stair treads
 - 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- C. Slip Resistance Field Testing
 - 1. Contractors, who fail to submit adequate slip resistance testing from product manufacturers, shall engage the services of a qualified testing agency to perform slip resistance field testing on the installed mockup.
 - 2. Test results shall be provided to the Architect and Owner along with required product data.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with sources or manufacturer's name, material or product brand name, and lot number if any.
- B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.
- B. Field Measurements: Verify actual dimensions of construction contiguous with precast terrazzo by field measurements before fabrication.
- C. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.
- D. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.
- E. Control and collect dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.
 - 1. Provide dustproof partitions and temporary enclosures to limit dust migration and to isolate areas from noise.

1.10 GUARANTEE/WARRANTY

- A. Manufacturers and Installer Warranty: Manufacturer and installer shall warranty the terrazzo work for a period of two years against cracking and discoloration.

PART 2 - PRODUCTS

2.1 BASIS OF DESIGN MANUFACTURER PRODUCTS AND LEAD TIMES:

- A. Products listed as Basis of Design herein and on the Finish Schedule have been coordinated with other finishes and approved by the Owner for color and pattern in schemes throughout the project area.
- B. Proposed substitutions must be approved by the Owner and Architect prior to award or they will not be considered. The Contractor shall be responsible to match all listed characteristics, including color and pattern, to the satisfaction of the Owner and Architect. Submit products for consideration per the requirements of Division 01 Section "Substitution Procedures."
- C. Substitutions for Cause proposed after award shall be submitted for approval per the requirements of Division 01 Section "Substitution Procedures." Substitutions for Convenience proposed after award will not be considered.
- D. Many Division 09 products are long lead. The Contractor is responsible to verify all lead times sufficiently in advance of submittal documents, mockups and need to avoid schedule conflicts. Neither the Owner nor Architect will be held responsible for inaction on the part of the Contractor in ordering material with enough lead time to avoid additional "quick ship" costs or delays to the construction schedule in order to accomplish all requirements herein.

2.2 MANUFACTURERS

- A. Source Limitations: Obtain primary terrazzo materials from single source from single manufacturer. Provide secondary materials including patching and fill material, joint sealant, and repair materials of type and from source recommended by manufacturer of primary materials.
- B. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of granular materials from single source with resources to provide materials of consistent quality in appearance and physical properties.

2.3 PERFORMANCE REQUIREMENTS

- A. NTMA Standards: Comply with NTMA's written recommendations for terrazzo type indicated unless more stringent requirements are specified.
- B. Dynamic Coefficient of Friction: For resilient flooring installed on floor surfaces.
 - 1. For floor products without manufacturers previous testing showing compliance:

- a. Test floors wet and dry in accordance with ANSI A326.3 dynamic coefficient of friction (DCOF) AcuTest.
 - 1) Flooring products which are required to be field tested and do not satisfactorily pass field testing standards with a DCOF of 0.42 or higher will not be permitted to be installed on the project.

2.4 EPOXY-RESIN TERRAZZO {TZB1}

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Master Terrazzo Technologies LLC
 - b. Crossfield Products, Corp.
 - c. Doyle Dickerson Terrazzo, Inc.
 - d. Hi-Tek Polymers, Inc.
 - e. Key Resin Company
 - f. Sherwin-Williams Company, General Polymers
 - g. Terrazzo & Marble Supply Companies
- B. Mix Color and Pattern: As selected by Architect from manufacturer's full range
- C. Materials
 1. Moisture-Vapor-Emission-Control Membrane: Two-component, high-solids, high-density, low-odor, epoxy-based membrane-forming product produced by epoxy terrazzo manufacturer that reduces moisture emission from concrete substrate to not more than 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 2. Substrate-Crack-Suppression Membrane: Product of terrazzo-resin manufacturer, having minimum 120 percent elongation potential according to ASTM D412.
 - a. Reinforcement: Fiberglass scrim.
 3. Primer: Manufacturer's product recommended for substrate and use indicated
 4. Epoxy-Resin Matrix: Manufacturer's standard recommended for use indicated < and in color required for mix indicated.
 - a. Physical Properties without Aggregates:
 - 1) Hardness: 60 to 85 per ASTM D2240, Shore D.
 - 2) Minimum Tensile Strength: 3000 psi (20.7 MPa) per ASTM D638 for a 2-inch (51-mm) specimen made using a "C" die per ASTM D412.
 - 3) Minimum Compressive Strength: 10,000 psi (6.9 MPa) per ASTM D695, Specimen B cylinder.
 - 4) Chemical Resistance: No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D1308.
 - a) Distilled water.
 - b) Mineral water.
 - c) Isopropanol.
 - d) Ethanol.

- e) 0.025 percent detergent solution.
 - f) 1.0 percent soap solution.
 - g) 5 percent acetic acid.
 - h) 10 percent sodium hydroxide.
 - i) 10 percent hydrochloric acid.
 - j) 30 percent sulfuric acid.
- b. Physical Properties with Aggregates: For terrazzo blended according to manufacturer's recommendations with one part epoxy resin with three parts marble aggregate consisting of 60 percent No. 1 chips and 40 percent No. 0 chips that is ground and grouted to a 1/4-inch (6.35-mm) nominal thickness, and cured for 7 days at 75 deg F (24 deg C) plus or minus 2 deg F (1 deg C) and at 50 percent plus or minus 2 percent relative humidity.
- 1) Flammability: Self-extinguishing, maximum extent of burning 1/4 inch (6.35 mm) according to ASTM D635.
 - 2) Thermal Coefficient of Linear Expansion: 0.0025 inch/inch per deg F (0.0025 mm/mm per 0.5556 deg C) according to ASTM C531.
5. Aggregates: Complying with NTMA gradation standards for mix indicated and containing no deleterious or foreign matter.
- a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C131.
 - b. 24-Hour Absorption Rate: Less than 0.75 percent.
 - c. Dust Content: Less than 1.0 percent by weight.

2.5 STRIP MATERIALS

- A. Thin-Set Divider Strips: L-type angle or T-type, 1/4 inch (6.4 mm) deep.
- 1. Material: White-zinc alloy
 - 2. Top Width: 1/8 inch (3.2 mm)
- B. Heavy-Top Divider Strips: L-type angle in depth required for topping thickness indicated.
- 1. Bottom-Section Material: Matching top-section material
 - 2. Top-Section Material: White-zinc alloy
 - 3. Top-Section Width: 1/8 inch (3.2 mm) [**1/4 inch (6.4 mm)**] [**3/8 inch (9.5 mm)**] [**1/2 inch (12.7 mm)**]
- C. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material, thickness, and color of divider strips and in depth required for topping thickness indicated.
- D. Accessory Strips: Match divider strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:
- 1. Base-bead strips for exposed top edge of terrazzo base
 - 2. Edge-bead strips for exposed edges of terrazzo
 - 3. Nosings for terrazzo stair treads and landings

- E. Abrasive Strips: abrasive inserts at nosings. Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.
 - 1. Width: 1/2 inch (12.7 mm)
 - 2. Depth: As required by terrazzo thickness
 - 3. Length: 4 inches (100 mm) less than stair width
 - 4. Color: As selected by Architect from manufacturer's full range

2.6 MISCELLANEOUS ACCESSORIES

- A. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use and acceptable to terrazzo manufacturer.
- B. Anchoring Devices:
 - 1. Strips: Provide mechanical anchoring devices for strip materials as required for secure attachment to substrate.
 - 2. Precast Terrazzo: Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.
- C. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- D. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- E. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.
- F. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; and is recommended by sealer manufacturer
 - 1. Surface Friction: Not less than 0.6 according to ASTM D 2047.
 - 2. Acid-Base Properties: With pH factor between 7 and 10.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, have been corrected.

3.2 PREPARATION

- A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.
- B. Concrete Slabs:
 - 1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.
 - a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written recommendations.
 - c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.
- C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
- D. Moisture-Vapor-Emission-Control Membrane: Install according to manufacturer's written instructions.
 - 1. Install on concrete substrates that incorporate lightweight aggregates.
 - 2. Install concrete substrates that fail preinstallation moisture testing.
- E. Substrate-Crack-Suppression Membrane: Install to isolate and suppress substrate cracks according to manufacturer's written instructions.
 - 1. Prepare and prefill substrate cracks with membrane material.
 - 2. Install membrane to produce full substrate coverage in areas to receive terrazzo.
 - 3. Reinforce membrane with fiberglass scrim.
- F. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.
 - 1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

3.3 EPOXY-RESIN TERRAZZO INSTALLATION

- A. Comply with NTMA's written recommendations for terrazzo and accessory installation.
- B. Accessory Strips: Install as required to provide a complete installation. Apply primer to terrazzo substrates according to manufacturer's written instructions.

- C. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions.
- D. Install and finish poured-in-place terrazzo stairs at the same time the adjacent terrazzo flooring is installed.

3.4 REPAIR

- A. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

3.5 CLEANING AND PROTECTION

A. Cleaning:

1. Remove grinding dust from installation and adjacent areas.
2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow to dry thoroughly.

B. Sealing:

1. Seal surfaces according to NTMA's written recommendations.
2. Apply sealer according to sealer manufacturer's written instructions.

- C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

END OF SECTION 09 66 23

SECTION 09 67 23 - RESINOUS FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes:
 - 1. Resinous flooring systems.
- B. Related Sections include the following:
 - 1. Division 07 Section "Joint Sealants" for sealants installed at joints in resinous flooring systems
 - 2. Division 09 Section "Resinous Matrix Terrazzo Flooring" for thin-set, resinous terrazzo

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include manufacturer's technical data, application instructions, and recommendations for each resinous flooring component required.
 - 1. With product data for each floor finish material specified, manufacturer shall provide slip resistance data from tests performed by an independent testing agency in accordance with ANSI A326.3 dynamic coefficient of friction (DCOF) AcuTest. Provide field testing where manufacturers test data is not available.
- B. Samples for Initial Selection: For each type of exposed finish required.
- C. Samples for Verification: For each resinous flooring system required, 6 inches (150 mm) square, applied to a rigid backing by Installer for this Project.

1.5 INFORMATIONAL SUBMITTALS

- A. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.

- B. Material Certificates: For each resinous flooring component, from manufacturer.
- C. Material Test Reports: For each resinous flooring system, by a qualified testing agency.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data For Owner: For each type of flooring to include in maintenance manuals, including slip-resistance maintenance requirements.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
- B. Engage an installer who is certified in writing by resinous flooring manufacturer as qualified to apply resinous flooring systems indicated.
- C. Mockups: Apply mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Apply full-thickness mockups on 96-inch- (2400-mm-) square floor area selected by Architect.
 - a. Include 96-inch (2400-mm) length of integral cove base with inside corner.
 - 2. Simulate finished lighting conditions for Architect's review of mockups.
 - 3. Approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.
- D. Slip Resistance Field Testing
 - 1. Contractors, who fail to submit adequate slip resistance testing from product manufacturers, shall engage the services of a qualified testing agency to perform slip resistance field testing on the installed mockup.
 - 2. Test results shall be provided to the Architect and Owner along with required product data.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.
- B. Store materials to prevent deterioration from moisture, heat, cold, direct sunlight, or other detrimental effects.

1.9 FIELD CONDITIONS

- A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring application.
- B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring application.
- C. Close spaces to traffic during resinous flooring application and for not less than 24 hours after application, unless manufacturer recommends a longer period.

1.10 GUARANTEE/WARRANTY

- A. Manufacturer shall furnish a single, written warranty covering both material and workmanship for a period of two (2) full years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Flammability: Self-extinguishing according to ASTM D635.
- B. Dynamic Coefficient of Friction: For resilient flooring installed on floor surfaces.
 - 1. For floor products without manufacturers previous testing showing compliance:
 - a. Test floors wet and dry in accordance with ANSI A326.3 dynamic coefficient of friction (DCOF) AcuTest.
 - 1) Flooring products which are required to be field tested and do not satisfactorily pass field testing standards with a DCOF of 0.42 or higher will not be permitted to be installed on the project.

2.2 MANUFACTURERS

- A. Source Limitations: Obtain primary resinous flooring materials, including primers, resins, hardening agents, grouting coats, and topcoats, from single source from single manufacturer. Obtain secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from manufacturer recommended in writing by manufacturer of primary materials.

2.3 RESINOUS FLOORING {E1}

- A. Resinous Flooring System: Abrasion-, impact-, and chemical-resistant, aggregate-filled, and resin-based monolithic floor surfacing designed to produce a seamless floor and integral cove base.

1. Manufacturer: Bases of Design: Stonhard, Inc.
 2. Other Acceptable Manufacturers: Subject to compliance with requirements.
 - a. Duraflex, Inc.
 - b. Sika Corporation; Flooring
 - c. Sherwin-Williams Company, General Polymers
- B. System Characteristics:
1. Color and Pattern: As indicated on the Finish Schedule
 2. Wearing Surface: Manufacturer's standard wearing surface
 3. Integral Cove Base: 4 inches (100 mm) high
 4. Overall System Thickness: 1/4 inch (6.4 mm)
- C. Primer: Type recommended by manufacturer for substrate and body coat(s) indicated.
- D. Waterproofing Membrane: Type recommended by manufacturer for substrate and primer and body coat(s) indicated.
- E. Reinforcing Membrane: Flexible resin formulation that is recommended by resinous flooring manufacturer for substrate and resinous flooring system indicated and that inhibits substrate cracks from reflecting through resinous flooring.
- a. Provide fiberglass scrim embedded in reinforcing membrane.
- F. Patching and Fill Material: Resinous product of or approved by resinous flooring manufacturer and recommended by manufacturer for application indicated.
- G. Body Coats:
1. Resin: Urethane
 2. Formulation Description: (4) four-component, 100 percent solids.
 3. Type: Pigmented
 4. Application Method: Troweled or screeded.
 5. Number of Coats: One
 6. Thickness of Coats: 3/16"
 7. Aggregates: Manufacturer's standard
- H. Topcoats: Sealing or finish coats.
1. Resin: Urethane
 2. Formulation Description: (2) two-component, 100 percent solids
 3. Type: Pigmented
 4. Number of Coats: One
 5. Thickness of Coats: 1/16 inch (1.6 mm)
 6. Finish: Standard.
- I. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested according to test methods indicated:
1. Compressive Strength: 7,700 psi after 7 days per ASTM C 579
 2. Tensile Strength: 1,000 psi per ASTM C 307

3. Flexural Modulus of Elasticity: 2,400 psi per ASTM C 580. minimum according to ASTM C580
4. Water Absorption: < 1% per ASTM C 413 minimum according to ASTM C413
5. Impact Resistance: No chipping, cracking, or delamination and not more than 1/16-inch (1.6-mm) permanent indentation per MIL-D-3134
6. Resistance to Elevated Temperature: No slip or flow of more than 1/16 inch (1.6 mm) per MIL-D-3134
- 7.
8. Hardness: .80 to .84, Shore D per ASTM D 2240 Shore D per ASTM D2240
9. Critical Radiant Flux: 0.45 W/sq. cm or greater according to NFPA 253.
10. Flammability: Self-extinguishing per ASTM D635

PART 3 - EXECUTION

3.1 PREPARATION

- A. Prepare and clean substrates according to resinous flooring manufacturer's written instructions for substrate indicated. Provide clean, dry, and neutral Ph substrate for resinous flooring application.
- B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.
 1. Roughen concrete substrates as follows:
 - a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - a. Comply with NACE No. 6/SSPC-SP13, with a Concrete Surface Profile (CSP) of 3 or greater in accordance with the International Concrete Repair Institute (ICRI) Technical Guideline No. 310.2R, unless manufacturer's written instructions are more stringent.
 2. Repair damaged and deteriorated concrete according to resinous flooring manufacturer's written recommendations.
 3. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with application of resinous flooring only after substrates have maximum moisture-vapor-emission rate of **3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m)** of slab area in 24 hours.
 - b. Relative Humidity Test: Use in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.

4. Alkalinity and Adhesion Testing: Verify that concrete substrates have neutral pH and that resinous flooring will adhere to them. Perform tests recommended by manufacturer. Proceed with application only after substrates pass testing.
- C. Patching and Filling: Use patching and fill material to fill holes and depressions in substrates according to manufacturer's written instructions.
 1. Control Joint Treatment: Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring according to manufacturer's written instructions.
- D. Resinous Materials: Mix components and prepare materials according to resinous flooring manufacturer's written instructions.

3.2 APPLICATION

- A. Apply components of resinous flooring system according to manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness indicated.
 1. Coordinate application of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.
 2. Cure resinous flooring components according to manufacturer's written instructions. Prevent contamination during application and curing processes.
 3. Expansion and Isolation Joint Treatment: At substrate expansion and isolation joints, provide joint in resinous flooring to comply with resinous flooring manufacturer's written recommendations.
 - a. Apply joint sealant to comply with manufacturer's written recommendations.
- B. Primer: Apply primer over prepared substrate at manufacturer's recommended spreading rate.
- C. Waterproofing Membrane: Apply waterproofing membrane where indicated on Drawings in manufacturer's recommended thickness.
 1. Apply waterproofing membrane to integral cove base substrates.
- D. Integral Cove Base: Apply cove base mix to wall surfaces before applying flooring. Apply according to manufacturer's written instructions and details, including those for taping, mixing, priming, troweling, sanding, and topcoating of cove base. Round internal and external corners.
 1. Integral Cove Base: 4 inches (100 mm) high.
- E. Self-Leveling Body Coats: Apply self-leveling slurry body coats in thickness indicated for flooring system.
- F. Troweled or Screeded Body Coats: Apply troweled or screeded body coats in thickness indicated for flooring system. Hand or power trowel and grout to fill voids. When body coats are cured, remove trowel marks and roughness using method recommended by manufacturer.
- G. Grout Coat: Apply grout coat, of type recommended by resinous flooring manufacturer, to fill voids in surface of final body coat.

- H. Topcoats: Apply topcoats in number indicated for flooring system and at spreading rates recommended in writing by manufacturer and to produce wearing surface indicated.

3.3 FIELD QUALITY CONTROL

- A. Material Sampling: Owner may, at any time and any number of times during resinous flooring application, require material samples for testing for compliance with requirements.
 - 1. Owner will engage an independent testing agency to take samples of materials being used. Material samples will be taken, identified, sealed, and certified in presence of Contractor.
 - 2. Testing agency will test samples for compliance with requirements, using applicable referenced testing procedures or, if not referenced, using testing procedures listed in manufacturer's product data.
 - 3. If test results show applied materials do not comply with specified requirements, pay for testing, remove noncomplying materials, prepare surfaces coated with unacceptable materials, and reapply flooring materials to comply with requirements.
- B. Core Sampling: At the direction of Owner and at locations designated by Owner, take 1 core sample per 1000 sq. ft. (92.9 sq. m) of resinous flooring, or portion of, to verify thickness. For each sample that fails to comply with requirements, take two additional samples. Repair damage caused by coring and correct deficiencies.

3.4 CLEANING AND PROTECTING

- A. Protect resinous flooring from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous flooring manufacturer.

END OF SECTION 09 67 23

SECTION 09 68 13 - TILE CARPETING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Modular carpet tile.
- B. Related Sections include the following:
 - 1. Division 09 Section "Resilient Base and Accessories" for resilient wall base and accessories installed with carpet tile

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
 - 2. Include manufacturer's written installation recommendations for each type of substrate.
- B. Shop Drawings: Show the following:
 - 1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles
 - 2. Carpet tile type, color, and dye lot
 - 3. Type of subfloor
 - 4. Type of installation
 - 5. Pattern of installation
 - 6. Pattern type, location, and direction
 - 7. Pile direction
 - 8. Type, color, and location of insets and borders
 - 9. Type, color, and location of edge, transition, and other accessory strips
 - 10. Transition details to other flooring materials
- C. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
 - 1. Carpet Tile: One full-size samples

2. Exposed Edge, Transition, and other Accessory Stripping: 12-inch- (300-mm-) long Samples
- D. Samples for Initial Selection: For each type of carpet tile.
1. Include Samples of exposed edge, transition, and other accessory stripping involving color or finish selection.
- E. Samples for Verification: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
1. Carpet Tile: Full-size Sample.
 2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch- (300-mm-) long Samples.
- F. Product Schedule: For carpet tile. Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

- A. Sustainable Product Certification: Provide ANSI/NSF 140 certification for carpet products.
- B. Qualification Data: For Installer.
- C. Product Test Reports: For carpet tile, for tests performed by a qualified testing agency.
- D. Certification that carpet company has a carpet recycling program and that carpet is in compliance with CRI indoor Air Quality Program.
- E. Sample Warranty: Special warranty specified in this Section.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:
 1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
 2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.
- B. Executed warranty

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd. (8.3 sq. m).

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who is certified by the International Certified Floorcovering Installers Association at the Commercial II certification level.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockups at locations and in sizes shown on Drawings.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Comply with CRI Carpet Installation Standard, Section 5, "Storage and Handling."

1.9 FIELD CONDITIONS

- A. Comply with the Carpet and Rug Institute's CRI 104 for temperature, humidity, and ventilation limitations.
- B. Environmental Limitations: Do not deliver or install carpet tiles until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at levels planned for building occupants during the remainder of the construction period.
- C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.
- D. Do not commence with carpet installation until painting, finishing work and all work in or behind carpet surface is complete and ceilings and overhead work, tested, approved and completed.
- E. Prior to commencement of installation, the carpet contractor shall inspect all surfaces to receive carpet so as to confirm a suitable substrate for the installation.
- F. Field Measurements: Field check area dimensions for establishing carpet starting points and balancing areas of the installation.
- G. Where demountable partitions or other items are indicated for installation on top of carpet tiles, install carpet tiles before installing these items.

1.10 WARRANTY

- A. Special Warranty for Carpet Tiles: Manufacturer's warranty in which manufacturer agrees to repair or replace (full labor and material) components of carpet tile installation that fail in materials or workmanship within specified warranty period.

1. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.
2. Failures include, but are not limited to, the following:
 - a. More than 10 percent edge raveling, snags, and runs.
 - b. Dimensional instability.
 - c. Excess static discharge.
 - d. Loss of tuft-bind strength.
 - e. Loss of face fiber.
 - f. Delamination.
3. Warranty Period: 10years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 BASIS OF DESIGN MANUFACTURER PRODUCTS AND LEAD TIMES:

- A. Products listed as Basis of Design herein and on the Finish Schedule have been coordinated with other finishes and approved by the Owner for color and pattern in schemes throughout the project area.
- B. Proposed substitutions must be approved by the Owner and Architect prior to award or they will not be considered. The Contractor shall be responsible to match all listed characteristics, including color and pattern, to the satisfaction of the Owner and Architect. Submit products for consideration per the requirements of Division 01 Section "Substitution Procedures."
- C. Substitutions for Cause proposed after award shall be submitted for approval per the requirements of Division 01 Section "Substitution Procedures." Substitutions for Convenience proposed after award will not be considered.
- D. Many Division 09 products are long lead. The Contractor is responsible to verify all lead times sufficiently in advance of submittal documents, mockups and need to avoid schedule conflicts. Neither the Owner nor Architect will be held responsible for inaction on the part of the Contractor in ordering material with enough lead time to avoid additional "quick ship" costs or delays to the construction schedule in order to accomplish all requirements herein.

2.2 CARPET TILE {CPT1}

- A. Manufacturer: Interface, LLC
 - 1.
 2. Other Acceptable Manufacturers: Subject to compliance with requirements:
 - a. Mohawk Group (The); Mohawk Carpet, LLC.
 - b. Patcraft; a division of Shaw Industries, Inc.
 - c. Shaw Contract Group; a Berkshire Hathaway company.
- B. Color: As indicated by manufacturer's designations
- C. Fiber Content: 100 percent nylon 6

- D. Fiber Type: 100% Recycled Content Nylon
- E. Pile Characteristic: Tufted Textured Loop pile.
- F. Pile Thickness: 0.09 in (2.30 mm) for finished carpet tile
- G. Gauge: 1/12 in
- H. Total Weight: 19 oz/yd² for finished carpet tile.
- I. Primary Backing/Backcoating: Manufacturer's standard composite materials
- J. Secondary Backing: Manufacturer's standard material
- K. Backing System: CQuest TM Bio
- L. Size: 25cm x 1m
- M. Applied Treatments:
 - 1. Applied Soil-Resistance Treatment: Manufacturer's standard material
 - 2. Antimicrobial Treatment: Manufacturer's standard material
 - a. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.
- N. Performance Characteristics:
 - 1. Carpet systems shall meet or exceed the requirements of the Carpet and Rug Institute's Green Label Plus Indoor Air Quality Test Program.
 - 2. Appearance Retention Rating: Severe traffic, 3.5 minimum according to ASTM D7330.
 - 3. Critical Radiant Flux Classification:
 - 4. Dry Breaking Strength: Not less than 100 lbf (445 N) per ASTM D2646.
 - 5. Dimensional Tolerance: Within 1/32 inch (0.8 mm) of specified size dimensions, as determined by physical measurement.
 - 6. Dimensional Stability: 0.2 percent or less per ISO 2551 (Aachen Test).
 - 7. Resistance to Insects: Comply with AATCC 24.
 - 8. Colorfastness to Crocking: Not less than 4, wet and dry, per AATCC 165.
 - 9. Colorfastness to Light: Not less than 4 after 60 AFU (AATCC fading units) per AATCC 16, Option E.
 - 10. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria; not less than 1-mm halo of inhibition for gram-negative bacteria; no fungal growth; per AATCC 174.
 - 11. Electrostatic Propensity: Less than 3.0 kV per AATCC 134.

2.3 CARPET TILE {CPT2}

- A. Manufacturer: Interface, LLC
 - 1.

2. Other Acceptable Manufacturers: Subject to compliance with requirements:
 - a. Mohawk Group (The); Mohawk Carpet, LLC.
 - b. Patcraft; a division of Shaw Industries, Inc.
 - c. Shaw Contract Group; a Berkshire Hathaway company.

- B. Color: As indicated by manufacturer's designations

- C. Fiber Content: 100 percent nylon 6

- D. Fiber Type: 100% Recycled Content Nylon

- E. Pile Characteristic: Tufted Pattern Loop pile.

- F. Pile Thickness: 0.10 in (2.50 mm) for finished carpet tile

- G. Gauge: 1/10 in

- H. Total Weight: 18 oz/yd² for finished carpet tile.

- I. Primary Backing/Backcoating: Manufacturer's standard composite materials

- J. Secondary Backing: Manufacturer's standard material

- K. Backing System: CQuest TM Bio

- L. Size: 25cm x 1m

- M. Applied Treatments:
 1. Applied Soil-Resistance Treatment: Manufacturer's standard material
 2. Antimicrobial Treatment: Manufacturer's standard material
 - a. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.

- N. Performance Characteristics:
 1. Carpet systems shall meet or exceed the requirements of the Carpet and Rug Institute's Green Label Plus Indoor Air Quality Test Program.
 2. Appearance Retention Rating: Severe traffic, 3.5 minimum according to ASTM D7330.
 3. Critical Radiant Flux Classification:
 4. Dry Breaking Strength: Not less than 100 lbf (445 N) per ASTM D2646.
 5. Dimensional Tolerance: Within 1/32 inch (0.8 mm) of specified size dimensions, as determined by physical measurement.
 6. Dimensional Stability: 0.2 percent or less per ISO 2551 (Aachen Test).
 7. Resistance to Insects: Comply with AATCC 24.
 8. Colorfastness to Crocking: Not less than 4, wet and dry, per AATCC 165.
 9. Colorfastness to Light: Not less than 4 after 60 AFU (AATCC fading units) per AATCC 16, Option E.

10. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria; not less than 1-mm halo of inhibition for gram-negative bacteria; no fungal growth; per AATCC 174.
11. Electrostatic Propensity: Less than 3.0 kV per AATCC 134.

2.4 INSTALLATION ACCESSORIES

- A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.
- B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and is recommended by carpet tile manufacturer for releasable installation.
 1. Adhesives shall have a VOC content of 50 g/L or less.
- C. Metal Edge/Transition Strips: Extruded aluminum with mill finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance.
- B. Examine carpet tile for type, color, pattern, and potential defects.
- C. Concrete Slabs: Verify that finishes comply with requirements specified in Section 033000 "Cast-in-Place Concrete" and that surfaces are free of cracks, ridges, depressions, scale, and foreign deposits.
 1. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - b. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
- D. For wood subfloors, verify the following:
 1. Underlayment over subfloor complies with requirements specified in Division 06 Section "Rough Carpentry."

2. Underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.
- E. For metal subfloors, verify the following:
1. Underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. General: Comply with CRI Carpet Installation Standard, Section 7, "Site Conditions – All Installations" and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile installation.
- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch (3 mm) wide or wider and protrusions more than 1/32 inch (0.8 mm), unless more stringent requirements are required by manufacturer's written instructions.
- C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet tile manufacturer.
- D. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.3 INSTALLATION

- A. General: Comply with CRI Carpet Installation Standard, Section 18, "Modular Carpet" and with carpet tile manufacturer's written installation instructions.
- B. Installation Method: Glue down; install every tile with full-spread, releasable, pressure-sensitive adhesive
- C. Maintain dye lot integrity. Do not mix dye lots in same area.
- D. Maintain pile-direction patterns indicated on Drawings
- E. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer. Minimum size of carpet tile shall be 1/3 of full size.
- F. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
- G. Terminate carpet at center of door openings where adjacent floor finish is dissimilar unless noted otherwise on drawings.

- H. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.
- I. Install pattern parallel to walls and borders.

3.4 CLEANING AND PROTECTION

- A. Perform the following operations immediately after installing carpet tile:
 - 1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet tile manufacturer.
 - 2. Remove yarns that protrude from carpet tile surface.
 - 3. Vacuum carpet tile using commercial machine with face-beater element.
- B. Protect installed carpet tile to comply with the Carpet and Rug Institute's CRI 104, Section 13.7.
- C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION 09 68 13

SECTION 09 72 00 - WALL COVERINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Vinyl wall covering with custom image
 - 2. Flexible wall protection

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Show location and extent of each wall-covering type. Indicate pattern placement, seams and termination points.
- C. Samples: For each type of wall covering and for each color, pattern, texture, and finish specified, full width by 36-inch- (914-mm-) long in size.
 - 1. Wall-Covering Sample: From same production run to be used for the Work, with specified applied. Show complete pattern repeat. Mark top and face of fabric.
- D. Samples for Verification: For each type of wall covering and for each color, pattern, texture, and finish specified, full width by 36-inch- (914-mm-) long in size.
 - 1. Wall-Covering Sample: From same production run to be used for the Work, Show complete pattern repeat. Mark top and face of fabric.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency.
- B. Product Test Reports: For each wall covering, for tests performed by a qualified testing agency.

1.6 CLOSEOUT DOCUMENTS

- A. Maintenance Data: For wall coverings to include in maintenance manuals.
- B. Warranties: Final warranties to include in operation and maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1.8 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for installation.

1.9 FIELD CONDITIONS

- A. Environmental Limitations: Do not install wall coverings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use for a minimum of seven days before and during application period.
- B. Lighting: Do not install wall covering until lighting that matches conditions intended for occupants after Project completion is provided on the surfaces to receive wall covering.
- C. Ventilation: Provide continuous ventilation during installation and for not less than the time recommended by wall-covering manufacturer for full drying or curing.

1.10 WARRANTY

- A. Wall Covering Manufacturers Standard Warranty: Manufacturer warrants that wall covering products will be free from defects for a period of two-years from date of Final Acceptance.
- B. Wall Covering Installers Warranty: Installer warrants that the wall covering installation will be free from defects in workmanship for a period of two years for the date of Final Acceptance.

PART 2 - PRODUCTS

2.1 BASIS OF DESIGN MANUFACTURER PRODUCTS AND LEAD TIMES

- A. Products listed as Basis of Design herein and on the Finish Schedule have been coordinated with other finishes and approved by the Owner for color and pattern in schemes throughout the project area.

- B. Proposed substitutions must be approved by the Owner and Architect prior to award or they will not be considered. The Contractor shall be responsible to match all listed characteristics, including color and pattern, to the satisfaction of the Owner and Architect. Submit products for consideration per the requirements of Division 01 Section “Substitution Procedures.”
- C. Substitutions for Cause proposed after award shall be submitted for approval per the requirements of Division 01 Section “Substitution Procedures.” Substitutions for Convenience proposed after award will not be considered.
- D. Many Division 09 products are long lead. The Contractor is responsible to verify all lead times sufficiently in advance of submittal documents, mockups and need to avoid schedule conflicts. Neither the Owner nor Architect will be held responsible for inaction on the part of the Contractor in ordering material with enough lead time to avoid additional “quick ship” costs or delays to the construction schedule in order to accomplish all requirements herein.

2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: As determined by testing identical wall coverings applied with identical adhesives to substrates according to test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2.3 VINYL WALL COVERING

- A. Vinyl Wall Covering, {DWG}: See Finishes schedule for Manufacturer and Product
- B. Description: Provide mildew-resistant products in rolls from same production run and complying with the following:
 - 1. FS CCC-W-408D for Type II, Medium-Duty products.
 - 2. ASTM F 793 for [peelable] [strippable] wall coverings.
 - a. Category: V, Type II, Commercial Serviceability
- C. Total Weight: 20 oz per linear yard, excluding coatings.
- D. Width: 54 inches (1372 mm)
- E. Backing: Nonwoven fabric.
 - 1. Fiber Content: Polycotton.
- F. Repeat: N/A
- G. Stain-Resistant Coating: DuPont; Tedlar/Teflon.
- H. Colors, Textures, and Patterns: CUSTOM DIGITAL VINYL GRAPHIC BY OWNER . FINAL GRAPHIC IMAGE TO BE COORDINATED AND PROVIDED BY OWNER.

2.4 FLEXIBLE WALL PROTECTION {WP2}

- A. Manufacturer: Wolf-Gordon, Rampart
- B. Description: Provide mildew-resistant products in rolls from same production run and complying with the following:
 - 1. FS CCC-W-408D Type III, Heavy Duty products
- C. Total Weight: 35oz per linear yard
- D. Width: 52 inches
- E. Bolt Size: 27 linear yards
- F. Backing: Dense Cotton or Dense Polyester/Cotton
- G. Stain-Resistant Coating: Surcoat stain-and abrasion-resistant treatment
- H. Surface Abrasion: Passes ASTM D4977-Level 3
- I. Surface Indentation: Passes ASTM D5420-Level 2
- J. Permeability Rating: 1
- K. Low Emitting VOCs: Passes Cal 01350 standard
- L. Colors, Textures and Patterns: As indicated on Finish Schedule

2.5 ACCESSORIES

- A. Adhesive: Mildew-resistant, nonstaining, strippable adhesive, for use with specific wall covering and substrate application indicated and as recommended in writing by wall-covering manufacturer.
- B. Primer/Sealer: Mildew resistant primer/sealer as recommended in writing by primer/sealer and wall-covering manufacturers for intended substrate.
- C. Seam Tape: As recommended in writing by wall-covering manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for levelness, wall plumbness, maximum moisture content, and other conditions affecting performance of work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

- C. Inspect material after three lengths for defects. Notify manufacturer's local representative of any defects.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances that could impair wall covering's bond, including mold, mildew, oil, grease, incompatible primers, dirt, and dust.
- C. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unsound coatings, cracks, and defects.
 - 1. Moisture Content: Maximum of 5 percent on new plaster, concrete, and concrete masonry units when tested with an electronic moisture meter.
 - 2. Plaster: Allow new plaster to cure. Neutralize areas of high alkalinity.
 - 3. Metals: If not factory primed, clean and apply metal primer.
 - 4. Gypsum Board: Prime with primer recommended by wall-covering manufacturer.
 - 5. Painted Surfaces: Treat areas susceptible to pigment bleeding.
- D. Check painted surfaces for pigment bleeding. Sand gloss, semigloss, and eggshell finishes with fine sandpaper.
- E. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.
- F. Acclimatize wall-covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.
- G. Install wall liner, with no gaps or overlaps, where required by wall-covering manufacturer. Form smooth wrinkle-free surface for finished installation. Do not begin wall-covering installation until wall liner has dried

3.3 TEST PANELS - FIELD CONSTRUCTED MOCK-UP TEST INSTALLATION

- A. At no additional cost to the Owner, the wall covering installation contractor shall install no less than three (3) full-width panels of each pattern specified in an area designated by the Architect.
- B. The test installation area shall be reviewed for conformance to the manufacturer's standard installation instructions, including seams, inside and outside corner wrap and recommended adhesives.
- C. Only the Architect shall accept the test installation. The Contractor shall replace unsatisfactory panels as directed by and until it is accepted by the Architect.
- D. The accepted test area shall remain as part of the finished installation work and standard of comparison for the installation throughout the project. The Contractor shall not install specified material beyond the test area prior to the acceptance of the test area.

3.4 WALL-COVERING INSTALLATION

- A. General: Comply with wall-covering manufacturers' written installation instructions applicable to products and applications indicated, except where more stringent requirements apply.
- B. Cut wall-covering strips in roll number sequence. Fill in spaces above and below windows, above doors and similar areas in sequence from roll. Change roll numbers at partition breaks and corners.
- C. Install strips in same order as cut from roll.
 - 1. For solid-color, even-texture, or random-match wall coverings, reverse every other strip.
- D. Install wall covering with no gaps or overlaps, no lifted or curling edges, and no visible shrinkage.
- E. Match pattern 72 inches (1830 mm) above the finish floor.
- F. Install seams vertical and plumb at least 6 inches (150 mm) from outside corners and 6 inches (150 mm) from inside corners unless a change of pattern or color exists at corner. No horizontal seams are permitted.
- G. Extend wallcovering into control joints, recesses, reveals, etc. Wall coverings extended into reveals shall be held with adhesive and with acceptable continuous wedges.
- H. Fully bond wall covering to substrate. Remove air bubbles, wrinkles, blisters, and other defects.
- I. Trim edges and seams for color uniformity, pattern match, and tight closure. Butt seams without any overlay or spacing between strips.

3.5 CLEANING

- A. Remove excess adhesive at finished seams, perimeter edges, and adjacent surfaces.
- B. Use cleaning methods recommended in writing by wall-covering manufacturer.
- C. Replace strips that cannot be cleaned.
- D. Reinstall hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

END OF SECTION 09 72 00

SECTION 09 91 13 - EXTERIOR PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes surface preparation and the application of paint systems on the following exterior substrates:
 - 1. Concrete (Non-traffic), Concrete and Brick Masonry, Stucco, Plaster and Stone.
 - 2. Galvanized Metal.
 - 3. Galvanized Structural Steel.
 - 4. Wood, Wood Trim and Laminated Wood Columns & Beams.
- B. Related Requirements:
 - 1. Division 05 Sections "Structural Steel Framing" and "Architecturally Exposed Structural Steel Framing" for shop priming of metal substrates.
 - 2. Division 05 Section "Metal Fabrications" for shop priming metal fabrications.
 - 3. Division 05 Section "Metal Stairs and Railings" for shop priming metal floor plate stairs.
 - 4. Section 055119 "Metal Grating Stairs" for shop priming exterior metal stairs, stair railings and painting other exterior pipe and tube railings.
 - 5. Division 08 Section "Hollow Metal Doors and Frames" for shop priming of metal substrates specified in that Section.
 - 6. Division 09 Section "High-Performance Coatings" for tile-like coatings.
 - 7. Division 09 Section "Interior Painting" for surface preparation and the application of paint systems on interior substrates.

1.3 DEFINITIONS

- A. MPI Gloss Levels:
 - 1. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D523.
 - 2. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.
 - 3. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.
 - 4. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523.
 - 5. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.
 - 6. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.

7. Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D523.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
 1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
 2. Indicate VOC content.
- B. Samples for Initial Selection: For each type of topcoat product.
- C. Samples for Verification: For each type of paint system and each color and gloss of topcoat.
 1. Submit Samples on rigid backing, 8 inches (200 mm) square.
 2. Step coats on Samples to show each coat required for system.
 3. Label each coat of each Sample.
 4. Label each Sample for location and application area.
- D. Product List: For each product indicated, include the following:
 1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.

1.5 INFORMATIONAL SUBMITTALS

- A. Certifications
 1. Before starting work, new and existing surfaces scheduled to be painted shall be inspected by paint manufacturer's representative and certified that surfaces are compatible and in satisfactory condition to receive finish specified.
 2. Provide certification letter attesting that shop applied primers have been reviewed for compatibility and are acceptable to the topcoat manufacturers.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Coating Maintenance Manual: Upon conclusion of the project, furnish a maintenance manual which shall include an area summary with finish schedule, paint color and gloss samples, where used, product data, MSDS sheets, care & cleaning instructions and touch up procedures.
- B. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Paint: 5 percent, but not less than 1 gal. (3.8 L) of each material and color applied.

1.7 QUALITY ASSURANCE

- A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Architect will select one surface to represent surfaces and conditions for application of each paint system specified in Part 3.
 - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft..
 - b. Other Items: Architect will designate items or areas required.
 - 2. Final approval of color selections will be based on mockups.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver paint materials in sealed original labeled containers, bearing manufacturer's name, type of paint, brand name, color designation, VOC content and instructions for mixing and/or reducing.
- B. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
 - 1. Maintain containers in clean condition, free of foreign materials and residue.
 - 2. Remove rags and waste from storage areas daily.
- C. Include precautionary measures to prevent fire hazards and spontaneous combustion in the approved Site-Specific Safety Manual and post in the paint storage area.

1.9 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F (10 and 35 deg C).
- B. Do not apply paints in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.

1.10 WARRANTY

- A. Provide a one year written warranty from painting subcontractor covering defects in material and workmanship. Areas deemed to be defective shall be repaired as required to make the repair indiscernible.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Sherwin Williams Company (SW)
 - 2. Benjamin Moore (BM)
 - 3. PPG Industries (PPG)

2.2 PAINT, GENERAL

- A. Material Compatibility:
 - 1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 - 2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.
- B. Colors: Color selections have been made from color charts published by the manufacturer(s) listed in the Finish Schedule; contractor shall match these colors without exception.

2.3 SOURCE QUALITY CONTROL

- A. Testing of Paint Materials: Owner reserves the right to invoke the following procedure:
 - 1. Owner may engage the services of a qualified testing agency to sample paint materials. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
 - 2. Testing agency will perform tests for compliance with product requirements.
 - 3. Owner may direct Contractor to stop applying paints if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 - 1. Concrete: 12 percent.
 - 2. Masonry (Clay and CMU): 12 percent.
 - 3. Wood: 15 percent.
 - 4. Portland Cement Plaster: 12 percent.
 - 5. Gypsum Board: 12 percent.
- C. Portland Cement Plaster Substrates: Verify that plaster is fully cured.
- D. Exterior Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
- E. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.
- F. Proceed with coating application only after unsatisfactory conditions have been corrected.
 - 1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Manual" applicable to substrates and paint systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
 - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.

- E. Masonry Substrates: Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces or mortar joints exceeds that permitted in manufacturer's written instructions.
- F. Steel Substrates (Not Galvanized or Shop Primed): Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer, but not less than the following:
 - 1. SSPC-SP1 Solvent Cleaning: Remove all visible oil, grease, soil, drawing and cutting compounds, and other soluble contaminants from steel surfaces with solvent, vapor, cleaning compound, alkali, emulsifying agent, or steam prior to SSPC-SP3.
 - 2. SSPC-SP 3, Power Tool Cleaning: Remove all loose mill scale, loose rust, loose paint, and other loose detrimental foreign matter by power wire brushing, power sanding, power grinding, power tool chipping, and power tool descaling.
- G. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces. Verify specified topcoat is compatible with shop primer prior to field painting. Prepare shop primed surfaces for painting per primer manufacturer's written instructions.
- H. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints. Prepare galvanized surfaces for painting per primer manufacturer's written instructions.
 - 1. If galvanized metal is chromate passivated, consult manufacturers for appropriate surface preparation and primers.
- I. Wood Substrates:
 - 1. Scrape and clean knots. Before applying primer, apply coat of knot sealer recommended in writing by topcoat manufacturer for exterior use in paint system indicated.
 - 2. Sand surfaces that will be exposed to view, and dust off.
 - 3. Prime edges, ends, faces, undersides, and backsides of wood.
- J. Existing Surfaces: Where existing painted surfaces are scheduled to be painted, prepare as follows:
 - 1. Remove dirt, mold, mildew and other contaminates per manufacturer's instructions.
 - 2. Lightly sand entire surface to be painted.

3.3 APPLICATION

- A. Apply paints according to manufacturer's written instructions.
 - 1. Use applicators and techniques suited for paint and substrate indicated.
 - 2. Paint surfaces behind movable items same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed items with prime coat only.
 - 3. Paint both sides and edges of exterior doors and entire exposed surface of exterior door frames.

4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
 5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.
- B. Tint undercoats same color as topcoat but tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Provide sufficient difference in shade of undercoats to distinguish each separate coat.
- C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
- E. Galvanized exterior items and miscellaneous fabrications to be field painted include, but are not limited to, the following:
1. Exposed steel stair work
 2. Steel hand railings and supports
 3. Exterior metal doors and frames.
 4. Exterior steel channel jambs
 5. Steel bollards
 6. Chain link and wire mesh partitions.
 7. Ladders
 8. Exposed primed metal without a finish coat.
- F. Paint exposed galvanized structural steel and dunnage scheduled for painting.
- G. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
1. Paint the following work where exposed to view:
 - a. Equipment, including panelboards.
 - b. Uninsulated metal piping.
 - c. Uninsulated plastic piping.
 - d. Pipe hangers and supports.
 - e. Metal conduit.
 - f. Plastic conduit.
 - g. Tanks that do not have factory-applied final finishes.
 - h. Duct, equipment, and pipe insulation or other paintable jacket material.
 - i. Other items as indicated.
 2. Color banding and identification (flow arrows, naming, numbering, etc.) are provided by the Division 21, 22, 23, 25, 26, 27 and 28 Contractors.
 3. Do not paint or in any way obscure certification or identification labels on any material or equipment.

3.4 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
 - 1. Contractor shall touch up and restore painted surfaces damaged by testing.
 - 2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.6 EXTERIOR PAINTING SCHEDULE: The paragraphs below cover a range of painting systems. The Contractor shall consult drawings for paint location, type, gloss and color to be applied to each individual substrate. Not all scheduled systems will be included on the drawings. Where the product line permits, provide products from a sole source single manufacturer.

- A. Concrete (Non-traffic), Concrete and Brick Masonry, Stucco, Plaster and Stone.
 - 1. Latex System; Flat (Gloss Level 1)
 - a. 1 Coat Primer: water borne emulsion type primer for exterior surfaces.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Loxon Concrete and Masonry Primer and Sealer
 - b) BM Ultra Spec Masonry Interior/Exterior 100% Acrylic Sealer 608
 - c) PPG Architectural Coatings Seal Grip Universal Primer/Sealer
 - b. 2 Coats Topcoat: Latex, exterior, institutional low odor/VOC, Flat.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW A-100 Exterior Latex Flat

- b) BM Ultra Spec EXT Flat Finish N447
 - c) PPG Architectural Coatings Sun-Proof Exterior Latex Flat
2. Existing Painted Surfaces:
- a. Apply one coat low VOC primer product as recommended by the manufacturer compatible with painted substrate and specified topcoat.
 - b. Apply two coats specified topcoat.
3. Elastomeric System – Flat/Satin
- a. Prepare substrate per manufacturers written instructions.
 - b. 2 Coats Topcoat: Elastomeric high build; applied 6 mils dft per coat.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Loxon XP Waterproofer
 - b) BM Ultra Spec Masonry Elastomeric Waterproofing Coating, Flat 359, Low Lustre
4. High Build 100% Acrylic Topcoat
- a. Surfaces to be coated must be dry, clean, sound, and free from all contamination including loose and peeling paint, dirt, grease, oil, wax, concrete curing agents and bond breakers, chalk, efflorescence, mildew, rust, product fines, and dust. Remove loose paint, chalk, and efflorescence by wire brushing, scraping, sanding, and/or pressure washing. Clean surfaces per ASTM Standard Practice D4258-83: Standard Practice for Surface Cleaning Concrete for Coating.
 - b. Dry substrate thoroughly to a moisture content under 12%.
 - c. Apply per manufacturer’s written instructions.
 - d. Acceptable Product: Subject to compliance with requirements, provide one of the following:
 - 1) (1) coat Primer:
 - a) SW Loxon Concrete and Masonry Primer and Sealer.
 - b) BM Ultra Spec Masonry Interior/Exterior 100% Acrylic Sealer 608
 - c) PPG Architectural Coatings 4-22 Perma-Crete LTC (Low Temperature Cure) Concrete Block & Masonry Surfacer/Filler.
 - 2) (2) coats Topcoat:
 - a) SW Conflex UltraCrete Acrylic Textured Masonry Topcoat A44W800 Series
 - b) BM Coronado Texcrete WB Masonry Waterproofer Smooth Finish 3194
 - c) PPG Architectural Coatings 4-22 Perma-Crete High Build 100% Acrylic Topcoat.
5. High Build Coating: Solvent Acrylic Exterior Waterproof and Textured Coating, applied 20 mils dft.

- a. Prepare substrate as directed by the structural engineer of record.
 - b. 2 Coat application: 10 mils dft ea. coat (20 mils dft min. total)
 - 1) SW Conflex UltraCrete Solvent Borne Texture Coating
- B. Galvanized Metal Fabrications: Including but not limited to, steel control panels, handrails, ornamental iron, steel lintels, steel fences and chain link, steel fire escapes and stairs, steel ladders and cross-overs, steel pipes and downspouts, steel gutters, steel catwalks, steel posts and bollards, hollow metal doors and frames and steel window sash.
- 1. Latex System; Gloss
 - a. 1 Coat Primer: Water based, anti-corrosive pigments and acrylic resins, for cleaned/etched galvanized metal.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Pro Industrial Pro-Cryl Universal Primer
 - b) BM Ultra Spec HP Acrylic Metal Primer HP04
 - c) PPG Architectural Coatings Pitt-Tech Plus Exterior DTM Industrial Primer.
 - b. 2 Coats Topcoat: Latex, exterior, institutional low odor/VOC, Gloss.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Pro Industrial DTM Acrylic
 - b) BM Ultra Spec HP DTM Acrylic Enamel Semi-gloss HP 29, Gloss HP28
 - c) PPG Architectural Coatings Pitt-Tech Plus Exterior DTM Industrial Enamel.
- C. Galvanized, Non-Ferrous and Ferrous Structural Steel: Exposed structural steel, steel dunnage and steel equipment supports.
- 1. High Performance System: High Build; Semi-Gloss
 - a. 1 Coat Epoxy: Water Borne Emulsion Type Primer for Exterior Surfaces.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Protective and Marine Macropoxy 646-100 Fast Cure Epoxy (7 mil dft minimum)
 - b) BM Corotech Surface Tolerant Epoxy Mastic (V160) (7 mil dft minimum).
 - b. 2 Coats Aliphatic Urethane, Semi-gloss.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:

- a) SW Acrolon Ultra, Semi-Gloss (4 mils dft minimum).
 - b) BM Corotech Aliphatic Urethane Semi-gloss V510 (4 mil dft minimum)
- D. Wood Items: (Fences, siding, joists, plywood, partitions, underside decking, etc., other than wood trim)
- 1. Latex System: Flat (Gloss Level 1-2)
 - a. 1 Coat Primer: Water based, wood primer for exterior wood surfaces.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Exterior Latex Wood Primer
 - b) BM Ultra Spec Exterior Latex Primer N558
 - c) PPG Architectural Coatings Seal Grip Universal Primer/Sealer.
 - b. 2 Coats Topcoat: Latex, intended for use on new exterior surfaces.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW A-100 Exterior Latex Flat
 - b) BM Ultra Spec Latex Exterior Flat N447
 - c) PPG Architectural Coatings Sun-Proof Exterior Latex Flat
 - 2. Latex System: Satin (Gloss Level 3-4)
 - a. 1 Coat Primer: Water based, wood primer for exterior wood surfaces.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW A-100 Exterior Latex Satin
 - b) BM Ultra Spec Exterior Latex Primer N558
 - c) PPG Architectural Coatings Sun-Proof Exterior Latex Satin
 - b. 2 Coats Topcoat: Latex, intended for use on new exterior surfaces.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW A-100 Exterior Latex Satin
 - b) BM Ultra Spec EXT Satin Finish N448
 - c) PPG Architectural Coatings Sun-Proof Exterior Latex Satin
 - 3. Stain Finish: Penetrating alkyd stain (Semi-Transparent)
 - a. 2 coats stain: Water Based, Emulsion Type, Pigmented Stain for Primed Exterior Wood Surfaces
 - 1) SW Woodscapes Exterior Acrylic Semi-Transparent Stain

- 2) BM Arborcoat Alkyd Semi-Transparent Stain 328
- 3) PPG Sun Proof Deck, Fence & Siding Alkyd/Oil Semi-Opaque Stain.

E. Wood Trim (Doors, Door Frame, Window Sash and Frames, Fascia, Batten, etc.)

1. Latex System: Semi-Gloss (Gloss Level 5)

- a. 1 Coat Primer: Water based, wood primer for exterior wood surfaces.

- 1) Acceptable Product: Subject to compliance with requirements, provide the following:

- a) SW Exterior Latex Wood Primer
- b) BM Ultra Spec EXT Latex Primer N558
- c) PPG Architectural Coatings Seal Grip Universal Primer/Sealer.

- b. 2 Coats Topcoat: Latex, intended for use on new exterior surfaces.

- 1) Acceptable Product: Subject to compliance with requirements, provide the following:

- a) SW A-100 Exterior Latex Semi-Gloss
- b) BM Ultra Spec EXT satin N448, gloss N449
- c) PPG Architectural Coatings Sun-Proof Exterior Latex Semi-Gloss

2. Stain Finish: Penetrating alkyd stain (Semi-Transparent)

- a. 2 coats stain: Water Based, Emulsion Type, Pigmented Stain for Primed Exterior Wood Surfaces

- 1) SW Woodscapes Exterior Acrylic Semi-Transparent Stain
- 2) BM Arborcoat Alkyd Semi-Transparent Stain 328
- 3) PPG Sun Proof Deck, Fence & Siding Alkyd/Oil Semi-Opaque Stain.

F. Exterior Glue Laminated Beams and Columns

1. Latex System: Flat (Gloss Level 1-2)

- a. 1 Coat Primer: Water based, wood primer for exterior wood surfaces.

- 1) Acceptable Product: Subject to compliance with requirements, provide the following:

- a) SW Exterior Latex Wood Primer
- b) BM Ultra Spec EXT Latex Primer N558
- c) PPG Architectural Coatings Seal Grip Universal Primer/Sealer.

- b. 2 Coats Topcoat: Latex, intended for use on new exterior surfaces.

- 1) Acceptable Product: Subject to compliance with requirements, provide the following:

- a) SW A-100 Exterior Latex Flat
 - b) BM Ultra Spec EXT Latex Flat N447
 - c) PPG Architectural Coatings Sun-Proof Exterior Latex Flat

- 2. Latex System: Satin (Gloss Level 3-4)
 - a. 1 Coat Primer: Water based, wood primer for exterior wood surfaces.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Exterior Latex Wood Primer
 - b) BM Ultra Spec EXT Latex Primer N558
 - c) PPG Architectural Coatings Seal Grip Universal Primer/Sealer.

 - b. 2 Coats Topcoat: Latex, intended for use on new exterior surfaces.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW A-100 Exterior Latex Satin
 - b) BM Ultra Spec EXT Satin Finish N448
 - c) PPG Architectural Coatings Sun-Proof Exterior Latex Satin

- 3. Latex System: Semi-Gloss (Gloss Level 5)
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Exterior Latex Wood Primer
 - b) BM Ultra Spec EXT Latex Primer N558
 - c) PPG Architectural Coatings Seal Grip Universal Primer/Sealer.

 - b. 2 Coats Topcoat: Latex, intended for use on new exterior surfaces.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW A-100 Exterior Latex Semi-Gloss
 - b) BM Ultra Spec EXT Low Lustre N455 Satin N448, Gloss N449
 - c) PPG Architectural Coatings Sun-Proof Exterior Latex Semi-Gloss

- 4. Stain Finish: Penetrating Acrylic stain (Semi-Transparent)
 - a. 2 coats stain: Water Based, Emulsion Type, Pigmented Stain for Primed Exterior Wood Surfaces
 - 1) SW Woodscapes Exterior Acrylic Semi-Transparent Stain
 - 2) BM Arborcoat Waterborne Semi-Transparent Stain N638

END OF SECTION 09 91 13

SECTION 09 91 23 - INTERIOR PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes surface preparation and the application of paint systems on the following interior substrates:

1. Concrete.
2. Concrete masonry units (CMU).
3. Ferrous metal.
4. Galvanized metal.
5. Gypsum board.
6. Plaster.
7. Wood.

- B. Related Requirements:

1. Division 05 Sections "Structural Steel Framing," "Architecturally Exposed Structural Steel Framing" and "Steel Decking" for shop priming of metal substrates with primers specified in that Section.
2. Division 05 Section "Metal Fabrications" for shop priming metal fabrications.
3. Division 05 Section "Metal Stairs and Railings" for shop priming metal stairs and railings and other interior pipe railings.
4. Division 06 Sections "Finished Carpentry" and "Architectural Cabinets" for transparent finishes for woodwork and millwork.
5. Division 08 Section "Hollow Metal Doors and Frames" for shop priming of metal substrates with primers specified in that Section.
6. Division 09 Section "Exterior Painting" for surface preparation and the application of paint systems on exterior substrates.

1.3 DEFINITIONS

- A. MPI Gloss Levels:

1. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D523.
2. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.
3. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

4. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523.
 5. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.
 6. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.
 7. Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D523.
- B. Finished Spaces: are all spaces or rooms throughout the area of construction, except spaces above suspended ceilings, unless otherwise specified or noted.
- C. Finish Schedule: The Finish Schedule lists interior finishes for project, including paint, and can be found on the drawings. The Finish Schedule will indicate paint type, color and gloss for the project. Additional finish information may be found elsewhere on the drawings.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
1. Include Printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
 2. Indicate VOC content.
 3. With product data for each floor finish material specified, manufacturer shall provide slip resistant data from tests performed by an independent testing agency in accordance with ANSI/NFSI B101.3 standards. Manufacturers who cannot provide test data must plan to provide field testing.
- B. Samples for Initial Selection: For each type of topcoat product.
- C. Samples for Verification: For each type of paint system and in each color and gloss of topcoat.
1. Submit Samples on rigid backing, 8 inches (200 mm) square.
 2. Apply coats on Samples in steps to show each coat required for system.
 3. Label each coat of each Sample.
 4. Label each Sample for location and application area.
- D. Product List: Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.5 INFORMATIONAL SUBMITTALS

- A. Certifications
1. Before starting work, new and existing surfaces scheduled to be painted shall be inspected by paint manufacturer's representative and certified that surfaces are compatible and in satisfactory condition to receive finish specified.
 2. Provide certification of compliance with Low VOC requirements for all filler, primer, paint and coating products.
 3. Provide certification letter attesting that shop applied primers have been reviewed for compatibility and are acceptable to the topcoat manufacturers.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Coating Maintenance Manual: Upon conclusion of the project, furnish a maintenance manual which shall include an area summary with finish schedule, paint color and gloss samples, where used, product data, MSDS sheets, care & cleaning instructions and touch up procedures.
- B. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Paint: 5 percent, but not less than 1 gal. (3.8 L) of each material and color applied.
- C. Slip Resistance Field Testing:
 - 1. Manufacturers who failed to submit adequate slip resistance testing for floor products shall engage the services of a qualified testing agency to perform slip resistance field testing on the installed mockup.
 - a. Test floors wet and dry in accordance with ANSI/NFSI B101.3
 - b. Flooring products which are required to be field tested and do not satisfactorily pass field testing will not be permitted to be installed on the project.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver paint materials in sealed original labeled containers, bearing manufacturer's name, type of paint, brand name, color designation, VOC content and instructions for mixing and/or reducing.
- B. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
 - 1. Maintain containers in clean condition, free of foreign materials and residue.
 - 2. Remove rags and waste from storage areas daily.
- C. Include precautionary measures to prevent fire hazards and spontaneous combustion in the approved Site-Specific Safety Manual and post in the paint storage area.

1.8 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F (10 and 35 deg C).
 - 1. Provide adequate continuous ventilation and sufficient heating facilities to maintain temperatures between 50 and 95 degrees for 24 hours before, during and 48 hours after application of finishes.
- B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.
- C. Provide a minimum 25-foot candles (270 lux) of lighting on surfaces to be finished.

1.9 WARRANTY

- A. Provide a one-year written warranty from painting subcontractor covering defects in material and workmanship. Areas deemed to be defective shall be repaired as required to make the repair indiscernible.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Sherwin Williams Company (SW)
 - 2. Benjamin Moore (BM)
 - 3. PPG Industries (PPG)

2.2 PAINT, GENERAL

- A. Material Compatibility:
 - 1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 - 2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.
- B. VOC Content: For field applications that are inside the weatherproofing system, paints and coatings shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits:
 - 1. Flat Paints and Coatings: 50 g/L.
 - 2. Nonflat Paints and Coatings: 50 g/L.
 - 3. Dry-Fog Coatings: 150 g/L.
 - 4. Primers, Sealers, and Undercoaters: 100 g/L.
 - 5. Rust-Preventive Coatings: 100 g/L.
 - 6. Zinc-Rich Industrial Maintenance Primers: 100 g/L.
 - 7. Pretreatment Wash Primers: 420 g/L.
 - 8. Shellacs, Clear: 730 g/L.
 - 9. Shellacs, Pigmented: 550 g/L.
- C. Low-Emitting Materials: For field applications that are inside the weatherproofing system, 90 percent of paints and coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- D. Colors: Color selections have been made from color charts published by the manufacturer(s) listed in the Finish Schedule; contractor shall match these colors without exception.

2.3 SOURCE QUALITY CONTROL

- A. Testing of Paint Materials: Owner reserves the right to invoke the following procedure:
1. Owner may engage the services of a qualified testing agency to sample paint materials. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
 2. Testing agency will perform tests for compliance with product requirements.
 3. Owner will direct Contractor to stop applying coatings if test results show materials being used do not comply with product requirements. Contractor shall remove non-complying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
1. Concrete: 12 percent.
 2. Fiber-Cement Board: 12 percent.
 3. Masonry (Clay and CMU): 12 percent.
 4. Wood: 15 percent.
 5. Gypsum Board: 12 percent.
 6. Plaster: 12 percent.
- C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
- D. Plaster Substrates: Verify that plaster is fully cured.
- E. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.
- F. Proceed with coating application only after unsatisfactory conditions have been corrected.
1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Manual" applicable to substrates indicated.

- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
 - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.
- E. Masonry Substrates: Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces or mortar joints exceeds that permitted in manufacturer's written instructions.
- F. Steel Substrates: Remove rust and loose mill scale, if any. Clean using methods recommended in writing by paint manufacturer, but not less than the following:
 - 1. SSPC-SP 3, "Power Tool Cleaning."
- G. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces. Verify shop applied primer is compatible with specified top coats.
- H. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal fabricated from coil stock by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints. Prepare galvanized metal surfaces for field painting per primer manufacturer's written instructions.
 - 1. If galvanized metal is chromate passivated, consult manufacturers for appropriate surface preparation and primers.
- I. Wood Substrates:
 - 1. Scrape and clean knots and apply coat of knot sealer before applying primer.
 - 2. Sand surfaces that will be exposed to view and dust off.
 - 3. Prime edges, ends, faces, undersides, and backsides of wood.
 - 4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.
- J. Existing Surfaces: Where existing painted surfaces are scheduled to be painted, prepare as follows:
 - 1. Remove dirt, mold, mildew and other contaminants per manufacturer's instructions.
 - 2. Lightly sand entire surface to be painted.

3.3 APPLICATION

- A. Apply paints according to manufacturer's written instructions.
 - 1. Use applicators and techniques suited for paint and substrate indicated.
 - 2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces.
 - 3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
 - 4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
 - 5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.

- B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

- C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

- D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

- E. Paint Primed and Exposed Steel including, but not limited to, the following:
 - 1. Exposed steel stair work
 - 2. Steel hand railings and supports
 - 3. Interior metal doors and frames.
 - 4. Steel channel jambs
 - 5. Drapery and blind pockets
 - 6. Steel bollards
 - 7. Chain link and wire mesh partitions.
 - 8. Ladders
 - 9. Exposed metal without a finish coat.

- F. Paint exposed structural steel and deck scheduled for painting (except shop priming).
 - 1. Do not prime steel surfaces scheduled for the application of applied fireproofing materials.

- G. Painting of Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
 - 1. Paint the following work where exposed in equipment rooms:
 - a. Equipment, including panel boards
 - b. Uninsulated metal piping.
 - c. Uninsulated plastic piping.
 - d. Pipe hangers and supports.
 - e. Metal conduit.
 - f. Plastic conduit.

- g. Tanks that do not have factory-applied final finishes.
 - h. Duct, equipment, and pipe insulation having cotton or canvas insulation covering or other paintable jacket material.
 - i. Other items as indicated.
2. Paint the following work where exposed in occupied spaces:
- a. Equipment, including panel boards.
 - b. Uninsulated metal piping.
 - c. Uninsulated plastic piping.
 - d. Pipe hangers and supports.
 - e. Metal conduit.
 - f. Plastic conduit.
 - g. Duct, equipment, and pipe insulation having cotton or canvas insulation covering or other paintable jacket material.
 - h. Other items as indicated.
3. Paint portions of internal surfaces (black) of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.
4. Paint both sides and edges of plywood backboards for electrical equipment before installing backboards and mounting equipment.
5. Color code equipment, piping, conduit and exposed ductwork in accordance with requirements indicated in Division 21, 22, 23, 25, 26, 27 and 28.
6. Color banding and identification (flow arrows, naming, numbering, etc.) are provided by the Division 21, 22, 23, 25, 26, 27 and 28 Contractors.
7. Do not paint or in any way obscure certification or identification labels on any material or equipment.
- H. When painting operating units, paint shall not be applied to sliding or rolling contacts where bare material is necessary for proper operation. Paint applied to such surfaces shall be removed.

3.4 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
- 1. Contractor shall touch up and restore painted surfaces damaged by testing.
 - 2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.6 INTERIOR PAINTING SCHEDULE (INTERIOR- LOW VOC LATEX PAINTS): The paragraphs below cover a range of painting systems. The Contractor shall consult the Finish Schedule and drawings for paint location, type, gloss and color to be applied to each individual substrate. Not all scheduled systems will be included on the Finish Schedule. Where the product line permits, provide products from a sole source single manufacturer.

A. Concrete Substrates, Traffic Surfaces:

1. Latex Floor Enamel System:

a. 2 Coats, Base coat & Topcoat: Floor paint, latex, low gloss

1) Acceptable Product: Subject to compliance with requirements, provide the following:

a) SW Industrial and Marine ArmorSeal Tread Plex WB Floor Coating.

B. Concrete (Non-Traffic) and Clay-Masonry Substrates: Consult Finish Schedule for gloss.

1. Institutional Low-Odor/VOC Latex System; Flat (Gloss Level 1).

a. 1 Coat Primer: Primer sealer, latex, interior.

1) Acceptable Product: Subject to compliance with requirements, provide the following:

a) SW ProMar 200 Zero Interior Latex Primer

b) BM Ultra Spec 500 Interior Latex Primer N534

c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Sealer

b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Flat.

1) Acceptable Product: Subject to compliance with requirements, provide the following:

a) SW ProMar 200 Zero VOC Interior Latex Flat.

b) BM Ultra Spec 500 WB Interior Latex Flat (N536)

c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Flat

2. Institutional Low-Odor/VOC Latex System; Eggshell (Gloss Level 3).

a. 1 Coat Primer: Primer sealer, latex, interior.

- 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero Interior Latex Primer
 - b) BM Ultra Spec 500 WB Interior Latex Primer N534
 - c) PPG Architectural Coatings Coatings Speedhide Interior Zero VOC Latex Sealer
 - b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Egg Shell.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero VOC Interior Latex Egg Shell
 - b) BM Ultra Spec 500 WB Interior Latex Egg Shell N538
 - c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Egg Shell
 3. Institutional Low-Odor/VOC Latex System; Semi-Gloss (Gloss Level 5).
 - a. 1 Coat Primer: Primer sealer, latex, interior.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero Interior Latex Primer
 - b) BM Ultra Spec 500 WB Interior Latex Primer N534
 - c) PPG Architectural Coatings Coatings Speedhide Interior Zero VOC Latex Sealer
 - b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Semi-Gloss.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero VOC Acrylic Semi-Gloss
 - b) BM Ultra Spec 500 Zero VOC Interior Semi-Gloss N539
 - c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Semi-Gloss
 4. Existing Painted Surfaces:
 - a. Apply one coat low VOC primer product as recommended by the manufacturer compatible with painted substrate and specified topcoat.
 - b. Apply two coats specified topcoat.
- C. CMU Substrates: Consult Finish Schedule for gloss and color.
1. Institutional Low-Odor/VOC Latex System Flat (Gloss Level 1):

- a. 1 Coat Block Filler: Block filler, latex, interior/exterior. Contractor shall apply two (2) coats block filler in high humidity areas (greater than 60%), kitchen/food prep areas, labs and clean rooms.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProIndustrial Heavy Duty Interior/Exterior Block Filler
 - b) BM Ultra Spec High Build Masonry Block Filler 571
 - c) PPG Pitt-Glaze Interior Exterior Block Filler 16-90
 - b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Flat.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Interior Latex Flat
 - b) BM Ultra Spec 500 WB Interior Latex Flat N536
 - c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Flat
2. Institutional Low-Odor/VOC Latex System Eggshell (Gloss Level 3):
- a. 1 Coat Block Filler: Block filler, latex, interior/exterior.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) ProIndustrial Heavy Duty Interior/Exterior Block Filler
 - b) BM Ultra Spec High Build Masonry Block Filler 571
 - c) PPG Pitt-Glaze Interior Exterior Block Filler 16-90
 - b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Egg Shell.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero VOC Interior Latex Egg Shell
 - b) BM Ultra Spec 500 WB Interior Latex Egg Shell N538
 - c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Egg Shell
3. Institutional Low-Odor/VOC Latex System Semi-gloss (Gloss Level 5):
- a. 1 Coat Block Filler: Block filler, latex, interior/exterior.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) ProIndustrial Heavy Duty Interior/Exterior Block Filler
 - b) BM Ultra Spec High Build Masonry Block Filler 571
 - c) PPG Pitt-Glaze Interior Exterior Block Filler 16-90
 - b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Semi-Gloss.

- 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero VOC Acrylic Semi-Gloss.
 - b) BM Ultra Spec 500 Zero VOC Interior Semi-Gloss N539.
 - c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Semi-Gloss.

4. Existing Painted Surfaces:
 - a. Apply one coat low VOC primer product as recommended by the manufacturer compatible with painted substrate and specified topcoat.
 - b. Apply two coats specified topcoat.

- D. Ferrous Metal: (Including, but not limited to, steel cabinets, exposed equipment support fabrications & unistrut, control panels, hollow metal doors and frames, handrails, ornamental iron and trim).
 1. Institutional Low-Odor/VOC Latex System; Semi-Gloss (Gloss Level 5):
 - a. 1 Coat Primer: Primer, rust-inhibitive, water based.
 - 1) If metal fabrications are shop primed the Contractor may elect to skip the prime coat. However, the Contractor shall verify the approved topcoat is compatible with the factory installed primer.
 - 2) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Pro Industrial Pro-Cryl Universal Primer
 - b. 2 Coats Topcoat: Water Based Alkyd Urethane (minimum pencil hardness 5H) Latex, interior, institutional low odor/VOC, Semi-gloss.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProIndustrial Water-Based Alkyd Urethane, semi-gloss
 - b) Shop applied structural steel primers are included in Division 05 Sections "Structural Steel Framing" and "Steel Decking." Coordinate the work of this section with the Structural Engineer before editing. Field or shop applied fireproofing coatings are included in Division 07 Section "Intumescent Mastic Fireproofing." Coordinate the work of this section with manufacturer recommendations for topcoating fireproofing products to verify the topcoat products listed above are compatible.

 2. Structural Steel: Verify with paint manufacturer that primers and field applied protective coats are compatible with ferrous metal topcoats specified above before proceeding. Notify the Architect where incompatibilities are noted.

 3. Existing Painted Surfaces:

- a. Apply one coat low VOC primer product as recommended by the manufacturer compatible with painted substrate and specified topcoat.
 - b. Apply two coats specified topcoat.

- E. Galvanized-Metal Substrates: Galvanized-metal substrates should not be chromate passivated if primers are field applied. If galvanized metal is chromate passivated, consult manufacturer for appropriate primers.
 - 1. Institutional Low-Odor/VOC Latex System, Semi-gloss (Gloss Level 5):
 - a. 1 Coat Primer: Primer, galvanized, water based.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Pro Industrial Pro-Cryl Universal Primer
 - b. 2 Coats Topcoat: Water Based Alkyd Urethane (minimum pencil hardness 5H) Latex, interior, institutional low odor/VOC, Semi-gloss.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProIndustrial Water-Based Alkyd Urethane, semi-gloss

- F. Stainless Steel Substrates: Including but not limited to, stainless steel pipe and pipe covering, control panels, handrails, ornamental iron, steel lintels, steel ladders, steel catwalks, steel posts and bollards, hollow metal doors and frames and steel window sash.
 - 1. Latex System; Semi-Gloss
 - a. 1 Coat Primer: Water based, anti-corrosive pigments and acrylic resins, for cleaned/etched stainless steel.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Pro Industrial Pro-Cryl Universal Primer
 - b) BM Insl-X Stix Waterborne Bonding Primer
 - b. 2 Coats Topcoat: Latex, exterior, institutional low odor/VOC, Semi-gloss.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Pro Industrial DTM Acrylic
 - b) BM Ultra Spec HP DTM Acrylic Enamel Semi-gloss HP 29, Gloss.

- G. Gypsum Board and Plaster Substrates: Consult Finish Schedule for gloss.
 - 1. Institutional Low-Odor/VOC Latex System; Gloss Level 1; Flat:

- a. 1 Coat Primer: Primer sealer, latex, interior, Flat (Gloss Level 1).
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero Interior Latex Primer
 - b) BM Ultra Spec 500 Interior Latex Primer N534
 - c) AN Glidden Professional Lifemaster No VOC Interior Primer
 - b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Flat.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero VOC Interior Latex Flat.
 - b) BM Ultra Spec 500 WB Interior Latex Flat N536
 - c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Sealer.
2. Institutional Low-Odor/VOC Latex System; Gloss Level 3; Eggshell:
- a. 1 Coat Primer: Primer sealer, latex, interior Gloss Level 1; Eggshell (Gloss Level 3).
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero Interior Latex Primer
 - b) BM Ultra Spec 500 WB Interior Latex Primer N534
 - c) PPG Architectural Coatings Coatings Speedhide Interior Zero VOC Latex Sealer.
 - b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Egg Shell.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero VOC Interior Latex Egg Shell
 - b) BM Eco Spec WB Interior Latex Egg Shell N538
 - c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Egg Shell.
3. Institutional Low-Odor/VOC Latex System; Gloss Level 5; Semi-Gloss:
- a. 1 Coat Primer: Primer sealer, latex, interior, Semi-Gloss (Gloss Level 5).
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero Interior Latex Primer
 - b) BM Ultra Spec 500 Interior Latex Primer N534

- c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Sealer
 - b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Semi-Gloss.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero VOC Acrylic Semi-Gloss
 - b) BM Ultra Spec 500 Zero VOC Interior Semi-Gloss N539
 - c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Semi-Gloss
 - 2) Semi-Gloss and Gloss products applied over Gypsum Drywall require a level 5 finish. Coordinate with Division 09 Section Gypsum Board Systems Contractor before proceeding.
- 4. Institutional Low-Odor/VOC Microbicial Latex System; Gloss Level 3; Eggshell:
 - a. 1 Coat Primer: Primer sealer, latex, interior, Semi-Gloss (Gloss Level 5).
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero Interior Latex Primer
 - b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Egg Shell.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Paint Shield Microbicial Latex. Egg Shell.
- 5. Existing Painted Surfaces:
 - a. Apply one coat low VOC primer product as recommended by the manufacturer compatible with painted substrate and specified topcoat.
 - b. Apply two coats specified topcoat.
- H. Wood Substrates: Including wood trim, architectural woodwork, wood doors and frames, wood-based panel products and exposed wood joists/beams.
 - 1. Institutional Low-Odor/VOC Latex System; Gloss Level 1; Flat (Gloss Level 1):
 - a. 1 Coat Primer: Primer sealer, latex, interior.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Extreme Bond Primer
 - b) BM Ultra Spec 500 Interior Latex Primer N534
 - c) PPG Architectural Coatings Seal Grip Interior Stain Blocking Primer

- b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Flat.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Interior Latex Flat.
 - b) BM Ultra Spec 500 WB Interior Latex Flat N536
 - c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Flat.
- 2. Institutional Low-Odor/VOC Latex System; Gloss Level 3; Eggshell (Gloss Level 3):
 - a. 1 Coat Primer: Primer sealer, latex, interior Gloss Level 1; Eggshell.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Extreme Bond Primer
 - b) BM Ultra Spec 500 Interior Latex Primer N534
 - c) PPG Architectural Coatings Seal Grip Interior Stain Blocking Primer
 - b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Egg Shell.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero VOC Interior Latex Egg Shell
 - b) BM Ultra Spec 500 WB Interior Latex Egg Shell N538
 - c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Egg Shell.
- 3. Institutional Low-Odor/VOC Latex System; Gloss Level 5; Semi-Gloss (Gloss Level 5):
 - a. 1 Coat Primer: Primer sealer, latex, interior.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Extreme Bond Primer
 - b) BM Ultra Spec 500 Interior Latex Primer N534
 - c) PPG Architectural Coatings Seal Grip Interior Stain Blocking Primer
 - b. 2 Coats Topcoat: Latex, interior, institutional low odor/VOC, Semi-Gloss.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero VOC Acrylic Semi-Gloss.
 - b) BM Ultra Spec 500 Zero VOC Interior Semi-Gloss N539.
 - c) PPG Architectural Coatings Speedhide Interior Zero VOC Latex Semi-Gloss.

4. Existing Painted Surfaces:
 - a. Apply one coat low VOC primer product as recommended by the manufacturer compatible with painted substrate and specified topcoat.
 - b. Apply two coats specified topcoat.

3.7 INTERIOR PAINTING SCHEDULE (INTERIOR- HIGH PERFORMANCE LOW VOC EPOXY COATINGS): The paragraphs below cover a range of painting systems. The Contractor shall consult the Finish Schedule and drawings for epoxy-modified paint location, type, gloss and color to be applied to each individual substrate. Not all scheduled systems will be included on the Finish Schedule. Where the product line permits, provide products from a sole source single manufacturer.

A. CMU Substrates: Consult Finish Schedule for gloss and color.

1. Institutional Low-Odor/VOC Epoxy System: Manufacturer shall formulate to specified gloss level (See Finish Schedule).
 - a. 1 Coat Block Filler: Block filler, latex, interior/exterior. Contractor shall apply two (2) coats block filler in high humidity areas (greater than 60%), kitchen/food prep areas, labs and clean rooms.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) ProIndustrial Heavy Duty Interior/Exterior Block Filler
 - b. 2 Coats Topcoat: Epoxy-modified interior latex low odor/VOC.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Pro Industrial Waterborne Catalyzed Epoxy

B. CMU Substrates: Consult Finish Schedule for gloss and color.

1. Institutional Low-Odor/VOC Epoxy System: Manufacturer shall formulate to specified gloss level (See Finish Schedule).
 - a. 1 Coat Block Filler: Block filler, latex, interior/exterior. Contractor shall apply two (2) coats block filler in high humidity areas (greater than 60%), kitchen/food prep areas, labs and clean rooms.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) PrepRite Interior/Exterior Block Filler
 - 2) Previously coated surfaces: Subject to compliance with requirements, provide the following:

- a) SW ProMar 200 Interior Latex Primer.
 - b. 2 Coats Topcoat: Pre-catalyzed, water-based epoxy low odor/VOC.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Pro Industrial Waterborne Pre-Catalyzed Epoxy
- C. Ferrous Metal: (Including, but not limited to, steel cabinets, exposed equipment support fabrications & unistrut, control panels, hollow metal doors and frames, handrails, ornamental iron and trim).
- 1. Institutional Low-Odor/VOC Epoxy System: Manufacturer formulate to specified gloss level (See Finish Schedule).
 - a. 1 Coat Primer: Primer, rust-inhibitive, water based.
 - 1) If metal fabrications are shop primed the Contractor may elect to skip the prime coat. However, the Contractor shall verify the approved topcoat is compatible with the factory installed primer.
 - 2) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Pro Industrial Pro-Cryl Universal Primer (E-2: 51-150 g/l)
 - b) BM Ultra Spec HP Acrylic Metal Primer HP04 (VOC 48 g/l, LEED)
 - c) PPG Architectural Coatings Pitt-Tech Plus Interior DTM Industrial Primer
 - b. 2 Coats Topcoat: Epoxy-modified interior latex low odor/VOC.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Pro Industrial Waterborne Catalyzed Epoxy
 - 2. Structural Steel: Verify with paint manufacturer that primers and field applied protective coatings are compatible with ferrous metal topcoats specified above before proceeding. Notify the Architect where incompatibilities are noted.
 - 3. Existing Painted Surfaces:
 - a. Apply one coat low VOC primer product as recommended by the manufacturer compatible with painted substrate and specified topcoat.
 - b. Apply two coats specified topcoat.
- D. Gypsum Board and Plaster Substrates: Consult Finish Schedule for gloss and color.
- 1. Institutional Low-Odor/VOC Epoxy System; Manufacturer formulate to specified gloss level (See Finish Schedule).
 - a. 1 Coat Primer: Primer sealer, latex, interior.

- 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW ProMar 200 Zero Interior Latex Primer
 - b) BM Ultra Spec 500 WB Interior Latex Primer N534
 - b. 2 Coats Topcoat: Epoxy-modified interior latex low odor/VOC.
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following:
 - a) SW Pro Industrial Waterborne Catalyzed Epoxy.
 - b) BM Corotech Acrylic Epoxy V450
 - 2) Semi-Gloss and Gloss products applied over Gypsum Drywall require a level 5 finish. Coordinate with the drawings and the Division 09 Section Gypsum Board Systems Contractor before proceeding.
2. Existing Painted Surfaces:
- a. Apply one coat low VOC primer product as recommended by the manufacturer compatible with painted substrate and specified topcoat.
 - b. Apply two coats specified topcoat.

3.8 INTERIOR PAINTING SCHEDULE (INTERIOR- SPECIALTY COATINGS): The paragraphs below cover a range of specialty coatings. The Contractor shall consult the Finish Schedule and drawings for specialty coating location, type, gloss and color to be applied to each individual substrate. Not all specialty coatings will be included on the Finish Schedule.

A. CMU Substrates: Consult Finish Schedule for gloss, style and color.

1. Low-Odor/VOC Multi-Color Latex System.
 - a. Acceptable Product: Subject to compliance with requirements, provide the following:
 - 1) 1 coat Primer: Sherwin Williams; PrepRite Block Filler (B25W25)
 - 2) 2 coats Topcoat: As scheduled
2. Existing Painted Surfaces:
 - a. Apply one coat low VOC primer product as recommended by the manufacturer compatible with painted substrate and specified topcoat.
 - b. Apply two coats specified topcoat.

B. Gypsum Board and Plaster Substrates: Consult Finish Schedule for gloss, style and color.

1. Low-Odor/VOC Multi-Color Latex System.
 - a. Acceptable Product: Subject to compliance with requirements, provide the following:

- 1) 1 coat Primer: Sherwin Williams; ProMar 200 Zero VOC Latex Primer
 - 2) 2 coats Topcoat: as scheduled
- b. This product applied over Gypsum Drywall requires a level 5 finish. Coordinate with Division 09 Section Gypsum Board System Contractor before proceeding.
2. Low Odor/VOC Dry Erase Coatings
- a. Acceptable Product: Subject to compliance with requirements, provide the following:
 - 1) 1 coat Primer:
 - a) IdeaPaint base.
 - b) ProMar 200 Zero VOC Eggshell
 - 2) 2 coats Topcoat:
 - a) IdeaPaint Dry Erase
 - b) SW Dry Erase Clear Coating Gloss (KB65C2000)
3. Existing Painted Surfaces:
- a. Apply one coat low VOC primer product as recommended by the manufacturer compatible with painted substrate and specified topcoat.
 - b. Apply two coats specified topcoat.

END OF SECTION 09 91 23

SECTION 10 14 19 - DIMENSIONAL LETTER SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Cast dimensional characters.
 - 2. Cutout dimensional characters.

1.3 UNIT PRICES

- A. Work of this Section is affected by unit prices specified in Division 01 Section "Unit Prices."

1.4 DEFINITIONS

- A. Illuminated: Illuminated by lighting source integrally constructed as part of the sign unit.

1.5 COORDINATION

- A. Furnish templates for placement of electrical service embedded in permanent construction by other installers.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For signs.
 - 1. Include fabrication and installation details and attachments to other work.
 - 2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
 - 3. Show message list, typestyles, graphic elements, and layout for each sign at least 3/4" = 1'-0" scale.
 - 4. Show locations of electrical service connections.
 - 5. Include diagrams for power, signal, and control wiring.

- C. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.
 - 1. Include representative Samples of available typestyles and graphic symbols.
- D. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
 - 1. Dimensional Characters: Full-size Sample of each type of dimensional character.
 - 2. Exposed Accessories: Full-size Sample of each accessory type.
 - 3. Full-size Samples, if approved, will be returned to Contractor for use in the Project.
- E. Product Schedule: For dimensional letter signs. Use same designations indicated on Drawings or specified.

1.7 INFORMATIONAL SUBMITTALS

- A. Delegated-Design Submittal: For signs indicated in "Performance Requirements" Article.
 - 1. Include structural analysis calculations for signs indicated to comply with design loads; signed and sealed by the qualified professional engineer responsible for their preparation.
- B. Qualification Data: For Installer and manufacturer.
- C. Sample Warranty: For special warranty.

1.8 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For signs to include in maintenance manuals.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Manufacturer Qualifications: A manufacturer of products who has verifiably manufactured products of the volume and complexity of those required for this project.

1.10 FIELD CONDITIONS

- A. Field Measurements: Verify locations of electrical service embedded in permanent construction by other installers by field measurements before fabrication and indicate measurements on Shop Drawings.

1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Deterioration of finishes beyond normal weathering.
 - b. Separation or delamination of sheet materials and components.
 - 2. Warranty Period: Five years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design sign structure and anchorage of dimensional characters according to structural performance requirements.
- B. Structural Performance: Signs and supporting elements shall withstand the effects of gravity and other loads within limits and under conditions indicated.
 - 1. Uniform Wind Load: As indicated on Drawings.
 - 2. Concentrated Horizontal Load: As indicated on Drawings.
 - 3. Other Design Loads: As indicated on Drawings
 - 4. Uniform and concentrated loads need not be assumed to act concurrently.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 DIMENSIONAL CHARACTERS

- A. Cast Characters: Characters with uniform faces, sharp corners, and precisely formed lines and profiles, and as follows:
 - 1. Manufacturers: Subject to compliance with requirements, provide products from one of the following:
 - a. A. R. K. Ramos
 - b. ACE Sign Systems, Inc.
 - c. ASI Sign Systems, Inc.
 - d. Cosco
 - e. Gemini Incorporated
 - f. Matthews International Corporation; Bronze Division
 - g. Metal Arts
 - h. Metallic Arts
 - i. Southwell Company (The)

2. Character Material: Cast aluminum.
 3. Character Height: As indicated on Drawings.
 4. Thickness: Manufacturer's standard for size of character.
 5. Finishes:
 - a. Integral Metal Finish: As selected by Architect from full range of industry finishes.
 - b. Integral Aluminum Finish: Anodized color as selected by Architect from full range of industry colors and color densities.
 - c. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color as selected by Architect from manufacturer's full range.
 - d. Overcoat: Clear organic coating.
 6. Mounting: Blind studs.
 7. Typeface: Roboto Regular.
- B. Cutout Characters: Characters with uniform faces; square-cut, smooth edges; precisely formed lines and profiles; and as follows:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A.R.K. Ramos.
 - b. ACE Sign Systems, Inc.
 - c. APCO Graphics, Inc.
 - d. ASI Sign Systems, Inc.
 - e. Cosco.
 - f. Diskey Architectural Signage Inc.
 - g. Gemini Incorporated.
 - h. Inpro Corporation.
 - i. Matthews International Corporation; Bronze Division.
 - j. Metal Arts.
 - k. Metallic Arts.
 - l. Southwell Company (The).
 - m. Steel Art Company.
 2. Character Material: Sheet or plate aluminum.
 3. Character Height: As indicated on Drawings.
 4. Thickness: Manufacturer's standard for size of character.
 5. Finishes:
 - a. Integral Metal Finish: As selected by Architect from full range of industry finishes.
 - b. Integral Aluminum Finish: Clear anodized.
 - c. Integral Stainless-Steel Finish: No. 4.
 - d. Integral Acrylic Color: As selected by Architect from full range of industry colors.
 - e. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color as selected by Architect from manufacturer's full range.
 - f. Overcoat: Clear organic coating.
 - g. Painted Edges: Paint edges of acrylic characters with laminated metal facing as recommended in writing by manufacturer.
 6. Mounting: Projecting studs.

7. Typeface: Roboto Regular.

2.3 DIMENSIONAL CHARACTER MATERIALS

- A. Aluminum Castings: ASTM B 26/B 26M, alloy and temper recommended by sign manufacturer for casting process used and for type of use and finish indicated.
- B. Aluminum Sheet and Plate: **ASTM B 209 (ASTM B 209M)**, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- C. Aluminum Extrusions: **ASTM B 221 (ASTM B 221M)**, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- D. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304, stretcher-leveled standard of flatness.
- E. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.4 ACCESSORIES

- A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following:
 1. Use concealed fasteners and anchors unless indicated to be exposed.
 2. For exterior exposure, furnish nonferrous-metal, stainless-steel, or hot-dip galvanized devices unless otherwise indicated.
 3. Exposed Metal-Fastener Components, General:
 - a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
 - b. Fastener Heads: For nonstructural connections, use countersunk screws and bolts with tamper-resistant torx slots unless otherwise indicated.
 4. Sign Mounting Fasteners:
 - a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
 - b. Projecting Studs: Threaded studs with sleeve spacer, welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
 - c. Through Fasteners: Exposed metal fasteners matching sign finish, with type of head indicated, installed in predrilled holes.
- B. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, **0.045 inch (1.14 mm)** thick, with adhesive on both sides.
- C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

2.5 FABRICATION

- A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
1. Preassemble signs and assemblies in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
 2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
 3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
 4. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
 5. Internally brace dimensional characters for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners.
 6. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.
 7. Castings: Fabricate castings free of warp, cracks, blowholes, pits, scale, sand holes, and other defects that impair appearance or strength. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks before finishing.

2.6 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.
- D. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.7 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, Class I, 0.018 mm or thicker.
- B. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.8 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 2. Directional Satin Finish: No. 4.
 - 3. Dull Satin Finish: No. 6.
 - 4. Reflective, Directional Polish: No. 7.
 - 5. Mirrorlike Reflective, Nondirectional Polish: No. 8.
- C. Clear Organic Coating: Clear, waterborne, air-drying, acrylic lacquer called "Incralac"; specially developed for coating copper-alloy products; consisting of a solution of methyl methacrylate copolymer with benzotriazole to prevent breakdown of the film in UV light; shop applied in two uniform coats according to manufacturer's written instructions, with interim drying between coats and without runs or other surface imperfections, to a total dry film thickness of 1 mil (0.025 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.
- C. Verify that electrical service is correctly sized and located to accommodate signs.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.
 - 1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
 - 2. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
 - 3. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- B. Mounting Methods:
 - 1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.

- a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place sign in position and push until flush to surface, embedding studs in holes. Temporarily support sign in position until adhesive fully sets.
 - b. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.
2. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
 - a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place spacers on studs, place sign in position, and push until spacers are pinched between sign and substrate, embedding the stud ends in holes. Temporarily support sign in position until adhesive fully sets.
 - b. Thin or Hollow Surfaces: Place spacers on studs, place sign in position with spacers pinched between sign and substrate and install washers and nuts on stud ends projecting through opposite side of surface, and tighten.
 3. Through Fasteners: Drill holes in substrate using predrilled holes in sign as template. Countersink holes in sign if required. Place sign in position and flush to surface. Install through fasteners and tighten.
 4. Back Bar and Brackets: Remove loose debris from substrate surface and install backbar or bracket supports in position, so that signage is correctly located and aligned.
 5. Adhesive: Clean bond-breaking materials from substrate surface and remove loose debris. Apply linear beads or spots of adhesive symmetrically to back of sign and of suitable quantity to support weight of sign after cure without slippage. Keep adhesive away from edges to prevent adhesive extrusion as sign is applied and to prevent visibility of cured adhesive at sign edges. Place sign in position and push to engage adhesive. Temporarily support sign in position until adhesive fully sets.
 6. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position, and push to engage tape adhesive.

3.3 ADJUSTING AND CLEANING

- A. Remove and replace damaged or deformed characters and signs that do not comply with specified requirements. Replace characters with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- B. Remove temporary protective coverings and strippable films as signs are installed.
- C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

END OF SECTION 10 14 19

SECTION 10 14 23.13 - ROOM-IDENTIFICATION SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes room-identification signs that are directly attached to the building.
- B. Related Requirements:
 - 1. Owner's Campus Interior Signage Standards

1.3 DEFINITIONS

- A. Accessible: In accordance with the accessibility standard.

1.4 COORDINATION

- A. Furnish templates for placement of sign-anchorage devices embedded in permanent construction by other installers.
- B. Furnish templates for placement of electrical service embedded in permanent construction by other installers.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For room-identification signs.
 - 1. Include fabrication and installation details and attachments to other work.
 - 2. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.
 - 3. Show message list, typestyles, graphic elements, including raised characters and Braille, and layout for each sign at least half size.
- C. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.
 - 1. Include representative Samples of available typestyles and graphic symbols.

- D. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
 - 1. Room-Identification Signs: Full-size Sample.
 - 2. Variable Component Materials: Full-size Sample of each base material, character (letter, number, and graphic element) in each exposed color and finish not included in Samples above.
 - 3. Exposed Accessories: Full-size Sample of each accessory type.
 - 4. Full-size Samples, if approved, will be returned to Contractor for use in Project.
- E. Product Schedule: For room-identification signs. Use same designations indicated on Drawings or specified.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For installer and manufacturer.
- B. Sample Warranty: For special warranty.

1.7 CLOSEOUT DOCUMENTS

- A. Maintenance Data: For signs to include in maintenance manuals.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Variable Component Materials: 12 replaceable text inserts and interchangeable characters (letters, numbers, and graphic elements) of each type.
 - 2. Tools: One set(s) of specialty tools for assembling signs and replacing variable sign components.

1.9 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A firm experienced in manufacturing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- B. Installer Qualifications: Manufacturer of products or an entity that employs installers and supervisors who are trained and approved by manufacturer.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Deterioration of finishes beyond normal.
 - b. Deterioration of embedded graphic image.
 - c. Separation or delamination of materials and components.
2. Warranty Period: Five years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design" and ICC A117.1.

2.2 ROOM-IDENTIFICATION SIGNS

- A. Room-Identification Sign 1, 1A, 3A, 3B, 3C, 4A: Sign system with smooth, uniform surfaces; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACE Sign Systems, Inc.
 - b. Advance Corporation.
 - c. Allen Industries Architectural Signage.
 - d. APCO Graphics, Inc.
 - e. ASE, Inc.
 - f. ASI Sign Systems, Inc.
 - g. Best Sign Systems, Inc.
 - h. Clarke Systems.
 - i. Cosco.
 - j. Diskey Architectural Signage Inc.
 - k. Inpro Corporation.
 - l. Mohawk Sign Systems.
 - m. Nelson-Harkins Industries.
 - n. Poblocki Sign Company, LLC.
 - o. Signature Signs, Inc.
 - p. Signs & Decal Corp.
 - q. Stamprite Supersine; a division of Stamp Rite Inc.
 - r. Vista System.
 - s. Vomar Products, Inc.
 - t. NC State University Sign Shop
2. Acrylic Sheet: ASTM D 4802, category as standard with manufacturer for each sign, Type UVF (UV filtering).

3. Photopolymer Face, in matte (non-glare) finish; with message and characters having uniform faces, rounded corners (1-inch radius typical), and precisely formed lines and profiles; and as follows:
4. Fabrication:
 - a. Tactile Graphics and Text:
 - 1) Fabrication process: Provide tactile copy and grade 2 Braille raised 1/32-inch minimum from plaque first surface by manufacturer's photopolymer bonded process. Sign face of single material, tactile characters and Braille integral to photopolymer. Adhesive-fixed characters are not acceptable.
 - 2) Provide lettering and graphics precisely formed, uniformly opaque to comply with relevant ADA regulations and requirements indicated for size, style, spacing, content, position, and colors. Tactile characters to be raised min. 1/32-inch from surface. Computerized translation of sign copy to be responsibility of the manufacturer.
5. Mounting Panel: .125-inch-thick matte finished acrylic.
6. Background Appearance: Solid color: Select from manufacturer's standard range.
7. Tactile Lettering and Graphics Color: Solid color contrast with background: Select from manufacturer's standard colors.
8. Overall panel size: As indicated on the drawings
9. Shape: As indicated on the drawings.
10. Edge: Beveled .125 inch.
11. Letter sizes and layout position: As indicated on the drawings
12. Letter Font: San Serif; Univers 55
13. Approved Installation Methods:
 - a. Vinyl tape: Manufacturer's standard high-bond, foam-core tape, 0.045-inch (1.14 mm) thick, with adhesive on both sides
 - b. Sheet adhesive: Wide-format high-bond acrylic adhesive on clear polyester carrier sheet, 0.0079 inch (0.2 mm) thick.
 - c. Magnetic Tape: Magnetic tape system consisting of the following:
 - 1) Steel tape affixed to back plate, 1 inch (24 mm) wide and 0.030 inch (0.8 mm) thick
 - 2) Magnetic stripping affixed to face plate, 1/2 inch (13 mm) wide and 0.060 inch (1.6 mm) thick
 - d. Magnetic Sheet: Wide-format adhesive-backed sheet magnet, 0.030 inch (0.8 mm) thick
 - 1) Color: White

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of signage work.

- B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.
 - 1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
 - 2. Install product at heights to conform to Americans with Disabilities Act Accessibility Guidelines (ADAAG), ANSI 117.1 and applicable local amendments and regulations.
 - 3. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
- B. Mounting Methods:
 - 1. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position and push to engage tape adhesive.
- C. Mounting to Glass: Mount using sheet adhesive. Provide opaque sheet matching sign material and background finish onto opposite side of glass to conceal back of sign.

3.3 ADJUSTING AND CLEANING

- A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- B. Remove temporary protective coverings and strippable films as signs are installed.
- C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

END OF SECTION 10 14 23.13

SECTION 10 21 13 - TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes phenolic-core units as follows:
 - 1. Toilet Enclosures
 - 2. Urinal Screens
- B. Related Sections include the following:
 - 1. Division 06 Section "Miscellaneous Rough Carpentry" for blocking.
 - 2. Division 09 Section "Gypsum Board Systems" for blocking.
 - 3. Division 10 "Toilet and Bath Accessories" for toilet tissue dispensers, grab bars, purse shelves, and similar accessories

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For toilet compartments.
 - 1. Include plans, elevations, sections, details, and attachments to other work.
 - 2. Show locations of cutouts for compartment-mounted toilet accessories.
 - 3. Show locations of reinforcements for compartment-mounted grab bars and locations of blocking for surface-mounted toilet accessories.
 - 4. Show locations of centerlines of toilet fixtures.
 - 5. Show locations of floor drains.
 - 6. Show ceiling grid, ceiling-mounted items, and overhead support or bracing locations.
- C. Samples for Initial Selection: For each type of toilet compartment material indicated.
 - 1. Include Samples of hardware and accessories involving material and color selection.
- D. Samples for Verification: For the following products, in manufacturer's standard sizes unless otherwise indicated:

1. Each type of material, color, and finish required for toilet compartments, prepared on 6-inch- (152-mm-) square Samples of same thickness and material indicated for Work.
2. Each type of hardware and accessory.

E. Product Schedule: For toilet compartments, prepared by or under the supervision of supplier, detailing location and selected colors for toilet compartment material.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of toilet compartment by manufacturer.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For toilet compartments to include in maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Door Hinges: One hinge(s) with associated fasteners.
2. Latch and Keeper: One latch(es) and keeper(s) with associated fasteners.
3. Door Bumper: One door bumper(s) with associated fasteners.
4. Door Pull: One door pull(s) with associated fasteners.
5. Fasteners: 10 fasteners of each size and type.

1.7 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication and indicate measurements on Shop Drawings.

1.8 GUARANTEE/WARRANTY

A. Manufacturer to supply a written warranty covering all components and hardware against breakage, corrosion and delamination for a period of 15 years.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.

2. Smoke-Developed Index: 450 or less.

B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 for toilet compartments designated as accessible.

2.2 PHENOLIC-CORE TOILET COMPARTMENTS {TP1, TP2}

A. Manufacturers – Subject to specified requirements, provide products by one of the following:

1. Bobrick Washroom Equipment, Inc.
2. General Partitions Mfg. Corp.
3. Global Partitions; ASI Group
4. All American Metal Corp.
5. American Sanitary Partition Corporation
6. Accurate Partitions Corporation.
7. Bradley Corporation; Mills Partitions
8. Decolam.
9. Flush Metal Partition, LLC.

B. Toilet-Enclosure Style: Floor anchored

C. Urinal-Screen Style: Wall hung

D. Door, Panel, and Pilaster Construction: Solid phenolic-core panel material with melamine facing on both sides fused to substrate during panel manufacture (not separately laminated), and with eased and polished edges. Provide minimum 3/4-inch- (19-mm-) thick doors and pilasters and minimum 1/2-inch- (13-mm-) thick panels.

E. Pilaster Shoes: Stainless steel, ASTM A666, Type 302 or 304, not less than 0.0312 inch (0.8 mm) specified thickness and 3 inches (75 mm) high, finished to match hardware.

F. Brackets (Fittings):

1. Full-Height (Continuous) Type: Manufacturer's standard design; stainless steel

G. Phenolic-Panel Finish:

1. Color and Pattern: As indicated by manufacturer's designations
2. Edge Color: Manufacturer's standard.

2.3 PHENOLIC-CORE SHOWER DIVIDERS {TP3}

A. Manufacturers – Subject to specified requirements, provide products by one of the following:

1. Bobrick Washroom Equipment, Inc.
2. Bradley Corporation; Mills Partitions
3. General Partitions Mfg. Corp.
4. Global Partitions; ASI Group

B. Mounting Configuration: Floor anchored, overhead braced with extruded anodized aluminum headrails 0.065 inches thick with anti-grip profile and integral curtain track and hooks for compartments without doors.

- C. Design Type:
 - 1. Maximum Height
 - 2. Door/Panel Height: 71-3/4 inches (182 cm).
 - 3. Floor Clearance: 4-1/2 inches (11 cm).
 - 4. Panels: Up to 71-3/4 inches (182 cm) wide, one piece. Splice or two panels joined by bracket not acceptable.
- D. Phenolic-Panel Finish:
 - 1. Color and Pattern: As indicated by manufacturer's designations

2.4 HARDWARE AND ACCESSORIES

- A. Hardware and Accessories: Manufacturer's standard operating hardware and accessories.
 - 1. Material: Stainless steel
 - 2. Hinges: Manufacturer's standard paired, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees allowing emergency access by lifting door.
 - 3. Latch and Keeper: Manufacturer's standard latch unit designed for emergency access and with combination rubber-faced door strike and keeper. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.
 - 4. Coat Hook: Manufacturer's standard combination hook and rubber-tipped bumper, sized to prevent in-swinging door from hitting compartment-mounted accessories.
 - 5. Door Bumper: Manufacturer's standard rubber-tipped bumper at out-swinging doors
 - 6. Door Pull: Manufacturer's standard unit at out-swinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible.
- B. Hardware and Accessories: Manufacturer's heavy-duty operating hardware and accessories.
- C. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.
- D. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless steel, hot-dip galvanized steel, or other rust-resistant, protective-coated steel compatible with related materials.

2.5 MATERIALS

- A. Aluminum Castings: ASTM B26/B26M
- B. Aluminum Extrusions: ASTM B221 (ASTM B221M)
- C. Steel Sheet: Commercial steel sheet for exposed applications; mill phosphatized and selected for smoothness
 - 1. Electrolytically Zinc Coated: ASTM A879/A879M, 01Z (03G0)
 - 2. Hot-Dip Galvanized: ASTM A653/A653M, either hot-dip galvanized or galvanized
- D. Stainless-Steel Sheet: ASTM A666, Type 304, stretcher-leveled standard of flatness

- E. Stainless-Steel Castings: ASTM A743/A743M
- F. Zamac: ASTM B86, commercial zinc-alloy die castings

2.6 FABRICATION

- A. Fabrication, General: Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories, and solid blocking within panel where required for attachment of toilet accessories.
- B. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, fasteners, and anchors at pilasters to suit floor conditions. Make provisions for setting and securing continuous head rail at top of each pilaster. Provide shoes at pilasters to conceal supports and leveling mechanism.
- C. Floor-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies complete with threaded rods, lock washers, and leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.
- D. Door Size and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide, in-swinging doors for standard toilet compartments and 36-inch- (914-mm-) wide, out-swinging doors with a minimum 32-inch- (813-mm-) wide, clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas and conditions, with Installer present, for compliance with requirements for fastening, support, alignment, operating clearances, and other conditions affecting performance of the Work.
 - 1. Confirm location and adequacy of blocking and supports required for installation.
- B. Coordinate layout and installation of supports, inserts, and anchors built into other units of work for toilet compartment anchorage.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position indicated with manufacturer's recommended anchoring devices.
 - 1. Maximum Clearances:
 - a. Pilasters and Panels: 1/2 inch (13 mm)

- b. Panels and Walls: 1 inch (25 mm)
- 2. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.
 - a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
 - b. Align brackets at pilasters with brackets at walls.
- B. Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Secure continuous head rail to each pilaster with not less than two fasteners. Hang doors to align tops of doors with tops of panels and adjust so tops of doors are parallel with overhead brace when doors are in closed position.
- C. Floor-Anchored Units: Set pilasters with anchors penetrating not less than 2 inches (50 mm) into structural floor, unless otherwise indicated in manufacturer's written instructions. Level, plumb, and tighten pilasters. Hang doors and adjust so tops of doors are level with tops of pilasters when doors are in closed position.
- D. Urinal Screens: Attach with anchoring devices to suit supporting structure. Set units level and plumb, rigid, and secured to resist lateral impact.

3.3 ADJUSTING

- A. Hardware Adjustment: Adjust and lubricate hardware according to manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors to return doors to fully closed position.

END OF SECTION 10 21 13

SECTION 10 26 00 - WALL AND DOOR PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Corner guards.
 - 2. End-wall guards.
 - 3. Abuse-resistant wall coverings.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, impact strength, dimensions of individual components and profiles, and finishes for each impact-resistant wall-protection unit.
 - 2. Include fire ratings of units recessed in fire-rated walls and listings for door-protection items attached to fire-rated doors.
- B. Shop Drawings: For each type of wall and door protection showing locations and extent.
- C. Samples for Initial Selection: For each type of impact-resistant wall-protection unit indicated, in each color and texture specified.
 - 1. Include Samples of accent strips and accessories to verify color selection.
- D. Samples for Verification: For each type of exposed finish on the following products, prepared on Samples of size indicated below:
 - 1. Corner and End-Wall Guards: 12 inches (300 mm) long. Include example top caps.
 - 2. Abuse-Resistant Wall Covering: 6 by 6 inches (150 by 150 mm) square.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For installer.
- B. Material Test Reports: For each impact-resistant plastic material.
- C. Material Certificates: For each impact-resistant plastic material, signed by manufacturer.

- D. Warranty: Sample of warranty specified in this Section.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each impact-resistant wall-protection unit to include in maintenance manuals.
 - 1. Include recommended methods and frequency of maintenance for maintaining optimum condition of plastic covers under anticipated traffic and use conditions. Include precautions against using cleaning materials and methods that may be detrimental to plastic finishes and performance.
- B. Executed warranty

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Corner-Guard Covers: Full-size plastic covers of maximum length equal to 2 percent of each type, color, and texture of cover installed, but no fewer than **two, 48-inch- (1200-mm)-**long units.
 - 2. Mounting and Accessory Components: Amounts proportional to the quantities of extra materials. Package mounting and accessory components with each extra material.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store impact-resistant wall-protection units in original undamaged packages and containers inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.
 - 1. Maintain room temperature within storage area at not less than 70 deg F (21 deg C) during the period plastic materials are stored.
 - 2. Keep plastic sheet material out of direct sunlight.
 - 3. Store plastic wall-protection components for a minimum of 72 hours, or until plastic material attains a minimum room temperature of 70 deg F (21 deg C).
 - a. Store corner-guard covers in a vertical position.

1.9 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install impact-resistant wall-protection units until building is enclosed and weatherproof, wet work is complete and dry, and HVAC system is

operating and maintaining temperature at 70 deg F (21 deg C) for not less than 72 hours before beginning installation and for the remainder of the construction period.

- B. Field Measurements: Verify actual locations of walls, columns, and other construction contiguous with impact-resistant wall-protection units by field measurements before fabrication and indicate measurements on Shop Drawings.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of wall- and door-protection units that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including detachment of components from each other or from the substrates, delamination, and permanent deformation beyond normal use.
 - b. Deterioration of metals, metal finishes, plastics, and other materials beyond normal use.
 - 2. Warranty Period: Five years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain wall- and door-protection products of each type from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Surface Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: 25 or less.
 - 2. Smoke-Developed Index: 450 or less.
- B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1

2.3 CORNER GUARDS

- A. Surface-Mounted, Metal Corner Guards {CG1}: Fabricated as one piece from formed or extruded metal with formed edges; with 90- or 135-degree turn to match wall condition.
 - 1. Manufacturer: Inpro, Corporation

2. Material: Stainless-steel sheet, Type 304
 - a. Thickness: Minimum **0.0625 inch (1.6 mm)**
 - b. Finish: Directional satin, No. 4
3. Material: Extruded aluminum, minimum 0.0625 inch (1.6 mm) thick, with clear anodic finish.
4. Wing Size: Nominal {2 by 2 inches (51 by 51 mm)}
5. Corner Radius: 1/8 inch (3 mm)
6. Mounting: Flat-head, countersunk screws through factory-drilled mounting holes or adhesive]

2.4 END-WALL GUARDS

- A. Surface-Mounted, Metal, End-Wall Guards {CG2}: Fabricated from one-piece, formed or extruded metal that covers entire end of wall; with formed edges.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 2. {Inpro Corporation} Material: Stainless-steel sheet, Type 304
 - a. Thickness: 0.0625 inch (1.6 mm)
 - b. Finish: Directional satin, No. 4
 3. Material: Extruded aluminum, minimum 0.0625 inch (1.6 mm) thick, with clear anodic finish.
 4. Wing Size: Nominal {2 by 2 inches (51 by 51 mm)}
 5. Corner Radius: **1/8 inch (3 mm)**
 6. Mounting: Flat-head, countersunk screws through factory-drilled mounting holes or adhesive

2.5 ABUSE-RESISTANT WALL COVERINGS

- A. Abuse-Resistant Sheet Wall Covering {WP1}: Fabricated from semirigid, plastic sheet wall-covering material.
 1. Basis of design manufacturer m: Altro USA, Inc
 2. Size: As indicated
 3. Sheet Thickness: 0.080 inch (2.0 mm)
 4. Color and Texture: As selected by Architect from manufacturer's full range
 5. Height: As indicated
 6. Trim and Joint Moldings: Extruded rigid plastic that matches wall-covering color.
 7. Mounting: Adhesive.

2.6 MATERIALS

- A. Plastic Materials: Chemical- and stain-resistant, high-impact-resistant plastic with integral color throughout; extruded and sheet material as required, thickness as indicated.
- B. Polycarbonate Plastic Sheet: ASTM D6098, S-PC01, Class 1 or Class 2, abrasion resistant; with a minimum impact-resistance rating of 15 ft.-lbf/in. (800 J/m) of notch when tested according to ASTM D256, Test Method A.
- C. Fasteners: Aluminum, nonmagnetic stainless-steel, or other noncorrosive metal screws, bolts, and other fasteners compatible with items being fastened. Use security-type fasteners where exposed to view.
- D. Adhesive: As recommended by protection product manufacturer.
 - 1. Adhesives shall have a VOC content of 70 g/L or less.

2.7 FABRICATION

- A. Fabricate wall and door protection according to requirements indicated for design, performance, dimensions, and member sizes, including thicknesses of components.
- B. Factory Assembly: Assemble components in factory to greatest extent possible to minimize field assembly. Disassemble only as necessary for shipping and handling.
- C. Quality: Fabricate components with uniformly tight seams and joints and with exposed edges rolled. Provide surfaces free of wrinkles, chips, dents, uneven coloration, and other imperfections. Fabricate members and fittings to produce flush, smooth, and rigid hairline joints.

2.8 FINISHES

- A. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and wall areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

- B. Examine walls to which wall and door protection will be attached for blocking, grounds, and other solid backing that have been installed in the locations required for secure attachment of support fasteners.
 - 1. For wall and door protection attached with adhesive, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Complete finishing operations, including painting, before installing impact-resistant wall-protection system components.
- B. Before installation, clean substrate to remove dust, debris, and loose particles.

3.3 INSTALLATION

- A. Installation Quality: Install wall and door protection according to manufacturer's written instructions, level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.
- B. Mounting Heights: Install wall in locations and at mounting heights indicated on Drawings.
- C. Accessories: Provide splices, mounting hardware, anchors, trim, joint moldings, and other accessories required for a complete installation.
 - 1. Provide anchoring devices and suitable locations to withstand imposed loads.
 - 2. Where splices occur in horizontal runs of more than 20 feet (6.1 m), splice aluminum retainers and plastic covers at different locations along the run, but no closer than 12 inches (305 mm) apart.
 - 3. Adjust end and top caps as required to ensure tight seams.
- D. Abuse-Resistant Wall Covering: Install top and edge moldings, corners, and divider bars as required for a complete installation.

3.4 CLEANING

- A. Immediately after completion of installation, clean plastic covers and accessories using a standard, ammonia-based, household cleaning agent.
- B. Remove excess adhesive using methods and materials recommended in writing by manufacturer.

END OF SECTION 10 26 00

SECTION 10 28 00 - TOILET AND BATH ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Washroom accessories.
 - 2. Shower room accessories, including curtains.
 - 3. Custodial accessories.
 - 4. Under-Lavatory guards.
- B. Related Sections include the following:
 - 1. Division 06 Section "Miscellaneous Rough Carpentry" and Division 09 Section "Gypsum Board Systems" for wood and metal blocking installed to support toilet accessories.
 - 2. Division 08 Section "Mirrors" for frameless mirrors

1.3 COORDINATION

- A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
- B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.
- C. Contractor shall be responsible to coordinate blocking requirements for all accessory items, including changing stations, grab bars and shower seat with specific requirements noted in Division 06 Section "Miscellaneous Rough Carpentry" and Division 09 Section "Gypsum Board Systems"

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

2. Include anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
 3. Include electrical characteristics.
- B. Samples: Full size, for each exposed product and for each finish specified.
1. Approved full-size Samples will be returned and may be used in the Work.
- C. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
1. Identify locations using room designations indicated.
 2. Identify accessories using designations indicated.

1.5 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For manufacturer's special warranty.
- B. Certification: Certification letter from the manufacturer stating that all accessories provided meet the minimum requirements of ICC A117.1, current edition.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For toilet and bath accessories to include in maintenance manuals.
- B. Copy of Executed Warranty

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Curtain Hooks: Five curtain hooks.
 2. Curtains: Full-size units equal to 10 percent of amount installed for each size indicated, but no fewer than two units.

1.8 QUALITY ASSURANCE

- A. Mockup- For projects with multiple toilet rooms, install one of each accessory toilet room mockup(s), as required to review proximity to fixtures, accessibility interferences and other code compliance issues for review and approval by Owner, Architect, AHJ and other facility stakeholders prior to proceeding with general project installation.

1.9 WARRANTY

- A. Standard Accessory Warranty: Warrant products to be free from defects in workmanship and material under normal usage from the date of purchase for the periods set forth below,
 - 1. Warranty Period: 2 years from date of Final Acceptance.
- B. Special Mirror Warranty: Manufacturer's standard form in which manufacturer agrees to replace mirrors that develop visible silver spoilage defects and that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: 15 years from date of Final Acceptance.
- C. Changing Station Warranty: Warrant products to be free from defects in workmanship and material under normal usage from the date of purchase for the periods set forth below,
 - 1. Warranty Period: 5 years from date of Final Acceptance.
- D. Warm Air Dryers: Manufacturer's standard form in which manufacturer agrees to repair, restore, or replace defective electric hand dryer components and labor within specified warranty period.
 - 1. Warranty Period: One (1) year limited for labor and five (5) years for parts.
- E. Track and Curtain Manufacturers Standard Warranty: Manufacturer warrants that track and curtain products will be free from defects for a period of two-years from date of Final Acceptance.
- F. Track and Curtain Installers Warranty: Installer warrants that the track and curtain installation will be free from defects in workmanship for a period of two years for the date of Final Acceptance.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Structural Performance: Design accessories and fasteners to comply with the following requirements:
 - 1. Grab Bars: Installed units are able to resist **250 lbf (1112 N)** concentrated load applied in any direction and at any point.
 - 2. Shower Seats: Installed units are able to resist **250 lbf (1112 N)** concentrated load applied in any direction and at any point.
- C. Curtains: Provide curtain fabrics with the following characteristics:
 - 1. Flame Resistance: Provide fabrics identical to those that have passed NFPA 701 when tested by a qualified testing agency acceptable to authorities having jurisdiction.

- a. Identify fabrics with appropriate markings of a qualified testing agency.

2.2 MATERIALS

- A. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304, 0.031-inch (0.8-mm) minimum nominal thickness unless otherwise indicated.
- B. Steel Sheet: ASTM A1008/A1008M, Designation CS (cold rolled, commercial steel), 0.036-inch (0.9-mm) minimum nominal thickness.
- C. Galvanized-Steel Sheet: ASTM A653/A653M, with G60 (Z180) hot-dip zinc coating.
- D. Galvanized-Steel Mounting Devices: ASTM A153/A153M, hot-dip galvanized after fabrication.
- E. Fasteners: Screws, bolts, and other devices of same material as accessory unit and tamper-and-theft resistant where exposed, and of galvanized steel where concealed.
- F. Chrome Plating: ASTM B456, Service Condition Number SC 2 (moderate service).
- G. Mirrors: ASTM C1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.
- H. Keyed (tumbler lock) accessories shall be keyed alike with the exception of coin receiving boxes on dispensing machines.
- I. Lettering for identification of accessories and operation instructions shall be silk screened using international symbols unless otherwise specified.

2.3 ACCESSIBILITY REQUIREMENTS

- A. All products shall be manufactured in compliance with ICC A117.1 requirements for accessibility by elderly, child and disabled persons, without exception and as may be required by other jurisdictional authorities.

2.4 EXPOSED FINISHES

- A. Stainless Steel: No. 4 satin luster finish.

2.5 OWNER-FURNISHED MATERIAL:

- A. Contractor will install Owner-Vendor provided dispensers.

2.6 TOILET AND BATH ACCESSORIES

- A. Manufacturers:
 1. Basis-of-Design: Bobrick Washroom Equipment, Inc.

2. Other Acceptable Manufacturers subject to compliance with requirements:

- a. American Specialties, Inc.
- b. Bradley Corporation.
- c. Brey-Krause Manufacturing Co.
- d. GAMCO Specialty Accessories; a division of Bobrick.
- e. Tubular Specialties Manufacturing, Inc.

B. Accessories

TA-1. Surface Mounted Twin Roll Tissue Dispenser with utility shelf, - Bobrick 2840

TA-3. Large Surface/Paper Towel Dispenser - Bobrick B-2620

TA-7. Semi-recessed Paper Towel and Waste Receptacle - Bobrick B-38032

TA-10 Surface mounted Sanitary napkins disposal, Bobrick B-254.

TA-13. Automatic Surface/Soap Dispenser – ASI 0362.

TA-14 Automatic Lav/Ctr Mtd Soap Dispenser, ASI 0338.

TA-15 .

TA-17. Recessed/Seat Cover Dispenser - Bobrick B-3013

TA-18. Robe Hook – ASI 7312

TA-19. Mop Strip - Bobrick B-223 x 24 (610 mm)

TA-20. Framed Mirror:
18 (61 cm) x 36 (91 cm) (long dimension vertical) -
Bobrick B-290 1836 minimum 20 gauge stainless steel, with mitered corners, welded and ground smooth to match frame. Where butt joints, edges shall be ground smooth with tight joints. Glass- No. 1 quality, 1/4" (6mm) glass mirror; warranted against silver spoilage for 15 years. Galvanized steel back. Secured to concealed wall hanger with theft-resistant mounting.

TA-21. Framed Mirror:
24" (61 cm) x 36" (91 cm) (long dimension vertical) - Bobrick B 290

2436 - minimum 20-gauge stainless steel, with mitered corners, welded and ground smooth to match frame. Where butt joints, edges shall be ground smooth with tight joints. Glass- No. 1 quality, 1/4" (6mm) glass mirror; warranted against silver spoilage for 15 years. Galvanized steel back. Secured to concealed wall hanger with theft-resistant mounting

- TA-28. Straight Grab Bar - Horizontal, length as indicated, with peened grip-
Bobrick B-6806.
- TA-29. Straight Grab Bar - Vertical, length as indicated, with peened grip-
Bobrick B-6806.
- TA-30. Stall Shower, Small Grab Rail (15-7/8 x 30-7/8), with peened grip-
Bobrick B-6861

- TA-32. Surface mounted soap pump – Simplehuman BT1029

C. Under-Lavatory Guard

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Buckaroos, Inc.
 - b. Plumberx Specialty Products, Inc.
 - c. Trubro by IPS Corporation
2. Description: Insulating pipe covering for supply and drain piping assemblies that prevents direct contact with and burns from piping; allow service access without removing coverings.
3. Material and Finish: Antimicrobial, molded plastic, white.

D. Minimum Requirement: As indicated on Drawings and as follows:

1. Tissue Holder - One each water closet.
2. Towel Dispenser: Min. unless otherwise noted on drawings - One up to four lavatories. One for each additional 3 lavatories.
3. Waste Receptacle - One up to four lavatories. One for each additional 3 lavatories.

4. Napkin Vendor - One for each female toilet room.
5. Napkin Disposal - One for each female cubicle.
6. Soap Dispenser - One for each lavatory.
7. Robe Hook - One for each shower cubicle. One each individual Toilet Room; and additional as indicated.
8. Mop Strip - One each Janitor's closet.
9. Mirror - One for each lavatory, and additional as indicated.
10. Grab Bars - All baths, showers, water closets as indicated and where required per ICC A-117.1.

2.7 SHOWER CURTAINS (SWR1)

- A. Curtain: Flame-resistant, polyester-reinforced fabric that is stain resistant, self-sanitizing, antistatic, antimicrobial, and launderable to a temperature of not less than 90 deg F (32 deg C).
 1. Flame Resistance: Passes NFPA 701 tests when tested by a testing and inspecting agency acceptable to authorities having jurisdiction.
 2. Labeling: Identify fabrics with appropriate markings of applicable testing and inspecting agency.
 3. Curtain Grommets: Two-piece, rolled-edge, rustproof, nickel-plated brass; spaced not more than 6 inches (152 mm) o.c.; machined into top hem.
 4. Length: Where curtain extends to a floor surface, size so that bottom hem clears finished floor by not more than 1 inch (25 mm) and not less than 1/2 inch (13 mm) above floor surface. Where curtains extend to a shower-receptor curb, size so that bottom hem hangs above curb line and clears curb line by not more than 1/2 inch (13 mm).
 5. Color and Pattern: As indicated on Finish Schedule.

2.8 FABRICATION

- A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.
- B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.
- C. Provide non-corrosive steel anchor plates and anchor components for installation of accessories herein specified.
- D. Back paint components where contact is made with building finishes to prevent electrolysis.
- E. Stainless steel anchors and fastening devices.
- F. Shop assemble components and package complete with anchors and fittings.

2.9 CURTAIN FABRICATION

A. Fabricate curtains as follows:

1. Shower Curtain Width: Minimum 12 inches (305 mm) wider than opening.
2. Length: Equal to floor-to-ceiling height, including mesh top, minus depth of track and carrier at top, and minus clearance above the finished floor as follows:
 - a. Shower Curtains: 1/2 inch (13 mm).
3. Vertical Seams: Not less than 1/2 inch (13 mm) wide, double turned and double stitched.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install accessories according to manufacturers' written instructions and fasten to blocking as indicated in Division 06 Section "Miscellaneous Rough Carpentry" and Division 09 Section "Gypsum Board Systems", using fasteners appropriate to substrate indicated and. Install units level, plumb, and firmly anchored in locations and at heights indicated.

1. Protrusion Limit: Installed units protrude maximum **4 inches (102 mm)** from wall surface, unless noted otherwise.

B. Contractor shall be responsible to coordinate blocking requirements for all accessory items, including changing stations, grab bars and shower seat, with specific requirements indicated in Division 06 Section "Miscellaneous Rough Carpentry" and Division 09 Section "Gypsum Board Systems"

1. Grab Bars: Install to comply with specified structural-performance requirements.

3.2 ADJUSTING AND CLEANING

- A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
- B. Remove temporary labels and protective coatings.
- C. Clean and polish exposed surfaces according to manufacturer's written recommendations.

END OF SECTION 10 28 00

SECTION 10 44 13 - FIRE EXTINGUISHERS AND FIRE PROTECTION CABINETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Fire protection cabinets for:
 - a. Portable fire extinguishers
- 2. Hand carried fire extinguishers.

- B. Related Requirements:

- 1. Division 21 Section "Fire-Suppression Standpipes" for fire-hose connections.

1.3 PREINSTALLATION CONFERENCE

- A. Preinstallation Conference: Conduct conference at Project site.

- 1. Review methods and procedures related to fire-protection cabinets including, but not limited to, the following:
 - a. Schedules and coordination requirements.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

- 1. Fire Protection Cabinets: Show door hardware, cabinet type, trim style, and panel style. Include roughing-in dimensions and details showing recessed, semi recessed, or surface-mounting method and relationships of box and trim to surrounding construction. Include rating and classification.
- 2. Fire Extinguishers: Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher and mounting brackets.

- B. Shop Drawings: For fire protection cabinets. Include plans, elevations, sections, details, and attachments to other work.

- C. Samples for Initial Selection: For each type of exposed cabinet finish required.
- D. Samples for Verification: For each type of exposed cabinet finish required, prepared on Samples of size indicated below:
 - 1. Size: 6 by 6 inches square.
- E. Product Schedule:
 - 1. For fire protection cabinets. Indicate whether recessed, semi-recessed, or surface mounted. Coordinate final fire protection cabinet with fire extinguisher to ensure proper fit and function.
 - 2. For fire extinguishers. Coordinate final fire-extinguisher schedule with fire-protection cabinet schedule to ensure proper fit and function.

1.5 INFORMATIONAL SUBMITTALS

- A. Warranty: Sample of special warranty.

1.6 CLOSEOUT DOCUMENTS

- A. Maintenance Data: For fire extinguishers and fire protection cabinets to include in maintenance manuals.

1.7 COORDINATION

- A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
- B. Coordinate sizes and locations of fire protection cabinets with wall depths.
- C. Coordinate type and capacity of fire extinguishers with fire-protection cabinets to ensure fit and function.

1.8 SEQUENCING

- A. Apply vinyl lettering on field-painted fire-protection cabinets after painting is complete.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure of hydrostatic test according to NFPA 10
 - b. Faulty operation of valves or release levers

2. Warranty Period: Six years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain fire-protection cabinets, accessories, and fire extinguishers from single source from single manufacturer.

2.2 CABINET PERFORMANCE REQUIREMENTS

- A. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements in ASTM E814 for fire-resistance rating of walls where they are installed.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 FIRE EXTINGUISHER PERFORMANCE REQUIREMENTS

- A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
- B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
 1. Provide fire extinguishers approved, listed, and labeled by FM Global.

2.4 FIRE PROTECTION CABINET

- A. Cabinet Type: Suitable for fire extinguisher.
 1. Basis of Design: Larsen's Manufacturing Company; Architectural steel series
- B. Other Acceptable Manufacturers subject to compliance with requirements
 1. J. L. Industries, Inc., a Division of Activar Construction Products Group; Ambassador steel series.
 2. Potter-Roemer, LCC; Alta steel series
- C. Cabinet Construction: Nonrated, 1-hour fire rated or 2-hour fire rated. Rating shall be the same as the partition in which it is located.
 1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.0428-inch thick, cold-rolled steel sheet lined with minimum 5/8-inch thick, fire-barrier material. Provide factory-drilled mounting holes.
- D. Cabinet Material: Stainless-steel sheet

1. Shelf: Same metal and finish as cabinet.
- E. Semi Recessed Cabinet: One-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).
1. Square-Edge Trim: 1-1/2-inch backbend depth.
- F. Recessed Cabinet: Cabinet box recessed in walls of sufficient depth to suit style of trim indicated.
1. Exposed Flat Trim: One-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).
- G. Cabinet Trim Material: Same material and finish as cabinet
- H. Door Material: Same material and finish as cabinet
- I. Door Glazing: Full Clear Acrylic Panel
- J. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
1. Provide door pull and friction latch.
 2. Provide continuous hinge, of same material and finish as trim, permitting door to open 180 degrees.
- K. Accessories:
1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire-protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
 2. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated.
 - a. Identify fire extinguisher in fire-protection cabinet with the words "FIRE EXTINGUISHER."
 - 1) Location: Applied to cabinet door.
 - 2) Application Process: Silk-screened Pressure-sensitive vinyl letters.
 - 3) Lettering Color: Red.
 - 4) Orientation: Vertical.
- L. Materials:
1. Stainless Steel: ASTM A666, Type 304.
 - a. Finish: No. 4 directional satin finish.
 2. Transparent Acrylic Sheet: ASTM D4802, Category A-1 (cell-cast sheet), 6 mm thick, with Finish 1 (smooth or polished).

2.5 CABINET FABRICATION

- A. Fire-Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
 - 1. Weld joints and grind smooth.
 - 2. Provide factory-drilled mounting holes.
 - 3. Prepare doors and frames to receive locks.
 - 4. Install door locks at factory.

- B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles.
 - 1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch thick.
 - 2. Miter and weld perimeter door frames.

2.6 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

- A. Fire Extinguishers: Type, size, and capacity for each indicated.

- B. Basis of Design: Buckeye Fire Equipment, Inc.
 - 1. Other Acceptable Manufacturers subject to compliance with requirements
 - a. Ansul by Johnson Controls Company.
 - b. Babcock-Davis.
 - c. Badger Fire Protection.
 - d. Guardian Fire Equipment, Inc.
 - e. JL Industries, Inc.; a division of the Activar Construction Products Group.
 - f. Larsens Manufacturing Company.
 - g. Potter Roemer LLC; a Division of Morris Group International.

- C. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B and bar coding for documenting fire extinguisher location, inspections, maintenance, and recharging.

- D. Fire Extinguishers by Type:
 - 1. Multipurpose Dry-Chemical Type in Steel Container: UL-rated 4-A:80-B:C, 10-lb nominal capacity, with monoammonium phosphate-based dry chemical in enameled-steel container.
 - 2. Wet Chemical in a Stainless Steel Cylinder: UL-rated 1-A:K, 1.59 gallons of a blend of Potassium Acetate and Potassium Citrate in a stainless steel cylinder with a plated brass valve assembly. Type K extinguishing agent with a applicator type nozzle. All units manufactured to ANSI/UL 154 and ANSI/UL 711 Standards and use DOT compliant cylinders

2.7 MOUNTING BRACKETS

- A. Mounting Brackets: Manufacturer's standard steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or red baked-enamel finish.
- B. Basis of Design: Buckeye Fire Equipment, Inc.
 - 1. Other Acceptable Manufacturers subject to compliance with requirements
 - a. Ansul by Johnson Controls Company.
 - b. Babcock-Davis.
 - c. Badger Fire Protection.
 - d. Guardian Fire Equipment, Inc.
 - e. JL Industries, Inc.; a division of the Activar Construction Products Group.
 - f. Larsens Manufacturing Company.
 - g. Potter Roemer LLC; a Division of Morris Group International.
- C. General Extinguishers:
 - 1. Buckeye Fire Equipment, Model 10CD (45600)

2.8 FIRE EXTINGUISHER SIGN

- A. Identification: Lettering complying with the local authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.
 - 1. Identify fire protection cabinet location and bracket-mounted fire extinguisher locations with a 5" x 6", 3D Rigid Aluminum Fire Extinguisher Arrow Sign, with white lettering on a red background. The words "FIRE EXTINGUISHER" in white letters above a white downward pointing arrow.
 - a. Orientation: Vertical
 - b. Visibility: Must be mounted directly over the fire extinguisher unit and within 6-12 inches of the finished ceiling and be visible from 3 directions.

2.9 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces of fire protection cabinets from damage by applying a strippable, temporary protective covering before shipping.
- C. Finish fire protection cabinets after assembly.
- D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.10 STEEL FINISHES

- A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning" or SSPC-SP 8, "Pickling". After cleaning, apply a conversion coating suited to the organic coating to be applied over it.
- B. Baked-Enamel or Powder-Coat Finish for Interior Finish of Box: Immediately after cleaning and pretreating, apply manufacturer's standard primer and two-coat, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils.
- C. Color and Gloss: White.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls and partitions for suitable framing depth and blocking where recessed cabinets will be installed.
- B. Examine fire extinguishers for proper charging and tagging.
 - 1. Remove and replace damaged, defective, or undercharged fire extinguishers.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare recess for fire protection cabinets as required by type and size of cabinet and trim style.

3.3 INSTALLATION

- A. General: Install fire protection cabinets in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.
 - 1. Fire Protection Cabinets: 54 inches above finished floor to top of cabinet or as noted otherwise.
- B. Fire Protection Cabinets: Fasten cabinets to structure, square and plumb.
 - 1. Unless otherwise indicated, provide recessed fire protection cabinets. If wall thickness is not adequate for recessed cabinets, notify Architect.
 - 2. Fasten mounting brackets to inside surface of fire protection cabinets, square and plumb.
- C. Identification:
 - 1. Apply vinyl lettering at locations indicated.

- D. Install fire extinguishers and mounting brackets in locations indicated and in compliance with requirements of authorities having jurisdiction.
 - 1. Mounting Brackets: 42 inches above finished floor to top of fire extinguisher unless noted otherwise or required by ADA.
- E. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.

3.4 ADJUSTING AND CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as fire protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust fire protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of fire protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- D. Touch up marred finishes or replace fire protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire protection cabinet and mounting bracket manufacturers.
- E. Replace fire protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 10 44 13

SECTION 10 56 13 - METAL STORAGE SHELVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Case-type metal storage shelving.
 - 2. Four-post metal storage shelving.
 - 3. Post-and-beam metal storage shelving.
- B. Related Sections include the following:
 - 1. Division 11 Section "Library Stack Systems" for library shelving systems including cantilever-bracket shelving supported by wall-mounted standards.
 - 2. Division 12 casework sections for cantilever-bracket shelving supported by wall-mounted standards

1.3 COORDINATION

- A. Coordinate sizes and locations of blocking and backing required for installation of metal storage shelving attached to wall and ceiling assemblies.
- B. Coordinate locations and installation of metal storage shelving that may interfere with ceiling systems including lighting, HVAC, speakers, sprinklers, access panels, electrical switches or outlets, and floor drains.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at location determined by Construction Manager and coordinated with Owner.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, construction details, material descriptions, dimensions of individual components and profiles, and finishes for metal storage shelving.

- B. Shop Drawings: For metal storage shelving.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include installation details of connectors, lateral bracing, and special bracing.
- C. Samples: For each type of metal storage shelving and for each color specified, in the following sizes:
 - 1. Vertical Supports: 12 inches (305 mm) tall.
 - 2. Shelves: Full size, but not more than 24 inches wide by 12 inches deep (610 mm wide by 305 mm deep).
 - 3. Connectors: Full size.
 - 4. Shelf-Label Holders: Full size.
- D. Samples for Initial Selection: For each type of metal storage shelving with factory-applied color finishes.
 - 1. Include Samples of accessories involving color selection.
- E. Samples for Verification: For the following components, of size indicated below:
 - 1. Vertical Supports: 12 inches (305 mm) tall.
 - 2. Shelves: Full size, but not more than 24 inches wide by 12 inches deep (610 mm wide by 305 mm deep).
 - 3. Connectors: Full size.
 - 4. Shelf-Label Holders: Full size.
- F. Product Schedule: For metal storage shelving. Use same designations indicated on Drawings.

1.6 INFORMATIONAL SUBMITTALS

- A. Delegated-Design Submittal: For seismic restraint of metal storage shelving.
- B. Qualification Data: For Installer.
- C. Seismic Qualification Certificates: For metal storage shelving, accessories, and components, from manufacturer.
- D. Product Certificates: For each type of metal storage shelving.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal storage shelving to include in maintenance manuals.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Shelves: Full-size units equal to 5 percent of amount installed for each type indicated, but no fewer than 5 shelves.
2. Shelf-to-Post Connectors: Full-size units equal to 5 percent of amount installed for each type indicated, but no fewer than 10 connectors.
3. Shelf-Label Holders: Full-size units equal to 5 percent of amount installed for each type indicated, but no fewer than 10 holders.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver metal storage shelving palletted, wrapped, or crated to provide protection during transit and Project-site storage.

1.11 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install metal storage shelving until spaces are enclosed and weatherproof, wet work in spaces is completed and dry, and ambient temperature is being maintained at the levels indicated for Project when occupied for its intended use.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design metal storage shelving, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Seismic Performance: Metal storage shelving shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 and the information provided on the drawings.
 1. Seismic Component Importance Factor: 1.0.
- C. Sustainable Design Performance:

2.2 CASE-TYPE METAL STORAGE SHELVING

- A. Case-Type Metal Shelving: Complying with MH 28.1; freestanding units and field assembled from factory-formed components. Shelves span between two independent supporting sheet metal end panels that allow shelf-height adjustment over full height of shelving unit. Provide fixed top and bottom shelves, adjustable intermediate shelves, and accessories indicated.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Adjustable Shelving; Karp Associates, Inc.
 - b. Borroughs Corporation.
 - c. EQUIPTO.
 - d. Lyon Workspace Products, LLC.
 - e. Montel Aetnastak Inc.
 - f. Republic Storage Systems, LLC.
 - g. Tennsco.
 - h. UNICOR.

- B. Load-Carrying Capacity per Shelf: 200 lb (91 kg), uniformly distributed.

- C. End Panels: Fabricated from cold-rolled steel sheet, with concealed perforations at front and back edges at manufacturer's standard spacing for receiving adjustable shelf clips.
 1. Steel Sheet Thickness, Nominal: As required for load-carrying capacity per shelf and number of shelves.
 2. Adjustable Shelf Clips: Cold-rolled steel, nominal thickness as required for load-carrying capacity per shelf; with projections designed to engage at least two perforations in end panels.

- D. End Panels: Fabricated from cold-rolled steel sheet; with horizontal slots spaced at manufacturer's standard spacing for supporting shelves.
 1. Steel Sheet Thickness, Nominal: As required for load-carrying capacity per shelf and number of shelves.

- E. Back Panel: One piece, fabricated from cold-rolled steel sheet.

- F. Shelves: Fabricated from cold-rolled steel sheet. Fabricate shelves with vertical front that is flanged and returned.
 1. Shelf-Divider Slots: 2 inches (51 mm) o.c..
 2. Steel Sheet Thickness, Nominal: As required for load-carrying capacity per shelf and number of shelves.

- G. Shelf Quantity: Four shelves per shelving unit in addition to top and bottom shelf.

- H. Base: Closed front, with base strips fabricated from same material and with same finish as end panels.

- I. Overall Unit Width: As indicated on drawings.

- J. Overall Unit Depth: As indicated on drawings.

- K. Overall Unit Height: As indicated on drawings.

- L. Accessories:

1. Finished End Panels: Fabricated as solid full-height panels from same material and with same finish as end panels, with trim along edges abutting end panels and top shelf.
- M. Steel Finish: Baked enamel or powder coat.
1. Color and Gloss: As selected by Architect from manufacturer's full range.

2.3 FOUR-POST METAL STORAGE SHELVING

- A. Wire-Type, Four-Post Metal Storage Shelving: Complying with MH 28.1; field assembled from factory-formed components. Shelves span between supporting corner posts that allow shelf-height adjustment over full height of shelving unit. Provide fixed top and bottom shelves, adjustable intermediate shelves, and accessories indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMCO Corporation.
 - b. Aurora Storage Products, Inc.
 - c. Gillis Associated Industries.
 - d. InterMetro Industries Corporation.
 - e. Lyon Workspace Products, LLC.
 - f. Nexel Industries Inc.
 - g. Safco Products.
 - h. Spacesaver Corporation.
 - i. Tennsco.
 2. Load-Carrying Capacity per Shelf: **200 lb (91 kg)**, uniformly distributed.
 3. Posts: Fabricated from **1-inch- (25-mm-)** OD, round tubing of indicated material; with grooves or notches at **1 inch (25 mm)** o.c. to receive shelf-to-post connectors. Label posts with numbers at not less than **2 inches (51 mm)** o.c. for determining shelf height.
 - a. Post Material: Stainless steel.
 - b. Post Base: Bolt leveler.
 - c. Post Cap: Nylon or plastic.
 - d. Unit Configuration: Configure shelving units as individual, freestanding assemblies.
 4. Framed-Type Wire Shelves: Stainless-steel wire-over-wire construction, with shelf frame fabricated from same material and with same finish as posts; with manufacturer's standard post collar, designed to engage collet (wedge), welded at each corner.
 5. Truss-Type Wire Shelves: Stainless-steel wire-over-wire construction, with downturned wire truss edges; with manufacturer's standard post collar, designed to engage collet (wedge), welded at each corner.
 6. Waterfall-Type Wire Shelves: Stainless-steel wire-over-wire waterfall construction; with manufacturer's standard post collar, designed to engage collet (wedge), welded at each corner.
 7. Shelf Quantity: Five shelves per shelving unit in addition to top and bottom shelf.
 8. Shelf-to-Post Connectors: Manufacturer's standard one-piece collet (wedge), designed to engage post collar attached to shelves.

9. Bracing: Manufacturer's standard diagonal cross bracing, as required for stability, load-carrying capacity of shelves, and number of shelves.
10. Overall Unit Width: as indicated on drawings, inclusive of two end posts.
11. Overall Unit Depth: as indicated on drawings.
12. Overall Unit Height: as indicated on drawings.
13. Accessories:
 - a. Shelf Inlay: Manufacturer's standard clear plastic mat.
 - b. Storage Basket: Edge-of-shelf-mounted wire basket,; fabricated from same material and with same finish as shelves.
 - c. Back Ledges: **1 inch (25 mm)** high, fabricated from same material and with same finish as shelves.
 - d. Side Ledges: **1 inch (25 mm)** high, fabricated from same material and with same finish as shelves.
 - e. Garment Hanger Tube: Width of shelves; with mounting brackets.
 - f. Shelf-Label Holders: Clear plastic, designed to clip onto front edge of shelf.
14. Stainless-Steel Finish: Manufacturer's standard nondirectional-polish finish.

2.4 POST-AND-BEAM METAL STORAGE SHELVING

- A. Post-and-Beam Metal Shelving: Complying with MH 28.2; field-assembled from factory-formed components. Shelves are supported by beams that span between supporting corner posts that allow beam-height adjustment over full height of shelving unit. Provide fixed top and bottom beams, adjustable intermediate beams, and accessories indicated.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Borroughs Corporation.
 - b. EQUIPTO.
 - c. Lyon Workspace Products, LLC.
 - d. Penco Products, Inc.
 - e. Republic Storage Systems, LLC.
 - f. Schaefer Systems International, Inc.
 - g. Tenssco.
 - h. UNICOR.
 - i. Western Pacific Storage Systems.
- B. Load-Carrying Capacity per Shelf: **400 lb (181 kg)**, uniformly distributed.
- C. Posts: Fabricated from cold-rolled steel; in manufacturer's standard shape; with perforations at **1-1/2 inches (38 mm)** o.c. to receive beam-to-post connectors.
 1. Unit Configuration: Configure shelving units as individual, freestanding assemblies.
 2. Steel Thickness, Nominal: As required for load-carrying capacity per shelf and number of shelves.
 - a. Add-On Shelf Posts: Fabricated from hot-rolled steel, T-shape; perforated to match main posts and of same thickness.
 3. Post Base: Cold-rolled steel floor plate, drilled for floor anchors.

- D. Beams: Fabricated from cold-rolled steel; in manufacturer's standard shape. Provide beam at each side of each shelf, with center supports as required for load-carrying capacity of shelf.
1. Steel Thickness, Nominal: As required for load-carrying capacity per shelf.
 2. Beam-to-Post Connectors: Projecting manufacturer's standard at each end that engage posts.
 - a. Top and Bottom Shelf Beams: Provide with double beam-to-post connectors.
 - b. Intermediate Shelf Beams: Provide with double beam-to-post connectors.
 3. Beam Quantity: As required for number of shelves indicated per shelving unit.
- E. Particleboard Shelves: **5/8 inch (16 mm)** thick; factory or field cut.
- F. Flat Metal Shelves: Fabricate fronts, backs, and sides of shelves with box-formed edges, with corners lapped and welded from the following material:
1. Steel Sheet: Nominal thickness as required for load-carrying capacity per shelf.
 2. Metallic-Coated Steel Sheet: Nominal Thickness as required for load-carrying capacity per shelf.
- G. Ribbed-Metal-Decking Shelves: Fabricated from **0.036-inch- (0.91-mm-)** nominal thickness steel sheet.
- H. Wire Shelves: Welded steel wire; with **2-by-4-inch (51-by-102-mm)** openings.
- I. Shelf Quantity: Four shelves per shelving unit in addition to top and bottom shelf.
- J. Overall Unit Width: As indicated on drawings, inclusive of two end posts.
- K. Overall Unit Depth: As indicated on drawings.
- L. Overall Unit Height: As indicated on drawings.
- M. Accessories:
1. Tie Plates: Cold-rolled steel, finished to match posts; designed for joining posts of adjacent shelving units.
 2. Supports: Back-to-wall and back-to-back type that bolt to posts; as required for shelving unit stability.
 3. Record Box Support Rails: **1-1/2-by-1-1/2-inch (38-by-38-mm)** metal angle, with length to match depth of shelving unit; fabricated from same material and with same finish as beams.
- N. Steel Finish: Baked enamel or powder coat.
1. Color and Gloss: As selected by Architect from manufacturer's full range.

2.5 ANCHORS

- A. Floor Anchors: Galvanized-steel, post-installed expansion anchors or threaded concrete screws. Provide number per unit recommended by manufacturer unless additional anchors are indicated in calculations.
- B. Wall Anchors: Manufacturer's standard, galvanized-steel anchors designed to secure metal storage shelving to adjacent wall. Provide one per shelving unit for each shelving unit adjacent to a wall unless additional anchors are indicated in calculations.

2.6 FABRICATION

- A. Fabricate metal storage shelving components to provide field-assembled units that are square and rigid, with posts plumb and true and shelves flat and free of dents or distortion. Fabricate connections to form a rigid structure, free of buckling and warping.
 - 1. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Locate joints where least conspicuous.
 - 2. Build in straps, plates, brackets, and other reinforcements as needed to support shelf loading.
 - 3. Cut, reinforce, drill, and tap metal fabrications to receive hardware, fasteners, and similar items.
- B. Form metal in maximum lengths to minimize joints. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work. Form backs of shelving units of up to **48 inches (1219 mm)** wide from one piece.
- C. Form edges and corners free of sharp edges or rough areas. Fold back and crimp exposed edges of unsupported sheet metal to form a hem on the concealed side; ease edges of metal plate to radius of approximately **1/32 inch (0.8 mm)**. Shear and punch metals cleanly and accurately. Remove burrs.
- D. Weld corners and seams continuously to develop strength, minimize distortion, and maintain the corrosion resistance of base metals. At exposed locations, finish welds and surfaces smooth and blended so surface is smooth after finishing and contour of welded surface matches that of adjacent surface. Weld before finishing components to greatest extent possible. Remove weld spatter and welding oxides from exposed surfaces before finishing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Examine floors for suitable conditions where metal storage shelving will be installed.
- C. Examine walls and ceilings to which metal storage shelving will be attached for properly located blocking, grounds, or other solid backing for attachment of support fasteners.

- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Vacuum and clean finished floor over which metal storage shelving is to be installed.

3.3 INSTALLATION

- A. Install metal storage shelving level, plumb, square, rigid, true, and with shelves flat and free of dents or distortion. Make connections to form a rigid structure, free of buckling and warping.

1. Install exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
2. Install braces, straps, plates, brackets, and other reinforcements as needed to support shelf loading and as required for stability.
3. Adjust post-base bolt leveler to achieve level and plumb installation.
4. Anchor shelving units to floor with floor anchors through floor plate. Shim floor plate to achieve level and plumb installation.
5. Install seismic restraints.
6. Connect side-to-side and back-to-back shelving units together.
7. Install shelves in each shelving unit at equal spacing.
 - a. Case-Type Metal Storage Shelving: Install adjustable shelf clips at front and back of each shelf.
 - b. Four-Post Metal Storage Shelving: Install four clips, one at each post, for support of each shelf; with clips fully engaged in post perforations.
 - c. Post-and-Beam Metal Storage Shelving: Install beams with beam-to-post connectors fully engaged in post perforations.

- B. Accessories:

1. Install finished end panels and trim at exposed ends of shelving units.
2. Record Box Support Rails: Provide two for each record storage box.
3. Shelf Inlays: Install one per shelf.
4. Back Ledges: Install one per shelf.
5. Side Ledges: Install on each side of each shelf.
6. Garment Hanger Tubes: Install at locations indicated on Drawings.

3.4 ERECTION TOLERANCES

- A. Erect case-type and four-post metal storage shelving to a maximum tolerance from vertical of **1/2 inch (13 mm)** in up to **10 feet (3 m)** of height, not exceeding **1 inch (25 mm)** for heights taller than **10 feet (3 m)**.
- B. Erect post-and-beam metal storage shelving to a maximum tolerance from vertical of **1/4 inch (6 mm)** in **84 inches (2134 mm)** of height.

3.5 ADJUSTING

- A. Adjust metal storage shelving so that connectors and other components engage accurately and securely.
- B. Adjust and lubricate operable components to operate smoothly and easily, without binding or warping. Check and readjust operating hardware.
- C. Touch up marred finishes or replace metal storage shelving that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by metal storage shelving manufacturer.
- D. Replace metal storage shelving components that have been damaged beyond successful repair

END OF SECTION 10 56 13

SECTION 11 30 13 - RESIDENTIAL APPLIANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Cooking appliances.
 - 2. Refrigeration appliances.
- B. Related Sections include the following:
 - 1. Division 22 Section "Plumbing Fixtures" for kitchen sinks, waste disposers, and instant hot-water dispensers

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include installation details, material descriptions, dimensions of individual components, and finishes for each appliance.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
- B. Product Schedule: For appliances. Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For manufacturer.
- B. Product Certificates: For each type of appliance.
- C. Field quality-control reports.
- D. Sample Warranties: For manufacturers' special warranties.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each residential appliance to include in operation and maintenance manuals.

1.6 WARRANTY

- A. Special Warranties: Manufacturer agrees to repair or replace residential appliances or components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Two years from date of Final Acceptance.
- B. Microwave Oven: Limited warranty, including parts and labor for first year and parts thereafter, for on-site service.
 - 1. Warranty Period: Two years from date of Final Acceptance.
- C. Refrigerator/Freezer, Sealed System: Limited warranty, including parts and labor for first year and parts thereafter, for on-site service on the product.
 - 1. Warranty Period for Sealed Refrigeration System: Two years from date of Final Acceptance.
 - 2. Warranty Period for Other Components: Two years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain residential appliances from single source and each type of residential appliance from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Gas-Fueled Appliances: Certified by a qualified testing agency for each type of gas-fueled appliance according to ANSI Z21 Series standards.
- C. Accessibility: Where residential appliances are indicated to comply with accessibility requirements, comply with applicable provisions in the DOJ's 2010 ADA Standards for Accessible Design, and ICC A117.1.

2.3 MICROWAVE OVENS

- A. Microwave Oven {MO 1}:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amana, a Division of Whirlpool Corporation
 - b. BSH Home Appliances Corporation (Bosch)
 - c. Electrolux Home Products (Frigidaire)
 - d. General Electric Company

- e. Jenn-Air, a Division of Whirlpool Corporation
 - f. KitchenAid, a Division of Whirlpool Corporation
 - g. LG Electronics
 - h. Maytag, a Division of Whirlpool Corporation
 - i. Samsung
 - j. Sears Brand LLC (Kenmore)
 - k. Sub-Zero, Inc.
 - l. Viking Range
 - m. Whirlpool Corporation
2. Mounting: Countertop.
 3. Type: Conventional.
 4. Capacity: 2.0 cu. ft. (0.06 cu. m).
 5. Oven Door: Door with observation window and pull handle.
 6. Exhaust Fan: Variable-speed fan, nonvented, recirculating type with charcoal filter and with manufacturer's standard capacity.
 7. Microwave Power Rating: 1000 W.
 8. Electric Power Supply: 120 V, 60 Hz, 1 phase, 15 A.
 9. Controls: Digital panel controls and timer display.
 10. Other Features: Turntable.
 11. Material: Stainless steel.

2.4 REFRIGERATOR/FREEZERS

A. Refrigerator/Freezer RF 1: One-door refrigerator with freezer compartment inside and complying with AHAM HRF-1.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amana, a Division of Whirlpool Corporation
 - b. BSH Home Appliances Corporation (Bosch)
 - c. Electrolux Home Products (Frigidaire)
 - d. General Electric Company
 - e. Jenn-Air, a Division of Whirlpool Corporation
 - f. KitchenAid, a Division of Whirlpool Corporation
 - g. LG Electronics
 - h. Maytag, a Division of Whirlpool Corporation
 - i. Samsung
 - j. Sears Brand LLC (Kenmore)
 - k. Sub-Zero, Inc.
 - l. Viking Range
 - m. Whirlpool Corporation
2. Type: Undercounter.
3. Storage:
 - a. Shelves: adjustable, glass.
4. General Features:

- a. Door Configuration: Overlay.
 - b. Dual refrigeration systems.
 - c. Separate temperature controls for each compartment.
5. Refrigerator Features:
- a. Interior light in refrigeration compartment.
 - b. Door Storage: Glazed door without storage.
6. Freezer Features: One freezer compartment.
- a. Automatic defrost.
 - b. Interior light in freezer compartment.
 - c. Automatic icemaker and storage bin.
7. ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
8. Front Panel(s): Manufacturer's standard Stainless steel.
9. Appliance Color/Finish: Stainless steel.

2.5 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before appliance installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Install appliances according to manufacturer's written instructions.

- B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.
- C. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.
- D. Range Anti-Tip Device: Install at each range according to manufacturer's written instructions.

3.3 CLEANING AND PROTECTION

- A. Test each item of residential appliances to verify proper operation. Make necessary adjustments.
- B. Verify that accessories required have been furnished and installed.
- C. Remove packing material from residential appliances and leave units in clean condition, ready for operation.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain residential appliances. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 11 30 13

SECTION 11 48 40 - FIELD WALL PADS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Vinyl covered pads backed with plywood
 - 2. Railing pads
 - 3. Padding for wire mesh and chain link fence post and top rails
 - 4. Padding for chain link fencing infill.
- B. Related Requirements:
 - 1. Division 32 Section "Chain Link Fences and Gates"

1.3 ACTION SUBMITTALS

- A. Product Data:
 - 1. For field wall pad components
- B. Shop Drawings:
 - 1. For pad construction, indicating design thickness, all attachment details, and layout elevations. Indicate field verified dimensions.
- C. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of vinyl padding cover.
- D. Samples for Verification: Sample of finished products for representative application.
 - 1. Size: Minimum 12" square for wall pads; minimum 12" long for pipe/rail pads.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For padding systems, including safety inspection checklists.
- B. Warranty Documentation:
 - 1. Manufacturers' special warranties effective from Final Acceptance.

2. Installer's special warranties effective from Final Acceptance.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra Stock Material: Furnish extra materials, from the same production run, to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Wall Pads: Full-size units equal to 10 percent of quantity installed for each size indicated, but no fewer than 2 units.
 2. Railing Pads: Full-size units equal to 5 percent of quantity installed for each size indicated, but no fewer than 20 lineal feet.
- B. Schedule of maintenance material items.

1.6 DELIVERY, STORAGE, AND HANDLING

1.7 FIELD CONDITIONS

1.8 WARRANTY

- A. Special Warranty: Manufacturer and Installer agree to repair or replace components of installed padding that fail(s) in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures, including delamination of materials.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 2. Warranty Period: 2 year(s) from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with requirements of this section, provide products from one of the following:
 1. Turbolink International; (800) 958-8726
 2. SportsField Specialties; (888) 975-3343
 3. Beacon Athletics; (800) 747-5985

2.2 SOURCE LIMITATIONS

- A. Obtain Padding from single manufacturer.

2.3 MATERIALS

- A. Vinyl Covering: 18 oz. per square yard laminated polyester vinyl, unbalanced coating - 10 mils top - 4 mils bottom. 1000 denier, Tear Strength test: Warp 85 lbs., Fill 83 lbs., Tensile Strength: Warp 221 lbs., Fill 216 lbs., 9 x 9 weft insertions, Cold Crack - 20 degrees F, Class A flame retardant. UV inhibitors. Color to be selected from manufacturer's standard selection. Each pad shall have 3 weep holes to evaluate moisture.
- B. Filler Foam: 3-inch thick Polyurethane Foam Density, 1.5 - 1.7 lbs/cubic foot, Indention Load Deflection: 87.0 - 93.0 °25% (4 inch), Tear Strength 1.20 PLI Min, Tensile Strength 15.0 PSI Min, elongation 75-125% Mi. Passes flammability specifications for California T.B. 117 and NFPA 260, 1989.
- C. Filler foam for chain link fence, fence posts, and fence top rail pads: 3 inch thick polyurethane open cell foam, 1.5 to 1.6 lbs./cubic foot density.
- D. Filler foam for guardrail and handrail pads: 1 inch thick polyurethane open cell foam, 1.9 lbs. cubic foot density.
- E. Plywood: 3/4 inch APA BC exterior grade plywood or better. Painted on both sides to match vinyl color.
- F. Attachments:
 - 1. Plywood Back Wall: "Z" clip: Aluminum extrusion, 2.5 inch x .125 inch thickness, mounted to panel using 1/4 inch x 1 inch stainless steel bolts screwed into 1/4 inch threaded washer inserts.
 - 2. Post Pads: 2-inch vinyl flap with #3 grommets every 12 inches o.c. on sides of the pad. Lace to post with 1/4-inch black nylon lacing.
- G. UV-resistant, weather-treated, corrugated polyurethane.

2.4 MANUFACTURED UNITS

- A. Field Wall Pads: Provide units with vinyl covering stretched over filler foam and attached to back of plywood panel. Mount to wall with "Z" clips or other non-corrosive hardware to be readily removable.
- B. Guard and Hand Railing Pads: Covered filler foam with vinyl fabric. Provide #3 brass grommets spaced 6 inches on center for lacing to rail.
- C. Chain Link Fence, Fence Posts, and Fence Top Rail Pads: For top rail provide units similar to railing pads application. For fence post provide 6-inch wide flat units with brass grommets spaced 6 inches on center. Both pads shall be laced to fence.
- D. Chain Link Fence Infill Pads: Provide units similar to field wall pad application. Provide units with brass grommets spaced 6 inches on center. Pad shall be laced to fence.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Reject fabricated units that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install per manufacturer's recommendations and approved shop drawings. Joints between field wall pads shall be level and plumb and tightly aligned with adjacent pads.

END OF SECTION 11 48 40

SECTION 11 66 23 – RETRACTABLE BATTING CAGES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Vertically retracting interior batting cages.
2. Related support materials.

B. Related Requirements:

1. Division 05 section “Architecturally Exposed Structural Steel” for steel finish requirements for secondary framing.
2. Division 26 sections "Common Materials and Methods for Electrical" and “Low-Voltage Electrical Power Conductors and Cables” for powering lifting motors and key switches.

1.02 DEFINITIONS

- A. Fully Enclosed: Batting tunnels contained by four net walls and an overhead net barrier

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at location coordinated with Owner.

1.04 ACTION SUBMITTALS

A. Product Data:

1. Batting tunnel

B. Shop Drawings:

1. For batting tunnel and mounting system
2. Signed and sealed by the qualified professional engineer responsible for their preparation.

C. Samples for Verification: Actual sample of finished products for netting.

1. Size: 12 inches (30 cm) square, minimum.

D. Delegated Design Submittals: For batting tunnels, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Indicate loads to primary structure. Loads shall be provided for both open and retracted conditions.

1.05 INFORMATIONAL SUBMITTALS

- A. Delegated design engineer qualifications.
- B. Sample warranties.

1.06 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For batting tunnel and retraction devices.
- B. Warranty Documentation:
 1. Manufacturers' special warranties.
 2. Installer's special warranties.

1.07 MAINTENANCE MATERIAL SUBMITTALS

- A. Schedule of maintenance material items.

1.08 QUALITY ASSURANCE

- A. Qualifications:
 1. Installers: Fabricator of products, or entity that employs installers and supervisors who are trained and approved by manufacturer.
 2. Delegated Design Engineer: A professional engineer who is legally qualified to practice in North Carolina and who is experienced in providing engineering services of the type indicated.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Store netting until ready to install.
- B. Do not place ladders, tool boxes, lifts, or other site equipment or materials on netting before netting is fully installed.

1.10 WARRANTY

- A. System Warranty: Manufacturer and Installer agree to repair or replace batting tunnel that fail(s) in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures, including failure of mounting hardware.

- b. Faulty operation of trolleys, pulleys, or links.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
- 2. Warranty Period: 5 year(s) from date of Final Acceptance.
- B. Netting Warranty: Manufacturer and Installer agree to repair or replace netting that fail(s) in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Deterioration of netting beyond normal use.
 - 2. Warranty Period: 2 year(s) from date of Final Acceptance.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design supplemental framing.
- B. Seismic Performance: Supplemental framing to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: 120 deg F (**67 deg C**), ambient; 180 deg F (**100 deg C**), material surfaces.

2.02 VERTICAL RETRACTING BATTING TUNNEL

- A. Source Limitations: Obtain batting tunnel and supports from a single source.
 - 1. Basis of Design: Airage 2.0 Tandem Batting Cage System by Practice Sports, Inc.
- B. Manufacturer: Subject to the requirements of this section, provide a complete batting tunnel system by one of the following:
 - 1. Practice Sports, Inc. (14706 Giles Rd, Omaha, NE 68138; www.practicesports.com)
 - 2. Grand Slam Safety, LLC (9793 Bridge Street, PO Box 35, Croghan, NY 13327; www.grandslamsafety.com)
 - 3. Netting Professionals, Inc. (PO Box 17183, Fernandina Beach, FL, 32035; www.nettingpros.com)
 - 4. Sportsfield Specialties, Inc. (155 Boyce Dr, Mocksville, NC 27028; www.sportsfield.com)
 - 5. Draper, Inc. (411 South Pearl St., Spiceland, Indiana 47385; www.draperinc.com)
- C. Length: 70 ft
- D. Width: 14 ft

- E. Height: 12 ft
 - 1. Height shall be measured to lowest point of overhead netting.
- F. Doors: Lapped panel doors at each corner of tunnel.
- G. Retraction: Automatic, via keyed moment switch.

2.03 LIFTING SYSTEM

- A. Drive-line: solid axle with pulleys at each lifting point
- B. Winch: Electric winch with custom mounting bracket for application.
 - 1. Rated Power: 1 horsepower
 - 2. Stall Governor: 14 amp

2.04 MATERIALS

- A. Netting: 1 3/4 inch (44 mm) square nylon netting with weighted bottom edge.
 - 1. Color: black
 - 2. Construction: knotted
 - 3. Lacing: braided Nylon, 800 lb (360 kg) rating
 - 4. Rope Edging: 3/8 inch (10 mm) minimum High Tenacity Polypropylene (HTPP)
 - 5. Edge seams: double- or triple-stitched.
- B. Tension Cable: Galvanized steel aircraft cable supporting top net.
 - 1. Diameter (nominal): 1/4 inch (6 mm)
 - 2. Construction: Twisted strand, 7 x 19
 - 3. Hardware:
 - a. Galvanized malleable wire rope clips
 - b. Galvanized steel wall plates at cable termination points
 - c. Galvanized turnbuckles at cable bridal as required.
- C. Lifting Cable: Galvanized steel aircraft cable spaced as required for raising bottom and top frames.
 - 1. Diameter (nominal): Manufacturer's standard, 1/8" minimum
 - 2. Construction: Twisted strand
 - 3. Attachment: Threaded through grommets, D-rings, or similar hardware on netting cage.

2.05 FABRICATION

- A. Shop Assembly: Fabricate complete batting tunnel net in manufacturer's facility before delivering to site.
- B. Tolerances: No part of the net shall allow an NCAA regulation baseball to pass through when pressed at 100 lbf.

2.06 FINISHES

- A. General: Provide factory finishes suitable for semi-conditioned space.
- B. Steel: Galvanized or powdercoat
- C. Aluminum or non-ferrous metals: Mill or clear anodized

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine installation areas for compliance with requirements for installation tolerances, clearances, and other conditions affecting performance of the Work.
- B. Reject materials or mounting substrates that are wet or damaged.
- C. Examine walls, floors, roofs, and overhead structural framing for suitable conditions where batting tunnel will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Install necessary anchors in accordance with manufacturer's written instructions and to match field conditions.

3.03 INSTALLATION OF BATTING TUNNEL

- A. Comply with manufacturer's instructions for installing batting tunnel.

3.04 INSTALLATION TOLERANCES

- A. Maintain minimum interior clear dimensions of batting tunnel.

3.05 REPAIR

- A. Touch-up finishes damaged during installation of supplemental support framing or netting.
- B. Mend tears or holes in netting.

3.06 FIELD QUALITY CONTROL

- A. Tests and Inspections: Visually inspect batting tunnel for irregularities, inconsistencies, or defects.
 - 1. Visually inspect batting tunnel for irregularities, inconsistencies, or defects.

- B. Prepare test and inspection reports.

3.07 ADJUSTING

- A. Adjust hardware to properly tension nets.
- B. Adjust moving parts to function smoothly, and lubricate as recommended in writing by manufacturer.

3.08 PROTECTION

- A. Remove and replace nets that are wet, moisture damaged, or mold damaged.

3.09 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain batting tunnels.

END OF SECTION

SECTION 12 24 13 – ROLLER WINDOW SHADES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Manually operated roller shades with single rollers.
2. Motor-operated roller shades with single rollers.

- B. Related Sections include the following:

1. Division 05 Section "Metal Fabrications" for custom metal pockets for window treatments fabricated from metal extrusions.
2. Division 06 Section "Miscellaneous Rough Carpentry" for wood blocking for mounting roller shades and accessories.
3. Division 09 Section "Gypsum Board Systems" for wood blocking for mounting roller shades and accessories.
4. Division 26 Sections for electrical service and connections for motor operators, controls, limit switches, and other powered devices and for system disconnect switches for motorized shade operation.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include styles, material descriptions, construction details, dimensions of individual components and profiles, features, finishes, and operating instructions.

- B. Shop Drawings: Show fabrication and installation details for roller shades, including shadeband materials, their orientation to rollers, and their seam and batten locations.

1. Motor-Operated Shades: Include details of installation and diagrams for power, signal, and control wiring.

- C. Samples: For each exposed product and for each color and texture specified, 10 inches (250 mm) long.

- D. Samples for Initial Selection: For each type and color of shadeband material.
 - 1. Include Samples of accessories involving color selection.
- E. Samples for Verification: For each type of roller shade.
 - 1. Shadeband Material: Not less than 10 inches (**250 mm**) square. Mark interior face of material if applicable.
 - 2. Roller Shade: Full-size operating unit, not less than 16 inches (400 mm) wide by 36 inches (900 mm) long for each type of roller shade indicated.
 - 3. Installation Accessories: Full-size unit, not less than 10 inches (250 mm) long.
- F. Window Treatment Schedule: For roller shades. Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of shadeband material.
- C. Product Test Reports: For each type of shadeband material, for tests performed by a qualified testing agency.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For roller shades to include in maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Roller Shades: Full-size units equal to 5 percent of quantity installed for each size, color, and shadeband material indicated, but no fewer than two units.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roller shades in factory packages, marked with manufacturer, product name, and location of installation using same designations indicated on Drawings.

1.9 FIELD CONDITIONS

- A. Environmental Limitations: Do not install roller shades until construction and finish work in spaces, including painting, is complete and dry and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operating hardware of operable glazed units through entire operating range. Notify Architect of installation conditions that vary from Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.10 WARRANTY

- A. Roller Shade Hardware, Chain and Shadecloth: Non-depreciating five year warranty.
- B. Roller Shade Motors and Motor Control Systems: Labor and material; no maximum limit; also non-depreciating five year warranty.
- C. Roller Shade Installation: One year from date of Final Acceptance, Labor and material; no maximum limit.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain roller shades from single source from single manufacturer.

2.2 APPLICATION/SCOPE

- A. Roller Shade Schedule:
 - 1. Shade Type 1: Manual operating, chain drive, sunscreen roller shades in all exterior windows of rooms and spaces shown on the Drawings.
 - 2. Shade Type 2: Motorized interior solar roller shades in all exterior windows of rooms and spaces shown on Drawings, and related motor control systems.

2.3 MANUALLY OPERATED SHADES WITH SINGLE ROLLERS {WS1}

- A. Basis of Design Manufacturer: MechoShade Systems, Inc.
- B. Other acceptable manufacturers subject to compliance with requirements:
 - 1. Draper Inc.
 - 2. Hunter Douglas Contract.
 - 3. Lutron Electronics Co., Inc.
- C. Chain-and-Clutch Operating Mechanisms: With continuous-loop bead chain and clutch that stops shade movement when bead chain is released; permanently adjusted and lubricated.
 - 1. Bead Chains: Manufacturer's standard
 - a. Loop Length: Full length of roller shade.
 - b. Limit Stops: Provide upper and lower ball stops.
 - c. Chain-Retainer Type: Clip, jamb mount
 - 2. Spring Lift-Assist Mechanisms: Manufacturer's standard for balancing roller shade weight and for lifting heavy roller shades.
 - a. Provide for shadebands that weigh more than 10 lb (4.5 kg) or for shades as recommended by manufacturer, whichever criterion is more stringent.
- D. Crank-and-Gear Operating Mechanisms: Sealed gearbox drive system controlled by crank handle.
 - 1. Crank-Handle Type: Permanently mounted.
 - 2. Crank-Handle Length: Manufacturer's standard.
- E. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shadebands for service.
 - 1. Roller Drive-End Location: Right side of interior face of shade
 - 2. Direction of Shadeband Roll: Regular, from back (exterior face) of roller
 - 3. Shadeband-to-Roller Attachment: Manufacturer's standard method
- F. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller assembly, operating mechanism, installation accessories, and mounting location and conditions indicated.
- G. Roller-Coupling Assemblies: Coordinated with operating mechanism and designed to join up to three inline rollers into a multiband shade that is operated by one roller drive-end assembly.
- H. Shadebands:
 - 1. Shadeband Material: Light-filtering fabric
 - 2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.

- a. Type: Enclosed in sealed pocket of shadeband material
- b. Color and Finish: As selected by Architect from manufacturer's full range

I. Installation Accessories:

- 1. Front Fascia: Aluminum extrusion that conceals front and underside of roller and operating mechanism and attaches to roller endcaps without exposed fasteners.
 - a. Shape: L-shaped
 - b. Height: Manufacturer's standard height required to conceal roller and shadeband assembly when shade is fully open, but not less than 3 inches (76 mm)
- 2. Exposed Headbox: Rectangular, extruded-aluminum enclosure including front fascia, top and back covers, endcaps, and removable bottom closure.
 - a. Height: Manufacturer's standard height required to enclose roller and shadeband assembly when shade is fully open, but not less than **4 inches (102 mm)**
- 3. Endcap Covers: To cover exposed endcaps.
- 4. Closure Panel and Wall Clip: Removable aluminum panel designed for installation at bottom of site-constructed ceiling recess or pocket and for snap-in attachment to wall clip without fasteners.
 - a. Closure-Panel Width: As indicated on Drawings
- 5. Side Channels: With light seals and designed to eliminate light gaps at sides of shades as shades are drawn down. Provide side channels with shadeband guides or other means of aligning shadebands with channels at tops.
- 6. Bottom (Sill) Channel or Angle: With light seals and designed to eliminate light gaps at bottoms of shades when shades are closed.
- 7. Installation Accessories Color and Finish: As selected from manufacturer's full range

2.4 MOTOR-OPERATED, SINGLE-ROLLER SHADES

- A. Basis of Design Manufacturer: MechoShade Systems, Inc.
- B. Other acceptable manufacturers subject to compliance with requirements:
 - 1. Draper Inc.
 - 2. Hunter Douglas Contract.
 - 3. Lutron Electronics Co., Inc.
- C. Motorized Operating System: Provide factory-assembled, shade-operator system of size and capacity and with features, characteristics, and accessories suitable for conditions indicated, complete with electric motor and factory-prewired motor controls, power disconnect switch, enclosures protecting controls and operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with building electrical system.

1. Electrical Components: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Electric Motor: Manufacturer's standard tubular, enclosed in roller.
 - a. Electrical Characteristics: 220-V ac.
 - b. Maximum Total Shade Width: As required to operate roller shades indicated.
 - c. Maximum Shade Drop: As required to operate roller shades indicated.
 - d. Maximum Weight Capacity: As required to operate roller shades indicated.
 3. Remote Control: Electric controls with NEMA ICS 6, Type 1 enclosure for surface mounting. Provide the following for remote-control activation of shades:
 - a. Keyed Control Station: Keyed, maintained-contact, three position, switch-operated control station with open, close, and off functions. Provide two keys per station.
 - b. Individual Switch Control Station: Maintained-contact, wall switch-operated control station with open, close, and center off functions.
 - 1) Switch Positions: [Three] [Five].
 - 2) Switch Style: [Toggle] [Rocker].
 - c. Group Control Station: Maintained-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for single-switch group control.
 - d. Individual/Group Control Station: Maintained-contact, three position, rocker-style, wall-switch-operated control station with open, close, and center off functions for individual and group control.
 - e. Sun Sensor Control: Adjustable system consisting of digital displays detecting sun intensity and responding by automatically adjusting shades.
 - g. Timer Control: Clock timer, [24-hour] [seven-day] programmable for regular events.
 - h. Microprocessor Control: Electronic programmable means for setting, changing, and adjusting control features; isolated from voltage spikes and surges. 12 24 13 - 16 of 30 00000000 G0219 Retain "Color" Subparagraph below if the color of control unit is critical.
 - i. Color: As selected by Architect from manufacturer's full range.
- D. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shadebands for service.
1. Roller Drive-End Location: Coordinate direction of roll with fascia, headbox, or shade-pocket design.
 2. Direction of Shadeband Roll: Regular, from back (exterior face) of roller.
 3. Shadeband-to-Roller Attachment: Manufacturer's standard method.
- D. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller assembly, operating mechanism, installation accessories, and mounting location and conditions indicated.

E. Roller-Coupling Assemblies: Coordinated with operating mechanism and designed to join up to three inline rollers that are operated by one roller drive-end assembly.

F. Shadebands:

1. Shadeband Material: Light-filtering fabric.
2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.

- a. Type: Enclosed in sealed pocket of shadeband material.
- b. Color and Finish: As selected by Architect from manufacturer's full range.

G. Installation Accessories:

1. Front Fascia: Aluminum extrusion that conceals front and underside of roller and operating mechanism and attaches to roller endcaps without exposed fasteners.

- a. Shape: L-shaped.
- b. Height: Manufacturer's standard height required to conceal roller and shadeband assembly when shade is fully open, but not less than 4 inches (102 mm).

2. Exposed Headbox: Rectangular, extruded-aluminum enclosure including front fascia, top and back covers, endcaps, and removable bottom closure.

a. Height: Manufacturer's standard in height required to enclose roller and shadeband assembly when shade is fully open, but not less than 4 inches (102 mm) .

3. Endcap Covers: To cover exposed endcaps.

5. Closure Panel and Wall Clip: Removable aluminum panel designed for installation at bottom of site-constructed ceiling recess or pocket and for snap-in attachment to wall clip without fasteners.

a. Closure-Panel Width: As indicated on Drawings.

6. Side Channels: With light seals and designed to eliminate light gaps at sides of shades as shades are drawn down. Provide side channels with shadeband guides or other means of aligning shadebands with channels at tops.

7. Bottom (Sill) Channel or Angle: With light seals and designed to eliminate light gaps at bottoms of shades when shades are closed.

8. Installation Accessories Color and Finish: As selected from manufacturer's full range .

2.5 SHADEBAND MATERIALS

- A. Shadeband Material Flame-Resistance Rating: Comply with NFPA 701 Testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

B. Light-Filtering Fabric: Woven fabric, stain and fade resistant.

1. Source: Roller shade manufacturer
2. Type: 100% Thermoplastic Olefin (TPO)
3. Weave: Basketweave.
4. Thickness: 0.034 inches.
5. Weight: 13.57 **oz./sq. yd. (g/sq. m)**>.
6. Roll Width: 126 inches.
7. Orientation on Shadeband: Up the bolt.
8. Openness Factor: 3 percent.
9. Color: As indicated on Drawings

2.6 ROLLER SHADE FABRICATION

- A. Product Safety Standard: Fabricate roller shades to comply with WCMA A 100.1, including requirements for flexible, chain-loop devices; lead content of components; and warning labels.
- B. Unit Sizes: Fabricate units in sizes to fill window and other openings as follows, measured at 74 deg F (23 deg C):
1. Between (Inside) Jamb Installation: Width equal to jamb-to-jamb dimension of opening in which shade is installed less 1/4 inch (6 mm) per side or 1/2-inch (13-mm) total, plus or minus 1/8 inch (3.1 mm). Length equal to head-to-sill or -floor dimension of opening in which shade is installed less 1/4 inch (6 mm), plus or minus 1/8 inch (3.1 mm).
 2. Outside of Jamb Installation: Width and length as indicated, with terminations between shades of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.
- C. Shadeband Fabrication: Fabricate shadebands without battens or seams to extent possible, except as follows:
1. Vertical Shades: Where width-to-length ratio of shadeband is equal to or greater than 1:4, provide battens and seams at uniform spacings along shadeband length to ensure shadeband tracking and alignment through its full range of movement without distortion of the material.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ROLLER SHADE INSTALLATION

- A. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions.
 - 1. Opaque Shadebands: Located so shadeband is not closer than **2 inches (51 mm)** to interior face of glass. Allow clearances for window operation hardware.
- B. Electrical Connections: Connect motor-operated roller shades to building electrical system.
- C. Roller Shade Locations: As indicated on Drawings.

3.3 ADJUSTING

- A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.4 CLEANING AND PROTECTION

- A. Clean roller shade surfaces, after installation, according to manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Final Acceptance.
- C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Final Acceptance.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain motor-operated roller shades.

END OF SECTION 12 24 13

SECTION 14 42 00 - WHEELCHAIR LIFTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Vertical platform lifts.

- B. Related Requirements:

- 1. Section 033000 "Cast-in-Place Concrete" for setting sleeves, inserts, and anchoring devices in concrete.
 - 2. Section 042000 "Unit Masonry" for setting sleeves, inserts, and anchoring devices in masonry.
 - 3. Section 087100 "Door Hardware" for runway-enclosure door hardware including monitored, electric door strikes if not included in lift work.
 - 4. Section 099123 "Interior Painting" for field painting of lift equipment.

1.3 DEFINITIONS

- A. Definitions in ASME A18.1 apply to Work of this Section.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

- 1. Include construction details, material descriptions, dimensions of individual components, and finishes for lifts.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, safety features, controls, finishes, and accessories.

- B. Shop Drawings: For each lift.

- 1. Include plans, elevations, sections, attachment details, and required clearances.
 - 2. Indicate dimensions, weights, loads, and points of load to building structure.
 - 3. Include details of equipment assemblies, method of field assembly, components, and location and size of each field connection.
 - 4. Include diagrams for power, signal, and control wiring.

- C. Samples for Initial Selection: For surfaces and components with factory-applied color finishes.
 - 1. Include Samples of integrally colored materials and accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of sizes indicated below:
 - 1. Metal Finish: Manufacturer's standard-size unit, not less than 3 inches square.
 - 2. Fiberglass Finish: Manufacturer's standard-size unit, not less than 3 inches square.
 - 3. Tubular Products and Running Trim: Manufacturer's standard-size unit, 6 inches long.
 - 4. Glass and Glazing: Units 12 inches square.
 - 5. Hardware: Manufacturer's standard, exposed, door-operating device.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For manufacturer vendor and Installer.
- B. Product Certificates: For each type of lift.
 - 1. Include statement that runway, ramp dimensions as shown on Drawings, and electrical service as shown and specified are adequate for lift being provided.
- C. Evaluation Reports: For post-installed anchors and power-actuated fasteners, from ICC-ES.
- D. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of lift to include in operation and maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Parts list with sources indicated.
 - b. Recommended parts inventory list.
- B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted use of lifts.
- C. Continuing Maintenance Proposal: Submit a continuing maintenance proposal from Installer to Owner, in the form of a standard one-year maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1. Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of lifts that fail in materials or workmanship within specified warranty period.
 1. Warranty Period: Five years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design".
- B. Regulatory Requirements: Comply with ASME A18.1, "Safety Standard for Platform Lifts and Stairway Chairlifts."
- C. Fire-Rated, Runway-Enclosure Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252 or UL 10B.
 1. Temperature-Rise Limit: Provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.

2.2 VERTICAL PLATFORM LIFT

Vertical Platform Lift, General: Pre-engineered lift system.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Garaventa; Genesis Opal (GVL-OP-42).
2. Other manufacturers: Subject to compliance with requirements, the following manufacture's products may be considered:
 - a. Ascension, Division of AGM Container Controls, Inc.
 - b. Bruno Independent Living Aids, Inc.
 - c. Butler Mobility Products.
 - d. Florlift of New Jersey, Inc.
 - e. Garaventa Lift.
 - f. Inclinator Company of America, Inc.
 - g. Liftavator, Inc.
 - h. Lift-U.
 - i. Savaria, Inc.
- B. Number of Stops: 2.

- C. Platform Size: As indicated on Drawings.
- D. Door Operation and Clear Opening Width: Low-energy, power-operated doors that remain open for 20 seconds minimum; end door with minimum 32-inch clear opening width.
- E. Rated Speed: 20 fpm.
- F. Power Supply: Electric drive.
 - 1. Voltage: 120-VAC, 60 hz, single phase, 20 amp min., single phase, 60 Hz.
- G. Emergency Operation: Provide manual operation and battery power system to raise or lower unit to a landing in case of malfunction or power loss.
- H. Attendant Operation: Provide attendant call device at each landing.
- I. Self-Supporting Unit: Support vertical loads of unit only at base, with lateral support only at landing levels.
- J. Platform: Aluminum floor plate with nonskid surface texture.
- K. Platform Enclosure and Door: Extruded-aluminum frame with flush aluminum-sheet panels.
- L. Ramp: Retractable ramp matching platform to provide transition from lower floor to lift platform. Ramp lowers to floor automatically when lifts reach lower landing and door opens. Ramp rises automatically when lift control is activated for lift to leave lower landing.
 - 1. Ramp Size: End ramps a minimum of 32 inches and side ramps a minimum of 42 inches wide; length as required for slope.
 - 2. Ramp Slope: Maximum 1:12.
 - 3. Ramp Finish: Finish ramps to match lift platform.
- M. Accessories: Provide units with the following accessories:
 - 1. Fold-down seat with seatbelt.
- N. Capacity: 750 lbs (340 kg) rated capacity.
- O. Mast Height:
 - 1. Model GVL-OP-42; 45 inches (1143 mm) maximum lifting height.
- P. Platform Size and Nominal Clear Platform Dimensions:
 - 1. Standard: 36 inches (914 mm) by 48-7/8 inches (1242 mm) clear platform dimensions.
- Q. Platform Configuration:
 - 1. Straight Through: Front and rear openings.
- R. Landing Openings: Gates shall be self closing type.
 - 1. Gate Height: 42-1/8 inches (1070 mm).
 - 2. Platform Gate: Travels with platform and opens at lower landing.
 - 3. Upper Landing Gate: Detached, freestanding type.

- S. Power Gate Operators:
 - 1. Location:
 - a. Platform Gate: Travels with platform and opens lower landing.
 - b. Upper Landing Gate.

- T. Lift Components:
 - 1. Machine Tower: Custom aluminum extrusion.
 - 2. Base Frame: Structural steel.
 - 3. Platform Side Wall Panels: 16 gauge (1.5 mm) galvanized steel sheet.
 - 4. Platform Access Ramp: 12 gauge (2.5 mm) galvanized steel plates; slip resistant surfaces.
 - a. Ramp: Stationary type.
 - 5. Side Guard Panels: 42-1/8 inches (1070 mm) high mounted on platform.

- U. Base Mounting at Lower Landing:
 - 1. Pit Mount: Lift to be mounted in pit with dimensions to meet manufacturers requirements for the platform size specified. Pit construction shall be in accordance to Section 03300.

- V. Leadscrew Drive:
 - 1. Drive Type: Self-lubricating acme screw drive.
 - 2. Emergency Operation: Manual handwheel device to raise or lower platform.
 - 3. Battery Powered Emergency Lowering: Battery powered platform lowering device that automatically activates in the event of power failure. Allows passenger to drive platform downward to lower landing. Does not operate lift in up direction.
 - 4. Safety Devices:
 - a. Integral safety nut assembly with safety switch.
 - 5. Travel Speed: 10 fpm (3.0 m/minute).
 - 6. Motor: 2.0 hp (560 W).
 - 7. Power Supply:
 - a. 120 VAC single phase; 60 Hz on a dedicated 20 amp circuit.

- W. Platform Controls: 24 VDC control circuit with the following features.
 - 1. Direction Control: Illuminated tactile and constant pressure elevator-style buttons with dual platform courtesy lights and safety light.
 - 2. Illuminated and audible emergency stop switch shuts off power to lift and activates audio alarm with battery backup.
 - 3. Keyless operation.
 - 4. Emergency Telephone: Platform shall be equipped with ADA compliant integrated telephone with a stainless steel faceplate. Telephone shall operate in the event of power failure. A telephone line shall be supplied to the lift site as specified under Division 16.

- X. Call Station Controls: 24 VDC control circuit with the following features.
 - 1. Direction Control:
 - a. Illuminated tactile and continuous pressure elevator-style buttons with dual platform courtesy lights and safety light.
 - 2. Keyless operation.
 - 3. Call Station Mounting:
 - a. Upper:
 - 1) Frame mounted.

- Y. Safety Devices and Features:
 - 1. Grounded electrical system with upper, lower, and final limit switches.

2. Tamper resistant interlock to electrically monitor that the gate is in the closed position and the lock is engaged before lift can move from landing.
3. Pit stop switch mounted on mast wall.
4. Electrical disconnect shall shut off power to the lift.
5. Under platform safety pan with five waterproof safety switches to detect obstruction under platform.

2.3 MATERIALS

- A. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- B. Steel Tubing: ASTM A500/A500M.
- C. Steel Pipe: ASTM A53/A53M; standard weight (Schedule 40) unless otherwise indicated or required by loads.
- D. Steel Sheet: ASTM A1008/A1008M, cold-rolled commercial steel (CS) or ASTM A1011/A1011M hot-rolled, commercial steel (CS); as required for each use.
- E. Galvanized-Steel Sheet: ASTM A653/A653M, G90 zinc coating.
- F. Galvanizing: Hot-dip galvanize items complying with the following:
 1. ASTM A123/A123M, for galvanizing steel and iron products.
 2. ASTM A153/A153M, for galvanizing steel and iron hardware.
- G. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use, corrosion resistance, and finish indicated; manufacturer's standard strengths and thicknesses for type of use.
 1. Extruded Aluminum: ASTM B221.
 2. Aluminum Sheet and Plate: ASTM B209.
- H. Fiberglass: Multiple laminations of glass-fiber-reinforced polyester resin with UV-light-stable, colorfast, nonfading, weather- and stain-resistant, colored polyester gel coat, and manufacturer's standard finish.
- I. Tempered Glass: Comply with requirements in Section 088000 "Glazing."
- J. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing structural members, guide rails, machines, and other lift components where installation of devices is specified in another Section.
- K. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.4 FASTENERS

- A. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01 ICC-ES AC193 ICC-ES AC58 or ICC-ES AC308 as appropriate for the substrate.
 - 1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633 or ASTM F1941 (ASTM F1941M), Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) Alloy Group 2 (A4) stainless-steel bolts, ASTM F593 (ASTM F738M), and nuts, ASTM F594 (ASTM F836M).
- B. Power-Actuated Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

2.5 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 FINISHES

- A. Steel Factory Finish:
 - 1. Baked-Enamel or Powder-Coat Finish: Clean, pretreat, and apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat with a minimum dry film thickness of 1 mil for topcoat.
 - 2. Color and Gloss: Custom color as selected by Architect.
- B. Aluminum Finishes:
 - 1. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: Black.
 - 2. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - a. Color and Gloss: Custom color as selected by Architect.
- C. Fiberglass Color and Gloss: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, critical dimensions, and other conditions affecting performance of the Work.
- B. Minimum Headroom Clearance: Verify that installed lift will have a minimum headroom of 80 inches above any point on platform floor at any point of travel.
- C. Minimum Headroom Clearance: Verify that installed lift will have a minimum headroom of 79 inches at any point during travel.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with ASME A18.1 and manufacturer's written instructions for installation of lifts unless otherwise indicated.
- B. Secure lifts to building construction as follows unless otherwise indicated:
 - 1. For concrete and solid masonry anchorage, use post-installed anchors.
 - 2. For hollow masonry anchorage, use toggle bolts.
 - 3. For steel-framed partitions, use self-tapping screws fastened to steel framing or to concealed steel reinforcements.
- C. Wiring Method: Conceal conductors and cables within housings of units or building construction. Do not install conduit exposed to view in finished spaces. Bundle, lace, and route conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.
- D. Coordinate runway doors with platform travel and positioning, for accurate alignment and minimum clearance between platforms, runway doors, sills, and door frames.
- E. Position sills accurately and fill space under sills solidly with nonshrink, nonmetallic grout.
- F. Coordinate platform doors with platform travel and positioning.
- G. Adjust stops for accurate stopping and leveling at each landing, within required tolerances.
 - 1. Leveling Tolerance: 1/4 inch up or down, regardless of load and direction of travel.
- H. Adjust retractable ramps to meet maximum allowable slope and change-in-elevation requirements, and to lie fully against landing surfaces.
- I. Lubricate operating parts of lift, including drive mechanism, guide rails, hinges, safety devices, and hardware.

- J. Test safety devices and verify smoothness of required protective enclosures and other surfaces.

3.3 FIELD QUALITY CONTROL

- A. Acceptance Testing: On completion of lift installation and before permitting use of lifts, perform acceptance tests as required and recommended by ASME A18.1 and authorities having jurisdiction.
- B. Operating Test: In addition to acceptance testing, load lifts to rated capacity and operate continuously for 30 minutes between lowest and highest landings served. Readjust stops, signal equipment, and other devices for accurate stopping and operation of system.
- C. Advise Owner, Architect, and authorities having jurisdiction in advance of dates and times tests are to be performed on lifts.

3.4 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Final Acceptance, maintenance service shall include three months' full maintenance by skilled employees of lift Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper lift operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain lifts. Include a review of emergency systems and emergency procedures to be followed at time of operational failure and other building emergencies.
- B. Check operation of lifts with Owner's personnel present and before date of Final Acceptance. Determine that operating systems and devices are functioning properly.
- C. Check operation of lifts with Owner's personnel present not more than one month before end of warranty period. Determine that operating systems and devices are functioning properly.

1.1 DESIGN PROFESSIONALS OF RECORD

A. Architect:

1. EwingCole
2. Jason C. Kolano
3. 11036 (North Carolina)
4. Responsible for Division 00-49 and referenced drawings in Construction Documents issuance, except where indicated as prepared by other design professionals of record.

B. Civil/Landscape Engineer:

1. McAdams
2. James Eason
3. 042597 (North Carolina)
4. Responsible for sections:
 - a. 02 41 13 Selective Site Removal
 - b. 32 10 00 Site Clearing
 - c. 31 20 00 Earth Moving
 - d. 31 23 17 Trenching
 - e. 31 23 19 Dewatering
 - f. 31 23 24 Flowable Fill
 - g. 31 25 00 Erosion and Sedimentation Control
 - h. 33 11 00 Water Utility Drainage Piping
 - i. 33 30 00 Sanitary Sewer Utility Distribution System
 - j. 33 41 00 Storm Utility Drainage Piping
 - k. 33 49 13 Storm Drainage Structures

C. Electrical Engineer:

1. Ewing Cole
2. Richard Garman
3. 039066 (North Carolina)
4. Responsible for:
 - a. Division 26 Sections
 - b. Section 28 31 11 "Digital, Addressable Fire Detection and Alarm System"

02/07/2024

D. Mechanical Engineer:

1. EwingCole
2. Richard Calame
3. 049327 (North Carolina)
4. Responsible for Division 23

E. Plumbing Engineer:

1. EwingCole
2. Richard Calame
3. 049327 (North Carolina)
4. Responsible for Division 22

F. Structural Engineer:

1. SKA Consulting Engineers
2. Aaron B. Bopp
3. 029394 (North Carolina)
4. Responsible for Sections:
 - a. 01 41 00 Special Inspections
 - b. 01 41 01 Statement of Special Inspections
 - c. 03 10 00 Concrete Formwork
 - d. 03 20 00 Concrete Reinforcement
 - e. 03 25 00 Adhesive Anchors
 - f. 03 30 00 Cast in Place Concrete
 - g. 05 12 00 Structural Steel
 - h. 05 31 00 Steel Decking

G. Low Voltage:

1. WHJW
2. Todd Semple
- 3.
4. Responsible for: Divisions 27 and 28.

END OF DOCUMENT 00 01 07

SECTION 21 00 00 - FIRE SUPPRESSION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This section is intended to describe the fire protection equipment and devices for the fire suppression work.

- B. This section includes the following:

1. Applicable requirements of Section 22 05 00, Basic Materials and Methods.
2. Wet standpipe system, Class 2, including pipe, and fire department valve.
3. Wet sprinkler system, including piping, alarm valve, sprinkler heads, valves, accessories.
4. Through-penetration fire-stop systems at penetrations through floors and fire or smoke rated walls or partitions will be provided by Contractor for Division 07. Refer to Section 22 05 00 for work in this section.
5. Miscellaneous fire protection accessories.

- C. Related sections include the following:

1. All applicable sections of Division 1
2. Division 7: Sealants
3. Section 22 05 00: Basic Materials and Equipment
4. Section 22 05 13: Electrical Requirements for Plumbing Equipment

1.3 REFERENCES AND REQUIREMENTS OF REGULATORY AGENCIES AND STANDARDS

- A. Codes and Standards: The fire protection equipment and installation shall conform to the requirements of all applicable codes, rules, regulations and standards, including, but not limited to, the following:

1. Maine Uniform Building & Energy Code (MUBEC) Based on the International Building Code, 2015 edition
2. NFPA 1 – Fire Code
3. NFPA 13 - Standard for the Installation of Sprinkler Systems
4. NFPA 14 - Standard for the Installation of Standpipe and Hose Systems
5. NFPA 25 - Standard for the Inspection, Testing and Maintenance of Water-Based Fire

Protection Systems

6. NFPA 30 - Flammable and Combustible Liquids Code
7. NFPA 45 - Standard on Fire Protection for Laboratories Using Chemicals
8. NFPA 70 - National Electrical Code
9. NFPA 72 - National Fire Alarm Code
10. NFPA 101 - Life Safety Code

- B. NEMA MG-1: Motors and Generators
- C. NEMA ICS-6: Enclosures for Industrial Control and Systems
- D. NICET: National Institute for Certification in Engineering Technologies

1.4 SUBMITTALS

- A. Provide submittals in accordance with Article 2.1 of this section and in accordance with Section 01 33 00, Submittal Procedures, in sufficient detail to verify full compliance with the requirements of the contract documents.
- B. Before starting work, submit Contractor's documentation as specified in the Quality Assurance article of this section.
- C. Submit data sheets for all products listed in this section. Where data sheets include information on multiple sizes or types of materials, clearly indicate which item is being submitted for review.
- D. Submit reflected ceiling plans showing proposed location of sprinkler heads, with respect to ceiling lights, diffusers, ceiling grid framing members, etc. Be responsible for verifying that spacing of heads located near surface mounted and/or suspended lighting fixtures, HVAC diffusers and any other obstruction complies with applicable NFPA requirements.
- E. Sprinklers shall be referred to on drawings and other documentation by the manufacturer's model number as specifically published in the appropriate agency listing or approval. Trade names or other abbreviated designations are not permitted.
- F. After review of reflected ceiling plan, prepare working plans of installation. Include size of all piping, method of anchoring and hanging pipe, location and type of valves, position, type and temperature ratings of sprinkler heads, material and equipment list indicating manufacturers' names and types, structural, mechanical, electrical and architectural coordinating information, and the various other items pertinent to the complete installation of the systems. Indicate seismic restraint locations and details when seismic restraint requirements are specified.
- G. Working plans shall comply with the requirements of applicable NFPA standard, shall be prepared at a scale of not less than 1/8" = 1'-0" and shall bear either the seal of a registered professional engineer experienced in fire protection system design or copy of NICET certification for the responsible design professional prior to submission to authority having jurisdiction. Designer NICET or professional engineering qualifications must meet or exceed the requirements of the Authority Having Jurisdiction.

- H. Obtain approval and stamp from the State of Maine and all other authorities having jurisdiction of working plans and sprinkler system hydraulic calculations and submit 6 copies of the approved and stamped plans and system design calculations to Architect for review before starting any work.
- I. Architect will review working plans for compliance and conformance with Contract Documents only and not for adequacy of system design. Architectural review does not relieve Contractor of full responsibility for system design.
- J. Where the Contractor must revise and resubmit, the revised submittal shall be accompanied by a written response to all previous submittal comments. Failure to provide written response to previous comments shall be cause for rejection of the submittal.

1.5 WARRANTY AND CONTRACT CLOSEOUT

- A. Comply with warranty and closeout requirements specified in Division 00.
- B. Warranty: Refer to BIDDING AND CONTRACT REQUIREMENTS and to DIVISION 1 - GENERAL REQUIREMENTS.
- C. Contract Closeout
 - 1. Include information for all products specified in this section in the operating and maintenance manual.
 - 2. Provide the following as specified in this section:
 - a. Inspection certificates
 - b. Test reports
 - c. Inspection agreement

1.6 SEISMIC REQUIREMENTS

- A. Seismic Design
 - 1. Installation of all new fire suppression systems (equipment and piping) to be in accordance with seismic requirements of the International Building Code, considering exemptions where applicable.
 - 2. Refer to structural drawings for seismic criteria to be used on project.

1.7 QUALITY ASSURANCE

- A. Sprinkler equipment and installation in accordance with recommendations of Owner's Underwriters and requirements of local Fire authority having jurisdiction.
- B. Equipment and installation to meet requirements of:

1. National Fire Protection Association
 2. The Factory Mutual Engineering Division
 3. Local and State codes and regulations.
 4. Utility company providing the electrical service.
- C. Manufacturers: All products and materials utilized in the fire protection systems shall be listed for fire protection service by Underwriters' Laboratories (UL) and approved for fire protection service by Factory Mutual (FM). Factory Mutual approval is required when the Factory Mutual Engineering Division is included in the paragraph above.
1. All grooved joint couplings, fittings, valves, and specialties shall be the products of a single manufacturer. Grooving tools shall be of the same manufacturer as the grooved components.
 2. All castings used for coupling housings, fittings, and valve bodies shall be date stamped for quality assurance and traceability.
- D. Contractor
1. The Fire Protection Contractor for the fire protection system shall be qualified for the work specified herein, regularly engaged in the installation of automatic fire suppression systems and equipment.
 2. The Fire Protection Contractor shall have a minimum of five years' experience in the installation of fire suppression systems. Upon request, documentation shall be submitted to show that the Fire Protection Contractor has provided similar systems to those specified herein. Documentation on at least 3 similar systems shall be provided including the system size and the name of a contact person at the facility.
 3. Documentation shall be provided to show that all fire protection system(s) is designed by an employee with a Level III or Level IV NICET (National Institute for Certification in Engineering Technologies) certification in automatic fire suppression system layout. If such a certified individual is not employed, adequate documentation shall be provided to show comparable training and experience of the designer.

1.8 DESIGN BASIS

- A. Drawings indicate areas to be protected by Fire Protection Systems and show location of main water supply and risers. Drawings are diagrammatic and not necessarily complete, and work is not limited to that shown. Design, arrangement, size and location of risers, feed mains, cross mains, branch lines and drains and spacing, number and types of heads must conform with requirements of Authorities, Standards, and Codes for the hazards and applicable occupancies.
- B. Number and Location of Sprinkler Heads
1. Where head location is not shown on the drawings, provide coordinated layout with the ceiling plan. Locate heads in the center of ceiling tiles.
 2. Where head locations are shown on the drawings, provide at the locations shown as a minimum. If additional heads are required to conform to requirements of authorities,

standards and codes for the hazard and application, coordinate head layout with Architect before preparing submittals.

3. Provide all additional sprinklers required for a complete sprinkler system installation in compliance with NFPA 13. Additional sprinklers in excess of quantities indicated on drawings shall be provided at no additional cost when required to comply with NFPA 13 (13R) obstruction, location and spacing requirements.

C. Sprinkler system shall be hydraulically designed in accordance with the following criteria:

1. All laboratories, mechanical rooms, electrical equipment storage rooms and similar areas:
 - a. Minimum design density of 0.20 gpm per square foot over the hydraulically most remote 2500 square feet.
 - b. Maximum protection area per sprinkler of 130 square feet.
 - c. Outside hose stream demand of 250 gpm
 - d. Minimum sprinkler k-factor of 8.0
2. All office areas, corridors and similar light hazard areas.
 - a. Minimum design density of 0.10 gpm per square foot over the hydraulically most remote 1500 square feet.
 - b. Maximum protection area per sprinkler of 225 square feet.
 - c. Outside hose stream demand of 250 gpm
 - d. Minimum sprinkler k-factor of 5.6
3. BSL-3 Laboratory
 - a. Minimum design density of 0.20 gpm per square foot over the hydraulically most remote 3000 square feet.
 - b. Maximum protection area per sprinkler of 130 square feet.
 - c. Outside hose stream demand of 250 gpm
 - d. Minimum sprinkler k-factor of 8.0
4. Loading Dock & Chemical Storage Room
 - a. Minimum design density of 0.30 gpm per square foot over the hydraulically most remote 2500 square feet.
 - b. Maximum protection area per sprinkler of 100 square feet.
 - c. Outside hose stream demand of 500 gpm
 - d. Minimum sprinkler k-factor of 11.2
5. Warehouse: Shelf/palletized storage of Group A uncartoned, unexpanded plastics
 - a. 12 sprinklers operating at 26 psi
 - b. Maximum protection area per sprinkler of 100 square feet.
 - c. Outside hose stream demand of 250 gpm
 - d. Minimum sprinkler k-factor of 14.0
6. Cold Storage: Shelf/palletized storage of Group A uncartoned, unexpanded plastics

- a. 12 sprinklers operating at 26 psi
 - b. Maximum protection area per sprinkler of 100 square feet.
 - c. Outside hose stream demand of 250 gpm
 - d. Minimum sprinkler k-factor of 14.0 (dry pendent)
- D. Include a total hose stream demand of 500 gpm in the hydraulic calculations, including inside and outside hose.
- E. For purposes of bidding, the contractor shall use the following water supply:
- | <u>Flow, gpm</u> | <u>Pressure, psi</u> |
|---|----------------------|
| 0 | 80 |
| 1433 | 75 |
| Test Hydrant: SPD-HYD00470
Flow Hydrant: SPD-HYD00477
Both are along Gannet Drive | |
- F. The contractor shall perform or have the water authority perform an additional flow test prior to the system design. In any case, where multiple water supply curves are available, the contractor shall use the lowest available normal operation curve as the basis of design.
- G. Sprinkler system water velocity shall not exceed 20 feet per second.
- H. The combined sprinkler and hose stream system demand pressure shall include at minimum ten (10) psig safety factor.
- I. Where there is a conflict between the drawings or specifications and any referenced standard, include the item of greater cost in the work and bring such conflict to the attention of the Architect for resolution.

1.9 INSPECTIONS

- A. Arrange and pay for all inspections, approvals, examinations and tests required by authorities having jurisdiction as necessary to obtain complete and final acceptance of Fire Protection Systems. Deliver certificates of all such inspections, approvals and tests to Architect and Owner's representative after completion of the installation.

1.10 TESTS

- A. Test fire protection systems as specified in 22 05 00, Basic Materials and Methods, as specified in Part 3 of this section, and as required by applicable NFPA reference standard. Conduct tests in presence of a representative of the fire insurance rating organization. Pay expenses in connection with performing tests.

1.11 INSPECTION SERVICE

- A. After completion of work and at the start of the warranty year, execute an "Inspection Agreement" with the Owner without additional cost to the Owner that includes provision of inspection, testing and maintenance of all fire protection equipment in accordance with the quarterly requirements of NFPA 25 and/or other appropriate reference standards. The agreement shall cover four site visits by the contractor scheduled on a quarterly basis as agreed by the Owner.
- B. After each inspection, submit to the Owner, insurance carrier and authority having jurisdiction as directed by the Owner, a "Report of Inspection" on a standard form similar to those provided in Appendix B of NFPA 25.

1.12 SEISMIC DESIGN

- A. Coordinate ceiling penetrations with ceiling installer to provide minimum clearance requirements around sprinkler penetration per seismic requirements.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with requirements, provide products of the following manufacture:
 - 1. Alarm Bell
 - a. Potter Electric Signal Co.
 - b. System Sensor
 - 2. Backflow Preventer (Double Check)
 - a. Ames
 - b. Watts
 - c. Zurn
 - 3. Fire Department Connections
 - a. Allenco
 - b. Elkhart Brass Mfg. Co.
 - c. Potter-Roemer, Inc.
 - d. Croker
 - 4. Fire Extinguisher
 - a. Ansul
 - b. Kidde, Inc.
 - c. Fyr-Fyter

5. Fire Protection System Valves, Type FPSV
 - a. Crane
 - b. Tyco Fire and Building Products
 - c. Kennedy
 - d. Milwaukee
 - e. Mueller Co.
 - f. Stockham
 - g. Victaulic Company of America
 - h. Anvil
 - i. Nibco

6. Monitor, Switches
 - a. Notifier
 - b. Potter Electric Signal Co.

7. Pipe and Fitting Materials
 - a. General: Unless otherwise specified, any United States manufacturer whose products comply with the reference standards. Submittals are not required where a manufacturer is not specified.
 - b. Basic Piping and Fitting Materials and Accessories not Specified in this Section: Refer to Section 22 05 00 and NFPA references.

8. Sprinkler Heads
 - a. Tyco Fire and Building Products
 - b. Reliable Automatic Sprinkler Co., Inc.
 - c. The Viking Corporation
 - d. Flexhead
 - e. Victaulic Company of America

9. Sprinkler Valve Assemblies (Wet)
 - a. Tyco Fire and Building Products
 - b. Victaulic Company of America
 - c. Reliable Automatic Sprinkler Co., Inc.
 - d. The Viking Corporation

10. Water Flow Switches
 - a. Potter Electric Signal Co.
 - b. Notifier
 - c. System Sensor

2.2 ALARM BELL

- A. Six inch, single stroke underdome type with red enamel finish. In the absence of accessible ceiling in finished area, install bell in flush wall box having front removable ornamental grille.

2.3 BACKFLOW PREVENTER DOUBLE CHECK

- A. Complete factory assembly consisting of two check valves with UL/FM resilient seated outside screw and yoke gate valves before and after check valves and bronze ball valve test cocks. Strainer not to be included.
- B. Check valves 3 inches in size and smaller, bronze body with bronze seats and trim. Check valves 4 inches and larger in size, epoxy coated inside and out cast iron body with bronze seats and trim. Check valve assemblies may be Type 304 Schedule 40 stainless steel housing with grooved ends and stainless steel torsion spring check valves with elastomer discs for maximum working pressure of 175 psig.
- C. Working pressure 175 psig at 110° F continuous, Class 125 flanged ends.
- D. Comply with all applicable local codes.

2.4 FIRE DEPARTMENT INLET CONNECTIONS

- A. Fire department inlet connections shall be UL listed and FM approved two-way projecting type, Potter-Roemer or approved equal. Unit shall be (polished chrome plated) (polished brass) Potter-Roemer, #5710 2-1/2 inch x 2-1/2 inch x 4 inches. Escutcheon shall be labeled AUTO SPKR. Unit shall have swing clapper, plugs and chains. Threaded hose connections shall conform to local fire department requirements.
- B. All fire department inlet connections shall be equipped with an automatic ball drip installed between connection and check valve. Pipe ball drip discharge to grade or to drain.
- C. At the low point near each fire department connection, install a 90-degree elbow with drain connection to allow for system drainage to prevent freezing. Basis of Design: Victaulic#10-DR.

2.5 FIRE EXTINGUISHER

- A. Fire extinguisher(s) will be provided under Division 10.

2.6 MONITOR SWITCHES

- A. Provide supervisory switch on each system control valve(s). The mechanism shall be contained in a weatherproof, die cast aluminum housing, which shall provide a 3/4 inch tapped conduit

entrance and incorporate the necessary facilities for attachment to the valve. Switch housing shall have a minimum rated capacity of 1 amp at 125V AC and 1/4 amp at 24V DC. The entire installed assembly shall be tamperproof and arranged to cause a switch operation if the housing cover is removed or if the unit is removed from its mounting. Valve supervisory switches shall be designed for valve mounting either vertically or horizontally. Said switches shall be normally closed type capable of detecting any motion from the valve full open position.

2.7 PIPE AND FITTINGS

A. General

1. Pipe and fitting materials and joint types are specified in the following "Piping Class" paragraphs. Application material and joint type which will be permitted for specific services are specified hereinafter in the Article titled "Piping System Requirements". Where more than one Piping Class is listed under "Piping System Requirements" for a service, use any of listed classes, unless otherwise specified or indicated, but systems' materials must be consistent throughout the work.
2. Pipe and fittings shall conform to the latest issue of the standards referred to hereinafter. Each length of pipe and each fitting shall be marked with the manufacturer's name brand and specification code designation to which it belongs.

B. Piping Class S7

ITEM	LIMITS	DESCRIPTION
PIPE	2-1/2 inch thru 8 inch	ASTM A53 or A135, Schedule 10, black steel
JOINTS & FITTINGS	2-1/2 inch thru 8 inch	Welded or rolled grooved type or mechanical locking type (push-on), UL and FM approved
FLANGES	2-1/2 inch thru 8 inch	Class 150 forged steel

Reference Standards

1. Steel Pipe: ASTM A53, Grade B or ASTM A135 black carbon steel.
2. Welded Fittings for Black Steel Pipe: 2-1/2 inch and larger - ASTM A234, Grade A and ANSI B16.9. All elbows long radius.
3. Flanges for Welded Black Steel Pipe: Forged steel, ASTM A181 Class 60, ANSI B16.5 for Classes 150 and 300.

C. Piping Class S8

ITEM	LIMITS	DESCRIPTION
PIPE	2 inch & smaller	Steel pipe Schedule 40, nipples, Schedule 80, black
JOINTS	2 inch & smaller	Screwed or welded
FITTINGS	2 inch & smaller	Class 150 malleable iron threaded or socket welded

UNIONS	2 inch and smaller	Class 250 threaded, Class 3000 socket welded
FLANGES	All sizes	Class 150 forged steel

Reference Standards

1. Steel Pipe: ASTM A53, Grade B black carbon steel.
2. Malleable Iron Threaded Fittings: ASTM A197 black malleable iron. ANSI B16.3 Classes 150 and 300 banded, with ANSI B2.1 standard taper pipe threads.
3. Welded Fittings for Black Steel Pipe: 2 inch and smaller - Class 3000 forged steel socket welded fittings, ASTM A105 and ANSI B16.11.
4. Flanges for Welded Black Steel Pipe: Forged steel, ASTM A181 Class 60, ANSI B16.5 for Classes 150 and 300.

2.8 PIPING SYSTEM REQUIREMENTS

A. Fire Protection

Service	Valve Type/Class	Pipe Class
Fire Protection Water 1. Above Ground **Comply with NFPA 13 and applicable Building Code, except plastic piping not allowed	FPSV**	S7**, S8**

2.9 SPRINKLER HEADS

A. Provide sprinklers as shown or specified, and finished as follows:

1. Quick response upright type with bronze finish.
2. Quick response pendent type with chrome finish and escutcheon.
3. Quick response recessed pendent type with chrome finish and escutcheon.
4. Quick response concealed pendent type with white cover plate
5. Quick response recessed dry pendent type with chrome finish and escutcheon.
6. Quick response dry pendent type with chrome finish and escutcheon.
7. ESFR sprinklers with K-factor and discharge pressure to match design criteria for pressure storage height and commodity. 3/4 inch or 1 inch NPT inlet as required.
8. Large drop sprinklers upright bronze type with K = 11.2 and 3/4 inch NPT inlet.

B. All sprinkler heads shall be the product of a single manufacturer.

C. Sprinklers shall be glass bulb type, with hex-shaped wrench boss integrally cast into the sprinkler body to reduce the risk of damage during installation.

D. Sprinklers with rubber O-rings are not permitted.

E. Sprinklers in finished areas attached to concealed piping shall be pendent or sidewall type with

chrome or factory painted finish and escutcheon or cover plate as specified.

- F. Sprinklers in unfinished areas connected to exposed piping shall be upright, pendent or sidewall type with bronze finish unless specified otherwise.
- G. Sprinklers for light hazard occupancies shall be quick response type where required by code.
- H. In lieu of rigid pipe offsets or return bends for sprinkler drops, the Victaulic VicFlex™ Multiple-Use Flexible Stainless Steel Sprinkler Drop System may be used to locate sprinklers as required by final finished ceiling tiles and walls. The drop system shall consist of a braided type 304 stainless steel flexible tube, zinc plated steel 1" NPT Male threaded nipple for connection to branch-line piping, and a zinc plated steel reducer with a 1/2" or 3/4" NPT female thread for connection to the sprinkler head.
 - 1. The drop shall include a UL approved Series AH2 braided hose with a bend radius to 2" to allow for proper installation in confined spaces. The hose shall be listed for (6) bends at 48" length.
 - 2. Union joints shall be provided for ease of installation. The flexible drop shall attach to the ceiling grid using a one-piece open gate Series AB1 bracket. The bracket shall allow installation before the ceiling tile is in place. The braided drop system is UL listed and FM Approved for sprinkler services to 175 psi.

2.10 SPRINKLER VALVE ASSEMBLY

- A. Provide in wet pipe sprinkler system, a grooved end riser check valve assembly consisting of a spring loaded stainless steel clapper check valve with ductile iron body, main drain tapping and 1/4 inch inlet and outlet gauge tappings with pressure gauges, globe valves and plugs. Valve is to be used in conjunction with a water flow switch to provide alarm signaling. Valve shall be rated for 300 psi and shall be UL listed and FM approved. Valve shall be Tyco Products Model CV 1FR or equal.
- B. Equip each riser check valve with a Form "C" 2-pole pressure switch similar to Potter Electric Signal Co. for wiring to an electric bell provided by this section.

2.11 SUPERVISORY ALARM SYSTEM

- A. Supervisory Alarm System will be accomplished by the Fire Alarm System provided under Division 28. Flow and valve monitoring switches provided by this section must be compatible with the Fire Alarm System.

2.12 VALVES

A. General

1. Valves are specified by Valve Type and, for some services, several valve types are grouped by "Valve Class" in this section. Application is stated in the "Piping System Requirements". Where more than one Valve Type or Valve Class is listed for a service, use any of the listed Types or Classes, unless otherwise specified or indicated, but selection must be consistent throughout the work.
2. Valve packing shall not contain asbestos.

B. Refer to Section 22 05 00 for basic valves not specified in this section.

C. Type FPSV, Fire Protection System Valves: Class 175 WWP, UL and FM listed for fire protection service, equivalent to listed figure numbers. Stockham figure numbers are listed except where noted otherwise.

1. Gate Valves 2 Inch and Smaller: Bronze, screw ends, solid disc, OS&Y. B-133.
2. Butterfly Valves 2 Inch and Smaller: Bronze, screwed ends, stainless steel disc and stem with built-in supervisory control switch, Milwaukee Model BB-SCS01.
3. Gate Valves 2-1/2 Inch and Larger: Flanged or grooved ends, iron body, bronze trim, solid disc, OS&Y. G-634 or Victaulic Series 771H
4. Butterfly Valves 2-1/2 Inch and Larger: Lug body, cast iron body, EPDM seat, aluminum-bronze disc, supervisory switch, Kennedy Model 911LE.
5. Check Valves 2-1/2 Inch and Larger: Horizontal swing type, iron body, bronze mounted, composition disc, equipped with ball drip connection. Flanged, G-940. Threaded, G-938.
6. Fire Department Valves at Standpipes: 1-1/2 inch 300 pound brass angle hose valve with red handwheel complete with hose coupling, cap and chain, complying with local fire department requirements.
7. Ball Valves 1 Inch Through 2 Inch: Cast brass body, grooved end, chrome plated brass ball, TFE seat, weatherproof actuator housing with built-in supervisory control switch, Victaulic Series 728.
8. Butterfly Valves 2 Inch Through 12 Inch: Ductile iron, grooved ends, ductile iron disc with EPDM pressure responsive seat, stainless steel stem (Stem shall be offset from the disc centerline to provide complete 360-degree circumferential seating), with weatherproof actuator and built-in supervisory control switch, Victaulic Series 705.
9. Check Valves 2 Inch Through 12 Inch: Ductile iron, grooved ends, seat integrally bonded to discs with stainless steel spring and shaft for vertical or horizontal installation, Victaulic Series 717.

2.13 WATER FLOW SWITCHES

A. Provide in wet pipe sprinkler system, flow switch of paddle type with two (2) sets of Form "C" single pole double throw (SPDT) contacts, suitable for maximum 120 volt AC or 24 volt DC electrical service. Paddle type switches shall have a sensitivity setting to signal any flow of water that equals or exceeds the discharge from the smallest orifice sprinkler head attached to the

system. Flow switch shall have an adjustable retard feature.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

- A. Refer to Section 22 05 00 for basic requirements.
- B. Manufacturers' Supervision/Inspection: Contractor shall be fully responsible for properly making arrangements for and coordinating with the manufacturer to provide the specified manufacturer's supervision/inspection services and manufacturer's written certification as specified in Part 1 of this section, and shall at his own expense make any corrections/modifications to his installation work as required by the manufacturer.
 - 1. Grooved joint shall be installed in accordance with the manufacturer's written recommendations. Grooved ends shall be clean and free from indentations, projections, or roll marks. The gasket shall be molded and produced by the coupling manufacturer of an elastomer suitable for the intended service. The coupling manufacturer's factory trained representative shall provide on-site training for the contractor's field personnel in the use of grooving tools and installation of product. The representative shall periodically visit the job site to ensure best practices in grooved product installation are being followed. (A distributor's representative is not considered qualified to conduct the training.)
- C. Provide pressure gauges where shown and as required by authorities having jurisdiction.
- D. Provide suitable means to permit free movement resulting from contraction and expansion.
- E. Install sprinkler heads in all spaces including electrical and elevator machine rooms, elevator shafts, stairways and any open or closed areas that may require protection and areas above and below ducts, etc., in accordance with NFPA 13. Arrange heads to clear all construction features, lights, ducts, piping, etc. Provide all sprinklers as may be required to provide a complete sprinkler system in all areas designed as having a sprinkler system.
- F. No piping foreign to electrical equipment is permitted to be installed in, enter, or pass through electrical equipment rooms, elevator machine rooms or similar areas. Only sprinkler branch piping with sprinkler heads serving such areas as previously listed may be installed. Piping and sprinkler heads are not permitted to be installed directly over any equipment, panels, etc., within this space.
- G. Provide each controlling valve with an approved lettered sign, as specified in Section 22 05 00, Basic Materials and Methods.
- H. Protect sprinkler piping system from earthquake damage in accordance with the requirements of NFPA 13.
- I. This Contractor shall coordinate locations of fire protection system piping with respect to fresh air intake louvers. Routing of piping directly in front of such louvers shall be avoided due to

potential freezing conditions. Refer to mechanical drawings for exact locations for all louvers. All louvers shall be shown on shop drawing submittals.

- J. The Contractor shall be responsible for coordinating all fire protection equipment locations with the locations of all lighting fixtures, HVAC diffusers, ceiling architectural features and structural members. The Contractor is responsible for coordinating the locations of all fire protection piping and equipment with all other trades to prevent obstructions to the required sprinkler discharge pattern and to prevent conflicts with location of piping above finished ceilings.
- K. Sprinkler heads shall be installed in a symmetrical and orderly fashion.
- L. Sprinkler bulb protectors shall be removed by hand. Do not use any tools or devices that could damage the bulb.
- M. Do not install sprinklers that have been dropped, damaged, or show a visible loss of fluid. Never install sprinklers with cracked bulbs.
- N. A maximum tolerance of (+) 1/2 inch between two adjacent sprinkler heads and 3/4 inch overall for sprinkler heads aligned parallel and perpendicular to branch lines shall be provided.
- O. Sprinkler heads shall be located in the center of all ceiling tiles.
- P. Piping shall be located so as to avoid areas where sprinkler or standpipe piping may have the potential for freezing.

3.2 ALARM BELL

- A. Provide a 120 V electric bell near the flow switch and alarm valve and wire to one pole of the switch. Connect to nearest emergency 20 amp circuit in accordance with National Electrical Code.
- B. Install bell exposed surface mounted on exterior of building near fire department inlet connection.

3.3 CONNECTIONS TO EXISTING SYSTEM

- A. Extend new system from existing system. Make necessary alterations to existing systems as required and as shown. Match new materials in altered systems with existing materials, unless otherwise indicated.
- B. Be responsible for and repair any leaks developing in existing piping and for damage to existing work due to failure to take proper precautions when making alterations and testing the system.
- C. Refer to Section 22 05 00 for additional instructions in connections with alteration work.

3.4 INTERFACING WITH ELECTRICAL WORK

- A. Refer to Section 22 05 00, Electrical Equipment and Wiring, for requirements regarding motors, starters, and wiring.
- B. Power wiring will be provided under Division 26, Electrical, to the following:
 - 1. Alarm bell
- C. Signal wiring for the connection of the following systems to the fire alarm system will be provided under Division 26, Electrical:
 - 1. Wet Sprinkler System
 - a. Waterflow alarm and valve monitoring switches
 - b. Electric alarm bell

3.5 MONITOR SWITCH

- A. Mount switch so that it will not interfere with operation of shutoff valve. Adjust switch to operate with one revolution of hand-wheel from its normal full open position. Closing of valve shall transmit alarm to annunciator panel and restoration of valve to normal open position shall restore circuit to normal operation. Attempts to remove unit from its mounting or tampering with cover of housing shall transmit signal to annunciator panel and restoration of switch to its mounting position, or replacing cover on housing shall restore circuit to normal operation.

3.6 SPRINKLER VALVE ASSEMBLY

- A. Install electric bell on wall outside of building adjacent to sprinkler valve assembly.

3.7 STANDPIPE SYSTEM, WET

- A. Provide **wet** standpipe system complete with piping, fittings, fire department valves, hose connection and fire department Siamese connection.
- B. During construction, make one standpipe outlet available on each floor without delay, for fire department use.
- C. Install fire hose cabinets with cabinet top maximum 7 feet above floor. Locate angle valve in cabinet 5 feet above floor.
- D. Provide full size check valve and a 3/4 inch ball-drip, installed between fire department connection and check valve, to prevent line from freezing.
- E. Provide pressure gauge at highest most remote hose station.

3.8 TESTING OF PIPING SYSTEMS

- A. Refer to Testing of Piping Systems, General, in Section 22 05 00.
- B. Water Fire Protection System: Test hydrostatically to 200 psig or 50 pounds over static head on system, whichever is greater. Maintain pressure for 2 hours without leakage.

3.9 WATER FLOW SWITCH

- A. May be mounted in horizontal or vertical position. When mounted in horizontal position, mount on top of pipe. Do not mount within 6 inches of a fitting that changes water flow direction or within 24 inches of a valve or drain.

3.10 WET SPRINKLER SYSTEM

- A. Provide wet type sprinkler system consisting of water source, backflow preventer, sprinklers, piping, fittings and hangers, valves, water flow switches, Siamese connection, alarm and accessories.
- B. Install monitored isolation valve, flow switch and test valve in each sprinkler zone as it connects to the main riser.
- C. Run piping concealed above furred ceilings and in joists to minimize obstructions. Expose only heads.
- D. Protect sprinkler heads against mechanical injury with standard guards.
- E. Locate outside alarms on wall of building adjacent to Siamese fire department connection.
- F. Provide full size check valve in Siamese fire department connection line located as near as practicable to point where it joins the system. Install 3/4 inch ball drip between check valve and fire department connection to prevent freezing. Pipe ball drip to outside.
- G. Provide sprinkler heads of rating higher than ordinary, where required and approved by authorities having jurisdiction.
- H. Install sprinkler head guards where heads are low enough to be subject to possible damage, as required or directed.
- I. Seal sleeves of pipes passing through ceiling air plenum space walls or roof above airtight in a manner similar to that specified for watertight sleeves.
- J. Do not allow pipe hangers to pierce ductwork under any circumstances without prior approval of Architect.
- K. Provide on wall near sprinkler alarm valve cabinet(s) containing 24 extra sprinkler heads for each type and wrenches suitable for each head type.
- L. Install inspectors test pipes and connections at points as required and approved by authorities

having jurisdiction, and so that flow of water will be visible.

- M. Grade piping for complete drainage. Provide drain pipes with approved valves and run to accessible place for discharge. Install auxiliary drain pipes at any low points in systems.
- N. Provide system, auxiliary, test and water motor alarm drain lines with valves and pipe to discharge over approved drains or discharge through exterior walls not more than 6 inches above grade as indicated or as required, visible from drain valves, so located that they will not cause water damage to persons or property.
- O. Show required test pipes and drains on working plans.
- P. Training Requirements: Prior to final acceptance, provide 8 (eight) hours operation and maintenance training to Owner's personnel. Include emergency procedures, troubleshooting procedures and unique maintenance and safety requirements. Coordinate dates and times of training period not less than 2 weeks prior to session.
- Q. At each system control riser, antifreeze loop, and auxiliary system control valve provide a general information sign used to determine system design basis and information relevant to the inspection, testing, and maintenance requirements required by NFPA 25. Such general information shall be provided on a permanently marked weatherproof metal or rigid plastic sign, secured with corrosion-resistant wire, chain, or other acceptable means.

END OF SECTION 21 00 00

SECTION 21 05 00 – COMMON MATERIALS AND METHODS FOR FIRE PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section is intended to describe the common materials and installation methods of the mechanical work and it applies in general to all other Sections under Division 21 and 22.
- B. Due to the small scale of the drawings, all work required is not shown on the floor plans and certain work is shown on flow diagrams, riser diagrams and details. Work of Division 21 and 22 shall include all required work shown on plans, riser diagrams, flow diagrams and details.
- C. This Section includes the following:
 - 1. Piping materials and installation instructions common to most piping systems
 - 2. Transition fittings
 - 3. Dielectric fittings
 - 4. Mechanical sleeve seals
 - 5. Sleeves
 - 6. Escutcheons
 - 7. Grout
 - 8. Fire protection and plumbing demolition
 - 9. Equipment installation requirements common to equipment sections
 - 10. Painting and finishing
 - 11. Concrete bases
 - 12. Hangers and supports for fire protection and plumbing system piping and equipment
 - 13. Identification for fire protection and plumbing piping and equipment

1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspace, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.4 REFERENCES

- A. Provide work in accordance with all applicable international, state and local, codes, rules, regulations, and standards, including but not limited to, requirements of the following:
 - 1. ASME/ANSI B31: Code for Pressure Piping
 - 2. ASME Boiler and Pressure Vessel Codes
 - 3. AWS D1.1: Structural Welding Code-Steel
 - 4. MSS SP58: Pipe Hangers and Supports – Materials, Design, and Manufacturers
 - 5. MSS SP69: Pipe Hangers and Supports – Selection and Application except spacing for hangers
 - 6. ANSI A13.1: Scheme for Identification of Piping Systems
 - 7. Applicable NFPA Codes and Standards
 - 8. NSF/ANSI 61: Drinking Water System Components

1.5 SUBMITTALS

- A. Provide Product List of factory fabricated items, in accordance with Section 01 60 00 “Product Requirements”, including name of proposed manufacturer, for all products specified in various sections of Division 21 and 22.
- B. Provide submittals in accordance with Section 01 33 00 “Submittal Procedures” in sufficient detail to verify full compliance with the requirements of the Contract Documents.
- C. Product Data: Provide for each type of factory-fabricated product indicated.
- D. Welding certificates.

1.6 WARRANTY AND CONTRACT CLOSEOUT

- A. Comply with warranty and contract closeout requirements specified in Division 01.
- B. Provide Special Warranties and/or warranty service in accordance with Section 01 60 00 “Product Requirements” where specified in the various sections of Division 21 and 22.
- C. Provide manufacturer’s certificates of supervision and startup service as specified in the various sections of Division 21 and 22.
- D. Provide testing and cleaning reports. Indicate dates of testing and cleaning operations, procedures used and results obtained for each system. Reports shall be certified as complete.

- E. Provide instructions and demonstration to the Owner's representatives for all equipment and systems installed under Division 21 and 22. Instruction and demonstration shall be appropriate for the size and complexity of the installed system.
- F. Include information for all products specified in the operation and maintenance manual.

1.7 QUALITY ASSURANCE

- A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."
- B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
 - 3. Use welders fully qualified and licensed by the state authorities.
- C. The specifications for certain products and alternative materials may appear in more than one section of Division 21 and 22. Work of Division 21 and 22 shall be coordinated for all sections of Division 21 and 22 to assure that where two or more items of any given product are furnished under Division 21 and 22 that they are of the same manufacturer and type and that alternative materials is consistent throughout the work of Division 21 and 22.
- D. Except for spacing of hangers, provide hangers and supports in accordance with the latest issue of Manufacturer's Standardization Society (MSS) Specifications SP 58 and 69.
- E. All pipe, valves, fittings, stops, faucets, and domestic water pumps shall comply with the Federal "Reduction of Lead in Drinking Water Act" NSF/ANSI 61 and NSF/ANSI 372 for lead content of 0.25%.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle all material and equipment in accordance with manufacturer's instructions and recommendations. Such instructions and recommendations are hereby made part of these specifications.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Deliver products and equipment properly labeled and tagged. Maintain products in original shipping containers and store in a dry area until ready for installation.
- D. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.9 COORDINATION

- A. The Mechanical systems are indicated on the Fire Protection and Plumbing Drawings. Certain pertinent information and details involving the installation of fire protection and plumbing work appear on Architectural, Structural, Mechanical and Electrical Drawings. Become familiar with all Drawings and incorporate all pertinent requirements.
- B. Drawings are diagrammatic and indicate general arrangement of systems and requirements of the plumbing work. Do not scale the Drawings to obtain dimensional requirements. Exact locations of equipment must be coordinated and obtained prior to starting the work.
- C. Arrange for pipe spaces, chases, slots, duct shafts and openings in building structure during progress of construction, to allow for plumbing installations.
- D. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- E. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces. Coordinate installation of identification labels with locations of access panels and doors.
- F. Coordinate scheduling, sequencing, movement and positioning of large equipment into the building during construction.
- G. Coordinate installation of identification devices with completion of covering and painting of surfaces where identification devices are to be applied.
- H. Install identification devices prior to installation of ceilings and similar concealment.

1.10 ENERGY PERFORMANCE CRITERIA

- A. All equipment provided under Division 22 shall meet the requirements of the International, or State, Energy Code, ASHRAE Standard 90 or the latest issue of the Standards for Equipment in the National Energy Policy Act (NEPA), whichever is more stringent.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. In other Part 2 articles of various sections of Division 21 and 22 where subparagraph titles below introduce lists, the following requirements apply for product selection:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
 - 2. Unless otherwise noted, substitutions of specified manufacturers shall comply with the requirements of Division 01.

2.2 PIPE, TUBE, AND FITTINGS

- A. Refer to individual Division 21 and 22 piping Sections for pipe, tube, and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.3 JOINING MATERIALS

- A. Refer to individual Division 21 and 22 piping Sections for special joining materials not listed below.
- B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
 - 2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
- C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- D. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- E. Solder Filler Metals: ASTM B32, lead-free alloys. Include water-flushable flux according to ASTM B813.
- F. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated.
- G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- H. Solvent Cements for Joining Plastic Piping:
 - 1. CPVC Piping: ASTM F493
 - 2. PVC Piping: ASTM D2564. Include primer according to ASTM F656.
 - 3. ABS Piping: ASTM D2235
 - 4. PVC to ABS Piping Transition ASTM D3138

2.4 TRANSITION FITTINGS

- A. AWWA Transition Couplings: Same size as, and with pressure rating at least equal to and with

ends compatible with, piping to be joined.

1. Underground Piping NPS 1-1/2 and Smaller: Manufactured fitting or coupling.
 2. Underground Piping NPS 2 and Larger: AWWA C219, metal sleeve type coupling.
 3. Aboveground Pressure Piping: Pipe fitting.
- B. Plastic-to-Metal Transition Fittings: CPVC and PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
- C. Plastic-to-Metal Transition Adaptors: One-piece fitting with manufacturer's SDR 11 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
- D. Plastic-to-Metal Transition Unions: MSS SP-107, CPVC and PVC four-part union. Include brass end, solvent-cement-joint end, rubber O-ring, and union nut.
- E. Flexible Transition Couplings for Underground Nonpressure Drainage Piping: ASTM C1173 with elastomeric sleeve, ends same size as piping to be joined, and corrosion-resistant metal band on each end. Fernco, Mission or equal.

2.5 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.
- D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.
- E. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.
- F. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.
- G. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

2.6 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Steel, zinc, dichromate for fire protection reinforced nylon polymer elsewhere. Include two for each sealing element.
3. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.
4. Thunderline link seal or equal.

2.7 SLEEVES

- A. Galvanized-Steel Sheet: 0.0239 inch minimum thickness; round tube closed with welded longitudinal joint.
- B. Steel Pipe: ASTM A53, Type E, Grade B, Schedule 40, galvanized, plain ends.
- C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- D. Stack Sleeve Fittings; Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
 1. Underdeck Clamp: Clamping ring with set screws.
- E. Molded PE: Reusable, PE, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

2.8 ESCUTCHEONS

- A. General: Manufactured wall and ceiling escutcheons and floor plates, with an inside diameter to closely fit around pipe, tube, and insulation of insulated piping and an outside diameter that completely covers opening.
- B. One piece construction on exposed piping in finished areas. Elsewhere, split pattern with setscrew. Provide deep pattern type where required to conceal protruding fittings and sleeve.
- C. Provide polished chromium plated escutcheons on pipes passing through walls, floors or ceilings wherever such pipes are exposed to view.

2.9 HANGERS AND SUPPORTS

- A. Acceptable Manufacturers
 1. Other Than Roof Supports
 - a. B-Line Systems, Inc.
 - b. Grinnell Company
 - c. National Pipe Hangers

- d. Penn Construction Industries
 - e. Other approved United States manufacturer whose products comply with the referenced standards.
2. Roof Pipe, Supports
 - a. ThyCurb
 - b. Pate
 - c. Roof Products and Systems Co.

B. Reference Standards

1. ASTM A36 - Specification for Structural Steel
2. ASTM A123 - Zinc (Hot-Dip Galvanized Coatings on Products Fabricated from Rolled, Pressed and Forged Steel Shapes, Bars, and Strip)
3. ASTM A653 G90 - Specification for Steel Sheet, Zinc Coated by the Hot-Dip Process
4. ASTM B633 - Specification for Electrodeposited Coatings of Zinc on Iron and Steel
5. AWS D1.1 - Structural Welding Code - Steel
6. MSS SP58 - Manufacturer's Standardization Society: Pipe Hangers and Supports - Materials, Design and Manufacture
7. MSS SP69 - Manufacturer's Standardization Society: Pipe Hangers and Supports - Selection and Application
8. NFPA 13 - Standard for the Installation of sprinkler Systems

C. Quality Assurance

1. Steel pipe hangers and supports shall have the manufacturer's name, part number and applicable size stamped in the part itself for identification.
2. Hangers and supports shall be designed and manufactured in conformance with MSS SP58.

D. General

1. Except for spacing of the hangers, design and fabrication of pipe hangers, supports and welding attachments shall conform to ANSI B31.9 or B31.1 as applicable.
2. Except for spacing of the hangers, hanger types and supports for bare and covered pipe shall conform to MSS SP69 for the temperature range except that only flat wide band hangers shall be used for hangers installed outside of insulation and plastic pipe.
3. Except for spacing of pipe hangers and elsewhere as otherwise indicated, horizontal and vertical piping attachment shall conform to the more stringent of this specification or MSS SP58 or MSS SP69. Continuous inserts and expansion bolts may be used.
4. All ferrous hangers, supports and hardware located outdoors shall be hot dip galvanized after fabrication per ASTM A123.
5. Hangers and clamps for support of bare copper piping shall be coated with copper colored (for identification) baked on epoxy paint. Use additional PVC coating of the epoxy painted hangers where necessary.
6. Provide suitable chromium plated brass supports for chromium plated pipe with exposed heads of bolts and screws chromium plated.
7. Hangers other than described above shall be zinc plated in accordance with ASTM B633 or shall have an electrodeposited epoxy finish.

8. Strut channels shall be pregalvanized in accordance with ASTM A653 G90 or shall have an electrodeposited finish.
 9. All hangers and supports shall have some form of adjustment available after installation.
- E. Inserts
1. Inserts: Malleable iron case or galvanized steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms.
 2. Size inserts to suit threaded hanger rods.
- F. Pipe Hangers and Supports: For plumbing plastic piping systems provide hangers, supports and support channels as recommended by piping manufacturer, use V-bottom clevis hanger with galvanized 18 gauge continuous support channel where required. Provide hangers as follows:
1. Hangers for Pipe Sizes to 1-1/2 Inch: Adjustable carbon steel ring or clevis.
 2. Hangers for Hot or Cold Pipe Sizes 2 Inches to 4 Inches and Cold Pipe Sizes 6 Inches and Over: Adjustable carbon steel clevis.
 3. Hangers for Hot Pipe Sizes 6 Inches and Over: Adjustable steel yoke and cast iron roll.
 4. Multiple or Trapeze Hangers: Factory-enameled steel channels with welded spacers and hanger rods or 12 gauge rolled formed ASTM A570 Grade 33 structural quality steel channels (strut), cast iron roll and stand for hot pipe sizes 6 inches and over. Cross section suitable for span and loading. Suspension by outside hanger rods sized for total load on trapeze.
 5. Wall Support for Pipe Sizes to 3 Inches: Carbon steel hook.
 6. Wall Support for Pipe Sizes 4 Inches and Over: Welded steel bracket and steel clamp, adjustable steel yoke and cast iron roll for hot pipe sizes 6 inches and over.
 7. Vertical Support: Steel riser clamp.
 8. Floor Support for Hot Pipe Sizes to 4 Inches and All Cold Pipe Sizes: Adjustable pipe saddle and pipe nipple attached to steel base stand, and concrete pier or steel support.
 9. Floor Support for Hot Pipe Sizes 6 Inches and Over: Adjustable cast iron roll and stand, steel screws and concrete pier or steel support.
 10. Design hangers to impede disengagement by the movement of supported pipe. Provide spring and neoprene hangers as required.
- G. Beam Clamps: Forged steel C-clamps shall include retaining strap, locking nut or other device for nonslip attachment, except LOCKING NUT NOT ALLOWED for project requiring seismic restraints.
- H. Hanger Rod: Steel hanger rod zinc plated per ASTM B633.
- I. Roof Pipe and Equipment Support
1. 18 gauge galvanized steel, unitized construction, straight base section without cant strip and with integral base plate, all welded construction, pressure treated wood nailer, counterflashing with lag screws, internal reinforcement.
 2. Unless otherwise indicated, overall height recommended by SMACNA Fig. 5-4 to provide clearance for roof maintenance, except 36 inches maximum clearance required. If used as pier or curb base for attachment of pipe or steel support, minimum overall height as required for top of pier or curb base not less than 12 inches above finished surface of roofing or ballast as applicable.

3. Furnish sloped curbs when installed on sloped roofs to provide a level support surface.
4. Furnish supports to Division 07 for installation.
5. Refer to other Section of Division 22 "Vibration Isolation and Seismic Restraints for Plumbing Systems" where pipe and/or other equipment requires vibration isolation, or combination support/isolation/restraint unit.

2.10 PIPE ROOF CURB ASSEMBLY

- A. Welded galvanized steel, insulated mounting curb without cant strip and with treated wood nailer. 1-1/2 inches minimum thickness fibrous glass insulation. Curb height as required for top of curb not less than 12 inches above finished roof.
- B. Furnish sloped curbs when installed on sloped roofs and tapered bottom designed for roof slope at curb location to provide level top surface.
- C. Fill in annular space around multiple pipe penetrations within curbed area with mineral wool insulation. Provide acrylic clad thermoplastic cover and pipe boot with stainless steel clamps.
- D. Furnish curb to Division 07 for installation.

2.11 THERMOMETERS

- A. Acceptable Manufacturers
 1. Trerice
 2. Taylor Instrument Company
 3. U.S. Gauge
 4. Weksler
 5. Weiss
- B. ASTM E1, liquid in place thermometer. Cast aluminum case, black baked epoxy enamel finish, 9 inch minimum liquid filled tube, brass stem, adjustable angle type with locking device and with brass union type separable socket. Socket length to suit installation. Mercury filled thermometer not allowed.
- C. Select range of thermometer to indicate normal operating temperatures at midpoint of scale. Scale division of 1 degree F for cold service and 2 degree F for hot service.
- D. Install wells with stem extending to center of pipe. Fill wells with oil or graphite and secure caps.

2.12 PRESSURE GAUGES

- A. Acceptable Manufacturers
 1. Trerice
 2. Taylor Instrument Company
 3. U.S. Gauge

4. Weksler
 5. Weiss
 6. Ashcroft
- B. ASTM B40.1, Grade A phosphor bronze seamless Bourdon spring type with white face, black numerals, 4-1/2-inch cast aluminum case, black baked epoxy enamel finish, brass bronze brushed movement and brass socket. Select range of gauge to indicate normal operating pressure of system at midpoint of scale.
- C. Provide brass snubber of material suitable for system fluid. Provide with needle valve.

2.13 IDENTIFICATION DEVICES AND LABELS

A. General

1. Products specified are manufacturer's standard products of categories and types required for each application as referenced in Part 3 of this section and elsewhere on the drawings or in Division 21 and 22 specifications. Where more than single type is specified for listed application, selection is Contractor's option, but provide single selection for each product category.
 2. Products shall comply with requirements of ANSI A13.1 and OSHA where applicable.
- B. Stencils: Standard stencils, prepared with letter sizes conforming to recommendations of ANSI A13.1. Minimum letter height is 1-1/4 inches for piping and 3/4 inch for access door signs and similar operational instructions.
1. Stencil Paint: Exterior, oil-based alkyd gloss black enamel, except as otherwise indicated. Paint may be in pressurized spray-can form.
 2. Identification Paint: Exterior, oil-based alkyd enamel in colors according to ANSI A13.1, except as otherwise indicated.
- C. Snap-On Plastic Pipe Markers: Manufacturer's standard preprinted, semirigid snap-on, color-coded pipe markers conforming to ANSI A13.1.
- D. Pressure-Sensitive Pipe Markers: Manufacturer's standard preprinted, color-coded, pressure-sensitive vinyl pipe markers, with permanent adhesive conforming to ANSI A13.1.
- E. Pipes/Insulation Smaller Than 6 Inches: Full-band pipe markers, extending 360 degrees around pipe/insulation at each location.
- F. Pipes/Insulation 6 Inches And Larger: Either full-band or strip type pipe markers, at least 3 times the letter height and of length required for label.
- G. Arrows: Either integrally with piping system service lettering (to accommodate both directions), or as separate unit, on each pipe marker to indicate direction of flow.
- H. Plastic Tape: Manufacturer's standard color-coded, pressure-sensitive, self-adhesive, vinyl tape, at least 3 mils thick. Width 1-1/2 inches wide on pipes with outside diameters (including insulation) less than 6 inches; 2-1/2 inches wide for larger pipes. Color shall comply with ANSI

A13.1 unless otherwise indicated.

- I. Valve Tags: Stamped or engraved brass with 1/4-inch letters for piping system abbreviation and 1/2-inch sequenced numbers. Provide a hole for fastener. Brass wire-link chain, beaded chain, or S-hook fasteners.
- J. Access Panel Markers: 1/16 inch thick engraved plastic-laminate markers, with abbreviated terms and numbers corresponding to concealed device. Provide center hole for attachment.
- K. Valve Schedule Frames: Glazed display frame, with screws for removable mounting on masonry walls for each page of valve schedule. Polished hardwood or extruded aluminum frame.
- L. Engraved Plastic-Laminate Signs: ASTM D709, Type I, cellulose, paper-base, phenolic-resin-laminate engraving stock; Grade ES-2, black surface, black phenolic core, with white (letter color) melamine subcore, except when other colors are indicated. Fabricate in sizes required for message. Provide holes for mechanical fastening. 1/16 inch thick for units up to 20 square inches or 8 inch length, 1/8 inch thick for larger units. Self-tapping stainless steel screws or contact-type permanent adhesive.
- M. Plasticized Tags: Preprinted accident-prevention tags, of plasticized card stock. Size approximately 3-1/4 by 5-5/8 inches. Brass grommets and wire fasteners.
- N. Nomenclature: Large-size wording such as "DANGER," "CAUTION," or "DO NOT OPERATE", or as noted on the drawings in the specification.
- O. Lettering and Graphics: Coordinate names, abbreviations, and other designations used in mechanical identification, with corresponding designations indicated. Use numbers, letters, and terms indicated for proper identification, operation, and maintenance of mechanical systems and equipment.
- P. Multiple Systems: Where multiple systems of same name are indicated, identify individual system number as well as service.

2.14 VALVES

A. General

1. Valves are specified by Valve Type and, for some services, several valve types are grouped by "Valve Class" in various sections of Division 21 and 22. Application is stated in the "Piping System Requirements". Where more than one Valve Type or Valve Class is listed for a service, use any of the listed Types or Classes, unless otherwise specified or indicated, but selection must be consistent throughout the work.
2. It shall be Contractor's responsibility to coordinate the work for all sections of Division 21 and 22 to assure that all general service valves throughout the work of Division 21 and 22 are of the same manufacture and type and that all valves of the same type number/identification throughout the work of Division 21 and 22 are of the same manufacture.
3. Valve packing shall not contain asbestos.
4. Bronze Valves: Construct body of ASTM B62 for Classes 125 and 150, ASTM B61 for

Classes 200 and 300, copper-silicon bronze stem.

5. Iron Valves: Construct body of ASTM A126, Class B copper-silicon bronze stem.
6. Domestic water system valve construction shall comply with NSF 61, 372 and Federal law 111-380 and shall be certified as lead free compliant.

B. Types V1 through V5 General Service Valves: Industrial valve construction. Handwheel operator, except where specified to be provided with chain-wheel operator. Figure numbers listed are those of Stockham Valve Co. Valves shall be products of a single manufacturer.

1. Type V1: Class 125 bronze, solder-end, for soldered copper piping 2 inch and smaller in size; 150 psig water or oil working pressure at 250° F. with high temperature nonlead solder joint (95-5 or equivalent as specified in the "Solder" article of this section); 125 psig saturated steam working pressure:

		Swing	
	Ball	Check	Globe
	See Type V9	B309	B14T
*Use B104 where space prevents full extension of rising steam.			

2. Type V2: Class 125 bronze, for screwed piping 2 inch and smaller in size; 125 psig steam working pressure; 200 psig cold water, oil or gas working pressure:

		Swing	Lift		
	Ball	Check	Check	Globe	Angle
	See Type V9	B319	B316	B22T	B222T
*Use B103 where space prevents full extension of rising steam.					

3. Type V3: Class 300 bronze, for screwed piping 2 inch and smaller in size; 300 psig steam working pressure; 600 psig cold water, oil or gas working pressure:

	Swing	Lift		
Ball	Check	Check	Globe	Angle
See Type V9	B375	B367	B74	B266

4. Type V4: Class 125 flanged, iron body, bronze mounted (IBBM) - for copper and steel piping 2-1/2 inch and over in size; 125 psig saturated steam working pressure; 200 psig cold water, oil or gas working pressure:

Gate	Swing		
OS&Y	Check	Globe	Angle
G623	G931	G512	G515

5. Type V5: Class 250 flanged, iron body, bronze mounted (IBBM) - for copper and steel piping 2-1/2 inch and over in size; 250 psig steam working pressure 450° F.; 500 psig cold water, oil

or gas working pressure:

Gate	Swing	
OS&Y	Check	Globe
F667	F947	F532

6. Approved Manufacturers:

- a. Crane
- b. Nibco
- c. Stockham
- d. Hammond
- e. Jomar

C. Balancing Valves

1. Balancing valves shall be calibrated type with bronze body, Class 125, soldered or screwed ends as required. Valves shall have Venturi flow measuring ports.
2. Approved Manufacturers:
 - a. Bell and Gossett Circuit Setter
 - b. Taco
 - c. Armstrong
 - d. Victaulic

D. Drain Valves

1. Valves 3/4 Inch and Smaller in Size: Interior hose bibb, brass, compression type, with renewable seat and male threads for attachment of hose and fitted with wheel handle and cap when not piped to drain. Valves exposed in finished spaces chromium plated.
2. Valves 1 Inch and Larger in Size: Hose end gate valves fitted with cap except that valves indicated as piped to drain shall be standard shutoff type for system.

E. Refer to other sections of Division 21 and 22 for additional valve requirements.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

A. General

1. Furnish, deliver, erect, connect, and finish in every detail all materials, equipment and accessories required for the Work.
2. Include in the work and in the bid minor details not usually shown or specified, but manifestly necessary for the proper installation and operation of the various systems, the same as if specified or shown.
3. If any departures from the Contract Documents are deemed necessary, submit details of

- such departure and the reasons therefore to the Architect for approval.
4. Be responsible to request clarification from the Architect on any conflicts represented between the drawings and specifications.
 5. Adequately guard all exposed moving parts of equipment, such that contact by operating personnel will not cause personal damage or injury.

B. Layout and Coordination With Other Trades

1. Layout Work from building and property lines and benchmarks provided, verify, and be responsible for the correctness of all measurements in connection with the Work. Any change made in major overall dimensions shown which affect the physical size, shape, or location of any part of the Work, whether due to field check or changes due to use of equipment of a manufacturer other than that used as basis of design shall cause no interference with other Work.
2. Examine the Drawings of other trades, cooperate and coordinate with other trades to insure that the Work can be installed properly as designed and planned without interference with other work or delay. Where interferences may occur and departures from the arrangements shown are required, consult with other trade involved. Come to agreement as to changed locations and elevations. Furnish all necessary templates, patterns, measurements, etc., for installation and for the purpose of making adjoining work conform. Furnish setting plans and shop drawings to other trades as required.
3. Investigate the structural and finish conditions affecting the Work. Offsets, bends or other items required may not be shown on the drawings; provide such offsets or bends as required to meet structural or finish conditions.
4. Coordinate layout with architectural ceilings and lighting layouts and similar work.
5. Coordinate and be responsible for the required clearances in shafts, chases, furred partitions and suspended ceilings. Coordinate and cooperate with the trades responsible for constructing such spaces, together with other trades sharing such spaces, and advise other trades of the requirements of the Work. Immediately submit for review large scale composite Drawings showing space requirements that exceed those shown.
6. Install systems so that they do not interfere with any openings, doors or windows, or with other work, and so as to permit proper access.
7. Install material and equipment as high as possible; at minimum, to clear the top of all doors, windows and other structural openings. Maintain maximum headroom and space conditions in every case. Where headroom or space conditions appear inadequate, notify the Architect before proceeding with the installation.
8. Except where greater clearance is specified or required by applicable codes, rules or regulations, install piping, fittings, valves, etc., to provide not less than 1 inch between their finished covering and the structure or adjacent work of any kind. The minimum space between finished hot piping of any kind and adjacent electrical conduit shall be 6 inches.
9. Make reasonable modifications in the layout to provide proper clearances or accessibility, or to prevent conflict with the work of other trades, at no increase in the Contract sum.
10. Prepare large scale composite working drawings, including such section views and details as are necessary to clearly show how the systems are to be installed in relation to the work of other trades. Issue such Drawings to the other trades for coordination of their work. Where such drawings show deviations from the Contract Drawings or conflict with other trades such that reasonable modifications cannot be made, detail and submit such deviation or conflict to the Architect for review.
11. If work is installed before coordinating with other trades so as to cause interference with the work of other trades, or as not to provide proper access for maintenance or repair, make

necessary changes to correct the condition at no increase in the Contract sum.

C. Manufacturer's Instructions and Recommendations

1. Perform the installation, cleaning, testing, calibration and startup of all material and equipment in accordance with the manufacturer's instructions and recommendations. Such instructions and recommendations are hereby made part of the specifications.
2. Should a conflict exist between specifications and manufacturer's instructions, consult with the Architect.

D. Electrical Rooms

1. Do not install any piping, or equipment in or through an electrical room or similar room containing electrical equipment, other than piping, or equipment exclusively serving the room or equipment in the room.
2. If there is a conflict between the above requirement and the Drawings, the above shall govern. If reasonable modifications cannot be made to accommodate this requirement, obtain instructions from the Architect before proceeding with the work.

E. Painting

1. Except where specified otherwise in Division 21 and 22, Work of Division 09 will provide painting of fire protection and plumbing systems, equipment and components.
2. Protect all equipment from rust, corrosion, and similar damage by either factory applied or field applied protective coatings.
3. Repair marred and damaged factory painted finishes with manufacturer's touch up paint and application procedures to match original factory finish.

F. Wall and Ceiling Access Doors

1. Access Doors shown on Architectural Drawings will be provided under Division 05.
2. Furnish access doors required for access to concealed valves, air vents, traps, cleanouts, unions, expansion joints, and other equipment where no other means of access is available. Access doors shall be of adequate size for the service requirements, minimum clear opening of 14 inches by 16 inches.
3. Coordinate requirements for access panels and doors for plumbing and fire protection items requiring access that are concealed behind finished surfaces. Access panels and doors shall be specified in Division 08 Section "Access Doors and Frames."

G. Roof Pipe and Equipment Support

1. Work by Division 07 will install all roof pipe or equipment support curbs, furnished by Division 22.
2. Roof pipe and equipment supports specified in various sections of Division 22 shall be coordinated for exact location and type suitable for roof construction.

3.2 PENETRATIONS

A. General

1. Coordinate with other trades as to the size and location of openings to be provided in new floors, walls, roofs and ceilings as construction progresses.
2. Do not cut openings in new or existing floors and walls without proper structural reinforcement.
3. Install both piping and seals so as to maintain integrity of seals with expansion and contraction of piping.
4. Clean Room and Biohazard Laboratory Sealing Requirements:
 - a. Seal completely all penetrations of piping through any surface.
 - b. Seal completely all penetrations of piping through above ceiling full height partitions.
 - c. Seal completely the perimeter of all access doors or panels in any surface.

B. Sleeves

1. Provide each pipe, passing through a masonry or concrete wall, floor or partition, and elsewhere as indicated, with a sleeve made from standard weight galvanized steel pipe for pipe or conduit.
2. Select sleeves two pipe sizes larger than any pipe to accommodate pipe, insulation, and jacketing without touching the sleeve and shall provide minimum of 3/8 clearance.
3. Be responsible for the proper location and alignment of all sleeves.
4. Extend wall and partition sleeves through and cut flush with each surface unless otherwise indicated or specified.
5. Place sleeves imbedded in concrete floors or walls in the forms before concrete is poured; sleeves shall have integral water stop flanges, where they are to receive either water tight or hydrostatic seals.

C. Fire Rated Penetrations

1. Provide through-penetration fire-stop sealing system for pipe penetrations through fire or smoke rated construction. Refer to Division 07 for through-penetration fire stop sealing system.
2. Coordinate with Division 07 to determine requirements for sleeves and clearances.

D. Interior Non-Rated Wall Pipe Penetrations

1. For acoustically treated partitions, and walls between mechanical equipment rooms and occupied spaces, fill annular void at penetration with acoustical sealant.

E. Resilient Penetration Sleeve/Seal

1. Provide resilient penetration sleeve seal for piping subject to vibration to prevent transmission to the building structure.
2. Maintain an airtight seal around the penetrating element and prevent rigid contact of the penetrating element and the building structure. Fit the sleeve tightly to the building construction and seal airtight on both sides of the construction penetrated with acoustical sealant.

F. Floor Pipe Penetrations

1. Provide water stops for new cored openings for piping where such openings are above grade in laboratories, toilet rooms and similar wet service areas and in mechanical rooms, penthouses, and pipe chases.
2. Provide water stops for existing pipe floor openings that do not have sleeves extended above the floor.
3. Provide either a sleeve or angle water stop. Sleeve may be used if the fire-stop sealing method selected by Division 07 allows the use of a sleeve, otherwise provide angle water stop.
4. Sleeve Water Stop: Construct of Schedule 40 galvanized steel pipe, length as required for 1 inch above floor and 1 inch below underside of floor. Provide 1 inch by 1 inch by 1/8 inch galvanized angle clips welded to sleeve at 90 degree intervals and securely fastened to underside of floor. Caulk space between floor opening and sleeve water tight with soft setting waterproof silicone sealant.
5. Angle Water Stop: Construct of standard weight pipe 1 inch long welded to a 1/4 inch circular steel base plate ring fastened to floor with expansion anchors. Base plate ring width as required for anchor clearance from edge of cored opening. Seal between base ring and floor and caulk all edges of base ring with waterproof silicone sealant.
6. Floor penetrations through concrete slabs on grade shall be sleeved as required by the plumbing code. For hydrostatic floor slab penetrations provide Link Seal as specified under exterior wall pipe penetrations.

G. Pipe Penetrations Through Roof

1. Work by Division 07 will provide flashing for piping not subject to vibration and/or thermal movement. Provide counterflashing of 16 ounce copper for sleeves through roof openings provided under Division 21 and 22 to provide a completely weather tight installation.
2. For piping subject to vibration and/or thermal movement, provide pipe sleeve as detailed on the drawings, or use pipe curb where curb is sized to accommodate both required overall pipe and insulation diameter and thermal movement.

H. Exterior Wall Pipe Penetrations

1. Provide compressible synthetic rubber seal with connecting bolts and pressure plates, equivalent to LINK SEAL, manufactured by the Thunderline Corporation, or THRUWALL manufactured by O.Z. Gedney. Provide sleeve and install seal in accordance with the manufacturer's recommendations to provide air and water tightness above ground and hydrostatic sealing below grade. Caulking or other type mastic is not acceptable.

3.3 ALTERATIONS OF UTILITIES AND SERVICES

- A. Arrange and pay for the relocation, disconnection or removal of existing utilities and services where such utilities and services interfere with new construction. Perform alteration of utilities and services in accordance with rules, regulations and requirements of the involved utility company as well as regulatory agencies having jurisdiction.

3.4 ALTERATIONS AND CONNECTIONS TO EXISTING FACILITIES

- A. Refer to Division 01 Sections "Execution" and "Alteration Project Procedures" and Division 02 Section "Selective Demolition" for general demolition requirements and procedures.
- B. Make all necessary alterations to existing Division 21 and 22 systems as required for removing or for connecting or extending these systems to new work and for revisions in existing work as indicated and as required, whether indicated or not. Match new materials in altered systems with existing materials unless otherwise indicated.
- C. Where equipment, and/or piping is removed or disconnected under Division 21 and 22, perform the work in such a manner that no damage is done to the structure or remaining portions of the existing systems. Do not under any circumstance place stress on existing pipe and fittings that are to be reused. Be fully responsible for and repair, at no additional expense to the Owner, any leaks developing in existing piping due to failure to take proper precautions when making alterations.
- D. Disconnect, demolish, and remove plumbing systems, equipment, and components indicated to be removed.
 - 1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 - 2. Piping to Be Abandoned in Place: Do not abandon any piping in place unless specifically noted to do so. Drain piping and cap or plug piping with same or compatible piping material.
 - 3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 - 4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 - 5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
 - 6. All materials and equipment removed or disconnected by Division 21 and 22, which is not to be reused or delivered to Owner, shall be removed from the premises.
- E. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.
- F. Remove all piping, and equipment hangers and supports.
- G. Cap tight unused connection at mains and risers behind finished surfaces.

3.5 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 21 and 22 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless

deviations to layout are approved on Coordination Drawings.

- C. Install all piping in accordance with best practices of trade and latest code requirements. Locate groups of pipes parallel to each other, spaced to permit valve servicing. Use uniform system materials throughout building.
- D. Install components having pressure rating equal to or greater than system operating pressure.
- E. Keep all piping as high as possible, consistent with proper pitch, to maintain maximum headroom. Cut piping accurately to measurements established at building, work into place without springing, forcing or cutting of the building structure, and install as directly as possible without sags between connecting points parallel with or at right angles to building construction, except as required to obtain pitch.
- F. Pitch all systems for proper venting at high points and to drain at low points where the systems can be completely emptied. Install vents at all high points and drains at all low points, including where offsets and bends in horizontal pipe runs create a low point. Provide drain points with bronze hose end drain valves.
- G. Do not install piping above or through electrical rooms, telecommunication rooms, or similar room having a large collection of electrical equipment.
- H. Keep pipe and fittings clean from cutting burrs, foreign matter and defects in structure and threading. Make all cuts square. Ream after cutting. Bevel plain ends of steel pipe. Clean off scale and dirt inside and outside before assembly. Remove welding slag or other foreign matter inside and outside.
- I. Install piping within building concealed in walls, furred spaces, pipe spaces or above suspended ceilings. Do not build in or bury horizontal piping within partitions. Install exposed piping as closely as possible to walls, ceilings and columns, allowing space for installation of insulation and access for valve operation.
- J. Install piping sections using greatest length possible in all cases. The use of short lengths socketed together will not be allowed.
- K. The use of lampwick or other material for packing threads, caulking or wrapping of joints to stop or prevent leaks or correct faults is not permitted. The use of long screws having right and left hand threads or couplings is not permitted.
- L. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- M. Install piping to permit valve servicing and application of insulation.
- N. Provide offsets and loops as required for piping crossing a building expansion joint to accommodate building movement, whether or not shown on the drawings. Provide seismic joints for piping crossing building seismic joints to accommodate building movement, whether or not shown on the drawings. Piping seismic joints shall be designed to accommodate maximum building seismic joint movement. Piping seismic joints shall be Metraflex or equal.
- O. Changes in Pipe Size and Direction

1. Make reduction or increase in pipe size with fittings. Use eccentric reducing fittings in horizontal piping. Use reducing tees in pressure piping for side outlet reduction only, not on run. Bushed fittings, notched or straight runs to form tees, or any similar fabrication method will not be permitted.
 2. Make changes in direction with standard fittings. Mitering of pipe to form elbows or similar fabrication method will not be allowed. Bending of piping will not be permitted.
- P. Chromium Plated and Stainless Steel Piping: Friction wrenches and clamps must be used exclusively in the installation of chromium plated and stainless steel pipe and fittings. Pipe which is cut, dented or otherwise damaged shall be replaced with new pipe.
- Q. Drain Pans
1. Provide drain pans under entire length of any piping, joints or fittings for soil, waste, rainwater or drain piping system which is installed over operating and delivery rooms, nurseries, ICU, food preparation centers, food serving facilities, food storage areas, central services areas and electronic data processing areas.
 2. Fabricate each drain pan not less than 2 inches deep and provide 3/4 inch drain pipe to discharge at nearest convenient drain line, floor drain or other approved drain point. Construct of not less than 18 gauge galvanized steel.
- R. Electrolysis Control
1. Install copper or brass piping or tubing in such a way as not to touch or come in contact with ferrous metals.
 2. Where ferrous piping or equipment is connected to copper or brass piping, make connection with insulating or dielectric union to prevent electrolytic action between the ferrous and nonferrous metals. At branch connections off mains, provide shut off valve upstream of dielectric union in order to isolate downstream union.
 3. Where copper or brass piping, tubing or fittings are anchored to, supported by, or come in contact with ferrous metal construction, provide an insulating nonconductor spacer of rubber, plastic or equivalent material to assure prevention of electrolysis.
- S. Equipment Piping
1. Verify final locations of equipment for rough in of piping connections.
 2. Provide shut off valves in the supply and return to each item of equipment. Suitably locate equipment isolation valves to facilitate removal of equipment.
 3. Provide piping from pump glands, drain pans, relief valves or other drainage to spill over open sight drains, floor drains, or other trapped acceptable discharge, terminating with plain end cut at a 45 degree angle.
- T. Expansion and Contraction of Piping
1. The piping installation shall be free of stress. Run all piping with full allowance for expansion or contraction. Base expansion calculations on 50 degree F. installation temperature to 140 degree F. for hot water systems.
 2. Evaluate the complete piping layout and notify Architect of additional anchors or

- expansion joints and any deviations required to compensate for expansion.
3. Make connections to equipment in such a manner as to eliminate undue strains in piping and equipment. Install sufficient number of elbow swings to allow for proper expansion and contraction of piping at the point of connection to mains and equipment.
 4. Fabricate expansion loops with long radius welded fittings in steel piping and with long radius copper sweat fittings in copper piping.
 5. Provide adequate pipe guides as close as possible on each end of the expansion device to preserve alignment and pitch.
 6. Install pipe hangers and supports in such a manner as to not cause an anchor condition in any direction.

U. Pipe Anchors

1. Install anchors where required to direct pipe expansion properly into expansion joints, loops or offsets and to prevent transfer of loading and stresses to connected equipment.
2. Pipe anchors may consist of heavy steel clamps bolted or welded to piping and provided with lugs and bolts for clamping and attaching anchor braces. Design anchors to restrict pipe movement and fasten to main members of building structure in most effective manner to secure desired results.
3. Do not attach supports, anchors or stays in places or in such a manner that will damage construction or integrity of the structure, either during installation, by weight of the pipe, or by expansion and contraction of the pipe.

V. Pipe Insulation Inserts and Shields

1. Refer to Section of Division 22, "Plumbing Insulation" to coordinate specific insulation thicknesses and requirements. At hanger locations for insulated piping 1 ½ inches and larger where hanger support is outside the insulation, provide inserts of exploded silica pipe insulation between pipe and hanger. Density and compression strength suitable for pipe size and support spacing as required by MSS SP-58, Paragraph 9 and MSS SP-69, Table 3. Provide inserts as required for smaller piping to prevent deformation of insulation. Inserts of equal thickness to adjoining insulation, provided with vapor retardant seals, and of proper length to fully support pipe at each hanger location. Manufactured by Value Engineered Products Max Span; or equivalent.
2. At all hanger locations for insulated piping where hanger is outside of insulation, provide galvanized sheet steel shield formed to fit insert/insulation, extending up to pipe centerline. Length 12 inch minimum when insert is not required. Where inserts are provided, length of shield 4 inches less than insert length. Provide shields 16 gauge for piping up to 4 inches, 12 gauge for piping 6 inches and larger.
3. Preformed insulated pipe saddles may be used in lieu of insert and shield where appropriate. Thickness of insert or pipe saddle same thickness as pipe insulation.

3.6 VALVES

A. General

1. Provide valves at locations shown, where specified and where required to properly control piping systems. Provide valves recommended or required by equipment manufacturers and

- codes for proper operation of equipment and shutoff valves to allow isolation of each main and branch service line, whether or not indicated or specified.
2. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
 3. Operate valves from fully open to fully closed positions. Examine guides and seats made accessible by such operation.
 4. Examine threads on valve and mating pipe for form and cleanliness.
 5. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Check gasket material for proper size, material composition suitable for service, and freedom from defects and damage.
 6. Do not attempt to repair defective valves; replace with new valves.
 7. Install valves in horizontal piping with stem at or above the center of the pipe.
 8. Install valves in a position to allow full stem movement.
- B. Check Valves: Provide lift check type in steam, air, gas or vapor service lines and after globe valves, install with stem upright and plumb. Provide nonslam type in vertical piping on discharge side of pumps and elsewhere as indicated or specified. Provide horizontal swing check type elsewhere unless otherwise indicated or required for service intended, install in horizontal position with hinge pin level. Install check valves, including those that are spring loaded, so that force of gravity will operate to close valves.
- C. Provide valve ends to suit character of pipe in which installed. Provide valves designed for working pressure of at least 125% of maximum operating pressure of system in which installed, but not less than 250 psig on high pressure systems, and 125 psig on low pressure systems.

3.7 WELDING, SOLDERING AND BRAZING

- A. Do not employ workers who have not been fully qualified and certified for the specified procedures.
- B. Pipe Welding, Black or Galvanized Steel Pipe: Perform all welding of black or galvanized steel pipe by shielded metallic arc method of fusion welding, in accordance with welding procedures of AWS (American Welding Society) D10.12 recommended procedures for welding low carbon steel pipe, or other approved procedure, conforming to requirements of ASME/ANSI B31.1 for high pressure steam boiler piping and B31.9 elsewhere.
- C. Pipe Welding Stainless Steel Pipe: Refer to other Sections of Division 22 for welding requirements.
- D. Structural Steel Field Welding: Comply with AWS D1.1 procedures for manual shielded metal-arc welding, appearance and quality of welds, methods used in correcting welding work, and the following:
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.

- 4. Finish welds at exposed connections so that no roughness shows after finishing, and so that contours of welded surfaces match adjacent contours.
- E. Soldering: Comply with the requirements of the AWS Soldering Manual.
- F. Brazing: Comply with the requirements of the AWS Brazing Manual and AWS A5.8 specification for filler materials for brazing.

3.8 UNIONS

- A. In Screwed Steel Pipe, 2 inches and smaller: Screwed, Class 250 malleable iron, brass to iron seat, ground joint union with brass seat ring pressed into head piece. Provide galvanized unions in galvanized pipe.
- B. In Welded Steel Pipe, 2 inches and smaller: Class 3000 carbon steel socket welded union, steel to steel seat and ground joint. Provide stainless steel in stainless steel piping.
- C. In Copper tubing, 2 inches and smaller: Class 200 wrought copper, solder type, brass ground joint union.
- D. Provide companion flanges in piping 2-1/2 inch and larger.

3.9 PIPING CONNECTIONS

- A. Refer to other Sections of Division 21 and 22 for additional requirements.
- B. Flanged Connections: Make with nonasbestos gaskets of 1/8 inch thick best quality material as recommended by manufacturer for the service application. For steam piping, factory manufactured for flange/connection size/type as manufactured by Flexitallic. For other piping services either Flexitallic or gaskets factory cut for flange size as manufactured by Garlock Packing Division, Colt Industries, or equal. Align flange surfaces parallel. Install gasket concentrically positioned. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly using torque wrench.
- C. Mechanical Couplings: Prepare pipe and install in accordance with manufacturer's instructions. Standard wall steel pipe either roll or cut grooved at Contractor's option, all sizes, except provide cut grooved as required to accommodate thermal expansion and contraction. Heavy wall steel pipe cut grooved all sizes. Light wall steel pipe roll grooved all sizes. Copper tubing roll grooved.
- D. Soldered Joints: Unless noted otherwise, make with appropriate flux and solder. Clean tubing ends and fittings before assembly. For piping 2 inch and larger tin tubing and fittings before assembly. For tubing 2-1/2 inch and larger use circular flame torch for soldering. The use of lead flux or solder and finishing with 50-50 solder is prohibited.
- E. Threaded Pipe: Make full, clean-cut standard ANSI/ASME B1.20.1 taper pipe threads using sharp dies. Carefully cut, ream or file out to size or bore, removing all chips. Use Schedule 80 pipe for all screwed close and shoulder nipples. Do not use all thread nipples. Provide teflon tape or other approved nontoxic joint compound, applied to male thread only.

- F. Welding Connections: Use only factory made welding fittings, same weight as piping, on welded pipe, except that Bonney Forge WELDOLET or THREADOLET, or Allied Type 1 Branchlet fittings, of same weight as connecting piping, may be used for branch takeoffs two or more commercial pipe sizes smaller than main. All elbows long radius.
- G. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
 - 1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
 - 2. CPVC Piping: Join according to ASTM D2846/D2846M Appendix.
 - 3. PVC Pressure Piping: Join schedule number ASTM D1785, PVC pipe and PVC socket fittings according to ASTM D2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D2855.
 - 4. PVC Nonpressure Piping: Join according to ASTM D2855.
- H. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D3139.
- I. Plastic Nonpressure Piping Gasketed Joints: Join according to ASTM D3212.
- J. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D2657. Plain-End Pipe and Fittings: Use butt fusion. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.10 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

3.11 PROTECTION OF WORK

- A. Clean pipe, tubing, fittings, valves, piping specialties, ductwork and equipment before installation and keep clean while the work is in progress.
- B. Securely close open ends of pipe and tubing and openings in other material and equipment until installed, during installation, and until finally connected or otherwise finished, with caps, plugs or other approved closure devices designed for such service.
- C. Protect factory finished equipment, fixtures and devices with approved temporary covering

material where those items are installed so as to be subject to accidental damage or abuse. Contractor shall remove all temporary covering material at the conclusion of the work or as directed.

- D. Protect the work of other trades and property of Owner from damage and assume full responsibility for the cost of repairing or replacing any damage to such work or property caused by the performance of the work under Division 21 and 22.

3.12 CLEANING OF SYSTEMS

- A. Refer to other sections of Division 21 and 22 for additional cleaning and system flushing requirements.
- B. Following completion of system testing, thoroughly clean all piping systems by flushing with water or other approved method, or as otherwise specified. Completely remove all dirt, scale, oil, grease and other foreign substances that may have accumulated in systems during installation.
- C. Carefully wipe out, wire brush, or if necessary, sand blast sections of pipe lines between temporary or permanent strainers and equipment they are to protect. Replace all permanent strainer screens with temporary screens during cleaning process. Remove temporary screens and reinstall permanent screens after cleaning is completed.
- D. Disconnect automatic devices that can become clogged during cleaning process and do not connect permanently until cleaning process is complete.
- E. Clean all piping and equipment of dirt, scale, plaster, concrete, splattered paint and other foreign matter.
- F. Clean all grease and cuttings from stainless steel piping and trim.
- G. Clean all strainers, dirt pockets, drip legs, traps and other accessories that may collect foreign matter.

3.13 EQUIPMENT PADS

- A. Provide reinforced concrete equipment pads for the work specified under Division 21 and 22. Be responsible for preparing equipment pad drawings and setting foundation anchor bolts in time so as not to delay the work. Equipment pads shall be of the types detailed on the drawings.
- B. Reinforce concrete to suit the loads placed on them. Materials and methods shall be as specified in Division 03.
- C. Unless otherwise indicated, extend equipment pads 4 inches above the finished floor and minimum 4 inches beyond the equipment base in all directions. Have the top edges and vertical corners chamfered along the full perimeter. Equipment pads shall have the same surface finish as the adjacent and surrounding floor.

- D. Set with proper templates, epoxy coated anchor bolts and inserts required for proper attachment of the equipment to the concrete foundations. Provide anchor bolts of the same size and number required by the equipment or as recommended by the equipment manufacturer and in accordance with the requirements detailed. Anchor bolts shall be compatible with vibration isolation requirements specified for the equipment.
- E. Set equipment anchor bolts in pipe sleeves at least two sizes larger than the anchor bolt. Length of pipe sleeve same as the imbedded length of the anchor bolt. After the equipment is set in place and adjusted to its proper position, fill the annular space between the anchor bolt and the inside of the pipe sleeve completely for the full length of the pipe sleeve with nonshrink cement grout.
- F. Grout any openings between the top of the concrete foundation and the base of the equipment.

3.14 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 05 Section "Metal Fabrications" for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing and fire protection materials and equipment.
- C. Field Welding: Comply with AWS D1.1.

3.15 GROUTING

- A. Description: ASTM C1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
 - 1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.
- B. Packaging: Premixed and factory packaged. Mix and install grout for equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- C. Clean surfaces that will come into contact with grout. Provide forms as required for placement of grout. Avoid air entrapment during placement of grout.
- D. Place grout, completely filling equipment bases. Place grout on concrete bases and provide smooth bearing surface for equipment. Place grout around anchors. Cure placed grout according to manufacturer's written instructions.

3.16 HANGERS AND SUPPORTS

- A. General
 - 1. Support major piping (3 inch and above), tanks and other equipment to the structure above (beams and girders) or by means of struts or brackets to columns. Do not support from floor or roof decks. Do not overload structural members to which supports are attached. Hanger spacing not to exceed MSS SP69.

- a. Provide hangers, rollers, threaded rods, turnbuckles, deflection guides, deflection provisions, inserts, beam clamps and all miscellaneous specialties for attachment of hangers and supports to structure.
 - b. Provide all rods, angles, rails, struts, brace plates, structural steel, platforms and other items required for suspension or support of piping, tanks and equipment.
 - c. Provide supplemental angles, channels, plates or other reinforcement where supports are required between building structural members. Size supports for weight of pipe, pipe contents, equipment fittings and other items, plus a 200 pound live load. Attach supplemental supports in a manner that will not weaken or overload structural members. Weld steel according to AWS D-1.1.
 - d. Attach by welding, clamping, concrete inserts, drilled in mechanical type anchors (Hilti or equal) and other approved means. Adhesive type anchors are not approved.
 - e. Place grout under supports for equipment, and make a smooth bearing surface.
 - f. For seismic restraint, provide double-sided beam clamp loaded perpendicularly to beam for seismic anchor point.
2. No lead shield anchors, powder or power fasteners permitted for attachments.
 3. Do not use perforated strap hangers. Do not use steel strap hangers on piping.
 4. Wherever possible, support shall be provided directly to main steel or concrete framing beams. If spacing of structure exceeds spacing required to support the mechanical work, supplemental channel or unistrut framing shall be designed and provided by the Contractor.
 5. Support all mechanical work independently of other trades. Under no circumstances shall work be supported or suspended from ceiling grids, piping or other supports by other trades.
 6. Before drilling concrete for attachments, carefully check Drawings and Shop Drawings for such concrete and locate drilled holes to miss reinforcing by at least 1 inch.
 7. Inserts in precast concrete to support Work of Division 21 and 22 will be furnished and installed by precast concrete supplier. Prepare drawings locating such inserts for review by Architect before distribution.
 8. Supports from Joist Construction: Support suspended piping, and equipment at joist panel point locations. Provide any supplementary steel angles or channels as required to fasten to panel point locations. Where this is not possible, reinforce joist from point of support to joist panel points on each side of support with steel angles welded to top and bottom joist chords. Do not hang from joist bridging. Maximum point load and maximum additional load per joist shall not exceed the loads in the table below:

Joist Size	Maximum Point Load	Maximum Additional Load per Existing Joist
SJ8	75#	300#
SJ10	75#	300#
SJ12	75#	300#
SJ14	150#	1000#
SJ16	100#	500#

B. Inserts

1. Use inserts for suspending hangers from reinforced concrete slabs and sides of reinforced

- concrete beams wherever practicable.
2. Set inserts in position in form work in advance of concrete work. Provide reinforcement rod placed through opening on top and bent over adjacent concrete reinforcement rods.
 3. Where concrete slabs form finished ceiling, finish inserts flush with slab surface.
 4. Where inserts are omitted, if approved by Architect, drill through concrete slab from below and provide rod with recessed square steel plate and nut above slab or provide drilled in mechanical type anchors, Hilti or equal, after concrete is completely cured.

C. Pipe Hangers and Supports

1. Unless otherwise required to avoid overloading of structural members or for seismic restraint, support horizontal steel and copper piping as follows:

Nominal Pipe Size (inch)	(a) Maximum Distance Between Support (feet)	Hanger Rod Diameter (inch)
-----------------------------	--	-------------------------------

	Steel Pipe	Copper Tubing	
up to 3/4	6	5	3/8
up to 2	6	6	3/8
2-1/2 to 3-1/2	10	8	1/2
4 and 5	12	10	5/8
6	12	10	3/4
8 to 12	14	14	7/8
Trapeze Hanger Rod			(b)

- a. Provide additional supports as required to avoid overloading of supporting structure. Reduce distance where so required by applicable codes.
 - b. As required to carry weight of trapeze channel, span of piping with contents, insulation and supports, plus a 200 pound live load.
2. Install hangers to provide minimum 1/2 inch clear space between finished covering and adjacent work.
 3. Install additional attachments at concentrated loads, including valves, flanges, guides, strainers and expansion joints/loops.
 4. Place a hanger within one foot of each horizontal elbow.
 5. Use hangers that are vertically adjustable 1-1/2 inch minimum after piping is erected.
 6. Unless otherwise required to avoid overloading, of structural members or for seismic restraint, support vertical piping with clamps spaced appropriately as to type and weight of piping, minimum spacing at every other floor and below roof. Support vertical soil pipe at each floor at hub. For exposed piping in stairs, walkways and finished areas, locate clamps below floor and secure to structure below floor as required.
 7. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers. Space hangers for smallest pipe size or provide intermediate supports for smaller pipe as specified above for individual pipes.
 8. Where practical, support riser piping independently of connected horizontal piping.
 9. Support pipe runs in a manner to minimize stress in the pipe or tubing and on bodies of valves and fittings.
 10. Install hangers and supports to allow controlled movement of piping systems, permit freedom of movement between pipe anchors, and facilitate action of expansion joints, expansion loops, expansion bends, and similar units, and so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.
 11. Install hangers and supports to provide indicated pipe slopes and so that maximum pipe deflections allowed by ASME B31.9 "Building Services Piping" is not exceeded.
 12. For piping subject to sweating (e.g.: domestic cold water), and for insulated piping requiring roller supports, install hangers outside insulation and provide pipe insulation protection shields as specified in this section. For all other piping, hanger may be attached to the piping before insulation is applied or may be installed outside the insulation with insulation protection shields.
 13. Do not support nonferrous piping with ferrous materials even on a temporary basis.
 14. Do not support piping from other piping or ductwork.
 15. Install hanger rods subjected to tension only. Accomplish lateral and axial movements by proper linkage in rod assembly. Secure hanger to hanger rod with two bottom lock nuts.

3.17 IDENTIFICATION

- A. Identify all new equipment, and new exposed and concealed pipe with legible lettering, applied after finish painting, in a color to contrast with basic color in accordance with ANSI A13.1 and OSHA.
- B. Identify piping by name of pipe content and direction of flow near major equipment items, adjacent to valves or flanges, adjacent to gauges or thermometers, at each tee, at changes in direction, on each side of a penetration of a wall or floor, at each access door or panel and then at maximum 20 foot centers in congested areas and 50 foot intervals elsewhere; indicate flow direction with arrows. Identification shall be by means of plastic markers or tape or painted on the finished pipe surface by using stencils. Lettering shall not be smaller than one third of the pipe diameter and directional arrows not less than 1/2-inch wide and 12 inches long.
- C. Identify equipment and operating devices such as switches, starters and similar equipment, by the equipment numbers shown on Drawings or by the Owner's numbering system, if so directed.
 - 1. Include the type of service or the name of areas served.
 - 2. Lettering minimum 1 inch high.
 - 3. Nameplates shall be two tone plastic, or printed white paper enclosed in a transparent, laminated plastic case with permanently sealed edges.
 - 4. Attach securely to equipment, or where this is not practicable attach by brass link chains.
 - 5. Do not stencil surfaces exposed in public areas.
- D. Furnish for each valve, except those immediately adjacent to apparatus, a 2 inch diameter nonferrous metal tag with figures stamped on the tag.
 - 1. Number tags for Plumbing P-1, P-2, etc.; Use Owner's numbering system if so directed.
 - 2. Fasten tags to valves with nonferrous S hooks and nonferrous chains.
 - 3. Where valves are located above removable acoustical tile ceilings, identify the tile section below the valves by an approved color pin system.
 - 4. Furnish duplicate framed schedules showing the location of each valve, system or equipment it serves, manufacturer, and figure number.

3.18 TESTING OF PIPING SYSTEMS – COMMON REQUIREMENTS

- A. Refer to various sections of Division 21 and 22 for additional piping system testing requirements.
- B. Provide materials and equipment required for testing. Test and make tight all new piping systems and connections to existing piping system.
- C. Take precautions during testing to insure safety of personnel and equipment. Provide systems to be pressurized with appropriate gauges and blowouts or relief valve set at a pressure no more than one third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test. Make good at no increase in Contract sum damage to work or work of other trades caused by failure to observe proper precautions.
- D. Test piping systems prior to application of insulation. Testing as stipulated herein shall be considered minimum, and where tests stipulated by lawful jurisdictional authorities exceed these

requirements, such more stringent tests shall be performed. Tests shall be witnessed and approved by the authorities having jurisdiction over the work.

- E. Concealed work shall remain uncovered until required tests have been completed. Provide proper sectionalizing devices so that portions of a system may be tested as appropriate.
- F. Isolate and exclude from tests all in line equipment, instruments, gauge glasses, flow meters and all other devices not capable of withstanding test pressure.
- G. Use ambient temperature water as testing medium, except where otherwise specified and except where there is a risk of damage due to freezing.
- H. Apply soap solution to all joints of pneumatically tested systems while system is being subjected to test pressure.
- I. Maintain test pressures sufficient length of time to permit thorough inspection of all joints. Where leaks are observed, replace defective work or material. Caulking of screw joints or holes is not acceptable. Repeat entire test as many times as necessary, until successful completion of test with no leaks.
- J. Prepare written report of testing.

3.19 BALANCING, ADJUSTING AND PERFORMANCE TESTING OF PLUMBING SYSTEMS

- A. Testing, adjusting and balancing of water systems will be provided by the Installing Contractor.
- B. Installing Contractor(s) responsible for the work specified in Division 22 shall perform all work necessary to place systems in full operation prior to start of testing, adjusting and balancing work. In addition, Installing Contractor shall perform certain additional preparatory work required for testing, adjusting and balancing as specified in various Sections of Division 22.
- C. Provide notice upon completion of all preparatory work and all initial operational testing required as part the Work. Perform additional operational testing on equipment, or systems, as directed and to extent and for duration deemed necessary, to demonstrate that systems are performing properly and delivering quantities in accordance with the requirements of the Contract Documents.
- D. Furnish approved manufacturer's technical data and shop drawings for equipment, including pump performance curves.
- E. Balance domestic hot water systems so that hot water circulates through all branches. Domestic hot water system balancing valve flow rates shall be selected to provide a maximum of 5° F. temperature loss throughout the system.

3.20 INSTRUCTION AND DEMONSTRATION

- A. Upon completion of all work and all tests, and at a time mutually agreed on by Contractor, Architect and Owner, Installing Contractor shall operate systems in all parts and at their expense for sufficient length of time to demonstrate the mode of operation and definitively determine

whether the systems as a whole are in first class working condition. Immediately correct, at no cost to Owner, any defects that may develop during this period of operation and place systems in first class working condition before being finally turned over to Owner.

- B. Provide experienced operating personnel to instruct Owner's authorized employees in the operation, adjustment and maintenance of systems and equipment installed under this Contract. Provide instructions for the period of time appropriate for the size and complexity of the system, or as requested by Owner.

3.21 MANUFACTURER'S SUPERVISIONS AND STARTUP SERVICE

- A. Include manufacturer's supervision/startup/certification and special instruction service for equipment as specified in various Sections of Division 21 and 22. Be responsible for properly making arrangements for and coordinating with the manufacturer to provide the specified work. Make any corrections/modifications to the installation as required by the manufacturer at no additional cost to Owner.
- B. The manufacturer's engineer or authorized service personnel shall check the equipment for its conformance to the Specifications, for proper installation and run the system in all modes of operation to ascertain that the unit will function properly. Make necessary adjustments to insure optimum efficiency and trouble free service.
- C. After completion of the startup procedures, the manufacturer shall certify, in writing, that the equipment is installed in accordance with their requirements and is operating in accordance with the intent of the Specifications.

3.22 COMMISSIONING

- A. Commissioning will be provided as specified in Division 01 Section "Commissioning". All contractors and subcontractors of the various sections of this specification shall cooperate and participate in the commissioning work in accordance with requirements of Division 01 Section "Commissioning".
- B. Ensure participation of major equipment manufacturers or their representatives.
- C. Equipment and systems/subsystems installed under this section are expected to be in full compliance with the design intent by the commissioning phase. Notify the Commissioning Agent when any specific piece of equipment or specific system/subsystem is ready for commissioning. Be prepared to demonstrate system readiness.
- D. Equipment or systems/subsystems having incomplete work or exhibiting problems related to noncompliance with the design intent shall require commissioning. The contractor for this section shall be fully responsible to make all necessary corrections to incomplete or non-complying work at their own expense and shall pay the Commissioning Agent per diem rate for recommissioning such incomplete or non-complying work.

END OF SECTION 22 05 00

SECTION 22 05 00 – COMMON MATERIALS AND METHODS FOR PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section is intended to describe the common materials and installation methods of the mechanical work and it applies in general to all other Sections under Division 21 and 22.
- B. Due to the small scale of the drawings, all work required is not shown on the floor plans and certain work is shown on flow diagrams, riser diagrams and details. Work of Division 21 and 22 shall include all required work shown on plans, riser diagrams, flow diagrams and details.
- C. This Section includes the following:
 - 1. Piping materials and installation instructions common to most piping systems
 - 2. Transition fittings
 - 3. Dielectric fittings
 - 4. Sleeves
 - 5. Escutcheons
 - 6. Grout
 - 7. Plumbing demolition
 - 8. Equipment installation requirements common to equipment sections
 - 9. Painting and finishing
 - 10. Hangers and supports for plumbing system piping and equipment
 - 11. Identification for plumbing piping and equipment

1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.

- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.4 REFERENCES

- A. Provide work in accordance with all applicable international, state and local, codes, rules, regulations, and standards, including but not limited to, requirements of the following:
 - 1. ASME/ANSI B31: Code for Pressure Piping
 - 2. ASME Boiler and Pressure Vessel Codes
 - 3. AWS D1.1: Structural Welding Code-Steel
 - 4. MSS SP58: Pipe Hangers and Supports – Materials, Design, and Manufacturers
 - 5. MSS SP69: Pipe Hangers and Supports – Selection and Application except spacing for hangers
 - 6. ANSI A13.1: Scheme for Identification of Piping Systems
 - 7. Applicable NFPA Codes and Standards
 - 8. NSF/ANSI 61: Drinking Water System Components

1.5 SUBMITTALS

- A. Provide Product List of factory fabricated items, in accordance with Section 01 60 00 “Product Requirements”, including name of proposed manufacturer, for all products specified in various sections of Division 21 and 22.
- B. Provide submittals in accordance with Section 01 33 00 “Submittal Procedures” in sufficient detail to verify full compliance with the requirements of the Contract Documents.
- C. Product Data: Provide for each type of factory-fabricated product indicated.
- D. Welding certificates.

1.6 WARRANTY AND CONTRACT CLOSEOUT

- A. Comply with warranty and contract closeout requirements specified in Division 01.
- B. Provide Special Warranties and/or warranty service in accordance with Section 01 60 00 “Product Requirements” where specified in the various sections of Division 21 and 22.
- C. Provide manufacturer’s certificates of supervision and startup service as specified in the various sections of Division 21 and 22.
- D. Provide testing and cleaning reports. Indicate dates of testing and cleaning operations, procedures used and results obtained for each system. Reports shall be certified as complete.
- E. Provide instructions and demonstration to the Owner’s representatives for all equipment and systems installed under Division 21 and 22. Instruction and demonstration shall be appropriate for the size and complexity of the installed system.

- F. Include information for all products specified in the operation and maintenance manual.

1.7 QUALITY ASSURANCE

- A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."
- B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
 - 3. Use welders fully qualified and licensed by the state authorities.
- C. The specifications for certain products and alternative materials may appear in more than one section of Division 21 and 22. Work of Division 21 and 22 shall be coordinated for all sections of Division 21 and 22 to assure that where two or more items of any given product are furnished under Division 21 and 22 that they are of the same manufacturer and type and that alternative materials is consistent throughout the work of Division 21 and 22.
- D. Except for spacing of hangers, provide hangers and supports in accordance with the latest issue of Manufacturer's Standardization Society (MSS) Specifications SP 58 and 69.
- E. All pipe, valves, fittings, stops, faucets, and domestic water pumps shall comply with the Federal "Reduction of Lead in Drinking Water Act" NSF/ANSI 61 and NSF/ANSI 372 for lead content of 0.25%.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle all material and equipment in accordance with manufacturer's instructions and recommendations. Such instructions and recommendations are hereby made part of these specifications.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Deliver products and equipment properly labeled and tagged. Maintain products in original shipping containers and store in a dry area until ready for installation.
- D. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.9 COORDINATION

- A. The Mechanical systems are indicated on the Plumbing Drawings. Certain pertinent information and details involving the installation of plumbing work appear on Architectural, Structural,

Mechanical and Electrical Drawings. Become familiar with all Drawings and incorporate all pertinent requirements.

- B. Drawings are diagrammatic and indicate general arrangement of systems and requirements of the plumbing work. Do not scale the Drawings to obtain dimensional requirements. Exact locations of equipment must be coordinated and obtained prior to starting the work.
- C. Arrange for pipe spaces, chases, slots, duct shafts and openings in building structure during progress of construction, to allow for plumbing installations.
- D. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- E. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces. Coordinate installation of identification labels with locations of access panels and doors.
- F. Coordinate scheduling, sequencing, movement and positioning of large equipment into the building during construction.
- G. Coordinate installation of identification devices with completion of covering and painting of surfaces where identification devices are to be applied.
- H. Install identification devices prior to installation of ceilings and similar concealment.

1.10 ENERGY PERFORMANCE CRITERIA

- A. All equipment provided under Division 22 shall meet the requirements of the International, or State, Energy Code, ASHRAE Standard 90 or the latest issue of the Standards for Equipment in the National Energy Policy Act (NEPA), whichever is more stringent.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. In other Part 2 articles of various sections of Division 21 and 22 where subparagraph titles below introduce lists, the following requirements apply for product selection:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
 - 2. Unless otherwise noted, substitutions of specified manufacturers shall comply with the requirements of Division 01.

2.2 PIPE, TUBE, AND FITTINGS

- A. Refer to individual Division 21 and 22 piping Sections for pipe, tube, and fitting materials and joining methods.

- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.3 JOINING MATERIALS

- A. Refer to individual Division 21 and 22 piping Sections for special joining materials not listed below.
- B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
 - 2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
- C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- D. Solder Filler Metals: ASTM B32, lead-free alloys. Include water-flushable flux according to ASTM B813.

2.4 TRANSITION FITTINGS

- A. AWWA Transition Couplings: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.
 - 1. Aboveground Pressure Piping: Pipe fitting.
- B. ; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

2.5 SLEEVES

- A. Galvanized-Steel Sheet: 0.0239 inch minimum thickness; round tube closed with welded longitudinal joint.
- B. Steel Pipe: ASTM A53, Type E, Grade B, Schedule 40, galvanized, plain ends.
- C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- D. Stack Sleeve Fittings; Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
 - 1. Underdeck Clamp: Clamping ring with set screws.

2.6 ESCUTCHEONS

- A. General: Manufactured wall and ceiling escutcheons and floor plates, with an inside diameter to closely fit around pipe, tube, and insulation of insulated piping and an outside diameter that completely covers opening.
- B. One piece construction on exposed piping in finished areas. Elsewhere, split pattern with setscrew. Provide deep pattern type where required to conceal protruding fittings and sleeve.
- C. Provide polished chromium plated escutcheons on pipes passing through walls, floors or ceilings wherever such pipes are exposed to view.

2.7 HANGERS AND SUPPORTS

A. Acceptable Manufacturers

1. Other Than Roof Supports

- a. B-Line Systems, Inc.
- b. Grinnell Company
- c. National Pipe Hangers
- d. Penn Construction Industries
- e. Other approved United States manufacturer whose products comply with the referenced standards.

B. Reference Standards

- 1. ASTM A36 - Specification for Structural Steel
- 2. ASTM A123 - Zinc (Hot-Dip Galvanized Coatings on Products Fabricated from Rolled, Pressed and Forged Steel Shapes, Bars, and Strip)
- 3. ASTM A653 G90 - Specification for Steel Sheet, Zinc Coated by the Hot-Dip Process
- 4. ASTM B633 - Specification for Electrodeposited Coatings of Zinc on Iron and Steel
- 5. AWS D1.1 - Structural Welding Code - Steel
- 6. MSS SP58 - Manufacturer's Standardization Society: Pipe Hangers and Supports - Materials, Design and Manufacture
- 7. MSS SP69 - Manufacturer's Standardization Society: Pipe Hangers and Supports - Selection and Application
- 8. NFPA 13 - Standard for the Installation of sprinkler Systems

C. Quality Assurance

- 1. Steel pipe hangers and supports shall have the manufacturer's name, part number and applicable size stamped in the part itself for identification.
- 2. Hangers and supports shall be designed and manufactured in conformance with MSS SP58.

D. General

- 1. Except for spacing of the hangers, design and fabrication of pipe hangers, supports and welding attachments shall conform to ANSI B31.9 or B31.1 as applicable.

2. Except for spacing of the hangers, hanger types and supports for bare and covered pipe shall conform to MSS SP69 for the temperature range except that only flat wide band hangers shall be used for hangers installed outside of insulation and plastic pipe.
3. Except for spacing of pipe hangers and elsewhere as otherwise indicated, horizontal and vertical piping attachment shall conform to the more stringent of this specification or MSS SP58 or MSS SP69. Continuous inserts and expansion bolts may be used.
4. All ferrous hangers, supports and hardware located outdoors shall be hot dip galvanized after fabrication per ASTM A123.
5. Hangers and clamps for support of bare copper piping shall be coated with copper colored (for identification) baked on epoxy paint. Use additional PVC coating of the epoxy painted hangers where necessary.
6. Provide suitable chromium plated brass supports for chromium plated pipe with exposed heads of bolts and screws chromium plated.
7. Hangers other than described above shall be zinc plated in accordance with ASTM B633 or shall have an electrodeposited epoxy finish.
8. Strut channels shall be pregalvanized in accordance with ASTM A653 G90 or shall have an electrodeposited finish.
9. All hangers and supports shall have some form of adjustment available after installation.

E. Inserts

1. Inserts: Malleable iron case or galvanized steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms.
2. Size inserts to suit threaded hanger rods.

F. Pipe Hangers and Supports: For plumbing plastic piping systems provide hangers, supports and support channels as recommended by piping manufacturer, use V-bottom clevis hanger with galvanized 18 gauge continuous support channel where required.

1. Hangers for Pipe Sizes to 1-1/2 Inch: Adjustable carbon steel ring or clevis.
2. Hangers for Hot or Cold Pipe Sizes 2 Inches to 4 Inches and Cold Pipe Sizes 6 Inches and Over: Adjustable carbon steel clevis.
3. Hangers for Hot Pipe Sizes 6 Inches and Over: Adjustable steel yoke and cast iron roll.
4. Multiple or Trapeze Hangers: Factory-enameled steel channels with welded spacers and hanger rods or 12 gauge rolled formed ASTM A570 Grade 33 structural quality steel channels (strut), cast iron roll and stand for hot pipe sizes 6 inches and over. Cross section suitable for span and loading. Suspension by outside hanger rods sized for total load on trapeze.
5. Wall Support for Pipe Sizes to 3 Inches: Carbon steel hook.
6. Wall Support for Pipe Sizes 4 Inches and Over: Welded steel bracket and steel clamp, adjustable steel yoke and cast iron roll for hot pipe sizes 6 inches and over.
7. Vertical Support: Steel riser clamp.
8. Floor Support for Hot Pipe Sizes to 4 Inches and All Cold Pipe Sizes: Adjustable pipe saddle and pipe nipple attached to steel base stand, and concrete pier or steel support.
9. Floor Support for Hot Pipe Sizes 6 Inches and Over: Adjustable cast iron roll and stand, steel screws and concrete pier or steel support.
10. Design hangers to impede disengagement by the movement of supported pipe. Provide spring and neoprene hangers as required.

- G. Beam Clamps: Forged steel C-clamps shall include retaining strap, locking nut or other device for nonslip attachment, except LOCKING NUT NOT ALLOWED for project requiring seismic restraints.
- H. Hanger Rod: Steel hanger rod zinc plated per ASTM B633.

2.8 IDENTIFICATION DEVICES AND LABELS

A. General

1. Products specified are manufacturer's standard products of categories and types required for each application as referenced in Part 3 of this section and elsewhere on the drawings or in Division 21 and 22 specifications. Where more than single type is specified for listed application, selection is Contractor's option, but provide single selection for each product category.
2. Products shall comply with requirements of ANSI A13.1 and OSHA where applicable.

B. Stencils: Standard stencils, prepared with letter sizes conforming to recommendations of ANSI A13.1. Minimum letter height is 1-1/4 inches for piping and 3/4 inch for access door signs and similar operational instructions.

1. Stencil Paint: Exterior, oil-based alkyd gloss black enamel, except as otherwise indicated. Paint may be in pressurized spray-can form.
2. Identification Paint: Exterior, oil-based alkyd enamel in colors according to ANSI A13.1, except as otherwise indicated.

C. Snap-On Plastic Pipe Markers: Manufacturer's standard preprinted, semirigid snap-on, color-coded pipe markers conforming to ANSI A13.1.

D. Pressure-Sensitive Pipe Markers: Manufacturer's standard preprinted, color-coded, pressure-sensitive vinyl pipe markers, with permanent adhesive conforming to ANSI A13.1.

E. Pipes/Insulation Smaller Than 6 Inches: Full-band pipe markers, extending 360 degrees around pipe/insulation at each location.

F. Arrows: Either integrally with piping system service lettering (to accommodate both directions), or as separate unit, on each pipe marker to indicate direction of flow.

G. Plastic Tape: Manufacturer's standard color-coded, pressure-sensitive, self-adhesive, vinyl tape, at least 3 mils thick. Width 1-1/2 inches wide on pipes with outside diameters (including insulation) less than 6 inches; 2-1/2 inches wide for larger pipes. Color shall comply with ANSI A13.1 unless otherwise indicated.

H. Valve Tags: Stamped or engraved brass with 1/4-inch letters for piping system abbreviation and 1/2-inch sequenced numbers. Provide a hole for fastener. Brass wire-link chain, beaded chain, or S-hook fasteners.

I. Access Panel Markers: 1/16 inch thick engraved plastic-laminate markers, with abbreviated terms and numbers corresponding to concealed device. Provide center hole for attachment.

- J. Valve Schedule Frames: Glazed display frame, with screws for removable mounting on masonry walls for each page of valve schedule. Polished hardwood or extruded aluminum frame.
- K. Engraved Plastic-Laminate Signs: ASTM D709, Type I, cellulose, paper-base, phenolic-resin-laminate engraving stock; Grade ES-2, black surface, black phenolic core, with white (letter color) melamine subcore, except when other colors are indicated. Fabricate in sizes required for message. Provide holes for mechanical fastening. 1/16 inch thick for units up to 20 square inches or 8 inch length, 1/8 inch thick for larger units. Self-tapping stainless steel screws or contact-type permanent adhesive.
- L. Plasticized Tags: Preprinted accident-prevention tags, of plasticized card stock. Size approximately 3-1/4 by 5-5/8 inches. Brass grommets and wire fasteners.
- M. Nomenclature: Large-size wording such as "DANGER," "CAUTION," or "DO NOT OPERATE", or as noted on the drawings in the specification.
- N. Lettering and Graphics: Coordinate names, abbreviations, and other designations used in mechanical identification, with corresponding designations indicated. Use numbers, letters, and terms indicated for proper identification, operation, and maintenance of mechanical systems and equipment.
- O. Multiple Systems: Where multiple systems of same name are indicated, identify individual system number as well as service.

2.9 VALVES

A. General

1. Valves are specified by Valve Type and, for some services, several valve types are grouped by "Valve Class" in various sections of Division 21 and 22. Application is stated in the "Piping System Requirements". Where more than one Valve Type or Valve Class is listed for a service, use any of the listed Types or Classes, unless otherwise specified or indicated, but selection must be consistent throughout the work.
2. It shall be Contractor's responsibility to coordinate the work for all sections of Division 21 and 22 to assure that all general service valves throughout the work of Division 21 and 22 are of the same manufacture and type and that all valves of the same type number/identification throughout the work of Division 21 and 22 are of the same manufacture.
3. Valve packing shall not contain asbestos.
4. Bronze Valves: Construct body of ASTM B62 for Classes 125 and 150, ASTM B61 for Classes 200 and 300, copper-silicon bronze stem.
5. Iron Valves: Construct body of ASTM A126, Class B copper-silicon bronze stem.
6. Domestic water system valve construction shall comply with NSF 61, 372 and Federal law 111-380 and shall be certified as lead free compliant.

- B. Types V1 through V5 General Service Valves: Industrial valve construction. Handwheel operator, except where specified to be provided with chain-wheel operator. Figure numbers listed are those of Stockham Valve Co. Valves shall be products of a single manufacturer.

1. Type V1: Class 125 bronze, solder-end, for soldered copper piping 2 inch and smaller in size; 150 psig water or oil working pressure at 250° F. with high temperature nonlead solder joint (95-5 or equivalent as specified in the "Solder" article of this section); 125 psig saturated steam working pressure:

		Swing	
	Ball	Check	Globe
	See Type V9	B309	B14T
*Use B104 where space prevents full extension of rising steam.			

2. Approved Manufacturers:

- a. Crane
- b. Nibco
- c. Stockham
- d. Hammond
- e. Jomar

C. Types V9 and V10, Ball Valves

1. Type V9, General Service, 3 Inches and Smaller: Cast bronze body, two piece type with full or conventional port, chrome plated brass ball, RPTFE seats and packing with adjustable stem packing gland, lever handle. 600 psi CWP. Extended stem to suit insulation thickness. Apollo 70 LF series. Valves in copper piping constructed with thermal barrier suitable for installation with nonlead solder joint (95-5 or equivalent as specified in the "Solder" article of this section). Include verification of suitability for high temperature solder with submittal. Where press type fittings and joining system is used, sizes 4 inches and smaller, provide Apollo 77VLF series. Where stainless steel piping systems are used, provide Apollo 76F series. Natural gas and propane system valves shall be Apollo 77G-UL series with NPT ends.

2. Approved Manufacturers:

- a. Apollo
- b. Nibco
- c. Crane
- d. Stockhom
- e. Watts
- f. Hammond
- g. Victaulic
- h. Jomar

D. Type V11, Nonslam (Silent) Check Valve: Combination Pump Valve Co. figure numbers are indicated.

1. 1/2 Inch Through 2 Inch in Size: Model 36, 300 psi, with union end. Bronze body and trim and stainless steel spring.

- E. Type CPBV, Chrome Plated Brass Valves: Similar to Type V2 and V3, except chrome plated brass finish and black composition wheel handle.
- F. Refer to other sections of Division 21 and 22 for additional valve requirements.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

A. General

1. Furnish, deliver, erect, connect, and finish in every detail all materials, equipment and accessories required for the Work.
2. Include in the work and in the bid minor details not usually shown or specified, but manifestly necessary for the proper installation and operation of the various systems, the same as if specified or shown.
3. If any departures from the Contract Documents are deemed necessary, submit details of such departure and the reasons therefore to the Architect for approval.
4. Be responsible to request clarification from the Architect on any conflicts represented between the drawings and specifications.
5. Adequately guard all exposed moving parts of equipment, such that contact by operating personnel will not cause personal damage or injury.

B. Layout and Coordination With Other Trades

1. Layout Work from building and property lines and benchmarks provided, verify, and be responsible for the correctness of all measurements in connection with the Work. Any change made in major overall dimensions shown which affect the physical size, shape, or location of any part of the Work, whether due to field check or changes due to use of equipment of a manufacturer other than that used as basis of design shall cause no interference with other Work.
2. Examine the Drawings of other trades, cooperate and coordinate with other trades to insure that the Work can be installed properly as designed and planned without interference with other work or delay. Where interferences may occur and departures from the arrangements shown are required, consult with other trade involved. Come to agreement as to changed locations and elevations. Furnish all necessary templates, patterns, measurements, etc., for installation and for the purpose of making adjoining work conform. Furnish setting plans and shop drawings to other trades as required.
3. Investigate the structural and finish conditions affecting the Work. Offsets, bends or other items required may not be shown on the drawings; provide such offsets or bends as required to meet structural or finish conditions.
4. Coordinate layout with architectural ceilings and lighting layouts and similar work.
5. Coordinate and be responsible for the required clearances in shafts, chases, furred partitions and suspended ceilings. Coordinate and cooperate with the trades responsible for constructing such spaces, together with other trades sharing such spaces, and advise other trades of the requirements of the Work. Immediately submit for review large scale composite Drawings showing space requirements that exceed those shown.

6. Install systems so that they do not interfere with any openings, doors or windows, or with other work, and so as to permit proper access.
7. Install material and equipment as high as possible; at minimum, to clear the top of all doors, windows and other structural openings. Maintain maximum headroom and space conditions in every case. Where headroom or space conditions appear inadequate, notify the Architect before proceeding with the installation.
8. Except where greater clearance is specified or required by applicable codes, rules or regulations, install piping, fittings, valves, etc., to provide not less than 1 inch between their finished covering and the structure or adjacent work of any kind. The minimum space between finished hot piping of any kind and adjacent electrical conduit shall be 6 inches.
9. Make reasonable modifications in the layout to provide proper clearances or accessibility, or to prevent conflict with the work of other trades, at no increase in the Contract sum.
10. Prepare large scale composite working drawings, including such section views and details as are necessary to clearly show how the systems are to be installed in relation to the work of other trades. Issue such Drawings to the other trades for coordination of their work. Where such drawings show deviations from the Contract Drawings or conflict with other trades such that reasonable modifications cannot be made, detail and submit such deviation or conflict to the Architect for review.
11. If work is installed before coordinating with other trades so as to cause interference with the work of other trades, or as not to provide proper access for maintenance or repair, make necessary changes to correct the condition at no increase in the Contract sum.
12. For alterations to existing facilities, be fully responsible for coordinating work with all existing conditions. Verify location of existing piping, and equipment in the field. Relocate or offset new piping, and make reasonable modifications to existing piping, as required to fit in available space whether or not such relocation of offset is shown on the Drawings.

C. Manufacturer's Instructions and Recommendations

1. Perform the installation, cleaning, testing, calibration and startup of all material and equipment in accordance with the manufacturer's instructions and recommendations. Such instructions and recommendations are hereby made part of the specifications.
2. Should a conflict exist between specifications and manufacturer's instructions, consult with the Architect.

D. Electrical Rooms

1. Do not install any piping, or equipment in or through an electrical room or similar room containing electrical equipment, other than piping, or equipment exclusively serving the room or equipment in the room.
2. If there is a conflict between the above requirement and the Drawings, the above shall govern. If reasonable modifications cannot be made to accommodate this requirement, obtain instructions from the Architect before proceeding with the work.

E. Painting

1. Except where specified otherwise in Division 21 and 22, Work of Division 09 will provide painting of plumbing systems, equipment and components.

2. Protect all equipment from rust, corrosion, and similar damage by either factory applied or field applied protective coatings.
3. Repair marred and damaged factory painted finishes with manufacturer's touch up paint and application procedures to match original factory finish.

F. Wall and Ceiling Access Doors

1. Access Doors shown on Architectural Drawings will be provided under Division 05.
2. Furnish access doors required for access to concealed valves, air vents, traps, cleanouts, unions, expansion joints, and other equipment where no other means of access is available. Access doors shall be of adequate size for the service requirements, minimum clear opening of 14 inches by 16 inches.
3. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces. Access panels and doors shall be specified in Division 08 Section "Access Doors and Frames."

3.2 PENETRATIONS

A. General

1. Coordinate with other trades as to the size and location of openings to be provided in new floors, walls, roofs and ceilings as construction progresses.
2. Do not cut openings in new or existing floors and walls without proper structural reinforcement.
3. Install both piping and seals so as to maintain integrity of seals with expansion and contraction of piping.

B. Sleeves

1. Provide each pipe, passing through a masonry or concrete wall, floor or partition, and elsewhere as indicated, with a sleeve made from standard weight galvanized steel pipe for pipe or conduit.
2. Select sleeves two pipe sizes larger than any pipe to accommodate pipe, insulation, and jacketing without touching the sleeve and shall provide minimum of 3/8 clearance.
3. Be responsible for the proper location and alignment of all sleeves.
4. Extend wall and partition sleeves through and cut flush with each surface unless otherwise indicated or specified.
5. Place sleeves imbedded in concrete floors or walls in the forms before concrete is poured; sleeves shall have integral water stop flanges, where they are to receive either water tight or hydrostatic seals.

C. Fire Rated Penetrations

1. Provide through-penetration fire-stop sealing system for pipe penetrations through fire or smoke rated construction. Refer to Division 07 for through-penetration fire stop sealing system.
2. Coordinate with Division 07 to determine requirements for sleeves and clearances.

D. Interior Non-Rated Wall Pipe Penetrations

1. For acoustically treated partitions, and walls between mechanical equipment rooms and occupied spaces, fill annular void at penetration with acoustical sealant.

E. Resilient Penetration Sleeve/Seal

1. Provide resilient penetration sleeve seal for piping subject to vibration to prevent transmission to the building structure.
2. Maintain an airtight seal around the penetrating element and prevent rigid contact of the penetrating element and the building structure. Fit the sleeve tightly to the building construction and seal airtight on both sides of the construction penetrated with acoustical sealant.

3.3 ALTERATIONS OF UTILITIES AND SERVICES

- A. Arrange and pay for the relocation, disconnection or removal of existing utilities and services where such utilities and services interfere with new construction. Perform alteration of utilities and services in accordance with rules, regulations and requirements of the involved utility company as well as regulatory agencies having jurisdiction.

3.4 ALTERATIONS AND CONNECTIONS TO EXISTING FACILITIES

- A. Refer to Division 01 Sections "Execution" and "Alteration Project Procedures" and Division 02 Section "Selective Demolition" for general demolition requirements and procedures.
- B. Make all necessary alterations to existing Division 21 and 22 systems as required for removing or for connecting or extending these systems to new work and for revisions in existing work as indicated and as required, whether indicated or not. Match new materials in altered systems with existing materials unless otherwise indicated.
- C. Continuity of Existing Services
1. Perform alterations and connections to existing facilities with a minimum of interruption. Where interruption is necessary, prepare a time schedule for shutdown activities, coordinate with Architect, Owner and other trades, and obtain written approval from Owner prior to proceeding with the work. Include work scheduled for off hours, when Owner requires that shutdown and interruption of facilities occur during unoccupied times.
 2. Prepare and set notices on services and equipment that are temporarily shut off or disconnected.
- D. Provide shutoff valves to isolate new work from existing and temporary or permanent connections to new work as required for proper testing and cleaning of new work.
- E. All relocations of existing work shall be accomplished using new materials and accessories unless specifically noted otherwise.
- F. Where equipment, and/or piping is removed or disconnected under Division 21 and 22, perform the work in such a manner that no damage is done to the structure or remaining portions of the existing systems. Do not under any circumstance place stress on existing pipe and fittings that

are to be reused. Be fully responsible for and repair, at no additional expense to the Owner, any leaks developing in existing piping due to failure to take proper precautions when making alterations.

- G. Disconnect, demolish, and remove plumbing systems, equipment, and components indicated to be removed.
 - 1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 - 2. Piping to Be Abandoned in Place: Do not abandon any piping in place unless specifically noted to do so. Drain piping and cap or plug piping with same or compatible piping material.
 - 3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 - 4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 - 5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
 - 6. All materials and equipment removed or disconnected by Division 21 and 22, which is not to be reused or delivered to Owner, shall be removed from the premises.
- H. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.
- I. Remove all piping, and equipment hangers and supports.
- J. Cap tight unused connection at mains and risers behind finished surfaces.

3.5 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 21 and 22 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Install all piping in accordance with best practices of trade and latest code requirements. Locate groups of pipes parallel to each other, spaced to permit valve servicing. Use uniform system materials throughout building.
- D. Install components having pressure rating equal to or greater than system operating pressure.
- E. Keep all piping as high as possible, consistent with proper pitch, to maintain maximum headroom. Cut piping accurately to measurements established at building, work into place without springing, forcing or cutting of the building structure, and install as directly as possible without sags between connecting points parallel with or at right angles to building construction, except as required to obtain pitch.

- F. Pitch all systems for proper venting at high points and to drain at low points where the systems can be completely emptied. Install vents at all high points and drains at all low points, including where offsets and bends in horizontal pipe runs create a low point. Provide drain points with bronze hose end drain valves.
- G. Do not install piping above or through electrical rooms, telecommunication rooms, or similar room having a large collection of electrical equipment.
- H. Keep pipe and fittings clean from cutting burrs, foreign matter and defects in structure and threading. Make all cuts square. Ream after cutting. Bevel plain ends of steel pipe. Clean off scale and dirt inside and outside before assembly. Remove welding slag or other foreign matter inside and outside.
- I. Install piping within building concealed in walls, furred spaces, pipe spaces or above suspended ceilings. Do not build in or bury horizontal piping within partitions. Install exposed piping as closely as possible to walls, ceilings and columns, allowing space for installation of insulation and access for valve operation.
- J. Install piping sections using greatest length possible in all cases. The use of short lengths socketed together will not be allowed.
- K. The use of lampwick or other material for packing threads, caulking or wrapping of joints to stop or prevent leaks or correct faults is not permitted. The use of long screws having right and left hand threads or couplings is not permitted.
- L. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- M. Install piping to permit valve servicing and application of insulation.
- N. Provide offsets and loops as required for piping crossing a building expansion joint to accommodate building movement, whether or not shown on the drawings. Provide seismic joints for piping crossing building seismic joints to accommodate building movement, whether or not shown on the drawings. Piping seismic joints shall be designed to accommodate maximum building seismic joint movement. Piping seismic joints shall be Metraflex or equal.
- O. Changes in Pipe Size and Direction
 - 1. Make reduction or increase in pipe size with fittings. Use eccentric reducing fittings in horizontal piping. Use reducing tees in pressure piping for side outlet reduction only, not on run. Bushed fittings, notched or straight runs to form tees, or any similar fabrication method will not be permitted.
 - 2. Make changes in direction with standard fittings. Mitering of pipe to form elbows or similar fabrication method will not be allowed. Bending of piping will not be permitted.
- P. Chromium Plated and Stainless Steel Piping: Friction wrenches and clamps must be used exclusively in the installation of chromium plated and stainless steel pipe and fittings. Pipe which is cut, dented or otherwise damaged shall be replaced with new pipe.

Q. Electrolysis Control

1. Install copper or brass piping or tubing in such a way as not to touch or come in contact with ferrous metals.
2. Where ferrous piping or equipment is connected to copper or brass piping, make connection with insulating or dielectric union to prevent electrolytic action between the ferrous and nonferrous metals. At branch connections off mains, provide shut off valve upstream of dielectric union in order to isolate downstream union.
3. Where copper or brass piping, tubing or fittings are anchored to, supported by, or come in contact with ferrous metal construction, provide an insulating nonconductor spacer of rubber, plastic or equivalent material to assure prevention of electrolysis.

R. Equipment Piping

1. Verify final locations of equipment for rough in of piping connections.
2. Provide shut off valves in the supply and return to each item of equipment. Suitably locate equipment isolation valves to facilitate removal of equipment.
3. Provide piping from pump glands, drain pans, relief valves or other drainage to spill over open sight drains, floor drains, or other trapped acceptable discharge, terminating with plain end cut at a 45 degree angle.

S. Expansion and Contraction of Piping

1. The piping installation shall be free of stress. Run all piping with full allowance for expansion or contraction. Base expansion calculations on 50 degree F. installation temperature to 140 degree F. for hot water systems.
2. Evaluate the complete piping layout and notify Architect of additional anchors or expansion joints and any deviations required to compensate for expansion.
3. Make connections to equipment in such a manner as to eliminate undue strains in piping and equipment. Install sufficient number of elbow swings to allow for proper expansion and contraction of piping at the point of connection to mains and equipment.
4. Fabricate expansion loops with long radius welded fittings in steel piping and with long radius copper sweat fittings in copper piping.
5. Provide adequate pipe guides as close as possible on each end of the expansion device to preserve alignment and pitch.
6. Install pipe hangers and supports in such a manner as to not cause an anchor condition in any direction.

T. Pipe Anchors

1. Install anchors where required to direct pipe expansion properly into expansion joints, loops or offsets and to prevent transfer of loading and stresses to connected equipment.
2. Pipe anchors may consist of heavy steel clamps bolted or welded to piping and provided with lugs and bolts for clamping and attaching anchor braces. Design anchors to restrict pipe movement and fasten to main members of building structure in most effective manner to secure desired results.
3. Do not attach supports, anchors or stays in places or in such a manner that will damage construction or integrity of the structure, either during installation, by weight of the pipe, or by expansion and contraction of the pipe.

U. Pipe Insulation Inserts and Shields

1. Refer to Section of Division 22, "Plumbing Insulation" to coordinate specific insulation thicknesses and requirements. At hanger locations for insulated piping 1 ½ inches and larger where hanger support is outside the insulation, provide inserts of exploded silica pipe insulation between pipe and hanger. Density and compression strength suitable for pipe size and support spacing as required by MSS SP-58, Paragraph 9 and MSS SP-69, Table 3. Provide inserts as required for smaller piping to prevent deformation of insulation. Inserts of equal thickness to adjoining insulation, provided with vapor retardant seals, and of proper length to fully support pipe at each hanger location. Manufactured by Value Engineered Products Max Span; or equivalent.
2. At all hanger locations for insulated piping where hanger is outside of insulation, provide galvanized sheet steel shield formed to fit insert/insulation, extending up to pipe centerline. Length 12 inch minimum when insert is not required. Where inserts are provided, length of shield 4 inches less than insert length. Provide shields 16 gauge for piping up to 4 inches, 12 gauge for piping 6 inches and larger.
3. Preformed insulated pipe saddles may be used in lieu of insert and shield where appropriate. Thickness of insert or pipe saddle same thickness as pipe insulation.

3.6 VALVES

A. General

1. Provide valves at locations shown, where specified and where required to properly control piping systems. Provide valves recommended or required by equipment manufacturers and codes for proper operation of equipment and shutoff valves to allow isolation of each main and branch service line, whether or not indicated or specified.
2. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
3. Operate valves from fully open to fully closed positions. Examine guides and seats made accessible by such operation.
4. Examine threads on valve and mating pipe for form and cleanliness.
5. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Check gasket material for proper size, material composition suitable for service, and freedom from defects and damage.
6. Do not attempt to repair defective valves; replace with new valves.
7. Install valves in horizontal piping with stem at or above the center of the pipe.
8. Install valves in a position to allow full stem movement.

- B. Check Valves: Provide lift check type in steam, air, gas or vapor service lines and after globe valves, install with stem upright and plumb. Provide nonslam type in vertical piping on discharge side of pumps and elsewhere as indicated or specified. Provide horizontal swing check type elsewhere unless otherwise indicated or required for service intended, install in horizontal position with hinge pin level. Install check valves, including those that are spring loaded, so that force of gravity will operate to close valves.

- C. Provide valve ends to suit character of pipe in which installed. Provide valves designed for working pressure of at least 125% of maximum operating pressure of system in which installed, but not less than 250 psig on high pressure systems, and 125 psig on low pressure systems.
- D. Provide chromium plated valves in chromium plated piping. Provide steam valves in chromium plated piping with composition hand wheels which shall remain reasonably cool in service.

3.7 WELDING, SOLDERING AND BRAZING

- A. Do not employ workers who have not been fully qualified and certified for the specified procedures.
- B. Structural Steel Field Welding: Comply with AWS D1.1 procedures for manual shielded metal-arc welding, appearance and quality of welds, methods used in correcting welding work, and the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Finish welds at exposed connections so that no roughness shows after finishing, and so that contours of welded surfaces match adjacent contours.
- C. Soldering: Comply with the requirements of the AWS Soldering Manual.

3.8 UNIONS

- A. In Screwed Steel Pipe, 2 inches and smaller: Screwed, Class 250 malleable iron, brass to iron seat, ground joint union with brass seat ring pressed into head piece. Provide galvanized unions in galvanized pipe.
- B. In Welded Steel Pipe, 2 inches and smaller: Class 3000 carbon steel socket welded union, steel to steel seat and ground joint. Provide stainless steel in stainless steel piping.
- C. In Copper tubing, 2 inches and smaller: Class 200 wrought copper, solder type, brass ground joint union.
- D. In Brass Piping, 2 inches and smaller: Class 250 cast bronze, screwed ends, brass ground joint unions. Provide chromium plated unions in chromium plated piping.
- E. Provide companion flanges in piping 2-1/2 inch and larger.

3.9 PIPING CONNECTIONS

- A. Refer to other Sections of Division 21 and 22 for additional requirements.
- B. Mechanical Couplings: Prepare pipe and install in accordance with manufacturer's instructions. Standard wall steel pipe either roll or cut grooved at Contractor's option, all sizes, except

provide cut grooved as required to accommodate thermal expansion and contraction. Heavy wall steel pipe cut grooved all sizes. Light wall steel pipe roll grooved all sizes. Copper tubing roll grooved.

- C. Soldered Joints: Unless noted otherwise, make with appropriate flux and solder. Clean tubing ends and fittings before assembly. For piping 2 inch and larger tin tubing and fittings before assembly. For tubing 2-1/2 inch and larger use circular flame torch for soldering. The use of lead flux or solder and finishing with 50-50 solder is prohibited.
- D. Threaded Pipe: Make full, clean-cut standard ANSI/ASME B1.20.1 taper pipe threads using sharp dies. Carefully cut, ream or file out to size or bore, removing all chips. Use Schedule 80 pipe for all screwed close and shoulder nipples. Do not use all thread nipples. Provide teflon tape or other approved nontoxic joint compound, applied to male thread only.

3.10 PROTECTION OF WORK

- A. Clean pipe, tubing, fittings, valves, piping specialties, ductwork and equipment before installation and keep clean while the work is in progress.
- B. Securely close open ends of pipe and tubing and openings in other material and equipment until installed, during installation, and until finally connected or otherwise finished, with caps, plugs or other approved closure devices designed for such service.
- C. Protect factory finished equipment, fixtures and devices with approved temporary covering material where those items are installed so as to be subject to accidental damage or abuse. Contractor shall remove all temporary covering material at the conclusion of the work or as directed.
- D. Protect the work of other trades and property of Owner from damage and assume full responsibility for the cost of repairing or replacing any damage to such work or property caused by the performance of the work under Division 21 and 22.

3.11 CLEANING OF SYSTEMS

- A. Refer to other sections of Division 21 and 22 for additional cleaning and system flushing requirements.
- B. Following completion of system testing, thoroughly clean all piping systems by flushing with water or other approved method, or as otherwise specified. Completely remove all dirt, scale, oil, grease and other foreign substances that may have accumulated in systems during installation.
- C. Carefully wipe out, wire brush, or if necessary, sand blast sections of pipe lines between temporary or permanent strainers and equipment they are to protect. Replace all permanent strainer screens with temporary screens during cleaning process. Remove temporary screens and reinstall permanent screens after cleaning is completed.
- D. Disconnect automatic devices that can become clogged during cleaning process and do not connect permanently until cleaning process is complete.

- E. Clean all piping and equipment of dirt, scale, plaster, concrete, splattered paint and other foreign matter.
- F. Clean all grease and cuttings from stainless steel piping and trim.
- G. Clean all strainers, dirt pockets, drip legs, traps and other accessories that may collect foreign matter.

3.12 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 05 Section "Metal Fabrications" for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.
- C. Field Welding: Comply with AWS D1.1.

3.13 GROUTING

- A. Description: ASTM C1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
 - 1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.
- B. Packaging: Premixed and factory packaged. Mix and install grout for equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- C. Clean surfaces that will come into contact with grout. Provide forms as required for placement of grout. Avoid air entrapment during placement of grout.
- D. Place grout, completely filling equipment bases. Place grout on concrete bases and provide smooth bearing surface for equipment. Place grout around anchors. Cure placed grout according to manufacturer's written instructions.

3.14 HANGERS AND SUPPORTS

- A. General
 - 1. Support major piping (3 inch and above), tanks and other equipment to the structure above (beams and girders) or by means of struts or brackets to columns. Do not support from floor or roof decks. Do not overload structural members to which supports are attached. Hanger spacing not to exceed MSS SP69.
 - a. Provide hangers, rollers, threaded rods, turnbuckles, deflection guides, deflection provisions, inserts, beam clamps and all miscellaneous specialties for attachment of hangers and supports to structure.

- b. Provide all rods, angles, rails, struts, brace plates, structural steel, platforms and other items required for suspension or support of piping, tanks and equipment.
 - c. Provide supplemental angles, channels, plates or other reinforcement where supports are required between building structural members. Size supports for weight of pipe, pipe contents, equipment fittings and other items, plus a 200 pound live load. Attach supplemental supports in a manner that will not weaken or overload structural members. Weld steel according to AWS D-1.1.
 - d. Attach by welding, clamping, concrete inserts, drilled in mechanical type anchors (Hilti or equal) and other approved means. Adhesive type anchors are not approved.
 - e. Place grout under supports for equipment, and make a smooth bearing surface.
 - f. For seismic restraint, provide double-sided beam clamp loaded perpendicularly to beam for seismic anchor point.
2. No lead shield anchors, powder or power fasteners permitted for attachments.
 3. Do not use perforated strap hangers. Do not use steel strap hangers on piping.
 4. Wherever possible, support shall be provided directly to main steel or concrete framing beams. If spacing of structure exceeds spacing required to support the mechanical work, supplemental channel or unistrut framing shall be designed and provided by the Contractor.
 5. Support all mechanical work independently of other trades. Under no circumstances shall work be supported or suspended from ceiling grids, piping or other supports by other trades.
 6. Before drilling concrete for attachments, carefully check Drawings and Shop Drawings for such concrete and locate drilled holes to miss reinforcing by at least 1 inch.
 7. Inserts in precast concrete to support Work of Division 21 and 22 will be furnished and installed by precast concrete supplier. Prepare drawings locating such inserts for review by Architect before distribution.
 8. Supports from Joist Construction: Support suspended piping, and equipment at joist panel point locations. Provide any supplementary steel angles or channels as required to fasten to panel point locations. Where this is not possible, reinforce joist from point of support to joist panel points on each side of support with steel angles welded to top and bottom joist chords. Do not hang from joist bridging. Maximum point load and maximum additional load per joist shall not exceed the loads in the table below:

Existing Joist Size	Maximum Point Load	Maximum Additional Load per Existing Joist
SJ8	75#	300#
SJ10	75#	300#
SJ12	75#	300#
SJ14	150#	1000#
SJ16	100#	500#

B. Inserts

1. Use inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams wherever practicable.
2. Set inserts in position in form work in advance of concrete work. Provide reinforcement rod placed through opening on top and bent over adjacent concrete reinforcement rods.
3. Where concrete slabs form finished ceiling, finish inserts flush with slab surface.

4. Where inserts are omitted, if approved by Architect, drill through concrete slab from below and provide rod with recessed square steel plate and nut above slab or provide drilled in mechanical type anchors, Hilti or equal, after concrete is completely cured.

C. Pipe Hangers and Supports

1. Unless otherwise required to avoid overloading of structural members or for seismic restraint, support horizontal steel and copper piping as follows:

Nominal Pipe Size (inch)	(a) Maximum Distance Between Support (feet)		Hanger Rod Diameter (inch)
	Steel Pipe	Copper Tubing	
up to 3/4	6	5	3/8
up to 2	6	6	3/8
2-1/2 to 3-1/2	10	8	1/2
4 and 5	12	10	5/8
Rod			(b)

- a. Provide additional supports as required to avoid overloading of supporting structure. Reduce distance where so required by applicable codes.
 - b. As required to carry weight of trapeze channel, span of piping with contents, insulation and supports, plus a 200 pound live load.
2. Install hangers to provide minimum 1/2 inch clear space between finished covering and adjacent work.
 3. Install additional attachments at concentrated loads, including valves, flanges, guides, strainers and expansion joints/loops.
 4. Place a hanger within one foot of each horizontal elbow.
 5. Use hangers that are vertically adjustable 1-1/2 inch minimum after piping is erected.
 6. Unless otherwise required to avoid overloading, of structural members or for seismic restraint, support vertical piping with clamps spaced appropriately as to type and weight of piping, minimum spacing at every other floor and below roof. Support vertical soil pipe at each floor at hub. For exposed piping in stairs, walkways and finished areas, locate clamps below floor and secure to structure below floor as required.
 7. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers. Space hangers for smallest pipe size or provide intermediate supports for smaller pipe as specified above for individual pipes.
 8. Where practical, support riser piping independently of connected horizontal piping.
 9. Support pipe runs in a manner to minimize stress in the pipe or tubing and on bodies of valves and fittings.
 10. Install hangers and supports to allow controlled movement of piping systems, permit freedom of movement between pipe anchors, and facilitate action of expansion joints, expansion loops, expansion bends, and similar units, and so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.
 11. Install hangers and supports to provide indicated pipe slopes and so that maximum pipe deflections allowed by ASME B31.9 "Building Services Piping" is not exceeded.
 12. For piping subject to sweating (e.g.: domestic cold water), and for insulated piping requiring roller supports, install hangers outside insulation and provide pipe insulation protection shields as specified in this section. For all other piping, hanger may be

attached to the piping before insulation is applied or may be installed outside the insulation with insulation protection shields.

13. Do not support nonferrous piping with ferrous materials even on a temporary basis.
14. Do not support piping from other piping or ductwork.
15. Install hanger rods subjected to tension only. Accomplish lateral and axial movements by proper linkage in rod assembly. Secure hanger to hanger rod with two bottom lock nuts.

3.15 IDENTIFICATION

- A. Identify all new and altered equipment, and new and altered exposed and concealed pipe with legible lettering, applied after finish painting, in a color to contrast with basic color in accordance with ANSI A13.1 and OSHA.
- B. Identify piping by name of pipe content and direction of flow near major equipment items, adjacent to valves or flanges, adjacent to gauges or thermometers, at each tee, at changes in direction, on each side of a penetration of a wall or floor, at each access door or panel and then at maximum 20 foot centers in congested areas and 50 foot intervals elsewhere; indicate flow direction with arrows. Identification shall be by means of plastic markers or tape or painted on the finished pipe surface by using stencils. Lettering shall not be smaller than one third of the pipe diameter and directional arrows not less than 1/2-inch wide and 12 inches long.
- C. Identify equipment and operating devices such as switches, starters and similar equipment, by the equipment numbers shown on Drawings or by the Owner's numbering system, if so directed.
 1. Include the type of service or the name of areas served.
 2. Lettering minimum 1 inch high.
 3. Nameplates shall be two tone plastic, or printed white paper enclosed in a transparent, laminated plastic case with permanently sealed edges.
 4. Attach securely to equipment, or where this is not practicable attach by brass link chains.
 5. Do not stencil surfaces exposed in public areas.
- D. Furnish for each valve, except those immediately adjacent to apparatus, a 2 inch diameter nonferrous metal tag with figures stamped on the tag.
 1. Number tags for Plumbing P-1, P-2, etc.; Use Owner's numbering system if so directed.
 2. Fasten tags to valves with nonferrous S hooks and nonferrous chains.
 3. Where valves are located above removable acoustical tile ceilings, identify the tile section below the valves by an approved color pin system.
 4. Furnish duplicate framed schedules showing the location of each valve, system or equipment it serves, manufacturer, and figure number.

3.16 TESTING OF PIPING SYSTEMS – COMMON REQUIREMENTS

- A. Refer to various sections of Division 21 and 22 for additional piping system testing requirements.
- B. Provide materials and equipment required for testing. Test and make tight all new piping systems and alterations and connections to existing piping system.

- C. Take precautions during testing to insure safety of personnel and equipment. Provide systems to be pressurized with appropriate gauges and blowouts or relief valve set at a pressure no more than one third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test. Make good at no increase in Contract sum damage to work or work of other trades caused by failure to observe proper precautions.
- D. Test piping systems prior to application of insulation. Testing as stipulated herein shall be considered minimum, and where tests stipulated by lawful jurisdictional authorities exceed these requirements, such more stringent tests shall be performed. Tests shall be witnessed and approved by the authorities having jurisdiction over the work.
- E. Concealed work shall remain uncovered until required tests have been completed. Provide proper sectionalizing devices so that portions of a system may be tested as appropriate.
- F. Isolate and exclude from tests all in line equipment, instruments, gauge glasses, flow meters and all other devices not capable of withstanding test pressure.
- G. Use ambient temperature water as testing medium, except where otherwise specified and except where there is a risk of damage due to freezing.
- H. Apply soap solution to all joints of pneumatically tested systems while system is being subjected to test pressure.
- I. Maintain test pressures sufficient length of time to permit thorough inspection of all joints. Where leaks are observed, replace defective work or material. Caulking of screw joints or holes is not acceptable. Repeat entire test as many times as necessary, until successful completion of test with no leaks.
- J. Prepare written report of testing.

3.17 BALANCING, ADJUSTING AND PERFORMANCE TESTING OF PLUMBING SYSTEMS

- A. Testing, adjusting and balancing of water systems will be provided by the Installing Contractor.
- B. Installing Contractor(s) responsible for the work specified in Division 22 shall perform all work necessary to place systems in full operation prior to start of testing, adjusting and balancing work. In addition, Installing Contractor shall perform certain additional preparatory work required for testing, adjusting and balancing as specified in various Sections of Division 22.
- C. Provide notice upon completion of all preparatory work and all initial operational testing required as part the Work. Perform additional operational testing on equipment, or systems, as directed and to extent and for duration deemed necessary, to demonstrate that systems are performing properly and delivering quantities in accordance with the requirements of the Contract Documents.
- D. Furnish approved manufacturer's technical data and shop drawings for equipment, including pump performance curves.

- E. Balance domestic hot water systems so that hot water circulates through all branches. Domestic hot water system balancing valve flow rates shall be selected to provide a maximum of 5° F. temperature loss throughout the system.

3.18 INSTRUCTION AND DEMONSTRATION

- A. Upon completion of all work and all tests, and at a time mutually agreed on by Contractor, Architect and Owner, Installing Contractor shall operate systems in all parts and at their expense for sufficient length of time to demonstrate the mode of operation and definitively determine whether the systems as a whole are in first class working condition. Immediately correct, at no cost to Owner, any defects that may develop during this period of operation and place systems in first class working condition before being finally turned over to Owner.
- B. Provide experienced operating personnel to instruct Owner's authorized employees in the operation, adjustment and maintenance of systems and equipment installed under this Contract. Provide instructions for the period of time appropriate for the size and complexity of the system, or as requested by Owner.

3.19 MANUFACTURER'S SUPERVISIONS AND STARTUP SERVICE

- A. Include manufacturer's supervision/startup/certification and special instruction service for equipment as specified in various Sections of Division 21 and 22. Be responsible for properly making arrangements for and coordinating with the manufacturer to provide the specified work. Make any corrections/modifications to the installation as required by the manufacturer at no additional cost to Owner.
- B. The manufacturer's engineer or authorized service personnel shall check the equipment for its conformance to the Specifications, for proper installation and run the system in all modes of operation to ascertain that the unit will function properly. Make necessary adjustments to insure optimum efficiency and trouble free service.
- C. After completion of the startup procedures, the manufacturer shall certify, in writing, that the equipment is installed in accordance with their requirements and is operating in accordance with the intent of the Specifications.

3.20 COMMISSIONING

- A. Commissioning will be provided as specified in Division 01 Section "Commissioning". All contractors and subcontractors of the various sections of this specification shall cooperate and participate in the commissioning work in accordance with requirements of Division 01 Section "Commissioning".
- B. Ensure participation of major equipment manufacturers or their representatives.
- C. Equipment and systems/subsystems installed under this section are expected to be in full compliance with the design intent by the commissioning phase. Notify the Commissioning Agent when any specific piece of equipment or specific system/subsystem is ready for commissioning. Be prepared to demonstrate system readiness.

- D. Equipment or systems/subsystems having incomplete work or exhibiting problems related to noncompliance with the design intent shall require commissioning. The contractor for this section shall be fully responsible to make all necessary corrections to incomplete or non-complying work at their own expense and shall pay the Commissioning Agent per diem rate for recommissioning such incomplete or non-complying work.

END OF SECTION 22 05 00

SECTION 22 05 13 - ELECTRICAL REQUIREMENTS FOR PLUMBING EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes extent of electrical equipment and electrical wiring that is responsibility of Division 22.
- B. Section includes general requirements for motors installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.
- C. Related Sections
 - 1. Section 22 05 00, Common Materials and Methods for Plumbing Systems.
 - 2. Variable Frequency Motor Speed Controllers furnished by Division 22 are specified in Division 26.

1.3 REFERENCE STANDARDS

- A. ANSI/IEEE 112 (C50.20): Test Procedure for single Phase Induction Motors
- B. ANSI/IEEE 114 (C50.21): Test Procedure for Polyphase Induction Motors and Generators
- C. NFPA 70: National Electric Code (NEC)
- D. UL: Underwriters Laboratories

1.4 SUBMITTALS

- A. Product Data: Include with equipment submittals, data pertinent to electrical characteristics, motor size, type, power requirements, wiring requirements.

1.5 QUALITY ASSURANCE

- A. Provide electrical products, including those factory mounted or factory furnished, which have been tested, listed and labeled with Underwriters' Laboratory (UL) or Electrical Testing Laboratory (ETL).

- B. There shall be no field modifications made to any materials, equipment and systems that would violate the listing and labeling.
- C. Comply with Division 26, NEC and NEMA as applicable to wiring methods, materials and equipment and equipment, construction and installation.

1.6 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.
- B. Wiring Under Division 26 "Electrical"
 - 1. Power wiring under Division 26 will include power feeders from source of building power to wiring terminals on the equipment; unit mounted disconnects, or control panels unless indicated in other sections of Division 22.
 - 2. Where disconnect switches for equipment are provided by Division 26, power wiring under Division 26 will include wiring from disconnect to wiring terminals on the equipment.
- C. Wiring Under Division 25 "Integrated Automation "
 - 1. Except on factory packaged equipment, wiring under Division 25 shall include all connections to control devices, wiring of pressure and flow control switches, flow meters and similar plumbing-electrical devices for plumbing systems to control panels, interlock wiring, control relays, and minor power wiring to auxiliary components for major pieces of apparatus such as solenoid valves and control valve motors.
 - 2. Wiring under Division 25 shall include all signal wiring from plumbing equipment to building automation system.
- D. Provide all other power and control wiring for Division 22 systems and equipment in accordance with the requirements of Division 26, required for complete operation, including wiring that is specified for factory prewired equipment, but not so provided.
- E. Short Circuit Current Rating (SCCR) for Plumbing Equipment
 - 1. Unless otherwise noted, the listed short circuit current rating (SCCR) of all motor controllers, disconnects, contactors, protective devices and associated assemblies that are integral or external to electrically powered mechanical equipment (except for controllers rated less than 2HP at 300V or less and listed exclusively for general purpose branch circuits), shall be equal to or greater than the electrical distribution equipment feeding it. The SCCR value shall be clearly labeled on the equipment. Refer to the electrical drawings, specifically the single line diagrams, panelboard schedules and HPE schedules to obtain this information. Where the minimum SCCR rating is not specifically identified on the documents at the referenced equipment, the SCCR rating of the plumbing equipment

shall be equal or greater than the kAIC rating of the electrical distribution equipment feeding the electrically powered mechanical equipment.

2. Plumbing equipment submittals shall include the SCCR rating meeting the above requirements. The contractor may elect to perform short circuit calculations to determine the available short circuit rating at the connection point of the applicable equipment. If the SCCR rating is determined to be less than the values indicated on the contract documents, the submittal shall include the calculations (inclusive of all input and output data), in particular the short circuit reduction on the feeder for each specific piece of equipment, and should show that the equipment rating meets or exceeds this calculated value. The calculations must be signed and sealed by a professional engineer (PE) registered in the project state.
3. All information required to show overall compliance with the above short circuit rating requirements shall be submitted as part of the product submittal. Submittals omitting this required information will be returned "Resubmit" or "Rejected".
4. No change orders or additional costs will be accepted by Owner or Architect to provide upgraded equipment in order to meet the above requirements or to perform any of the calculations described above.

F. Electrical Ratings

1. The motor horsepower and apparatus full load amperage ratings shown or specified are Basis of Design values and the corresponding sizes of feeders and other electrical equipment indicated to serve them are minimum sizes required to meet the Basis of Design requirements. When motors of greater horsepower and apparatus with larger full load amperage ratings are furnished as necessary to meet the design intent of the various sections within the specification, the associated changes to the electrical system (i.e. increase in capacity of the feeders and other electrical equipment serving them) shall be submitted for approval and be completed by the Contractor at no additional cost to the Owner.

PART 2 - PRODUCTS

2.1 ELECTRICAL WIRING

- A. Electrical wiring provided by Division 22 shall be in accordance with the requirements of Division 26.

2.2 CONTROL PANELS

- A. Include in control panels provided as a part of apparatus specified in Division 22, fused disconnect, circuit breaker or motor circuit protector combination starter with overload protection for each motor, contactors, and electric heaters, if required. Provide 120 volt control circuit and other required circuit protection. Where remote controls are required, they shall operate at 120 volt maximum, with properly fused control transformer provided for that purpose.

PART 3 - EXECUTION

3.1 ELECTRICAL WIRING

- A. Unless otherwise stated herein or on the drawings, power wiring will be provided under Division 26 and control wiring will be provided under Division 22. Provide power and control wiring for Division 22 systems and equipment for interconnecting wiring on apparatus that has not been factory installed.
- B. Coordinate power wiring requirements with Division 26 for locations of electrical panelboards to connect Division 22 system as specified.

3.2 POWER FACTOR CORRECTION

- A. Deliver capacitors not factory mounted on equipment to Division 26 for field installation and wiring.

END OF SECTION 22 05 13

SECTION 22 07 00 - PLUMBING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Plumbing Piping Insulation
2. Adhesives, mastics, tapes
3. Recovering

B. Related Sections

1. Warranty, pipe insulation insert and shields are specified in Section 22 05 00, "Common Materials and Methods for Plumbing Systems".

1.3 DEFINITIONS

- A. Cold Surfaces: Normal operating temperatures less than 75° F.
- B. Density: Is expressed in pcf (pounds/cu. ft.).
- C. Dual Temperature Surfaces: Normal operating temperatures that vary from hot to cold.
- D. Hot Surfaces: Normal operating temperatures of 100° F. or higher.
- E. Thermal Conductivity ("K" value): Measure of heat flow through a material at a given temperature difference; conductivity is expressed in units of (Btu x inch)/(h x sq. ft. x ° F.).
- F. Through Resistivity ("R" value): Represents the reciprocal of thermal conductivity ("K" value).

1.4 REFERENCES

- A. ASTM C1136 Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
- B. ASTM E84 Surface Burning Characteristics of Building Materials.

- C. MICA Standards: National Commercial & Industrial Insulation Standards published by the Midwest Insulation Contractors Association. Endorsed by National Insulation Contractors Association (NICA) and its regional associations.
- D. NFPA 255 Test of Surface Burning Characteristics of Building Materials.
- E. UL 723 Surface Burning Characteristics of Building Materials.

1.5 SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, thickness, and jackets (both factory and field applied, as applicable).
- B. Product Schedule or List: Prepare a summary of products required and clearly indicate location of their intended use.
- C. Shop Drawings:
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 - 2. Detail attachment and covering of heat tracing inside insulation.
- D. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. For products where color is specified, show the full range of colors available for each type of finish.

1.6 QUALITY ASSURANCE

- A. Materials, job conditions and installation shall be in compliance with the applicable Building and Plumbing Codes.
- B. Installation shall be done in a workmanlike manner by skilled and experienced workers who are regularly employed in commercial/industrial insulation work, in accordance with manufacturer's recommendations and instructions and best practices of the trade.
- C. Comply with the more stringent of the requirements of this specification or the requirements of the MICA standards.
- D. Insulation materials manufacturing facilities must be certified and registered with an approved registrar for conformance with ISO 9000 quality standard.
- E. Fire Performance Characteristics
 - 1. Insulation, jacketing materials, PVC covers, tapes, adhesives, mastics, cements and finish coatings shall have a composite noncombustible fire and smoke hazard rating and label, as tested in accordance with United States Public Health Service requirements, ASTM E84, NFPA 255 and UL 723 not exceeding Flame Spread 25 and Smoke Developed 50.
 - 2. Indoor Recovering Canvas Jackets: UL listed fabric, 6 ounce per square yard, unless otherwise specified, attached with a lagging fire retardant and waterproof adhesive.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Ship insulation materials in containers marked by manufacturer with appropriate ASTM specification designation, type and grade, and maximum use temperature. Deliver materials to job site in original nonbroken factory packaging, labeled with manufacturer's density and thickness and store in a safe, dry place.
- B. No insulation material shall be installed that has become damaged in any way.
- C. Do not install, and remove from the site, any insulation material that has become wet because of transit or job site exposure to moisture or water. Remove insulation from piping and/or equipment which has become wet. Reinsulate as required.

1.8 COORDINATION

- A. Coordinate size and location of supports, hangers, and insulation shields specified in Division 22 Section "Common Materials and Methods for Plumbing."
- B. Coordinate clearance requirements with installing contractor for insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.9 SCHEDULING

- A. Schedule insulation application after pressure testing of piping systems. Insulation application may begin on segments that have satisfactory test results.
- B. Schedule insulation application on water piping prior to activation of system. Do not install insulation to surfaces where condensation is present.
- C. Schedule insulation application after installation and testing of heat trace tape.

1.10 ALTERNATIVES

- A. Alternative insulations are subject to Architect's approval. Alternatives shall provide, at normal conditions, thermal resistance within 5% of resistance of materials specified.
- B. Where alternative thermal conductivity ("k") differs from specified thermal conductivity by more than 5%, increase or decrease insulation thickness as follows:

$$\text{New thickness} = \frac{\text{Actual "k"}}{\text{Specified "k"}} \times \text{specified thickness}$$

PART 2 - PRODUCTS

2.1 PIPING INSULATION

A. Acceptable Manufacturers

1. Johns Manville
2. Armstrong World Industries
3. Owens-Corning Fiberglass
4. Knauf Insulation
5. Certain Teed

B. Insulation Type P1:

1. Piping: Fine fibrous glass insulation, with factory applied vapor barrier jacket, molded to conform to piping, "k" value at 75° F. maximum 0.23. Johns Manville "Micro-Lok AP-T Plus" with jacket of white Kraft reinforced with fiberglass yarn and bonded to aluminum foil, and having a pressure sensitive tape closure system bonded to the longitudinal lap.
2. Valves and Fittings:
 - a. Glass fiber insert of equal thickness to adjacent pipe insulation and premolded PVC cover, Johns Manville "Zeston" and "Hi-Lo Temp Inserts" for valves and fittings.
 - b. Factory molded fibrous glass fitting covering for fittings of equal thickness to adjacent pipe insulation. Cover with 6 ounce canvas on concealed piping and 8 ounce canvas on exposed piping.
 - c. Mitered sections of pipe covering for valves.

C. Insulation Type P2:

1. Piping: Type P1 with additional PVC jacket Zeston 2000 PVC or equal with minimum thickness of 0.030 inches. Seal with permaweld adhesive.
2. Valves and Fittings: Mitered sections of Type P2 piping insulation with miter seals and snap-straps.

D. Insulation Type P3: Piping, Valves and Fittings: Foamed plastic of closed cell structure, "k" value at 75° F. maximum 0.27. Maximum water vapor transmission rating of 0.1 perms. Insulation shall not drip or melt when exposed to flame. Polyethylene or polyolefin not allowed. Armacell "AP Armaflex", "AP Armaflex SS" and "SSA-2000" (maximum 0.2 perms). Exposed insulation in finished areas shall be white.

E. Insulation Type P4: Piping, Valves and Fittings: Asbestos free hydrous calcium silicate colored gold throughout, molded to conform to piping, "k" value at 200° F. and 500° F. maximum 0.42 and 0.50 Btu/in./sq.ft./° F./hr. respectively. Johns Manville "Thermo-12 Gold" throughout.

F. Insulation Type P5 Mineral-Fiber, Pipe Insulation Wicking System: Preformed pipe insulation complying with ASTM C547, Type I, Grade A, with absorbent cloth factory applied to the entire inside surface of preformed pipe insulation and extended through the longitudinal joint to outside surface of insulation under insulation jacket. Factory apply a white, polymer, vapor-

retarder jacket with self-sealing adhesive tape seam and evaporation holes running continuously along the longitudinal seam, exposing the absorbent cloth.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Determine clearances required for installation of work and review such requirements with trades responsible for installing various piping systems, and equipment to be insulated. Where it is determined that working clearances between equipment and material to be insulated and adjacent work will restrict or prohibit proper installation of work, immediately report such conditions to all interested parties and arrange to have affected material relocated or preinsulated before erection, as approved. Failure to so comply will not relieve Contractor of full responsibility for providing specified insulation.
- B. Do not install covering before piping, and equipment has been tested and approved.
- C. Ensure surface is clean and dry prior to installation. Ensure insulation is dry before and during application.

3.2 GENERAL INSTALLATION REQUIREMENTS

- A. Comply with applicable requirements of Division 22 Section, "Common Materials and Methods for Plumbing".
- B. Adhesives and mastics materials shall be compatible with insulation material, jackets and substrates. Apply insulation and adhesives in accordance with manufacturers' instructions.
- C. Do not install any insulation before building is adequately closed in. Where it is necessary to install insulation in any section of building that is not adequately closed in, secure prior permission and, where permission is granted, such insulation shall be in place to form a waterproof covering. Remove and replace all insulation installed that becomes water saturated because of failure to comply with this requirement, at no increase in the Contract sum.
- D. Clean excess adhesive, mastic or cement used in performance of work from all exposed surfaces of insulation jacketing materials. Clean smudges and dirt from all exposed surfaces of insulation jacketing materials at conclusion of this work.
- E. Apply insulation on all cold surfaces with a continuous, unbroken vapor seal. Install hangers outside of insulation for all piping subject to sweating (e.g., domestic water piping, chilled drinking water piping, cold USP water piping) and provide inserts - refer to and coordinate with Section 22 05 00, Part 3, Article titled "PIPING SYSTEMS – COMMON REQUIREMENTS", paragraph titled "Pipe Insulation Inserts and Shields". For all equipment subject to sweating, insulate and vapor seal hangers, supports, anchors, etc., that are secured directly to cold surfaces to prevent condensation.
- F. Extend all surface finishes to protect all surfaces, ends and raw edges of insulation.

- G. Install insulation on and at access doors to allow easy use of access door without damage to insulation.
- H. Finish insulation neatly at hangers, supports and other protrusions.
- I. Install insulation with least number of joints practical. Locate insulation, or cover seams, in least visible locations.
- J. Finish installation with systems at operating conditions. Repair separation of joints or cracking of insulation due to thermal movement or poor workmanship.
- K. Be responsible for proper curing of insulation, etc., in accordance with manufacturers' requirements.
- L. Repair existing insulation damaged through installation of new work to match existing insulation.

3.3 PENETRATIONS

- A. Refer to Division 22 Section "Common Materials and Methods for Plumbing" for additional requirements.
- B. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
 - 1. Comply with requirements in Division 07. Coordinate requirements for sleeves and clearance between finished surface of penetrating item and penetrated construction to achieve proper installation of through-penetration fire-stop system.
- C. Insulation Installation at Floor Penetrations:
 - 1. Pipe: Install insulation continuously through floor penetrations.
 - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07.

3.4 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Carry pipe insulation through sleeves and through hangers which are specified to be installed outside insulation.
- C. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
 - 1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
 - 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly

- against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
 5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
 9. Stencil or label the outside insulation jacket of each union with the word "UNION." Match size and color of pipe labels.
 10. Do not insulate flexible connections and expansion joints. Install insulation on flanges, valves and unions so that it can be removed and replaced without damaging adjacent insulation.
- D. Strainers, temperature control valves, safety valves, relief valves, flanges and unions in hot piping 3/4 inch and smaller in size in equipment rooms and 1 inch and smaller in size elsewhere. Finish insulation neatly at flanges, leaving space for access to both.
- E. Terminate insulation neatly and finish all exposed ends with plastic material troweled on bevel.
- F. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- G. Install removable insulation covers at locations indicated. Installation shall conform to the following:

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
3. Construct removable valve insulation covers in same manner as for flanges except divide the two-part section on the vertical center line of valve body.
4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.

H. Insulation Type P1

1. Seal longitudinal laps of jackets and wrap butt joints with 3 inch wide strip of jacketing material securely sealed in place.
2. Where premolded PVC fitting covers are used, apply factory precut insulation insert in accordance with manufacturer's instructions and then apply one piece cover. Use two or more layers of inserts on hot piping as required to limit outer surface temperatures of insert(s) to 150° F. maximum. On concealed hot piping, covers may be secured with staples. On exposed hot piping, secure covers by taping ends to adjacent insulation. Seal seam edges of covers on concealed and exposed cold piping with Zeston vapor-barrier adhesive and wrap edges of covers with Zeston vapor-barrier pressure sensitive color matching tape.
3. Where factory-molded fibrous glass fitting covering is used, finish insulation on concealed and exposed hot piping with same jacketing material as adjacent insulation lap-sealed and finished with Foster 30-36, Childers CP-50A or equal. Finish insulation on cold piping same as for hot piping except that sealer shall be Foster 30-35 or Childers CP-30LO vapor sealer.
4. Finish valve covering in hot and cold piping systems same as specified above for fittings.
5. Recover exposed piping in finished areas with 0.02 mil thick PVC jacket less than 8 ft. above floor in mechanical room, with 0.02 mil thick PVC jacket or aluminum jacket, except use Alpha Assoc. Fiberglass Scrim Fabric "Luben 58" (20 x 10) white, adhered and then finished with Foster 30-36 or Childers CP-50A at steam pressure reducing stations and when piping systems are specified to be painted.

I. Insulation Type P2

1. Secure PVC jacket in place by a continuous longitudinal solvent weld type joint.
2. Use mitered sections of PVC jacketed insulation for valves and fittings. Seal joints with solvent weld compound
3. Entire installation of PVC jacketed insulation shall be weatherproof.

J. Insulation Type P3

1. Where possible, slip insulation over tubing as a full cylinder. Where necessary to cut and at all butt joints, tightly butt edges and join by sealing with waterproof vapor barrier adhesive,

Armstrong 520. For Self-Seal type, peel adhesive paper from surface and apply firm pressure along entire longitudinal joint.

2. Cover fittings and valves with equivalent thickness of insulation material.
3. Finish outdoor insulation with two coats of manufacturer's recommended weather-resistant and ultraviolet-resistant protective finish: Armacell WB Armaflex, white. DO NOT TINT FINISH.
 - a. At Contractor's option for exposed indoor piping and for all outdoor piping, use aluminum jacket, as specified for insulation Type P-2.
 - b. Secure metal jacket in place by a continuous longitudinal friction type joint. Seal circumferential joints with 2 inch wide, .016 inch aluminum preformed snap-strap and clip containing a permanently plastic weatherproof sealant. Where outside diameter of the insulation is over 12-3/4 inch, lock snap-strap in place using 3/4 inch wide, .015 inch thick, No. 302 stainless steel bands. Apply snap-strap with appropriate banding wrench.
 - c. Use mitered sections of metal jacketed insulation for valves and fittings. Seal joints with sealing compound and preformed aluminum bands.
 - d. Entire installation of outdoor piping shall be weatherproof.

3.5 PIPING INSULATION SCHEDULE

A. Thickness Schedule (TS)

TABLE 1				
Plumbing and Drainage				
Minimum Insulation Thickness for Pipe Sizes*				
Schedule No.	Water Temp. Range	1-1/4 In. and Less	1-1/2 to 8 In.	Over 8 In.
	Deg F.	in.	in.	in.
TS-11	105-140	1.0	1.5	1.5
TS-12	40-60	0.5	1.0	1.0
*Refer to Article titled "Alternatives".				
*Comply with ASHRAE 90.1 - 2016				

B. Type: Unless otherwise specified use Insulation Type P1 on indoor piping and Insulation Type P2 on outdoor piping, except as follows:

1. Contractor may substitute Type P3 of thickness as scheduled for Type P1 or P2 when system operating temperature is less than 210 deg F. and specified thickness is 1/2 inch or less.
2. Contractor may substitute Type P3 of thickness as scheduled for Type P1 or P2 when system operating temperature is less than 210 deg F. and:
 - a. Piping is constructed from rolls of soft copper tubing and space limitations preclude straightening of tubing to allow satisfactory installation of Type P1 or P2.

SECTION 22 10 00 - PLUMBING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This section includes the following plumbing materials and equipment for domestic water, fuel gas and drainage systems:

- 1. Pipe and fittings
- 2. Valves

- B. Related Sections include the following:

- 1. Section 22 11 00: Disinfection of Domestic Water Lines
- 2. Section 22 05 00: Basic Materials and Methods
- 3. Section 22 07 00: Plumbing Insulation
- 4. Section 22 05 13: Electrical Equipment and Wiring for Plumbing Systems
- 5. Section 22 40 00: Plumbing Fixtures and Trim
- 6. Section 21 00 00: Fire Suppression
- 7. Division 25: Integrated Automation
- 8. Division 26: Electrical

 - 5. Precast concrete meter pits
- C. Welding certificates.

1.5 WARRANTY AND CONTRACT CLOSEOUT

- A. Warranty
 - 1. Refer to BIDDING AND CONTRACT REQUIREMENTS and to warranty and contract closeout requirements specified in DIVISION 00

B. Contract Closeout

1. Comply with requirements of Division 1, Contract Closeout.
2. Include information for all products specified in this section, in the operating and maintenance manual.
3. Provide the following as specified in this section or Section 22 05 00.
 - a. Testing and cleaning reports certified by contractor for each system.
 - b. Balancing report for domestic hot water recirculation system. Include certificate stating degree of accuracy of instruments.
 - c. Portable flow measuring instrument for automatic flow control valves.
 - d. Insurance inspection certificate for direct fired storage domestic water heater.
 - e. Inspection form U-1 for compact type domestic hot water generator.
 - f. Qualification certificates for plastic piping system installers/solvent welders.

1.6 ENERGY PERFORMANCE CRITERIA

- A. Rating temperatures and conditions, Coefficient of Performance (COP) and Energy Efficiency Rate (EER) of all equipment and components provided under this section shall meet the requirements of the State Energy Code or latest issue of ASHRAE Standard 90.1, or of the latest issue of the Standards for Equipment in the National Energy Policy Act, whichever is more stringent.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with requirements, provide products of the following manufacture:
 1. Pipe and Fittings
 - a. General Pipe and Fitting Materials, No Specified Manufacturer
 - 1) Any manufacturer whose products are manufactured in the United States and comply with the reference standards.
 - b. Basic Pipe and Fitting Materials and Accessories not Specified in this Section: Refer to Section 22 05 00.
 2. Valves
 - a. Basic Valve Types not Specified in this Section: Refer to Section 22 05 00.
 - b. Type V14, Ball Check Valve
 - 1) Flygt
 3. Water Hammer Arrestors

- a. Josam
- b. J. R. Smith
- c. Precision Plumbing Products
- d. Sioux Chief
- e. Wade
- f. Zurn
- g. Watts Drainage

2.2 PIPE AND FITTINGS

A. General

1. Pipe and fitting materials and joint types are specified in the following "Piping Class" paragraphs. Application material and joint type which will be permitted for specific services are specified hereinafter in the Article titled "Piping System Requirements". Where more than one Piping Class is listed under "Piping System Requirements" for a service, use any of listed classes, unless otherwise specified or indicated, but systems' materials must be consistent throughout the work.
2. Pipe and fittings shall conform to the latest issue of the standards referred to hereinafter. Each length of pipe and each fitting shall be marked with the manufacturer's name brand and specification code designation to which it belongs.

B. *Piping Class CI2

ITEM	LIMITS	DESCRIPTION
PIPE & FITTINGS	2 inch thru 12 inch	Cast iron no hub soil pipe and fittings
JOINTS	2 inch thru 12 inch	Compression type couplings similar to Tyler Corporation "CI No-Hub Couplings" CISPI 310 Clamp All Hi Torq 125, Mission, Husky or equal]

* For use only above ground where allowed by codes.

Reference Standards

1. Cast Iron Soil Pipe and Fittings, No Hub: ASTM A888, CISPI 301. Joints, ASTM C564. Piping shall bear CISPI collective trademark and NSF international listing.

C. Piping Class CU1 & CU1S

ITEM	LIMITS	DESCRIPTION
PIPE	All sizes	Copper tubing Type L. Hard temper for Class CU1 and soft temper for Class CU1S
JOINTS	All sizes	Soldered
FITTINGS	All sizes	Wrought copper, except cast brass only in sizes where wrought copper is not available

UNIONS	2 inch and smaller	Class 200
	2-1/2 inch and larger	Companion flanges
FLANGES	2-1/2 inch and larger	Class 150 cast bronze

Reference Standards

1. Copper Tubing: ASTM B88, ANSI H23.1
2. Soldered Fittings for Copper Tubing: Wrought copper, ANSI B16.22 for pressure fittings and B16.29 for drainage fittings; Cast brass for larger sizes where wrought copper is not available, ANSI B16.18 for pressure fittings and B16.23 for drainage fittings.
3. Flanges for Copper Tubing: Cast bronze, ANSI B11.24, Classes 150 and 300, solder joint.

Alternate Jointing and Fitting System may be used in lieu of requirements above as follows:

4. Press Fit System, Apollo Xpress, Nibco, Viega

Installation shall be in accordance with manufacturer's instructions.

D. Piping Class CU1M

ITEM	LIMITS	DESCRIPTION
PIPE	2-6 inch	Copper tubing Type L. Hard temper
JOINTS	2-6 inch	Soldered or roll grooved mechanical coupling
FITTINGS	2-6 inch	Wrought copper, except cast brass only in sizes where wrought copper is not available
UNIONS	2-6 inch and larger	Companion flanges
FLANGES	2-6 inch	Class 150 cast bronze

Reference Standards

1. Copper Tubing: ASTM B88, ANSI H23.1
2. Soldered Fittings for Copper Tubing: Wrought copper ANSI B16.22; Cast brass for larger sizes where wrought copper is not available, ANSI B16.18.
3. Copper Grooved-End Fittings: ASTM B75 or ASTM B584.
4. Flanges for Copper Tubing: Cast bronze, ANSI B11.24, Classes 150 and 300, solder joint.
5. Refer to Section 22 05 00 for mechanical couplings.

Alternate Fitting/Jointing System installed in accordance with manufacturer's instructions may be used in lieu of requirements above as follows:

1. T-Drill System - Formed tee ASTM 2014
2. Press Fit System, Apollo Xpress, Nibco, Viega

E. Piping Class CU2

ITEM	LIMITS	DESCRIPTION
------	--------	-------------

PIPE	2 inch and smaller*	Copper tubing, Type K, soft, in rolls
JOINTS	2 inch and smaller*	Soldered except flared at valve, underground branch and equipment connections
FITTINGS	2 inch and smaller*	Wrought copper for soldered, cast bronze for flared
UNIONS	2 inch and Smaller	Class 200, for soldered joint piping
*NOTES:	1. No joints allowed for lengths under: 95 foot for 1-1/4 inch and smaller 55 foot for 1-1/2 inch 40 foot for 2 inch 2. No underground joints allowed below floors, driveways and the like.	
EXCEPTIONS:	Where branches are required underground, flared connections are to be used.	

Reference Standards

1. Copper Tubing: ASTM B88, ANSI H23.1
2. Soldered Fittings for Copper Tubing: Wrought copper ANSI B16.22; Cast brass for larger sizes where wrought copper is not available, ANSI B16.18.
3. Flared Fittings for Copper Tubing: Cast bronze, ASTM B62, ANSI B16.26.

F. Piping Class CU3

ITEM	LIMITS	DESCRIPTION
PIPE	Less than 1-1/4 inch	Copper tubing, Type L, Hard
	1-1/4 inch & larger	Urinals (2") copper tubing Type K, hard; elsewhere DWV copper drainage tubing and fittings, hard.
JOINTS	All sizes	Soldered
FITTINGS	All sizes	DWV Pattern wrought copper except cast brass only in sizes where wrought copper is not available
FLANGES		Class 150 cast bronze

Reference Standards

1. Copper Tubing: ASTM B88, ANSI H23.1
2. DWV Copper Drainage Tube: ASTM B306, ANSI H23.6.
3. Flanges for Copper Tubing: Cast bronze, ANSI B11.24, Classes 150 and 300, solder joint.
4. Soldered Drainage Fittings (DWV): Cast bronze, ANSI B16.23.
5. Soldered Fittings for Copper Tubing: Wrought copper ANSI B16.29; Cast brass, for larger sizes where wrought copper is not available, ANSI B16.23.

2.3 PIPING SYSTEM REQUIREMENTS

Service	Valve Type/Class	Pipe Class
Domestic Water Above Ground 1) General Service 6 inches and smaller	VC-4	CU1, CU1M
Sanitary and Combination Storm and Sanitary Gravity Drainage and Vent Above Ground 1) Piping, General 2) Branch Waste & Vents for Fixtures other than Water Closets and Urinals 3) Branch Waste & Vents for Water Closets 4) Branch Waste & Vents for Urinals (2 inch) 5) Indirect drainage 6) Exposed Piping at Fixtures & Equipment *If allowed by codes. If not allowed, use CU3. **Piping less than 1-1/4 inch in size		CU1, CU1, CU3 CU1 PVC3* CU1**, CU3 BR1

2.4 VALVES

A. General

1. Valves are specified by Valve Type and, for some services, several valve types are grouped by "Valve Class" in various sections of Division 22. Application is stated in the "Piping System Requirements". Where more than one Valve Type or Valve Class is listed for a service, use any of the listed Types or Classes, unless otherwise specified or indicated, but selection must be consistent throughout the work.
2. It shall be Contractor's responsibility to coordinate the work for all sections of Division 22 to assure that all general service valves throughout the work of Division 22 are of the same manufacture and type and that all valves of the same type number/identification throughout the work of Division 22 are of the same manufacture.
3. Valve packing shall not contain asbestos.
4. Bronze Valves: Construct body of ASTM B62 for Classes 125 and 150, ASTM B61 for Classes 200 and 300, copper-silicon bronze stem.
5. Iron Valves: Construct body of ASTM A126, Class B copper-silicon bronze stem.
6. All valves used in domestic water applications shall comply with NSF/ANSI 61 for lead free construction.

- B. Refer to Section 22 05 00 for specifications for basic valve types not specified in this section.

C. Type V14 Ball Check Valve: Nonclog, unobstructed, free flow type. Ball shall be out of the flow in the open position, directed to and from the body seat by guide rails integral with the valve body. Function satisfactorily in a vertical, horizontal or inverted position. Capable of direct burial without the use of a vault or other enclosure. Ball actuated by the flowing medium, system pressure, or gravity without the use of springs, levers, weights or external power source. Body of gray cast iron construction for sizes 2-1/2 inch and larger, flange ends integral with the body casting, flat faced and drilled to ANSI B16.1, Class 125 cast iron, standard. Body shall be cast bronze with threaded connections conforming to N.P.T. for 2 inch size. Ball shall be a hollow steel sphere with a smooth covering of nitril rubber. Valve shall be suitable for 150 psig working pressure and a temperature of 185°F. Flygt HDL ball check valves.

D. Valve Classes

1. Valve Class VC-4

SERVICE	LIMITS	ALLOWABLE VALVE TYPES
SHUTOFF	Copper Tubing	V8a, V9\ V10
	Steel Pipe	V8a, V9, V10
THROTTLING (BYPASS)	Copper Tubing	V1 & V4 globe, V9, V10
	Steel Pipe	V2 & V4 globe, V9, V10
BALANCING		Calibrated type Class 125 bronze body. Bell & Gossett circuit setter or equal. See Section 20 05 00.
CHECK	Copper Tubing	V1 swing check or V14 at storm water or sanitary pump discharge, V1 & V4 elsewhere
	Steel Pipe	V2 swing check or V14 at storm water or sanitary pump discharge, V2 & V4 elsewhere
*Not allowed for pump discharge balancing service.		

2.5 WATER HAMMER ARRESTERS

A. ASME A112.26.1M, ASSE 1010, or PDI-WH 201, stainless steel bellows with pressurized cushioning chamber. Sizes are based on water-supply fixture units, ASME A112.26.1M sizes A through F and PDI-WH 201 sizes A through F. Piston type are not permitted for applications that exceed 60 psi.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

- A. Refer to and comply with Section 22 05 00 for basic requirements.
- B. Refer to Section 22 05 48 for vibration isolation and seismic restraints, penetration seals and the like.

3.2 CLEANING OF SYSTEMS

- A. Refer to Section 22 05 00 for basic requirements.
- B. Disinfect domestic hot and cold water distribution systems in accordance with latest issue of American Water Works Association Standard C651.

3.3 CLEANOUTS

- A. Provide cleanouts on all drainage piping at 50 foot intervals on piping 4 inches and smaller and at not more than 100 foot intervals on larger pipe sizes, at each change in direction of more than 45°, at the base of drainage stacks and at other locations shown. Cleanouts full size for pipes up to 4 inches and not less than 4 inches for larger pipes except where code requires cleanouts larger than 4 inches. Cleanout sizes shall comply with applicable plumbing code.
- B. Install cleanouts in driveways and yards flush with top of a 16 inch by 16 inch by 8 inch concrete pad set flush with grade or road. Where cleanouts are provided in vitrified clay below ground, last 5 foot length of vertical riser shall be cast iron.
- C. Lubricate non-plastic cleanout plugs with mixture of graphite and linseed oil or provide Teflon tape on threads. Sealants for plastic cleanout plugs shall be compatible with plastic piping materials. Prior to building turnover remove cleanout plugs, relubricate and reinstall using only enough force to ensure permanent leakproof joint.

3.4 DOMESTIC WATER PIPING

- A. Install inside domestic water distribution piping with sufficient pitch and in a manner that entire system may be drained at a central point, if possible. Otherwise provide drainage points for each portion of system.
- B. Support risers and stacks by metal brackets attached to building construction or by other approved methods.
- C. Provide a riser shutoff valve at all water supply risers in nearest accessible location.
- D. For each toilet room with two or more plumbing fixtures provide shutoff valves on hot and cold water supply piping within access panel or other accessible location.
- E. For domestic hot water recirculating systems, manually adjust calibrated type balancing valve to provide flow of hot water in each branch with flow rates selected for a maximum temperature drop of 5° F.

- F. Provide 3/4 inch tap with hose end valve for pipe disinfection where water main enters building downstream of backflow preventer.
- G. Provide isolation valve in new piping where new piping and existing piping interconnect. Provide 3/4 inch tap with hose end valve for pipe disinfection downstream of isolation valve.

3.5 ELECTRICAL WORK

- A. Refer to Section 22 05 00 for general requirements.

3.6 PIPING CONNECTIONS

- A. Refer to Section 22 05 00 for basic requirements.
- B. Bell and Spigot, Cast Iron Pipe Joints: Caulk firmly with oakum or hemp and fill with molten lead not less than 1 inch deep and not to extend more than 1/8 inch below rim of hub; no paint, varnish or other coatings permitted on jointing material until after joint has been tested and approved. Neoprene gasketing system or gasket and clamp type mechanical fastener where specified.

3.7 SANITARY, STORM AND ACID RESISTANT DRAIN PIPING

- A. Set true to line and even slope using grade boards and targets or grade lines. Install cast iron soil pipe and fittings and make joints in accordance with "Cast Iron Soil Pipe & Fittings Handbook".
- B. Slope suspended sanitary and storm piping downward minimum 1/4 inch per foot where possible for pipes 3 inch and smaller, and 1/8 inch per foot for piping 4 inch diameter and larger, and in all cases, conform to code requirements.
- C. Slope underground sanitary and storm piping downward a minimum of 1/4 inch per foot for 3 inch pipe and less; a minimum of 1/8 inch per foot for piping larger than 3 inch diameter, and in all cases, conform to code requirements.
- D. Install all piping in accordance with manufacturer's recommendations regarding connections, hangers, hanger spacing, underground installation, etc. Support suspended horizontal soil pipe near each hub, with maximum spacing between hangers of 5 feet for pipe fabricated in 5 foot lengths and 10 feet for pipe fabricated in 10 foot lengths. Underground PVC piping shall be installed in accordance with ASTM D2321 latest edition. Provide sway braces and anchorage on horizontal drainage piping sizes 5" and larger at changes of direction, where required by code and/or where recommended by coupling manufacturer and or CISPI standard 4 inch pipe size. Shall be included when required by the plumbing code.
- E. Provide main trap with fresh air inlet for each sanitary and storm main drain line.
- F. Provide deep seal trap at base of each vertical rainwater conductor.

- G. For corrosive soil conditions, metallic underground piping shall be provided with loose polyethylene encasement 0.008" thick.
- H. Provide ball joint connections at foundation wall where piping exists building, EBAAron flex-tend or equal.
- I. Support underground piping from structural floor slab. Refer to detail on drawings.

3.8 TESTING OF PIPING SYSTEMS

- A. Refer to Testing of Piping Systems, General in Section 22 05 00.
- B. Field Quality Control
 - 1. Do not enclose, cover, or put into operation water distribution piping system and drainage and vent piping system until each has been inspected and approved by the authority having jurisdiction.
 - 2. Reinspections: When the representative of the authority having jurisdiction finds that piping system will not pass test or inspection, make required corrections and arrange for reinspection by authority having jurisdiction.
 - 3. Reports: Prepare inspection reports signed by the representative of the authority having jurisdiction.
 - 4. Test in accordance with the more stringent of the requirements of the authority having jurisdiction or the following:
- C. Gravity Drainage Systems
 - 1. Combination Water/Air Test
 - a. Rough Plumbing Test Procedure: Except for outside leaders and perforated or open-jointed drain tile, test new and/or altered piping of plumbing drainage and venting systems on completion of roughing in piping installation. Tightly close all openings in piping system and fill with water to point of overflow, but not less than 10 feet head of water. Limit test pressure on plastic piping system to 30 feet head of water maximum. Water level shall not drop during the period from 15 minutes before inspection starts through 15 minutes after completion of inspection. Inspect all joints for leaks.
 - b. Finished Plumbing Test Procedure: After plumbing fixtures have been set and their traps filled with water, test connections and prove gastight and watertight. Plug stack openings on roof and building drain where it leaves the building and introduce air into the system equal to pressure of 1 inch water column. Use a U tube or manometer inserted in the trap of a water closet to measure this pressure. Air pressure shall remain constant without introducing additional air throughout period beginning 15 minutes before inspection starts and 15 minutes after completion of inspection. Inspect plumbing fixture connections for gas, air and water leaks.
 - 2. Air test only

- a. Rough Plumbing Test Procedure: If tests are made with air, apply a pressure of not less than 5 psig with a force pump and test as specified above. Use mercury-column gauge registering 10 inches in height in air test. Use air tests only when air temperatures around tested system are 32° F. or below and temporary heat is not available.
 - b. Finished Plumbing Test Procedure: Test as specified above.
- D. Domestic Hot and Cold Water: Test hydrostatically upon completion of the rough-in and before insulating or setting fixtures. Maintain pressure for not less than 4 hours without leakage.
- E. Unless otherwise required by Code, new branch piping connected to existing systems may be tested at normal operating pressure, provided new piping does not exceed 75 feet, or does not include more than 20 fittings.

3.9 VALVES

- A. Refer to Section 22 05 00 for basic requirements.
- B. Equip each main and each major branch valve in Boiler Mechanical Room installed in a line over 7 feet above floor with appropriate size babbitt adjustable sprocket rim, chain and chain guide. Continuous chain shall reach within six feet of floor. Use only valves available with chain operators. Install with wheel in vertical plane.
- C. Provide gate valves 8 inch and larger on high pressure (above 100 psig) water lines with built-up valved bypasses conforming to MSS-SP45, Series A, for iron body valves; bypasses on steel valves furnished with drop forged steel, OS&Y bolted bonnet globe valves with socket weld ends. Bypass valves shall have trim materials for same service as main valve.

3.10 WATER HAMMER ARRESTERS

- A. Provide water hammer arresters at ends of all branches in hot and cold supply piping, at each group of flush valve operated fixtures, at equipment having quick closing valves (such as washers) and elsewhere as required and/or indicated on Drawings. Size and install each arrester according to manufacturer's instructions. Where pressure exceeds 60 psi, use next size larger where required by unit manufacturer. Install in an upright position and above ceiling in pipe chase in an accessible location.

END OF SECTION 22 10 00

SECTION 22 11 00 - DISINFECTION OF DOMESTIC WATER LINES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the contract, including General and Supplementary Conditions and Division 01 specification sections, apply to this section.

1.2 SUMMARY

- A. This section includes the disinfection and laboratory testing of domestic water piping systems to certify disinfection of system.
- B. Related Sections: Division 22.

1.3 DEFINITIONS

- A. Disinfectant Residual means the quantity of disinfectant in treated water.
- B. pH Factor means the measure of alkalinity and acidity in water.
- C. Ppm means parts per million.
- D. CFU/mL means colony forming units per milliliter.

1.4 QUALITY ASSURANCE

- A. Water Treatment Contractor: At least 5 years' experience performing Work specified herein.

1.5 REFERENCE STANDARDS

- A. AWWA Specification C-651 - Disinfecting Water Mains.
- B. Centers for Disease Control and Prevention (CDC) Standard Methods #9260J.

1.6 SUBMITTALS

- A. Water Treatment Contractor's evidence of certification: Submit four copies.
- B. Water Treatment Contractor's evidence of experience: Submit four copies.
- C. Tests Reports: Submit four copies as follows:

1. Disinfection Report, include:
 - a. Date issued
 - b. Project name and location
 - c. Treatment Contractor's name, address, and phone number and name of person executing disinfection
 - d. Type and form of Disinfectant used
 - e. Time and date of Disinfectant injection start and completion
 - f. Test Locations
 - g. Initial and 24 hour Disinfectant Residuals in ppm for each outlet tested
 - h. Time and date of flushing start and completion
 - i. Disinfectant Residual after flushing in ppm for each outlet tested

1.7 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Protect against damage and contamination.
- B. Maintain caution labels on hazardous materials.
- C. Maintain storage room dry and with temperatures as uniform as possible between 60 deg F. and 80 deg F.

1.8 PROTECTION

- A. Provide necessary signs, barricades and notices to prevent any person from accidentally consuming water or disturbing system being treated.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Disinfectant:
 1. Sodium Hypochlorite; liquid, powder, tablet, or gas.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Prior to starting Work verify that domestic water system is completed and cleaned.
- B. Notify General Contractor about defects requiring correction.
- C. Do not start Work until conditions are satisfactory.

3.2 SYSTEM TREATMENT

- A. Inject Disinfectant to obtain 200 ppm residual throughout the system.
- B. Starting at outlet closest to water source, bleed water from each outlet until water produces odor of disinfectant. Repeat process at each outlet throughout system.
- C. Maintain disinfectant in system for 3 hours.
- D. At the end of retention period, test for Disinfectant Residual at each of the following locations:
 - 1. Ends of piping runs
 - 2. Remote outlets
 - 3. Tanks
 - 4. At least 15% of outlets on each floor where directed by Architect, but in no case less than 2 outlets
- E. If Disinfectant Residual is less than 10 ppm, repeat system treatment.

3.3 FLUSHING

- A. Remove disinfectant by flushing system with clean water until residual rate is reduced to less than 1.0 ppm.

3.4 LEGIONELLA TEST

- A. Instruct bacteriological laboratory to take water samples no sooner than 24 hours after flushing system.
- B. Take water samples at each of the following locations:
 - 1. Domestic water heater drain valve
 - 2. Ends of piping runs
 - 3. Remote outlets
- C. Analyze water samples in accordance with CDC Standard Method #9260J, or other internationally recognized test method as recommended by groups such as Special Pathogens Laboratory of the VA Medical Center, Pittsburgh, Pennsylvania.
- D. Samples shall be delivered to the laboratory and analyzed within 48 hours of collection. Samples shall be protected from extreme temperature variations during transport.
- E. Sample collection: Collect samples utilizing the methodology described as follows:
 - 1. Faucets: Moisten the outlet by allowing water to trickle through the opening. A sterile Dacron swab is inserted and rotated four times around the inner circumference and moving up the faucet as far as the swab will reach. Replace the swab into the container. If the swab system does not contain a transport medium, then allow 0.5 ml of water to flow from the faucet into the container to keep the swab moist. The Culturette II System

(Becton Dickinson) has a self-contained transport medium, and it is not necessary to add outlet water to the swabs.

2. Shower Head: Moisten the shower head by allowing water to trickle through the opening. Rotate the swab over the entire surface of the shower head 4 times. Place swab into the container. If the swab system does not contain a transport medium, then allow 0.5 ml of water to flow from the shower head into the container.

F. Action Limits: Test results indicating the Legionella CFU/mL shall be acted upon as follows:

1. Individual Sample Test of less than 10 CFU/mL: Report results with recommendation for monthly follow-up testing. After 6 months of follow-up testing with no test above 10 CFU/mL, testing may be suspended. If samples from 30% or more of tested outlets test positive for Legionella, report results with recommendation for prompt cleaning and/or biocide treatment.
2. Individual Sample Test Result Between 10 and 99 CFU/mL: Report results with recommendation for prompt cleaning and/or biocide treatment.
3. Individual Sample Test Result of 100 CFU/mL or Higher: Report results and recommend immediate cleaning and/or biocide treatment with prompt steps to avoid exposure.

3.5 ALTERATIONS TO EXISTING SYSTEMS

- A. Unless required otherwise by Codes or authorities having jurisdiction, new branch piping not exceeding 75 total linear feet that is connected to existing systems need not be disinfected. Thoroughly flush this piping with system water and then test for coliform and Legionella organisms. If tests indicate presence of coliform organisms, or Legionella organisms, treat piping as described above and retest for coliform and Legionella. Provide all necessary valves, drains, piping and accessories required to isolate new piping from existing systems during treatment.

END OF SECTION 22 11 00

SECTION 22 40 00 - PLUMBING FIXTURES AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This section is intended to describe the plumbing fixtures and devices for the plumbing work.
- B. This section includes the following:
 - 1. Plumbing fixtures and trim
 - 2. Miscellaneous plumbing accessories
- C. Related sections include the following:
 - 1. All applicable sections of Division 1
 - 2. Division 7: Sealants
 - 3. Section 22 05 00: Basic Materials and Equipment
 - 4. Section 22 10 00: Plumbing Systems

1.3 REFERENCES AND REQUIREMENTS OF REGULATORY AGENCIES AND STANDARDS

- A. Provide work in accordance with all applicable codes, rules, regulations and reference standards.
- B. ANSI - Z358.1 - Latest Edition: American National Standard for Emergency Eyewash and Shower Equipment.
- C. NSF/ANSI 61: Drinking Water System Components.
- D. LEED - NC2.2 - Leadership in Energy and Environmental Design - New Construction Version 2.2.

1.4 SUBMITTALS

- A. Provide submittals for all products listed in Article 2.01 of this section in accordance with Section 01 33 00, Submittal procedures in sufficient detail to verify full compliance with the requirements of the contract documents.

- B. For each plumbing fixture category and type specified, include selected fixture, trim, fittings, accessories, appliances, appurtenances, equipment and supports. Indicate materials and finishes, dimensions, construction details and flow-control rates.
- C. Submit wiring diagrams from manufacturer for electrically operated units.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Deliver plumbing fixtures in manufacturer's protective packing, crating and covering.
- B. Store plumbing fixtures on elevated platforms in dry location.

1.6 WARRANTY AND CONTRACT CLOSEOUT

- A. Comply with warranty and contract closeout requirements specified in Division 00.
- B. Warranty
 - 1. Refer to BIDDING AND CONTRACT REQUIREMENTS and to DIVISION 1 - GENERAL REQUIREMENTS. In addition, provide the following extended warranties as specified in this section:
 - a. Five year warranty on electric water cooler refrigerationsystem.
 - b. Three year nonprorated warranty on flush valves.
- C. Contract Closeout
 - 1. Include information for all products specified in this section, in operating and maintenance manual.

1.7 PROJECT/SITE CONDITIONS

- A. Coordinate roughing in and final fixture locations and verify that plumbing fixtures can be installed in accordance with contract documents.
- B. Check millwork Shop Drawings. Confirm location and size of fixtures and openings before rough-in and installation.

1.8 QUALITY ASSURANCE

- A. Provide fixtures described herein. All trim shall be manufacturer's first grade line, perfect in all respects. "Competition" or "Reserve Grade" material will not be accepted. Manufacturers and model numbers listed are to indicate standard of quality. Equal products of acceptable manufacturers listed in Article 2.01 may be submitted for review.
- B. Faucets, fittings, handles, traps, seat hinges, water and waste connections, and any other exposed parts shall be polished chrome plated brass. Provide chrome plated escutcheons for all

exposed plated piping penetrating floors and walls. The metal used in castings shall be red metal, having a copper content of not less than 85% and tubing used at plumbing fixtures, heavy seamless brass tubing, not less than No. 17 gauge.

- C. Fixtures shall be product of one manufacturer.
- D. Fittings of same type shall be product of one manufacturer.

1.9 GENERAL REQUIREMENTS

- A. Plumbing fixtures shall be white, unless indicated otherwise.
- B. Provide supports for all wall mounted fixtures.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with requirements, provide products of the following manufacture:

- 1. Plumbing Fixtures (Water Closets, Urinals, Lavatories, Sinks and Baths)

- a. American Standard, Inc.
- b. Kohler Co.
- c. Zurn Industries
- d. Crane
- e. Elkay
- f. Just
- g. Toto
- h. Advance Tabco
- i. Franke

- 2. Flushometers

- a. Sloan Valve Co.
- b. Coyne and Delany Co.
- c. Zurn Industries, Inc.
- d. Toto

- 3. Toilet Seats

- a. Church Seat Co.
- b. Sperzel Industries, Inc.
- c. Beneke Corp.
- d. Olsonite Corp.
- e. Bemis Mfg. Co.

- 4. Electric Water Coolers

- a. Halsey Taylor
- b. Elkay Mfg. Co.
- c. Filtrine Mfg. Co., Inc.
- d. Oasis Water Coolers, Ebco Manufacturing Co.
- e. Sunroc, Inc.
- f. Haws

5. Brassware and Trim

- a. Speakman Co.
- b. American Standard, Inc.
- c. Kohler Co.
- d. Toto
- e. Chicago Faucet Co.
- f. Elkay
- g. T & S Brass
- h. Water Saver
- i. Delta Faucet Co.
- j. Sloan
- k. Zurn
- l. Moen Commercial

6. Traps and Supplies

- a. McGuire Manufacturing Co., Inc.
- b. Bridgeport Brass Co.

2.2 GENERAL

- A. All mixing valves, electronic faucets and faucets for service sinks and mop receptors shall have check valves or back checks installed in hot and cold water supply piping, branches or installed integral to faucet inlets.
- B. All supply stops for lavatories, sinks, etc. shall be of lead free construction complying with NSF/ANSI 61. All flex tube risers from stops to fixtures shall be chrome plated copper. Stops shall be all brass, no plastic. Braided flex risers are not permitted.

2.3 ELECTRIC WATER COOLERS

- A. All water coolers shall be NSF/ANSI 61 certified.
- B. Electric Water Cooler A (Wheelchair Type)
 - 1. Wall mounted, all stainless steel cabinet, stainless steel top and backsplash with a deep basin, antispash, chrome plated brass strainer, chrome plated brass bubbler with automatic stream control, valve operated by a bar in front panel.
 - 2. Cooling Unit: Hermetically sealed, air cooled condensing unit for 115 volts, 60 Hertz, single phase, lubricated for life and equipped with electric cord and three-prong molded rubber plug, thermostat with an adjustable range of 42° to 53° F., ARI certified,

- complying with Standard 1010-84. Provide five year warranty on the refrigeration system.
3. Refrigeration system shall employ high efficiency, positive start compressor, nonpressurized counterflow cooling coil with totally encapsulated EPS insulation and be controlled by positive sensing thermostat. Shall have front and side push-bar water controls with chrome plated raised lettering for the visually impaired. Cooler shall comply with ADA for both visual and motion disabilities. Cabinet shall have removable front panels. The manufacturer shall certify the unit to be lead free as defined by the Safe Drinking Water Act. Energy consumption not to exceed 400 watts/hr.
 4. Capacity and Manufacturer: To cool 8 gph water to 50° F. at 90° F. ambient, Halsey Taylor HAC-8FS-Q. Provide filter water Sentry HWF.172.

PART 3 - EXECUTION

3.1 PROTECTION

- A. Protect fixtures against use and damage during construction.

3.2 INSTALLATION

- A. Install each fixture with trap, easily removable for servicing and cleaning.
- B. At completion, thoroughly clean plumbing fixtures and equipment.
- C. Attach floor mounted water closets to floor with wax seal and lag screws. Do not use lead flashing to hold closet in place.
- D. Install faucets with wrist blades requiring "push to close". Wrist blades in the "closed" position should be 45° from the rear wall.
- E. Provide vacuum breakers for hose bibbs and faucets with hose connections.
- F. Securely bolt all fixtures to the building construction and unless special hangers are indicated, provide hangers and/or carriers designed specifically for the fixtures by the fixture manufacturer.
- G. Securely bolt all chair carriers/fixture supports to floor using 4 bolts in each foot of each support. All floor bolt openings in chair carriers to be used.
- H. Caulk all wall hung fixtures between fixture and wall with sealant specified in Section 07 92 00. Provide sealant at all points where mop receptor meets walls and floor.
- I. Install electric water coolers with "P" trap and water shutoff valve within cabinet.
- J. For ground hydrants, provide concrete mounting pad and minimum one cubic yard of crushed rock at base of hydrant.

- K. For plumbing fixtures furnished and set by others, rough in piping and provide traps, valved cold and hot water connections and escutcheons. All exposed components shall be chrome plated unless otherwise noted.
- L. For plumbing fixtures installed in millwork, Contractor for this section shall provide template to Contractor for General Construction for required holes. Contractor for this section shall set fixtures and provide rough-in and final connections.
- M. Before installing the shower valve escutcheon in the shower cubicle, fill the entire annular space between the shower valve body and the surrounding ceramic material with sealant as specified in Section 07 92 00.
- N. Set all shower faucet mixing valves or limit stops to maximum allowable temperature permitted by code for each application.
- O. All plumbing fixtures and faucets shall be installed in accordance with manufacturer's recommendations.

3.3 MOUNTING HEIGHTS

- A. Mount fixtures the following heights above finished floor, except where noted otherwise.

Water Closet	
Standard	15 inches to top of bowl rim
Handicapped	17-19 inches to top of seat
Lavatory	
Standard wall hung	31 inches to top of basin rim
Standard countertop	34 inches to top of basin rim
Handicapped	29 inches min. to underside of basin apron 34 inches (max.) to top of basin rim
Child's height	27 inches to top of basin rim
Electric Water Cooler	
Standard	[30] [40] inches to top of basin rim
Handicapped	36 inches to bubbler outlet
Water Closet Flush Valves	
Standard	11 inches minimum above bowl rim
Recessed	10 inches minimum above bowl rim
Handicapped	Mounted for use from the wide side of stall

END OF SECTION 22 40 00

SECTION 23 05 00 – COMMON MATERIALS AND METHODS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section is intended to describe the common materials and installation methods of the mechanical work and it applies in general to all other Sections under Division 23.
- B. Due to the small scale of the drawings, all work required is not shown on the floor plans and certain work is shown on flow diagrams, riser diagrams and details. Work of Division 23 shall include all required work shown on plans, riser diagrams, flow diagrams and details.
- C. This Section includes the following:
 - 1. Piping materials and installation instructions common to most piping systems
 - 2. Transition fittings
 - 3. Dielectric fittings
 - 4. Mechanical sleeve seals
 - 5. Sleeves
 - 6. Escutcheons
 - 7. Grout
 - 8. HVAC demolition
 - 9. Equipment installation requirements common to equipment sections
 - 10. Painting and finishing
 - 11. Concrete bases
 - 12. Hangers and supports for HVAC system piping and equipment
 - 13. Identification for HVAC Piping and equipment

1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.4 REFERENCES

- A. Provide work in accordance with all applicable international, state and local, codes, rules, regulations, and standards, including but not limited to, requirements of the following:
 - 1. ASME/ANSI B31: Code for Pressure Piping
 - 2. ASME Boiler and Pressure Vessel Codes
 - 3. AWS D1.1: Structural Welding Code-Steel
 - 4. MSS SP58: Pipe Hangers and Supports – Materials, Design, and Manufacturers
 - 5. MSS SP69: Pipe Hangers and Supports – Selection and Application except spacing for hangers
 - 6. ANSI A13.1: Scheme for Identification of Piping Systems
 - 7. Applicable NFPA Codes and Standards

1.5 SUBMITTALS

- A. Provide Product List of factory fabricated items, in accordance with Section 01 60 00 “Product Requirements”, including name of proposed manufacturer, for all products specified in various sections of Division 23.
- B. Provide submittals in accordance with Section 01 33 00 “Submittal Procedures” in sufficient detail to verify full compliance with the requirements of the Contract Documents.
- C. Product Data: Provide for each type of factory-fabricated product indicated.

1.6 WARRANTY AND CONTRACT CLOSEOUT

- A. Comply with warranty and contract closeout requirements specified in Division 00.
- B. Provide Special Warranties and/or warranty service in accordance with Section 01 60 00 “Product Requirements” where specified in the various sections of Division 23.
- C. Provide manufacturer’s certificates of supervision and startup service as specified in the various sections of Division 23.
- D. Provide testing and cleaning reports. Indicate dates of testing and cleaning operations, procedures used and results obtained for each system. Reports shall be certified as complete.
- E. Provide instructions and demonstration to the Owner’s representative for all equipment and systems installed under Division 23. Instruction and demonstration shall be appropriate for the size and complexity of the installed system.

- F. Include information for all products specified in the operation and maintenance manual.

1.7 QUALITY ASSURANCE

- A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."
- B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
 - 3. Use welders fully qualified and licensed by the state authorities.
- C. The specifications for certain products and alternative materials may appear in more than one section of Division 23. Work of Division 23 shall be coordinated for all sections of Division 23 to assure that where two or more items of any given product are furnished under Division 23 that they are of the same manufacturer and type and that alternative materials is consistent throughout the work of Division 23.
- D. Except for spacing of hangers, provide hangers and supports in accordance with the latest issue of Manufacturer's Standardization Society (MSS) Specifications SP 58 and 69.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle all material and equipment in accordance with manufacturer's instructions and recommendations. Such instructions and recommendations are hereby made part of these specifications.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Deliver products and equipment properly labeled and tagged. Maintain products in original shipping containers and store in a dry area until ready for installation.
- D. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.9 COORDINATION

- A. The Mechanical systems are indicated on the Mechanical Drawings. Certain pertinent information and details involving the installation of Mechanical work appear on Architectural, Structural, Plumbing and Electrical Drawings. Become familiar with all Drawings and incorporate all pertinent requirements.
- B. Drawings are diagrammatic and indicate general arrangement of systems and requirements of the Mechanical work. Do not scale the Drawings to obtain dimensional requirements. Exact locations of equipment must be coordinated and obtained prior to starting the work.

- C. Arrange for pipe spaces, chases, slots, duct shafts and openings in building structure during progress of construction, to allow for HVAC installations.
- D. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- E. Coordinate requirements for access panels and doors for HVAC items requiring access that are concealed behind finished surfaces. Coordinate installation of identification labels with locations of access panels and doors.
- F. Coordinate scheduling, sequencing, movement and positioning of large equipment into the building during construction.
- G. Coordinate installation of identification devices with completion of covering and painting of surfaces where identification devices are to be applied.
- H. Install identification devices prior to installation of ceilings and similar concealment.

1.10 ENERGY PERFORMANCE CRITERIA

- A. All equipment provided under Division 23 shall meet the requirements of the International, or State, Energy Code, ASHRAE Standard 90 or the latest issue of the Standards for Equipment in the National Energy Policy Act (NEPA), whichever is more stringent.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. In other Part 2 articles of various sections of Division 23 where subparagraph titles below introduce lists, the following requirements apply for product selection:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
 - 2. Unless otherwise noted, substitutions of specified manufacturers shall comply with the requirements of Division 01.

2.2 PIPE, TUBE, AND FITTINGS

- A. Refer to individual Division 23 piping Sections for pipe, tube, and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.3 JOINING MATERIALS

- A. Refer to individual Division 23 piping Sections for special joining materials not listed below.

- B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
 - 2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
- C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- D. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- E. Solder Filler Metals: ASTM B32, lead-free alloys. Include water-flushable flux according to ASTM B813.
- F. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.
- G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- H. Solvent Cements for Joining Plastic Piping:
 - 1. CPVC Piping: ASTM F493.
 - 2. PVC Piping: ASTM D2564. Include primer according to ASTM F656.
- I. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

2.4 TRANSITION FITTINGS

- A. Plastic-to-Metal Transition Fittings: CPVC and PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
- B. Plastic-to-Metal Transition Adaptors: One-piece fitting with manufacturer's SDR 11 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
- C. Plastic-to-Metal Transition Unions: MSS SP-107, CPVC and PVC four-part union. Include brass end, solvent-cement-joint end, rubber O-ring, and union nut.

2.5 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder- joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.
- D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150-psig minimum working pressure as required to suit system pressures.
- E. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full- face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers. Separate companion flanges and steel bolts and nuts shall have 150-psig minimum working pressure where required to suit system pressures.
- F. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.
- G. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

2.6 ESCUTCHEONS

- A. General: Manufactured wall and ceiling escutcheons and floor plates, with an inside diameter to closely fit around pipe, tube, and insulation of insulated piping and an outside diameter that completely covers opening.
- B. One piece construction on exposed piping in finished areas. Elsewhere, split pattern with setscrew. Provide deep pattern type where required to conceal protruding fittings and sleeve.
- C. Provide brushed brass escutcheons, except provide polished chromium plated escutcheons on pipes passing through walls, floors or ceilings wherever such pipes are exposed to view.

2.7 HANGERS AND SUPPORTS

- A. Acceptable Manufacturers
 - 1. Other Than Roof Supports
 - a. B-Line Systems, Inc.
 - b. Grinnell Company
 - c. National Pipe Hangers
 - d. Penn Construction Industries
 - e. Other approved United States manufacturer whose products comply with the referenced standards

B. Reference Standards

1. ASTM A36 - Specification for Structural Steel
2. ASTM A123 - Zinc (Hot-Dip Galvanized Coatings on Products Fabricated from Rolled, Pressed and Forged Steel Shapes, Bars, and Strip)
3. ASTM A653 G90 - Specification for Steel Sheet, Zinc Coated by the Hot-Dip Process
4. ASTM B633 - Specification for Electrodeposited Coatings of Zinc on Iron and Steel
5. AWS D1.1 - Structural Welding Code - Steel
6. MSS SP58 - Manufacturer's Standardization Society: Pipe Hangers and Supports - Materials, Design and Manufacture
7. MSS SP69 - Manufacturer's Standardization Society: Pipe Hangers and Supports - Selection and Application
8. NFPA 13 - Standard for the Installation of sprinkler Systems

C. Quality Assurance

1. Steel pipe hangers and supports shall have the manufacturer's name, part number and applicable size stamped in the part itself for identification.
2. Hangers and supports shall be designed and manufactured in conformance with MSS SP58.

D. General

1. Except for spacing of the hangers, design and fabrication of pipe hangers, supports and welding attachments shall conform to ANSI B31.9 or B31.1 as applicable.
2. Except for spacing of the hangers, hanger types and supports for bare and covered pipe shall conform to MSS SP69 for the temperature range except that only flat wide band hangers shall be used for hangers installed outside of insulation and plastic pipe.
3. Except for spacing of pipe hangers and elsewhere as otherwise indicated, horizontal and vertical piping attachment shall conform to the more stringent of this specification or MSS SP58 or MSS SP69. Continuous inserts and expansion bolts may be used.
4. All ferrous hangers, supports and hardware located outdoors shall be hot dip galvanized after fabrication per ASTM A123.
5. Hangers and clamps for support of bare copper piping shall be coated with copper colored (for identification) baked on epoxy paint. Use additional PVC coating of the epoxy painted hangers where necessary.
6. Provide suitable chromium plated brass supports for chromium plated pipe with exposed heads of bolts and screws chromium plated.
7. Hangers other than described above shall be zinc plated in accordance with ASTM B633 or shall have an electrodeposited epoxy finish.
8. Strut channels shall be pregalvanized in accordance with ASTM A653 G90 or shall have an electrodeposited finish.
9. All hangers and supports shall have some form of adjustment available after installation.

E. Pipe Hangers and Supports: Provide hangers as follows:

1. Hangers for Pipe Sizes to 1-1/2 Inch: Adjustable carbon steel ring or clevis.
2. Hangers for Hot or Cold Pipe Sizes 2 Inches to 4 Inches and Cold Pipe Sizes 6 Inches and Over: Adjustable carbon steel clevis.
3. Hangers for Hot Pipe Sizes 6 Inches and Over: Adjustable steel yoke and cast iron roll.

4. Multiple or Trapeze Hangers: Factory-enameled steel channels with welded spacers and hanger rods or 12 gauge rolled formed ASTM A570 Grade 33 structural quality steel channels (strut), cast iron roll and stand for hot pipe sizes 6 inches and over. Cross section suitable for span and loading. Suspension by outside hanger rods sized for total load on trapeze.
 5. Vertical Support: Steel riser clamp.
 6. Floor Support for Hot Pipe Sizes to 4 Inches and All Cold Pipe Sizes: Adjustable pipe saddle and pipe nipple attached to steel base stand, and concrete pier or steel support.
 7. Floor Support for Hot Pipe Sizes 6 Inches and Over: Adjustable cast iron roll and stand, steel screws and concrete pier or steel support.
 8. Design hangers to impede disengagement by the movement of supported pipe. Provide spring and neoprene hangers as required.
- F. Hanger Rod: Steel hanger rod zinc plated per ASTM B633.

2.8 THERMOMETERS

A. Acceptable Manufacturers

1. Terice
2. Taylor Instrument Company
3. U.S. Gauge
4. Weksler
5. Weiss

B. Dial Thermometer: Bi-metal type, case assembly of type 304 stainless steel, moisture proof heavy glass face, gasketed and hermetically sealed. Stem and fixed threaded connection of stainless steel, all welded construction. Provide 5-inch dial of heavy gauge aluminum with white matte finish, black graduation lines and numerals. Provide separable sockets of depth suitable for pipe size in which installed.

C. Tube Thermometer: ASTM E1, liquid in place thermometer. Cast aluminum case, black baked epoxy enamel finish, 9-inch minimum liquid filled tube, brass stem, adjustable angle type with locking device and with brass union type separable socket. Socket length to suit installation. Mercury filled thermometer not allowed.

D. Select range of thermometer to indicate normal operating temperatures at midpoint of scale. Scale division of 1 degree F for cold service and 2 degree F for hot service.

E. Install wells with stem extending to center of pipe. Fill wells with oil or graphite and secure caps.

2.9 PRESSURE GAUGES

A. Acceptable Manufacturers

1. Terice
2. Taylor Instrument Company
3. U.S. Gauge
4. Weksler
5. Weiss

- B. ASTM B40.1, Grade A phosphor bronze seamless Bourdon spring type with white face, black numerals, 4 ½-inch cast aluminum case, black baked epoxy enamel finish, brass bronze brushed movement and brass socket. Select range of gauge to indicate normal operating pressure of system at midpoint of scale.
- C. Provide ¼-inch brass coil siphon for steam gauge. For liquid gauge, provide brass snubber of material suitable for system fluid. Provide with needle valve.

2.10 IDENTIFICATION DEVICES AND LABELS

- A. General
 - 1. Products specified are manufacturer's standard products of categories and types required for each application as referenced in Part 3 of this section and elsewhere on the drawings or in Division 23 specifications. Where more than single type is specified for listed application, selection is Contractor's option, but provide single selection for each product category.
 - 2. Products shall comply with requirements of ANSI A13.1 and OSHA where applicable.
- B. Stencils: Standard stencils, prepared with letter sizes conforming to recommendations of ANSI A13.1. Minimum letter height is 1-1/4 inches for ducts and 3/4 inch for access door signs and similar operational instructions.
 - 1. Stencil Paint: Exterior, oil-based alkyd gloss black enamel, except as otherwise indicated. Paint may be in pressurized spray-can form.
 - 2. Identification Paint: Exterior, oil-based alkyd enamel in colors according to ANSI A13.1, except as otherwise indicated.
- C. Snap-On Plastic Pipe Markers: Manufacturer's standard preprinted, semirigid snap-on, color-coded pipe markers conforming to ANSI A13.1.
- D. Pressure-Sensitive Pipe Markers: Manufacturer's standard preprinted, color-coded, pressure-sensitive vinyl pipe markers, with permanent adhesive conforming to ANSI A13.1.
- E. Pipes/Insulation Smaller than 6 Inches: Full-band pipe markers, extending 360 degrees around pipe/insulation at each location.
- F. Pipes/Insulation 6 Inches and Larger: Either full-band or strip-type pipe markers, at least 3 times the letter height and of length required for label.
- G. Arrows: Either integrally with piping system service lettering (to accommodate both directions), or as separate unit, on each pipe marker to indicate direction of flow.
- H. Plastic Duct Markers: Manufacturer's standard laminated plastic, duct markers in the following color code:
 - 1. Green: Cold air
 - 2. Yellow: Hot air
 - 3. Yellow/Green: Supply air
 - 4. Blue: Exhaust, outside, return, and mixed air
 - 5. For hazardous materials exhausts, use colors and designs recommended by ASME A13.1

6. Terminology: Include direction of air flow, duct service, system identification
- I. Plastic Tape: Manufacturer's standard color-coded, pressure-sensitive, self-adhesive, vinyl tape, at least 3 mils thick. Width 1-1/2 inches wide on pipes with outside diameters (including insulation) less than 6 inches; 2-1/2 inches wide for larger pipes. Color shall comply with ANSI A13.1 unless otherwise indicated.
 - J. Valve Tags: Stamped or engraved brass with 1/4-inch letters for piping system abbreviation and 1/2-inch sequenced numbers. Provide a hole for fastener. Brass wire-link chain, beaded chain, or S-hook fasteners.
 - K. Access Panel Markers: 1/16 inch thick engraved plastic-laminate markers, with abbreviated terms and numbers corresponding to concealed device. Provide center hole for attachment.
 - L. Valve Schedule Frames: Glazed display frame, with screws for removable mounting on masonry walls for each page of valve schedule. Polished hardwood or extruded aluminum frame.
 - M. Engraved Plastic-Laminate Signs: ASTM D709, Type I, cellulose, paper-base, phenolic-resin-laminate engraving stock; Grade ES-2, black surface, black phenolic core, with white (letter color) melamine subcore, except when other colors are indicated. Fabricate in sizes required for message. Provide holes for mechanical fastening. 1/16 inch thick for units up to 20 square inches or 8 inch length, 1/8 inch thick for larger units. Self-tapping stainless steel screws or contact-type permanent adhesive.
 - N. Plasticized Tags: Preprinted accident-prevention tags, of plasticized card stock. Size approximately 3-1/4 by 5-5/8 inches. Brass grommets and wire fasteners.
 - O. Nomenclature: Large-size wording such as "DANGER," "CAUTION," or "DO NOT OPERATE", or as noted on the drawings in the specification.
 - P. Lettering and Graphics: Coordinate names, abbreviations, and other designations used in mechanical identification, with corresponding designations indicated. Use numbers, letters, and terms indicated for proper identification, operation, and maintenance of mechanical systems and equipment.
 - Q. Multiple Systems: Where multiple systems of same name are indicated, identify individual system number as well as service.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

- A. General
 - 1. Furnish, deliver, erect, connect, and finish in every detail all materials, equipment and accessories required for the Work.
 - 2. Include in the work and in the bid minor details not usually shown or specified, but manifestly necessary for the proper installation and operation of the various systems, the same as if specified or shown.

3. If any departures from the Contract Documents are deemed necessary, submit details of such departure and the reasons therefore to the Architect for approval.
4. Be responsible to request clarification from the Architect on any conflicts represented between the drawings and specifications.
5. Adequately guard all exposed moving parts of equipment, such that contact by operating personnel will not cause personal damage or injury.

B. Layout and Coordination with Other Trades

1. Layout Work from building and property lines and benchmarks provided, verify, and be responsible for the correctness of all measurements in connection with the Work. Any change made in major overall dimensions shown which affect the physical size, shape, or location of any part of the Work, whether due to field check or changes due to use of equipment of a manufacturer other than that used as basis of design shall cause no interference with other Work.
2. Examine the Drawings of other trades, cooperate and coordinate with other trades to insure that the Work can be installed properly as designed and planned without interference with other work or delay. Where interferences may occur and departures from the arrangements shown are required, consult with other trade involved. Come to agreement as to changed locations and elevations. Furnish all necessary templates, patterns, measurements, etc., for installation and for the purpose of making adjoining work conform. Furnish setting plans and shop drawings to other trades as required.
3. Investigate the structural and finish conditions affecting the Work. Offsets, bends or other items required may not be shown on the drawings; provide such offsets or bends as required to meet structural or finish conditions.
4. Coordinate layout with architectural ceilings and lighting layouts and similar work.
5. Coordinate and be responsible for the required clearances in shafts, chases, furred partitions and suspended ceilings. Coordinate and cooperate with the trades responsible for constructing such spaces, together with other trades sharing such spaces, and advise other trades of the requirements of the Work. Immediately submit for review large scale composite Drawings showing space requirements that exceed those shown.
6. Install systems so that they do not interfere with any openings, doors or windows, or with other work, and so as to permit proper access.
7. Install material and equipment as high as possible; at minimum, to clear the top of all doors, windows and other structural openings. Maintain maximum headroom and space conditions in every case. Where headroom or space conditions appear inadequate, notify the Architect before proceeding with the installation.
8. Except where greater clearance is specified or required by applicable codes, rules or regulations, install piping, ductwork, fittings, valves, etc., to provide not less than 1 inch between their finished covering and the structure or adjacent work of any kind. The minimum space between finished hot piping of any kind and adjacent electrical conduit shall be 6 inches.
9. Make reasonable modifications in the layout to provide proper clearances or accessibility, or to prevent conflict with the work of other trades, at no increase in the Contract sum.
10. Prepare large scale composite working drawings, including such section views and details as are necessary to clearly show how the systems are to be installed in relation to the work of other trades. Issue such Drawings to the other trades for coordination of their work. Where such drawings show deviations from the Contract Drawings or conflict with other trades such that reasonable modifications cannot be made, detail and submit such deviation or conflict to the Architect for review.

11. If work is installed before coordinating with other trades so as to cause interference with the work of other trades, or as not to provide proper access for maintenance or repair, make necessary changes to correct the condition at no increase in the Contract sum.
12. For alterations to existing facilities, be fully responsible for coordinating work with all existing conditions. Verify location of existing piping, ductwork and equipment in the field. Relocate or offset new piping and ductwork, and make reasonable modifications to existing piping and ductwork, as required to fit in available space whether or not such relocation of offset is shown on the Drawings.

C. Manufacturer's Instructions and Recommendations

1. Perform the installation, cleaning, testing, calibration, and start up of all material and equipment in accordance with the manufacturer's instructions and recommendations. Such instructions and recommendations are hereby made part of the specifications.
2. Should a conflict exist between specifications and manufacturer's instructions, consult with the Architect.

D. Electrical Rooms

1. Do not install any piping, ductwork or equipment in or through an electrical room or similar room containing electrical equipment, other than piping, ductwork or equipment exclusively serving the room or equipment in the room.
2. If there is a conflict between the above requirement and the Drawings, the above shall govern. If reasonable modifications cannot be made to accommodate this requirement, obtain instructions from the Architect before proceeding with the work.

E. Painting

1. Except where specified otherwise in Division 23, Work of Division 09 will provide painting of HVAC systems, equipment and components.
2. Protect all equipment from rust, corrosion, and similar damage by either factory applied or field applied protective coatings.
3. Repair marred and damaged factory painted finishes with manufacturer's touch up paint and application procedures to match original factory finish.

F. Wall and Ceiling Access Doors

1. Access Doors shown on Architectural Drawings will be provided under Division 08.
2. Furnish access doors required for access to concealed dampers, valves, air vents, traps, cleanouts, unions, expansion joints, and other equipment where no other means of access is available. Access doors shall be of adequate size for the service requirements, minimum clear opening of 14 inches by 16 inches.
3. Access doors shall be as specified in Division 08. Coordinate locations of access doors with all trades.

3.2 PENETRATIONS

A. General

1. Coordinate with other trades as to the size and location of openings to be provided in new floors, walls, roofs and ceilings as construction progresses.
2. Do not cut openings in new or existing floors and walls without proper structural reinforcement.
3. Install both piping and seals so as to maintain integrity of seals with expansion and contraction of piping.

B. Sleeves

1. Provide each pipe, duct or conduit passing through a masonry or concrete wall, floor or partition, and elsewhere as indicated, with a sleeve made from standard weight galvanized steel pipe for pipe or conduit and 12 gauge galvanized sheet steel for ducts, with smooth edges, securely and neatly set in place.
2. Select sleeves two pipe sizes larger than any pipe or conduit to accommodate pipe, insulation, and jacketing without touching the sleeve and shall provide minimum of 3/8 inch clearance.
3. Be responsible for the proper location and alignment of all sleeves.
4. Extend wall and partition sleeves through and cut flush with each surface unless otherwise indicated or specified.
5. Place sleeves imbedded in concrete floors or walls in the forms before concrete is poured; sleeves shall have integral water stop flanges, where they are to receive either water tight or hydrostatic seals.

C. Fire Rated Penetrations

1. Provide through-penetration fire-stop sealing system for pipe, duct and conduit penetrations through fire or smoke rated construction. Refer to Division 07 for through- penetration fire stop sealing system.
2. Coordinate with Division 07 to determine requirements for sleeves and clearances.
3. Select duct sleeve sizes to suit requirements of manufacturer of fire and/or smoke dampers.

D. Interior Non-Rated Wall Pipe Penetrations

1. For acoustically treated partitions, and walls between mechanical equipment rooms and occupied spaces, fill annular void at penetration with acoustical sealant.

3.3 ALTERATIONS AND CONNECTIONS TO EXISTING FACILITIES

A. Refer to Division 01 Section "Cutting and Patching" and Division 02 Section "Selective Structure Demolition" for general demolition requirements and procedures.

B. Make all necessary alterations to existing Division 23 systems as required for removing or for connecting or extending these systems to new work and for revisions in existing work as indicated and as required, whether indicated or not. Match new materials in altered systems with existing materials unless otherwise indicated.

C. Continuity of Existing Services

1. Perform alterations and connections to existing facilities with a minimum of interruption. Where interruption is necessary, prepare a time schedule for shutdown activities, coordinate with Architect, Owner and other trades, and obtain written approval from Owner prior to

proceeding with the work. Include work scheduled for off hours, when Owner requires that shutdown and interruption of facilities occur during unoccupied times.

2. Prepare and set notices on services and equipment that are temporarily shut off or disconnected.
- D. Provide shutoff valves to isolate new work from existing and temporary or permanent connections to new work as required for proper testing and cleaning of new work.
- E. All relocations of existing work shall be accomplished using new materials and accessories unless specifically noted otherwise.
- F. Where equipment, ductwork and piping is removed or disconnected under Division 23, perform the work in such a manner that no damage is done to the structure or remaining portions of the existing systems. Do not under any circumstance place stress on existing pipe and fittings that are to be reused. Be fully responsible for and repair, at no additional expense to the Owner, any leaks developing in existing piping due to failure to take proper precautions when making alterations.
- G. Disconnect, demolish, and remove HVAC systems, equipment, and components indicated to be removed.
1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 2. Piping to Be Abandoned in Place: Do not abandon any piping in place unless specifically noted to do so. Drain piping and cap or plug piping with same or compatible piping material.
 3. Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
 4. Ducts to Be Abandoned in Place: Do not abandon any ductwork in place unless specifically noted to do so. Cap or plug ducts with same or compatible ductwork material.
 5. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 6. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 7. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
 8. All materials and equipment removed or disconnected by Division 23, which is not to be reused or delivered to Owner, shall be removed from the premises. Provide owner first right of refusal of equipment prior to removal from site.
- H. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.
- I. Remove all piping, ductwork and equipment hangers and supports.
- J. Cap tight unused connection at mains and risers behind finished surfaces.

3.4 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 23 Sections specifying piping systems.

- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Install all piping in accordance with best practices of trade and latest code requirements. Locate groups of pipes parallel to each other, spaced to permit valve servicing. Use uniform system materials throughout building.
- D. Install components having pressure rating equal to or greater than system operating pressure.
- E. Keep all piping as high as possible, consistent with proper pitch, to maintain maximum head room. Cut piping accurately to measurements established at building, work into place without springing, forcing or cutting of the building structure, and install as directly as possible without sags between connecting points parallel with or at right angles to building construction, except as required to obtain pitch.
- F. Pitch all systems for proper venting at high points and to drain at low points where the systems can be completely emptied. Install vents at all high points and drains at all low points, including where offsets and bends in horizontal pipe runs create a low point. Provide drain points with bronze hose end drain valves.
- G. Do not install piping above or through electrical rooms, telecommunication rooms, or similar room having a large collection of electrical equipment.
- H. Keep pipe and fittings clean from cutting burrs, foreign matter and defects in structure and threading. Make all cuts square. Ream after cutting. Bevel plain ends of steel pipe. Clean off scale and dirt inside and outside before assembly. Remove welding slag or other foreign matter inside and outside.
- I. Install piping within building concealed in walls, furred spaces, pipe spaces or above suspended ceilings. Do not build in or bury horizontal piping within partitions. Install exposed piping as closely as possible to walls, ceilings and columns, allowing space for installation of insulation and access for valve operation.
- J. Install piping sections using greatest length possible in all cases. The use of short lengths socketed together will not be allowed.
- K. The use of lampwick or other material for packing threads, caulking or wrapping of joints to stop or prevent leaks or correct faults is not permitted. The use of long screws having right and left hand threads or couplings is not permitted.
- L. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- M. Install piping to permit valve servicing and application of insulation.
- N. Provide offsets and loops as required for piping crossing a building expansion joint to accommodate building movement, whether or not shown on the drawings.
- O. Changes in Pipe Size and Direction

1. Make reduction or increase in pipe size with fittings. Use eccentric reducing fittings in horizontal piping. Use reducing tees in pressure piping for side outlet reduction only, not on run. Bushed fittings, notched or straight runs to form tees, or any similar fabrication method will not be permitted.
2. Make changes in direction with standard fittings. Mitering of pipe to form elbows or similar fabrication method will not be allowed. Bending of piping will not be permitted.

P. Electrolysis Control

1. Install copper or brass piping or tubing in such a way as not to touch or come in contact with ferrous metals.
2. Where ferrous piping or equipment is connected to copper or brass piping, make connection with insulating or dielectric union to prevent electrolytic action between the ferrous and nonferrous metals. At branch connections off mains, provide shut off valve upstream of dielectric union in order to isolate downstream union.
3. Where copper or brass piping, tubing or fittings are anchored to, supported by, or come in contact with ferrous metal construction, provide an insulating nonconductor spacer of rubber, plastic or equivalent material to assure prevention of electrolysis.

Q. Equipment Piping

1. Verify final locations of equipment for rough in of piping connections.
2. Provide shut off valves in the supply and return to each item of equipment. Suitably locate equipment isolation valves to facilitate removal of equipment.
3. Provide piping from pump glands, cooling coil drain pans, relief valves or other drainage to spill over open sight drains, floor drains, or other trapped acceptable discharge, terminating with plain end cut at a 45 degree angle.

R. Expansion and Contraction of Piping

1. The piping installation shall be free of stress. Run all piping with full allowance for expansion or contraction. Base expansion calculations on 50 degree F installation temperature to 200 degree F for hot water systems and temperature of steam pressure for steam systems, plus 30% safety factor.
2. Evaluate the complete piping layout and notify Architect of additional anchors or expansion joints and any deviations required to compensate for expansion.
3. Make connections to equipment in such a manner as to eliminate undue strains in piping and equipment. Install sufficient number of elbow swings to allow for proper expansion and contraction of piping at the point of connection to mains and equipment.
4. Fabricate expansion loops with long radius welded fittings in steel piping and with long radius copper sweat fittings in copper piping.
5. Provide adequate pipe guides on each end of the expansion device to preserve alignment and pitch.
6. Install pipe hangers and supports in such a manner as to not cause an anchor condition in any direction.

S. Pipe Anchors

1. Install anchors where required to direct pipe expansion properly into expansion joints, loops or offsets and to prevent transfer of loading and stresses to connected equipment.

2. Pipe anchors may consist of heavy steel clamps bolted or welded to piping and provided with lugs and bolts for clamping and attaching anchor braces. Design anchors to restrict pipe movement and fasten to main members of building structure in most effective manner to secure desired results.
3. Do not attach supports, anchors or stays in places or in such a manner that will damage construction or integrity of the structure, either during installation, by weight of the pipe, or by expansion and contraction of the pipe.

T. Pipe Insulation Inserts and Shields

1. Refer to Section of Division 23, "HVAC Insulation" to coordinate specific insulation thicknesses and requirements. At hanger locations for insulated piping 1 ½ inches and larger where hanger support is outside the insulation, provide inserts of exploded silica pipe insulation between pipe and hanger. Density and compression strength suitable for pipe size and support spacing as required by MSS SP-58, Paragraph 9 and MSS SP-69, Table 3. Provide inserts as required for smaller piping to prevent deformation of insulation. Inserts of equal thickness to adjoining insulation, provided with vapor retardant seals, and of proper length to fully support pipe at each hanger location. Manufactured by Value Engineered Products Max Span; or equivalent.
2. At all hanger locations for insulated piping where hanger is outside of insulation, provide galvanized sheet steel shield formed to fit insert/insulation, extending up to pipe centerline. Length 12 inch minimum when insert is not required. Where inserts are provided, length of shield 4 inches less than insert length. Provide shields 16 gauge for piping up to 4 inches, 12 gauge for piping 6 inches and larger. Shields shall have preformed ridges on each side of hanger to prevent hanger from slipping along shield.
3. Preformed insulated pipe saddles may be used in lieu of insert and shield where appropriate. Thickness of insert or pipe saddle same thickness as pipe insulation.

3.5 WELDING, SOLDERING AND BRAZING

- A. Do not employ workers who have not been fully qualified and certified for the specified procedures.
- B. Pipe Welding, Black or Galvanized Steel Pipe: Perform all welding of black or galvanized steel pipe by shielded metallic arc method of fusion welding, in accordance with welding procedures of AWS (American Welding Society) D10.12 recommended procedures for welding low carbon steel pipe, or other approved procedure, conforming to requirements of ASME/ANSI B31.1 for high pressure steam boiler piping and B31.9 elsewhere.
- C. Pipe Welding Stainless Steel Pipe: Refer to other Sections of Division 23 for welding requirements.
- D. Structural Steel Field Welding: Comply with AWS D1.1 procedures for manual shielded metal- arc welding, appearance and quality of welds, methods used in correcting welding work, and the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Finish welds at exposed connections so that no roughness shows after finishing, and so that contours of welded surfaces match adjacent contours.

23 05 00 - 17 of 26

- E. Soldering: Comply with the requirements of the AWS Soldering Manual.
- F. Brazing: Comply with the requirements of the AWS Brazing Manual and AWS A5.8 specification for filler materials for brazing.

3.6 UNIONS

- A. In Screwed Steel Pipe, 2 inches and smaller: Screwed, Class 250 malleable iron, brass to iron seat, ground joint union with brass seat ring pressed into head piece. Provide galvanized unions in galvanized pipe.
- B. In Welded Steel Pipe, 2 inches and smaller: Class 3000 carbon steel socket welded union, steel to steel seat and ground joint. Provide stainless steel in stainless steel piping.
- C. In Copper tubing, 2 inches and smaller: Class 200 wrought copper, solder type, brass ground joint union.
- D. In Brass Piping, 2 inches and smaller: Class 250 cast bronze, screwed ends, brass ground joint unions. Provide chromium plated unions in chromium plated piping.
- E. Provide companion flanges in piping 2 ½ inches and larger.

3.7 PIPING CONNECTIONS

- A. Refer to other Sections of Division 23 for additional requirements.
- B. Flanged Connections: Make with nonasbestos gaskets of 1/8 inch thick best quality material as recommended by manufacturer for the service application. For steam piping, factory manufactured for flange/connection size/type as manufactured by Flexitallic. For other piping services either Flexitallic or gaskets factory cut for flange size as manufactured by Garlock Packing Division, Colt Industries, or equal. Align flange surfaces parallel. Install gasket concentrically positioned. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly using torque wrench.
- C. Mechanical Couplings: Prepare pipe and install in accordance with manufacturer's instructions. Standard wall steel pipe either roll or cut grooved at Contractor's option, all sizes, except provide cut grooved as required to accommodate thermal expansion and contraction. Heavy wall steel pipe cut grooved all sizes. Light wall steel pipe roll grooved all sizes. Copper tubing roll grooved.
- D. Soldered Joints: Unless noted otherwise, make with appropriate flux and solder. Clean tubing ends and fittings before assembly. For piping 2 inch and larger tin tubing and fittings before assembly. For tubing 2-1/2 inch and larger use circular flame torch for soldering. The use of lead flux or solder and finishing with 50-50 solder is prohibited.
- E. Threaded Pipe: Make full, clean-cut standard ANSI/ASME B1.20.1 taper pipe threads using sharp dies. Carefully cut, ream or file out to size or bore, removing all chips. Use Schedule 80 pipe for all screwed close and shoulder nipples. Do not use all thread nipples. Provide teflon tape or other approved nontoxic joint compound, applied to male thread only.

- F. Welding Connections: Use only factory made welding fittings, same weight as piping, on welded pipe, except that Bonney Forge WELDOLET or THREADOLET, or Allied Type 1 Branchlet fittings, of same weight as connecting piping, may be used for branch takeoffs two or more commercial pipe sizes smaller than main. All elbows long radius.
- G. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
 - 1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
 - 2. CPVC Piping: Join according to ASTM D2846/D2846M Appendix.
 - 3. PVC Pressure Piping: Join schedule number ASTM D1785, PVC pipe and PVC socket fittings according to ASTM D2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D2855.
 - 4. PVC Nonpressure Piping: Join according to ASTM D2855.
- H. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D3139.
- I. Plastic Nonpressure Piping Gasketed Joints: Join according to ASTM D3212.
- J. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D2657. Plain-End Pipe and Fittings: Use butt fusion. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.8 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

3.9 PROTECTION OF WORK

- A. Clean pipe, tubing, fittings, valves, piping specialties, ductwork and equipment before installation and keep clean while the work is in progress.
- B. Securely close open ends of pipe and tubing and openings in other material and equipment until installed, during installation, and until finally connected or otherwise finished, with caps, plugs or other approved closure devices designed for such service.
- C. Protect factory finished equipment, fixtures and devices with approved temporary covering material where those items are installed so as to be subject to accidental damage or abuse. Contractor shall remove all temporary covering material at the conclusion of the work or as directed.

- D. Protect the work of other trades and property of Owner from damage and assume full responsibility for the cost of repairing or replacing any damage to such work or property caused by the performance of the work under Division 23.

3.10 CLEANING OF SYSTEMS

- A. Refer to Division 23 “HVAC Water Treatment” for additional cleaning and system flushing requirements.
- B. Following completion of system testing, thoroughly clean all piping systems by flushing with water or other approved method, or as otherwise specified. Completely remove all dirt, scale, oil, grease and other foreign substances that may have accumulated in systems during installation.
- C. Carefully wipe out, wire brush, or if necessary, sand blast sections of pipe lines between temporary or permanent strainers and equipment they are to protect. Replace all permanent strainer screens with temporary screens during cleaning process. Remove temporary screens and reinstall permanent screens after cleaning is completed.
- D. Disconnect automatic devices that can become clogged during cleaning process and do not connect permanently until cleaning process is complete.
- E. Clean all ductwork, piping and equipment of dirt, scale, plaster, concrete, splattered paint and other foreign matter.
- F. Clean all grease and cuttings from stainless steel piping and trim.
- G. Clean all strainers, dirt pockets, drip legs, traps and other accessories that may collect foreign matter.

3.11 GROUTING

- A. Description: ASTM C1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
 - 1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.
- B. Packaging: Premixed and factory packaged. Mix and install grout for HVAC equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- C. Clean surfaces that will come into contact with grout. Provide forms as required for placement of grout. Avoid air entrapment during placement of grout.
- D. Place grout, completely filling equipment bases. Place grout on concrete bases and provide smooth bearing surface for equipment. Place grout around anchors. Cure placed grout according to manufacturer’s written instructions.

3.12 HANGERS AND SUPPORTS

A. General

1. Support major piping 3 inch and above, ductwork, tanks and other equipment to the structure above (beams and girders) or by means of struts or brackets to columns. Do not support from floor or roof decks. Do not overload structural members to which supports are attached. Hanger spacing not to exceed MSS SP69.
 - a. Provide hangers, rollers, threaded rods, turnbuckles, deflection guides, deflection provisions, inserts, beam clamps and all miscellaneous specialties for attachment of hangers and supports to structure.
 - b. Provide all rods, angles, rails, struts, brace plates, structural steel, platforms and other items required for suspension or support of piping, ductwork, tanks and equipment.
 - c. Provide supplemental angles, channels, plates or other reinforcement where supports are required between building structural members. Size supports for weight of duct, pipe, pipe contents, equipment fittings and other items, plus a 200 pound live load. Attach supplemental supports in a manner that will not weaken or overload structural members. Weld steel according to AWS D-1.1.
 - d. Attach by welding, clamping, concrete inserts, drilled in mechanical type anchors (Hilti or equal) and other approved means. Adhesive type anchors are not approved.
 - e. Place grout under supports for equipment, and make a smooth bearing surface.
 - f. For seismic restraint, provide double-sided beam clamp loaded perpendicularly to beam for seismic anchor point.
2. No lead shield anchors, powder or power fasteners permitted for attachments.
3. Do not use perforated strap hangers. Do not use steel strap hangers on piping.
4. Wherever possible, support shall be provided directly to main steel or concrete framing beams. If spacing of structure exceeds spacing required to support the mechanical work, supplemental channel or unistrut framing shall be designed and provided by the Contractor.
5. Support all mechanical work independently of other trades. Under no circumstances shall work be supported or suspended from ceiling grids, piping or other supports by other trades.
6. Before drilling concrete for attachments, carefully check Drawings and Shop Drawings for such concrete and locate drilled holes to miss reinforcing by at least 1 inch.

B. Pipe Hangers and Supports

1. Unless otherwise required to avoid overloading of structural members or for seismic restraint, support horizontal steel and copper piping as follows:

Nominal Pipe Size (inch)	(a)Maximum Distance Between Support (feet)		Hanger Rod Diameter (inch)
	Steel Pipe	Copper Tubing	
up to 3/4	6	5	3/8
1 to 2	6	6	3/8
2-1/2 to 3-1/2	10	8	1/2
Trapeze Hanger Rod			(b)

- a. Provide additional supports as required to avoid overloading of supporting structure. Reduce distance where so required by applicable codes.
 - b. As required to carry weight of trapeze channel, span of piping with contents, insulation and supports, plus a 200 pound live load.
 - c. Install hangers to provide minimum 1/2 inch clear space between finished covering and adjacent work.
2. Install additional attachments at concentrated loads, including valves, flanges, guides, strainers and expansion joints/loops.
 3. Place a hanger within one foot of each horizontal elbow.
 4. Use hangers that are vertically adjustable 1-1/2 inch minimum after piping is erected.
 5. Vertical Piping Support:
 - a. Unless otherwise required to avoid overloading, of structural members or for seismic restraint, support vertical piping with clamps spaced appropriately as to type and weight of piping, minimum spacing at every other floor and below roof. Support vertical soil pipe at each floor at hub. For exposed piping in stairs and finished areas, locate clamps below floor and secure to structure below floor as required.
 - b. Support vertical steel pipe at a maximum of 15 feet spacing.
 - c. Support vertical copper pipe and tubing at a maximum of 10 feet spacing.
 6. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers. Space hangers for smallest pipe size or provide intermediate supports for smaller pipe as specified above for individual pipes.
 7. Where practical, support riser piping independently of connected horizontal piping.
 8. Support pipe runs in a manner to minimize stress in the pipe or tubing and on bodies of valves and fittings.
 9. Install hangers and supports to allow controlled movement of piping systems, permit freedom of movement between pipe anchors, and facilitate action of expansion joints, expansion loops, expansion bends, and similar units, and so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.
 10. Install hangers and supports to provide indicated pipe slopes and so that maximum pipe deflections allowed by ASME B31.9 "Building Services Piping" is not exceeded.
 11. For piping subject to sweating (e.g.: domestic cold water, chilled water, refrigerant suction, drain piping for air conditioning equipment, heat recovery piping, etc.) and for insulated piping requiring roller supports, install hangers outside insulation and provide pipe insulation protection shields as specified in this section. For all other piping, hanger may be attached to the piping before insulation is applied or may be installed outside the insulation with insulation protection shields.
 12. Do not support nonferrous piping with ferrous materials even on a temporary basis.
 13. Do not support piping or ductwork from other piping or ductwork.
 14. Install hanger rods subjected to tension only. Accomplish lateral and axial movements by proper linkage in rod assembly. Secure hanger to hanger rod with two bottom lock nuts.
- C. Duct Hanger and Supports: Refer to Section 23 30 00 "Ductwork and Ductwork Accessories".

3.13 IDENTIFICATION

- A. Identify all new and altered equipment, new and altered exposed and concealed ducts and new and altered exposed and concealed pipe with legible lettering, applied after finish painting, in a color to contrast with basic color in accordance with ANSI A13.1 and OSHA.
- B. Identify piping by name of pipe content and direction of flow near major equipment items, adjacent to valves or flanges, adjacent to gauges or thermometers, at each tee, at changes in direction, on each side of a penetration of a wall or floor, at each access door or panel and then at maximum 20 foot centers in congested areas and 50 foot intervals elsewhere; indicate flow direction with arrows. Identification shall be by means of plastic markers or tape or painted on the finished pipe surface by using stencils. Lettering shall not be smaller than one third of the pipe diameter and directional arrows not less than 1/2 inch wide and 12 inches long.
- C. Identify equipment and operating devices such as switches, starters and similar equipment, by the equipment numbers shown on Drawings or by the Owner's numbering system, if so directed.
 - 1. Include the type of service or the name of areas served.
 - 2. Lettering minimum 1 inch high.
 - 3. Nameplates shall be two tone plastic, or printed white paper enclosed in a transparent, laminated plastic case with permanently sealed edges.
 - 4. Attach securely to equipment, or where this is not practicable attach by brass link chains.
 - 5. Do not stencil surfaces exposed in public areas.
- D. Furnish for each valve, except those immediately adjacent to apparatus, a 2-inch diameter nonferrous metal tag with figures stamped on the tag.
 - 1. Number tags for HVAC H-1, H-2, etc.; Use Owner's numbering system if so directed.
 - 2. Fasten tags to valves with nonferrous S hooks and nonferrous chains.
 - 3. Where valves are located above removable acoustical tile ceilings, identify the tile section below the valves by an approved color pin system.
 - 4. Furnish duplicate framed schedules showing the location of each valve, system or equipment it serves, manufacturer, and figure number.
- E. Identify exposed ductwork similar to piping.
- F. Identify access doors to fire dampers with access panel markers or by stencils with the words "Fire Damper Access" except for dynamic fire dampers, use the words "CAUTION Dynamic Fire Damper Access". Provide approved markers to locate fire dampers concealed above ceilings.

3.14 TESTING OF PIPING SYSTEMS – COMMON REQUIREMENTS

- A. Refer to individual piping system specifications elsewhere in Division 23 for additional piping system testing requirements.
- B. Provide materials and equipment required for testing. Test and make tight all new piping systems and alterations and connections to existing piping system.
- C. Take precautions during testing to insure safety of personnel and equipment. Provide systems to be pressurized with appropriate gauges and blowouts or relief valve set at a pressure no more than one

third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test. Make good at no increase in Contract sum damage to work or work of other trades caused by failure to observe proper precautions.

- D. Test piping systems prior to application of insulation. Testing as stipulated herein shall be considered minimum, and where tests stipulated by lawful jurisdictional authorities exceed these requirements, such more stringent tests shall be performed. Tests shall be witnessed and approved by the authorities having jurisdiction over the work.
- E. Concealed work shall remain uncovered until required tests have been completed. Provide proper sectionalizing devices so that portions of a system may be tested as appropriate.
- F. Isolate and exclude from tests all in line equipment, instruments, gauge glasses, flow meters and all other devices not capable of withstanding test pressure.
- G. Use ambient temperature water as testing medium, except where otherwise specified and except where there is a risk of damage due to freezing.
- H. Apply soap solution to all joints of pneumatically tested systems while system is being subjected to test pressure.
- I. Maintain test pressures sufficient length of time to permit thorough inspection of all joints. Where leaks are observed, replace defective work or material. Caulking of screw joints or holes is not acceptable. Repeat entire test as many times as necessary, until successful completion of test with no leaks.
- J. Prepare written report of testing.

3.15 BALANCING, ADJUSTING AND PERFORMANCE TESTING

- A. Testing, adjusting and balancing of air and water systems will be provided under Division 01 "Testing, Adjusting and Balancing of HVAC Systems".
- B. Installing Contractor(s) responsible for the work specified in Division 23 shall perform all work necessary to place systems in full operation prior to start of testing, adjusting and balancing work. In addition, Installing Contractor shall perform certain additional preparatory work required for testing, adjusting and balancing as specified in various Sections of Division 23.
- C. Provide notice upon completion of all preparatory work and all initial operational testing required as part the Work. Perform additional operational testing on equipment, or systems, as directed and to extent and for duration deemed necessary, to demonstrate that systems are performing properly and delivering quantities in accordance with the requirements of the Contract Documents.
- D. Cooperate with testing, adjusting and balancing Contractor in coordination and scheduling of testing, balancing and adjusting work. Furnish approved manufacturer's technical data and shop drawings for equipment, including fan and pump performance curves.

3.16 INSTRUCTION AND DEMONSTRATION

- A. Upon completion of all work and all tests, and at a time mutually agreed on by Contractor, Architect and Owner, Installing Contractor shall operate systems in all parts and at their expense for sufficient length of time to demonstrate the mode of operation and definitively determine whether the systems as a whole are in first class working condition. Immediately correct, at no cost to Owner, any defects that may develop during this period of operation and place systems in first class working condition before being finally turned over to Owner.
- B. Provide experienced operating personnel to instruct Owner's authorized employees in the operation, adjustment and maintenance of systems and equipment installed under this Contract. Provide instructions for the period of time appropriate for the size and complexity of the system, or as requested by Owner.

3.17 MANUFACTURER'S SUPERVISIONS AND STARTUP SERVICE

- A. Include manufacturer's supervision/startup/certification and special instruction service for equipment as specified in various Sections of Division 23. Be responsible for properly making arrangements for and coordinating with the manufacturer to provide the specified work. Make any corrections/modifications to the installation as required by the manufacturer at no additional cost to Owner.
- B. The manufacturer's engineer or authorized service personnel shall check the equipment for its conformance to the Specifications, for proper installation and run the system in all modes of operation to ascertain that the unit will function properly. Make necessary adjustments to insure optimum efficiency and trouble free service.
- C. After completion of the startup procedures, the manufacturer shall certify, in writing, that the equipment is installed in accordance with their requirements and is operating in accordance with the intent of the Specifications.

3.18 COMMISSIONING

- A. Commissioning will be provided as specified in Division 01 Section "Commissioning". All contractors and subcontractors of the various sections of this specification shall cooperate and participate in the commissioning work in accordance with requirements of Division 01 Section "Commissioning".
- B. Ensure participation of major equipment manufacturers or their representatives.
- C. Equipment and systems/subsystems installed under this section are expected to be in full compliance with the design intent by the commissioning phase. Notify the Commissioning Agent when any specific piece of equipment or specific system/subsystem is ready for commissioning. Be prepared to demonstrate system readiness.
- D. Equipment or systems/subsystems having incomplete work or exhibiting problems related to noncompliance with the design intent shall require commissioning. The contractor for this section shall be fully responsible to make all necessary corrections to incomplete or non-complying work at

their own expense and shall pay the Commissioning Agent per diem rate for recommissioning such incomplete or non-complying work.

END OF SECTION 23 05 00

SECTION 23 05 13 – ELECTRICAL REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes extent of electrical equipment and electrical wiring that is responsibility of Division 23.
- B. Section includes general requirements for motors installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.
- C. Related Sections:
 - 1. Variable Frequency Motor Speed Controllers furnished by Division 23 are specified in Division 26.

1.3 REFERENCE STANDARDS

- A. ANSI/IEEE 112 (C50.20): Test Procedure for Single Phase Induction Motors.
- B. ANSI/IEEE 114 (C50.21): Test Procedure for Polyphase Induction Motors and Generators.
- C. NFPA 70: National Electric Code (NEC)
- D. UL: Underwriters Laboratories

1.4 SUBMITTALS

- A. Product Data: Include with equipment submittals, data pertinent to electrical characteristics; motor size, type, power requirements, wiring requirements.

1.5 QUALITY ASSURANCE

- A. Provide electrical products, including those factory mounted or factory furnished, which have been tested, listed and labeled with Underwriters' Laboratory (UL) or Electrical Testing Laboratory (ETL).
- B. There shall be no field modifications made to any materials, equipment and systems that would violate the listing and labeling.

- C. Comply with Division 26, NEC and NEMA as applicable to wiring methods, materials and equipment and equipment, construction and installation.

1.6 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.
- B. Duct Smoke Detectors: Duct mounted smoke detectors will be furnished by Division 28 and installed by Division 23. Detectors will be wired to Fire Alarm system by Division 28.
- C. Smoke Dampers: Smoke dampers will be provided by Division 23. Smoke damper will be wired to the Fire Alarm system by Division 28. Wiring and addressable interface module will be provided by Division 28.
- D. Air Volume Control Boxes: Air volume control boxes with integral 120/24 volt transformer will be provided by Division 23. Control wiring to and from air volume control boxes will be provided by Division 25.
- E. Wiring Under Division 26 “Electrical”
 - 1. Power wiring under Division 26 will include power feeders from source of building power to wiring terminals on the equipment, unit mounted disconnects, or control panels.
 - 2. Where disconnect switches for equipment are provided by Division 26, power wiring under Division 26 will include wiring from disconnect to wiring terminals on the equipment.
- F. Wiring Under Division 25 “Instrumentation and Control For HVAC”
 - 1. Wiring under Division 25 shall include all connections to control devices, wiring of pressure and flow control switches, flow meters and similar mechanical-electrical devices for mechanical systems to control panels, interlock wiring, control relays, and minor power wiring to auxiliary components for major pieces of apparatus such as damper motors, solenoid valves and control valve motors.
- G. Provide all other power and control wiring for Division 23 systems and equipment in accordance with the requirements of Division 26, required for complete operation, including wiring that is specified for factory prewired equipment, but not so provided.
- H. Short Circuit Current Ratings (SCCR) for HVAC Equipment
 - 1. Unless otherwise noted, the listed short circuit current rating (SCCR) of all motor controllers, disconnects, contactors, protective devices and associated assemblies that are integral or external to electrically powered mechanical equipment (except for controllers rated less than 2HP at 300V or less and listed exclusively for general purpose branch circuits), shall be

equal to or greater than the electrical distribution equipment feeding it. The SCCR value shall be clearly labeled on the equipment. Refer to the electrical drawings, specifically the single line diagrams, panelboard schedules and HPE schedules to obtain this information. Where the minimum SCCR rating is not specifically identified on the documents at the referenced equipment, the SCCR rating of the HVAC equipment shall be equal to or greater than the kAIC rating of the electrical distribution equipment feeding the electrically powered mechanical equipment.

HVAC equipment submittals shall include the SCCR rating meeting the above requirements. The contractor may elect to perform short circuit calculations to determine the available short circuit rating at the connection point of the applicable equipment. If the SCCR rating is determined to be less than the values indicated on the contract documents, the submittal shall include the calculations (inclusive of all input and output data), in particular the short circuit reduction on the feeder for each specific piece of equipment, and should show that the equipment rating meets or exceeds this calculated value. The calculations must be signed and sealed by a professional engineer (PE) registered in the project state.

All information required to show overall compliance with the above short circuit rating requirements shall be submitted as part of the product submittal. Submittals omitting this required information will be returned 'Resubmit' or 'Rejected'.

No change orders or additional costs will be accepted by Owner or Architect to provide upgraded equipment in order to meet the above requirements or to perform any of the calculations described above.

I. Electrical Ratings

1. The motor horsepower and apparatus full load amperage ratings shown or specified are Basis of Design values and the corresponding sizes of feeders and other electrical equipment indicated to serve them are minimum sizes required to meet the Basis of Design requirements. When motors of greater horsepower and apparatus with larger full load amperage ratings are furnished as necessary to meet the design intent of the various sections within the specification, the associated changes to the electrical system (i.e. increase in capacity of the feeders and other electrical equipment serving them) shall be submitted for approval and be completed by the Contractor at no additional cost to the Owner.

PART 2 - PRODUCTS

2.1 ELECTRICAL WIRING

- A. Electrical wiring provided by Division 23 shall be in accordance with the requirements of Division 26.

2.2 MOTORS

- A. Acceptable Manufacturers:
 1. Toshiba
 2. General Electric

3. Lincoln
4. Reliance
5. U.S. Electric
6. Marathon
7. Baldor

B. General Motor Requirements

1. Construct in accordance with the latest NEMA MG 1 standards and UL 1004, test in accordance with NEMA MG 1, ANSI/IEEE 112 and ANSI/IEEE 114. Except where more stringent requirements are indicated, comply with the following.
2. Single phase/3 phase (polyphase) and voltage characteristics as scheduled on drawings, 60 Hz.
3. Service factors indicated for motors are minimum values and apply at frequency and utilization voltage at which motor is connected. Provide motors that will not operate in service factor range when supply voltage is within 10 percent of motor voltage rating.
4. Class B insulation unless otherwise specified.
5. Provide each motor with a conduit terminal box or factory installed cord set with molded plug as applicable.
6. Provide motors with grease or lubrication fittings. For specific applications, and at the approval of the Architect, the use of permanently lubricated or lifetime bearings will be permitted.
7. Open dripproof (ODP) or totally enclosed fan cooled (TEFC) type with a minimum service factor of 1.15 unless otherwise specified herein or in other section of the specifications.

C. Motor Characteristics

1. Duty: Continuous duty at 100 percent of rated capacity at ambient temperature of 40 deg C and at altitude of 3300 feet above sea level.
2. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

D. Polyphase Motors

1. Squirrel cage induction type conforming to the following requirements unless noted otherwise:
2. Description: NEMA MG 1, Design B, medium induction motor, unless otherwise required by starting torque.
3. Separate winding for each speed for multispeed motors.
4. Efficiency:
 - a. Single speed motors larger than 100 Hp shall be of "Energy efficient" design as defined in NEMA MG-1.
 - b. Single speed motors 75 Hp shall be of "Premium efficiency" design, as defined in NEMA MG-1. Class F insulation.
 - c. Motors driven by variable frequency motor speed controller (VFD) shall be "Premium" efficiency, as defined in NEMA MG-1. NEMA Design B, Class H insulation.
5. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading. For motors 1.0 Hp and smaller, prelubricated, antifriction sleeve bearings.

6. Motors drawing 1000 watts or more at full load shall have a power factor rating of at least 85% without external capacitor correction. Verify efficiency in accordance with NEMA MG-1. Test per NEMA MG-1, ANSI/IEEE 112. Display efficiency on nameplate in accordance with NEMA MG-1.
7. Special Requirements:
 - a. Motors installed in air handling unit directly downstream of cooling coils or humidifiers shall be totally enclosed fan cooled (TEFC) type.
 - b. Motors driven by variable frequency motor speed controller (VFD) shall be inverter duty rated, thermally protected, in full compliance with NEMA MG-1 Part 31.
 - c. For motors driven by VFD, provide motor shaft grounding ring (SGR) to protect against electrical discharge machining (EDM) motor bearing damage.
 - d. Provide next size larger motor and drive, where fan motor brake horsepower, including all drive and belt losses, exceeds the following limits:
 - 1) 85% of nameplate horsepower for motor 40 Hp and smaller in size.
 - 2) 90% of nameplate horsepower for motor 50 Hp through 100 Hp in size.
 - 3) 95% of nameplate horsepower for motor larger than 100 Hp.

E. Single Phase Motors

1. Motors larger than 1/20 hp shall be energy efficient capacitor start type to suit starting torque and requirements of specific motor application:
2. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
3. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
4. Motors 1/20 HP and Smaller: Shaded-pole type.
5. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

2.3 VARIABLE FREQUENCY MOTOR SPEED CONTROLLERS (VFD)

- A. Variable frequency motor speed controllers (VFD), including line reactor and/or harmonic filter as required, shall be furnished by Division 23 in accordance with Division 26 Section "Variable Frequency Motor Speed Controller (VFD)".
- B. It shall be the responsibility of Division 23 Sections to properly match the motor and drive.
- C. All variable frequency motor speed controllers furnished by Division 23 shall be of the same manufacturer.

2.4 MOTOR STARTERS

- A. Motor starters for chillers and certain packaged equipment will be furnished by equipment manufacturer(s) as specified in their respective sections of Division 23. All other motor starters, except variable frequency drives, shall be provided by Division 26.

2.5 POWER FACTOR CORRECTION

- A. Power factor correction for certain packaged equipment will be furnished by equipment manufacturer(s) as specified in their respective sections of Division 23.
- B. For each motor 25 hp and larger, except those driven by a VFD, furnish 3 phase, 60 hertz, biodegradable, low toxicity type capacitor for power factor correction with maximum rating allowed by motor manufacturer sufficient to raise overall motor power factor to 95%.
- C. Provide NEMA enclosure with gray enamel finish, porcelain bushings, non-PCB impregnated dielectric resistors, current limiting fuses, mounting brackets, internal connections and appurtenances, including blown fuse external indicator.
- D. Factory test capacitors for compliance with referenced NEMA and ANSI/IEEE Specifications. Submit certified test reports with equipment shop drawings.

2.6 CONTROL PANELS

- A. Include in control panels provided as a part of apparatus specified in Division 23, fused disconnect, circuit breaker or motor circuit protector combination starter with overload protection for each motor, contactors, and electric heaters, if required. Provide 120 volt control circuit and other required circuit protection. Where remote controls are required, they shall operate at 120 volt maximum, with properly fused control transformer provided for that purpose.

PART 3 - EXECUTION

3.1 ELECTRICAL WIRING

- A. Power wiring will be provided under Division 26 and control wiring will be provided under Division 23. Provide power and control wiring for Division 23 systems and equipment for interconnecting wiring on apparatus that has not been factory installed.

3.2 MOTORS

- A. Provide electric motors required for equipment specified in the various sections of Division 23, designed and wound for electrical characteristics shown on the Drawings.
- B. Select motors for quiet operation and for sufficient capacity to operate driven devices under all conditions of operation without overloading.
- C. Install motors in accordance with manufacturer's published instructions. Mount direct drive connected motors securely in accurate alignment. For belt drive motors, use adjustable mounting bases, align pulleys and install belts. Use belts identified by the manufacturer and tension belts in accordance with manufacturer recommendations.

D. Extend lubrication lines to accessible locations.

E. Startup

1. Check operating motors, both factory and field installed, for unusual conditions during normal operation. Coordinate with the balancing and commissioning of the equipment for which the motor is a part.
2. Report unusual conditions and correct deficiencies.

3.3 VARIABLE FREQUENCY MOTOR SPEED CONTROLLERS (VFD)

- A. Deliver variable frequency motor speed controllers not factory mounted on equipment to Division 26 for field installation and wiring.

3.4 MOTOR STARTERS

- A. Deliver motor starting equipment not factory mounted on equipment to Division 26 for field installation and wiring.

3.5 POWER FACTOR CORRECTION

- A. Deliver capacitors not factory mounted on equipment to Division 26 for field installation and wiring.

END OF SECTION 23 05 13

SECTION 23 05 40 - VIBRATION ISOLATION FOR HVAC SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Vibration isolation devices, accessories, materials and related items for new equipment, piping and ductwork as may be required to prevent the transmission of vibration to the building structure.
 - 2. Wind restraint devices, accessories, materials and related items for new equipment, piping and ductwork as may be required to keep all components in place during a wind event and operational where this specification so requires.

1.3 REFERENCES

- A. ASCE: American Society of Civil Engineers, ASCE 7, latest edition.
- B. ASHRAE: American Society of Heating, Refrigeration and Air-Conditioning Engineers, Inc., Applications Handbook, latest edition.
- C. ASTM: American Society for Testing and Materials.
- D. AWS: American Welding Society.
- E. SMACNA: Sheet Metal and Air Conditioning Contractors' National Association, Duct Construction Standards – Metal and Flexible, latest version.
- F. MSS: Manufacturer's Standardization Society.
- G. IBC: International Building Code.

1.4 SUBMITTALS

- A. Product Data: Annotate to indicate application of each product submitted and compliance with the specifications.
 - 1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.

- B. Product Schedule or List: Provide schedule of all vibration isolated equipment and all vibration isolated piping and ductwork systems. Include the following for each piece of equipment and, as applicable, for each piping and ductwork system:
1. Identification. Include equipment ID where applicable
 2. Isolator type(s) with identification reference numbers of applicable product data and shop drawings.
 3. Actual load for each isolator type.
 4. Actual static deflection expected under actual load for each isolator type.
 5. Specified minimum static deflection under actual load for each isolator type.
- C. Shop Drawings:
1. Fabrication details of roof curbs, steel rails, steel base frames and concrete inertia bases showing all steel work, reinforcing, vibration isolator mounting attachment method and location of equipment bolts.
 2. Drawings showing methods of suspension, support guides for piping and ductwork.
 3. Drawings showing methods for isolation of pipes and ductwork piercing walls and slabs.
 4. Details and sizing of housekeeping pad(s) showing reinforcement, method of attachment to structure and method of attachment of equipment restraint(s).
 5. All other special details necessary to convey complete understanding of work to be performed.
 6. Provide the number, size and location of braces and anchors for suspended piping and ductwork on shop drawings.

1.5 QUALITY ASSURANCE

- A. It is the objective of this specification to provide the installation of vibration isolation equipment and devices for the avoidance of excessive noise and vibration in the building(s) due to the operation of machinery or equipment and/or due to interconnected piping, ductwork or conduit.
- B. All vibration isolation equipment and devices, including auxiliary steel bases and pouring forms, shall be the products of a single manufacturer, hereinafter called the isolation manufacturer, unless otherwise allowed in writing by the Architect, shall be certified by the isolation manufacturer and shall be furnished by the isolation manufacturer or his authorized representative, who shall be responsible for performing all work specified in this section to be performed by the isolation manufacturer or his representative and for coordination of all phases of the work.
- C. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel.

1.6 DESIGN REQUIREMENTS

- A. Design isolators and restraints for equipment installed outdoors to provide site specific restraint to withstand wind loads as calculated in accordance with ASCE 7, applied to any exposed surface of the isolated and/or restrained equipment. Isolators and restraints for outdoor equipment shall have bolt holes for attachment to the equipment and to the supports. Equipment shall be anchored to roof curb or rail, and roof curb or rail shall be anchored to the building structure.

1.7 COMPONENT MANUFACTURER'S RESPONSIBILITIES

- A. Vibration isolation component manufacturer shall have the following responsibilities:
1. Determine vibration isolation sizes and locations.
 2. Furnish vibration isolation systems as scheduled or specified.
 3. Guarantee specified isolation system deflection.
 4. Provide installation instructions, drawings and field supervision to assure proper installation and performance. The installation of all vibration isolation units, and associated hangers and bases, shall be under the direct supervision of the manufacturer's representative. Upon completion of installation and after system is put into operation, representative shall make a final inspection and submit report to Architect in writing certifying that the installation is in compliance with reviewed submittal data.

1.8 COORDINATION

- A. Coordinate work with other trades to avoid having isolated systems coming in contact with the building. Inform other trades following this work to avoid causing any contact which would reduce the vibration isolation.
- B. Coordinate size, location and special requirements of vibration isolation equipment and systems with other trades. Coordinate plan dimensions with size of housekeeping pad.
- C. Bring to the Architect's attention in writing prior to installation any conflicts with other trades which will result in unavoidable contact to the equipment, piping, etc., described herein, due to inadequate space, etc. Corrective work necessitated by conflicts after installation shall be at the Contractor's expense.
- D. Bring to the Architect's attention in writing any discrepancies between the specifications and field conditions, changes required due to specific equipment selection, etc., prior to installation. Corrective work necessitated by discrepancies after installation shall be at the Contractor's expense.

1.9 INSPECTION AND INSTRUCTION

- A. Notify the isolation manufacturer's representative prior to the general installation of vibration isolation devices so that the isolation manufacturer's representative can instruct and demonstrate the proper installation procedures with the Contractor's foremen.
- B. Comply with written instructions from the isolation manufacturer's representative as to the proper installation and adjustment of vibration isolation devices.
- C. Obtain inspection and approval from the isolation manufacturer's representative of the completed installation. Perform all work and make all adjustments as directed by the isolation manufacturer's representative as a result of the inspection.
- D. Obtain inspection and approval from the isolation manufacturer's representative, and perform all directed work and adjustments, of any installation to be covered or enclosed prior to such closure.

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATORS

A. Acceptable Manufacturers:

1. Amber/Booth Company, Inc.
2. Kinetics Noise Control
3. Mason Industries

B. General:

1. Clean and paint steel components, and zinc-electroplate all nuts, bolts and washers. Clean structural steel bases of welding slag and prime with zinc-chromate or metal etching primer.
2. All springs installed out-of-doors shall be cadmium plated, zinc electroplated or powder-coated, hardware and other metal parts installed out-of-doors shall be galvanized, zinc electroplated or cadmium plated. Non Electro-Plated zinc coating shall be by hot dipped galvanizing and shall comply with ASTM-B17 salt spray test standards and Federal Test Standard No. 14.
3. All isolators installed out-of-doors shall have base plates with bolt holes for fastening the isolators to the support members.
4. Isolator types are scheduled to establish minimum standards. At Contractor's option, labor-saving accessories can be an integral part of isolators supplied to provide initial lift of equipment to operating height, hold piping at fixed elevations during installation and initial system filling operations, and similar installation advantages. Accessories must not degrade the isolation performance of the isolators.
5. All static deflections stated are not "minimal" or "rated" deflections, but are the minimum acceptable deflection for the mounts under actual load as certified by the manufacturer. Isolators selected solely on the basis of rated deflections are not acceptable and will be rejected.
6. Spring isolators shall be freestanding and laterally stable without any housing. Spring diameter shall be not less than 0.8 of compressed height of spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of rated deflection. Springs shall be so designed that the ratio of horizontal stiffness to vertical stiffness is approximately 1/1. All mounts shall have leveling bolts.
7. All elastomeric isolation elements shall be fabricated of neoprene or high quality synthetic rubber with anti-ozon and antioxidant additives, and shall be cured to eliminate curing outgassing. The formulation shall have a shore hardness of 30 to 60 ± 5 , after minimum aging of 20 days or corresponding oven-aging. Elements used in restraints shall be bridge-bearing quality.

C. Pads:

1. Type NP (Neoprene Pad – ASHRAE Type 1):
 - a. One layer of 1/4 inch to 3/8 inch thick ribbed or waffle-pattern neoprene. Pads sized so that they will be applied within manufacturer's supplied application Engineering data.

D. Spring Isolators, Type FSN (Floor-Spring-Neoprene): Freestanding, laterally stable, combination coil-spring and elastomeric isolator with spring and insert in compression (ASHRAE Type 3).

1. Either set spring element in isolator in a neoprene cup with a steel washer to distribute load evenly over the neoprene or mount each isolator on a Type NP isolator. If the NP isolator is used, provide a rectangular bearing plate of appropriate size to load the pad uniformly within the manufacturer's recommended range.
2. If basic spring isolator has a neoprene friction pad on its base and an NP isolator is to be added to the base, a separator plate shall be used between the friction pad and the NP isolator. Separator plate shall be stainless steel or aluminum for isolator installed outdoors and for indoor isolator not mounted on a housekeeping pad, and may be zinc- grip galvanized steel for indoor isolator mounted on a housekeeping pad. The NP isolator, separator plate and friction pad shall be permanently adhered to one another and to the bottom of the isolator base plate.
3. If isolator is to be fastened to the building structure and a Type NP isolator is used under the bearing plate, provide grommets for each bolt hole in base plate. Bolts and washers are to be galvanized for galvanized plate, stainless steel elsewhere.
4. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
5. Minimum Additional Travel: 50 percent of the required deflection at rated load.
6. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
8. Baseplates: Factory drilled for bolting to structure and bonded to 1/4-inch-thick, rubber isolator pad attached to baseplate underside. Baseplates shall limit floor load to 500 psig.
9. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.

E. Restrained Spring Isolators, Type FSNTL (Floor-Spring-Neoprene, Travel Limited): Freestanding, laterally stable, combination coil-spring and elastomeric-insert isolator with seismic or limit-stop restraint (ASHRAE Type 4).

1. All mounts shall have leveling bolts and vertical travel limit stops to control extension when weight is removed. Travel limit stops shall be capable of serving as blocking during erection of equipment. Maintain a maximum clearance of 1/4 inch around restraining bolts and between limit stops and spring to avoid interference with spring action.
2. Either set spring element in isolator in a neoprene cup with a steel washer to distribute load evenly over the neoprene or mount each isolator on a Type NP isolator. If the NP isolator is used, provide a rectangular bearing plate of appropriate size to load pad uniformly within the manufacturer's recommended range.
3. If basic spring isolator has a neoprene friction pad on its base and an NP isolator is to be added to the base, a separator plate shall be used between the friction pad and the NP isolator. Separator plate shall be stainless steel or aluminum for isolator installed outdoors and for indoor isolator not mounted on a housekeeping pad, and may be zinc- grip galvanized steel for indoor isolator mounted on a housekeeping pad. The NP isolator, separator plate and friction pad shall be permanently adhered to one another and to the bottom of the isolator base plate.
4. If isolator is to be fastened to building structure and a Type NP isolator is used under the bearing plate, provide neoprene grommets for each bolt hole in base plate. Bolts and washers are to be galvanized for galvanized plate, stainless steel elsewhere.
5. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled baseplate bonded to 1/4-inch-thick, neoprene or rubber isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.

6. Restraint: Seismic and wind or limit stop shall comply with site specific design parameters as defined by applicable code.
 7. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 8. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 9. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 10. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
- F. Elastomeric Hangers Type HN (Hanger-Neoprene): Single or double-deflection type compression hanger (ASHRAE Type 2).
1. General: Fitted with molded, oil-resistant elastomeric isolator elements bonded to steel housings with threaded connections for hanger rods. Color-code or otherwise identify to indicate capacity range. Provide neoprene neck bushing where hanger rod passes through the hanger housing to prevent rod from contacting hanger housing. Make diameter of hole in housing sufficient to permit hanger rod to swing through a 30° arc before contacting hanger housing.
- G. Spring Hangers Type HSN (Hanger Spring Neoprene): Combination coil-spring and elastomeric-insert hanger with spring and insert in compression (ASHRAE Type 3).
1. General: Vibration isolation hangers consist of a freestanding, laterally stable steel spring and a neoprene element in series, contained within a steel housing. Make spring diameters and hanger housing lower hole sized large enough to permit hanger rod to swing through a 30° arc before contacting housing or make equivalent alternative provisions to allow specified movement.
 2. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
 3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 7. Elastomeric Element: Molded, oil-resistant rubber or neoprene with a 0.3 inch minimum static deflection. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
 8. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.
- H. Pipe Riser Resilient Support: All-directional, acoustical pipe anchor consisting of 2 steel tubes separated by a minimum of 1/2-inch-thick neoprene. Include steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions. Design support for a maximum load on the isolation material of 500 psig and for equal resistance in all directions.
- I. Resilient Pipe Guides: Telescopic arrangement of 2 steel tubes or post and sleeve arrangement separated by a minimum of 1/2-inch-thick neoprene. Where clearances are not readily visible, a factory-set guide height with a shear pin to allow vertical motion due to pipe expansion and contraction shall be fitted. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.

- J. Resilient Penetration Sleeve/Seal: Field fabricate from pipe or sheet metal section 1/2 inch to 3/4 inch larger in each dimension than penetrating element in all directions around the element. Use to provide a sleeve through construction penetrated. Extend sleeve 1 inch beyond penetrated construction on each side. Pack annular space between sleeve and the penetrating element tightly with glass fiber or mineral wool to within 1/4 inch of ends of sleeve. Fill remaining 1/4 inch space on each side with acoustical sealant to form an airtight seal. Penetrating element shall be able to pass through sleeve without contacting sleeve. Alternatively, prefabricated sleeves accomplishing same result are acceptable.
- K. Grommets: Apply a formed grommet to prevent bolts from directly contacting the isolator base plate and sized so that they will be loaded within the manufacturer's recommended load range.

2.2 NON-RESTRAINED, NON-ISOLATED ROOF CURB (Type BC-4)

- A. Acceptable Manufacturers:
 - 1. Roof curb manufacturer shall be the responsibility of the roof-mounted equipment manufacturer.
- B. General: Requirements for Non-Restrained Non- Isolated Roof-Curb: Factory-assembled, fully enclosed, insulated, air- and watertight curb rail designed to support equipment and to withstand wind forces.
- C. Lower Support Assembly: Formed sheet-metal section that support upper frame. Upper frame shall provide continuous support for equipment and shall be captive to resiliently resist wind forces. Lower support assembly shall have a means for attaching to building structure and a wood nailer for attaching roof materials, and shall be insulated with a minimum of 2 inches of rigid, glass-fiber insulation on inside of assembly.
- D. System shall be designed for positive anchorage or welding of equipment to supports and welding of supports to the building structure. Details of anchoring requirements shall be provided by the Curb supplier.
- E. Water Seal: Galvanized sheet metal with EPDM seals at corners, attached to upper support frame, extending down past wood nailer of lower support assembly, and counterflashed over roof materials. Weather protect each spring isolator.
- F. Pitched Roof: Fabricate roof curb with tapered bottom designed to match roof slope where required whether or not indicated on drawings.
- G. Connections: All wiring and duct connections made within perimeter of roof curb.

2.3 VIBRATION ISOLATION ROOF RAIL (Type RIRS)

- A. Acceptable Manufacturers:
 - 1. Mason Industries
 - 2. Kinetics Noise Control

- B. General: Prefabricated assembly consisting of continuous equipment support piers and steel spring isolation system that forms the support under isolated equipment.
- C. Spring Isolators: Adjustable, restrained spring isolators (Type FSNTL-SR) shall be mounted on 1/4-inch-thick, elastomeric vibration isolation pads and shall have access ports, for level adjustment, with removable waterproof covers at all isolator locations. Isolators shall be located so they are accessible for adjustment at any time during the life of the installation without interfering with the integrity of the roof.
- D. Support Piers: Construct equipment support pier of galvanized steel or plaster coated steel, straight base section without cant strip and with integral base plate, all welded construction, internal reinforcement, treated wood nailer. Provide clearance above roof surface as per requirements by the National Association of Roofers recommendation for maintenance and re-roofing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation and wind-restraint devices for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after non-conforming code compliance conditions have been corrected.

3.2 GENERAL INSTALLATION REQUIREMENTS

- A. Provide vibration isolators of appropriate sizes and proper loading to meet specified deflection requirements. Select in accordance with the weight distribution to provide uniform isolator load distribution.
- B. Supply and install any incidental materials such as mounting brackets, attachments and other accessories as may be needed to meet requirements stated herein, even if not expressly specified or shown on Drawings, without claim for additional payment.
- C. Verify correctness of equipment model numbers and conformance of each component with manufacturer's specifications.
- D. Should any rotating equipment cause excessive noise or vibration when properly installed on the vibration isolators, and if it is caused by isolator, then the isolation manufacturer shall be responsible for rebalancing, realignment or other remedial work required to reduce noise and vibration levels. Excessive is defined as exceeding the manufacturer's specifications for unit in question.
- E. Make certain that attachments do not short circuit the isolation system and that isolation system is unrestrained. Special attention shall be applied in the installation of restraints on thermally active

pipng systems as this condition can shorten out vibration isolation devices and impose excessive stress on the structural components.

- F. Adjust isolators after piping system is at operating weight.
- G. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
- H. Adjust active height of spring isolators.
- I. Adjust restraints to permit free movement of equipment within normal mode of operation.

3.3 VIBRATION ISOLATION, APPLICATION

A. General

- 1. The static deflections of all isolators specified herein are the minimum acceptable deflections for the mounts under actual load. Isolators selected solely on the basis of rated deflection are not acceptable and will be disapproved.

B. Major Equipment

- 1. Unless otherwise shown or specified, set all floor mounted major equipment on 4 inch high housekeeping type concrete pad properly doweled or bolted to floor to meet site specific anchoring forces. Size pad to extend far enough beyond restraint to develop full rating of restraint in accordance with isolation manufacturer's instructions.
- 2. Types and minimum static deflections of vibration isolation devices for major equipment items shall be as scheduled elsewhere in this section.
- 3. Provide thrust restraints on equipment as called for in the schedule or as specified or as required whether or not scheduled or specified to limit movement to 1/4 inch maximum. As a minimum, provide thrust restraints for all suspended fans, all suspended or floor mounted axial flow fans and for other floor mounted fans developing 4 inches or more static pressure, unless the horizontal component of the thrust force can be demonstrated to be less than 10% of the equipment weight. Install thrust restraints on the discharge of the fan so that the restraint rods are in tension. Assemblies that place the rods in compression are not acceptable.

C. Miscellaneous Mechanical Equipment

- 1. Isolate the following miscellaneous pieces of mechanical equipment which are connected to isolated piping systems from the building structure:
 - a. Storage Tanks
- 2. Isolate miscellaneous mechanical equipment listed with Type NP or Type HN isolators, selected for 0.1 inch static deflection unless their position in piping system requires a higher degree of isolation as called for under piping isolation.

D. Pipe Isolation

1. All chilled water, condenser water, refrigerant, and drain piping shall be isolated from the building structure within the following limits:
 - a. Within mechanical rooms;
 - b. Within 50 foot total pipe length of connected vibration-isolated equipment (chillers, pumps, air handling units, etc.);
 - c. All above piping that is 6 inches or larger shall be isolated everywhere.
2. Piping shall be isolated from building structure by means of vibration isolation, resilient lateral supports and, except at penetration through fire-rated construction, resilient penetration sleeve/seals.
3. Isolators for the first three support points adjacent to connected equipment shall have the same deflection as used on the connected equipment isolation. When the required static deflection of these isolators is greater than 1/2 inch, Type FSN or HSN isolators shall be used. When the required static deflection is less than or equal to 1/2 inch, Type FN or HN isolators shall be used. All other pipe support isolators within the specified limits shall be either Type FN or HN achieving not less than 1/4 inch static deflection.

E. Ductwork

1. Isolate all sheet metal ducts and air plenums within mechanical rooms or within a distance of 50 feet total duct length of connected vibration isolated equipment (whichever is longer) from the building structure by either Type FN, PCF or HN isolators (whichever is applicable to mounting condition). All isolators shall achieve not less than 0.1 inch static deflection.
2. Isolate ducts within the specified limits that penetrate nonfire-rated building construction from the building by use of resilient penetration sleeve/seals.
3. Use resilient lateral supports wherever lateral support of vertical duct runs is required within the specified areas.

3.4 VIBRATION ISOLATION, INSTALLATION

A. General

1. Select locations of all vibration isolation equipment for ease of inspection and adjustments, as well as for proper operation.
2. Install vibration isolation equipment in accordance with isolation manufacturer's written instructions.
3. Prior to startup, verify that there are no isolation short circuits.
4. Comply with requirements in Division 07 Section "Roof Accessories" for installation of roof curbs, equipment supports, and roof penetrations.

B. Isolators

1. Align all vibration isolators squarely above or below mounting points of supported equipment.
2. Locate isolators for equipment with bases on the side of the bases which are parallel to equipment shaft unless this is not possible because of physical constraints.
3. Locate isolators to provide stable support for equipment, without excess rocking. Consideration shall be given to the location of the center of gravity of the system and the location and spacing of the isolators. If necessary, a base with suitable footprint shall be provided to maintain stability

of supported equipment, whether or not such a base is specifically called for herein or shown on the drawings.

4. If a housekeeping pad is provided, isolators and the isolator base plate must rest entirely on pad.
5. For steel framed structures, connect hanger rods for vibration isolated support to structural beams or joists, not to floor slab between beams and joists. Provide intermediate support members and joist reinforcing members as necessary.
6. Position vibration isolation hanger elements as high as possible in hanger rod assembly, but not in contact with building structure, so that hanger housing may rotate a full 360° about rod axis without contacting any object.
7. Parallel running pipes may be hung together on a trapeze which is isolated from building. Deflections must be largest determined by provisions for pipe isolation. Do not hang isolated and nonisolated pipes on same trapeze.
8. Do not support pipes, ducts or equipment from other pipes or equipment.
9. Resiliently isolated pipes shall not contact building construction or other equipment.
10. The installed and operating heights of isolated equipment mounted on Type FSNTL isolators or Type BC-1 bases shall be the same. Limit stops shall be out of contact during normal operation. Adjust isolators to provide 1/4 inch clearance between limit stop brackets and isolator top plate, and between travel limit nuts and travel limit brackets.
11. Adjust all leveling bolts and hanger rod bolts so isolated equipment is level and in proper alignment with connecting ducts or pipes. Leveling bolts shall not be used to level equipment if unevenness exceeds 1/8 inch as measured by the longest dimension of the equipment base. If leveling of equipment requirements are greater than 1/8 inch, grouting of the base shall be used in order to achieve a level equipment mounting platform.

C. Bases

1. Equipment shall not bear directly on vibration isolators unless its own frame is suitably rigid to span between isolators and such direct support is approved by equipment manufacturer. This provision applies whether or not a base frame is called for on the schedule. In the case that a base frame is required for equipment because of equipment manufacturer's requirements and a base frame for the equipment is not specifically called for on equipment schedule, Contractor for Division 23 shall provide the base frame recommended by equipment manufacturer at no additional expense.
2. Unless otherwise indicated, there shall be a minimum operating clearance of 1 inch between steel rails, steel frame bases or inertia bases and the concrete housekeeping pad or floor beneath the equipment. Position isolator mounting brackets so that required clearance is maintained. Check and clean clearance space to ensure that no construction debris has been left to short-circuit or restrict proper operation of vibration isolation system.

D. Vibration Isolation Thrust Restraints: Attach thrust restraints at the vertical centerline of thrust on each side of the unit, and so that thrust rods are in tension only. Install the two rods of the thrust restraint parallel to the thrust force. This may require modified brackets or standoffs. The body of the thrust restraint shall not come in contact with the connected elements. Adjust restraints to constrain equipment movement to the specified limit.

E. Resilient Penetration Sleeve/Seals: Install penetration seals to maintain an airtight seal around penetrating element and to prevent rigid contact of penetrating element and building construction. Fit sleeve tightly to building construction and seal airtight on both sides of construction penetrated with acoustical sealant.

- F. Grommets: Where grommets are required at hold-down bolts of isolators, properly size bolt holes to allow for grommets. The hold-down bolt assembly shall include washers to distribute load evenly over the grommets. Bolts and washers shall be galvanized for galvanized isolators and stainless steel elsewhere.

3.5 FIELD QUALITY CONTROL

- A. Upon completion of installation of all vibration isolation devices, the isolation manufacturer's representative shall inspect the installation and certify in writing to the Contractor that all isolation devices are installed in compliance with the written quality assurance document as furnished by the isolation manufacturer.

3.6 HVAC VIBRATION-ISOLATION DEVICE SCHEDULE

VIBRATION ISOLATION SCHEDULE				
Equipment	Base Type	Isolator		Remarks
		Type	Defl. (In)	
Indoor Air Handling Unit (AHU-_)	-	NP	0.25	(1)
Indoor Air Handling Unit (AHU-_)	-	FSNTL	1.50	
Chiller, Outdoor Roof Mounted (CH-_) (P-_)	-	FSNTL	1.0	
Suspended Fans (EF-_)	None	HSN	1.5	
Condensing Unit (Outdoor) (CU-_)	RIRS	FSNTL	1.5	
Fan Coil Unit, Suspended	-	HSN	0.75	
Unit Heater, Suspended	-	HN	0.25	
Curb Mounted Fans (Non-Isolated)	BC-4	-	-	

- (1) Fans(s) internally isolated by AHU Manufacturer. Include thrust restraints.
 (2) Isolate with connected piping.

END OF SECTION 23 05 40

SECTION 23 07 00 - HVAC INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. HVAC Piping Insulation
2. HVAC Duct Insulation
3. HVAC Equipment Insulation
4. Adhesives, mastics, tapes

B. Related Sections

1. Pipe insulation insert and shields are specified in Section 23 05 00, "Common Materials and Methods for HVAC".

1.3 DEFINITIONS

- A. Cold Surfaces: Normal operating temperatures less than 75° F.
- B. Density: Is expressed in pcf (pounds/cu. ft.) (kg/m^3).
- C. Dual Temperature Surfaces: Normal operating temperatures that vary from hot to cold.
- D. Hot Surfaces: Normal operating temperatures of 100° F or higher.
- E. Thermal Conductivity ("k" value): Measure of heat flow through a material at a given temperature difference; conductivity is expressed in units of $(\text{Btu} \times \text{inch})/(\text{h} \times \text{sq. ft.} \times ^\circ\text{F})$ ($\text{W/m} \times ^\circ\text{C}$).
- F. Through Resistivity ("R" value): Represents the reciprocal of thermal conductivity ("k" value).

1.4 REFERENCES

- A. ASTM C1136 Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
- B. ASTM E84 Surface Burning Characteristics of Building Materials.

- C. MICA Standards: National Commercial & Industrial Insulation Standards published by the Midwest Insulation Contractors Association. Endorsed by National Insulation Contractors Association (NICA) and its regional associations.
- D. NFPA 90A Installation of Air Conditioning and Ventilating Systems.
- E. NFPA 255 Test of Surface Burning Characteristics of Building Materials.
- F. UL 723 Surface Burning Characteristics of Building Materials.

1.5 SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, thickness, and jackets (both factory and field applied, as applicable).
- B. Product Schedule or List: Prepare a summary of products required and clearly indicate location of their intended use.
- C. Shop Drawings:
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.

1.6 QUALITY ASSURANCE

- A. Materials, job conditions and installation shall be in compliance with the applicable Building and Mechanical Codes and NFPA 90A.
- B. Installation shall be done in a workmanlike manner by skilled and experienced workers who are regularly employed in commercial/industrial insulation work, in accordance with manufacturer's recommendations and instructions and best practices of the trade.
- C. Comply with the more stringent of the requirements of this specification or the requirements of the MICA standards.
- D. Insulation materials manufacturing facilities must be certified and registered with an approved registrar for conformance with ISO 9000 quality standard.
- E. Fire Performance Characteristics
 - 1. Insulation, jacketing materials, PVC covers, tapes, adhesives, mastics, cements and finish coatings shall have a composite noncombustible fire and smoke hazard rating and label, as tested in accordance with United States Public Health Service requirements, ASTM E84, NFPA 255 and UL 723 not exceeding Flame Spread 25 and Smoke Developed 50.
 - 2. Indoor Recovering Canvas Jackets: UL listed fabric, 6 ounce per square yard, unless otherwise specified, attached with a lagging fire retardant and waterproof adhesive.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Ship insulation materials in containers marked by manufacturer with appropriate ASTM specification designation, type and grade, and maximum use temperature. Deliver materials to job site in original unbroken factory packaging, labeled with manufacturer's density and thickness and store in a safe, dry place.
- B. No insulation material shall be installed that has become damaged in any way.
- C. Do not install, and remove from the site, any insulation material that has become wet because of transit or job site exposure to moisture or water. Remove insulation from ductwork, piping and/or equipment which has become wet. Reinsulate as required.

1.8 COORDINATION

- A. Coordinate size and location of supports, hangers, and insulation shields specified in Division 23 Section "Common Materials and Methods for HVAC."
- B. Coordinate clearance requirements with installing contractor for insulation application. Before preparing piping and ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.9 SCHEDULING

- A. Schedule insulation application after pressure testing of piping and duct systems. Insulation application may begin on segments that have satisfactory test results.
- B. Schedule insulation application on chilled water piping prior to circulating chilled water and schedule application on supply air ductwork prior to delivering conditioned air. Do not install insulation to surfaces where condensation is present.
- C. Do not install any insulation before building is adequately closed in. Where it is necessary to install insulation in any section of building that is not adequately closed in, secure prior permission and, where permission is granted, such insulation shall be in place to form a waterproof covering. Remove and replace all insulation installed that becomes water saturated because of failure to comply with this requirement, at no increase in the Contract sum.

1.10 ALTERNATIVES

- A. Alternative insulations are subject to Architect's approval. Alternatives shall provide, at normal conditions, thermal resistance within 5% of resistance of materials specified.
- B. Where alternative thermal conductivity ("k") differs from specified thermal conductivity by more than 5%, increase or decrease insulation thickness as follows:

$$\text{New Thickness} = \frac{\text{Actual "k"}}{\text{Specified "k"}} \times \text{Specified Thickness}$$

PART 2 - PRODUCTS

2.1 PIPING INSULATION

A. Acceptable Manufacturers

1. Johns Manville
2. Armacell
3. Owens-Corning Fiberglass
4. Knauf Insulation
5. Certain Teed

B. Insulation Type P1:

1. Piping: Fine fibrous glass insulation, with factory applied vapor barrier jacket, molded to conform to piping, "k" value at 75° F maximum 0.23. Johns Manville "Micro-Lok AP-T Plus" with jacket of white Kraft reinforced with fiberglass yarn and bonded to aluminum foil, and having a pressure sensitive tape closure system bonded to the longitudinal lap.
2. Valves and Fittings:
 - a. Glass fiber insert of equal thickness to adjacent pipe insulation and premolded PVC cover, Johns Manville "Zeston" and "Hi-Lo Temp Inserts" for valves and fittings.
 - b. Factory molded fibrous glass fitting covering for fittings of equal thickness to adjacent pipe insulation. Cover with 6 ounce canvas on concealed piping and 8 ounce canvas on exposed piping.
 - c. Mitered sections of pipe covering for valves.

C. Insulation Type P2:

1. Piping: Type P1 with additional aluminum jacket of Alloy No. 5005 or No. 3003 with minimum thickness of 0.016 inches. Johns Manville "Micro-Lok ML".
2. Valves and Fittings: Mitered sections of Type P2 piping insulation with miter seals and snap-straps.

D. Insulation Type P3:

1. Piping: Foamed plastic of closed cell structure, "k" value at 75° F maximum 0.25. Maximum water vapor transmission rating of 0.05 perms. Insulation shall not drip or melt when exposed to flame. Polyethylene or polyolefin not allowed. Armacell "AP Armaflex", "AP Armaflex SS" and "AP Armacell W" (maximum 0.2 perms). Exposed insulation in finished areas shall be white.
2. Valves and Fitting: Mitered sections of Type P3 insulation. Factory produced or field fabricated.

2.2 EQUIPMENT INSULATION

A. Acceptable Manufacturers

1. Johns Manville
2. Armacell
3. Owens Corning
4. Knauf

B. Insulation Type E1 - Cold Equipment: Rigid fibrous glass insulation, density approximately 3 pcf, with factory applied reinforced aluminum foil vapor barrier, "k" value at 75° F maximum 0.23. Johns Manville "814 Spin- Glas" with FSK jacket.

C. Insulation Type E4 – Cold Equipment: Foamed plastic of closed cell structure, "k" value at 75° F maximum 0.25. Maximum vapor transmission rating of 0.05 perms. Armacell "AP Armaflex Sheet Roll" and "AP Armaflex SA Sheet".

2.3 DUCTWORK INSULATION

A. Acceptable Manufacturers:

1. Johns Manville
2. Armacell
3. Owens Corning
4. Knauf
5. Certain Teed

B. Insulation Type D1: Semirigid fibrous glass ductwork and casing insulation, density approximately 4 pcf with factory applied reinforced aluminum foil vapor barrier, "k" value at 75° F maximum 0.23. Johns Manville "815 Spin-Glas" with FSK jacket.

C. Insulation Type D2: Flexible fibrous glass ductwork insulation with factory applied reinforced aluminum foil vapor barrier, density approximately 0.60 to 0.75 pcf, "k" value at 75° F maximum 0.31 Johns Manville "Microlite" with Type FSK jacket.

D. Insulation Type D3: Foamed plastic of closed cell structure, "k" value at 75° F maximum 0.25. Maximum vapor transmission rating of 0.05 perms. Armstrong "AP Armaflex" and "AP Armaflex SA".

PART 3 - EXECUTION

3.1 PREPARATION

A. Determine clearances required for installation of work and review such requirements with trades responsible for installing various piping systems, ducts and equipment to be insulated. Where it is determined that working clearances between equipment and material to be insulated and adjacent work will restrict or prohibit proper installation of work, immediately report such conditions to all interested

parties and arrange to have affected material relocated or preinsulated before erection, as approved. Failure to so comply will not relieve Contractor of full responsibility for providing specified insulation.

- B. Do not install covering before piping, ductwork and equipment has been tested and approved, or before ductwork has been sealed.
- C. Ensure surface is clean and dry prior to installation. Ensure insulation is dry before and during application.

3.2 GENERAL INSTALLATION REQUIREMENTS

- A. Comply with applicable requirements of Division 23 Section, "Common Materials and Methods for HVAC".
- B. Adhesives and mastics materials shall be compatible with insulation material, jackets and substrates. Apply insulation and adhesives in accordance with manufacturers' instructions.
- C. Clean excess adhesive, mastic or cement used in performance of work from all exposed surfaces of insulation jacketing materials. Clean smudges and dirt from all exposed surfaces of insulation jacketing materials at conclusion of this work.
- D. Apply insulation on all cold surfaces with a continuous, unbroken vapor seal. Install hangers outside of insulation for all piping subject to sweating (e.g., chilled water supply and return, refrigerant suction, dual temperature water supply and return, drain piping for air conditioning equipment, glycol heat recovery piping, etc.) and provide inserts - refer to and coordinate with Section 23 05 00, Part 3, Article titled "PIPING SYSTEMS – COMMON REQUIREMENTS", paragraph titled "Pipe Insulation Inserts and Shields". For all equipment subject to sweating, insulate and vapor seal hangers, supports, anchors, etc., that are secured directly to cold surfaces to prevent condensation.
- E. Extend all surface finishes to protect all surfaces, ends and raw edges of insulation.
- F. Install insulation on and at access doors to allow easy use of access door without damage to insulation.
- G. Finish insulation neatly at hangers, supports and other protrusions.
- H. Install insulation with least number of joints practical. Locate insulation, or cover seams, in least visible locations.
- I. Finish installation with systems at operating conditions. Repair separation of joints or cracking of insulation due to thermal movement or poor workmanship.
- J. Be responsible for proper curing of insulation, etc., in accordance with manufacturers' requirements.

3.3 PENETRATIONS

- A. Refer to Division 23 Section "Common Materials and Methods for HVAC" for additional requirements.

- B. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
 - 4. Seal jacket to roof flashing with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
 - 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Non-Rated Interior Wall and Partition Penetrations: Install insulation continuously through walls and partitions.
- E. Insulation Installation at Floor Penetrations:
 - 1. Duct: Install insulation continuously through floor penetrations that are not fire rated. For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
 - 2. Pipe: Install insulation continuously through floor penetrations.

3.4 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Carry pipe insulation through sleeves and through hangers which are specified to be installed outside insulation.
- C. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
 - 1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
 - 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.

3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
 5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. Stencil or label the outside insulation jacket of each union with the word "UNION." Match size and color of pipe labels.
 9. Insulate flexible connections and expansion joints on cold piping with removable insulation section. Install insulation on flanges, valves and unions so that it can be removed and replaced without damaging adjacent insulation.
- D. Terminate insulation neatly and finish all exposed ends with plastic material troweled on bevel.
- E. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- F. Install removable insulation covers at locations indicated. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless- steel or aluminum bands. Select band material compatible with insulation and jacket.
 3. Construct removable valve insulation covers in same manner as for flanges except divide the two-part section on the vertical center line of valve body.
 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover

assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.

G. Insulation Type P1

1. Seal longitudinal laps of jackets and wrap butt joints with 3 inch wide strip of jacketing material securely sealed in place.
2. Where premolded PVC fitting covers are used, apply factory precut insulation insert in accordance with manufacturer's instructions and then apply one piece cover. Use two or more layers of inserts on hot piping as required to limit outer surface temperatures of insert(s) to 150° F maximum. Use two layers of inserts on chilled water and refrigerant piping. On concealed hot piping, covers may be secured with staples. On exposed hot piping, secure covers by taping ends to adjacent insulation. Seal seam edges of covers on concealed and exposed cold piping with Zeston vapor-barrier adhesive and wrap edges of covers with Zeston vapor-barrier pressure sensitive color matching tape.
3. Where factory-molded fibrous glass fitting covering is used, finish insulation on concealed and exposed hot piping with same jacketing material as adjacent insulation lap- sealed and finished with Foster 30-36, Childers CP-50A or equal. Finish insulation on cold piping same as for hot piping except that sealer shall be Foster 30-35 or Childers CP-30LO vapor sealer.
4. Finish valve covering in hot and cold piping systems same as specified above for fittings.
5. Recover exposed piping in finished areas with 0.02 mil thick PVC jacket and less than 8 ft above floor in mechanical room with 0.02 mil thick PVC jacket or aluminum jacket, except use Alpha Assoc. Fiberglass Scrim Fabric "Luben 58" (20 x 10) white, adhered and then finished with Foster 30-36 or Childers CP- 50A at steam pressure reducing stations and when piping systems are specified to be painted.

H. Insulation Type P2

1. Secure metal jacket in place by a continuous longitudinal friction type joint. Seal circumferential joints with 2 inch wide, .016 inch aluminum preformed snap-strap and clip containing a permanently plastic weatherproof sealant. Where outside diameter of the insulation is over 12-3/4 inches, lock snap-strap in place using 3/4 inch wide, .015 inch thick, No. 302 stainless steel bands. Apply snap-strap with appropriate banding wrench.
2. Use mitered sections of metal jacketed insulation for valves and fittings. Seal joints with sealing compound and preformed aluminum bands.
3. Entire installation of metal jacketed insulation shall be weatherproof.

I. Insulation Type P3

1. Where possible, slip insulation over tubing as a full cylinder. Push insulation on to pipe. Do not pull insulation on pipe. Where necessary to longitudinally cut, and at all butt joints, tightly butt edges and join by sealing with waterproof vapor barrier adhesive, Armaflex 520. For Self-Seal type, peel adhesive paper from surface and apply firm pressure along entire longitudinal joint.
2. Cover fittings and valves with equivalent thickness of insulation material.
3. Finish outdoor insulation with two coats of manufacturer's recommended weather- resistant and ultraviolet-resistant protective finish: Armacell WB Armaflex, white. DO NOT TINT FINISH.
 - a. At Contractor's option (for all outdoor piping), use aluminum jacket, as specified for insulation Type P-2.

- b. Secure metal jacket in place by a continuous longitudinal friction type joint. Seal circumferential joints with 2 inch wide, .016 inch aluminum preformed snap-strap and clip containing a permanently plastic weatherproof sealant. Where outside diameter of the insulation is over 12-3/4 inch, lock snap-strap in place using 3/4 inch wide, .015 inch thick, No. 302 stainless steel bands. Apply snap-strap with appropriate banding wrench.
- c. Use mitered sections of metal jacketed insulation for valves and fittings. Seal joints with sealing compound and preformed aluminum bands.
- d. Entire installation of outdoor piping shall be weatherproof.

3.5 PIPING INSULATION SCHEDULE

Service Temp	Systems Description	Indoor			Outdoor or Unheated Space			
		Type	Pipe Size	Thickness	Type	Pipe Size	Thickness	Heat Trace
40-60F	Chilled Water	P1 or P3	≤ 3/4"	1"	P2 or P3	≤ 3/4"	2"	Yes
			1" to 1 1/2"	1 1/2"		1" to 1 1/2"	2 1/2"	
			≥ 2"	2"		≥ 2"	2 1/2"	
40-60F	Condensate Drain (Cooling Coil, Heat Recovery Coil, Heat Pump)	P1 or P3	≤ 1 1/4"	1/2"	P3	All	2"	Yes
			≥ 1 1/2"	1"				
	Refrigerant Liquid	-	-	-	P3	All	3/4"	
<40F	Refrigerant Suction	P3	≤ 3/4"	1 1/2"	P3	≤ 3/4"	1 1/2"	
			≥ 1"	2"		≥ 1"	2"	

- Note:
1. Insulation for underground piping systems is specified in Section 23 24 13.
 2. Outdoor or Unheated Space insulation thickness shall extend through wall inside the building or heated space minimum of 2 feet.
 3. Insulation can be omitted from Condenser Water System located indoors in mechanical rooms and in spaces within buildings that are not humidified only when approved by Architect/Engineer.
 4. Where systems are required that don't exactly match the systems description listed on the schedule, provide insulation based on the appropriate service temperature range.

3.6 INSTALLATION, EQUIPMENT

- A. Apply insulation with edges tightly butted and joints staggered. Provide sufficient clearances around opening for normal operation of equipment. Do not cover cleanouts and nameplates, and bevel insulation at such openings.
- B. Insulation Type E1: Secure insulation with adhesive and anchor pins and speed washers.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of tank and vessel surfaces.
2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
3. Protect exposed corners with secured corner angles.
4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
 - a. Do not weld anchor pins to ASME-labeled pressure vessels.
 - b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
 - c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches on center in both directions.
 - d. Do not overcompress insulation during installation.
 - e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
 - f. Impale insulation over anchor pins and attach speed washers.
 - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
5. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches o.c. Use this network for securing insulation with tie wire or bands.
7. Stagger joints between insulation layers at least 3 inches.
8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.
11. Seal all joints with vapor barrier mastic, Foster 30-35, Childers CP-30LO or equal. Over insulation apply tack coat of Foster 30-36, Childers CP-50A or equal, and imbed into wet coating Alpha Assoc. Fiberglass Scrim Fabric "Luben 58" (20 x 10) white, Childers "Chil-Glass" or equal, smoothing to avoid wrinkles, and overlapping all seams at least 2 inches. Apply finish coat of Foster 30-36, Childers CP-50A or equal.
12. When applying to hot equipment, bring insulation up to operating temperature and provide space ventilation in accordance with manufacturer's recommendations.

C. Insulation Type E4

1. Install using manufacturer's recommended adhesive (Armacell 520). Use full adhesive coverage attachment, including seams and joints. Coat both surfaces to be joined. Seal longitudinal seams and end joints.

2. Finish outdoor insulation with two coats of manufacturer's recommended weather-and ultraviolet-resistant protective finish Armacell WB Armaflex, white. DO NOT TINT FINISH.
 - a. At Contractor's option (for outdoor insulation), use manufacturer's factory applied UV resistant jacket adhered to Type E4 insulation. Armacell Armatuff Plus.
- D. Removable Insulation: For strainers, casings of pumps handling chilled, etc., which require access for service and maintenance, provide insulated removable and replaceable 20 gauge galvanized steel cover painted with Foster 30-35. Apply insulation to all inside surfaces of cover using adhesive as recommended by insulation manufacturer. Seal all seams and joints to provide vaportight enclosure for indoor equipment and weathertight for outdoor equipment. Provide flanged joint, gasketed and bolted, for convenient removal and replacement.
- E. Insulation Installation on Pumps: Adhere insulation Type E4 directly to pump casing. Joints shall coincide with splits in pump casing. Provide removable insulation piece at pump nameplate. Do not insulate over drain and vent tapings.

3.7 EQUIPMENT INSULATION SCHEDULE

Equipment	Type	Thickness
Air Separator (Chilled Water, Condenser Water)	E1 or E4	1 1/2"
Chilled Water Storage Tank	E1 or E4	2"
Chilled Water Expansion Tank, Chemical Treatment Feeder	E1 or E4	1"
Heat Exchanger (Chilled Water, Cooling Water)	E4	1 1/2"
Pump Casing (Chilled Water, Dual Temperature, Glycol Heat Recovery)	E4	1"
Water Chiller (Not Factory Insulated) - Evaporator Shell, Heads, Water Boxes	E4	2"

3.8 DUCTWORK AND CASINGS INSULATION INSTALLATION

A. Insulation Type D1:

1. Apply with edges tightly butted. Impale on pins welded to duct and secure with speed clips. Cut protruding ends of pins flush. Space pins as required to hold insulation firmly in place but not less than one pin per square foot. Seal all joints, exposed ends, speed clips and penetrations of

- the vapor barrier with minimum 3-inch-wide strip of the vapor barrier material applied with Foster 85-75 or Childers CP-82 to both surfaces or with pressure sensitive tape to match facing.
2. Outdoor Installation: Cover with sheet metal jacketing; minimum 26 gauge aluminum in conformance with ASTM B209M, having lock forming corner bead and joint capability. Interlocking seams and corner beads completely sealed and made watertight.

B. Insulation Type D2

1. Cut insulation to length longer than duct perimeter to minimize compression and maximize installed "R" value as recommended by manufacturer. Allow maximum fullness at corners of rectangular ductwork and avoid excessive compression.
2. Insulation shall be firmly butted at all joints with a maximum allowable compression of 25%. Secure insulation to underside of ducts 18 inches or greater in width with mechanical fasteners welded to duct and speed clips spaced approximately 18 inches on center. Cut protruding ends of pins flush. Additionally secure to sides of ducts 18 inches or greater in depth and to the two larger sides of all vertically installed ductwork with mechanical fasteners in the same fashion as for the underside of ducts 18 inches or greater.
3. Overlap all joints at least 2 inches and staple in place. Seal stapled seams, speed clips and breaks in the vapor barrier facing with a minimum 3-inch-wide pressure sensitive tape designed for use with the duct insulation. Use pressure sensitive tape and apply additional Foster or Childers sealant in concealed spaces to provide a complete sealed thermal break installation.

C. Insulation Type D3

1. Verify that horizontal rectangular ductwork is properly pitched to avoid ponding before installing insulation.
2. Install using manufacturer's recommended adhesive (Armacell Armaflex 520). Metal surface must be clean and dry before application. Use full adhesive coverage attachment, including seams and joints. Coat both surfaces to be joined. Apply pressure to the surface of the insulation to assure a tight bond. Make sure all joints are under compression.
3. Install on each surface and butt joint at corners. Do not continuously wrap around corners on rectangular duct causing insulation to be in tension.
4. Outdoor Installation: Finish, using manufacturer's recommended procedures, with two coats of manufacturer's recommended weather-resistant and ultraviolet-resistant finish (Childers Vi-Cryl CP-10 white, with elastic reinforcing cloth (Vimasco Dynel Elastafab #894 8 x 8 mesh) blended into the first coat. **DO NOT THIN THE MASTIC.** Overlap seams of reinforcing cloth a minimum of 6 inches at each corner of rectangular ductwork. Completely cover mesh with second coat, applied immediately after the first coat has taken its set.

3.9 DUCTWORK AND CASING INSULATION SCHEDULE

A. Minimum Thickness

1. Insulation thickness indicated hereinafter in this article and/or on the drawings is minimum thickness. Where duct is constructed with flanged, angle, standing, factory fabricated or similar joints or reinforcing, increase thickness to provide minimum 1/4 inch cover on edge of joint or reinforcing.
2. Increased thickness section shall be a minimum of 6 inches wide, centered on flange or reinforcing with exposed ends sealed as specified in this article.

B. Type

1. Exposed Indoor Rectangular Ductwork - Type D1.
2. Concealed Rectangular Ductwork - Either Type D1 or Type D2 at Contractor's option.
3. Apparatus and Equipment Casings – Type D1 Indoors, Type D3 Outdoors
4. Indoor Round and Oval Ductwork - Type D2.
5. All Outdoor Ductwork - Type D3.

C. Thickness Schedule:

<u>Location</u>	<u>Thickness* - Type D1 and D3</u>	<u>Thickness* Type D2</u>
1. Equipment Casing		
a. Indoor (Type D1)	2 Inches	Not Allowed
b. Outdoor (Type D3)	3 Inches	Not Allowed
2. Ductwork Location		
a. Outdoors		
1) Supply air	3 Inches	Not Allowed
2) Return air	3 Inches	Not Allowed
3) Exhaust air	1-1/2 Inches	Not Allowed
b. Indoors (Type D1 or D2)		
1) Penthouse or Mechanical Room with Roof	1-1/2 Inches	Not Allowed
2) Air Conditioning Supply and Return Between Roof and Suspended Ceiling	1-1/2 Inches	2 Inches
3) Other Than Above	1 Inch	1-1/2 Inches

*Subject to compliance with Paragraph A. of this article, where ductwork or apparatus casing or equipment casing is acoustically lined, reduce insulation thickness by equivalent thickness of lining so that combined "R" of lining and insulation is equal to or greater than "R" of specified insulation thickness. Increase thickness at flanged or standing joints to provide minimum 1/4 inch cover over edge of flange or joint.

D. Listing of Ductwork and Casings to be Insulated:

1. All air conditioning system supply air ductwork, casings and plenums.
2. Air conditioning system return air ductwork, casings and plenums located in:
 - a. Mechanical equipment room.
 - b. Ceiling space or plenum where there is roof above.
 - c. Shaft with exterior wall(s) or shaft passing through non-air-conditioned space.
 - d. Non-air-conditioned space, including shaft not surrounded by air-conditioned spaces on all sides and ceiling space or plenum with non-air-conditioned space either above or below.
3. Air conditioning system return air ductwork, casings and plenums located outdoors.

4. Casings of heating and air conditioning systems and equipment which are not factory insulated, including plenums (supply, return, mixing), filter sections, access sections, sound attenuator casings and all other areas subject to condensation, heat gain or heat loss.
5. Combustion air duct.
6. Dryer exhaust ductwork.
7. Flexible ductwork not factory insulated.
8. Heating system supply ductwork, except ductwork exposed in spaces heated by the system.
9. Supply air diffuser plenums/back pans that are not either insulated or acoustically lined at the factory.
10. Ductwork and casings shown on the Drawings to be insulated, whether or not listed above.

END OF SECTION 23 07 00

SECTION 23 21 13 - HYDRONIC PIPING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 01 Specification Sections and other related sections apply to this Section.

1.2 SUMMARY

- A. This Section includes pipe and fitting materials, joining methods, special-duty valves, and specialties for the following:
 - 1. Pipe, valves and fittings
 - 2. Strainers
 - 3. Hydronic System Specialties and Accessories
 - 4. Expansion Joints and Guides
- B. Related sections include:
 - 1. Hydronic flow meters are specified in Section 23 05 19 "Meters for HVAC".

1.3 PERFORMANCE REQUIREMENTS

- A. Design working pressure and temperature for all specialties and accessories suitable for system operating temperature and pressure 125 psig at 225° F minimum.

1.4 SUBMITTALS

- A. Product Data: For each type of factory fabricated item indicated, include pressure ratings, construction materials, data sheets, performance characteristics, and furnished accessories.
- B. Field quality-control test reports.
- C. Grooved joint couplings and fittings shall be shown on the drawings and product submittals and shall be specifically identified with the applicable style or series designation.

1.5 MANUFACTURER'S SUPERVISION/INSPECTION SERVICE

- A. Expansion Joints, Offset Type: Provide service of manufacturer's authorized representative to inspect installation and to submit report of his inspection to Architect.

- B. Flexible Pipe: Provide inspection services by manufacturer's representative for final installing and certify installation is in accordance with manufacturer's recommendations and that connectors are performing satisfactorily.
- C. Grooved Installations: The grooved coupling manufacturer's factory trained representative shall provide on-site training for contractor's field personnel in the use of grooving tools and installation of grooved joint products. The representative shall periodically visit the jobsite and review contractor is following best recommended practices in grooved product installation. (A distributor's representative is not considered qualified to conduct the training or jobsite visit(s).)

1.6 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Installers of Pressure-Sealed Joints: Installers shall be certified by the pressure-seal joint manufacturer as having been trained and qualified to join piping with pressure-seal pipe couplings and fittings.
- B. Steel Support Welding: Qualify processes and operators according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- D. Gaskets shall not contain asbestos.
 - 1. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 01.
- E. Conform to Standards of Expansion Joint Manufacturer's Association.
- F. All grooved joint couplings, fittings, valves and specialties shall be products of a single manufacturer. Grooving tools shall be of same manufacturer as the grooved component.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

- A. Drawn-Temper Copper Tubing: ASTM B88, Type L.
- B. Annealed-Temper Copper Tubing: ASTM B88, Type K.

- C. DWV Copper Tubing: ASTM B306, Type DWV.
- D. Wrought-Copper Fittings: ASME B16.22 for pressure fittings, ASME B16.29 for drainage fittings.
- E. Cast Brass Fittings: ASME B16.18 for pressure fittings, ASME B16.23 for drainage fittings.
- F. Flanges for Copper Tubing: Cast Bronze, ASME B11.24, Classes 150 and 300, solder joint.
- G. Grooved Mechanical Joint Fittings and Couplings: Victaulic Company "QuickVic" rigid coupling for copper manufactured to copper-tube dimensions. (Flaring of tube or fitting ends to accommodate IPS sized couplings is not permitted.)
 - 1. Fittings: Wrought copper, ASME B16.22.
 - 2. Couplings:
 - a. Cast ductile iron conforming to ASTM A536. Copper-colored alkyd enamel coating for copper tubing systems. Coupling housings cast with offsetting, angle pattern bolt pads shall be used to provide system rigidity. Victaulic Style 607.
 - b. Flange adapter; flat face for direct connection to ANSI Class 125/150 flanged components. Victaulic Style 641.
 - c. Gaskets composed of elastomer properties as designated by ASTM D2000. Gaskets for water service Grade "EHP", or as approved by the engineer for the specific service.
 - 3. Operating Conditions: -30° F through +250° F temperature range according to gasket or valve lining selected and working pressure as shown in manufacturer's current product specification.
 - 4. Coupling Assembly: Housing clamps in two parts, single C-shaped gasket, two or more electroplated steel bolts as required to assemble housing clamps.

2.2 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A53/A53M, black steel with plain ends; Type E, Grade B (electric resistance welded), wall thickness as indicated in Part 3 "Piping Applications" Article.
- B. Cast-Iron Threaded Fittings: ASME B16.4; Class 125 as indicated in Part 3 "Piping Applications" Article.
- C. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150 as indicated in Part 3 "Piping Applications" Article.
- D. Malleable-Iron Threaded Unions: ASME B16.39; Class 250 as indicated in Part 3 "Piping Applications" Article.
- E. Unions in Welded Steel Pipes 2 Inches and Smaller: Class 3000 carbon steel socket welding union steel to steel seat and ground joint. Stainless steel in stainless steel piping.

- F. Welded Fittings for Black Steel Pipe 2 Inches and Smaller: Forged steel socket welding fittings. ASTM A105 and ASME B16.11, wall thickness to match adjoining pipe. All elbows long radius.
- G. Welding Fittings for Black Steel Pipe 2½ Inches and Larger: ASTM A234/A234M and ASME B16.9, wall thickness to match adjoining pipe. All elbows long radius.
- H. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced as indicated in Part 3 "Piping Applications" Article.
- I. Wrought-Steel Fittings: ASTM A234/A234M, wall thickness to match adjoining pipe.
- J. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts and nuts in accordance with applicable ASME standards. Flanges to be of slip-on, weld neck, threaded or solder type to suit piping system in which installed.
- K. Flange Gaskets: Flexitallic spiral wound gasket with PTFE filler and stainless-steel inner ring rated for 500° F service temperature. Gaskets shall be 1/8 inch thick, color coded and selected for service conditions.
- L. Grooved Mechanical-Joint Fittings and Couplings:
 - 1. Acceptable Manufacturers: Subject to compliance with requirements, provide products manufactured by the following manufacturers without substitution:
 - a. Victaulic Company of America.
 - b. Anvil/Gruvlok (sizes 14 inches and smaller).
 - 2. Operating Conditions: -30° F through +250° F temperature range according to gasket or valve lining selected and working pressure as shown in manufacturer's current product specification.
 - 3. Couplings
 - a. Cast of ductile iron conforming to ASTM A536. Alkyd enamel coating for black steel piping systems. Galvanized finish for galvanized piping systems. Couplings designed to engage and lock grooved or shouldered piping and fitting ends. Rigid joints in mechanical rooms, cooling tower piping and valve connections. Flexible coupling designed to allow for some angular deflection, contraction and expansion, may be used in distribution piping.
 - b. Sizes 2-1/2 inches through 12 inches: Coupling housings cast with offsetting, angle pattern bolt pads shall be used to provide system rigidity and support and hanging in accordance with ANSI B31.1 and B31.9.
 - c. Sizes 14 inch through 24 inches: Coupling housing key designed to fill the wedge shaped AGS groove and provide system rigidity and support and hanging in accordance with ANSI B31.1 and B31.9.
 - d. Gaskets composed of elastomer properties as designated by ASTM D2000. Gaskets for water service Grade "EHP" EPDM, with green color code.

- e. Coupling Assembly: Housing clamps in two parts, single C-shaped gasket, two or more electroplated steel bolts as required to assemble housing clamps. Couplings with more than 2 parts are not acceptable.
 - f. Equal to Victaulic Styles 107 or W07, for rigid joints and Styles 177, 75, 77, or W77 for flexible joints.
4. Fittings: Full flow type fittings with grooves designed to accept couplings of the same manufacturer. ASTM A536 cast ductile iron, ASTM A234 forged steel, or ASTM A53 carbon steel, galvanized for galvanized piping systems.
 5. Where grooved mechanical joints are used, Contractor may use:
 - a. Grooved design strainers:
 - 1) T-Type 2-1/2 inches through 12 inches: 300 psi, ductile iron body, Type 304 stainless steel frame and removable mesh basket with No. 12 or No. 6 strainer sizes, 57% free open area. Victaulic Style 730.
 - 2) Y-Type: 300 psi, ductile iron body, Type 304 stainless steel perforated removable metal baskets with 1/16 inch or 1/8-inch diameter perforations. Victaulic Style 732
 - 3) T-Type 14 inches through 24 inches: 300 psi, AGS grooved end carbon steel body, Type 304 stainless steel frame and mesh basket with T-bolt hinged closure. Victaulic Style W730.
 - b. As a substitute for Butterfly Valves, Victaulic Master Seal for sizes 2-1/2 inch
 - c. through 12 inch, or AGS-Vic 300 for sizes 14 inches through 24 inches. Valve stem shall be offset from the disc centerline to provide full 360-degree circumferential seating. Gear operator for valves 6 inches and larger.
 - d. As a substitute for Spring Loaded, Lift Disc Check Valves; Victaulic Series 716 for sizes 2-1/2 inch through 12 inch and Series W715 for sizes 14 inch through 24 inch.
 6. USE OF GROOVED FLANGE ADAPTERS IS PROHIBITED. Weld mating flange to grooved piping section to connect directly to ANSI 125/150 flanged components.
- M. Steel Pipe Nipples: ASTM A733, made of same materials as pipe in which they are installed, Schedule 80.

2.3 VALVES, GENERAL REQUIREMENTS

- A. Valves are specified by valve type. Where more than one valve type is listed for a service, use any of the listed types, unless otherwise specified or indicated, but selection must be consistent throughout the work.
- B. Bronze Valves: NPS 2 and smaller with solder or threaded ends, unless otherwise indicated.
- C. Ferrous Valves: NPS 2-1/2 and larger with flanged ends, unless otherwise indicated.

- D. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- E. Valve Sizes: Same as upstream pipe, unless otherwise indicated.
- F. Valve Actuators:
 - 1. Gear Drive: For quarter-turn valves NPS 8 and larger.
 - 2. Handwheel: For valves other than quarter-turn types.
 - 3. Lever Handle: For quarter-turn valves NPS 6 and smaller, except plug valves.
 - 4. Wrench: For plug valves with square heads. Furnish Owner with 1 wrench for every 10 plug valves, for each size square plug head.
- G. Extended Valve Stems: On insulated valves.
- H. Valve Flanges: ASME B16.1 for cast-iron valves, ASME B16.5 for steel valves, and ASME B16.24 for bronze valves.
- I. Valve Grooved Ends: AWWA C606.
- J. Solder Ends: With sockets according to ASME B16.18.
 - 1. Caution: Use solder with melting point below 840° F for angle, check, gate, and globe valves. For ball valves and calibrated orifice balancing valves, manufacturers shall verify that valve construction is satisfactory for use with non-lead solders.
- K. Threaded Ends: With threads according to ASME B1.20.1.
- L. Valve Bypass and Drain Connections: MSS SP-45.
- M. Automatic Temperature-Control Valves, Actuators and Sensors: Comply with requirements specified in Division 25 Section "Instrumentation and Control for HVAC".

2.4 BRONZE ANGLE VALVES

- A. Acceptable Manufacturers:
 - 1. Type 2, Bronze Angle Valves:
 - a. NIBCO, Inc.
 - b. Crane Co.; Crane Valve Group; Crane Valves
 - c. Milwaukee Valve Co.
 - d. Powell, Wm. Co.
- B. Bronze Angle Valves, General: MSS SP-80, with ferrous-alloy handwheel.
- C. Type 2, Class 150, Bronze Angle Valves: Bronze body with PTFE disc and union-ring bonnet. Dezincification-resistant bronze body, Bronze ASTM B584 Alloy C84400 (Solder) or Bronze ASTM

B62 Alloy C83600 (Threaded) or Bronze ASTM B61. Forged or yellow brass bodies will not be accepted. NIBCO T-335-Y.

- D. Type 2, Class 300, Bronze Angle Valves: Bronze body with stainless steel disc, replaceable seat and union-ring bonnet. Dezincification-resistant bronze body, Bronze ASTM B584 Alloy C84400 (Solder) or Bronze ASTM B62 Alloy C83600 (Threaded) or Bronze ASTM B61. Forged or yellow brass bodies will not be accepted. NIBCO T-376-AP.

2.5 CAST-IRON ANGLE VALVES

A. Acceptable Manufacturers:

1. Type II, Cast-Iron Angle Valves with Metal Seats:

- a. NIBCO, Inc.
- b. Crane Co.; Crane Valve Group; Crane Valves
- c. Milwaukee Valve Co

B. Cast-Iron Angle Valves, General: MSS SP-85, Type II.

- C. Class 125, Cast-Iron Angle Valves: Bronze mounted with renewable seat and disc, gray-iron body and bronze seats. NIBCO F-818-B.

2.6 COPPER-ALLOY BALL VALVES

A. Acceptable Manufacturers:

1. Two-Piece, Copper-Alloy Ball Valves, NIBCO, Inc., series listed, or equivalent product manufactured by:

- a. Conbraco Industries, Inc.; Apollo Div.
- b. Crane Co.; Crane Valve Group; Crane Valves
- c. Metso; Jamesbury, Inc.
- d. Milwaukee Valve Company
- e. Watts Industries, Inc.; Water Products Div.
- f. Worcester

B. Copper-Alloy Ball Valves, General: MSS SP-110

- 1. Two-Piece, Copper-Alloy Ball Valves: Bronze body with full-port, stainless steel ball and trim; PTFE seats and packing; and 600-psig minimum CWP rating and blowout-proof stem. Dezincification-resistant bronze body, Bronze ASTM B584 Alloy C84400 (Solder) or Bronze ASTM B62 Alloy C83600 (Threaded) or Bronze ASTM B61, ball and/or trim. Forged or yellow brass bodies will not be accepted. NIBCO T-585-70-66 and 5-585-70-66.

2.7 HIGH-PRESSURE (HIGH PERFORMANCE) BUTTERFLY VALVES

A. Acceptable Manufacturers: NIBCO, Inc. figure number listed or approved equal by:

23 21 13 - 7 of 21

1. DeZurik
2. Crane Co.; Crane Valve Group; Flowseal
3. Metso; Jamesbury, Inc.
4. Posi-Seal
5. Tyco International, Ltd.; Tyco Valves & Controls; Keystone Valves

B. High-Pressure Butterfly Valves:

1. General: MSS SP-68. 6 inches and larger for Balancing Service, except not allowed for pump discharge or cooling tower balancing service 2½ inches or larger where used for shutoff service only, except not allowed for boiler shutoff service) for Hot or Chilled Water Service.
2. Butterfly valves to have full-lug carbon steel ASTM A216 lug body, one-piece stainless-steel stem with stainless steel bearings and stainless-steel disc manufactured in conformance with MSS SP-68, MSS SP-25, and API-609. Valve shall be capable of bi-directional dead-end service at full pressure rating of the valve with no downstream flanges required. Drive end of shaft to be designed to accept universal ISO 5211 Actuator Mounting top works. The stem journals will be a multiple seal design providing for completely independent seals. Positive stem retention to be provided using 316 stainless steel keys locked in place, to permit removal of handle or actuator while under full operating pressure. Design discs with an offset flat face to reduce dynamic torque, decrease turbulence and maximize flow capacity. Provide disc-to-shaft locking keys of stainless steel and of the tangential or compressive type. The valve seats to consist of replaceable PTFE seating surface with a stainless-steel retaining ring. Shaft and thrust bearings to be of combination permanently lubricated reinforced PTFE with 316 stainless steel. Provide packing of multiple PTFE and graphite V-ring design with adjustable stainless steel gland follower and gland.
3. Valves 3 to 6 inches to be supplied with multi-position, lever-lock handles; size 8 inch and larger to be supplied with gear operator. Valve body to be full-lug pattern to comply with MSS-SP-68 and be compatible with ANSI 150 or 300 pattern flanges of appropriate pressure rating. Similar to NIBCO series ANSI Class 150 LCS-6822-3, 3 to 6 inches; LCS-6822-5 8 inches and larger). ANSI Class 300 LCS 7822-3, 3 to 6 inches; LCS-7822-5 (8 inches and larger).

2.8 BRONZE CHECK VALVES

A. Acceptable Manufacturers:

1. Type 1, Bronze, Lift Check Valves with Metallic Disc:
 - a. NIBCO, Inc.
 - b. Crane Co.; Crane Valve Group; Crane Valves
 - c. Milwaukee Valve Co.
2. Type 3, Bronze, Swing Check Valves with Metallic Disc:
 - a. NIBCO, Inc.
 - b. Crane Co.; Crane Valve Group; Crane Valves
 - c. Milwaukee Valve Company

- B. Bronze Check Valves, General: MSS SP-80. Dezincification-resistant bronze body, Bronze ASTM B584 Alloy C84400 (Solder) or Bronze ASTM B62 Alloy C83600 (Threaded) or Bronze ASTM B61. Forged or yellow brass bodies will not be accepted.

- C. Type 1, Class 125, Bronze, Horizontal or Vertical Lift Check Valves: Bronze body with PTFE disc and bronze seat. NIBCO T/S 480-Y.
- D. Type 1, Class 300, Bronze, Horizontal or Vertical Lift Check Valves: Bronze body with renewable metallic disc and bronze seat. NIBCO T/S 473-B.
- E. Type 3, Class 125, Bronze, Swing Check Valves: Bronze body with renewable metallic disc and bronze seat. NIBCO T/S 413-B.
- F. Type 3, Class 300, Bronze, Swing Check Valves: Bronze body with renewable metallic disc and bronze seat. NIBCO T/S 473-B.

2.9 GRAY-IRON SWING CHECK VALVES

A. Acceptable Manufacturers:

1. Type II, Gray-Iron Swing Check Valves with Composition to Metal Seats:

- a. NIBCO Inc.
- b. Crane Co.; Crane Valve Group; Crane Valves.
- c. Milwaukee Valve Co.

2. Grooved-End, Ductile-Iron Swing Check Valves:

- a. NIBCO, Inc.
- b. Mueller Co.
- c. Victaulic Co. of America.

B. Gray-Iron Swing Check Valves, General: MSS SP-71.

- C. Type I, Class 125, gray-iron, swing check valves with renewable metallic disc and seats. NIBCO F-918-B.
- D. Type II, Class 300, gray-iron, swing check valves with renewable metallic disc and seats. NIBCO F-968-B; Class 250 cast iron.
- E. 175-psig CWP Rating, Grooved-End, Swing Check Valves: Ductile-iron body with grooved or shouldered ends. NIBCO G-917-W; Cast Iron, Grooved, 250 psi, Swing Check; or KG-900-W; Cast Iron, Grooved, 250 psi, Silent Check.
- F. 300-psig CWP Rating, Grooved-End, Swing Check Valves: Ductile-iron body with grooved or shouldered ends and stainless steel disc and shaft. NIBCO KG-900-W-350; Cast Iron, Grooved, 350 psi, Silent Check.

2.10 SPRING-LOADED, LIFT-DISC CHECK VALVES

A. Acceptable Manufacturers:

1. Type III, Globe Lift-Disc Check Valves:

- a. NIBCO, Inc.
 - b. Metraflex Co.
 - c. Milwaukee Valve Company
2. Type IV, Threaded Lift-Disc Check Valves:
- a. NIBCO, Inc.
 - b. Metraflex Co.
 - c. Milwaukee Valve Company
 - d. Mueller Steam Specialty
- B. Lift-Disc Check Valves, General: FCI 74-1 or MSS-SP-125 (Type III), with spring-loaded bronze, PTFE or alloy disc and bronze or alloy seat.
- C. Type III, Class 125, Globe Lift-Disc Check Valves: Globe style with cast-iron shell and flanged ends. NIBCO F-910-W.
- D. Type III, Class 250, Globe Lift-Disc Check Valves: Globe style with cast-iron shell and flanged ends. NIBCO F-960-W.
- E. Type IV, Class 125, Threaded Lift-Disc Check Valves: Threaded style with bronze shell and threaded ends. NIBCO T-480.
- F. Type IV, Class 150, Threaded Lift-Disc Check Valves: Threaded style with bronze shell and threaded ends. NIBCO T-480.

2.11 BRONZE GLOBE VALVES

- A. Acceptable Manufacturers:
- 1. Type 2, Bronze Globe Valves with Nonmetallic Disc:
 - a. NIBCO, Inc.
 - b. Crane Co.; Crane Valve Group; Crane Valves
 - c. Milwaukee Valve Company
 - d. Powell, Wm. Co.
 - 2. Type 3, Bronze Globe Valves with Renewable Seats:
 - a. NIBCO, Inc.
 - b. Crane Co.; Crane Valve Group; Crane Valves
 - c. Milwaukee Valve Company
 - d. Powell, Wm. Co.
- B. Bronze Globe Valves, General: MSS SP-80, with ferrous-alloy handwheel.
- C. Type 2, Class 125, Bronze Globe Valves: Bronze body with PTFE disc and union-ring bonnet. NIBCO T/S 211-Y.

- D. Type 3, Class 300, Bronze Globe Valves: Bronze body with renewable stainless steel seats and union-ring bonnet. NIBCO T-276-AP.

2.12 CAST-IRON GLOBE VALVES

A. Acceptable Manufacturers:

1. Type I, Cast-Iron Globe Valves with Renewable Metal Seats:

- a. NIBCO, Inc.
- b. Crane Co.; Crane Valve Group; Crane Valves.
- c. Milwaukee Valve Company.

B. Cast-Iron Globe Valves, General: MSS SP-85.

C. Type I, Class 125, Cast-Iron Globe Valves: Gray-iron body with renewable bronze seats. NIBCO F-718-B; F-818-B (Angle).

D. Type I, Class 250, Cast-Iron Globe Valves: Gray-iron body with renewable bronze seats. NIBCO F-768-B; F-869-B (Angle Stop/Check/Globe).

2.13 BRONZE, CALIBRATED-ORIFICE, BALANCING VALVES

A. Acceptable Manufacturers:

- 1. Armstrong Pumps, Inc.
- 2. Bell & Gossett Domestic Pump; a division of ITT Industries
- 3. Taco
- 4. Tour-Anderson; available through Victaulic Company

B. Body: Bronze, ball, globe or plug type with adjustable calibrated orifice capable of pre- calculating and pre-setting.

C. Ball: Brass or stainless steel.

D. Plug: Resin.

E. Seat: PTFE or Ametal copper alloy.

F. End Connections: Threaded or solder.

G. Pressure Gage Connections: Integral seals for portable differential pressure meter.

H. Handle Style: Lever, with memory stop to retain set position and marked position settings.

I. CWP Rating: Minimum 125 psig.

J. Maximum Operating Temperature: 250° F.

2.14 CAST-IRON OR STEEL, CALIBRATED-ORIFICE, BALANCING VALVES

- A. Acceptable Manufacturers:
 - 1. Armstrong Pumps, Inc.
 - 2. Bell & Gossett Domestic Pump; a division of ITT Industries
 - 3. Taco
 - 4. Tour & Anderson; available through Victaulic Company
- B. Body: Cast-iron or steel body, ball, plug, or globe pattern with adjustable calibrated orifice venture capable of pre-calculating and pre-setting.
- C. Ball: Brass or stainless steel.
- D. Stem Seals: EPDM O-rings.
- E. Disc: Glass and carbon-filled PTFE.
- F. Seat: PTFE.
- G. End Connections: Flanged or grooved.
- H. Pressure Gage Connections: Integral seals for portable differential pressure meter.
- I. Handle Style: Lever, with memory stop to retain set position and marked position settings.
- J. CWP Rating: Minimum 125 psig.
- K. Maximum Operating Temperature: 250° F.

2.15 NEEDLE VALVES

- A. Acceptable Manufacturers
 - 1. Stockham
 - 2. Nibco
 - 3. Crane
 - 4. Milwaukee
- B. Bronze body and stem, working pressure to match piping system in which installed.

2.16 DIAPHRAGM-OPERATED, PRESSURE-REDUCING VALVES

- A. Acceptable Manufacturers:
 - 1. Amtrol, Inc.
 - 2. Armstrong Pumps, Inc.
 - 3. Bell & Gossett Domestic Pump; a division of ITT Industries
 - 4. Conbraco Industries, Inc.

5. Taco, Inc.
 6. Spence Engineering Company, Inc.
 7. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- B. Design working pressure and temperature suitable for system operating temperature and pressure, 125 psig at 225° F.
- C. Automatic Fill Valves: Pressure regulating type that will not stick nor allow pressure to build up on low side. Capable of field adjustment and set to maintain terminal pressure of approximately 5 psig in excess of static head on system, within a 2-pound maximum variation regardless of initial pressure fluctuation and without objectionable noise under any condition of operation. Brass body with non-corrosive valve seat and stem. Built-in anti-siphon check valve to prevent backflow of water when make-up water line pressure falls below the system pressure.

2.17 DIAPHRAGM-OPERATED, SAFETY VALVES

- A. Acceptable Manufacturers:
1. Amtrol, Inc.
 2. Armstrong Pumps, Inc.
 3. Bell & Gossett Domestic Pump; a division of ITT Industries
 4. Conbraco Industries, Inc.
 5. Taco, Inc.
 6. Thrush
 7. Spence Engineering Company, Inc.
 8. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- B. Design working pressure and temperature suitable for system operating temperature and pressure, 125 psig at 225° F minimum.
- C. ASME label and rated direct spring-loaded type, lever operated, thermostat of stainless steel or protected with a thermo-bonded coating, emergency fusible plug, non-adjustable factory set discharge pressure. Set for temperature and pressure limits of system.
- D. Selection system relief valve capacity so that it is greater than make-up valve capacity and to exceed maximum btu/hr. rating of connected equipment. Use AGA temperature steam ratings when sizing for water heater.

2.18 PRESSURE/TEMPERATURE TEST PLUGS

- A. Acceptable Manufacturers:
1. Peterson Equipment Company, Inc.
 2. SISCO
- B. Solid brass test plug with cap and seal, Nordel inner core for up to 300° F, extension to suit insulation thickness. Test plug capable of receiving either a pressure or temperature probe 1/8-inch O.D. Furnish number of 1/8 inch gauges with adapters and 5 inch stem pocket thermometers for appropriate ranges

specified in Warranty and Contract Closeout article of Part 1 of this section. Provide one Master Test Kit containing a 2-1/2-inch test gauge and two 5 inch pocket thermometers.

2.19 AIR CONTROL DEVICES

A. Acceptable Manufacturers:

1. Amtrol, Inc.
2. Armstrong Pumps, Inc.
3. Bell & Gossett Domestic Pump; a division of ITT Industries
4. Taco.

B. Design working pressure and temperature for all specialties and accessories, suitable for system operating pressure and temperature, 125 psig at 225° F minimum.

C. Air Vent

1. Manual Air Vent: Provide 1/4 inch vent cock.
2. Automatic Air Vent: Float type with isolating valve, brass or cast iron body, copper float, stainless steel valve and valve seat. Suitable for system operating temperature and pressure, minimum 125 sprig. Minimum 3/4 inch inlet for high capacity type, 1/2 inch elsewhere, 1/4 inch outlet.

D. Air Separator

1. Centrifugal type similar to Bell & Gossett "Rolairtrol" Type R, with steel tank, perforated stainless steel air collector and drain connection, ASME stamped for 125 psi working pressure.
2. Size in accordance with manufacturer's recommendations for circulating rate of system, but not less than adjacent pipe size.

2.20 EXPANSION TANK

A. Precharged and pressurized expansion tank, welded carbon steel ASME constructed and stamped for 125 psi, with sealed-in elastomer diaphragm suitable for temperatures to 240° F. Provide air charging fitting, pressure gauge and drain fitting. Provide vertical unit with base for floor mounting.

2.21 STRAINERS GENERAL SERVICE

A. Acceptable Manufacturers

1. NIBCO, Inc.
2. Armstrong Machine Works
3. Hoffman Specialty, ITT
4. Illinois
5. Keckley
6. Mueller Steam Specialty
7. Spirax-Sarco

- B. Cast iron (ASTM A126, Grade B), carbon steel (ASTM A216, Grade WCB) or brass (ASTM B62) body as required to meet system pressure and temperature requirements, screwed or flanged ends matching piping in which installed. Provide straight threaded gasket face cap with gasket for screwed end type, cast iron or hot rolled steel cover with gasket for flanged end type and bottom drain connection. Type 304 stainless steel screen unless otherwise required for application with net free area not less than three times the area of the inlet pipe. Maximum 2 psig pressure drop at design flow.
 - 1. Size 4 inch and under, 1/32-inch (20 mesh) perforated screen.
 - 2. Size 5 inch and larger, 1/8-inch perforated screen.
- C. Y pattern, except basket pattern in low horizontal piping without sufficient clearance for Y pattern screen removal/replacement.
- D. For Stainless Steel Piping: As above except ASTM A296 cast stainless steel body, 150 psig, flanged Y pattern. Mueller Steam Specialty 781-SS.

2.22 FLEXIBLE CONNECTORS

- A. Acceptable Manufacturers:
 - 1. Anaconda
 - 2. Flexonics
 - 3. Korfund
 - 4. Metraflex
- B. General: Fabricate of multiple plies of nylon card, fabric and neoprene, vulcanized so as to become inseparable and homogeneous.
- C. Stainless-Steel Bellow, Flexible Connectors:
 - 1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
 - 2. End Connections: 2 inches and smaller threaded; 2-1/2 inches and larger flanged.
 - 3. Performance: Capable of 3/4-inch misalignment.
 - 4. CWP Rating: 150 psig.
 - 5. Maximum Operating Temperature: 250° F.
 - 6. Maximum Unit Lengths: 12 inches up to 3-inch size, 18 inches for sizes 4 inches and larger.
- D. Provide control rods or cables to control extension of connector.

2.23 EXPANSION JOINTS

- A. Acceptable Manufacturers:
 - 1. Metraflex Co.
 - 2. Adscos Manufacturing Corp.
 - 3. Flexonics
 - 4. Keflex, Inc.
 - 5. Hyspan Precision Products Co.

B. General

1. Conform to the standards by Expansion Joint Manufacturers Association. Provide joints with design working pressure to match specified class of valves, flanges and fittings of piping system in which installed and with material of construction suitable for piping system in which installed.
2. Provide joint(s) with rated stroke capable of absorbing 200% of maximum piping expansion at installed location.

C. Bellows Type Externally Pressurized Expansion Joint, for all Copper Tubing or Steel Pipe Sizes

1. 150 psig or 300 psig minimum design working pressure to suit character of piping system in which installed, rated piping system expansion up to 8 inches (refer to Paragraph A.2. above) for single joint and 16 inches for dual joint, rated contraction 1/2 inch minimum to 2 inches for single joint, forged steel flanged ends.
2. Packless all welded construction, inner pipe and housing ASTM A53 Grade B of equal or greater schedule than piping system in which installed, internal guide ring with travel limited to rated expansion stroke plus 1/2 inch maximum, laminated or multiply stainless-steel bellows, housing drain and vent ports.
3. Factory or field installed reducer for pipe sizes smaller than 2 inches.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. Chilled-water piping, aboveground, NPS 2 and smaller, shall be any of the following:

1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
2. Type L, drawn-temper copper tubing, wrought-copper fittings, with Press System (press to connect) joints.

B. Chilled-water piping, aboveground, NPS 2-1/2 and larger, shall be any of the following:

1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
2. Type L, drawn-temper copper tubing, wrought-copper fittings, with Press System (press to connect) joints, up to 4 inches.
3. Type L, drawn-temper copper tubing, wrought-copper fittings up to NPS 3. Grooved, mechanical joint coupling and fittings; and grooved, mechanical joints allowed in accessible locations only. Grooved couplings not allowed within shafts, furred spaces or above inaccessible ceilings. Solder mating flange to grooved piping section to connect directly to ANSI 125/150 flanged components.
4. Schedule 40 steel pipe, except 0.375-inch wall for sizes 12 inches and larger. Wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings and welded and flanged joints. Nipples Schedule 80.
5. Schedule 40 steel pipe, except 0.375-inch wall for sizes 12 inches and larger. Grooved, mechanical joint coupling and fittings; and grooved, mechanical joints allowed in accessible locations only. Grooved couplings not allowed within shafts, furred spaces or above inaccessible ceilings. Weld mating flange to grooved piping section to connect directly to ANSI 125/150 flanged components.

- C. Condensate-Drain Piping, NPS 1 and smaller shall be any of the following:
 - 1. Type L, drawn temper copper tubing, wrought copper fittings, and soldered joints.
 - 2. Type L, drawn-temper copper tubing, wrought-copper fittings, with Press System (press to connect) joints.
- D. Condensate-Drain Piping NPS 1-1/4 and larger, shall be the following:
 - 1. Type DWV, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
- E. Air-Vent Piping:
 - 1. Inlet: Same as service where installed with metal-to-plastic transition fittings for plastic piping systems according to the piping manufacturer's written instructions.
 - 2. Outlet: Type K, annealed-temper copper tubing with soldered or flared joints.
- F. Safety-Valve-Inlet and -Outlet Piping for Hot-Water Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed.

3.2 PIPING INSTALLATION

- A. Refer to Section 23 05 00, "Common Materials and Methods for HVAC", for general piping installation requirements.
- B. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- C. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
- D. Install branch connections to mains using mechanically formed tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe. Bull head tees are not allowed.
- E. Install strainers on inlet side of each control valve, pressure-reducing valve, solenoid valve, in-line pump, and elsewhere as indicated. Install NPS 3/4 nipple and ball valve in blowdown connection of strainers NPS 2 and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2.

3.3 VALVE APPLICATIONS

- A. Unless otherwise noted, use the following:
 - 1. Shutoff Service: Ball or butterfly valves.
 - 2. Throttling or Balancing Service: Angle, ball, butterfly, or globe valves. Butterfly valves not allowed for balancing at pump discharge or for cooling tower balancing service.
 - 3. Pump Discharge: Spring-loaded, lift-disc check valves (non-slam)
- B. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP class or CWP ratings may be substituted.

- C. Install shutoff-duty valves at each branch connection to supply mains, and at supply connection to each piece of equipment.
- D. Install calibrated-orifice, balancing valves at each branch connection to return main.
- E. Install calibrated-orifice, balancing valves in the return pipe of each heating or cooling terminal.
- F. Install check valves at each pump discharge and elsewhere as required to control flow direction.
- G. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; and pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 01, for installation requirements.
- H. Safety relief valve vent lines shall not connect to piping serving other relief devices or equipment.
- I. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.
- J. Chilled-Water Piping: Use the following types of valves:
 - 1. Angle Valves, NPS 2 and Smaller: Type 2, Class 150, bronze.
 - 2. Angle Valves, NPS 2-1/2 and Larger: Type II, Class 125, cast iron.
 - 3. Ball Valves, NPS 2 and Smaller: Two piece, 600-psig CWP rating, copper alloy.
 - 4. High-Pressure (High Performance) Butterfly Valves, NPS 2-1/2 and Larger: Threaded Lug Type, Class 300.
 - 5. Lift Check Valves, NPS 2 and Smaller: Type 1, Class 125, horizontal or vertical, bronze.
 - 6. Swing Check Valves, NPS 2 and Smaller: Type 3, Class 125, bronze.
 - 7. Swing Check Valves, NPS 2-1/2 and Larger: Type II, Class 125, gray iron.
 - 8. Spring-Loaded, Lift-Disc Check Valves, NPS 2 and Smaller: Type IV, Class 125 minimum.
 - 9. Spring-Loaded, Lift-Disc Check Valves, NPS 2-1/2 and Larger: Type III, Class 125, cast iron.
 - 10. Globe Valves, NPS 2 and Smaller: Type 2, Class 125, bronze.
 - 11. Globe Valves, NPS 2-1/2 and Larger: Type I, Class 125, bronze- mounted cast iron.

3.4 VALVE INSTALLATION

A. General

- 1. Provide valves at locations shown, where specified and where required to properly control piping systems. Provide valves recommended or required by equipment manufacturers and codes for proper operation of equipment and shutoff valves to allow isolation of each main and branch service line, whether or not indicated or specified.
- 2. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- 3. Operate valves from fully open to fully closed positions. Examine guides and seats made accessible by such operation.
- 4. Examine threads on valve and mating pipe for form and cleanliness.
- 5. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Check gasket material for proper size, material composition suitable for service, and freedom from defects and damage.

6. Do not attempt to repair defective valves; replace with new valves.
 7. Install valves in horizontal piping with stem at or above the center of the pipe.
 8. Install valves in a position to allow full stem movement.
- B. Check Valves: Provide lift check type after globe valves, install with stem upright and plumb. Provide nonslam type in vertical piping on discharge side of pumps and elsewhere as indicated or specified. Provide horizontal swing check type elsewhere unless otherwise indicated or required for service intended, install in horizontal position with hinge pin level. Install check valves, including those that are spring loaded, so that force of gravity will operate to close valves.
- C. Provide valve ends to suit character of pipe in which installed. Provide valves designed for working pressure of at least 125% of maximum operating pressure of system in which installed, but not less than 250 psig on high pressure systems, and 125 psig on low pressure systems.

3.5 HYDRONIC SPECIALTIES INSTALLATION

A. Expansion Tank

1. Provide expansion tank for the following systems:

- a. Chilled Water

- B. Pressure/Temperature Test Plugs: Provide nipple as required to locate cap of P/T plug outside of surface of pipe insulation.

C. Relief Valves

1. Provide as required or shown on all water systems and equipment. Aggregate relieving capacity as required by ASME Code.
2. Select system relief valve capacity so that it is greater than makeup pressure reducing valve capacity. Select equipment relief valve capacity to exceed rating of connected equipment.
3. Pipe relief valve outlet to nearest floor drain.
4. Safety relief valve vent lines shall not connect to piping serving other relief devices or equipment.

3.6 COOLING COIL CONDENSATE DRAIN PIPING

- A. Comply with requirements of applicable mechanical and plumbing code.
- B. Drain piping for air conditioning units may not be shown on the Drawings. Provide as required, whether or not indicated.
- C. Provide drain piping for room air conditioning units.
- D. Provide water seal traps of sufficient depth to maintain water seal against system static pressure. Enter building drainage system only through an air gap. Run piping to nearest convenient floor drain or as indicated. Pitch at least 1/4 inch per foot unless otherwise noted or directed.

- E. Provide plugged "TY" at each change in direction and at approximately 60-foot centers on straight runs. Provide cleanout at base of vertical risers as required.

3.7 FLEXIBLE PIPING CONNECTIONS

- A. Install where shown, where specified and at all base-mounted pumps, chillers, and elsewhere where required. On pipes connected to equipment supported by vibration isolation, install parallel to axis of rotation. Install one end immediately adjacent to the isolated equipment and anchor other end.
- B. Flexible piping connections shall not be used to correct misalignment between equipment and connected piping.

3.8 FIELD QUALITY CONTROL

- A. Prepare hydronic piping according to ASME B31.9 and as follows:
 - 1. Leave joints, including welds, uninsulated and exposed for examination during test.
 - 2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
 - 3. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
 - 4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
 - 5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.
- B. Grooved joints shall be installed in accordance with the manufacturer's latest published installation instructions. Grooved ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove. Gaskets shall be of an elastomer grade suitable for the intended service and shall be molded and produced by the coupling manufacturer. The grooved coupling manufacturer's factory trained representative shall provide on-site training for contractor's field personnel in the use of grooving tools and installation of grooved joint products. The representative shall periodically visit the jobsite and review contractor is following best recommended practices in grooved product installation. (A distributor's representative is not considered qualified to conduct the training or jobsite visit(s).)
- C. Perform the following tests on hydronic piping:
 - 1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
 - 2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
 - 3. Isolate expansion tanks and determine that hydronic system is full of water.
 - 4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure for a minimum of 4 hours with no drop in pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of

specified minimum yield strength or 1.7 times "SE" value in Appendix A in ASME B31.9, "Building Services Piping."

5. At the beginning of the pressure test, and periodically during the test, examine piping, joints and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
6. Prepare written report of testing.

D. Perform the following before operating the system:

1. Open manual valves fully.
2. Inspect pumps for proper rotation.
3. Set makeup pressure-reducing valves for required system pressure.
4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
5. Set temperature controls so all coils are calling for full flow.
6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
7. Verify lubrication of motors and bearings.

END OF SECTION 23 21 13

SECTION 23 23 00 - REFRIGERANT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 01 Specification Sections and other related sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes refrigerant piping used for air-conditioning applications.
- B. Related Sections
 - 1. Division 23, "Common Materials and Methods for HVAC"
 - 2. Division 23, "Vibration Isolation and Seismic Restraints for HVAC Systems"
 - 3. Division 23, "Unitary Air Conditioning"

1.3 PERFORMANCE REQUIREMENTS

- A. Line Test Pressure for Refrigerant R-32:
 - 1. Suction Lines for Air-Conditioning Applications: 300 psig
 - 2. Suction Lines for Heat-Pump Applications: 535 psig
 - 3. Hot-Gas and Liquid Lines: 535 psig

1.4 SUBMITTALS

- A. Product Data: Include catalog cuts for factory fabricated items.
- B. Welding certificates.
- C. Field quality-control test reports.
- D. Operation and Maintenance Data: For refrigerant valves and piping specialties to include in maintenance manuals.

1.5 MANUFACTURER'S SUPERVISION/INSPECTION SERVICE

- A. Refrigerant Piping System: Provide the services of the equipment manufacturer, or his authorized representative, to design and supervise the installation, cleaning and testing of the field installed refrigerant piping system. At the completion of the installation, the equipment manufacturer shall certify, in writing, to the Architect that the installation was made in accordance with his design and

recommendations and shall provide record fabrication drawing schematics showing all pipe sizes and specialties of complete refrigerant piping systems.

1.6 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
- B. Comply with ASHRAE 15, "Safety Code for Refrigeration Systems."
- C. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."

1.7 PRODUCT STORAGE AND HANDLING

- A. Store piping in a clean and protected area with end caps in place to ensure that piping interior and exterior are clean when installed.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

- A. Copper Tube for Refrigerant Service: ASTM B 280, ACR copper tubing, Type K or L Hard, except soft tubing in coils may be used in sizes 7/8 ODS and smaller for final branch to equipment having flared connections. Pipe and fittings manufactured especially for refrigeration. All pipe cleaned, dried, charged with nitrogen and sealed with pressure tight plugs at the factory.
- B. Copper Tube for Refrigerant Vent Service: ASTM B 88, Type L Hard copper tubing.
- C. Wrought-Copper Fittings: ASME B16.22.
- D. Wrought-Copper Unions: ASME B16.22.
- E. Cast Brass Fittings: ANSI B16.18, Tinned coat brass may be used in larger sizes where wrought copper is not available.
- F. Solder Filler Metals: ASTM B 32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.
- G. Brazing Filler Metals: AWS A5.8.
- H. Flexible Connectors:
 - 1. Body: Tin-bronze bellows with woven, flexible, tinned-bronze-wire-reinforced protective jacket.
 - 2. End Connections: Socket ends.
 - 3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch- long assembly.

4. Pressure Rating: Factory test at minimum 500 psig.
5. Maximum Operating Temperature: 250 deg F.

2.2 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, Grade B black steel with plain ends; Schedule 40, nipples Schedule 80, coated with ASTM B6 slab zinc inside and outside by the hot-dip process.
- B. Malleable Iron Threaded Fittings: ASTM A 197 black malleable iron. ANSI B16.3, Class 150 banded, with ANSI B1.20.1 standard taper pipe threads. Coated with ASTM B6 slab zinc inside and outside by the hot-dip process.
- C. Flexible Connectors:
 1. Body: Stainless-steel bellows with woven, flexible, stainless-steel-wire-reinforced protective jacket
 2. End Connections:
 - a. NPS 2 and Smaller: With threaded-end connections.
 - b. NPS 2-1/2 and Larger: With flanged-end connections.
 3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch- long assembly.
 4. Pressure Rating: Factory test at minimum 500 psig.
 5. Maximum Operating Temperature: 250 deg F.

2.3 REFRIGERANT VALVES AND SPECIALTIES

- A. Acceptable Manufacturers:
 1. Henry Valve Co.
 2. Sporlan Valve Co.
 3. Superior Valve Co.
 4. Mueller Brass Co.
- B. Type REFV, Refrigerant Valves
 1. Shutoff Valves: Brass, back seating ball, globe, and angle valves. Diaphragm packless type for 1-5/8-inch ODS and smaller, packed type with winged sealing cap for 2-1/8 inch ODS and larger.
 2. Check Valves: Brass body and piston, stainless steel spring, screw cap for 5/8-inch ODS and smaller. Bronze body, floating piston, soft seat disc for 7/8-inch ODS and larger.

2.4 REFRIGERANT STRAINERS

- A. Acceptable Manufacturers:
 1. Henry Valve Co.

2. Sporlan Valve Co.
3. Superior Valve Co.
4. Mueller Brass Co.

- B. Angle or Y pattern, brass body, renewable screen of 100 mesh monel metal reinforced with 10 mesh brass screen, not screen free area at least 10 times that of refrigerant line.

2.5 REFRIGERANTS

- A. ASHRAE 34, R-32: Difluoromethane.

PART 3 - EXECUTION

3.1 REFRIGERANT PIPING APPLICATIONS

- A. Suction Lines for Conventional Air-Conditioning Applications: ACR Copper, Type K or L, hard tubing and wrought-copper fittings with brazed joints.
- B. Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications: ACR Copper, Type K or L, hard tubing and wrought-copper fittings with brazed joints.
- C. Safety-Relief-Valve Discharge Piping NPS 2-1/2 and Larger: Schedule 40, galvanized steel pipe and galvanized fittings with threaded joints.
- D. Safety-Relief-Valve Discharge Piping NPS 2 and Smaller: Copper, Type L, drawn- temper tubing and wrought-copper fittings with soldered joints.

3.2 REFRIGERANT PIPING AND SYSTEM INSTALLATION

- A. Refer to Section 23 05 00 "Common Materials and Methods for HVAC", for general piping installation requirements.
- B. Install refrigerant piping according to ASHRAE 15, complete with hangers, fittings, valves, strainers, drier, oil traps, etc.
- C. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.
- D. Install refrigerant piping in protective conduit where installed belowground.
- E. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.
- F. Slope refrigerant piping as follows:
1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
 2. Install horizontal suction lines with a uniform slope downward to compressor.
 3. Liquid lines may be installed level.

- G. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.
- H. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.
- I. Install sleeves through floors, walls, or ceilings, sized to permit installation of full-thickness insulation.
- J. Bleed dry nitrogen through the lines when making joints.
- K. Size and run refrigerant piping in accordance with common good practices, the recommendations of the equipment manufacturers and the Equipment Standards of the Air Conditioning and Refrigerating Machinery Association, Inc. Entire installation, including safety devices, testing and cleaning, conform to ANSI B9.1 and B31.5. Provide piping system, as required, with: liquid-suction heat exchangers, ASME coded liquid receivers, double risers, all necessary purge and charging valves and moisture indicating liquid line sight glass in each circuit, shutoff, relief and drain valves and connections, a full-flow removable cartridge type refrigerant drier and a strainer installed with a three valve bypass arrangement in the liquid line close to each condensing unit if not built into the equipment, a strainer in the suction connection to each compressor if the compressor does not have built-in scale traps, external strainers on the inlet side of each solenoid valve and each thermal expansion valve, regardless of any internal strainer that may be incorporated in the valve construction, hot gas muffler, and flexible connections at equipment mounted on resilient supports.
- L. Provide appropriate refrigerant charging and recovery valves and fittings in each refrigerant circuit.
- M. Provide pressure relief valves if required for venting. Pipe relief lines to outside of building, terminate with an ell turned down and a bug screen.
- N. Isolation valves shall be low pressure drop design ball type, designed specifically for refrigerant system.
- O. Provide necessary operating charges of refrigerant and oil.
- P. Clean interior of any refrigerant piping, should it become dirty, by first rodding pipe with a wire brush and then rodding pipe with cheesecloth with refrigerant oil on it. Make at least three (3) passes with cheesecloth using a clean cheesecloth with clean refrigerant oil each time.
- Q. Test as specified hereinafter under FIELD QUALITY CONTROL, and charge with refrigerant. If initial charging occurs at ambient temperature below 55 degrees F., recharge again when ambient is above 55 degrees F. Test and recharge with refrigerant as required during first full summer of operation, April 1, through October 31, without additional cost to Owner.
- R. Support piping at no more than eight-foot intervals and pitch not less than 1 inch per 20 feet in direction of flow.
- S. Provide the services of the equipment manufacturer, or his authorized representative, as specified in the Article titled "Manufacturer's Supervision/Inspection Services".

3.3 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
- B. Tests and Inspections:
 - 1. Comply with ASME B31.5, Chapter VI.
 - 2. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
 - 3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in Part 1 "Performance Requirements" Article.
 - a. Fill system with dry nitrogen to the required test pressure.
 - b. System shall maintain test pressure at the manifold gage throughout duration of test (minimum 24 hours).
 - c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
 - d. Remake leaking joints using new materials, and retest until satisfactory results are achieved.

3.4 SYSTEM CHARGING

- A. Charge system using the following procedures:
 - 1. Install core in filter dryers after leak test but before evacuation.
 - 2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers. If vacuum holds for 12 hours, system is ready for charging.
 - 3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
 - 4. Charge system with a new filter-dryer core in charging line.

3.5 ADJUSTING

- A. Adjust thermostatic expansion valve to obtain proper evaporator superheat.
- B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.
- C. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.
- D. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:
 - 1. Open shutoff valves in condenser water circuit.
 - 2. Verify that compressor oil level is correct.
 - 3. Open compressor suction and discharge valves.
 - 4. Open refrigerant valves except bypass valves that are used for other purposes.
 - 5. Check open compressor-motor alignment and verify lubrication for motors and bearings.

- E. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

END OF SECTION 23 23 00

SECTION 23 30 00 – DUCTWORK AND DUCTWORK ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Sheet metal ductwork and fittings
2. Sheet metal casings and plenums
3. Duct Accessories; including dampers, flexible connectors, flexible duct, access doors
4. Air volume control boxes
5. Diffusers, registers and grilles

- B. Related Sections include the following:

1. Duct mounted smoke detectors are specified in Division 28
2. Airflow measuring stations are specified in Division 25
3. Motorized control dampers are specified in Division 25

1.3 DEFINITIONS

- A. Duct Sizes: Inside clear dimensions. For acoustically lined ducts and casings, maintain sizes inside lining. For rectangular ductwork in plan, first dimension indicates width, and second dimension indicates height.
- B. Pressure Class: The numerical duct construction pressure classification that identifies permissible SMACNA Duct Construction Standards.
- C. Seal Class: Identifies the extent of sealing of duct joints, seams and penetrations per SMACNA Duct Construction Standards.
- D. Leakage Class: Identifies permissible leakage as described in SMACNA HVAC Air Duct Leakage Test Manual.
- E. Low Pressure Ductwork: 3 inch wg and less.
- F. Medium Pressure Ductwork: 4 inch wg and 6 inch wg.
- G. High Pressure Ductwork: Greater than 6 inch wg.

1.4 REFERENCES

- A. SMACNA: HVAC Duct Construction Standards – Metal and Flexible
- B. SMACNA: HVAC Air Duct Leakage Manual
- C. ARI 880: Air Volume Terminals
- D. UL: Applicable Standards

1.5 SUBMITTALS

- A. Product Data:
 - 1. Provide booklet of Shop Standards, including the following:
 - a. Duct construction classification and fabrication, assembly, and installation details including SMACNA Tables and Figure numbers clearly marked to identify which are to be used.
 - b. Details of shop fabricated items, fittings, reinforcing details and spacing, seam and joint construction.
 - c. Installation details of duct mounted equipment and accessories, including dampers, coils, access doors, hangers and supports.
 - d. Product data for factory fabricated equipment, dampers, access doors, flexible duct, etc.
 - 2. For each type of product indicated, include performance characteristics, rated capacities, data sheets, and furnished accessories.
 - 3. Shop Standards shall be submitted for review prior to submission of sheet metal shop drawings. Any sheet metal shop drawings submitted prior to the shop standard review will be returned as “Rejected”.
- B. Product Schedule or Lists: Include Diffuser, Register and Grille Schedule, indicating Drawing designation, room location, quantity, model number, size and accessories furnished.
- C. Shop Drawings: Prepare CAD-generated shop fabrication drawings to a scale of not less than 3/8 inch per foot. Show complete ductwork and casing layout, including:
 - 1. Duct layout indicating sizes and pressure classes.
 - 2. Elevations of top and bottom of ducts.
 - 3. Dimensions of main duct runs from building grid lines.
 - 4. Fittings.
 - 5. Clearly show all duct accessories, including access doors, dampers, diffusers, and grilles.
 - 6. Acoustical lining and thickness as applicable.
 - 7. Prepare duct layout based on routing indicated on the drawings and make reasonable modifications to layout without increasing duct system pressure drop in order to coordinate with other trades. Refer to “Layout and Coordination with other Trades” specified in Section 23 05 00. Do not submit duct shop drawings until multi-discipline coordination drawings specific in Division 1 are completed.

8. Clearly identify by circle and by note "Deviation" and/or "Interference" in large lettering any and all deviations from Drawings and any and all unresolved interference conditions and assume full responsibility for failure to do so.
9. Submit all shop drawings for review.
10. Modify shop fabrication drawings in accordance with Architect's review comments, if any, and to show any subsequent shop or field changes. At completion of work, submit final shop fabrication drawings labeled "As-Built" to the Owner for record purposes.

D. Field quality-control test reports.

1.6 QUALITY ASSURANCE

A. NFPA Compliance:

1. NFPA 90A, "Installation of Air Conditioning and Ventilating Systems."
2. NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."

1.7 COORDINATION

- A. Coordinate location of duct access doors to allow proper access to dampers, coils, fans, etc. Coordinate with General Contractor proper location of wall and ceiling access panels to permit access to duct access doors.
- B. Coordinate location of duct mounted equipment (coils, humidifiers, filters, smoke detectors) furnished in other Sections for installation under this Section. Provide duct transitions as required.

PART 2 - PRODUCTS

2.1 SHEET METAL MATERIALS

- A. Comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods, unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Lock-forming quality; zinc coating each side, complying with ASTM A 653/A 653M and having G90 coating designation; ducts shall have mill- phosphatized finish for surfaces exposed to view.
- C. Aluminum Sheets: ASTM B209, alloy 3003, temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.
- D. Reinforcements: Structural shapes (channels, angles, and plates) shall be of galvanized steel where installed on galvanized ducts, and Type 304 stainless steel where installed on stainless steel ducts.

2.2 SEALANT MATERIALS

A. Acceptable Manufacturers:

1. United McGill Corp.
2. H.B. Fuller Co., Foster Products Division
3. Precision Adhesives
4. Carlisle Hardcast
5. General Electric Co.

B. General:

1. The term "sealant" is not limited to materials of adhesive or mastic nature but includes tapes and combinations of open-weave fabric strips and mastics.
2. Sealants for air distribution systems shall be of liquid and/or mastic type in accordance with SMACNA.

C. All sealants shall be UL Classified and meet NFPA 90A, Class 1 requirements when applied in a manner consistent with its intended use. Ratings shall not exceed a Flame Spread of 25 or a Smoke Developed of 50. All containers and shipping cartons shall bear the UL label indicating flame and smoke ratings and shall include Fire Hazard Classification. Labeling shall also include Hazard Statement required by the Consumers Product Safety Act, CFR Title 16, Chapter II, subchapter C, Federal Hazardous Substances Act Regulations, Part 1500, Section 1-272.

D. Sealants for air distribution systems shall be compatible with the materials, application and operating temperatures of the system. Sealants used for systems handling fumes and chemicals shall be confirmed suitable for the specific application. Sealants exposed to the weather, shall be ultraviolet light and ozone resistant and provide watertight seal.

E. Sealants shall be applied in accordance with manufacturer's instructions. Provide adequate ventilation and follow safety procedures as required. Adequate drying/curing time shall be allowed before operating or testing the systems.

F. Tape Sealing System: Woven-fiber tape impregnated with gypsum mineral compound and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.

G. Water-Based Joint and Seam Sealant: Flexible, adhesive sealant, resistant to UV light when cured, UL 723 listed, and complying with NFPA requirements for Class 1 ducts.

H. Flanged Joint Mastic: One-part, acid-curing, silicone, elastomeric joint sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use O.

I. Flange Gaskets: Butyl rubber or EPDM polymer with polyisobutylene plasticizer.

2.3 DUCT PRESSURE CLASSIFICATION AND CONSTRUCTION

A. Construct ducts for pressure class indicated (positive or negative), and seal all seams and joints to achieve Seal Class A, Leakage Class 6 for rectangular duct and Class 3 for round duct, according to the following:

1. Supply Ducts between AHU and Air Volume Control Box: 4-inch wg positive.
 2. Supply Ducts between Air Volume Control Box and Diffuser: 2-inch wg positive.
 3. Supply Duct Systems without Air Volume Control Boxes: 2-inch wg positive.
 4. Outside Air Ducts: 2-inch wg negative.
 5. Return Ducts between AHU and Air Volume Control Box: 3-inch wg negative.
 6. Return Ducts between Register or Grille and Air Volume Control Box: 2-inch wg negative.
 7. Return Duct System without Air Volume Control Boxes up to AHU: 2-inch wg negative.
 8. General Exhaust Duct System without Air Volume Control Boxes: 2-inch wg negative.
- B. Material: All ducts shall be galvanized steel, except where specifically noted otherwise on drawings and as follows:
1. Shower Exhaust Ducts: Aluminum.

2.4 GENERAL DUCT FABRICATION

- A. Detail and fabricate with the fewest possible joints in accordance with SMACNA standards and details, except where more stringent requirements are specified in this section, to keep resistance losses to a minimum.
- B. Size round ducts installed in place of rectangular ducts, and vice versa, from ASHRAE table of equivalent rectangular and round ducts. Aspect ratio of rectangular ducts can be modified for coordination of layout, but in no case exceed 4 to 1, and without reducing free area of duct or increasing pressure drop.
- C. Complete metal ducts within themselves with no single partition between ducts. Open corners are not acceptable.
- D. Lap metal ducts in direction of air flow. Hammer down edges and slips to leave smooth duct interior.
- E. Sleeves:
1. Construct sleeves of galvanized steel minimum 22 gauge unless noted otherwise.
 2. Provide sleeves for fire dampers and combination fire/smoke dampers as specified in this Section "Fire and Smoke Dampers".
 3. Breakaway connections are not permitted except for pressure class 2-inch wg and less.
- F. Square heel and throat elbows, with vanes, are used on Drawings for drafting convenience only. Where space allows, construct tees, bends, and elbows with radius of not less than 1-1/2 times width of duct on centerline. Where not possible on rectangular ductwork, provide smooth radius elbows with full length splitter vanes designed and constructed in accordance with SMACNA Duct Design and Duct Construction Standard to produce a loss coefficient of 0.15 or less, except as follows:
1. Where R/W is such that a vaned radius elbow will not produce the specified loss coefficient and on exposed ductwork in finished areas, provide mitered elbows with square heel and throat and with double thickness turning vanes set into vane runners with a radius of 4-1/2 inches on 3-1/4 inch centers, designed and constructed to produce a loss coefficient of 0.26 or less in accordance with above standards.

2. Increase/decrease duct sizes gradually, not exceeding 15° divergence/ convergence wherever possible. Maximum divergence upstream of equipment to be 30° and 45° convergence downstream.

G. Unless otherwise indicated or specified, fabricate branch connections as follows:

1. Rectangular duct branch connection to rectangular ductwork, 45° SMACNA entry/exit butt flange boot with corner filler pieces or proportional splits at Contractor's option. Where size of main duct is not large enough for a boot connection, fabricate ducts with proportional splits.
2. Round duct branch connections to round ductwork, conical tee.
3. Round branch connection to rectangular ductwork, bellmouth connection equal to Buckley BM or BMD or high efficiency boot connection equal to Buckley 3300 or 3300D.
4. Where round duct is connected to rectangular duct and rectangular duct width shown is not equal to or larger than overall diameter of connecting end of round connector BENDING OF FLANGES OF ROUND CONNECTOR FOR CONNECTION TO RECTANGULAR DUCT IS NOT ALLOWED. Either increase rectangular duct width as required or provide a rectangular 45° SMACNA boot connection to the rectangular duct and a rectangular to round conversion for the round duct connection. For round connection to low pressure ductwork. Contractor may, at his option use a mini bellmouth connection equal to Buckley M-BM or M-BMD or a flat oval bellmouth equal to Buckley FOBM or FOBMD and an oval to round conversion for the round duct connection.
5. Spin-in, cinch lock or dovetail fittings not allowed except at duct connection to a transfer duct.
6. Connect branch to top, bottom or side of duct as indicated or as required, whether or not indicated, to suit surrounding conditions and avoid interferences.
7. Coordinate branch take-off locations with transverse joint spacing. Transverse joints interfering with branch take-offs will not be accepted. Modify joint spacing as required without exceeding maximum spacing.

H. Rigidly construct ducts with joints mechanically tight, substantially airtight without use of tape, braced and stiffened so as not to breathe, rattle, vibrate, or sag. Caulk duct joints and connections with sealant as ducts are being assembled. Where joints are not accessible for sealing, provide access doors and seal from inside.

I. Provide easements where low pressure ductwork conflicts with piping and structure. Where easements exceed 10% duct area, split into two ducts maintaining original duct area. No easements or penetrations allowed for medium or high-pressure ductwork.

J. Fabricate goosenecks of aluminum equivalent to not less than 18-gauge galvanized steel. Rigidly reinforce and brace. Provide hinged 1/2-inch mesh aluminum hardware cloth bird screen. Fabricate for lowest edge of opening not less than 24 inches above finished surface of roof for exhaust, and 36 inches above roof for intakes.

2.5 RECTANGULAR DUCT FABRICATION

A. Fabricate ducts, elbows, transitions, offsets, branch connections, and other construction according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" and complying with requirements for metal thickness, reinforcing types and intervals, tie-rod applications, and joint types and intervals.

1. Construct ducts of minimum 24 gauge.

23 30 00 - 6 of 23

2. Do not install tie-rods in areas where system effects apply including upstream and downstream of fans and sound attenuators or within three times the published absorption distance of humidifiers.
 3. Lengths: Fabricate rectangular ducts in lengths appropriate to reinforcement and rigidity class required for pressure class.
 4. Deflection: Duct systems shall not exceed deflection limits according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible."
- B. Flat Drive Joints: Flat drive joint constructed of not less than 24 gauge and specified static pressure in accordance with the limits of SMACNA will be accepted as Class A reinforcement for low pressure (2 inches w.g. and less) ductwork located in shafts or furred spaces that do not have adequate clearance for factory fabricated or formed flanged joints.
- C. Transverse Joints: Prefabricated slide-on joints with four bolted flange, fastened to duct section with spot welds (do not use screws), and components constructed using manufacturer's guidelines for material thickness, reinforcement size and spacing, and joint reinforcement. Ductmate Industries, Inc., Nexus Inc., Ward Industries, Inc.
- D. Formed-On Flanges: Construct according to SMACNA's "HVAC Duct Construction Standards-Metal and Flexible," Figure 1-4, using corner, bolt, cleat, and gasket details. Ductmate Industries, Inc. TDC or Lockformer.
1. Use joint reinforcing for T-24 or T-25 joints and sheet metal gauges as recommended by SMACNA Standards as a minimum. Do not use lighter gauges shown in joint manufacturer's literature.
- E. Longitudinal Seams: Pittsburgh lock sealed with noncuring polymer sealant. Button punch snaplocks and pocket locks are not permitted.
- F. Cross Breaking or Cross Beading: For duct pressure class 3 inch or less, cross break or cross bead duct sides 18 inches and larger and 20 gauge thick or less, with more than 10 sq. ft. of nonbraced panel area unless ducts are lined.

2.6 ROUND DUCT AND FITTING FABRICATION

- A. Acceptable Manufacturer: Factory fabricated, or shop fabricated but equal in all respects to factory fabricated items specified herein:
1. McGill AirFlow Corporation.
 2. SEMCO Incorporated.
- B. Diameter as applied to flat-oval ducts in this Article is the diameter of a round duct with a circumference equal to the perimeter of a given size of flat-oval duct.
- C. Round Duct and Fittings: Lock type spiral seam construction of galvanized steel according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible Stamped elbows and fittings. Gored (segmented) elbows and fitting only for sizes where stamped elbows and fittings not available. Adjustable elbows are not permitted.

- D. 90-Degree Tees and Laterals and Conical Tees: Fabricate to comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible," with metal thicknesses specified for longitudinal-seam straight ducts.
- E. Diverging-Flow Fittings: Fabricate with reduced entrance to branch taps and with no excess material projecting from fitting onto branch tap entrance.
- F. Mitered-Elbow Radius and Number of Pieces: Welded construction complying with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible," unless otherwise indicated.
- G. Plastic coated where specified.

2.7 FLEXIBLE DUCTWORK

- A. Acceptable Manufacturers: Type numbers indicated are those of Thermaflex.
 - 1. Thermaflex
 - 2. Flexmaster, Inc.
- B. UL listed under UL-181 as Class 1 Air Duct Connector and conforming to NFPA 90A and 90B.
- C. Minimum Rating: 10-inch WG positive all uses, 2 inch WG negative for return or exhaust use, velocity of 4000 feet per minute.
- D. Type "M-KC". Continuous galvanized spring wire helix having a cover of woven fiberglass fabric, vinyl impregnated and coated, or continuous corrugated aluminum for low pressure supply use only and insulated with 1-inch-thick fibrous glass insulation having outer moisture barrier consisting of reinforced metalized Mylar/ neoprene laminate with integral attaching devices. "U" factor at 75° F differential maximum 0.22 btu/sq.ft./° F/hour.
- E. Attachment: Duct clamp stainless steel band with cadmium-plated hex screw to tighten band with a worm-gear action in size to suit duct size.

2.8 HANGERS AND SUPPORTS

- A. Hanger Materials: Galvanized sheet steel or threaded steel rod.
 - 1. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards-- Metal and Flexible" for steel sheet width and thickness and for steel rod diameters. Perforated strap hangers are not allowed.
 - 2. Galvanized-steel straps attached to aluminum ducts shall have contact surfaces painted with zinc-chromate primer.
- B. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials. Hanger fasteners shall not pierce medium/high pressure (greater than 3 inches w.g.) ductwork under any circumstance.
- C. Trapeze and Riser Supports: Steel shapes complying with ASTM A 36/A 36M.

1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
2. Supports for Stainless-Steel Ducts: Stainless-steel support materials.
3. Supports for Aluminum Ducts: Aluminum support materials unless materials are electrolytically separated from ducts.

2.9 FLEXIBLE CONNECTORS

A. Acceptable Manufacturers

1. Ductmate Industries, Inc.
2. Duro Dyne Corp.
3. Ventfabrics, Inc.
4. Ward Industries, Inc.

B. General Description: Flame-retardant or noncombustible fabrics, coatings, and adhesives complying with UL 181, Class 1.

C. Metal-Edged Connectors: Factory fabricated with a fabric strip 5-3/4 inches wide attached to two strips of 2-3/4-inch-wide, 0.028-inch-thick, galvanized sheet steel or stainless steel, or 0.032-inch-thick aluminum sheets. Select metal compatible with connected duct system. Comply with SMACNA requirements.

D. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.

1. Minimum Weight: 26 oz./sq. yd.
2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
3. Service Temperature: Minus 40 to plus 200 deg F.

2.10 SHOP AND FIELD FABRICATED CASINGS

A. Fabricate casings according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible", except where more stringent requirements are specified herein.

B. Shop fabricate casings, to greatest extent possible, with a minimum number of joints and to minimize field fabrication and assembly.

C. Fabricate casings with standing seams and angle reinforcements. Reinforce casings with galvanized- or painted-steel angles. Seal joints with liquid-type, high-pressure duct sealant to eliminate air leakage.

D. Fabricate casings with reinforced and braced openings for hinged access doors at least 24 inches wide by 48 inches high and located for access to each item of equipment housed, or where shown on drawings for cleaning and inspection. Provide double wall access door when installed in insulated plenums.

E. Provide minimum 3-inch-high reinforced concrete curb for floor mounted walls. At floor, rivet panels on 8-inch centers to steel angles.

2.11 FACTORY FABRICATED CASINGS

- A. Acceptable Manufacturers:
1. Industrial Acoustics Company
 2. Vibro-Acoustics, Co.
 3. McGill Airflow Corporation
 4. SEMCO Incorporated
- B. Double-wall, insulated, pressurized equipment casing.
- C. Panel Fabrication: Solid, galvanized sheet steel exterior shell and solid, galvanized sheet steel interior shell; with 2- or 4-inch space between shells, as indicated.
1. Fabricate with a minimum number of joints.
 2. Weld exterior and interior shells to perimeter; to interior, longitudinal, galvanized-steel channels; and to box-end internal closures. Paint welds.
 3. Exterior Shell Thickness: 0.040 inch minimum.
 4. Interior Shell Thickness: 0.034 inch minimum.
 5. Fabricate perimeter and interior, longitudinal channel members with galvanized-steel shapes.
 6. Fill each panel assembly with insulating material that is noncombustible, inert, mildew resistant, and vermin proof, and that complies with NFPA 90A.
 7. Fabricate panels with tongue-and-groove, continuous self-locking joints effective inside and outside each panel.
- D. Trim Items: Fabricate from a minimum of 0.052-inch galvanized sheet steel, furnished in standard lengths for field cutting.
- E. Access Doors: Fabricate personnel access doors at least 24 by 60 inches and other access doors in sizes indicated.
1. Fabricate doors of same thickness as panels, with a minimum 0.040-inch solid, interior and exterior, galvanized sheet steel shell.
 2. Install a minimum of two ball-bearing hinges and two wedge-lever-type latches, operable from inside and outside. Install doors to open against air pressure differential. Install neoprene gaskets around entire perimeters of door frames.
 3. Fabricate windows in doors consisting of double-glazed, wire-reinforced safety glass with an air space between panes and sealed with interior and exterior rubber seals.
- F. Structural Performance: Fabricate plenum to be self-supporting and capable of withstanding internal static pressures as scheduled, without any panel joint exceeding deflection of $L/200$ where "L" is the unsupported span length within completed casings.
- G. Acoustic Performance: Certified by an independent acoustical testing agency listing sound- absorption and transmission-loss characteristics of panel assemblies.
- H. Thermal Conductivity (k-Value): 0.26 at 75 deg F mean temperature.

2.12 VOLUME DAMPERS

- A. General: Factory fabricated, or shop fabricated but equal in all aspects to factory fabricated items, with required hardware and accessories in accordance with SMACNA duct standards except as noted herein.
- B. Damper and damper frames shall be constructed of same material as duct in which they are installed. Fabricate single blade damper of minimum 20 gauge. Fabricate multi-blade damper of minimum 16 gauge.
- C. Damper blades in rectangular ductwork shall be maximum 8 inches wide. Dampers having two or more blades shall be opposed action type with connecting bar and linkage. Multiple blade dampers shall be mounted in frames. Splitter dampers not allowed.
- D. Provide for multiple section damper (larger sizes), appropriately sized jackshaft with bearing assemblies mounted on supports at each mullion and at each end of the multiple damper section. Provide appropriate length and number of mountings to connect linkage of each damper to the jackshaft.
- E. Stiffen blades for stability. Include locking device to hold single-blade dampers in a fixed position without vibration. Device shall include indication of damper position. Provide end bearings and gaskets for damper components to seal duct consistent with pressure class.
- F. Damper Hardware: Dampers shall be provided with all hardware including zinc plated, die-cast core with dial and handle made of 3/32-inch-thick zinc plated steel, and a 3/4 inch hexagon locking nut. Include center hole to suit damper operating rod size. Include raised quadrant for mounting on insulated duct. Improvised shop or field fabricated hardware will not be accepted.

2.13 REMOTE CEILING DAMPER REGULATOR

- A. Acceptable Manufacturers
 - 1. Young Regulator
- B. System specifically designed for remote manual adjustment of duct mounted volume damper.
- C. Damper controller and cable shall be concealed above the ceiling and wall. Cable to consist of Bowden cable 0.054-inch stainless steel control wire encapsulated in 1/16-inch flexible galvanized spiral wire sheath. Maximum 50 feet length of cable distance between damper and control kit.
- D. Damper:
 - 1. Round damper constructed of heavy-duty galvanized steel spiral shell design with rolled in stiffening beads for rigidity. Spiral shell shall have one crimped end and one straight end for ease of installation. Damper to include "V" style 20-gauge galvanized steel blade secured with 1/2 inch diameter steel shaft and Teflon bushings. Young Regulator Model 5020-CC.
 - 2. Rectangular damper to be opposed blade type constructed of heavy duty extruded aluminum frame and blades. Damper blades to include individual blade bushings for smooth and quiet operation. Damper blades shall rotate between a matched pair of formed and punched stainless

steel connecting slide rails that facilitate blade movement and alignment. Young Regulator Model 830A-CC.

3. Damper shall include all necessary hardware to ensure compatibility with Bowden remote cable control system.
- E. Control Shaft: Shall be D-styled flatted ¼ inch diameter with 265-degree rotation providing graduations for positive locking and control, and 1 ½ inch linear travel capability.
- F. Control Kit: Shall be designed for use with internally or externally controlled round or rectangular dampers and shall consist of 14-gauge steel rack and pinion gear drive converting rotary motion to push-pull motion. Control kit mounting bracket can be field mounted on ceiling framework, behind grilles, on or inside plenum slot diffusers, or on diffuser back pan. Include wrench for damper adjustment. Young Regulator Model 270- 275.

2.14 BACKDRAFT DAMPERS

A. Acceptable Manufacturers:

1. Ruskin
2. Greenheck
3. Air Balance, Inc
4. American Warming and Ventilating Co.

B. Low Pressure Backdraft Damper:

1. Factory fabricated, heavy-duty, multiblade, parallel action gravity balanced backdraft damper with minimum .050-inch aluminum blades a maximum of 6-inch width having flexible vinyl sealing edges, linked together in rattle-free manner and with adjustment device to permit setting for varying differential static pressure. Blade pivot pins mounted in nylon bearings in a minimum 0.050 inch extruded aluminum mounting frame. Constructed for up to 1500 feet per minute face velocity and 1/2-inch water gauge static pressure. Suitable for horizontal or vertical applications as indicated.
2. Provide minimum 0.050 inch extruded aluminum wall frame with mounting flange for wall mounted damper.

C. High Pressure Backdraft Damper:

1. Factory fabricated, heavy-duty, multiblade, parallel action, gravity balanced backdraft damper with airfoil blades a maximum of 6-inch width having flexible vinyl sealing edges and neoprene jamb seals.
2. Pressure drop for a 24 inch x 24 inch damper shall not exceed 0.2 inch water gauge when tested in accordance with AMCA Standard 500, Figure 5.3 with ductwork upstream and downstream of damper.
3. Blades interconnected with on-blade linkage. Provide external counterbalance on extended shaft, field adjustable for system flow and pressure.
4. Minimum 14-gauge, galvanized steel, 8 inch by 2 inch formed channel frame with minimum 18 gauge galvanized blades mounted on minimum 3/4 inch zinc plated shafts rotating in 3/4 inch bore ball bearings. Designed for up to 4,500 feet per minute face velocity and 7 inches water gauge static pressure for Class 2 fans.

2.15 ACCESS DOORS

- A. General: Factory fabricated double wall access doors in accordance with SMACNA standards except as specified herein. Improvised shop or field fabricated access doors will not be permitted.
- B. Fabricate doors airtight and suitable for duct pressure class. Access doors shall be double wall constructed of the same material as the ductwork in which they are installed except that doors located in ducts constructed of plastic, FRP and PVC coated steel shall be constructed of Type 304 stainless steel.
- C. Rectangular Duct: Provide door with closed cell full sealing gaskets and quick turn fastening locking device. Provide hinged doors with butt or piano hinge and 2 cam latches. For medium and high-pressure duct, hingeless with minimum 4 cam latches and factory installed retaining cable.
- D. Round Duct: Provide double wall insulated and gasketed door with minimum 2 compression latches.
- E. For insulated ductwork, fabricate double wall with insulation fill and thickness not less than adjacent duct insulation. Provide raised hinge type.
- F. Access door size 16 inches by 20 inches unless otherwise indicated. Where size of duct will not accommodate this size, provide size as large as possible, minimum 12 inch by 6 inch. Provide view window where indicated.

2.16 INSTRUMENT TEST HOLES

- A. Cast iron or cast aluminum to suit duct material, including screw cap and gasket and a flat mounting gasket. Size to allow insertion of pitot tube and other testing instruments and provide in length to suit duct insulation thickness. Ventlock 699 by Ventfabrics or approved equal.

2.17 DUCT ROOF CURBS

- A. Welded galvanized steel, insulated mounting curb without cant strip and with treated wood nailer suitable for duct roof penetration. Fibrous glass insulation minimum 1 ½ inch thick. Curb height as required for top of curb not less than 12 inches above finished roof surface. As manufactured by ThyCurb, Pate, Penn Ventilator, or equal.
- B. Furnish roof curb to Division 07 for installation.

2.18 AIR VOLUME CONTROL BOXES

- A. Acceptable Manufacturers:
 - 1. Price Industries
 - 2. Anemostat
 - 3. Tuttle & Bailey
 - 4. Titus
 - 5. Nailor Industries

B. General:

1. Factory fabricated assembly consisting of casing, damper, airflow sensor and other accessories as specified herein.
2. The assembly operation shall be pressure independent and shall reset to any airflow throughout entire operating range.
3. Performance ratings shall be certified in accordance with ARI 880 and shall bear the ARI seal. Sound ratings calculated in accordance with ARI 885.
4. Identification: Provide label on each box indicating identification number shown on drawings, maximum and minimum airflow range, scheduled airflow and calibration curve.
5. Units listed and labeled as defined in NFPA 70 by a testing agency applicable to authorities having jurisdiction and marked for intended use.

C. Configuration:

1. Boxes shall be suitable for electric powered pressure independent air volume control system and temperature control system furnished by Division 25. Boxes shall include airflow sensor and damper with extended shaft compatible with unit mounted controller.
2. Provide integral power transformer 120/24 volt of each air volume control box.

D. Casing:

1. Minimum 22-gauge galvanized steel housing. Inlet collar minimum 2-inch depth for securing duct connection. Outlet slip and drive connection.
2. Provide insulated double wall access door or removable panel for access to all interior components and coil cleaning.
3. Provide sheet metal frame in box casing and gasket seal to obtain specified maximum leakage.
4. Standard casing: Construct and seal casing and access panel for leakage not to exceed 2% of unit rated airflow, or 10 CFM, whichever is greater, at 1.5-inch wg static pressure.

E. Insulation:

1. Fibrous glass: 1/2-inch-thick 1½ pound density fibrous glass insulation, coated with a durable fire and damage resistant surface to prevent erosion complying with ASTM C 1071; secured with adhesive. All exposed edges shall be coated.
2. Polymer foam: ¾ inch thick closed cell polymer foam, complying with UL 181 erosion requirements, and having maximum flame spread index of 25 and maximum smoke developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
3. The unit insulation shall be fully enclosed with non-porous foil liner. All edges sealed within metal nosing or with NFPA 90A approved sealant.

F. Damper:

1. Damper constructed of two heavy gauge metal plates sandwiched around gasketed blade seal with solid one piece aluminum shaft rotating in self-lubricated bearings extended outside of unit casing. Construct of materials that cannot corrode and do not require periodic servicing. Hollow metal shaft is not permitted.
2. Provide damper blade seals and shaft bearing bushings to satisfy required leakage. Damper shaft shall include an integral marker at the end of shaft to indicate damper position.
3. Damper leakage for closed damper shall not exceed 2% of the nominal catalog rating at 3-inch wg inlet pressure. ARI 880 rated.

G. Air Flow Sensor:

1. Center tapped cross flow, center-averaging sensor located in inlet collar, constructed of plastic meeting UL fire resistance, reinforced to prevent damage.
2. Sensor shall amplify pressure signal by a factor of not less than 1.7 and shall maintain control accuracy within plus or minus 5% throughout operating range with the same size inlet duct in any configuration. Sensor shall not require any minimum length of straight duct to maintain control accuracy.
3. Sensor shall have a minimum of 3 static pressure and 4 total pressure measurement points on all inlet sizes. Pressure sensing tubes shall be extended to the outside of casing for connection to the airflow controller. Tubing secured to casing with grommets.
4. Sensor shall be aerodynamically designed with negligible pressure drop or noise contribution.

H. Electric Heating Coil:

1. Factory mounted, slip in type, open coil design, factory wired and installed in 20-gauge galvanized steel casing. Nickel chrome 80/20 heating elements.
2. Equip with both primary and secondary over temperature protection meeting UL and NEC requirements. Provide integral control box with integral contactors of deenergizing or disconnecting type. Proof of airflow, either by airflow switch or motor current meter, shall be wired into coil safety circuit to prevent energizing of coil when airflow is not present.
3. Coil UL listed as suitable for installation as duct heater with zero clearance to combustible surfaces. Steps of control as indicated minimum of two steps for coils larger than 5 kw.
4. Provide access door or removable panel for access upstream of coil. Heater controls shall be accessible from the same side as the primary air controls. Provide noninterlocking disconnect switch.

I. Control Package:

1. Provide factory mounted electric damper motor for air volume control and velocity reset controls for pressure independent operation throughout entire operating range.
2. Include all required accessories and box controls to accomplish sequence of operation specified in Division 25.
3. Submittals shall clearly indicate accessories, normal damper position (open or closed), etc. for sequences specified, in plain English, without the need for interpretation of manufacturer's part number or model number to determine what is being provided.
4. Box manufacturer shall be fully responsible for coordinating and verifying compatibility of air volume control box with sequences specified in Division 25.
5. Coordinate for direct attachment of damper actuator to shaft. Additional linkages, swivels, or levels are not acceptable.
6. Electric Controls: Provide electrically operated pressure independent air volume control and temperature control system.
 - a. Damper Actuator: 24-volt AC, powered closed, spring return open.
 - b. Provide transformer to step down incoming voltage to 24-volt, service disconnect switch, low voltage fuse and fuse block, line voltage disconnect switch, and line voltage fuse and fuse block.
 - c. Velocity Controller: Factory calibrated and field adjustable to minimum and maximum air volumes; shall maintain airflow dictated by thermostat with 5 percent of set point while compensating for inlet static pressure variations up to 4 inch (1000 Pa); shall be suitable

for either reverse acting or direct acting and field adjustable for either normally open or normally closed damper position. The controller shall have auxiliary flow setpoint to be referenced through contact input and provide line velocity readout.

- d. Thermostat: Wall mounting electronic thermostat, with concealed cover latches to prevent tampering and adjustable stops for locking or limiting temperature setpoint slider movement.

2.19 DIFFUSERS, REGISTERS, AND GRILLES

A. Acceptable Manufacturers:

1. Diffusers, Registers, and Grilles

- a. Titus
- b. Price Industries
- c. Anemostat
- d. Tuttle & Bailey
- e. Krueger
- f. Carnes

2. Laminar Flow Diffusers:

- a. Price Industries
- b. Anemostat
- c. Precision Air Products
- d. Krueger

B. General:

1. Provide terminals of type and quantity as indicated on the drawings. Sizes and deflection patterns are shown for general guidance. Approved manufacturer shall be responsible for adjusting sizes to meet noise and throw performance requirements for CFM indicated.
2. Provide air terminals that have, as minimum, temperature and velocity traverses, throw and drop, and noise criteria ratings for each size and type device as listed in manufacturer's current data. Rate in accordance with ADC standards and certify catalogued performance.
3. Provide blow direction to direct air away from walls, columns, or other obstructions within radius of supply air terminal operation.

C. Performance requirements: Base selection on maximum residual air velocity in breathing zone of 35 feet per minute and on space noise level of NC 35 unless otherwise indicated.

D. Ceiling and Wall Compatibility:

1. Refer to architectural drawings and general specifications for types of ceiling and wall systems and coordinate the specific ceiling and wall type at the location where air terminals are to be installed. Provide border styles compatible with ceiling and wall type that are specifically manufactured to fit into ceiling module with accurate fit and adequate support.
2. Air terminals installed in T-bar grid framed ceilings: Provide panel type frame sized to fit within lay-in tile grid system. For tegular tile ceilings, provide drop face terminal to align with ceiling surface.

3. Air terminals installed in Spline, or inverted T-bar, grid framed ceilings: Provide drop face panel type sized to fit within lay-in tile grid system and aligning with ceiling surface.
4. Air terminals installed in hard gypsum ceilings: Provide frame with gasket seal suitable for attachment to gypsum ceiling.
5. Air terminals installed in walls: Provide wall mounted terminals suitable for installation in concrete block or drywall partition.

E. Ceiling Diffuser (CD):

1. Fabricate of steel or aluminum. 4-way blow pattern unless otherwise indicated, square flat panel face, each side to deliver quantity of air proportional to area served. Removable inner core for access to damper. Round or square duct collar connection as indicated, minimum 2 inch collar for duct connection.
2. Provide multi-blade equalizing deflector and adjustable opposed blade damper in collar of diffuser. Damper blades and adjustment lever shall be secured tight within frame to prevent incidental rattling of blades at normal airflow. Damper adjustable through face of diffuser.
3. Finish: Factory applied baked on white enamel to match ceiling grid.

F. Perforated Face Diffuser (PFD):

1. Fabricate of steel or aluminum. 4-way blow pattern unless otherwise indicated, fixed louver diffuser core. Hinged removable perforated face with 3/16-inch diameter holes on ¼ staggered centers and no less than 51% free area. Diffuser back pan shall be one-piece stamped heavy gauge metal. Round or square duct collar connection as indicated, minimum 2-inch collar for duct connection.
2. Adjustable pattern deflectors shall be mounted in diffuser core. Deflectors attached directly to perforated face will not be accepted. Include integral volume damper in the neck of the diffuser, adjustable from the face of the diffuser.
3. When used for return intakes; similarly constructed except without pattern deflectors. Grilles provided without volume dampers.
4. Finish: Factory applied baked on white enamel to match ceiling grid.

G. Registers and Grilles:

1. Provide outlets and intakes indicated as registers with adjustable key operated, multi shutter, streamlined contour, opposed blade dampers adjustable from face of register. Provide outlets and intakes indicated as grilles of same construction as registers except without dampers.
2. Fabricate of steel with minimum 20-gauge frame and 22-gauge blades, or aluminum of equivalent gauge. Fabricate entire assembly of stainless steel where indicated. Provide countersunk fastening screws on frame.
3. Intakes: Fabricate with streamlined, horizontal fixed bar grille face with bars set at 40 deg angle, turned down for low sidewall and turned up for high sidewall.
4. Outlets: Fabricate with streamlined, individually adjustable, double deflection grille faces with horizontal face bars.
5. Finish: Factory applied baked on enamel finish. Matte white to match ceiling grid.

PART 3 - EXECUTION

3.1 DUCT INSTALLATION

- A. Construct and install ducts according to SMACNA's "HVAC Duct Construction Standards-- Metal and Flexible," unless otherwise indicated, for the specified duct pressure classification with the fewest possible joints.
- B. Install round and flat-oval ducts in lengths not less than 12 feet unless interrupted by fittings.
- C. Install fabricated fittings for changes in directions, size, and shape and for connections.
- D. Install couplings tight to duct wall surface with a minimum of projections into duct. Secure couplings with sheet metal screws. Install screws at intervals of 12 inches, with a minimum of 3 screws in each coupling.
- E. Install ducts, unless otherwise indicated, vertically and horizontally and parallel and perpendicular to building lines; avoid diagonal runs.
- F. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- G. On ductwork subject to internal condensation, pitch horizontal runs towards equipment, or source of moisture, minimum 1/8 inch per foot slope.
- H. Install ducts with a clearance of 1 inch, plus allowance for insulation thickness.
- I. Conceal ducts from view in finished spaces. Do not encase horizontal runs in solid partitions unless specifically indicated.
- J. Coordinate layout with suspended ceiling, fire- and smoke-control dampers, lighting layouts, and similar finished work.
- K. Non-Fire-Rated Partition Penetrations: Where ducts pass through interior partitions and exterior walls and are exposed to view, conceal spaces between construction openings and ducts or duct insulation with sheet metal flanges of same metal thickness as ducts. Overlap openings on 4 sides by at least 1-1/2 inches.
- L. Fire-Rated Partition Penetrations: Where ducts pass through interior partitions and exterior walls, install appropriately rated fire dampers, sleeves, and firestopping sealant. Firestopping materials and installation methods are specified in Division 07.
- M. Install ducts with hangers and braces in accordance with Division 23 "Vibration Isolation and Seismic Restraints for HVAC Systems".
- N. Paint interiors of metal ducts that do not have duct liner, for 24 inches upstream of registers and grilles. Apply one coat of flat, black, latex finish coat over a compatible galvanized- steel primer. Paint materials and application requirements are specified in Division 09 painting Sections.

3.2 SEAM AND JOINT SEALING

- A. Seal all duct seams and joints according to SMACNA's "HVAC Duct Construction Standards-- Metal and Flexible" for duct pressure class indicated, and SMACNA's "HVAC Leakage Test Standards" for leakage and seal class indicated.
 - 1. For pressure classes 2-inch wg and lower, seal transverse joints.
- B. Seal ducts before external insulation is applied. Apply sealant to male end connectors before insertion, and afterward to cover entire joint and sheet metal screws.

3.3 FLEXIBLE DUCT INSTALLATION

- A. Use only where shown on the drawings, installed in accordance with SMACNA's "HVAC Duct Construction Standards" except as specified herein.
- B. Do not install flexible duct on return or exhaust ductwork unless specifically noted on drawings.
- C. Minimum length 48 inches and maximum length of 72 inches. Install runs with minimum centerline radius of bends not less than twice duct diameter and with no more offsets than an equivalent 90° elbow. Provide band strap hangers with saddle supports under flexible duct run to keep supports from sagging and kinking. Stretch duct enough to smooth out internal corrugations.
- D. Connect both ends to collar of rigid ductwork and air delivery device with sheet metal screws in addition to an approved stainless steel worm gear draw band. Plastic tie straps are not permitted.

3.4 FLEXIBLE CONNECTORS INSTALLATION

- A. Provide flexible connections immediately adjacent to fans, and externally isolated air handling units, to isolate and prevent transmission of vibration to ductwork and casings.
- B. Connections shall be made with a 3-inch space between duct and equipment collars, installed in line, and with 1 1/2-inch excess material folded so as not to interfere with airflow through connection. Flexible connectors are not permitted as a means for correcting misalignment.
- C. Do not install flexible connectors on internally isolated air-handling units.

3.5 VOLUME DAMPERS INSTALLATION

- A. Provide volume dampers at all points on low pressure supply, return and exhaust systems where branches are taken from larger ducts as required for air balancing. Do not install volume dampers upstream of air volume control boxes in any circumstance.
- B. Install volume damper as close to main as possible, minimum 2 duct widths from branch takeoff.
- C. Install damper in acoustically lined ducts in such a manner to avoid damage to liner and to avoid erosion of duct liner.

- D. Install orange ribbon tag tied on to volume damper handle for the purpose of visibly identifying volume damper locations.

3.6 ACCESS DOORS INSTALLATION

- A. Install duct access doors to allow inspecting, adjusting and cleaning duct mounted accessories where shown on drawings and as follows:
 - 1. Upstream and downstream of coils, filters, fans, humidifiers, control dampers, airflow measuring devices.
 - 2. Downstream of air volume control boxes.
 - 3. Adjacent to fire and fire/smoke dampers, providing adequate access to reset or reinstall fusible link.
 - 4. Adjacent to fire/smoke dampers, providing adequate access to damper actuator/motor.
 - 5. As required by NFPA requirements for duct cleaning.
- B. Where access doors are required within shaft enclosures or above inaccessible ceilings, coordinate with General Contractor and advise proper location of access panel.
- C. Identify all fire damper access doors by stenciling with bright red paint the words "FIRE DAMPER ACCESS". For spring closure dynamic curtain type fire dampers use the words "CAUTION – DYNAMIC FIRE DAMPER ACCESS".

3.7 AIR VOLUME CONTROL BOX INSTALLATION

- A. Install connecting piping to allow access to unit mounted controller and access panel.
- B. Connecting tubing and/or wiring for box installed in return air plenum ceiling to be "plenum rated" of type approved by applicable building code and local authority having jurisdiction for installation in ceiling air plenum.
- C. Install straight run, minimum of 1-1/2 duct diameters but not exceeding 2-1/2 duct diameters of rigid duct connection to inlet, full size of inlet connection. Fan powered units shall be connected with flexible connections on inlet and outlet. Inlet flexible connection shall be located upstream of straight run section, not at box collar connection.
- D. Provide hanger support for air volume control boxes independent of ductwork.

3.8 AIR TERMINAL INSTALLATION

- A. After installing terminal in ceiling grid, provide 12-gauge support wire fastened independently to structure. One wire for each device weighing 10 pounds or less, two wires (opposite corners) for device weighing 11 to 55 pounds, four wires for device weighing greater than 55 pounds. Wire shall not be in tension to lift device out of grid, but with minimal slack to allow device to sit on grid.

3.9 INSTRUMENT TEST HOLES INSTALLATION

- A. Install instrument test holes where shown on the drawings and in the following locations:
 - 1. Air handling unit supply duct mains; provide multiple test ports properly spaced for traverse airflow measurement. Coordinate location with TAB Contractor.
 - 2. Return fan duct mains; provide multiple test ports properly spaced for traverse airflow measurement. Coordinate with TAB Contractor.
 - 3. Exhaust fan duct mains.
 - 4. Downstream of duct mounted coils.
 - 5. Downstream of air volume control boxes.

3.10 DUCT MOUNTED SMOKE DETECTORS INSTALLATION

- A. Install duct mounted smoke detectors furnished by Division 28. Obtain installation instructions and install in accordance with manufacturer's instructions. Mount on ductwork at locations indicated on the drawings.

3.11 DUCT HANGERS AND SUPPORTS INSTALLATION

- A. Suspend and support ductwork, casings, and equipment in accordance with requirements of SMACNA Duct Construction Standards and as specified further in Sections 23 05 00 and 23 05 48, except as specified herein.
- B. No hangers shall be attached to or suspended from any type of metal deck. Attachments made beneath metal deck areas may be made by positive fastening to building structural members (excluding bridging and bracing) in conjunction with the use of miscellaneous auxiliary structural steel. All such steel shall conform to ASTM A36. Attachments relying on friction are not permitted.
- C. Whenever the distance between the top of duct and overhead supporting member is greater than 36 inches, the hangers shall be of structural angles or channels and shall include cross bracing as required to prevent sway. Do not use straps or rods.
- D. Support horizontal ducts within 2 feet of each elbow and within 4 feet of each branch intersection. Support vertical ducts at a maximum interval of 12 feet and at each floor.
- E. Hangers must be arranged to allow the duct insulation to pass through without insulating any part of the hanger.
- F. Unless combined pipe/duct racks are shown on the drawings, provide dedicated hangers for support of ductwork.

3.12 EXTERIOR WALL LOUVER PLENUM INSTALLATION

- A. Exterior wall louvers for exhaust/intake/relief air will be provided by Division 08.

- B. Unless otherwise indicated, provide shop or field fabricated casings and plenums as specified elsewhere in this section for connection to exterior wall louvers. Where the connecting plenum is smaller than actual louver size, provide insulated blank off panel(s) for unused portions behind louver.
- C. Insulate plenum/casing as specified in 23 07 00.
- D. For suspended plenums, slope bottom of plenum down towards face of louver, minimum 1/8 inch per foot, and provide adequate flashing or weep holes at louver frame to allow entrained water to drain out through louver face.
- E. Blank off panel shall be double wall construction with internal insulation having a total R value of not less than R-13. Fabricate of aluminum of gauge required by SMACNA for size of blank off required, 18 gauge minimum. Insulation shall be moisture proof, non-wicking, mildew resistant and shall comply with ASTM E84 Flame Spread and Smoke Developed ratings.
- F. Blank-off panels shall be mounted directly behind louver blades and shall be integral with the flashing at the bottom of the louver.

3.13 CLEANING AND PROTECTION

- A. Thoroughly clean all air stream surfaces of all equipment, devices and accessories in the air distribution systems and all air stream surfaces of ductwork, casings and plenums and maintain in a clean condition as the work progresses. Clean ductwork piece by piece, section by section as installed.
- B. Protect openings of all equipment, devices and accessories with polyethylene film or another covering to prevent entrance of moisture, dust or debris until final ductwork/casing/plenum connections are made. Similarly protect openings in ductwork, casings and plenums.
- C. After installation, either force air at high velocity through systems or use high power vacuum machines to remove accumulated dust. Protect equipment which may be harmed by dirt with filters, or bypass during cleaning. Provide adequate access into ductwork/casings/plenums for cleaning.
- D. Clean external surfaces of all of the above of foreign substances which might cause corrosive deterioration of metal or, where to be painted, might interfere with painting or cause paint deterioration.
- E. Wipe clean all air terminal units from dust entrained on face during construction.

3.14 FIELD QUALITY CONTROL

- A. Perform duct leakage testing and inspections according to SMACNA's "HVAC Air Duct Leakage Test Manual" and prepare test reports.
- B. Test all high and medium pressure ductwork during installation and before application of any exterior insulation or enclosing of ductwork.
- C. Test all low pressure ductwork during installation and before application of any exterior insulation or enclosing of ductwork.

- D. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
- E. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. Do not pressurize systems above maximum design operating pressure.
- F. Conduct tests in the presence of TAB Contractor. Give seven days' advance notice for testing.
- G. Maximum Allowable Leakage: Total leakage for pressure class shall not exceed permissible leakage for specified seal and leakage class.
- H. Remake leaking joints and retest until leakage is equal to or less than maximum allowable.

END OF SECTION 23 30 00

SECTION 23 34 00 – FANS AND VENTILATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

- 1. In-Line Centrifugal Fans
- 2. Centrifugal Downblast Fans
- 3. Ceiling Exhaust Fans

- B. Related Sections:

- 1. Motors are specified in Division 23 “Electrical Requirements for HVAC Equipment.”
- 2. Variable speed motor speed controllers furnished by Division 23 are specified in Division 26.

1.3 PERFORMANCE REQUIREMENTS

- A. Base fan performance on sea level conditions unless noted otherwise.
- B. Provide fans capable of accommodating static pressure variations of plus/minus 10 percent at scheduled airflow.
- C. Fans and shafts statically and dynamically balanced and designed for continuous operation at maximum rated fan speed and motor horsepower.
- D. Equivalent fan selections shall not increase motor horsepower (wattage) from that specified and shall not increase noise level and tip speed by more than 10 percent or increase inlet or discharge air velocity by more than 20 percent.
- E. Fan Class: If the fan selection indicates an operating point within 10 percent of maximum operational speed (RPM) limit for the fan class indicated by the selection point, provide fan with next higher-class designation.

1.4 SUBMITTALS

- A. Product Data: Include rated capacities, furnished specialties, and accessories for each type of product indicated and include the following:

1. Certified fan performance curves with system operating conditions indicated. Provide multiple RPM curves. Single RPM curves not acceptable for belt driven fans or variable speed fans.
 2. Certified fan sound-power ratings.
 3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
 4. Material thickness and finishes, including color charts.
 5. Dampers, including housings, linkages, and operators.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
1. Wiring Diagrams: Power, signal, and control wiring.
 2. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.
- C. Field quality-control test reports.
- D. Operation and Maintenance Data: For fans to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. AMCA Compliance: Products shall comply with performance requirements and shall be licensed to use the AMCA-Certified Ratings Seal.
- C. NEMA Compliance: Motors and electrical accessories shall comply with NEMA 1.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations, with protective crating and covering.
- B. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.

1.7 COORDINATION

- A. Coordinate size and location of structural-steel support members.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

PART 2 - PRODUCTS

2.1 IN-LINE CENTRIFUGAL FAN

A. Acceptable Manufacturers:

1. Loren Cook
2. Penn Ventilator
3. Greenheck

B. Description: Centrifugal, of all aluminum construction, with housing, fan wheel, shaft, grease lubricated ball bearings, motor and accessories. Class as indicated or required. Direct-drive as scheduled.

C. Housing: Housing fabricated from one piece or split spun aluminum and provided with removable spun inlet collar to match wheel inlet cone, outlet guide vanes, gasketed access door or plate, raised type for insulated housing, flanged inlet and outlet duct connections with, if required, companion flanges and with mounting brackets suitable for floor, ceiling or vertical installation as required for application.

D. Single-width single-inlet (SWSI) wheel with backwardly inclined or airfoil type non overloading blades welded to side and back plates, spun inlet cone, cast-aluminum hub keyed to shaft.

E. Direct Drive Unit: Motor encased in housing outside of airstream and factory wired to external terminal box.

F. Accessories:

1. Scroll Access Doors: Shaped to conform to scroll, with quick-opening latches and gaskets.
2. Cleanout Door: Bolted gasketed door allowing access to fan scroll, of same material as housing.
3. Companion Flanges: Rolled flanges for duct connections of same material as housing.
4. Variable Inlet Vanes: With blades supported at both ends with two permanently lubricated bearings of same material as housing. Variable mechanism terminating in single control lever with control shaft for double-width fans.
5. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.

G. Motors: Comply with requirements in Division 23 Section "Electrical Requirements for HVAC Equipment."

H. Vibration Isolation: Refer to Division 23 "Vibration Isolation and Seismic Restraints For HVAC Systems."

2.2 CENTRIFUGAL DOWNBLAST FAN

A. Acceptable Manufacturers:

1. Penn Ventilator
2. Loren Cook

3. Greenheck
 4. Hartzell Fan Inc
- B. Description: Direct-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, curb base, and accessories.
- C. Housing: Removable, spun-aluminum discharge baffle to direct discharge air upward, with rain and snow drains, square, one-piece, aluminum base with venturi inlet cone. Galvanized-steel hinged arrangement permitting service and maintenance.
- D. Fan Wheels: Aluminum hub and wheel with backward-inclined blades.
- E. Accessories:
1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent for direct drive fans.
 2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
 3. Bird Screens: Removable, 1/2-inch mesh, aluminum, or brass wire.
 4. Dampers: Counterbalanced, parallel-blade, back draft dampers mounted in curb base; factory set to close when fan stops.
 5. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.
- F. Roof Curbs: Galvanized steel; mitered and welded corners; 1-1/2-inch-thick, rigid, fiberglass insulation adhered to inside walls; and 1-1/2-inch wood nailer. Size as required to suit roof opening and fan base.
1. Overall Height: 12 inches
 2. Sound Curb: Curb with sound-absorbing insulation matrix.
 3. Metal Liner: Galvanized steel.
 4. Mounting Pedestal: Galvanized steel with removable access panel for access to backdraft damper.
 5. Vented Curb: Unlined with louvered vents in vertical sides in compliance with NFPA 96 for use with cooking hood.

2.3 CEILING EXHAUST FAN

- A. Acceptable Manufacturers:
1. Penn Ventilator Company
 2. Greenheck
 3. Loren Cook
- B. Description: Centrifugal fans designed for installing in ceiling or wall or for concealed in-line applications.
- C. Housing: Steel, lined with acoustical insulation.

- D. Fan Wheel: Centrifugal wheels directly mounted on motor shaft. Fan shrouds, motor, and fan wheel shall be removable for service.
- E. Grille: Plastic, louvered grille with flange on intake and thumbscrew attachment to fan housing.
- F. Electrical Requirements: Junction box for electrical connection on housing and receptacle for motor plug-in.
- G. Accessories:
 - 1. Time-Delay Switch: Assembly with single-pole rocker switch, timer, and cover plate.
 - 2. Isolation: Rubber-in-shear vibration isolators.

2.4 SOURCE QUALITY CONTROL

- A. Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.
- B. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install centrifugal fans level and plumb. Install units with clearances for service and maintenance.
- B. Support suspended units from structure using threaded steel rods and vibration isolators as specified in Division 23 Section "Vibration Isolation and Seismic Restraints for HVAC Systems."
- C. Install roof mounted fans on roof curbs or roof support rails as indicated. Support fans mounted on roof rails using vibration isolators as specified in Division 23 Section "Vibration Isolation and Seismic Restraints for HVAC Systems."
- D. Make final duct connections with flexible connectors. Install ducts adjacent to fans to allow service and maintenance.
- E. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- F. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.2 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
1. Verify that shipping, blocking, and bracing are removed.
 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 3. Verify that cleaning and adjusting are complete.
 4. Adjust damper linkages for proper damper operation.
 5. Verify lubrication for bearings and other moving parts.
 6. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
 7. Refer to Division 01 Section "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing procedures.
 8. Remove and replace malfunctioning units and retest as specified above.
- B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

END OF SECTION 23 34 00

SECTION 23 60 00 – WATER CHILLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Air Cooled Liquid Chiller
- B. Related Sections include the following:
 - 1. Division 23 Section “Electrical Requirements for HVAC Equipment” for motors.
 - 2. Division 23 Section “Vibration Isolation for HVAC Systems”.

1.3 DEFINITIONS

- A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- B. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.
- C. IPLV: Integrated part-load value. A single number part-load efficiency figure of merit calculated per the method defined by AHRI 550/590 and referenced to AHRI standard rating conditions.
- D. kW/Ton: The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons at any given set of rating conditions.
- E. NPLV: Nonstandard part-load value. A single number part-load efficiency figure of merit calculated per the method defined by AHRI 550/590 and intended for operating conditions other than the AHRI standard rating conditions.

1.4 REFERENCES

- A. ANSI/ASHRAE 15: Safety Code for Mechanical Refrigeration
- B. AHRI 550/590: Centrifugal, Rotary Screw and Reciprocation Water Chilling Packages
- C. AHRI 560: Absorption Water Chilling Packages

- D. ASME Boiler and Pressure Vessel Code, Section VIII, Division 1
- E. NFPA 70: National Electric Code
- F. NEMA ICS-6: Enclosures for Industrial Controls and Systems
- G. UL: Underwriters Laboratories, applicable standards
- H. ETL: Electrical Testing Laboratories, applicable standards

1.5 SUBMITTALS

- A. Product Data: Include refrigerant, rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Complete set of manufacturer's certified prints of equipment assemblies, control panels, sections and elevations, and unit isolation. Include the following:
 - 1. Assembled unit dimensions.
 - 2. Operating weight and load distribution.
 - 3. Required clearances for maintenance and operation.
 - 4. Size and location of piping and wiring connections.
 - 5. Wiring Diagrams: Power, signal, and control wiring.
- C. Certificates: For certification required in "Quality Assurance" Article.
- D. Source quality-control test reports.

1.6 WARRANTY

- A. Special Warranty: Provide extended warranty or warranty service as specified in this section.

1.7 MANUFACTURER'S SUPERVISION/INSPECTION SERVICES

- A. Water Chiller
 - 1. Provide services of manufacturer's factory trained field engineer to supervise installation of unit and witness pressure testing, evacuation and charging. Manufacturer's field engineer shall also perform initial startup including proper coordination with Contractor on startup of cooling tower and associated condenser water and chilled water pumps.
 - 2. When chiller is shipped in sections, manufacturer shall properly field charge assembled system.
 - 3. Following test, startup, adjustment and balancing, manufacturer's engineer shall instruct Owner or his representative in proper care and operation of unit for a period of 2 days, continuous or intermittent at option of Owner.
 - 4. Following test, startup, adjustment and balancing, manufacturer shall certify, in writing, that the equipment is installed in accordance with his requirements and is operating in accordance with the intent of the specifications.

1.8 QUALITY ASSURANCE

- A. ASHRAE Certification: Signed by manufacturer certifying compliance with ASHRAE 15 for safety code for mechanical refrigeration. Comply with ASHRAE Guideline 3 for refrigerant leaks, recovery, and handling and storage requirements.
- B. ASME Compliance: Fabricate and label water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- C. Comply with NFPA 70.
- D. Comply with UL 1995.
- E. Rating temperatures and conditions, COP and EER of all equipment and components provided under this section shall meet the requirements of the State Energy Code or latest issue of ASHRAE Standard 90 or the latest issue of the Standards for Equipment of the National Energy Policy Act, whichever is more stringent.

1.9 COORDINATION

- A. Centrifugal Water Chiller: Contractor for DIVISION 26, ELECTRICAL, will install chiller motor starter(s) and will provide power wiring from source to chiller motor starter(s) and motor(s). DIVISION 26, ELECTRICAL shall provide wiring from the chiller control panel to the chiller starter and including wiring from flow switches to safeties.

1.10 SOURCE QUALITY CONTROL

- A. Water chillers shall receive factory performance test as specified. All tests to be witnessed by the Owner's representative. Manufacturer shall provide minimum two weeks prior notice of test date.
- B. Include test procedures and results of chiller performance tests in final book to the Owner.

1.11 DELIVERY OF EQUIPMENT

- A. Equipment manufacturer shall prepare units for shipment. Units shall be fully cleaned and plastic wrapper prior to shipment. Provide instructions for assembly as required.
- B. Ship water chillers from the factory fully charged with refrigerant or nitrogen.
- C. Installing contractor shall schedule delivery with the equipment manufacturer and shall receive, unload, store if necessary, and install equipment in accordance with manufacturer's instructions.

PART 2 - PRODUCTS

2.1 AIR COOLED LIQUID CHILLER (SCROLL)

A. Acceptable Manufacturers:

1. Trane
2. York / Johnson Controls, Inc.
3. Carrier
4. Daikin / McQuay

B. General

1. Complete factory assembled, including scroll compressors, condenser coils, fans and motors, controls charged with oil and refrigerant ready for installation and use. Units shall be UL or CSA certified and rated in accordance with AHRI Standard 550/590.
2. Chiller shall include single or multiple refrigerant circuits suitable for capacity modulation. Refrigerant circuits independently piped and complete with liquid line solenoid valve, filter drier, liquid line sight glass with moisture indicator, thermostatic expansion valve, and service valves (liquid and discharge). For multiple refrigerant circuits, capacity modulation is achieved by staging the compressors on and off.
3. Factory run tested to confirm performance and proper operation.
4. Chiller shall operate using refrigerant R-410A.

C. Cabinet

1. Units are constructed of 14 gauge welded galvanized steel frame with minimum 16-gauge galvanized steel panels and access doors. Unit surface is phosphatized and finished with manufacturers recommended finish, which withstands a 1000 consecutive hour salt spray in accordance with ASTM B117.

D. Evaporator:

1. Evaporator tube of brazed plate construction designed to withstand 150 psig waterside working pressure and 225 psig refrigerant side working pressure. Evaporator equipped with heater for freeze protection down to -20 deg. F ambient.
2. Water inlet and outlet connections grooved end victaulic couplings.
3. Insulation: Manufacturer shall be responsible to field insulate unit with minimum 3/4-inch closed cell (antisweat) insulation applied to cooler, float chamber and piping, compressor suction piping and other low temperature surfaces subject to sweating.

E. Compressor and Motor

1. Compressor shall be scroll type direct drive, 3600 RPM, suction gas cooled hermetic motor.
2. Provide centrifugal oil pump, oil level sight glass and oil charging valve.
3. Provide crankcase heater properly sized to minimize the amount of liquid refrigerant present in the oil sump during off cycles.
4. Provide hot gas bypass capacity control, for stable operation as low as 5% capacity.

F. Air Cooled Condenser:

1. Fin and tube condenser coils of seamless copper tubes mechanically expanded into aluminum fins. Design working pressure of 450 psig, factory pressure tested.
2. Condenser fans shall be corrosion resistant material, direct drive independent motors designed for maximum efficiency. Vertical discharge, statically and dynamically balanced for vibration free operation. Provide corrosion resistant fan guards constructed of heavy gauge coated steel. Motors shall be totally enclosed air over (TEAO), squirrel cage type. Ball bearings permanently lubricated.

G. Controls

1. Control panel shall be contained in a NEMA 3R/12 cabinet with hinged outer door.
2. Provide flow switches.

H. Power Connections

1. Power Panels:
 - a. NEMA 3R/12 (P55) rain/dust tight, powder painted steel cabinets with hinged, latched, and gasket sealed outer doors equipped with wind struts for safer servicing. Provide main power connection(s), compressor and fan motor start contactors, current overloads, and factory wiring.
 - b. Field power supply wiring connections shall be to a single power center on the chiller, shall be 3 phase of scheduled voltage, and shall connect to terminal blocks per each of the two motor control panels. Separate disconnecting means and/or external branch circuit protection (by Contractor) required per applicable local or national codes.
 - c. Provide two electrically separate, adjacent motor control center cabinets, with independent doors and separated by a steel panel, for compressor and fan motor power distribution components.
2. Exposed compressor and fan motor power wiring shall be routed through liquid tight conduit.

I. Accessories and Options

1. Power Supply Connections
 - a. Single Point or Multiple Point Supply Terminal Block with Circuit Breakers
 - b. Single Point or Multiple Point Non Fused Disconnect Switches
 - c. Single Point Non-Fused Disconnect Switch with individual circuit breakers
 - d. Single Point Circuit Breaker
2. Low Temperature Brine: Provide suitable for operation for chilling brine below 30 deg F.
3. Sound attenuating package including blanket wrapped compressors, and low RPM condenser fans.
4. Condenser coil protective coating where installed in maritime environments.

J. Hydronic Pumping Package

1. Provide complete pumping package including the following components mounted on an integral skid.
 - a. Dual pump[s] as scheduled.
 - b. Variable speed drive for each pump
 - c. Power feed for the pump[s] to be part of the chiller single point connection.
 - d. For each pump provide a balancing valve, isolation valves, check valve, strainer, upstream and downstream pressure gauges
 - e. Expansion tank as scheduled

PART 3 - EXECUTION

3.1 CHILLER INSTALLATION

- A. Install chillers on concrete base.
- B. Charge chiller with refrigerant if not factory charged.
- C. Provide water piping and accessories for water cooled oil cooler.
- D. Pipe discharge from relief valve and purge to exterior of building.
- E. Install temperature sensor, chilled and condenser water flow and differential switches and other devices not specified or not furnished as factory installed.
- F. Provide union/flanged piping connections and arrange piping risers to allow head removal for tube cleaning or replacement with minimal disturbance to piping connections. Provide drain and vent valves for evaporator and condenser.
- G. Leave adequate pull space at the end of unit where access is required for tube pulling.
- H. Connect wiring and electrically ground water chillers according to Division 26. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- I. Start Up Service:
 1. Engage a factory authorized service representative to perform startup service.
 2. Inspect field assembled components, equipment installations, and piping and electrical connections for proper assemblies, installations and connections.
 3. Complete startup checks according to manufacturer's written instructions and perform the following:
 - a. Verify that refrigerant charge is sufficient and water chiller has been leak tested.
 - b. Verify that pumps are installed and functional.
 - c. Verify that thermometers and gages are installed.
 - d. Operate water chiller for run-in period according to manufacturer's written instructions.
 - e. Check bearing lubrication and oil levels.

- f. Verify that refrigerant pressure relief is properly vented.
 - g. Verify proper motor rotation.
 - h. Verify and record performance of chilled- and condenser-water flow and low-temperature interlocks.
 - i. Verify and record performance of water chiller protection devices.
 - j. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
4. Prepare a written startup report that records results of tests and inspections.

END OF SECTION 23 60 00

SECTION 23 70 10 – COMMERCIAL INDOOR AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This section includes commercial indoor air handling units
- B. Related Sections include the following:
 - 1. Division 23 Section “Electrical Requirements for HVAC Equipment” for motors and variable frequency motor speed controllers.

1.3 REFERENCES

- A. AGA: Applicable publications
- B. AMCA-210: Laboratory Methods of Testing Fans for Rating
- C. AMCA-500: Test Method for Louvers, Dampers and Shutters
- D. AHRI-410: Forced Circulation Air-cooling and Air-heating Coils
- E. AHRI-430: Central Station Air Handling Units.
- F. ASHRAE 90.1: Energy Standard for Buildings, Except Low-Rise Residential Buildings
- G. NBS: Applicable standards
- H. NEC: National Electric Code
- I. NFPA: Applicable standards
- J. UL: Applicable standards

1.4 SUBMITTALS

- A. Product Data: For each type of air-handling unit indicated, include the following:
 - 1. Certified fan-performance curves with system operating conditions indicated. Submit multiple RPM fan curve, single RPM fan curve not acceptable.

2. Certified fan-sound power ratings.
3. Certified coil-performance ratings with system operating conditions indicated.
4. Motor ratings, electrical characteristics, and motor and fan accessories.
5. Material gages and finishes.
6. Filters with performance characteristics.
7. Dampers, including housings, linkages, and operators.
8. Internal pressure drop calculation tabulating each component, including dirty filter allowance, include inlet and outlet openings.
9. Wiring diagrams: Power and control wiring as applicable.

- B. Shop Drawings: Provide a detailed fabrication drawing for each air handling unit, drawn accurately to scale, clearly indicating installation of all components, accessories, and unit connections, when assembled as a complete unit. Include unit dimensions and operating weights. Shipping splits shall be indicated as applicable.

1.5 WARRANTY

- A. Special Warranty: Provide extended warranty and/or warranty service where specified elsewhere in this section.

1.6 MANUFACTURER'S SUPERVISION/INSPECTION SERVICES

A. Air Handling Units

1. The manufacturer shall be present during field installation or shall inspect completed installation of all air handling units and shall certify in writing that the installation is in accordance with their requirements and the units will function properly and operate in accordance with the intent of the specifications.
2. The manufacturer shall include the cost of furnishing the services of a factory trained representative to supervise the initial startup and testing of all air handling units.
3. Following test, startup, adjustment and balancing, the manufacturer shall also provide the services of a factory trained representative for instruction of the Owner's personnel in the operation and maintenance of the equipment.

B. Variable Frequency Motor Speed Controller for Air Handling Units

1. Provide the services of the manufacturer's engineer or authorized serviceman to check, start-up, test and adjust controller and to assist the TAB Contractor and BAS Contractor in setting up controls for the variable speed controller.
2. The manufacturer's engineer or authorized serviceman shall: Check the equipment for proper installation and for its conformance to the Specifications; run the system in all modes of operation to ascertain that the unit will function properly; test the system for line noise and radio interference and furnish test report; make necessary adjustments to ensure trouble-free service.
3. After completion of the start-up procedure, the manufacturer shall certify in writing, that the equipment is installed in accordance with his requirements and is operating in accordance with the intent of the Specifications and shall instruct the Owner in proper operation and maintenance of the variable speed controller.

1.7 QUALITY ASSURANCE

- A. Drawings indicate size, profiles, and dimensional requirements of air-handling units and are based on one manufacturer. Other manufacturer's dimensions and weights that deviate from the basis of design are acceptable provided that there is no impact to the general layout, structural design, and accessibility requirements indicated on the documents. Division 23 Contractor shall be fully responsible to coordinate all changes.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. NFPA Compliance: Air-handling units and components shall be designed, fabricated, and installed in compliance with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems."
- D. AHRI Certification: Air-handling units and their components shall be factory tested according to AHRI 430, "Central-Station Air-Handling Units," and shall be listed and labeled by AHRI.
- E. Comply with NFPA 70.

1.8 COORDINATION

- A. Coordinate with Division 26 for the required unit power connections, including any internal wiring of lights and receptacles not factory wired.

1.9 DELIVERY OF EQUIPMENT

- A. Equipment manufacturer shall prepare units for shipment. Identify each component and mating planes. Units shall be fully cleaned and completely dry, and plastic shrink wrapped for each shipping section. Provide instructions for assembly.
- B. Installing contractor shall schedule delivery with the equipment manufacturer and shall receive, unload, store if necessary, and install equipment in accordance with manufacturer's instructions.
- C. Contractor shall inspect equipment on receipt and report any damage to the Owner in writing. Barring such written notification, Contractor shall be fully responsible for and shall repair at his own expense any damage to the equipment resulting from his receipt, unloading, storage if necessary, and installation of the equipment.
- D. Equipment manufacturer shall provide a trained field technician to supervise assembly of air handling units in the field.

PART 2 - PRODUCTS

2.1 HEAT TRANSFER COIL FOR AIR HANDLING UNIT

- A. Water and Steam Coils: Manufacturer to be selected by and complete responsibility of air handling unit manufacturer.

- B. Extended surface type constructed of copper tubes with aluminum fins. Coil headers of steel, copper or cast iron unless otherwise specified. Header and nipple designed and constructed to prevent electrolytic corrosion. Tubes staggered in direction of air flow. Fin spacing 10 fins per inch maximum for cooling coils unless indicated otherwise. Coil rating certified in accordance with AHRI 410.
- C. Water Coils
 - 1. Cooling Coils: 1/2-inch o.d. x 0.016-inch tube wall.
 - 2. Coil headers of steel, copper or cast iron unless otherwise specified.
 - 3. Coils for cooling service (chilled water) constructed of plate type fins with tubes mechanically or hydraulically expanded into fins to form a permanently tight metal to metal contact.
 - 4. Provide coils with supply and return connections on the same end of coil.
- D. Maximum coil face velocities or minimum coil areas and minimum rows deep are noted on Drawings. Increase face area or rows as required to meet scheduled performance, not fins per inch.
- E. Casings: Construct casings and tube sheet of type 304 stainless steel for cooling coils, galvanized sheet steel elsewhere, with intermediate tube supports for coils exceeding 48 inch tube length. Tube sheets and intermediate tube supports to have either extruded holes or ferruled holes.

2.2 COMMERCIAL INDOOR AIR HANDLING UNIT

A. Acceptable Manufacturers:

- 1. Daikin
- 2. York
- 3. Trane
- 4. McQuay
- 5. Carrier

B. General:

- 1. Air-handling units shall be factory assembled and consist of fans, motor and drive assembly, coils, damper, plenums, filters, condensate pans, mixing dampers, control devices, and accessories as specified herein. Suitable for operation at scheduled static pressure. Fan and coil performance AHRI certified whenever AHRI offers such certification.
- 2. Manufacturer shall guarantee performance of cooling coil(s) such that no moisture carryover will occur on downstream components. Provide moisture eliminator at discharge of cooling coil if required to prevent moisture carryover.
- 3. Provide access sections of sufficient length between unit components to ensure proper performance and airflow across all surfaces as well as sufficient distance for maintenance and service access.
- 4. Air handling unit total static pressure indicated on the drawings is approximately only. Manufacturer shall be responsible to confirm internal pressure drop for each component of the unit, including system effects, and combined with scheduled external static pressure, determine total fan pressure drop for the basis of fan selection. Include filter manufacturer's recommended dirty filter pressure drop in total pressure drop calculations.

C. Casing:

1. Construct entire casing of unit of galvanized steel with double wall thermal barrier system. Unit casing to have solid inner walls constructed of 22 gauge and solid outer walls constructed of 18-gauge galvanized steel with galvanized steel support members. Perforated inner wall will not be accepted.
2. Floor shall be 16-gauge galvanized steel, except stainless steel required under cooling coils and humidifiers.
3. Provide insulated double wall sloped drain pan under cooling coils and humidifier, to comply with ASHRAE 62. Fabricate drain pans from single sheet with welded corners. Fabricate full inner pan of stainless steel and outer pan of galvanized steel. Either provide stainless steel moisture eliminator or extend drain pan sufficient distance downstream of cooling coil to collect all condensed moisture when units are operating at maximum catalogued face velocity across cooling coil. Extend drain connection(s) to exterior of unit casing.
4. Mount equipment and support exterior steel panels from welded and bolted, heavy structural steel frame. Exterior panels nonload bearing to allow removal of panels without effecting structural integrity of unit. Sheet metal screws or similar type fasteners will not be permitted for frame. Reinforce larger panels as required to provide rigidity.
5. Provide lifting lugs.

D. Insulation:

1. Insulate entire unit between inner and outer panels with 2-inch-thick polyurethane foam insulation conforming to NFPA 90A and NFPA 90B.
2. Thermal conductivity (k value): 0.18 at 75 deg. F.
3. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50, when tested according to ASTM C411.

E. Access Panels and Doors:

1. Provide access doors of same construction as unit casing, complete with hinges, latches, handles, and gaskets. Access doors shall be sized and located to allow periodic maintenance and inspections. Doors shall be fully gasketed and open against unit pressure. Provide access doors for each access section. Provide minimum 6-inch by 8- inch view window made with safety wire reinforcement for fan section and elsewhere as indicated on drawings.
2. Provide access panels of same construction as unit casing to allow removal of components such as coil(s) and fans. Access panels shall be bolted and gasketed to be removable as well as airtight.

F. Fans, Motors, and Drives:

1. Provide fan assembly consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, and support frame equipped with formed steel channel base for integral mounting of fan and motor.
2. Fan assemblies statically and dynamically balanced and designed for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
3. Centrifugal Fan Housings: Formed- and reinforced-steel panels to make curved scroll housings with shaped cutoff, spun-metal inlet bell, and access doors or panels to allow entry to internal parts and components.

- a. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
 - b. Performance Class: AMCA 99-2408, Class suitable for scheduled operating condition.
 - c. Horizontal Flanged Split Housing: Bolted construction.
4. Fan Assemblies:
- a. Provide ECM, motorized impeller fan(s). Fan assembly shall include fan, fan base, and a motor and shall be dynamically balanced by the fan manufacturer.
 - 1) Fan array shall be equipped with piezometer points to measure airflow. One piezometer point shall be supplied on each fan in the fan array.
 - 2) Motor control panel shall come with a low voltage terminal strip and shall include terminals for Fan ON/OFF, 0-10V signal, and fan fault.
 - 3) Motor control panel shall come equipped with a fused disconnect.
 - 4) Fan section shall come equipped with a motor control panel mounted on the fan section. Both line voltage and low voltage wiring shall be done by the factory. Each fan shall have an isolation switch.
 - 5) Motor shall be brushless DC type with a permanent magnet rotor.
 - 6) Inverter shall be integral to the motor and come as an assembly from the fan manufacturer.
 - 5. Shafts: Turned, ground, and polished hot rolled solid steel with keyway. Ship with protective coating of lubricating oil. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
 - 6. Provide self-aligning oil or grease lubricated pillow block type ball bearings with adaptor mount and two-piece, cast-iron housing. Minimum L-10 life of 50,000 hours. Provide suitable lubrication fittings.
 - 7. Fan Speed Control: Where scheduled, provide variable frequency motor speed controller as specified in Division 23 Section "Electrical Requirements for HVAC Equipment".
 - 8. Include with submittals multiple RPM fan curve with operating point plotted on curve. Single RPM curve not acceptable. Equivalent fan selection shall not increase motor horsepower (wattage) and shall not increase noise level and tip speed by more than 10 percent or increase inlet or discharge air velocity by more than 20 percent.
 - 9. Sound Performance: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Fans shall bear AMCA-certified sound ratings seal. Factory test fan performance for flow rate, pressure, power, air density, rotation speed, and efficiency. Establish ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."

G. Vibration Isolation

- 1. Install entire fan, motor and drive assembly on a structural steel vibration isolator base and isolate by use of springs, internally mounted at factory, together with fan discharge flexible connection and thrust restraint springs.
- 2. Isolation devices shall comply with Division 23 "Vibration Isolation for HVAC Systems".

H. Filters

- 1. Furnish combination filter section with 2-inch pleated MERV 8 flat pre-filter and 4-inch final filter. Provide side loading and removal of filters.

2. Filter media shall be UL 900 listed, Class I or Class II.

I. Coils

1. Construct coil(s) as specified elsewhere in this Section under “Heat Transfer Coil for Air Handling Unit”.
2. Provide cooling coil support racks constructed of stainless-steel structural members.
3. Where coils are stacked more than one high, provide individual coil support racks to allow easy removal of a lower coil without disturbing the upper coils. For stacked cooling coils, provide independent stainless steel support racks and intermediate stainless-steel drain pan with downspout for each upper coil.
4. Extend coil connections through unit casing to the exterior of unit. Seal casing penetrations airtight.

J. Gas Heat Module

1. The air handling unit shall include a natural gas heating section. The duct furnace shall be natural gas fired heating module(s) factory installed downstream of the supply air fan in the heat section. The heating module shall be a tubular design with in-shot gas burners. The heat exchanger tubes shall be constructed of stainless steel. The module shall have an induced draft fan that will maintain a negative pressure in the heat exchanger tubes for the removal of the flue gases.
2. Gas-fired duct furnaces provided shall have a tubular heat exchanger constructed of type 409 Stainless Steel .044 Min. Wall thickness produced to ASTM A268.
3. The Duct Furnace models shall be listed by Intertek Testing Services (ITS / ETL) for operation on Natural or Propane gas to the current edition of ANSI Z83.8 Standard for Gas-Fired Duct Furnaces. Duct furnaces are for installation on the positive pressure side of the circulating air blower, only.
4. Gas module shall have 5:1 modulating control.
5. Each burner module shall have two flame roll-out safety protection switches and a high temperature limit switch that will shut the gas valve off upon detection of improper burner manifold operation. The induced draft fan shall have an airflow safety switch that will prevent the heating module from turning on in the event of no airflow in the flue chamber.
6. Field installed heating modules shall require a field ETL certification. The manufacturer’s rooftop unit ETL certification shall cover the complete unit including the gas heating modules.
7. Individual Duct Furnaces shall incorporate a Direct Spark Ignition control module that is design certified by a recognized national testing agency. The control shall provide:
 - a. 100% safety shut-off.
 - b. A 15 second minimum pre-purge period prior to trial for ignition.
 - c. High energy direct spark ignition of main burners.
 - d. Electronic flame supervision incorporating a 0.8 second flame failure response time.
 - e. Up to 2 additional ignition retrieals preceded by an interpurge period.
 - f. A minimum 30 second post-purge.
 - g. Automatic reset after one hour to initiate additional ignition trials if lockout occurs during heat call.
 - h. An LED indicator light to provide a flash code to identify the operating condition of the control.

K. Additional Sections

1. Access section shall be provided for access between components.
2. Mixing box section shall be provided with top outside air opening and end return air opening with or without parallel low leak airfoil damper blades. Dampers shall be hollow core galvanized steel airfoil blades, fully gasketed and have continuous vinyl seals between damper blades in a galvanized steel frame. Dampers shall have stainless steel jamb seals along end of dampers. Linkage and ABS plastic end caps shall be provided when return and outside air dampers sized for full airflow. Return and outside air dampers of different sizes must be driven separately. Damper Leakage: Leakage rate shall be less than two tenths of one percent leakage at 2 inches static pressure differential. Leakage rate tested in accordance with AMCA Standard 500.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment. Verify that quantities and locations of balancing devices are accessible and appropriate for effective balancing and for efficient system and equipment operation. Prepare a report that identifies any deficiencies and specifically note required work to be done to allow effective balancing.
- B. Examine approved submittal data of HVAC systems and equipment.
- C. Examine system and equipment installations to verify that they are complete and that testing, cleaning, adjusting, and commissioning specified in individual Sections have been performed.
- D. Examine system and equipment test reports.
- E. Examine HVAC system and equipment installations to verify that indicated balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers, are properly installed, and that their locations are accessible and appropriate for effective balancing and for efficient system and equipment operation.
- F. Examine systems for functional deficiencies that cannot be corrected by adjusting and balancing.
- G. Examine HVAC equipment to ensure that clean filters have been installed, bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.
- H. Examine terminal units, such as variable-air-volume boxes, to verify that they are accessible and their controls are connected and functioning.
- I. Examine plenum ceilings or raised floors used for supply air to verify that they are airtight. Verify that pipe and duct penetrations and other holes are sealed.
- J. Examine strainers for clean screens.
- K. Examine three-way valves for proper installation for their intended function of diverting or mixing fluid flows.
- L. Examine heat-transfer coils for correct piping connections and for clean and straight fins.

- M. Examine system pumps to ensure absence of entrained air in the suction piping.
- N. Examine equipment for installation and for properly operating safety interlocks and controls.
- O. Examine automatic temperature system components to verify the following:
 - 1. Dampers, valves, and other controlled devices are operated by the intended controller.
 - 2. Dampers and valves are in the position indicated by the controller.
 - 3. Integrity of valves and dampers for free and full operation and for tightness of fully closed and fully open positions.
 - 4. Automatic modulating and shutoff valves, including two-way valves and three-way mixing and diverting valves, are properly connected.
 - 5. Thermostats and humidistats are located to avoid adverse effects of sunlight, drafts, and cold walls.
 - 6. Sensors are located to sense only the intended conditions.
 - 7. Sequence of operation for control modes is according to the Contract Documents.
 - 8. Controller set points are set at indicated values.
 - 9. Interlocked systems are operating.
 - 10. Changeover from heating to cooling mode occurs according to indicated values.
- P. Report deficiencies discovered before and during performance of TAB procedures. Record default set points if different from indicated values.

3.2 DUCTWORK LEAKAGE TEST VERIFICATION

- A. Installing Contractor will install ductwork as specified in Section 23 30 00 and will perform leakage tests. TAB Contractor shall witness all duct leakage tests.
- B. Verify and record that all duct sections have been tested, indicate both successful and unsuccessful tests. Verify sections where resealing and retesting resulted in successful tests. Include date of tests and initials of balancing technician who witnessed tests.

3.3 PREPARATION

- A. Complete system readiness checks and prepare system readiness reports. Include verification of the following:
 - 1. Permanent electrical power wiring is complete.
 - 2. Hydronic systems are filled, clean, and free of air.
 - 3. Automatic temperature-control systems are operational.
 - 4. Equipment and duct access doors are securely closed.
 - 5. Isolating and balancing valves are open and control valves are operational.
 - 6. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
 - 7. Windows and doors can be closed so indicated conditions for system operations can be met.

3.4 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system according to the procedures contained in AABC or NEBB, and otherwise as specified in this Section.
- B. Obtain approved submittals for all equipment and devices required for proper system balancing. Balance systems to achieve capacities and flow quantities indicated on drawings and approved submittals. Should there be a conflict between the drawings and submittals, the approved submittal values shall be used.
- C. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary to allow adequate performance of procedures. After testing and balancing, close probe holes and patch insulation with new materials identical to those removed. Restore vapor barrier and finish according to insulation Specifications for this Project.
- D. Mark equipment and balancing device settings with paint or other suitable, permanent identification material, including damper-control positions, valve position indicators, fan-speed- control levers, and similar controls and devices, to show final settings.
- E. Take and report testing and balancing measurements in the same units, inch-pound (IP) or metric (SI), to match what is shown on Contract Documents.

3.5 BALANCING TOLERANCES

A. Air Balancing:

- 1. All measured air quantities shall agree with design air quantities within tolerances listed herein or otherwise acceptable to the Architect. The measurements recorded in the TAB Report for the total CFM of all branches, and the grand total shall agree with the measured air volume of the fan, less an air quantity not greater than the specified maximum percentage of leakage.
- 2. Balance all equipment, air outlets and air intakes in accordance with the air quantities shown on the drawings with permissible tolerances as follows:
 - a. Supply, return and exhaust fans
 - 1) Fan serving multiple rooms -5% to +10%
 - 2) Fan serving individual room $\pm 5\%$
 - b. Minimum outside air -0% to +5%
 - c. Terminal Units
 - 1) Terminal unit serving multiple rooms -5% to +10%
 - 2) Terminal unit serving individual room $\pm 5\%$
 - d. Air Outlets
 - 1) Room with multiple outlets $\pm 10\%$
 - 2) Room with individual outlet $\pm 5\%$

- B. Water Balancing: Balance all hydronic equipment, pumps, coils, etc in accordance with the capacities and flow quantities shown on the drawings within an acceptable tolerance of $\pm 5\%$.
- C. If during progress of the construction or during balancing, the TAB Contractor encounters any condition that will not allow balancing to be performed within the above balancing tolerances, the fact(s) shall be reported immediately to the Architect with recommendations for corrective action. If feasible, report such conditions and recommendations prior to submission of balancing reports. Work shall then proceed in accordance with the response provided by the Architect.

3.6 AIR SYSTEM BALANCING

- A. Prepare test reports for all air systems. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' "as-built" duct layouts.
- C. Determine the best locations in main and branch ducts for accurate duct airflow measurements.
- D. Locate start-stop and disconnect switches, electrical interlocks, motor starters, variable frequency motor speed controllers and DDC panels.
- E. Verify that motor starters are equipped with properly sized thermal protection.
- F. Check condensate drains for proper connections and functionality. Confirm plenum pressure at trap connection and confirm trap depth and arrangement is in accordance with drawing detail.
- G. Check for proper sealing of air-handling unit components.
- H. Verify that clean filters have been provided by Installing Contractor. Simulate specified dirty filter condition when balancing.
- I. Provide pitot tube test openings with covers as required for taking pressure and velocity readings in ductwork. Install openings and covers of a type and in a manner to insure against leakage. Remove, replace and repair insulation at pitot tube test openings in a neat and workmanlike manner. Where permanent instrument test ports are specified, advise Installing Contractor as to proper location.
- J. Measure air quantities in main ducts by pitot tube traverse of the entire cross sectional area of the duct. Where air measuring stations have been installed, measure air quantities by pitot tube traverse and verify calibration of air measuring station. Do not use air measuring station for balancing purposes. Where necessary for proper balancing, make similar measurements in branch ducts. Determine outlet and inlet air quantities in accordance with outlet and inlet manufacturer's recommendations.
- K. Obtain total air quantities by adjustment of fan speeds or adjustment of belts and sheaves. Adjust branch duct air quantities by volume dampers. Permanently mark dampers after air balance is complete.
- L. Volume dampers shall be used to balance air quantities at outlets and inlets, providing final adjustments do not produce objectionable drafts or sound levels. Air quantity adjustments using outlet pattern deflectors will not be permitted.

M. Balancing variable air volume (VAV) systems:

1. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at a maximum set- point airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced airflow terminal units so they are distributed evenly among the branch ducts.
2. Set outside-air dampers at minimum, and return- and exhaust-air dampers at a position that simulates full-cooling load. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Measure total system airflow. Adjust to within indicated airflow. When total airflow is correct, balance the air outlets downstream from terminal units.
3. Measure the return airflow to the fan while operating at maximum return airflow and minimum outside airflow. Adjust the fan and balance the return-air ducts and inlets.
4. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow.
5. Balance at design (maximum) airflow and to deliver design minimum outside air at both design maximum and design minimum total airflow. Determine minimum fan speed and system static pressure that will satisfy requirements and advise BAS Contractor accordingly. Retest at simulated partial load conditions, at scheduled minimum airflow.
6. Record the final fan performance data at maximum and minimum flow conditions. Using fan curves obtained from approved submittals, plot maximum and minimum operating conditions on fan curve and include in final report.
7. Test variable frequency drives through full range of Hertz for operating points that cause excessive vibration due to harmonic frequency, and program VFD to prevent operation at those frequencies.

N. Outside Air and Relief Air (Economizer) Damper Setup Procedure:

1. All airflow station calibration should be checked prior to beginning procedure listed below.
2. These procedures should be performed during unoccupied hours, since building temperatures will not be maintained during the adjustment procedure.
3. Disassociate AHU relief air damper control signal from outside air damper and return air damper control signal. Relief air damper shall be modulated to maintain return fan discharge static pressure at setpoint (Relief air damper setpoint to be initially set to
4. +0.20”).
5. De-energize all associated exhaust fans.
6. Index outside air damper to 100% open and return damper to 100% closed.
7. Index all associated AVB boxes to maximum scheduled airflow (This should cause supply fan VFD to index to near maximum design speed).
8. Set supply/return differential setpoint to zero. Replace or adjust the return fan sheave so that at VFD maximum speed the return fan airflow is less than or equal to the scheduled return fan airflow.
9. Set supply/return differential setpoint to scheduled minimum outside air cfm (This should slow down the return air fan VFD). Disable economizer controls and reset outside air and return air dampers to automatic control (outside air damper should be at minimum position and return air damper should be mostly open).
10. Energize all associated building general exhaust fans.
11. Adjust return damper position to maintain 0.10” positive pressure in the return fan discharge ductwork (this should establish maximum return damper and minimum outside air damper

positions). Relief damper should be closed and the outside airflow sensor should now read near to the supply/return differential setpoint set in 8 above (There will be a difference due to flow sensor inaccuracy at low o/a flow).

12. Complete steps 1 to 10 above for each air handling unit. After completing set-up on all units, check return fan discharge pressure at each unit. The pressure should still be +0.1" at minimum outside airflow.
 13. Check building pressurization at front doors, if it seems to take excess pressure to open doors or if there seems to be an in rush of air when doors are opened, increase supply/return differential setpoints for each air handling unit by 5%. (Note: Only perform this step when there is little or no wind outside).
 14. Perform step 12 until the building is at a neutral or slightly positive pressure.
 15. Index all boxes to minimum scheduled airflow and check building pressurization at front doors (it should be the same as at the end of step 13).
 16. Index unit for 100% outside air and check building pressurization at front doors (again it should not change).
 17. Return all systems to automatic control and check building pressurization at the front doors (final check that building pressurization is the same as it was after step 13).
 18. After final set-up of all units is completed, submit to the owner a report containing:
 - a. Final supply/return differential setpoint for each unit.
 - b. Description of apparent building pressurization after AHU setup is completed.
 - c. One hour trend logs for each unit listing: supply air CFM, return air CFM, outside air CFM (as measured at o/a flow station), and return fan discharge static pressure. These readings shall be taken every 5 minutes for one hour after AHU setup is complete.
- O. Air Volume Control Boxes and Air Flow Measuring Stations: Check each terminal unit and air flow measuring station for calibration and adjust as necessary.
1. For Air Volume Control Boxes and Air Flow Measuring Stations with DDC Controls
 - a. BAS Contractor will set up and calibrate the mass flow control device to the design contract values.
 - b. BAS Contractor will index the system configuration as requested by TAB Contractor.
 - c. TAB Contractor shall then test the mass flow output and shall proportionately adjust the distribution. If the mass flow results deviate from the design intent by greater than the nominal ($\pm 5\%$) amount, TAB Contractor shall provide those values to BAS Contractor for final adjustment.
 - d. BAS Contractor will modify the previously mentioned correction factor to cause the controlled value to be consistent with the field measured value.
 - e. TAB Contractor shall then retest as required to confirm that such corrections have resulted in values that conform to the specification requirements.
- P. Diffuser Pattern Adjustment: Adjust individual outlets under procedures recommended by the manufacturers of the outlets, or as otherwise approved by Architect. Set pattern deflectors at each outlet for the air pattern required. Make changes in air patterns or settings necessary to achieve correct air balance and to minimize drafts. Bring to the attention of the Installing Contractor any air outlets with noticeable rattle caused by loose dampers or pattern adjusters.

3.7 AIR BALANCING DATA

A. Include the following data in the TAB Reports:

1. Air Moving Equipment Data

- a. Fan or Unit No.
- b. Location
- c. Area Served
- d. Manufacturer
- e. Model No. and Serial No.
- f. Rated and Actual Motor Data
 - 1) HP
 - 2) Phase
 - 3) Voltage
 - 4) Amperage
- g. Design and Actual Air Flow Measurements
 - 1) Total CFM
 - 2) Outside air CFM at minimum OA damper setting
 - 3) Total and external static pressures, in w.g.
 - 4) Fan suction static pressure, in w.g.
 - 5) Fan discharge static pressure, in w.g.
 - 6) Fan RPM
- h. Design and Actual Pressure Drops
 - 1) Across filter bank
 - 2) Across each heat transfer coil
 - 3) Provide complete pressure drop profile across each component in air handling unit
- i. Static pressure controls' identification (by service) and final setpoint.
- j. Evaluate building and room pressure conditions to determine adequate supply and return air proportions.
- k. Fan curves with actual operating conditions indicated.

2. Controllable Speed Fan with Variable Frequency Motor Speed Controller

- a. Establish the maximum speed setpoint by determining the following at maximum design air flow requirements:
 - 1) Lowest pressure reading at the most remote air controlling device that will satisfy requirements.
 - 2) Supply fan air flow measuring station readings: CFM, velocity pressure, static pressure.
 - 3) Return and/or exhaust fan airflow measuring station readings: CFM, velocity pressure, static pressure.

- b. Establish the minimum speed setpoint by determining the following at minimum design air flow requirements:
 - 1) Lowest pressure reading at the most remote air controlling device that will satisfy requirements.
 - 2) Supply fan air flow measuring station readings: CFM, velocity pressure, static pressure.
 - 3) Return and/or exhaust fan airflow measuring station readings: CFM, velocity pressure, static pressure.
 - c. Record the operating conditions of the controllable speed fan system(s) with variable frequency motor speed controller(s) at the time the preceding work is performed, including control settings, damper positions, filter conditions and other pertinent data, to permit duplication of all operating conditions during final calibration of the controllable speed fan variable frequency motor speed controller(s).
 - d. After final calibration of the fan controller(s) has been performed again duplicate all system operating conditions and repeat the balancing and adjusting work, specified above, to demonstrate the proper operation, control and calibration of each controllable speed fan system variable frequency motor speed controller at both minimum and maximum air flow conditions.
3. Air Flow Measuring Station
 - a. Fan or unit number
 - b. Station symbol and location
 - c. Manufacturer and model number
 - d. Design and actual velocity
 - e. Design and actual cfm
 4. Duct Velocity Traverse Data
 - a. Fan or Unit No.
 - b. Traverse location.
 - c. Design and actual CFM.
 - d. Duct dimensions and area.
 - e. Design and actual average velocity.
 - f. Duct static pressure at test holes, in. w.g.
 - g. Traverse measurements in FPM (show grid pattern).
 5. Air Volume Control Box Data
 - a. Unit symbol and location.
 - b. Manufacturer and model number.
 - c. Design and actual air velocity.
 - d. Design and actual CFM.
 6. Air Outlet and Inlet Data
 - a. Identify each outlet or inlet as to location, area and fan or unit system.
 - b. Manufacturer and model number.
 - c. Outlet or inlet size, effective area or Ak factor.

- d. Design and actual velocity, FPM.
- e. Design and actual CFM.

3.8 HYDRONIC SYSTEM BALANCING

- A. Prepare test reports with pertinent design data and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against approved pump flow rate.
- B. Prepare schematic diagrams of systems' "as-built" piping layouts.
- C. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:
 - 1. Open all manual valves for maximum flow.
 - 2. Check expansion tank liquid level.
 - 3. Check makeup-water-station pressure gage for adequate pressure for highest vent.
 - 4. Check flow-control valves for specified sequence of operation and set at indicated flow.
 - 5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
 - 6. Set system controls so automatic valves are wide open to heat exchangers.
 - 7. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
 - 8. Check air vents for a forceful liquid flow exiting from vents when manually operated.
- D. Measure water flow at pumps. Use the following procedures, except for positive-displacement pumps:
 - 1. Verify impeller size by operating the pump with the discharge valve closed. Read pressure differential across the pump. Convert pressure to head and correct for differences in gage heights. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
 - 2. Check system resistance. With all valves open, read pressure differential across the pump and mark pump manufacturer's head-capacity curve. Adjust pump discharge valve until indicated water flow is achieved.
 - 3. Verify pump-motor brake horsepower. Calculate the intended brake horsepower for the system based on pump manufacturer's performance data. Compare calculated brake horsepower with nameplate data on the pump motor. Report conditions where actual amperage exceeds motor nameplate amperage.
- E. Set calibrated balancing valves, if installed, at calculated presettings.
- F. Measure flow at all stations and adjust, where necessary, to obtain first balance.
 - 1. System components that have Cv rating or an accurately cataloged flow-pressure-drop relationship may be used as a flow-indicating device.
- G. Measure flow at main balancing station and set main balancing device to achieve flow that is 5 percent greater than indicated flow.
- H. Adjust balancing stations to within specified tolerances of indicated flow rate as follows:

1. Determine the balancing station with the highest percentage over indicated flow.
 2. Adjust each station in turn, beginning with the station with the highest percentage over indicated flow and proceeding to the station with the lowest percentage over indicated flow.
 3. Record settings and mark balancing devices.
- I. Measure pump flow rate and make final measurements of pump amperage, voltage, rpm, pump heads, and systems' pressures and temperatures including outdoor-air temperature.
 - J. Measure the differential-pressure control valve settings existing at the conclusions of balancing.
 - K. For variable flow systems, open or close sufficient valves to simulate design diversity, if applicable, and coordinate with BAS Contractor for setpoint and setting of all bypass valves.
 - L. For primary-secondary flow systems, first balance the primary system crossover flow, then balance the secondary system flow.

3.9 HYDRONIC BALANCING DATA

A. Include the following data in the TAB Reports:

1. Pump Data

- a. Identification and location.
- b. Service.
- c. Manufacturer, model, and serial number.
- d. Type drive.
- e. RPM.
- f. Rated and Actual Motor Data
 - 1) HP
 - 2) Phase
 - 3) Voltage
 - 4) Amperage
- g. Discharge and suction pressures and differential pressures (feet).
- h. Design and actual pump head (feet) and GPM.
- i. No flow (discharge valve closed) suction and discharge pressure (feet).

2. Equipment Data (air handling unit, chiller, terminal unit, radiation, coils, etc.)

- a. Identification (symbol) and location.
- b. Service.
- c. Manufacturer and, except for coils and radiation and the like, model, and serial number.
- d. Entering and leaving pressures and pressure differential (feet).
- e. Pressure differential across balancing valve (feet)
- f. Design and actual GPM.
- g. Entering and leaving water temperatures.

3. Flow Meter Data

- a. Identification (symbol) and location.
- b. Service.
- c. Type of meter.
- d. Manufacturer, model, and serial number.
- e. Pipe size.
- f. Design GPM and meter indication.
- g. Actual GPM and meter indication.

3.10 VIBRATION MEASUREMENT OF ROTATING EQUIPMENT

- A. Measure, and submit report, vibration displacement for all fans and pumps over 3 hp.
- B. Perform vibration measurements after air and water balancing and equipment testing is complete.
- C. Measure and record equipment vibration, bearing vibration, equipment base vibration, and building structure vibration. Record velocity and displacement readings in the horizontal, vertical, and axial planes.
- D. Maximum allowable vertical vibration of rotating equipment is as follows:

<u>Equipment Speed (RPM)</u>	<u>Vibration Displacement (MILS peak to peak)</u>
Under 600	4
600 to 1,000	3
1,000 to 2,000	2
Over 2,000	1

If equipment has an inertia base, allowable vibration level is reduced by the ratio of the equipment weight alone to the equipment plus the inertia base weight.

- E. Inspect, measure, and record vibration isolation.
 - 1. Verify that vibration isolation is installed in the required locations.
 - 2. Verify that installation is level and plumb.
 - 3. Verify that isolators are properly anchored.
 - 4. For spring isolators, measure the compressed spring height, the spring OD, and the travel- to-solid distance.
 - 5. Measure the operating clearance between each inertia base and the floor or concrete base below. Verify that there is unobstructed clearance between the bottom of the inertia base and the floor.

3.11 VERIFICATION OF CONTROLS AND INSTRUMENTATION

- A. The BAS Contractor is responsible to demonstrate the operation of the control system to the TAB Contractor to verify system performance is in accordance with requirements of the specifications.
- B. Verify that controllers are properly calibrated.
- C. Check transmitter and controller locations and note conditions that would adversely affect control functions.

- D. Record controller settings and note variances between set points and actual measurements.
- E. Check the operation of limiting controllers (i.e., high- and low-temperature controllers).
- F. Check free travel and proper operation of control devices such as damper and valve operators.
- G. Check the sequence of operation of control devices. Note air pressures and device positions and correlate with airflow and water flow measurements. Note the speed of response to input changes.
- H. Check the interaction of electrically operated switch transducers.
- I. Check the interaction of interlock and lockout systems.
- J. For pneumatic control systems, check main control supply-air pressure and observe compressor and dryer operations.
- K. For electric control systems, record voltages of power supply and controller output. Determine whether the system operates on a grounded or non-grounded power supply.
- L. Note operation of electric actuators using spring return for proper fail-safe operations.

3.12 FINAL REPORT

- A. General: Typewritten, or computer printout in letter-quality font, on standard bond paper, in three-ring binder, tabulated and divided into sections by tested and balanced systems.
- B. Include a certification sheet in front of binder signed and sealed by the certified testing and balancing engineer.
 - 1. Include a list of instruments used for procedures, along with proof of calibration.
- C. Final Report Contents: In addition to certified field report data, include the following:
 - 1. Pump curves
 - 2. Fan curves
 - 3. Manufacturers' test data
 - 4. Field test reports prepared by system and equipment installers
 - 5. Other information relative to equipment performance, but do not include Shop Drawings and Product Data.
- D. General Report Data: In addition to form titles and entries, include the following data in the final report, as applicable:
 - 1. Title page
 - 2. Name and address of TAB firm
 - 3. Project name
 - 4. Project location
 - 5. Architect's name and address
 - 6. Engineer's name and address

7. Contractor's name and address
 8. Report date
 9. Signature of TAB firm who certifies the report
 10. Table of Contents with the total number of pages defined for each section of the report
 11. Number each page in the report
 12. Summary of contents including the following:
 - a. Indicated versus final performance
 - b. Notable characteristics of systems
 - c. Description of system operation sequence if it varies from the Contract Documents
 13. Nomenclature sheets for each item of equipment.
 14. Data for terminal units, including manufacturer, type size, and fittings.
 15. Notes to explain why certain final data in the body of reports varies from indicated values.
 16. Test conditions for fans and pump performance forms including the following:
 - a. Settings for outside-, return-, and exhaust-air dampers.
 - b. Conditions of filters.
 - c. Cooling coil, wet- and dry-bulb conditions.
 - d. Face and bypass damper settings at coils.
 - e. Fan drive settings including settings and percentage of maximum pitch diameter.
 - f. Variable speed controller settings for variable-air-volume systems.
 - g. Settings for supply-air, static-pressure controller.
 - h. Other system operating conditions that affect performance.
- E. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outside, supply, return, and exhaust airflows.
 2. Water and steam flow rates.
 3. Duct, outlet, and inlet sizes.
 4. Pipe and valve sizes and locations.
 5. Terminal units.
 6. Balancing stations.
 7. Position of balancing devices.
- F. Air System and Hydronic System Balancing Data:
1. Include all test data required for proper system balance and other test data specified elsewhere in this Section. Include all values, design and actual.
 2. Provide all duct traverse readings, including traverse locations marked on drawings.
- G. Vibration Measurement Reports:
1. Date and time of test.
 2. Vibration meter manufacturer, model number, and serial number.
 3. Equipment designation, location, equipment, speed, motor speed, and motor horsepower.
 4. Diagram of equipment showing the vibration measurement locations.
 5. Measurement readings for each measurement location.
 6. Calculate isolator efficiency using measurements taken.
 7. Description of predominant vibration source.

H. Instrument Calibration Reports:

1. Report Data:
 - a. Instrument type and make
 - b. Serial number
 - c. Application
 - d. Dates of use
 - e. Dates of calibration

3.13 INSPECTIONS

- A. Periodically visit the site, as appropriate for size of project or as requested by Owner during the installation of the work. At a minimum, visit the site at the following times:
 1. After major equipment is set in place and rough-ins are completed.
 2. Prior to installation of shaft enclosures.
 3. Prior to ceiling installation.
- B. Should any potential or developing problems be discovered relating to accessibility, materials, equipment, or methods being used in the work, and where such problems may adversely affect the TAB work, immediately report these findings in writing to the Architect with recommendations for correction.
- C. After testing and balancing are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the Final Report.
 1. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the setpoint.
 2. Walk through the spaces and observe any excessive noise or vibration from the HVAC system.
- D. Final Inspection:
 1. After initial inspection is complete and evidence by random checks verifies that testing and balancing are complete and accurately documented in the final report, perform a final inspection to verify the following:
 - a. Verify that all balancing devices are marked with final balance position.
 - b. Verify that all holes in ductwork for pitot-tube traverse have been plugged.
 - c. Verify that all insulation removed during TAB work has been replaced.
 - d. Review requirements for follow-up seasonal checks and schedule dates with Owner.

END OF SECTION 01 91 00

SECTION 23 80 00 - HEAT TRANSFER

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes:
 - 1. Unit heaters
- B. Related Sections:
 - 1. Reheat coils in air volume control boxes are specified with air volume control boxes in Division 23 "Ductwork and Ductwork Accessories".

1.3 SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Enclosure joints, corner pieces, access doors, and other accessories.
 - 2. Wiring Diagrams: Power, signal, and control wiring.
- C. Color Samples for Initial Selection: For units with factory-applied color finishes.
- D. Operation and Maintenance Data: For equipment include in operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, performance, and dimensional requirements of equipment and are based on the specific equipment indicated. Refer to Division 01 Section "Product Requirements."
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

PART 2 - PRODUCTS

2.1 ELECTRIC CABINET UNIT HEATER

A. Acceptable Manufacturers:

1. Berko Electric
2. Chromalox, Inc.; a division of Emerson Electric Company.
3. Indeeco.
4. Markel Products; a division of TPI Corporation.
5. QMark Electric Heating; a division of Marley Engineered Products.
6. Trane.

B. Unit arrangement as indicated. Electric finned tube heating element, double inlet centrifugal fans and motor, built-in thermal cutout switch, integral disconnect switch and temperature controls, bonderized 16-gauge steel casing and front panel finished in baked enamel, standard color as selected by Architect. Submit color chart.

C. Fans and direct driven motor mounted on common shaft and removable as a unit.

D. Unit shall be UL listed.

2.2 ELECTRIC WALL HEATER

A. Acceptable Manufacturers:

1. Marley Electric Heating Co. of "Q Mark".
2. Berko Electric
3. Electromode
4. Trane

B. Surface mounted, semirecessed, or fully recessed, wall mounted heavy duty type as indicated. Metal sheathing heating grid, safety switch, fan delay switch, integral thermostat, fan, oil sealed motor and "Heat-Off-Fan" selector switch.

C. Unit shall be UL listed.

PART 3 - EXECUTION

3.1 UNIT HEATER INSTALLATION

A. Examine areas to receive unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Install cabinet unit heaters to comply with NFPA 90A.

- C. Install propeller unit heaters level and plumb.
- D. Install wall-mounting thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.
- E. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Install piping adjacent to machine to allow service and maintenance.

3.2 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. Operational Test: After electrical circuitry has been energized, operate electric coils to confirm proper unit operation.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

END OF SECTION 23 80 00

SECTION 23 81 00 – UNITARY AIR CONDITIONING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes:

- 1. Packaged rooftop air handling unit.
- 2. Ductless split system air conditioning.

- B. Related Sections include:

- 1. Refrigerant piping systems are specified in Division 23 “Refrigerant Piping Systems”.
- 2. Cooling towers for water-cooled heat pump system are specified in Division 23 “Cooling Towers”.

1.3 DEFINITIONS

- A. RTU: Roof-top unit, also applies to packaged rooftop air handling unit.

1.4 SUBMITTALS

- A. Product Data: Include manufacturer’s technical data for each manufactured piece of equipment, including rated capacities, dimensions, required clearances, characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Wiring Diagrams: Power, signal, and control wiring.
- C. Manufacturer Wind Loading Qualification Certification: Submit certification that equipment will withstand wind forces identified in Division 23 “Vibration Isolation and Seismic Restraints for HVAC Systems”.
- D. Field quality-control test reports.
- E. Operation and Maintenance Data: For equipment to include in emergency, operation, and maintenance manuals.

- F. Warranty: Special warranty specified in this Section.

1.5 QUALITY ASSURANCE

A. AHRI Compliance:

1. Comply with AHRI 210/240 and AHRI 340/360 for testing and rating energy efficiencies for RTUs.
2. Comply with AHRI 270 for testing and rating sound performance for RTUs.

B. ASHRAE Compliance:

1. Comply with ASHRAE 15 for refrigeration system safety.
2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
3. Comply with ASHRAE/IESNA 90.1 for minimum efficiency of heating and cooling.

C. NFPA Compliance: Comply with NFPA 90A and NFPA 90B.

D. UL Compliance: Comply with UL 1995.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.6 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to replace components that fail in materials or workmanship within specified warranty period.

1.7 MANUFACTURER'S SUPERVISION AND INSPECTION SERVICES

- A. Refrigerant Piping System: Provide the services of the equipment manufacturer, or their authorized representative, to design and supervise the installation, cleaning and testing of the field installed refrigerant piping system. At the completion of the installation, the equipment manufacturer shall certify in writing that the installation was made in accordance with their design and recommendations and shall provide record fabrication drawing schematics showing all pipe sizes and specialties of complete refrigeration piping system.

PART 2 - PRODUCTS

2.1 PACKAGED ROOFTOP AIR HANDLING UNIT

A. Acceptable Manufacturers:

1. CaptiveAire Systems
2. AAON, Inc.
3. Carrier Corporation

4. Engineered Air
5. McQuay International
6. Trane
7. YORK International Corporation

B. General

1. Provide self-contained, packaged, factory assembled and prewired unit, consisting of cabinet and frame, and components as indicated.

C. Casing

1. Interior and exterior casing shall be constructed of minimum 24-gauge G90 galvanized steel and shall undergo salt spray corrosion test. Exterior walls shall be double-wall construction with 1-inch-thick, R4.3 fiber glass duct board insulation. Exterior casing shall include knockouts with grommet seals for electrical and piping connections and lifting lugs.
2. Base shall be constructed of minimum 18-gauge G-90 galvanized steel.
3. Roof shall be fabricated of double-standing, self-locking seam that requires no additional support. Roof shall be pitched to allow for proper drainage.

D. Condensate Drain Pans: Formed sections of stainless-steel sheet, a minimum of 2 inches deep, and complying with ASHRAE 62.

E. Fans

1. Direct-Driven Supply-Air Fans: Double width, centrifugal; with permanently lubricated, multispeed motor resiliently mounted in the fan inlet. Aluminum or painted-steel wheels, and galvanized- or painted-steel fan scrolls.
2. Condenser-Coil Fan: Propeller, mounted on shaft of permanently lubricated motor.
3. Fan Motor: Comply with requirements in Division 23 Section "Electrical Requirements for HVAC Equipment."

F. Coils:

1. Supply-Air Refrigerant Coil:
 - a. Aluminum-plate fin mechanically bonded to copper tubes.
 - b. Coil Split: Interlaced.
 - c. Baked phenolic coating.
2. Outdoor-Air Refrigerant Coil:
 - a. Aluminum-plate fin mechanically bonded to copper tubes.
 - b. Baked phenolic coating.
3. Hot Gas Reheat Refrigerant Coil:
 - a. Aluminum-plate fin mechanically bonded to copper tubes.
 - b. Baked phenolic coating.
4. Electric-Resistance Heating:

- a. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium, supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.
- b. Overtemperature Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box.
- c. Overcurrent Protection: Manual-reset thermal cutouts, factory wired in each heater stage.
- d. Control Panel: Unit mounted with disconnecting means and overcurrent protection. Include the following controls:
 - 1) Magnetic contactors
 - 2) SCR Controller: Pilot lights operate on load ratio, a minimum of five steps.
 - 3) Time-delay relay.
 - 4) Airflow proving switch.

G. Refrigerant Circuit Components:

- 1. Number of Refrigerant Circuits: One
- 2. Compressor: Hermetic, scroll, mounted on vibration isolators; with internal overcurrent and high-temperature protection, internal pressure relief and crankhouse heater.
- 3. Refrigeration Specialties:
 - a. Refrigerant Charge: R-410A
 - b. Expansion valve with replaceable thermostatic element.
 - c. Refrigerant filter/dryer.
 - d. Manual-reset high-pressure safety switch.
 - e. Automatic-reset low-pressure safety switch.
 - f. Minimum off-time relay.
 - g. Automatic-reset compressor motor thermal overload.
 - h. Brass service valves installed in compressor suction and liquid lines.

H. Air Filters

- 1. Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
- 2. Pleated: MERV 8.

I. Dampers:

- 1. Outdoor-Air Damper: Linked damper blades, for 0 to 100 percent outdoor air, with motorized damper filter.
- 2. Outdoor- and Return-Air Mixing Dampers: Parallel- or opposed-blade galvanized-steel dampers mechanically fastened to cadmium plated for galvanized-steel operating rod in reinforced cabinet. Connect operating rods with common linkage and interconnect linkages so dampers operate simultaneously.
 - a. Damper Motor: Modulating with adjustable minimum position.
 - b. Relief-Air Damper: Gravity actuated with bird screen and hood.

J. Electrical Power Connection:

1. Provide for single connection of power to unit with unit-mounted disconnect switch accessible from outside unit and control-circuit transformer with built-in overcurrent protection.

K. Controls:

1. Basic Unit Controls:

- a. Control-voltage transformer.
- b. Wall-mounted thermostat or sensor with the following features:
 - 1) Heat-cool-off switch.
 - 2) Fan on-auto switch.
 - 3) Fan-speed switch.
 - 4) Automatic changeover.
 - 5) Adjustable deadband.
 - 6) Concealed setpoint.
 - 7) Concealed indication.
 - 8) Degree F indication.
 - 9) Unoccupied-period-override push button.
 - 10) Data entry and access port to input temperature and humidity set points, occupied and unoccupied periods, and output room temperature and humidity, supply-air temperature, operating mode, and status.
- c. Wall-mounted humidistat or sensor with the following features:
 - 1) Concealed setpoint.
 - 2) Concealed indication.
- d. Remote Wall and Unit-Mounted Annunciator Panel for Each Unit:
 - 1) Lights to indicate power on, cooling, heating, fan running, filter dirty, and unit alarm or failure.
 - 2) DDC controller or programmable timer and interface with HVAC instrumentation and control system.
 - 3) Digital display of outdoor-air temperature, supply-air temperature, return-air temperature, economizer damper position, indoor-air quality, and control parameters.

2. DDC Controller

- a. Controller shall have volatile-memory backup.
- b. Safety Control Operation:
 - 1) Firestats: Stop fan and close outdoor-air damper if air greater than 130 deg F enters unit.
 - 2) Low-Discharge Temperature: Stop fan and close outdoor-air damper if supply air temperature is less than 40 deg F.
- c. Scheduled Operation: Occupied and unoccupied periods on seven 365-day clock with a minimum of two programmable periods per day.
- d. Unoccupied Period:

- 1) Heating Setback: 10 deg F.
 - 2) Cooling Setback: System off.
 - 3) Override Operation: Two hours.
- e. Supply Fan Operation:
- 1) Occupied Periods: Run fan continuously.
 - 2) Unoccupied Periods: Cycle fan to maintain setback temperature.
- f. Refrigerant Circuit Operation:
- 1) Occupied Periods: Cycle or stage compressors and operate hot-gas bypass to match compressor output to cooling load to maintain room temperature. Cycle condenser fans to maintain maximum hot-gas pressure. Operate low-ambient control kit to maintain minimum hot-gas pressure.
 - 2) Unoccupied Periods: Compressors off.
- g. Hot-Gas Reheat-Coil Operation:
- 1) Occupied Periods: Humidistat opens hot-gas valve to provide hot-gas reheat, and cycles compressor.
 - 2) Unoccupied Periods: Reheat not required.
- h. Electric-Heating-Coil Operation:
- 1) Occupied Periods: Cycle coil to maintain room temperature.
 - 2) Unoccupied Periods: Energize coil to maintain setback temperature.
- i. Fixed Minimum Outdoor-Air Damper Operation:
- 1) Kitchen Hood in Operation: Open to 100 percent.
 - 2) Kitchen Hood Not in Operation: Close the outdoor-air damper.
3. Interface Requirements for HVAC Instrumentation and Control System:
- a. Interface relay for scheduled operation.
 - b. Interface relay to provide indication of fault at the central workstation and diagnostic code storage.
 - c. Provide BACnet compatible interface for central HVAC control workstation for the following:
 - 1) Adjusting set points.
 - 2) Monitoring supply fan start, stop, and operation.
 - 3) Inquiring data to include outdoor-air damper position, supply- and room-air temperature.
 - 4) Monitoring occupied and unoccupied operations.

L. Accessories

1. Electric heater with integral thermostat maintains minimum 50 deg F temperature in gas burner compartment.

2. Duplex, 115-V, ground-fault-interrupter outlet with 15-A overcurrent protection. Include transformer if required.
3. Filter differential pressure switch with sensor tubing on either side of filter. Set for final filter pressure loss.
4. Coil guards of painted, galvanized-steel wire.
5. Hail guards of galvanized steel, painted to match casing.
6. Concentric diffuser with white louvers and polished aluminum return grilles, insulated diffuser box with mounting flanges, and interior transition.

M. Roof Curb:

1. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
 - a. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
 - 1) Materials: ASTM C1071, Type I or II.
 - 2) Thickness: 2 inches.
 - b. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
 - 1) Liner Adhesive: Comply with ASTM C916, Type I.
 - 2) Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
 - 3) Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
 - 4) Liner Adhesive: Comply with ASTM C916, Type I.
 - c. Curb Height: 14 inches.

2.2 DUCTLESS SPLIT SYSTEM AIR CONDITIONING UNIT

- A. Acceptable Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
 1. Sanyo
 2. Mitsubishi
 3. Enviromaster International
 4. Daikin
- B. Type: Provide ductless air conditioning systems complete with packaged wall mounted room unit, remote air cooled condensing unit (CU), temperature controls, filters, factory installed condensate pump, and other system components as specified or scheduled, all assembled and tested at factory prior to shipment.
- C. Wall Mounted Room Unit

1. Cabinet and Chassis: Constructed of 20-gauge galvanized steel and designed for easy installation and service access. Cabinet to have powder coat matte finish. Suitable wall mounting through setscrew mounting holes. Discharge grilles constructed of high temperature Noryl. Inlet grille to be steel.
 2. Refrigeration System: Split between indoor and outdoor sections. Both factory piped and sealed with an operating charge. Connection of the indoor and outdoor sections shall not require brazing, dehydration or charging.
 3. Evaporator Section: Copper-tube, aluminum-fin evaporator coil and thermal expansion valve. Provide condensate drain pan constructed of galvanized steel with anti-corrosion coating.
- D. Air Cooled Condensing Unit (CU): Hermetic compressor with overloads, manual reset high pressure switch, spring isolation, crankcase heater. Include filter drier, refrigerant line sight glass and moisture indicator. Condenser coil constructed of copper tubes and aluminum fins with direct drive propeller type fan. Capable of operation to -20°F. ambient air. Provide 24V control interconnection to evaporator unit.
- E. Air Distribution System: Direct drive fan assembly equipped with multiple, double-inlet blowers, self-aligning sleeve bearings and lifetime lubrication. Fan motor permanent-split, high efficiency type, equipped with two speeds for airflow modulation. Dehumidification shall utilize the lower fan speed.
- F. Air Filters: Permanent washable electrostatic type. Easily removable from front of unit and not require system shutdown for service.
- G. Controls: Factory assembled, wired into unit and tested prior to shipment. Consisting of an On/Off switch, adjustable temperature thermostat, high/low fan speed selector switch and indicator lights for fan speed and operational mode. Easily accessible from front of unit and protected by an impact resistant cover. Provide 24V remote thermostat with controls and relays.

PART 3 - EXECUTION

3.1 ALL EQUIPMENT WITH FILTERS

- A. Provide temporary filters for use during construction. Do not operate unit until filters (temporary or permanent) are in place. Replace all temporary filters used during construction with specified filters before turning equipment over to Owner. For air handling units, provide new clean filters as specified just prior to balancing work.

3.2 PACKAGED ROOFTOP AIR HANDLING UNIT INSTALLATION

- A. Examine roughing-in for rooftop units to verify actual locations of piping and duct connections before equipment installation. Examine roofs for suitable conditions where units will be installed.
- B. Prior to setting unit on roof curb, verify that area within curb is clean and dry. Ensure that all roofing work, insulation, acoustical treatment of roof deck, curb, etc has been completed as applicable. Provide full perimeter gasket around top of curb.

- C. Install RTUs on curbs and coordinate roof penetrations and flashing with roof construction specified in Division 07 Section "Roof Accessories." Secure RTUs to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.
- D. Install condensate drain, minimum connection size, with trap and indirect connection to nearest roof drain or area drain.
- E. Duct installation requirements are specified in other Division 23 Sections. Drawings indicate the general arrangement of ducts. The following are specific connection requirements:
 - 1. Install ducts to termination at top of roof curb.
 - 2. Remove roof decking only as required for passage of ducts. Do not cut out decking under entire roof curb.
 - 3. Connect supply ducts to RTUs with flexible duct connectors specified in Division 23 Section "Ductwork and Ductwork Accessories."
 - 4. Install return-air duct continuously through roof structure.

3.3 SPLIT SYSTEM AIR CONDITIONING UNIT INSTALLATION

- A. Install units level and plumb. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.
- B. Install roof-mounting compressor-condenser components on equipment support rails or curbs specified elsewhere in Division 23. Anchor units to supports with removable, cadmium-plated fasteners.
- C. Install compressor-condenser components on restrained, spring isolators with a minimum static deflection of 1 inch. Refer to Division 23 Section "Vibration Isolation and Seismic Restraints for HVAC Systems."
- D. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.
- E. Use qualified mechanics and thoroughly check equipment at site for leaks and loose connections in accordance with manufacturer's instructions.
- F. Install piping adjacent to unit to allow service and maintenance.
- G. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- H. Electrical Connections: Comply with requirements in Division 26 Sections for power wiring, switches, and motor controls.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Provide manufacturer's certification of installation in accordance with requirements of Part 1 of this Section.

- B. Contractor shall be fully responsible for properly making arrangement for and coordinating with manufacturer to provide specified manufacturer's supervision and inspection services, and shall make any corrections or modifications to installation as required by the manufacturer.
- C. Tests and Inspections:
 - 1. After installing equipment and after electrical circuitry has been energized, test units for compliance with requirements.
 - 2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Remove and replace malfunctioning units and retest as specified above.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain equipment. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 23 81 00

SECTION 26 05 00 - COMMON MATERIALS AND METHODS FOR ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section is intended to describe the basic materials and installation methods for electrical work; it applies in general to all Sections under DIVISION 26. All materials and equipment specified and/or shown on Drawings are new unless noted otherwise.
- B. All new materials, equipment and systems shall be listed and labeled by a licensed nationally recognized testing laboratory as defined by OSHA and used for the specific purpose, environment or application for which it was tested and approved. No field modifications and/or noncompliant installation whatsoever shall be made to any materials, equipment and systems that would violate the listing and labeling.
- C. This section includes the following:
 - 1. Electrical equipment coordination and installation
 - 2. Sleeves for raceways and cables
 - 3. Sleeve seals
 - 4. Grout
 - 5. Common electrical installation requirements

1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspace, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.

- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
- F. EPDM: Ethylene-propylene-diene terpolymer rubber.
- G. NBR: Acrylonitrile-butadiene rubber.

1.4 REFERENCES

- A. Provide work in accordance with all applicable international, state and local, codes, rules, regulations, and standards, including but not limited to, requirements of the following:
 - 1. National Electrical Code, NFPA 70 (NEC)
 - 2. Underwriters' Laboratories, Inc. (UL)
 - 3. National Electrical Manufacturer's Association (NEMA)
 - 4. National Electrical Contractors Association (NECA)
 - 5. The Institute of Electrical and Electronics Engineers, Inc. (IEEE)
 - 6. Applicable NFPA Codes and Standards
 - 7. See Drawing LS001 for a complete list of applicable codes
- B. Conflicts
 - 1. Nothing stated or shown in Specifications or on Drawings is intended to conflict with the above standards and regulations. Should Contractor find any apparent conflict, it shall be his responsibility to notify Architect before any of the work in question is performed or material purchased.

1.5 SUBMITTALS

- A. Provide Product List of factory fabricated items, in accordance with Section 016000 "Product Requirements", including name of proposed manufacturer, for all products specified in various sections of Division 26.
- B. Provide submittals in accordance with Section 013300 "Submittal Procedures" in sufficient detail to verify full compliance with the requirements of the Contract Documents.
- C. Product Data: Provide for each type of factory-fabricated product indicated.
- D. Submit testing reports.

1.6 WARRANTY AND CONTRACT CLOSEOUT

- A. Comply with warranty and contract closeout requirements specified in Division 01, GENERAL REQUIREMENTS.
- B. Provide Special Warranties and/or warranty service in accordance with Section 016000 "Product Requirements" where specified in the various sections of Division 26.

- C. Provide manufacturer's certificates of supervision and startup service as specified in the various sections of Division 26.
- D. Upon completion of work and tests, and at a time mutually agreed to by Contractor, Architect and Owner, operate all systems installed, in all parts, at Contractor's expense for sufficient length of time to demonstrate the mode of operation and definitely determine whether systems as a whole are in first class working condition. Defects and malfunctions that may develop during this period of operation shall be immediately corrected by Contractor at his own expense, and systems placed in first class working condition before being finally turned over to Owner.
- E. Include information for all products specified in the operation and maintenance manual.
- F. Provide electrical certificate(s) from electrical inspection agency - see Article titled "Inspections".
- G. Provide manufacturer's certification and warranty of system operation - see Article titled "Tests".

1.7 QUALITY ASSURANCE

- A. The specifications for certain products and alternative materials may appear in more than one section of Division 26. Work of Division 26 shall be coordinated for all sections of Division 26 to assure that where two or more items of any given product are furnished under Division 26 that they are of the same manufacturer and type and that alternative materials is consistent throughout the work of Division 26.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle all material and equipment in accordance with manufacturer's instructions and recommendations. Such instructions and recommendations are hereby made part of these specifications.
- B. Deliver products and equipment properly labeled and tagged. Maintain products in original shipping containers and store in a dry area until ready for installation.
- C. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.9 PHASE ARRANGEMENT

- A. Exercise great care in maintaining a uniform and consistent arrangement of phase conductors on all systems. Throughout the entire wiring systems, each phase conductor must always be in the same physical position with respect to the other phase wires at equipment terminals.
- B. Identify phase wires by color coded conductors. Refer to Section 26 05 53.
- C. Determine the existing established phase arrangement and use it throughout the new addition and renovation. Use special care in determination and execution.

1.10 INSPECTIONS

- A. Before starting any Work under this Contract, file for inspection with the agency approved by the AHJ. Upon completion of the work, furnish electrical certificates from said agency for all electrical equipment and systems installed or furnished and installed as part of the work.
- B. Electrical equipment or systems that are modified in the field shall be reinspected. Furnish a new electrical certificate covering such modifications.

1.11 GENERAL COORDINATION.

- A. The electrical systems are indicated on the Electrical Drawings. Certain pertinent information and details required by the electrical work appear on the Architectural, Structural, Mechanical Civil, Fire Protection, and Low Voltage Drawings. Become familiar with all drawings and incorporate all pertinent requirements
- B. Drawings are diagrammatic and indicate general arrangement of systems and requirements of the Electrical work. Do not scale the drawings to obtain dimensional requirements. Exact locations of equipment must be coordinated and obtained prior to starting the work.
- C. Coordinate scheduling, sequencing, movement and positioning of large equipment into the building during construction.
- D. Coordinate installation of identification devices with completion of covering and painting of surfaces where identification devices are to be applied.
- E. Coordinate arrangement, mounting, and support of electrical equipment:
 - 1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
 - 2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
 - 3. To allow right of way for piping and conduit installed at required slope.
 - 4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- F. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- G. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."
- H. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."

1.12 ELECTRICAL WORK ASSOCIATED WITH OTHER DIVISIONS

- A. WORK NOT REQUIRED BY DIVISION 26

1. Unless otherwise noted or specified, setting of mechanical equipment and associated safety and control devices will be done by Division 22 and 23 Contractors.
2. Control devices provided under Division 22 or 23 will include, but are not necessarily limited to the following:
 - a. Limit Switches: Aquastats, thermostats, air, gas and water pressure
 - b. Sensing Devices: Air, gas and water flow and their presence in atmosphere
 - c. Level Switches: Liquidometer, float switches or valves
 - d. Flow Switches: Air, medical gas, water
 - e. Proximity Switches: O.S.&Y. valve tamper
 - f. Valve Operators: Electric or air motors or pistons
3. Magnetic motor starters and their associated auxiliary contacts (other than Motor Control Center), pushbutton stations, selector switches, pilot lights and control switches that are integral with factory prewired packaged equipment.
4. Unless otherwise noted or specified, setting of mechanical equipment and associated safety and control devices will be done by Division 22 and 23 Contractors.
5. Reduced voltage and high voltage starters for chillers and other large motors indicated.
6. Automatic Temperature Control System including all necessary power wiring.
7. Integral disconnect switches for power roof ventilators.
8. Motors for mechanical equipment.
9. Vaporproof luminaires, including switches with pilot lights, conduit and wiring to a local junction box, for plenums of air handling units.
10. Variable frequency drives (VFD) and harmonic filters (optional) for chillers and other large mechanical equipment motors indicated.
11. Furnishing only of electric heaters as follows: unit heaters, cabinet unit heaters, baseboard heaters, duct heaters, radiant heaters and other heaters. Installation and wiring by electrical contractor.
12. Field wiring, other than power wiring, for electrical accessories furnished as an integral part of equipment furnished under Division 22 and 23.
13. Integral fused disconnect switch, circuit breaker or motor circuit breaker in control panels for Division 22 equipment, unless otherwise indicated.
14. Furnishing, installing and wiring of pilot switches, relays and other control devices required for the proper sequence, electrical or pneumatic control of the apparatus furnished under Division 22 and 23, and not specified or shown on Drawings as being furnished under Automatic Temperature Control System or under Division 26 of the Specifications.
15. Packaged room air conditioning units.
16. Variable frequency drives (VFD) furnished by Division 23 that are either integral with factory prewired packaged equipment or installed separately.
17. Passive communication cabling, terminations and devices are provided by Division 27.
18. Furnishing and installing heat trace cable and electric heaters in mechanical equipment, including control wiring.
19. Furnishing and installing humidifiers including control wiring.

B. WORK REQUIRED BY DIVISION 26

1. Provide all labor, materials, equipment, components and tools for required wiring and connections to control devices and instruments, as specified herein.
2. Provide all recording, indicating devices, contactors, time switches, photoelectric devices and lighting dimming equipment, as specified.

3. Install, completely wire and connect all systems specified herein in accordance with details on drawings and manufacturer's instructions.
4. Install and adjust all mechanical and electrical interlocks. Repair or replace faulty equipment.
5. Install, wire and connect electric heater non-integral thermostats.
6. Provide magnetic and manual motor starters for equipment furnished by others except where starters and controllers are furnished as an integral part of prewired packaged equipment.
7. Provide power wiring to starters and from starters to motor including all connections. Wire capacitors, VFD and associated filter when they are provided by Division 23. Exception: When motors, starters, controllers, etc., are furnished as an integral part of any equipment furnished under Division 23, only power wiring to power terminals on said equipment shall be included herein.
8. Provide Motor Starters including integral pushbuttons, pilot light, control switches, auxiliary contacts and the like, required for proper sequence and control function specified under Division 23.
9. Provide and wire all manual motor switches as required and specified.
10. Provide motor and circuit disconnect safety switches, both fusible and nonfusible types, as shown or as required by the NEC. Integral disconnect switches for power roof ventilators will be included under Division 23 and in equipment control panels under Division 22.
11. Provide branch circuits to ATC air compressor motor starters and associated air dryer. Branch circuits to ATC panels and other associated ATC equipment will be included under Division 25.
12. Provide branch circuits for pipe tracing electric heating cable, strip type space heaters, humidifiers and snow melting systems furnished and installed by Divisions 22 and 23.
13. Provide 120V circuits including conduit and wiring, to a junction box at air handling units. Make necessary connections to plenum luminaires, switches with pilot lights, receptacles and other 120V equipment.
14. Installation of electric unit heaters, cabinet unit heaters, baseboard heaters, and duct heaters including their power and control wiring.
15. Provide all interlock and control wiring shown or referred to on the Electrical and Mechanical Drawings.
16. Provide grounded convenience outlet, or grounded junction box for solid connection when required, for each electric water cooler. Locate properly so connection is not visible.
17. Installation of variable frequency drives (VFD). Exception: When furnished as an integral part of prewired packaged equipment. Provide power wiring to VFD and from VFD to motor including all connections. Obtain manufacturer's installation instructions and wiring diagrams from Division 22 and 23.

C. Plumbing, Gas and Fire Protection System Controls

1. All plumbing system control equipment and devices will be provided under Division 22, with the exception of Motor Control Centers and any devices so indicated or specified otherwise under Division 26.
2. The following controls will be furnished and installed by Division 22 Contractor and wired and connected by Division Contractor indicated:
 - a. Aquastats, float and pressure switches integral with a given system equipment piping
- Division 22 or Equipment Supplier; individual devices installed at construction site
-Division 26.

- b. Pressure switches, flow and OS&Y indicating valve switches for fire protection – Division 26. When these devices are installed concealed above ceiling construction, provide local space mounted condition pilot lights as indicated.
 - c. Control transformers for Plumbing and Fire Protection System if integral with equipment Division 21 or 22, respectively; otherwise - Division 26.
3. Coordinate all plumbing, gas and fire protection control equipment, devices, location of and test with the respective sections of Division 23.

D. Automatic Temperature Controls (ATC)

1. All temperature control equipment and devices will be provided under Division 25, with the exception of any devices indicated or specified otherwise under Division 26.
2. The following controls will be furnished and installed by Division 23, and as noted herein, wired and connected by Division Contractor indicated.
 - a. Line Voltage Thermostats – Division 25
 - b. Aquastats, Freezestats, Firestats – Division 25
 - c. Air Flow Switches, Float and Pressure Switches – Division 25
 - d. Pneumatic Electric (P.E.) and Electric Pneumatic (E.P.) Switches – Division 25
 - e. Duct Mounted Smoke Detectors - Furnished and wired to Fire Alarm System - Division 28. Installed and wired to dampers, fan controls and other mechanical devices – Division 25
 - f. Initiating Alarm Contacts for Supervisory (Surveillance) Alarm Wiring - Division 28.
 - g. Control Transformers for HVAC Control Equipment - Division 25; exception control transformers in Motor Control Centers provided under Division 26.
 - h. Selector Switches for indexing spare chilled and condenser water pumps to primary pump service - provided by Division 25, wired by Division 26
3. Coordinate all temperature control equipment device locations and test with the respective Division 23 Contractor.

E. Air Volume Control Box Wiring

1. Unless otherwise noted in the Panelboard Schedule, connect no more than ten (10) air volume control boxes on a 20A, 120V branch circuit.
2. Connect all air volume control boxes to the nearest normal 208/120V power panelboard within the respective electrical circuit zone, unless the air handler that serves the air volume control box is on emergency power and/or indicated in the air volume control box schedule shown on the mechanical drawings. Air volume control boxes requiring emergency power shall be connected to the nearest 208/120V emergency panel that is fed by the same automatic transfer switch (emergency branch) that supplies power to the respective air handler.
3. Refer to Mechanical Drawings for quantity and locations of air volume control boxes.

F. Smoke and Combination Fire/Smoke Damper Wiring

1. Unless otherwise noted in the Panelboard Schedule, connect no more than ten (10) smoke and/or combination fire/smoke dampers on a 20A, 120V dedicated branch circuit.

2. Connect all smoke and/or combination fire/smoke dampers to the nearest normal 208/120V power panelboard within the respective electrical circuit zone, unless the air handler that serves the smoke and/or combination fire/smoke damper is on emergency power. Smoke and/or combination fire/smoke dampers requiring emergency power shall be connected to the nearest 208/120V emergency panelboard that is fed by the same automatic transfer switch (emergency branch) that supplies power to the respective air handler. Circuits shall be arranged as follows:
 - a. Dampers located in riser shafts shall be circuited vertically to other dampers served by the same air handler.
 - b. Dampers located in areas, other than riser shafts shall be circuited horizontally to the nearest panel board (as described above) within the respective electrical circuit zone. Coordinate circuited arrangement with Division 23 contractor, prior to commencement of work, to limit the quantity of control relays associated with each fan.
3. Refer to mechanical drawings for quantity and locations of smoke and/or combination fire/smoke dampers.
4. Refer to detail titled "Shaft and Smoke Barrier Duct Smoke Damper Wiring Diagram" shown on the drawings for specific wiring requirements.

G. Kitchen Equipment Wiring

1. Provide all required branch circuits from panel to equipment rough-in location, and from rough-in location to attachment point on the equipment. Make all connections. Where branch circuits are shown turning up out of the floor, stub up 4 inches above finished floor and extend and make connections after equipment has been set in place and leveled by Kitchen Equipment Contractor. At wall or column locations, provide outlets and conduits in the wall whenever possible.
2. Kitchen Equipment Contractor will furnish all food service equipment completely wired internally. All electrical outlets and devices mounted on or in fabricated equipment will be provided by Kitchen Equipment Contractor, including internal wiring for same to a suitable terminal box, subpanel, starter or disconnect switch on equipment, except where receptacle symbols are shown, in which case install wiring and conduit to receptacle and make final connections.
3. Kitchen Equipment Contractor will provide Shop Drawings, including wiring and connection diagrams of all equipment to be used, and Roughing-in Drawings to locate all electrical work. Any deviation between these Shop Drawings and equipment provided shall be responsibility of Kitchen Equipment Contractor. Confirm all characteristics of each item of electrically operated equipment before installing wiring and circuit protective devices.
4. Electrically heated equipment will be provided by Kitchen Equipment Contractor with an "ON-OFF" light indicator, control, contactors, approved wiring, grounding, enclosure and equipment all connected to factory installed terminal boxes. For each voltage and phase requirement for a piece of equipment, there will be a one-point terminal box ready to receive final connection by Electrical Contractor.
5. All wiring shall be run concealed wherever possible. Provide all exposed conduit of EMT or rigid steel as required. Flexible conduit shall be liquidtight with appropriate fittings.
6. Lamp receptacles, raceways and lamps for equipment other than exhaust hoods will be provided by Kitchen Equipment Contractor when these items are an integral part of the

- equipment; provide connections to terminal box. Hood luminaires will be furnished by Kitchen Equipment Contractor; install and connect.
7. Exhaust hoods will be supplied and set in place by other trades, complete with luminaires, automatic washdown and dry chemical fire prevention system. For wiring of the washdown system, refer to schematic wiring diagrams supplied with the hoods.
 8. Provide wiring for automatic heat detectors so that upon activation of a detector the valve of the dry chemical bottle opens; the release microswitch on the gas supply solenoid valve shuts down the gas supply valve; closes all dampers; shuts down the exhaust fan; opens electrical power contactor or opens shunt trip circuit breaker and activates the building fire alarm system.
 9. Kitchen panelboard supplying cooking/frying appliances shall be provided with contactor(s) or shunt trip circuit breaker(s) which shall be interlocked to open required circuits when fire suppression system operates.
 10. Interconnect fire suppression system with the washdown system; main fire alarm system; hood exhaust system; electrical contractor/shunt trip circuit breaker devices and all items listed under paragraph 7.

H. Cooler and Freezer Wiring

1. Coolers and freezers will be supplied and installed by others, prewired complete with luminaires, light switch, door heater tape, all connected to a central terminal box. Provide required branch circuit wiring. Provide all conduit, wire and circuits required to operate refrigeration equipment, defrost heater, blower coil, alarm.
2. Arrange to have equipment supplier cut and seal all openings in coolers and freezers required to accommodate electrical system installation. Verify all locations with supplier.
3. Exposed conduit installed on surface inside coolers and freezers shall be installed parallel to room lines. Do not install exposed conduit if it can be avoided.
4. Where conduit enters refrigerated areas, install fiber nipple from box outside refrigerated area to surface mounted box inside area. Provide ground conductor through nipple. After conductors are installed, plug both ends of fiber nipple with oakum to prevent leakage and condensation.
5. Install required wiring and branch circuits when possible for blower fans, defrost heaters, lighting through top of cooler/freezer from surface mounted box in space above. Confirm characteristics of each electrical component before installing wiring and circuit protective devices, and provide as required.

I. Overhead Door Wiring

1. Install controller, push-buttons, limit switches, safety bars and key-operated stations for each overhead door. Provide branch circuit and control wiring, and circuit disconnect as required for each door.
2. Locate key-operated control station on the exterior of the building or where directed. Seal conduit after conductor installation.
3. Confirm all locations and electrical characteristics with supplier prior to installing electrical work.

J. Power Door Wiring

1. Perform the following work for power operated and power held doors furnished under other divisions of this specification.

2. Provide branch circuit/feeder and disconnect switches or devices at each location as shown or as required. Key switches if required will be furnished by others; install and connect.
3. Investigate and determine exact requirements for each power operated and held door specified or shown, for location of conduits, switches, controllers, etc., and type of connections. Coordinate all this data before making installation and provide as required to comply with manufacturer's requirements, details of installation and materials supplied. Wire and coordinate electric lock circuits for doors where required and/or indicated.
4. Certain doors to room(s) containing emergency engine generator(s) shall open automatically during operation of emergency engine generator and also open by operation of a local manual switch. Provide coordination and interwiring between the power door controller and engine generator control circuit relay contacts, for "open" and "close" response.

K. Electric Door Lock and Monitor Wiring

1. Perform the following work for the electric door lock and monitor systems specified and furnished under another section of this specification and as indicated.
2. Provide 120 Volt branch circuits required for each system specified, to a low voltage transformer and controller by others, as shown or required. Install and wire all electric door locks, contact devices, control switches and control devices for a complete operable system.
3. In addition to the local interior door systems, the following exterior doors with lock release system shall be equipped with a relay interwired with door security system circuit (specified by Division 28). When these doors are operated remotely, security status alarm will be bypassed (with time delay) during authorized door opening:
4. Investigate and determine exact requirements for each door lock system specified, for location of conduit, switches, wiring, etc., and type of connection, before installing any work and comply with manufacturer's requirements for details of installation and materials used.

L. Dock Leveler Wiring

1. Perform the following work for power operated dock leveler(s) provided under another division of this specification and as shown.
2. Provide branch circuit/feeder and disconnect switches or devices at each location as shown or as required, one at leveler control unit and one at the hydraulic pump unit.
3. Provide required control wiring, conduit and connections between control unit enclosure, manual and/or automatic operating switches, limit switches and power operators.
4. Investigate and determine exact characteristics for these units, for location of conduits, switches, controllers, etc., and type of connections. Coordinate all this work before installing same and comply with manufacturer's requirements, details of installation and materials used.

1.13 EQUIPMENT LOCATIONS

- A. Locations are subject to changes in order to avoid obstacles in building construction. Verify all dimensions and conditions at site. Check layout for sizes and clearances, so that the apparatus and material may be installed and operated satisfactorily in space provided. Install equipment and raceways to preserve headroom and to keep openings and passageways clear.

- B. Install equipment, boxes and outlets in accessible locations. Obtain final locations of all outlets and equipment from details on drawings and from Architect. Examine drawings of other trades and avoid interferences with their work.
- C. In case of conflict in location of flush outlets, architectural details shall take precedence.
- D. Install conduit to avoid mechanical and/or structural obstructions, minimizing crossovers.
- E. Install all exposed conduits parallel or perpendicular to building lines.
- F. Provide minimum of 6 inches clearance between electrical work and flues, steam pipes and other heat sources.
- G. Mounting heights of outlets and equipment shall be as indicated on "Mounting Height" Schedule, or as specified herein.
- H. Verify all door swings before installing switch boxes. In case of conflict between drawings, Architectural details shall take precedence.
- I. Architect reserves the right to change, without additional cost, location of any luminaire, wall switch, receptacle or power outlet, provided such changed location is not more than 10 feet, and is ordered changed before said work is completely "roughed in".
- J. Locations of electrical equipment and connections to all other equipment are approximately correct, and are subject to such modifications as are required at time of installation, in order to meet field conditions or the dimensions of equipment actually being supplied.
- K. No changes are to be made in the original design without written approval by Architect.

1.14 SEISMIC REQUIREMENTS

A. Seismic Design

1. All new electrical systems (equipment, tray and raceways) shall be provided with seismic restraints in accordance with the requirements of the applicable building code and site specific seismic design parameters considering exemptions where applicable.
2. Refer to Structural Drawings and Division 01 for seismic criteria to be used for this project.

PART 2 - PRODUCTS

2.1 SLEEVES FOR RACEWAYS AND CABLES

- A. Steel Pipe Sleeves: ASTM A53/A53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

- C. Sleeves for Rectangular Openings: Galvanized sheet steel.
 - 1. Minimum Metal Thickness:
 - a. For sleeve cross-section rectangle perimeter less than 50 inches and no side more than 16 inches, thickness shall be 0.052 inch.
 - b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches and 1 or more sides equal to, or more than, 16 inches, thickness shall be 0.138 inch.
- D. Coordinate sleeve selection and application with selection and application of fire stopping specified in Division 07 Section "Penetration Firestopping"

2.2 SLEEVE SEALS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc. (Inner Lynx)
 - b. Calpico, Inc. (Pipe Linx)
 - c. Metraflex Co.
 - d. Pipeline Seal and Insulator, Inc. (Link Seal)
 - e. O-Z/Gedney
- B. Description: Modular Sealing device, designed for field assembly, to fill annular space between sleeve and cable.
 - 1. Sealing Elements: EPDM or NBR interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
 - 2. Pressure Plates: Carbon steel or stainless steel. Include two for each sealing element.
 - 3. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating or stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.3 GROUT

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.4 CONDUIT SEALS

- A. All active and spare underground power and communication conduits greater than 1-1/4 inches, leaving manholes and entering building foundation walls and floor slabs shall be provided with an inflatable bladder as manufactured by Tyco-Raychem, Product No. RDSS. Refer to manufacturer's recommendations for bladder size and installation methods.

- B. All active and spare underground power and communication conduits 1 1/4 inch or less, leaving below grade enclosures and entering building foundation walls and floor slabs shall be sealed with an approved waterproof sealant.

2.5 FIRE-RATED CABLE PATHWAYS

- A. All telecommunications cable bundles shall utilize an enclosed fire-rated pathway device wherever said cables penetrate rated walls. The fire-rated pathway shall contain a built-in fire sealing system sufficient to maintain the hourly fire rating of the barrier being penetrated. The self-contained sealing system shall automatically adjust to the installed cable loading and shall permit cables to be installed, removed, or retrofitted without the need to remove or reinstall firestop materials. The pathway shall be UL Classified and/or FM Systems Approved and tested to the requirements of ASTM E814 (UL1479).
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
 - a. STI, Inc., EZ-Path (Basis of Design)
 - b. Hilti-Speed Sleeve
 - c. 3M
- B. Cable pathways shall have an orange finish color and dimensions per drawings.
- C. Provide three (3) cable pathways into each IDF, MDF and server room at the location of the cable tray penetration into each room. Provide "radius control module" on each end of cable pathway to provide a 1 inch minimum bend radius suitable for category as specified and fiber optic cables.
- D. Multiple cable pathways shall be installed in rated partitions utilizing manufacturer's recommended wall plate.
- E. Cable pathways shall meet or exceed rating of partition where pathway is installed. Refer to architectural drawings for rating of partitions.

2.6 INNERDUCT

- A. Description: Exterior and interior rated non-metallic and textile pathway used for the installation of outside plant (OSP) and inside plant (ISP) telecommunications cabling.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Non-metallic Flexible Innerduct
 - 1) Carlon (Basis of Design)
 - 2) Endot
 - 3) AT&T
 - b. Flexible Textile Fabric Innerduct

1) Maxcell (Basis of Design)

B. Non-metallic Flexible Innerduct

1. Innerduct shall be rated for use and spaced in accordance with NFPA 90A and NFPA 262 by UL Tested Method 910. Innerduct in return air ceiling shall be plenum rated.
2. Innerduct shall be constructed of corrugated high-density polyethylene and shall have a minimum inside diameter of one inch. Color shall be orange.
3. Innerduct shall be UL listed to UL2024 in accordance with NEC for plenum, riser, general purpose and other optical fiber cabling applications.
4. Innerduct and couplers shall be manufactured by the same company.
5. Innerduct shall be provided for each fiber riser and service cable from the point of origin to the termination location.
6. Spare Innerduct with nylon pull cord shall be provided in conduits and duct banks as indicated on the drawings and specified herein.
7. All Innerduct to have warning label at 4 feet on center. All terminations of Innerduct shall be mechanically connected to end component (cabinet, patch panel, enclosure, etc.) by appropriate mechanical fitting.
8. Refer to drawings for quantity and location of raceways requiring non-metallic flexible innerduct.

C. Flexible Textile Fabric Innerduct

1. General

- a. Material: White polyester and nylon resin polymer.
- b. Labeled and/or listed as acceptable to the authority having jurisdiction as suitable for the intended use.
- c. Flexible optical fiber/communication raceway.
- d. A non-metallic pathway, usually circular, placed within a larger non flexible raceway.

2. Description and Application

a. Outdoor Locations:

- 1) Detectable Outdoor Textile Innerduct Micro 2 inch, 3 inch and 4 inch single or multi-cell polyester/nylon textile innerduct containing 1,250 lb. polyester flat woven pull tape, and a solid copper, polyvinyl color coated conductor (19 AWG minimum) for tracing and rated for a minimum of 6 amps and 600 volts. Conductor shall be placed in the sidewall edge fold of the textile sleeve.

b. Indoor - Non Plenum Areas

- 1) Indoor Textile Innerduct (Riser-listed): Micro 2 inch, 3 inch and 4 inch single or multi-cell nylon textile innerduct containing 1,250 lb. polyester flat woven pull tape which meets UL 2024A for flame propagation and smoke density values for general applications.

c. Indoor - Plenum Areas

- 1) Plenum-Listed Textile Innerduct: Micro 2 inch and 3 inch single or multi-cell nylon textile innerduct containing 200 lb. nylon-resin flat woven pull tape which meets UL 2024A for flame propagation and smoke density values for use in air handling spaces.
- d. Refer to drawings for quantity and location of raceways requiring textile innerduct and diameter/number of cells per raceway.
3. Textile Innerduct Fittings
 - a. Conduit Plugs: compression-type conduit plugs with locking nuts for sealing and securing one or more textile innerducts within a 4-inch inside diameter conduit, e.g.:
 - 1) 4-inch plug with nine holes for cables in a 3 pack (9-cell) configuration
 - b. Termination Bags: Inflation-type bags for sealing and securing around one or more textile innerducts and cables within 2-inch outside diameter or larger conduit.
4. Pull Tape
 - a. Measuring and pulling tape constructed of synthetic fiber, printed with accurate sequential footage marks. Color-coded.
5. Penetration Sealing Materials
 - a. Duct Water Seal: Products suitable for closing underground and entrance conduit openings where innerduct or cable is installed to prevent entry of gases, liquids, or rodents into the structure.

PART 3 - EXECUTION

3.1 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION

A. General

1. Comply with NECA 1.
2. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
3. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
4. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
5. Right of Way: Give to piping systems installed at a required slope.
6. Furnish, deliver, erect, connect and finish in every detail, all materials, equipment and accessories required for the Work. Select and arrange to fit properly into the building spaces.

7. Perform all work in accordance with the drawings, specifications, including manufacturer's installation instructions, all applicable codes and NECA's Standard of Installation guidelines.
8. Include in the Work and in the bid proposal minor details not shown or specified, but manifestly necessary for the proper installation and operation of the various systems, as if specified or shown.
9. Position and install all material and equipment to permit proper access and in such a manner that maintenance, adjustment, calibration, inspection, repair and replacement of the material and equipment can be accomplished with minimum effort and cost.
10. Perform the installation, wiring, cleaning, testing, calibration and startup of all material and equipment in accordance with the manufacturers' instructions and recommendations. Such instructions and recommendations are hereby made a part of these Specifications.
11. If any departures from Contract Documents are deemed necessary, submit details of such departures and the reasons there for to Architect for approval.
12. Pull and junction boxes shall be located and sized by the electrical contractor in accordance with NEC, EIA/TIA, utility company requirements and/or owner standards, unless otherwise noted on the drawings.

B. Layout and Coordination

1. Lay out all work from approved building and property lines and benchmarks. Verify and be responsible for the correctness of all measurements in connection with work. Any change made in major overall dimensions as shown which affect the physical size, shape, or location of any part of the Work, whether due to field check or changes due to the use of equipment of a manufacturer other than that used as the basis of design shall not cause any interference with other work.
2. Examine the drawings of other trades and initiate cooperation and coordination of the Work with the work of other trades to ensure that the Work can be installed properly as designed and planned without interference with other work or delay. Furnish all necessary templates, patterns, measurements, etc., for installing work and for the purpose of making adjoining work conform; furnish setting plans and shop details to other trades as required.
3. Investigate the structural and finish conditions affecting the Work. Offsets, bends or other items required by the Work may not be shown due to the small scale of the drawings; provide such offsets, bends or other items as required to meet structural or finish conditions.
4. Coordinate and be responsible for the required clearances of the Work in shafts, chases, double partitions and suspended ceilings. Coordinate and cooperate with the trades responsible for constructing such spaces, together with other trades sharing such spaces, and advise other trades of the requirements of the Work. Immediately submit for review space requirements that exceed those shown.
5. Install material and equipment as high as possible; at minimum, to clear the top of all doors, windows and other structural openings. Maintain maximum headroom and space conditions in every case. Where headroom or space conditions appear inadequate, notify the Architect before proceeding with the installation.
6. Install conduit, fittings, etc., to provide not less than 1/2 inch between their finished covering and the structure or adjacent work of any kind.
7. Electrical equipment shall not interfere in any way with other material or equipment and shall be provided with adequate working space; see the National Electrical Code working space requirements.

8. Make reasonable modifications in the layout of the Work, as directed, to provide proper clearances or accessibility, or to prevent conflict with the work of other trades, at no increase in the Contract sum.
9. Cooperate fully with the Contractor for General Construction in regards to location of electrical equipment and work progress schedules. Notify him of all flush panelboard locations so that wall of proper thickness is provided.
10. Prepare large scale composite working drawings, including such section views and details as are necessary to clearly show how the Work is to be installed in relation to the work of other trades. Issue such drawings to the other trades for coordination of their work. Where such drawings show deviations from the Contract Drawings or conflict with other trades, detail and submit such deviation or conflicts to the Architect for review.
11. Locate wall switches at strike side of doors and at height indicated on "Mounting Height" schedule. Review all door swings with Contractor for General Construction prior to rough-in.
12. Locate receptacles at heights indicated in "Mounting Height" schedule. Mount receptacles vertically, ground pole at top. In special areas such as kitchens, laboratories, utility areas, coordinate locations with counters, benches and casework.
13. All devices and wiring are to be concealed where possible. Where specifically shown or where approved by the Architect, install exposed outlet boxes and branch circuit wiring in finished areas in formed metallic surface raceway systems using suitable factory fabricated fittings and devices as specified herein.
14. If work is installed before coordinating with all other trades and Owner's work, or so as to cause interference with the work of other trades, or so as not to provide proper access for maintenance or repair, make necessary changes in work to correct the condition at no cost to the Owner.

C. Excavation, Trenching, Backfilling

1. Mass excavation to required basic construction elevations will be performed under Division 31, EARTHWORK.
2. Provide all other excavation, trenching and backfilling including shoring, sheeting, pumping, grading, barricading and other related work necessary for installation of electrical work.
3. Perform work in accordance with the requirements of Division 31, EARTHWORK.

D. Cutting and Patching

1. Except where specified otherwise in Division 26, provide cutting, patching and refinishing work in accord with the requirements of Division 01, GENERAL REQUIREMENTS.
2. Horizontal chases shall not be cut into existing walls or partitions without approval of Architect.

E. Painting

1. Except where specified otherwise in Division 26, general painting will be provided under Division 09, FINISHES.
2. Touch up or paint out damage done to items having a factory applied finish, and which are installed under Division 26, utilizing materials and methods specified in Division 09. FINISHES.

F. Foundations

1. Provide concrete foundations required for the work specified under Division 26, unless specifically noted otherwise. Be responsible for preparing foundation drawings and setting foundation anchor bolts in time so as not to delay the work. Concrete foundations shall be of the types detailed or as specified.
2. Reinforce concrete foundations to suit the loads placed on them; foundations shall be in strict accordance with the equipment manufacturers' recommendations. Concrete materials and methods shall be as specified in Division 03, CONCRETE.
3. Unless otherwise indicated, concrete equipment pads shall be provided under all transformers and shall extend a minimum 4 inches above the finished floor, at least 4 inches beyond the equipment base in all directions, shall have the top edges and vertical corners chamfered and shall have the same surface finish as the adjacent and surrounding floor.
4. Securely anchor concrete foundations to the floor slab with steel dowels. When so indicated or where required, concrete foundations or concrete footings for structural steel supports for equipment too heavy to be placed in the floor slab shall be extended not less than 12 inches below the underside of the floor slab, except where bearing rock is encountered at a lesser depth. In such cases, after inspection and approval, concrete foundations may be set on bearing rock.
5. Furnish and set, with proper templates, anchor bolts leveling steel rails and inserts required for the proper attachment of the equipment to the concrete foundations. Anchor bolts shall be of the size and number required by the equipment or as recommended by the equipment manufacturer and shall be in accordance with the requirements detailed or specified. Anchor bolts shall also be compatible with vibration isolation requirements specified for the equipment.
6. Set equipment anchor bolts in pipe sleeves at least two sizes larger than the anchor bolt. Length of pipe sleeve shall be the same as the imbedded length of the anchor bolt. After the equipment is set in place and adjusted to its proper position, completely fill the annular space between the anchor bolt and the inside of the pipe sleeve for the full length of the pipe sleeve with Embeco, or equivalent, nonshrink cement grout.
7. Grout any openings between the top of the concrete foundation and the base of the equipment using nonshrink cement grout.
8. Piles, pile caps and foundation beams for exterior underground duct banks and for equipment foundations will be furnished under the General Construction Divisions of the Specifications.

G. Access Doors and Panels

1. Coordinate requirements for access panels and doors for electrical items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section "Access Doors and Frames."
2. Furnish access panels required under Division 26 for installation under the General Construction Sections.
3. Furnish access panels for access to concealed junction/pull boxes, cabinets, terminal boxes and other equipment where other means of access is not available. Access panels shall be adequate in size for the service requirements, and shall not have a clear opening of less than 16 inches x 16 inches. Final size and location of access panels shall be subject to approval of the Architect. Cooperate with other trades so that the equipment will be accessible through the access panels.

H. Sleeves, Fire-stops and Waterseals

1. Provide each raceway or cable passing through a masonry or concrete wall, floor or partition with a sleeve made from standard weight steel pipe with smooth edges, securely and neatly cemented in place. Provide each raceway or cable passing through a wood or metal partition with a sleeve made from No. 22 gauge galvanized sheet metal, securely fastened in place.
2. Set floor sleeves flush with floor surface in finished areas; 1 inch above the finished floor in kitchens, cafeterias and similar service areas, mechanical rooms, pipe chases, pipe spaces and other unfinished areas, unless otherwise indicated, and flush with the underside of slabs. Wall and partition sleeves shall be flush with each surface unless otherwise indicated or specified.
3. Sleeves shall be 2 pipe sizes larger than the conduit or cable size unless otherwise required by the sealing method selected by the Contractor for Division 07, THERMAL AND MOISTURE PROTECTION. Coordinate with the Contractor for that section to determine requirements for sleeves, clearances, etc. Remove sleeve if required by UL listing for system selected.
4. Place sleeves in concrete floor or wall forms before concrete is poured. Sleeves shall have integral waterstop flanges, where they are to receive either watertight or hydrostatic seals.
5. Insure proper location and alignment of all sleeves for electrical work before and during concrete placement.
6. Where sleeves penetrate exterior walls, fill and seal ends around conduits and/or cables with duct sealant compound equal to Solorite KN-1146, or Link Seal. Install seals in accordance with the manufacturer's recommendations to provide airtightness above ground and hydrostatic sealing below grade. Caulking or other type mastic is not acceptable.
7. Provide fire-stop systems in accordance with Division 07, THERMAL AND MOISTURE PROTECTION.

I. Flashing and Counterflashing:

1. For conduit penetrating built-up roofing membranes, provide a flashing fitting located approximately 1 foot above the roof and extend the conduit to the required height. Flashing fitting shall be J. R. Smith 1750 or equivalent. For sizes when manufactured fittings are not available, the flashing fitting shall consist of a drilled and threaded standard cast iron or malleable iron cap, galvanized, one size larger than conduit and screwed to form a counterflashing or rainguard. Extend conduit through the cap and provide with a coupling for extension. Flashing under the Roofing Section will terminate at the flashing fitting. Apply two coats of asphalt base emulsion to the entire fitting and for a minimum of 6 inches up the conduit extension, to provide a completely weathertight installation.

3.2 PROTECTION OF WORK

- A. Protect all conduit, fittings, panelboards, switchgear, transformers and other equipment before and during installation and keep clean.
- B. Protect factory finished equipment, luminaires, panels, switchgear and devices with approved temporary protective material where these items are subject to accidental damage or abuse. Electrical equipment and switchgear shall be stored indoors or otherwise securely protected and kept free of condensation by adequate electric heat. Contractor shall remove all temporary protective material at the conclusion of the Work or as directed.

- C. The Contractor shall assume full responsibility for the cost of repairing or replacing any damaged Work or material caused by employees working under this Division.

3.3 TESTS

- A. Test equipment, including switchgear, motor starters, motors, panelboards and all other equipment to verify that items are free from unintended grounds, short circuits, and open circuits and that equipment will operate as specified. Test feeders for insulation resistance; for load balance of the final installation, and for overall operation of systems. Furnish labor and material required for making such tests and make corrections necessary to balance the load and to obtain proper operation.
- B. Measure secondary voltages after energizing transformers and adjust transformer taps to provide rated voltages listed on drawings and/or specifications. After building is in use, measure these voltages during a period of "normal load" and "light load". Report results to Architect, who will advise Contractor whether or not further adjustment of voltages is required. Make changes as directed.
- C. Test all wiring systems up to 600 volts, for insulation resistance with a megger in accordance with the NEC. Determine values with switchboards, panelboards, fuseholders, switches, receptacles and overcurrent devices in place.
- D. Determine ampere rating of thermal overload relays in motor starters and compare with equipment nameplate and actual current measurement of the motor. If overload relays are found to be incorrect, provide proper size. Provide proper motor rotation.
- E. Arrange for each system to be fully tested and adjusted by manufacturer or his authorized representative. Each element of each system shall be individually operated to insure that it will function as intended. Furnish all labor and material required to correct all defects.
- F. Submit to the Architect a letter from manufacturer (or authorized representative) of each system, attesting to the fact that all necessary tests and adjustments have been made and that the entire system is functioning properly in every respect.
- G. This article shall not be construed as deleting other tests specifically outlined in other sections of this Specification.

3.4 WORKMANSHIP

- A. Electrical equipment shall be installed in a neat and workmanlike manner in accordance with latest and best practices of the trade.
- B. Only mechanics skilled in this type of Work shall be employed and utilized by Contractor for this Division in the execution of this Work.

3.5 REFINISHING

- A. All surfaces of boxes, cabinets and equipment shall have suitable lacquer, enamel or plated finishes. Touch up any finishes marred during construction. Supports and other metal work not furnished with a protective coating, shall be given two coats of approved paint after completion of the work.

3.6 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
- B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
- C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- E. Cut sleeves to length for mounting flush with both surfaces of walls.
- F. Extend sleeves installed in floors 2 inches above finished floor level.
- G. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable, unless indicated otherwise.
- H. Seal space outside of sleeves with grout for penetrations of concrete and masonry
 - 1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
- I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07, THERMAL AND MOISTURE PROTECTION.
- J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with requirements in Division 07, THERMAL AND MOISTURE PROTECTION.
- K. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- L. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel or cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

- M. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing mechanical sleeve seals.

3.7 SLEEVE-SEAL INSTALLATION

- A. Install to seal exterior wall penetrations.
- B. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.8 INNERDUCT INSTALLATION

A. General

1. Provide innerduct for each fiber riser backbone cable as specified on the drawings.
2. All unused flexible non-metallic conduits shall be capped.
3. Innerduct quantity and diameter shall be as noted on the drawings.

B. Flexible Textile Fabric

1. Provide textile innerduct in conduit and wire ways and place textile innerduct within and under cable trays using continuous unspliced lengths of textile innerduct between maintenance holes, pull boxes, and/or termination points as indicated on the drawings.
2. Make a 2" incision approximately 18" from the end of textile innerduct. Pull out and cut off approximately 2 feet of pull-tape thus allowing the pull tape ends to retract back into the cells.
3. Using approximately 6 feet of pull tape, tie a non-slip knot to the incision. Then tie 3 to 6 half-hitch knots down to the end of textile innerduct. Apply black vinyl tape over all knots and the end of textile innerduct. Using a Bow Line knot tie a swivel to the end of 3 feet pull tape. For multi-pack installations one swivel is sufficient, but stagger each textile innerduct.
4. Using a Bow Line knot, attach the pull rope located in the rigid conduit to the other end of the swivel. Install textile innerduct – ensuring that no twist is introduced to the innerduct.
5. Provide suitable textile innerduct slack in the maintenance holes, hand holes, pull boxes, and at turns to ensure there is no kinking or binding of the product.
6. Textile Innerduct Mountings, Hangers and Attachments: When exposed indoors or in maintenance holes, hold firmly in place using independent support.
 - a. Design and install hangers and other similar fittings adequate to support loads and so as to not damage innerduct.
 - b. Do not fasten textile innerduct to steam, water, or other piping, ductwork, mechanical equipment, electrical equipment, electrical raceways, or wires.
 - c. When appropriate, use the following cable ties to secure textile innerduct through previously created incisions:
 - 1) Plenum areas: Plenum-rated plastic or stainless steel

- 2) Non-plenum areas: Conventional flame-retardant nylon ties
- 3) Underground locations: Conventional plastic cable ties.

3.9 FIRESTOPPING

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07, THERMAL AND MOISTURE PROTECTION.
- B. Install all fire-rated cable pathways in accordance with manufacturer's recommendations.

3.10 CONTINUITY OF EXISTING SERVICES

- A. Perform alterations and connections to existing facilities with a minimum of interruption. Where interruption is necessary, prepare a time schedule for same, coordinate with Architect, Owner and other sections, and obtain prior written clearance from Owner. Provide and place notices in affected areas, and on luminaires or equipment, etc., which will be temporarily out of use. Remove notices when interruption has been completed.
- B. When Owner requires that work involving shutdown and interruption of existing facilities be performed on an overtime basis, Contractor shall pay all overtime costs.

3.11 DEMOLITION

- A. Disconnect and cap existing DIVISION 26 services to demolished areas of existing and new building(s) as required. Cap services at points where directed by Contractor for Division 2, EXISTING CONDITIONS. Contractor for Division 2 will remove abandoned DIVISION 26 services between capped services and demolished areas and will do all excavation and backfill in connection with disconnection and removal of the services.

3.12 ALTERATIONS AND CONNECTIONS TO EXISTING FACILITIES

- A. Make all necessary alterations to existing DIVISION 26 systems to permit connecting or extending these systems to new work and to permit existing systems to remain in use whether indicated or not. New materials used to alter existing systems shall match existing materials unless otherwise indicated. Record modifications for Owner's future use.
- B. Make all necessary alterations to existing DIVISION 26 systems to permit the installation of new DIVISION 23 equipment, i.e. ductwork and piping, to permit connecting or extending these systems to new work and to permit existing systems to remain in use whether indicated or not. New materials used to alter existing systems shall match existing materials unless otherwise indicated. Record modifications for Owner's future use.
- C. Where equipment, ductwork and piping is removed or disconnected under DIVISION 26, perform the work in such a manner that no damage is done to the structure or remaining portions of the systems.

- D. Remove exposed conduit, hangers and supports made obsolete due to this modification.
- E. Where existing concealed conduit is not to be reused, abandon same in place unless otherwise indicated or specified.
- F. Unless otherwise specified, all materials and equipment removed or disconnected by Contractor which are not to be reused shall become the property of Contractor and be removed from premises.
- G. Where excavation for new electrical work disturbs support of any existing underground services, materials, equipment and structures, provide new and suitable concrete, steel and brick supports as required. Review supports and supporting methods with Architect before beginning work.

3.13 COMMISSIONING

- A. Commissioning will be provided as specified in Division 01 Section "Commissioning". All contractors and subcontractors of the various sections of this specification shall cooperate and participate in the commissioning work in accordance with requirements of Division 01 Section "Commissioning".
- B. Ensure participation of major equipment manufacturers or their representatives.
- C. Equipment and systems/subsystems installed under this section are expected to be in full compliance with the design intent by the commissioning phase. Notify the Commissioning Agent when any specific piece of equipment or specific system/subsystem is ready for commissioning. Be prepared to demonstrate system readiness.
- D. Equipment or systems/subsystems having incomplete work or exhibiting problems related to noncompliance with the design intent shall require commissioning. The contractor for this section shall be fully responsible to make all necessary corrections to incomplete or non-complying work at their own expense and shall pay the Commissioning Agent per diem rate for recommissioning such incomplete or non-complying work.

END OF SECTION 26 05 00

SECTION 26 05 19 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Building wires and cables rated 600 V and less.
 - 2. Connectors, splices, and terminations rated 600 V and less.
- B. Related sections include the following:
 - 1. Division 26 Section "Common Material and Methods for Electrical"
 - 2. Division 26 Section "Identification for Electrical Systems"

1.3 DEFINITIONS

- A. EPDM: Ethylene-propylene-diene terpolymer rubber.
- B. NBR: Acrylonitrile-butadiene rubber.
- C. NETA: International Electrical Testing Association.
- D. NRTL: Nationally Recognized Testing Laboratory.
- E. Homerun: The circuit conductors between the branch circuit outlet and/or device and the panel board over current protective device.
- F. VFD: Variable Frequency Drive or Variable Frequency motor Speed Controller (VFD)
- G. Wet Location: The interior of enclosures or raceways installed underground shall be considered to be a wet location.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency.
- B. Field quality control reports.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
 - 1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
- C. Comply with NFPA 70.

1.7 COORDINATION

- A. Set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- B. Coordinate wall and floor penetrations with appropriate UL listed fire stopping systems.

PART 2 - PRODUCTS

2.1 CONDUCTORS AND CABLES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. 600V Insulated Building Wire
 - a. Alpha Wire Corp.
 - b. General Cable Technologies Corporation
 - c. Southwire Company
 - d. Encore Wire Corporation
 - e. The Okonite Company
- B. Copper Conductors: Comply with NEMA WC 70/ICEA S-95-658.
- C. Conductor Insulation: Comply with NEMA WC 70/ICEA S-95-658 for Types THW-2, THHN-2-THWN-2, XHHW-2, and SO.

2.2 CONNECTORS AND SPLICES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. AFC Cable Systems, Inc.
 - 2. Hubbell Power Systems, Inc.
 - 3. O-Z/Gedney; EGS Electrical Group LLC
 - 4. 3M Company
 - 5. Ideal Industries, Inc.
 - 6. Tyco Electronics Corp.
- B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

PART 3 - EXECUTION

3.1 CONDUCTOR MATERIAL APPLICATIONS

- A. Feeders: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
- B. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger, unless otherwise indicated.

3.2 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

- A. Service Entrance: Type XHHW-2, single conductors in raceway.
- B. Exposed Feeders: Type THHN-2-THWN-2, single conductors in metal raceway or Type XHHW-2, single conductors in raceway.
- C. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspace: Type THHN-2-THWN-2, single conductors in metal raceway; Type XHHW-2, single conductors in raceway.
- D. Feeders Concealed in Concrete and below Slabs-on-Grade: ; Type XHHW-2, Single conductors in raceway;
- E. Feeders in Wet Locations (See Definition in Article 1.3): Type XHHW-2, single conductors in raceway.
- F. Exposed Branch Circuits, Including in Crawlspace: Type THHN-2-THWN-2, single conductors in metal raceway; Type XHHW-2, single conductors in raceway.
- G. Normal Power and Lighting Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN-2-THWN-2, single conductors in metal raceway; Type XHHW-2, single conductors in raceway.

- H. Emergency Power and Lighting Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN-2-THHW-2, single conductors in metal raceway; Type XHHW-2, single conductors in raceway.
- I. Branch Circuits Concealed in Concrete and Slabs-on-Grade: Type XHHW-2, single conductors in raceway.
- J. Branch Circuits in Wet Locations (See definition in Article 1.3): ; Type XHHW-2, single conductors in raceway.
- K. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless-steel, wire-mesh, strain relief device at terminations to suit application.
- L. Class 1 Control Circuits: Type THHN-2-THWN-2, in raceway.
- M. Class 2 Control Circuits: Type THHN-2-THWN-2, single conductors in metal raceway or power-limited cable, concealed in building finishes
- N. VFD Output Circuits: Type XHHW-2, single conductors in metal raceway.

3.3 INSTALLATION OF CONDUCTORS AND CABLES

- A. Conceal cables in finished walls, ceilings, and floors, unless otherwise indicated.
- B. Complete raceway installation between conductor and cable termination points according to Division 26, Section "Raceways and Boxes for Electrical Systems" prior to pulling conductors and cables through raceways.
- C. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
- D. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.
- E. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.
- F. Support cables according to Division 26 Section "Hangers and Supports for Electrical Systems."
- G. Identify and color-code conductors and cables according to Division 26 Section "Identification for Electrical Systems."
- H. Where specifically shown or where approved by the Architect, install exposed branch circuit wiring in finished areas in formed metallic surface raceway systems using suitable factory fabricated fittings and devices as specified herein.
- I. Multi-wire branch circuits will not be allowed. A separate neutral conductor shall be provided for each branch circuit.

- J. The continuity of a neutral conductor shall not be dependent upon device and luminaire connections, where removal of such device would interrupt the continuity of circuit.
- K. All conductors of a parallel feeder shall be of the same length.
- L. Lace or clip groups of conductors at lighting and distribution panels, pull boxes and wireways.
- M. Where permitted install metal-clad cable per requirements of NEC and support at each junction box. Support only from building structure. Provide an additional three feet of cable at each luminaire and support excess cable only from structure; do not lay on ceiling tiles or attach to any other support systems.
- N. Protect metal-clad cable from physical damage where necessary by conduit, pipe, guard strips or other approved means.
- O. Where groups of armored and/or metal-clad cables extend from collector troughs, pull boxes or the like, secure and assemble them in an orderly manner on vertical cable tray or channel ladders.
- P. Not more than 4 armored and/or metal-clad cables shall be grouped or bundled together throughout the installation.
- Q. Insulated conductors and cables installed in underground enclosures or raceways shall be listed for use in wet locations and shall comply with NEC Article 310.10(C). Any connections or splices in an underground installation shall be approved for wet locations.
- R. Wireways and junction boxes shall not be used for routing and/or splicing of branch circuit, power and control wiring in excess of thirty current carrying conductors.
- S. Do not install conduits and cables in the cell of the metal deck above bar joists or other structural member.
- T. For branch circuits a maximum of six current carrying conductors shall be permitted to be installed in a raceway.
- U. The smallest size conductors permitted are:
 - 1. Lighting and Power Branch Circuits - No. 12 AWG
 - 2. Control Circuits - No. 14 AWG
 - 3. Luminaires (Pig Tails) - No. 16 AWG
 - 4. Fire Alarm System - No. 14 AWG
 - 5. Branch circuits rated 20 amperes, 120 volts and longer than 90 circuit feet from panelboard shall be #10 AWG.
 - 6. Branch circuits rated 20 amperes, 277 volts and longer than 150 circuit feet from panelboard shall be #10 AWG.

3.4 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

- B. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
- C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches of slack.

3.5 IDENTIFICATION

- A. Identify and color code conductors and cables according to Division 26, Section "Identification for Electrical Systems."
- B. Identify each spare conductor at each end with identity number and location of other end of conductor and identify as spare conductor.

3.6 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Division 26, Section "Common Materials and Methods for Electrical"

3.7 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Division 26, Section "Common Materials and Methods for Electrical" and Division 7, Section "Firestopping."

3.8 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Tests and Inspections:
 - 1. Test all conductors and cables to verify that no short circuits or accidental grounds exist.
 - 2. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors, per inspection and test procedures Section 7.3.2 as stated in the NETA Acceptance Testing Specification. Certify compliance with test parameters.
- C. Test and Inspection Reports: Prepare a written report to record the following:
 - 1. Procedures used.
 - 2. Results that comply with requirements.
 - 3. Results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- D. Cables will be considered defective if they do not pass tests and inspections. Perform corrective action, including replacement and retest.

END OF SECTION 26 05 19

SECTION 26 05 26 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes methods and materials for grounding systems and equipment, plus the following special applications:
 - 1. Underground distribution grounding
 - 2. Common ground bonding with lightning protection system
 - 3. Panelboard bonding
 - 4. Fence Grounding

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Other Informational Submittals: Plans showing dimensioned as-built locations of grounding features specified in Part 3 "Field Quality Control" Article, including the following:
 - 1. Test wells
 - 2. Ground rods
 - 3. Ground rings
 - 4. Grounding arrangements and connections for separately derived systems
 - 5. Grounding for sensitive electronic equipment
- C. Qualification Data: For testing agency and testing agency's field supervisor.
- D. Field quality-control test reports.
- E. Operation and Maintenance Data: For grounding to include the following in emergency, operation, and maintenance manuals:
 - 1. Instructions for periodic testing and inspection of grounding features at test wells, ground rings, grounding connections for separately derived systems based on NETA MTS and NFPA 70B.
 - a. Tests shall be to determine if ground resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if they do not.

- b. Include recommended testing intervals.

1.4 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
 - 1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association to supervise on-site testing specified in Part 3.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with UL 467 for grounding and bonding materials and equipment.

PART 2 - PRODUCTS

2.1 CONDUCTORS

- A. Insulated Conductors: Copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.
- B. Equipment grounding conductor insulation color shall be continuous green, except for wire sizes No. 4 AWG and larger which shall be identified per NEC.
- C. Bare Copper Conductors:
 - 1. Solid Conductors: ASTM B3
 - 2. Stranded Conductors: ASTM B8
 - 3. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch in diameter.
 - 4. Bonding and Grounding Conductor: Unless otherwise indicated on the drawings, use No. 4 or No. 6 AWG minimum, stranded conductor.
 - 5. Bonding Jumper: Copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.
 - 6. Tinned Bonding Jumper: Tinned-copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.
- D. Bare Grounding Conductor and Conductor Protector for Wood Poles:
 - 1. No. 4 AWG minimum, soft-drawn solid copper.
 - 2. Conductor Protector: Half-round PVC or wood molding. If wood, use pressure-treated fir or cypress or cedar.
- E. Grounding Bus: Rectangular bars of annealed copper, 1/4 by 2 inches in cross section, unless otherwise indicated; with insulators.

2.2 CONNECTORS

- A. Listed and labeled by a nationally recognized testing laboratory acceptable to authorities having jurisdiction for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.
- B. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, bolted pressure-type, with at least two bolts.
 - 1. Pipe Connectors: Clamp type, sized for pipe.
- C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

2.3 GROUNDING ELECTRODES

- A. Ground Rods: Copper-clad steel; 3/4 inch by 10 feet in diameter.
- B. Chemical-Enhanced Grounding Electrodes: Copper tube, straight or L-shaped, charged with nonhazardous electrolytic chemical salts.
 - 1. Termination: Factory-attached No. 4/0 AWG bare conductor at least 48 inches long.
 - 2. Backfill Material: Electrode manufacturer's recommended material.

PART 3 - EXECUTION

3.1 APPLICATIONS

- A. Conductors: Install solid conductor for No. 10 AWG and smaller, and stranded conductors for No. 8 AWG and larger, unless otherwise indicated.
- B. Underground Grounding Conductors: Install bare copper conductor, No. 3/0 AWG minimum.
 - 1. Bury at least 24 inches below grade
- C. Grounding Bus: Install in electrical and telephone equipment rooms, in rooms housing service equipment, and elsewhere as indicated.
 - 1. Install bus on insulated spacers 1 inch, minimum, from wall 6 inches above finished floor, unless otherwise indicated.
 - 2. Where indicated on both sides of doorways, connect horizontal buses with No. 4/0 AWG bare copper over doorway at right angles. Bond metal door frames to horizontal buses or No. 4/0 AWG conductor.
- D. Conductor Terminations and Connections:
 - 1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.

2. Underground Connections: Exothermic-welding connectors, except at test wells and as otherwise indicated.
3. Connections to Ground Rods at Test Wells: Compression or welded connectors.
4. Connections to Structural Steel: Exothermic-welding connectors.
5. Test Wells: Bolted connectors.
6. Connections to Fence posts and gates: Bolted connectors.

3.2 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

- A. Comply with IEEE C2 grounding requirements.
- B. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches above to 6 inches below concrete. Seal floor opening with waterproof, nonshrink grout.
- C. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod and or grounding conductor. Make connections with No. 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductor's level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields as recommended by manufacturer of splicing and termination kits.
- D. Pad-Mounted Transformers and Switches: Unless otherwise indicated, install minimum of four ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than No. 2 AWG for ground ring and for taps to equipment grounding terminals. Bond concrete pad rebar to ground ring with tinned-copper conductor not less than No. 2 AWG. Bury ground ring not less than 6 inches from the foundation.

3.3 EQUIPMENT GROUNDING

- A. Install insulated equipment grounding conductors with all feeders and branch circuits.
- B. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.
- C. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate insulated copper equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.
- D. Signal and Communication Equipment: For telephone, alarm, voice and data, and other communication equipment, provide No. 6 AWG minimum unless indicated otherwise on the

drawings, insulated copper grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.

1. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a grounding bus as indicated on the drawings and Specification Section 27 11 00.
2. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.

3.4 INSTALLATION

- A. Grounding Conductors: Route along shortest and straightest paths possible, unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
- B. Common Ground Bonding with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in non-metallic conduit.
- C. Ground Rods: Drive rods until tops are 2 inches below finished floor or final grade, unless otherwise indicated.
 1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating, if any.
 2. For grounding electrode system, install at least three rods spaced at least twenty (20) feet from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.
- D. Test Wells: Ground rod driven in open bottom of handhole. Handholes are specified in Division 26 Section "Underground Ducts and Raceways for Electrical Systems," and shall be at least 12 inches deep, with cover.
 1. Test Wells: Install at least one test well for each service, unless otherwise indicated. Install at the ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.
- E. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.
 1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
 2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install so vibration is not transmitted to rigidly mounted equipment.
 3. Use exothermic-welded connectors for outdoor locations, but if a disconnect-type connection is required, use a bolted clamp.
- F. Grounding and Bonding for Piping:

1. Metal Water Service Pipe: Install insulated copper grounding conductor(s), in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductor(s) to main metal water service pipes, using a bolted clamp connector or by bolting a lug-type connector to a pipe flange, using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
 2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
 3. Bond each aboveground portion of gas or other metal piping system downstream from equipment shutoff valve to the service equipment ground bus or grounding electrode bus.
- G. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install tinned bonding jumper to bond across flexible duct connections to achieve continuity.
- H. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column, at intermediate exterior columns at distances not more than 60 feet apart and at the column closet to the electrical service equipment or grounding electrode system.
- I. Ground Ring: Install a grounding conductor, electrically connected to each building structure ground rod and to each steel column, extending around the perimeter of building.
1. Install tinned-copper conductor not less than No. 3/0 AWG for ground ring and for taps to building steel.
 2. Bury ground ring not less than 24 inches from building foundation.
- J. Ufer Ground (Concrete-Encased Grounding Electrode): Fabricate according to NFPA 70, using a minimum of 20 feet of bare copper conductor not smaller than No. 4 AWG.
1. If concrete foundation is less than 20 feet long, coil excess conductor within base of foundation.
 2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building grounding grid or to grounding electrode external to concrete.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing and inspecting agency to perform the following field tests and inspections and prepare test reports:
1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
 2. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, at ground test wells, and at individual ground rods. Make tests at ground rods before any conductors are connected.
 - a. Measure ground resistance not less than two full days after last trace of precipitation and without soil being moistened by any means other than natural

drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.

- b. Perform tests by fall-of-potential method according to IEEE 81.
3. Prepare dimensioned drawings locating each test well, ground rod and ground rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.
- B. Report measured ground resistances that exceed the following values:
1. Power and Lighting Equipment or System with Capacity 500 kVA and Less: 10 ohms
 2. Power and Lighting Equipment or System with Capacity 500 to 1000 kVA: 5 ohms
 3. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: 3 ohms
 4. Power Distribution Units or Panelboards Serving Electronic Equipment: 3 ohm(s)
 5. Substations and Pad-Mounted Equipment: 5 ohms
 6. Manhole Grounds: 10 ohms
- C. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Architect promptly and include recommendations to reduce ground resistance.

END OF SECTION 26 05 26

SECTION 26 05 29 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Hangers and supports for electrical equipment and systems
 - 2. Construction requirements for concrete bases

1.3 DEFINITIONS

- A. EMT: Electrical metallic tubing
- B. IMC: Intermediate metal conduit
- C. RMC: Rigid metal conduit

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design supports for multiple raceways, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.
- C. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
- D. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of five times the applied force.

1.5 SUBMITTALS

- A. Product Data: For the following:
 - 1. Steel slotted support systems

- B. Shop Drawings: Signed and sealed by a qualified professional engineer in the corresponding state of the project location. Show fabrication and installation details and include calculations for the following:
 - 1. Trapeze hangers. Include Product Data for components.
 - 2. Steel slotted channel systems. Include Product Data for components.
 - 3. Equipment supports.
- C. Welding certificates.

1.6 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Comply with NFPA 70.

1.7 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

PART 2 - PRODUCTS

2.1 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

- A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Allied Tube & Conduit
 - b. Cooper B-Line, Inc.; a division of Cooper Industries
 - c. ERICO International Corporation
 - d. GS Metals Corp.
 - e. Thomas & Betts Corporation
 - f. Unistrut; Tyco International, Ltd.
 - g. Wesanco, Inc.
 - 2. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
 - 3. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.

4. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
 5. Channel Dimensions: Selected for applicable load criteria.
- B. Raceway and Cable Supports: As described in NECA 1 and NECA 101.
- C. Conduit and Cable Support Devices: Steel hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.
- D. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.
- E. Structural Steel for Fabricated Supports and Restraints: ASTM A36/A36M, steel plates, shapes, and bars; black and galvanized.
- F. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Hilti Inc.
 - 2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
 - 3) MKT Fastening, LLC
 - 4) Simpson Strong-Tie Co., Inc.; Masterset Fastening Systems Unit
 2. Mechanical-Expansion Anchors: Insert-wedge-type, stainless steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Cooper B-Line, Inc.; a division of Cooper Industries
 - 2) Empire Tool and Manufacturing Co., Inc.
 - 3) Hilti, Inc.
 - 4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
 - 5) MKT Fastening, LLC
 3. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
 4. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
 5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A325.
 6. Toggle Bolts: All-steel springhead type.
 7. Hanger Rods: Threaded steel.

8. Plastic Nylon Ties: Not acceptable.

2.2 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

- A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.
- B. Materials: Comply with requirements in Division 05 Section "Metal Fabrications" for steel shapes and plates.

PART 3 - EXECUTION

3.1 APPLICATION

- A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.
- B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, IMC, and RMC as required by NFPA 70. Minimum rod size shall be 1/4 inch in diameter.
- C. Multiple Raceways or Cables: For horizontal pendent installation, install trapeze-type supports fabricated with steel slotted or other support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits. For vertical surface installation, install steel slotted support system anchored to structural wall system for the entire length of run.
 1. Secure raceways and cables to these supports with two-bolt conduit clamps.
- D. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

3.2 SUPPORT REQUIREMENTS

- A. General
 1. Provide materials, equipment, supplies and labor necessary as required to adequately support, brace and strengthen all equipment and materials furnished as part of this work.
 2. Materials, equipment, apparatus supports and mounting hardware shall be approved for use in the location installed. For example, use electroplated galvanized, hot dipped galvanized, epoxy coated, PVC coated, stainless steel or aluminum in wet/outdoor locations.
- B. Attachment to Building Structure
 1. Light fixtures, raceways, boxes, cable trays, wireways, and other utilities shall not be supported by roof deck.

2. Light fixtures, raceways, boxes, cable trays, wireways may be suspended from floor deck provided the attachment is designed and supplied by the Contractor.
3. Transformers, switches, starters, apparatus, or any group of conduits in excess of 100 pounds shall not be supported by floor deck, regardless of concrete thickness above steel deck.
4. Transformers, switches, starters, apparatus, or any group of conduits in excess of 100 pounds shall not be suspended by concrete roof or floor slabs unless specifically shown on the contract drawings.
5. Whenever possible, support shall be provided directly to the main steel or concrete framing beams. If spacing of structure exceeds the spacing required to sufficiently support the electrical work, supplemental steel member or steel channel shall be designed and provided by the Contractor.
6. Support all Electrical work independently of any other trades. Under no circumstances shall work be supported or suspended from ceiling grids, ductwork, piping, or other supports for other trades.
7. Before drilling concrete for attachments, carefully check Drawings and Shop Drawings for such concrete and locate drilled holes to miss reinforcing by at least 1 inch.
8. Inserts in precast concrete to support Work of Division 26 will be furnished and installed by precast concrete supplier. Prepare drawings locating such inserts for review by Architect before distribution.

3.3 SUPPORT INSTALLATION

- A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.
- B. Raceway Support Methods: In addition to methods described in NECA 1, EMT, IMC, and RMC may be supported by openings through structure members, as permitted in NFPA 70.
- C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.
- D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Install steel slotted channel-racks to finish wall anchored and fastened to structural floor and ceiling, and wall were crossing structural members. Anchor and fasten electrical items to the steel slotted support system. The steel slotted channel-racks shall be anchored and fastened by the following methods unless otherwise indicated by code:
 1. To Wood: Fasten with lag screws or through bolts.
 2. To New Concrete: Bolt to concrete inserts.
 3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
 4. To Existing Concrete: Expansion anchor fasteners.
 5. Structural Steel: Beam clamps, angle clips welded or powder-driven studs.
 6. Exterior: Anchors, screws, bolts, etc., exposed to weather and corrosion shall be rustproof finished or nonferrous material.
 7. Adhesive Anchors: The use of adhesive anchors is prohibited.
 8. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches thick or

- greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches thick.
9. To Steel: Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts and beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69.
 10. To Light Steel: Sheet metal screws.
- E. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

3.4 INSTALLATION OF FABRICATED METAL SUPPORTS

- A. Comply with installation requirements in Division 05 Section "Metal Fabrications" for site-fabricated metal supports.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
- C. Field Welding: Comply with AWS D1.1/D1.1M.

3.5 CONCRETE BASES

- A. Unless otherwise indicated, construct concrete bases of dimensions indicated but not less than 4 inches larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
- B. Use 3000-psi, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- C. Anchor equipment to concrete base.
 1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 2. Install anchor bolts to elevations required for proper attachment to supported equipment.
 3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.6 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.
- B. Touchup: Comply with requirements in Division 09 for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.

- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A780.

END OF SECTION 26 05 29

SECTION 26 05 33 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.
- B. Related Sections include the following:
 - 1. Division 26 Section "Underground Ducts and Raceways for Electrical Systems" for exterior ductbanks, manholes, and underground utility construction.

1.3 DEFINITIONS

- A. EMT: Electrical metallic tubing
- B. ENT: Electrical nonmetallic tubing
- C. EPDM: Ethylene-propylene-diene terpolymer rubber
- D. FMC: Flexible metal conduit
- E. IMC: Intermediate metal conduit
- F. LFMC: Liquidtight flexible metal conduit
- G. LFNC: Liquidtight flexible nonmetallic conduit
- H. NBR: Acrylonitrile-butadiene rubber
- I. RNC: Rigid nonmetallic conduit

1.4 SUBMITTALS

- A. Product Data: For surface raceways, conduits, wireways and fittings, boxes, enclosures, and cabinets.
- B. Shop Drawings: For the following raceway components. Include plans, elevations, sections, details, and attachments to other work.

1. Custom enclosures and cabinets.
2. For handholes and boxes for underground wiring, including the following:
 - a. Duct entry provisions, including locations and duct sizes
 - b. Frame and cover design
 - c. Grounding details
 - d. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons
 - e. Joint details
- C. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 1. Structural members in the paths of conduit groups with common supports.
 2. HVAC and plumbing items and architectural features in the paths of conduit groups with common supports.
- D. Qualification Data: For professional engineer and testing agency.
- E. Source quality-control test reports.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 METAL CONDUIT AND TUBING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. AFC Cable Systems, Inc.
 2. Alflex Inc.
 3. Allied Tube & Conduit; a Tyco International Ltd. Co.
 4. Anamet Electrical, Inc.; Anaconda Metal Hose
 5. Electri-Flex Co.
 6. Manhattan/CDT/Cole-Flex
 7. Maverick Tube Corporation
 8. O-Z Gedney; a unit of General Signal
 9. Wheatland Tube Company
- B. Rigid Steel Conduit: ANSI C80.1.
- C. IMC: ANSI C80.6.

- D. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit or IMC.
 - 1. Comply with NEMA RN 1
 - 2. Coating Thickness: 0.040 inch, minimum
- E. EMT: ANSI C80.3.
- F. FMC: Zinc-coated steel or aluminum.
- G. LFMC: Flexible steel conduit with PVC jacket.
- H. Fittings for Conduit (Including all Types and Flexible and Liquidtight), EMT, and Cable: NEMA FB 1; listed for type and size raceway with which used, and for application and environment in which installed.
 - 1. Fittings for EMT: Set-screw or compression type.
 - 2. Coating for Fittings for PVC-Coated Conduit: Minimum thickness, 0.040 inch, with overlapping sleeves protecting threaded joints.
 - 3. Fittings, couplings and connectors in general shall be of the same material as the conduit to which applied. Die cast fittings are not acceptable.
 - 4. Fittings and couplings for use with rigid and intermediate metal conduit shall be threaded type.
- I. Joint Compound for Rigid Steel Conduit or IMC: Listed for use in cable connector assemblies, and compounded for use to lubricate and protect threaded raceway joints from corrosion and enhance their conductivity.

2.2 NONMETALLIC CONDUIT AND TUBING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. AFC Cable Systems, Inc.
 - 2. Anamet Electrical, Inc.; Anaconda Metal Hose
 - 3. Arnco Corporation
 - 4. CANTEX Inc.
 - 5. CertainTeed Corp.; Pipe & Plastics Group
 - 6. Condux International, Inc.
 - 7. ElecSYS, Inc.
 - 8. Electri-Flex Co.
 - 9. Heritage Plastics
 - 10. Lamson & Sessions; Carlon Electrical Products
 - 11. Manhattan/CDT/Cole-Flex
 - 12. RACO; a Hubbell Company
 - 13. Thomas & Betts Corporation
- B. RNC: NEMA TC 2, Type EPC-40-PVC, unless otherwise indicated.
- C. LFNC: UL 1660.

- D. Fittings for RNC: NEMA TC 3; match to conduit or tubing type and material.
- E. Fittings for LFNC: UL 514B.

2.3 OPTICAL FIBER/COMMUNICATIONS CABLE RACEWAY AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Arnco Corporation
 - 2. Endot Industries Inc.
 - 3. IPEX Inc.
 - 4. Lamson & Sessions; Carlon Electrical Products
- B. Description: Comply with UL 2024; flexible type, approved for plenum installation.

2.4 METAL WIREWAYS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cooper B-Line, Inc.
 - 2. Hoffman
 - 3. Square D; Schneider Electric
- B. Description: Sheet metal sized and shaped as indicated, NEMA 250, Type 1, unless otherwise indicated.
- C. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
- D. Wireway Covers: Hinged type.
- E. Finish: Manufacturer's standard enamel finish.

2.5 SURFACE RACEWAYS

- A. Surface Metal Raceways: Galvanized steel with snap-on covers. Manufacturer's standard enamel finish in color selected by Architect.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Thomas & Betts Corporation
 - b. Walker Systems, Inc.; Wiremold Company (The)
 - c. Wiremold Company (The); Electrical Sales Division

2.6 BOXES, ENCLOSURES, AND CABINETS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Cooper Crouse-Hinds; Div. of Cooper Industries, Inc.
 2. EGS/Appleton Electric
 3. Erickson Electrical Equipment Company
 4. Hoffman
 5. Hubbell Incorporated; Killark Electric Manufacturing Co. Division
 6. O-Z/Gedney; a unit of General Signal
 7. RACO; a Hubbell Company
 8. Robroy Industries, Inc.; Enclosure Division
 9. Scott Fetzer Co.; Adalet Division
 10. Spring City Electrical Manufacturing Company
 11. Thomas & Betts Corporation
 12. Walker Systems, Inc.; Wiremold Company (The)
 13. Woodhead, Daniel Company; Woodhead Industries, Inc. Subsidiary
- B. Interior Sheet Metal Outlet and Device Boxes: NEMA OS1.
1. General: Provide pressed galvanized sheet steel boxes with knockouts to suit raceway system to be used. Supports shall also be galvanized steel.
 2. Ceiling: Provide flush, 4 inch, octagonal boxes not less than 1-1/2 inches deep with 4 knockouts. Provide 3/8 inch luminaire studs where required. Surface, 4 inch, square boxes not less than 1-1/2 inches deep.
 3. Walls: Provide flush 4 inch boxes not less than 2 inches deep with matching plaster ring for single or 2 gang outlets. For larger boxes use 1-piece construction to suit application. In masonry use deep boxes with square corners so masonry units will fit closely to box.
 4. Do not use sectional or handy boxes unless specifically noted
- C. Exterior Cast-Metal Outlet and Device Boxes: NEMA FB 1, ferrous alloy, Type FD, with threaded hubs sized for conduit to be used, deep type, covers fitted with gaskets.
- D. Communication Outlet and Device Boxes:
1. Unless noted otherwise, all communication outlet and devices boxes shall comply with paragraph titled "Sheet Metal Outlet and Device Boxes" above, except shall be 2-1/2 inches deep.
 2. Outlet boxes for "Swing Away Fiber Storage Kit"; provide 4-11/16 inch square by 4 inch deep backbox. Refer to specification 27 11 00 for storage kit requirements.
- E. Nonmetallic Outlet and Device Boxes: Not allowed.
- F. Metal Floor Boxes: Cast or sheet metal, rectangular.
- G. Nonmetallic Floor Boxes: Nonadjustable, round.
- H. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
- I. Cast-Metal Access, Pull, and Junction Boxes: NEMA FB 1, cast aluminum with gasketed cover.

J. Cabinets:

1. NEMA 250, Type 1, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
2. Hinged door in front cover with flush latch and concealed hinge.
3. Key latch to match panelboards.
4. Metal barriers to separate wiring of different systems and voltage.
5. Accessory feet where required for freestanding equipment.

2.7 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

1. Tests of materials shall be performed by a independent testing agency.
2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer in the state of the project location shall certify tests by manufacturer.
3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.1 RACEWAY APPLICATION

A. Outdoors: Apply raceway products as specified below, unless otherwise indicated:

1. Exposed Conduit: Rigid steel conduit or IMC, where applicable by Code
2. Concealed Conduit, Aboveground: Rigid steel conduit or IMC.
3. Underground Conduit for Lighting and Branch Circuits: RNC, Type EPC-Schedule A 40-PVC, direct buried.
4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.
6. Application of Handholes and Boxes for Underground Wiring:
 - a. Handholes and Pull Boxes in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Polymer concrete, SCTE 77, Tier 15 structural load rating.
 - b. Handholes and Pull Boxes in Sidewalk and Similar Applications with a Safety Factor for Nondeliberate Loading by Vehicles: Polymer-concrete units, SCTE 77, Tier 8 structural load rating.
 - c. Handholes and Pull Boxes Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resin, structurally tested according to SCTE 77 with 3000-lbf vertical loading.

B. Comply with the following indoor applications, unless otherwise indicated:

1. Exposed in Unfinished Areas, Not Subject to Physical Damage: EMT
2. Exposed in Unfinished Areas and Subject to Physical Damage: Rigid steel conduit or IMC. Includes raceways installed below 10 feet, in the following locations:
 - a. Loading dock
 - b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units
 - c. Mechanical rooms
 - d. Boiler rooms
 - e. Garages
 - f. Warehouses
 - g. Tunnel
 - h. Shipping and receiving areas
3. Exposed in finished areas; Formed metallic surface raceway systems using suitable factory fabricated fittings and devices.
4. Concealed in Ceilings and Interior Walls and Partitions: EMT
5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
6. Damp or Wet Locations: Rigid steel conduit or IMC.
7. Raceways for Optical Fiber or Communications Cable in Spaces Used for Environmental Air: EMT.
8. Raceways for Optical Fiber or Communications Cable Risers in Vertical Shafts: EMT.
9. Raceways for Concealed General Purpose Distribution of Optical Fiber or Communications Cable: EMT.
10. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4, stainless steel in damp or wet locations.

C. Minimum Raceway Size: 3/4-inch trade size.

D. Raceway Fittings: Compatible with raceways and suitable for use and location.

1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.
2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with that material. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer.
3. Use UL approved expansion fittings complete with grounding jumpers where conduits cross building expansion joints. Install bends or offsets in conduit adjacent to building expansion joints where conduit is installed above suspended ceilings.

3.2 RACEWAY INSTALLATION

- A. Comply with NECA 1 for installation requirements applicable to products specified in Part 2 except where requirements on Drawings or in this Article are stricter.
- B. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.
- C. Complete raceway installation before starting conductor installation.

- D. Support raceways as specified in Division 26 Section "Hangers and Supports for Electrical Systems."
- E. Arrange stub-ups so curved portions of bends are not visible above the finished slab.
- F. Install no more than the equivalent of three 90-degree bends in any conduit run except for communications conduits, for which fewer bends are allowed.
- G. Conceal conduit and EMT within finished walls, ceilings, and floors, including walls of unfinished spaces, unless otherwise indicated.
- H. Raceways below slab on grade:
 - 1. Install RNC (Type EPC-40 PVC), rigid steel conduit or IMC.
 - 2. Before rising above the floor slab, conduit elbows and stub ups shall be RNC (Type EPC-80 PVC), rigid steel conduit or IMC.
 - 3. Conduits shall be located below the vapor barrier. Conduit penetrations through the vapor barrier shall be sealed in accordance with the barrier manufacturers recommendations.
 - 4. Conduits shall be located below the waterproofing and the penetration sealed with approved products that are part of the waterproofing system.
- I. Do not install conduits in concrete floor slabs unless shown otherwise.
 - 1. Maximum embedded conduit size shall be 1" nominal.
 - 2. Embedded conduit shall be galvanized rigid steel.
 - 3. Minimum center to center spacing of conduit shall be 6 inches. Conduit runs with multiple conduits spaced 6 inches on center must maintain that spacing until they exit the slab – reduced spacing between conduits as they approach the slab turn out will not be permitted.
 - 4. Embedded conduit shall be placed within the middle third of the concrete section. A maximum of two layers of conduits running in opposing directions shall be permitted within this section.
 - 5. A minimum of 1 inch of concrete shall be maintained between the face of rebar and the face of conduit.
 - 6. Embedded conduit will not be permitted in columns or shear walls, and at shear stud rail locations.
 - 7. Run conduits parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support.
 - 8. Arrange raceways to cross building expansion joints at right angles with expansion fittings.
 - 9. The contractor shall produce layout, placement and fabrication drawings for all embedded conduit. The location of all conduits shall be dimensioned relative to column grid lines, slab edges and one another. Conduits shall be shown in section to demonstrate location within the depth of the slab. These drawings shall be submitted to engineer for review and approval as shop drawings. The Owner's testing and inspection agency shall review the field placement of embedded conduits against the approved shop drawings and shall certify that the conduits have been placed in accordance with the approved shop drawings. This certification shall be provided to owner and engineer prior to pouring concrete.
- J. Raceways Embedded in cast-in-place concrete Slabs

- K. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.
- L. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors, including conductors smaller than No. 4 AWG.
- M. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire.
- N. Raceways for Optical Fiber and Communications Cable: Provide raceways, metallic and nonmetallic, rigid and flexible, as previously indicated herein with minimum size to be 1-inch (25mm) or larger as noted on drawings.
 - 1. Install with a maximum of two 90-degree bends or equivalent for each length of raceway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.
- O. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:
 - 1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
 - 2. Where otherwise required by NFPA 70.
- P. Expansion-Joint Fittings for RNC: Install in each run of aboveground conduit that is located where environmental temperature change may exceed 30 deg F, and that has straight-run length that exceeds 25 feet.
 - 1. Install expansion-joint fittings for each of the following locations, and provide type and quantity of fittings that accommodate temperature change listed for location:
 - a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
 - b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
 - c. Indoor Spaces: Connected with the Outdoors without Physical Separation: 125 deg F temperature change.
 - 2. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change.
 - 3. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at the time of installation.
- Q. Flexible Conduit Connections: Use maximum of 72 inches of flexible conduit for recessed and semirecessed lighting fixtures, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
 - 1. Use LFMC in damp or wet locations subject to severe physical damage.

2. Use LFMC or LFNC in damp or wet locations not subject to severe physical damage.
- R. Flexible metal conduit shall be secured in place at intervals not exceeding 4-1/2 feet and within 12 inches of every outlet box, junction box, cabinet or fitting.
- S. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall.
- T. Set metal floor boxes level and flush with finished floor surface.
- U. Installation of conduit in exposed (areas without ceilings). Conduits shall follow building lines and shall be grouped to present a neat appearance. Conduit bodies (condulets) shall be used to accomplish the installation to keep the conduit as tight as possible to the structure. Diagonal runs of conduit is not permitted in exposed areas. Conduit shall be supported not more than eight feet on center regardless of size. Prior to installation of conduit systems Contractor shall provide layout drawings of conduit system for review by Architect.

3.3 BOX INSTALLATION

- A. Mount outlet boxes flush in areas other than mechanical rooms, electrical rooms, and above removable ceilings. Secure firmly in place and set true and square with finished surfaces. Provide raised covers for boxes as required to suit the wall or ceiling, construction, and finish.
- B. Do not fasten boxes to ceiling support wires or other piping systems.
- C. Install pull and junction boxes above accessible ceilings and in unfinished areas only.
- D. In Accessible Ceiling Areas: Install outlet and junction boxes no more than 6 inches from ceiling access panel or from removable recessed luminaire. Note: Removable luminaires can only be considered an access point for pull and splice boxes (housing no active components nor devices requiring routine maintenance or repair).
- E. Locate flush mounted boxes in masonry walls so that only a corner need be cut from masonry units. Coordinate masonry cutting to achieve neat opening.
- F. Do not install flush mounted boxes back-to-back within the same wall; Install with minimum 6-inch separation. For acoustic rated walls, boxes shall be separated by at least one stud and a minimum 12-inch separation.
- G. Do not use two-gang and multi-gang boxes in such a manner that one section contains a switch or receptacle circuit or combination of such circuits operating at more than 277V.
- H. For boxes mounted in exterior walls install insulation behind outlet boxes to prevent condensation in boxes and air movement. Install boxes without damaging wall insulation or reducing its effectiveness.
- I. All boxes shall be provided with a far side support bracket to prevent movement.
- J. Remove only knockouts as required and plug unused openings. Use threaded plugs for cast metal boxes and snap in metal covers for sheet metal boxes.

- K. Support boxes independently of conduit.
- L. Install stamped steel bridges to fasten flush mounted outlet boxes between studs.
- M. Install adjustable steel channel fasteners for hung ceiling outlet boxes.
- N. Fire-resistance-rated walls and ceilings; Device outlet boxes shall only penetrate one face of a fire-resistance-rated assembly. Steel electrical boxes shall not exceed 16 square inches (i.e. a typical 4" x 4" outlet box), and the sum of such penetrations shall not exceed 100 square inches within 100 square feet of wall or ceiling space. Additionally, electrical boxes on opposite sides of the walls must either be separated by a distance of 24 inches, by a distance not less than the depth of a wall cavity when filled with insulation, by solid fireblocking, by listed putty pads, or by other approved listed materials and methods. Contractor can utilize a shallow (4" x 4" x 1 1/2") depth box to meet the above criteria if; volume of the box meets the minimum conductor fill requirements of the NEC and box is of sufficient depth to accommodate the device and terminations.

3.4 UNDERGROUND CONDUIT INSTALLATION

A. Direct-Buried Conduit:

1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Division 31 Section "Earth Moving" for pipe less than 6 inches in nominal diameter.
2. Install backfill as specified in Division 31 Section "Earth Moving."
3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Division 31 Section "Earth Moving."
4. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.
 - a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete.
 - b. For stub-ups at equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.
5. Warning Tape: Bury warning tapes approximately 12 inches above direct-buried conduits. Refer to Standard Details where applicable.

3.5 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

3.6 PROTECTION

- A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.
 - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
 - 2. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 26 05 33

SECTION 26 05 43 - UNDERGROUND DUCTS AND STRUCTURES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Conduit, ducts, and duct accessories for direct burial and concrete-encased duct banks, and in single duct runs.
 - 2. Handholes and boxes.
- B. Related Sections include the following:
 - 1. Division 07 Section "Joint Sealants"

1.3 DEFINITION

- A. RNC: Rigid nonmetallic conduit.

1.4 SUBMITTALS

- A. Product Data: For the following:
 - 1. Duct-bank materials, including separators and miscellaneous components.
 - 2. Ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
 - 3. Accessories for handholes, boxes, and other utility structures.
 - 4. Warning tape.
- B. Structural delegated design requirements
 - 1. The electrical contractor and the precast underground utility structure manufacturer shall provide calculation and drawing sealed by a structural engineer registered in the Commonwealth of Virginia for the design and installation of the precast handholes as follows:
 - a. Underground precast handholes shall be factory fabricated reinforced concrete, monolithically poured walls and bottom complying with ASTM C858 for design

and manufacturing process. Complete with accessories, hardware, and features as specified herein.

b. The calculation shall include as minimum:

- 1) Live load for units in roadways and other deliberate traffic paths in accordance with AASHTO HB 17, H-20 structural load rating.
- 2) Dead load of vertical and lateral components as determined by structural engineer.
- 3) Hydrostatic load based on water table elevation as provided by civil engineers.
- 4) The manufacturers engineer shall determine rebar size and spacing and length of anti-floatation collar. The collars can be either field or factory installed as determined by manufacturer's engineer.
- 5) Appropriate safety factor of 1.5 or larger shall be used.

C. Shop Drawings for Factory-Fabricated Handholes and Boxes Other Than Precast Concrete: Include dimensioned plans, sections, and elevations, and fabrication and installation details, including the following:

1. Duct entry provisions, including locations and duct sizes
2. Cover design
3. Grounding details
4. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons

D. Duct-Bank Coordination Drawings: Show duct profiles and coordination with other utilities and underground structures.

1. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.
2. All drawings shall be submitted for review and approval prior to commencement of work.

E. Product Certificates: For concrete and steel used in precast handholes, as required by ASTM C 858.

F. Qualification Data: For professional engineer and testing agency.

G. Source quality-control test reports.

H. Field quality-control test reports.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

B. Comply with ANSI C2.

C. Comply with NFPA 70.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver ducts to Project site with ends capped. Store nonmetallic ducts with supports to prevent bending, warping, and deforming.
- B. Store precast concrete and other factory-fabricated underground utility structures at Project site as recommended by manufacturer to prevent physical damage. Arrange so identification markings are visible.
- C. Lift and support precast concrete units only at designated lifting or supporting points.

1.7 PROJECT CONDITIONS

- A. Interruption of Existing Electrical or Communication Services: Do not interrupt services to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 - 1. Notify Construction Manager no fewer than fourteen days in advance of proposed interruption of electrical service.
 - 2. Do not proceed with interruption of services without Construction Manager's and Owner's written permission.

1.8 COORDINATION

- A. Coordinate layout and installation of ducts, handholes, and boxes with final arrangement of other new and existing utilities, site grading, and surface features as determined in the field.
- B. Coordinate elevations of ducts and duct-bank entrances into handholes and boxes with final locations and profiles of ducts and duct banks as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations from those indicated as required to suit field conditions and to ensure that duct runs drain to handholes, and as approved by Architect.

PART 2 - PRODUCTS

2.1 CONDUIT

- A. Rigid Steel Conduit: Galvanized. Comply with ANSI C80.1.
- B. RNC: NEMA TC 2, Type EPC-40-PVC, UL 651, with matching fittings of same material as the conduit, complying with NEMA TC 3 and Type EPC-80-PVC and UL 514B.
- C. Fiber Glass Duct Elbows: NEMA TC 14, UL 2420, with straight end on deep socket PUC couplings. Heavy Wall Construction.

2.2 NONMETALLIC DUCTS AND DUCT ACCESSORIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Allied Tube & Conduit.
 2. Carlon Electrical Products
 3. Cantex, Inc.
 4. CertainTeed Corp.; Pipe & Plastics Group
 5. IPEX Inc.
- B. Underground Plastic Utilities Duct: RNC, NEMA Type EPC-40-PVC and EPC-80-PVC with matching fittings, by the same manufacturer as the duct, complying with NEMA TC 9.
- C. Duct Accessories:
1. Duct Separators: Factory-fabricated rigid PVC interlocking spacers, sized for type and sizes of ducts with which used, and selected to provide minimum duct spacings indicated while supporting ducts during concreting or backfilling.
 2. Warning Tape: Underground-line detectable warning tape specified in Division 26 Section "Identification for Electrical Systems."
 3. All active and spare underground power and communication ducts leaving handholes, entering building foundation walls and floor slabs shall be provided with an inflatable bladder as manufactured by Tyco-Raychem, Product No. RDSS. Refer to manufacturer's recommendations for bladder size and installation methods. Install at both the handhole and at entrance to building.

2.3 FIBER GLASS DUCT ELBOWS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Champion Fiberglass
 2. United Fiberglass
- B. Listing
1. The conduit shall be listed by UL, Underwriters Laboratories, to the UL 2420 Below Ground standard. All conduit shipped shall contain UL labels.
- C. Manufacturing
1. The conduit shall be fiberglass conduit, also known as Reinforced Thermosetting Resin Conduit (RTRC). All conduit shall be heavy wall construction. Tapering is only allowed at the belled end.
 2. The resin system shall be epoxy based, with no fillers. All additives for increasing flame spread and lowering smoke density shall be halogen free.
 3. Carbon black shall be used as ultraviolet inhibitor to protect the conduit and fittings during storage and exposure to the outdoors. Conduit and elbows shall be black in color.

4. The internal conduit and elbow walls shall be smooth and all fibers embedded in the epoxy.
5. All elbows shall meet the nominal radius + or - 2^o. The wall thickness shall meet tolerance as shown below and as shown in NEMA TC 14.

Conduit shall be manufactured with following nominal dimensions:

		Outside Diameter (inch)	Inside Diame- ter (inch)	Wall Thickness (inch)
4"	HW	4.512	4.320	.096
5"	HW	5.600	5.380	.110

Conduit shall be manufactured having non-tapered sections (except for integral belled ends).

6. All elbows shall have either straight ends or deep socket PVC couplings.
7. All conduits and elbows shall be durably and legibly marked in accordance to NEMA TC 14. In addition, the following information shall be included:

NEMA TC 14
 UL 2420 BG (Below Ground)
 Manufacturer and Reseller (if the conduit was modified or bent other than by the manufacturer)
 Date of Manufacturing of conduit and elbows
 Elbows shall be marked with the angle and radius

8. All conduit, elbows and fittings shall be manufactured in the U.S.A. and marked as such.
9. Electrical and Mechanical characteristics shall be per ASTM and API Standards

D. Manufacturer shall have a current Certificate, issued by an independent and accredited company, of compliance with an ISO 9001:2008 Quality Management System.

E. Joining System

1. The conduit shall be supplied with a gasketed joining system which can be used for concrete encasement as well as direct burial installations. This gasketed conduit shall consist of a three-ribbed gasket made from water resistant rubber material. The gasket shall be fit into a permanent groove in the belled end of the conduit. Retainer rings etc. are not permitted and shall not be used in order to create the gasket groove.

F. Toxicity

1. The conduit shall not contain any compounds that can release halogens, i.e. chlorine, bromine, flour and iodine in more than trace amounts when burning. Following shall be the maximum values when tested in accordance to ASTM E-800:

<u>Gases</u>	<u>Values (max p.p.m.)</u>

Hydrogen Chloride	0
Hydrogen Bromide	0
Hydrogen Cyanide	<1
Hydrogen Sulfide	0
Ammonia	0
Aldehydes as HCHO	<10
Oxides of Nitrogen	<50
Carbon Dioxide	<12,500
Carbon Monoxide	<250

G. All Fiber Glass Elbows shall be fire resistant to UL 2515 specifications and shall be halogen free. Plastic duct plugs shall be manufactured from PVC.

H. Environmental

1. Manufacturer shall have a current Certificate, issued by an independent and accredited company, of compliance with an ISO 14001: Environmental Management Systems and Performance.

I. Installation Training

1. Manufacturer shall provide contractor installation training and certification for field cutting, joint preparation, joint assembly, field bending and RTRC field cut sealing (with field cutting sealant).

2.4 PRECAST CONCRETE HANDHOLES AND BOXES

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AC Miller – Basis of Design
2. Oldcastle Precast Group
3. Utility Concrete Products, LLC
4. Utility Vault Co.

C. Comply with ASTM C 858 for design and manufacturing processes, with structural design loading as specified in Part-3, “Underground Enclosure Application” Article and with interlocking mating sections, complete accessories hardware and features.

D. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of handhole or box.

1. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
2. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
3. Cover Legend: Molded lettering, "ELECTRIC", "COMM."

4. Configuration: Units shall be designed for flush burial and have integral closed bottom, unless otherwise indicated.
 5. Anti-Floatation collar.
 6. Extensions and Slabs: Designed to mate with bottom of enclosure. Same material as enclosure.
 - a. Extension shall provide increased depth of 12 inches.
 - b. Slab: Same dimensions as bottom of enclosure, and arranged to provide closure.
 7. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches vertically and horizontally to accommodate alignment variations.
 - a. Windows shall be located no less than 6 inches from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.
 - b. Window opening shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.
 - c. Window openings shall be framed with at least two additional No. 4 steel reinforcing bars in concrete around each opening.
 8. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
 - a. Type and size shall match fittings to duct or conduit to be terminated.
 - b. Fittings shall align with elevations of approaching ducts and be located near interior corners of handholes to facilitate racking of cable.
 9. Handholes 12 inches wide by 24 inches long and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.
- E. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

2.5 HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

- A. Description: Comply with ANSI/SCTE 77 Latest addition.
1. Color: Gray, for other than in lawns. Green for lawn installations.
 2. Configuration: Units shall be designed for flush burial and have open bottom, unless otherwise indicated.
 3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure with minimum rating of Tier 15.
 4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
 5. Cover Legend: Molded lettering, "ELECTRIC."
 6. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.

7. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
 8. Handholes 12 inches wide by 24 inches long and larger shall have factory-installed inserts for cable racks and pulling-in irons.
- B. Polymer Concrete Handholes and Boxes with Polymer Concrete Cover: Molded of sand and aggregate, bound together with a polymer resin, and reinforced with steel or fiberglass or a combination of the two.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Quazite
 - b. Armorcast Products Company
 - c. Carson Industries LLC
 - d. CDR Systems Corporation

2.6 UTILITY STRUCTURE ACCESSORIES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Bilco Company (The)
 2. Campbell Foundry Company
 3. East Jordan Iron Works, Inc.
 4. McKinley Iron Works, Inc.
 5. Neenah Foundry Company
 6. Oldcastle Precast Group
 7. Osburn Associates, Inc.
 8. Pennsylvania Insert Corporation
 9. Riverton Concrete Products; a division of Cretex Companies, Inc.
 10. Utility Concrete Products, LLC
 11. Utility Vault Co.
- C. Duct-Sealing Compound: Nonhardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F. Capable of withstanding temperature of 300 deg F without slump and adhering to clean surfaces of plastic ducts, metallic conduits, conduit coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals.

2.7 SOURCE QUALITY CONTROL

- A. Test and inspect precast concrete utility structures according to ASTM C1037.
- B. Nonconcrete Handhole and Pull-Box Prototype Test: Test prototypes of boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

1. Tests of materials shall be performed by a independent testing agency.
2. Strength tests of complete boxes and covers shall be by either an independent testing agency or the manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.1 UNDERGROUND DUCT APPLICATION

- A. Ducts for Electrical Cables Over 600 V: RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank, unless otherwise indicated.
- B. Ducts for Electrical Feeders 600 V and Less: RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank, unless otherwise indicated.
- C. Ducts for Electrical Branch Circuits: RNC, NEMA Type EPC-80-PVC, in direct-buried duct bank, unless otherwise indicated. This shall only be used when specifically noted on drawings.
- D. Underground Ducts for Telephone, Communications, or Data Utility Service Cables: RNC, NEMA Type EPC-40-PVC, installed in concrete-encased duct bank, unless otherwise indicated.
- E. Underground Ducts for Telephone, Communications, or Data Circuits: RNC, NEMA Type EPC-80-PVC, in direct-buried duct bank, unless otherwise indicated. This shall only be used when specifically noted on drawings.
- F. Underground Ducts Crossing Driveways, Roadways and Railroads: RNC, NEMA Type EPC-40-PVC, in concrete-encased.
- G. Contractor shall sprinkle the red dye mix on top of the wet concrete duct bank prior to concrete set up.

3.2 UNDERGROUND ENCLOSURE APPLICATION

- A. Handholes and Boxes for 600 V and Less, Including Telephone, Communications, and Data Wiring:
 1. Units in Roadways and Other Deliberate Traffic Paths: Precast concrete. AASHTO HB 17, H-20 structural load rating.
 2. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Precast concrete, AASHTO HB 17, H-20 structural load rating.
 3. Units in Sidewalk and Similar Applications with a Safety Factor for Nondeliberate Loading by Vehicles: Precast concrete, AASHTO HB 17, H-10 structural load rating.
 4. Units Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resin, structurally tested according to SCTE 77 with 3000-lbf vertical loading.

3.3 EARTHWORK

- A. Excavation and Backfill: Comply with Division 31 Section "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.
- B. Restore surface features at areas disturbed by excavation and reestablish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling is completed.
- C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Division 32 Sections "Turfs and Grasses" and "Plants."
- D. Cut and patch existing pavement in the path of underground ducts and utility structures according to Division 01 Section "Cutting and Patching."

3.4 DUCT INSTALLATION

- A. Slope: Pitch ducts a minimum slope of 1:300 down toward handholes and away from buildings and equipment.
- B. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48 inches, both horizontally and vertically, at other locations, unless otherwise indicated.
- C. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in same plane.
- D. Underground-Line Detectable Warning Tape
 - 1. Description: Permanent bright-colored, continuous-printed polyethylene tape.
 - 2. Not less than 6 inches wide by 4 mils thick.
 - 3. Compounded for permanent direct-burial services.
 - 4. Provide with continuous metallic strip or core that shall be traceable type.
 - 5. Provided legend shall indicate type of underground service.
- E. Underground-Line Detectable Warning Tape: During backfilling of trenches, install continuous underground line tape directly above line at 12 inches below finished grade. Use multiple tapes where width of multiple lines installed in a common trench on concrete envelope exceeds 16 inches overall width. Space additional tapes 12 inches apart, horizontally.
- F. Duct Entrances to Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inches o.c. for 5-inch ducts, and vary proportionately for other duct sizes.
 - 1. Begin change from regular spacing to end-bell spacing 10 feet from the end bell without reducing duct line slope and without forming a trap in the line.
 - 2. Grout end bells into structure walls from both sides to provide watertight entrances.
- G. Sealing: Provide temporary closure at terminations of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig hydrostatic

pressure. Provide inflatable bladder at last handhole duct entering building and all duct penetrations into building.

H. Pulling Cord: Install 100-lbf- test nylon cord in ducts, including spares.

I. Concrete-Encased Ducts: Support ducts on duct separators.

1. Separator Installation: Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 feet of duct. Secure separators to earth and to ducts to prevent floating during concreting. Stagger separators approximately 6 inches between tiers. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
2. Concreting Sequence: Pour each run of envelope between handholes or other terminations in one continuous operation.
 - a. Start at one end and finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to manufacturer's written recommendations or use other specific measures to prevent expansion-contraction damage.
 - b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch reinforcing rod dowels extending 18 inches into concrete on both sides of joint near corners of envelope.
3. Pouring Concrete: Spade concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Use a plank to direct concrete down sides of bank assembly to trench bottom. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application.
4. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
5. Depth: Install top of duct bank at least 24 inches below finished grade in areas not subject to deliberate traffic, and at least 30 inches below finished grade in deliberate traffic paths for vehicles, unless otherwise indicated.
6. Stub-Ups: Use manufactured fiberglass duct elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Extend concrete encasement throughout the length of the elbow. Protect stub-ups during construction.
7. Contractor shall sprinkle the red dye mix on top of wet concrete duct bank prior to concrete set up.

J. Direct-Buried Duct Banks:

1. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.
2. Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 feet of duct. Secure separators to earth and to ducts to prevent displacement during backfill and yet permit linear duct movement due to expansion and contraction as temperature changes. Stagger spacers approximately 6 inches between tiers.

3. Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as specified in Division 31 Section "Earth Moving" for pipes less than 6 inches in nominal diameter.
4. Install backfill as specified in Division 31 Section "Earth Moving."
5. After installing first tier of ducts, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand-place backfill to 4 inches over ducts and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction as specified in Division 31 Section "Earth Moving."
6. Install ducts with a minimum of 3 inches between ducts for like services and 6 inches between power and signal ducts.
7. Depth: Install top of duct bank at least 30 inches below finished grade, unless otherwise indicated.
8. Install manufactured fiberglass conduit elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Encase elbows for stub-up ducts throughout the length of the elbow. Protect stub-ups during construction.
9. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.
 - a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete.
 - b. For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.

3.5 INSTALLATION OF CONCRETE HANDHOLES AND BOXES

A. Precast Concrete Handhole Installation:

1. Comply with ASTM C 891, unless otherwise indicated.
2. Install units level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances.
3. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

B. Elevations:

1. Install handholes with bottom below the frost line, below grade.
2. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch above finished grade.

C. Waterproofing: Apply waterproofing to exterior surfaces of handholes after concrete has cured at least three days. Waterproofing materials and installation are specified in Division 07 Section "Elastomeric Sheet Waterproofing or Thermoplastic Sheet Waterproofing." After ducts have been connected and grouted, and before backfilling, waterproof joints and connections and touch up abrasions and scars.

- D. Hardware: Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated.
- E. Field-Installed Bolting Anchors in Concrete Handholes: Do not drill deeper than 2 inches for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.

3.6 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

- A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of ducts, and seal joint between box and extension as recommended by the manufacturer.
- B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.
- C. Elevation: In paved areas and trafficways, set so cover surface will be flush with finished grade. Set covers of other handholes 1 inch above finished grade.
- D. Install handholes and boxes with bottom below the frost line, below grade.
- E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in the enclosure.
- F. Field-cut openings for ducts and conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
- G. For enclosures installed in asphalt paving and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box cover frame. Bottom of ring shall rest on compacted earth.
 - 1. Concrete: 3000 psi, 28-day strength, complying with Division 03 Section "Cast-in-Place Concrete," with a troweled finish.
 - 2. Dimensions: 10 inches wide by 12 inches deep.

3.7 GROUNDING

- A. Ground underground ducts and utility structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."

3.8 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections and prepare test reports:
 - 1. Demonstrate capability and compliance with requirements on completion of installation of underground ducts and utility structures.
 - 2. Pull aluminum or wood test mandrel through duct to prove joint integrity and test for out-of-round duct. Provide mandrel equal to 80 percent fill of duct. If obstructions are indicated, remove obstructions and retest.
 - 3. Test manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Correct deficiencies and retest as specified above to demonstrate compliance.

3.9 CLEANING

- A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.
- B. Clean internal surfaces of handholes. Remove foreign material.

END OF SECTION 26 05 43

SECTION 26 05 53 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Identification for raceway and metal-clad cable.
 - 2. Identification for conductors and communication and control cable.
 - 3. Underground-line warning tape.
 - 4. Warning labels and signs.
 - 5. Instruction signs.
 - 6. Equipment identification labels.
 - 7. Miscellaneous identification products.

1.3 SUBMITTALS

- A. Product Data: For each electrical identification product indicated.
- B. Identification Schedule: An index of nomenclature of electrical equipment and system components used in identification signs and labels.

1.4 QUALITY ASSURANCE

- A. Comply with ANSI A13.1 and ANSI C2.
- B. Comply with NFPA 70.
- C. Comply with 29 CFR 1910.145.

1.5 COORDINATION

- A. Coordinate identification names, abbreviations, colors, and other features with requirements in the Contract Documents, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual, and with those required by codes, standards, and 29 CFR 1910.145. Use consistent designations throughout Project.

- B. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- C. Coordinate installation of identifying devices with location of access panels and doors.
- D. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 RACEWAY AND METAL-CLAD CABLE IDENTIFICATION MATERIALS

- A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.
- B. Color for Printed Legend:
 - 1. Power Circuits: Black letters on an orange field.
 - 2. Fire Alarm: White letters on red field.
 - 3. Communication Systems: Per vendor/owner requirements.
 - 4. Legend: Indicate system or service and voltage, if applicable.
- C. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.
- D. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.
- E. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inches long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.
- F. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; 2 inches wide; compounded for outdoor use.

2.2 CONDUCTOR AND COMMUNICATION- AND CONTROL-CABLE IDENTIFICATION MATERIALS

- A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils thick by 1 to 2 inches wide.
- B. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.
- C. Aluminum Wraparound Marker Labels: Cut from 0.014-inch-thick aluminum sheet, with stamped, embossed, or scribed legend, and fitted with tabs and matching slots for permanently securing around wire or cable jacket or around groups of conductors.

- D. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch, with stamped legend, punched for use with self-locking nylon tie fastener.
- E. Write-On Tags: Polyester tag, 0.015 inch thick, with corrosion-resistant grommet and polyester or nylon tie for attachment to conductor or cable.
 - 1. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.

2.3 UNDERGROUND-LINE WARNING TAPE

- A. Description: Permanent, bright-colored, continuous-printed, polyethylene tape.
 - 1. Not less than 6 inches wide by 4 mils thick.
 - 2. Compounded for permanent direct-burial service.
 - 3. Embedded continuous metallic strip or core.
 - 4. Printed legend shall indicate type of underground line.

2.4 WARNING LABELS AND SIGNS

- A. Comply with NFPA 70 and 29 CFR 1910.145.
- B. Self-Adhesive Warning Labels: Factory printed, multicolor, pressure-sensitive adhesive labels, configured for display on front cover, door, or other access to equipment, unless otherwise indicated.
- C. Baked-Enamel Warning Signs: Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for application. 1/4-inch grommets in corners for mounting. Nominal size, 7 by 10 inches.
- D. Metal-Backed, Butyrate Warning Signs: Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396-inch galvanized-steel backing; and with colors, legend, and size required for application. 1/4-inch grommets in corners for mounting. Nominal size, 10 by 14 inches.
- E. Warning label and sign shall include, but are not limited to, the following legends:
 - 1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
 - 2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES."
 - 3. At each service disconnect, provide plaque that denotes all other services, feeders, and branch circuits supplying the building and the areas they serve.

2.5 INSTRUCTION SIGNS

- A. Engraved, laminated acrylic or melamine plastic, minimum 1/16 inch thick for signs up to 20 sq. in. and 1/8 inch thick for larger sizes.

1. Engraved legend with black letters on white face.
2. Punched or drilled for mechanical fasteners.
3. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.6 EQUIPMENT AND DEVICE IDENTIFICATION LABELS

- A. Engraved, Laminated Acrylic or Melamine Label: Punched or drilled for screw mounting. White letters on a dark-gray background. Minimum letter height shall be 3/8 inch.
- B. Stenciled Legend: In nonfading, waterproof, black ink or paint. Minimum letter height shall be 1 inch.

2.7 MISCELLANEOUS IDENTIFICATION PRODUCTS

- A. Cable Ties: Fungus-inert, self-extinguishing, 1-piece, self-locking, Type 6/6 nylon cable ties.
 1. Minimum Width: 3/16 inch.
 2. Tensile Strength: 50 lb, minimum.
 3. Temperature Range: Minus 40 to plus 185 deg F.
 4. Color: Black, except where used for color-coding.
- B. Paint: Paint materials and application requirements are specified in Division 09 painting Sections.
- C. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

PART 3 - EXECUTION

3.1 APPLICATION

- A. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits More Than 30 A: Identify with orange self-adhesive vinyl label.
- B. Accessible Raceways and Cables of Auxiliary Systems: Identify the following systems with color-coded, self-adhesive vinyl tape applied in bands:
 1. Fire Alarm System: Red.
 2. Fire-Suppression Supervisory and Control System: Red and yellow.
 3. Combined Fire Alarm and Security System: Red and blue.
 4. Security System: Blue and yellow.
 5. Mechanical and Electrical Supervisory System: Green and blue.
 6. Telecommunication System: Green and yellow.
 7. Control Wiring: Green and red.
- C. Emergency Systems: Each junction and pull box shall be painted orange. Use black indelible liquid marker to label "EMERG" in 3/8 inch letters minimum.

- D. Fire Alarm System: Each junction and pull box shall be painted Red. Use Black indelible liquid marker to label "FA" in 3/8 inch letters minimum.
- E. Feeders Shown on Single Line Diagram: Each junction and pull box shall be marked with black indelible liquid marker with the assigned feeder number (example: "FDR #3B) in 3/8 inch letters minimum.
- F. Power-Circuit Conductor Identification: For primary and secondary conductors No. 1/0 AWG and larger in vaults, pull and junction boxes, manholes, and handholes use color-coding conductor tape and write-on tags. Identify source and circuit number of each set of conductors. For single conductor cables, identify phase in addition to the above.
- G. Branch-Circuit Conductor Identification: Where there are conductors for more than three branch circuits in same junction or pull box, use color-coding conductor tape and write-on tags. Identify each ungrounded conductor according to source and circuit number. Each junction and pull box shall be marked with black indelible liquid marker with the assigned circuit number source panels and service voltage. (Example: 120V, AP-FL-B-1 CKT #14).
- H. Conductors to Be Extended in the Future: Attach write-on tags and marker tape to conductors and list source, service voltage and circuit number.
- I. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, signal, sound, intercommunications, voice, and data connections.
 - 1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
 - 2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.
 - 3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and Operation and Maintenance Manual.
- J. Locations of Underground Lines: Identify with underground-line warning tape for power, lighting, communication, and control wiring and optical fiber cable. Install underground-line warning tape for both direct-buried cables and cables in raceway.
- K. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Comply with 29 CFR 1910.145 and apply baked-enamel warning signs. Identify system voltage with black letters on an orange background. Apply to exterior of door, cover, or other access.
 - 1. Equipment with Multiple Power or Control Sources: Apply to door or cover of equipment including, but not limited to, the following:
 - a. Power transfer switches.
 - b. Controls with external control power connections.
 - 2. Equipment Requiring Workspace Clearance According to NFPA 70: Unless otherwise indicated, apply to door or cover of equipment but not on flush panelboards and similar equipment in finished spaces.

L. Instruction Signs:

1. Operating Instructions: Install instruction signs to facilitate proper operation and maintenance of electrical systems and items to which they connect. Install instruction signs with approved legend where instructions are needed for system or equipment operation.
2. Emergency Operating Instructions: Install instruction signs with white legend on a red background with minimum 3/8-inch-high letters for emergency instructions at equipment used for power transfer and Energy Storage.

M. Equipment Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and Operation and Maintenance Manual. Apply labels to disconnect switches and protection equipment, central or master units, control panels, control stations, terminal cabinets, and racks of each system. Systems include power, lighting, control, communication, signal, monitoring, and alarm systems unless equipment is provided with its own identification.

All switchboards, distribution panels and panelboards shall also indicate the name of the device or equipment where the power supply originates.

Example: Panel AP-1
 Fed from Substation SS-1

1. Labeling Instructions:

- a. Indoor Equipment: Engraved, laminated acrylic or melamine label. Unless otherwise indicated, provide a single line of text with 1/2-inch-high letters on 1-1/2-inch-high label; where 2 lines of text are required, use labels 2 inches high.
- b. Outdoor Equipment: Engraved, laminated acrylic or melamine label.
- c. Elevated Components: Increase sizes of labels and letters to those appropriate for viewing from the floor.

2. Equipment to Be Labeled:

- a. Panelboards, electrical cabinets, and enclosures.
- b. Access doors and panels for concealed electrical items.
- c. Electrical switchgear and switchboards.
- d. Transformers.
- e. Electrical substations.
- f. Emergency system boxes and enclosures.
- g. All other boxes and enclosures.
- h. Disconnect switches.
- i. Enclosed circuit breakers.
- j. Motor starters.
- k. Push-button stations.
- l. Power transfer equipment.
- m. Contactors.
- n. Remote-controlled switches, dimmer modules, and control devices.
- o. Battery inverter units.
- p. Battery racks.
- q. Power-generating units.
- r. Voice and data cable terminal equipment.

- s. Master clock and program equipment.
 - t. Television/audio components, racks, and controls.
 - u. Fire-alarm control panel and annunciators.
 - v. Security and intrusion-detection control stations, control panels, terminal cabinets, and racks.
 - w. Monitoring and control equipment.
 - x. Uninterruptible power supply equipment.
 - y. Terminals, racks, and patch panels for voice and data communication and for signal and control functions.
3. Devices to be Labeled:
- a. Receptacles
 - 1) Normal Power Receptacles: Provide self-adhesive 3/8 inch high label with 3/16 inch high black lettering mounted at top of device cover plate.
 - 2) Wrap edges of self-adhesive label around edges of cover plate such that label is pressed between cover plate and wall.
 - 3) Lettering may be printed either on the back or front of label. Lettering shall be permanently affixed to label and resist damage from normal building operations.
 - 4) Label shall indicate branch circuit number and panelboard from which device is fed. Example: "A-1C-1 #2". Review nomenclature with the Owner.
4. Panel Schedule: For all new and/or altered existing panelboards, provide neatly typed Excel format panel schedules for each panel. Provide Owner with an electronic copy of Excel files for all panel schedules and post copy of each printed schedule on inside of panelboard door. Refer to 'Panelboards' Section 26 24 16 for additional requirements. Handwritten panel scheduels shall not be acceptable.

3.2 INSTALLATION

- A. Verify identity of each item before installing identification products.
- B. Location: Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment.
- C. Apply identification devices to surfaces that require finish after completing finish work.
- D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.
- E. Attach nonadhesive signs and plastic labels with screws and auxiliary hardware appropriate to the location and substrate.
- F. System Identification Color Banding for Raceways and Cables: Each color band shall completely encircle cable or conduit. Place adjacent bands of two-color markings in contact, side by side. Locate bands at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.

- G. Color-Coding for Phase and Voltage Level Identification, 600 V and Less: Use the colors listed below for ungrounded service, feeder, and branch-circuit conductors.
1. Color shall be factory applied.
 2. Colors for 208/120-V Circuits:
 - a. Phase A: Black.
 - b. Phase B: Red.
 - c. Phase C: Blue.
 - d. Neutral: White.
 3. Colors for 480/277-V Circuits:
 - a. Phase A: Brown.
 - b. Phase B: Orange.
 - c. Phase C: Yellow.
 - d. Neutral: Gray.
 4. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Locate bands to avoid obscuring factory cable markings.
- H. Aluminum Wraparound Marker Labels and Metal Tags: Secure tight to surface of conductor or cable at a location with high visibility and accessibility.
- I. Underground-Line Warning Tape: During backfilling of trenches install continuous underground-line warning tape directly above line at 12 inches below finished grade. Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches overall.
- J. Painted Identification: Prepare surface and apply paint according to Division 09 painting Sections.

END OF SECTION 26 05 53

SECTION 26 05 73 - ELECTRICAL SYSTEMS STUDIES AND ANALYSIS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes computer-based, fault-current, arc flash hazard analysis and overcurrent protective device coordination studies. Protective devices shall be set based on results of the protective device coordination study.
 - 1. Coordination of series-rated devices is permitted only where series ratings are allowed and indicated on Drawings and/or schedules.

1.3 SUBMITTALS

- A. Product Data: For computer software program to be used for studies.
- B. Product Certificates: For coordination-study and fault-current-study computer software programs, certifying compliance with IEEE 399.
- C. Qualification Data: Submittal information shall be signed and sealed by a registered professional engineer (licensed in the State where project is located) indicating that the studies and analysis are in compliance with applicable codes and the requirements of this specification. Also refer to Section 1.4 "Quality Assurance" for qualification requirements.
- D. Other Action Submittals: The following submittals shall be made after the approval process for system protective devices has been completed. Provide five (5) bound copies of complete final report and CD in PDF format.
 - 1. Coordination-study input data, including completed computer program input data sheets.
 - 2. Study and Equipment Evaluation Reports.
 - 3. Coordination-Study Report.
 - 4. One-Line Diagrams.
 - 5. Description, Purpose and Scope of the Study.
 - 6. PPE Ratings.
 - 7. Incident Energy and Flash Protection Boundary Calculations.
- E. Study: The short-circuit and protective device coordination studies shall be submitted to the design engineer prior to receiving final approval of the distribution equipment shop drawings and/or prior to release of equipment drawings for manufacturing. If formal completion of the studies may cause delay in equipment manufacturing, approval from the Design Engineer may be

obtained for preliminary submittal of sufficient study data to ensure that the selection of device and characteristics will be satisfactory. Protective device coordination in regards to selective coordination is required prior to the applicable equipment review process.

1.4 QUALITY ASSURANCE

- A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are not acceptable.
- B. Coordination-Study Specialist Qualifications: An entity experienced in the application of computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.
 - 1. Professional Electrical Engineer, licensed in the state where Project is located, shall be responsible for the study. All elements of the study shall be performed under the direct supervision and control of engineer. The Registered Professional Engineer shall be a full-time employee of the Engineering Services Organization.
- C. Comply with IEEE 242 for short-circuit currents and coordination time intervals.
- D. Comply with IEEE 399 for general study procedures.
- E. Comply with NFPA 70 and 70E.

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE DEVELOPERS

- A. Computer Software Developers: Subject to compliance with requirements, provide products by one of the following:
 - 1. SKM Systems Analysis, Inc.

2.2 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

- A. Comply with IEEE 399.
- B. Analytical features of fault-current-study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.
- C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.

- D. Computer software program capable of performing an Arch Flash Hazard Analysis in accordance with IEEE 1584 equations that are presented in NFPA 70E-2015, Annex D.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance.
 - 1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.2 POWER SYSTEM DATA

- A. Gather and tabulate the following input data to support coordination study:
 - 1. Product Data for overcurrent protective devices specified in other Division 26 Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings. The Contractor shall expedite collection of the data to assure completion of the studies as required for final approval of the distribution equipment shop drawings and/or prior to the release of the equipment for manufacturing.
 - 2. Maximum available fault current and impedance of utility service entrance.
 - 3. Electrical Distribution System Diagram: In hard-copy and electronic-copy formats, showing the following:
 - a. Circuit-breaker and fuse-current ratings and types.
 - b. Relays and associated power and current transformer ratings and ratios.
 - c. Transformer kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.
 - d. Cables: Indicate conduit material, sizes of conductors, conductor material, insulation, and length.
 - e. Motor horsepower and code letter designation according to NEMA MG 1.
 - 4. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram, showing the following:
 - a. Special load considerations, including starting inrush currents and frequent starting and stopping.
 - b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
 - c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
 - d. Ratings, types, and settings of utility company's overcurrent protective devices.
 - e. Special overcurrent protective device settings or types stipulated by utility company.

- f. Time-current-characteristic curves of devices indicated to be coordinated.
- g. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
- h. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
- i. Panelboards, switchboards, motor-control center ampacity, and interrupting rating in amperes rms symmetrical.

3.3 FAULT-CURRENT STUDY

- A. Calculate the maximum available short-circuit current in amperes rms symmetrical at circuit-breaker positions of the electrical power distribution system. The calculation shall be for a current immediately after initiation and for a three-phase bolted short circuit at each of the following:
 - 1. Switchboard bus.
 - 2. Distribution panelboard.
 - 3. Branch circuit panelboard.
 - 4. Elevator controllers.
 - 5. Mechanical equipment starters/controllers
- B. Study electrical distribution system from normal power sources throughout electrical distribution system for Project.
- C. Calculate momentary and interrupting duties on the basis of maximum available fault current.
- D. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with IEEE 141, IEEE 241 and IEEE 242.
 - 1. Transformers:
 - a. ANSI C57.12.10
 - b. ANSI C57.12.40
 - c. ANSI C57.12.22.
 - d. IEEE C57.96.
 - e. IEEE C57.12.00.
 - 2. Low-Voltage Circuit Breakers: IEEE 1015 and ANSI C37.13.
 - 3. Low-Voltage Fuses: IEEE C37.46.
- E. Study Report:
 - 1. Show calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on electrical distribution system diagram.
 - 2. Show interrupting (5 cycle) and time delayed currents (6 cycles and above) on medium voltage breakers as needed to set relays and access the sensitivity of overcurrent relays.
- F. Equipment Evaluation Report:

1. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
2. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.
3. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

3.4 COORDINATION STUDY

- A. Perform coordination study using approved computer software program. Prepare a written report using results of fault-current study. Comply with IEEE 399.
 1. Calculate the maximum and minimum 1/2-cycle short-circuit currents.
 2. Calculate the maximum and minimum interrupting duty (5 cycles to 2 seconds) short circuit current.
- B. Comply with IEEE 14,1 IEEE 241, IEEE 242 recommendations for fault currents and time intervals.
- C. Transformer Primary Overcurrent Protective Devices:
 1. Device shall not operate in response to the following:
 - a. Inrush current when first energized.
 - b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
 - c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
- D. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.
- E. Coordination-Study Report: Prepare a written report indicating the following results of coordination study:
 1. Tabular Format of Settings Selected for Overcurrent Protective Devices:
 - a. Device tag.
 - b. Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.
 - c. Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.
 - d. Fuse-current rating and type.
 - e. Ground-fault relay-pickup and time-delay settings.

2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Show the following information:
 - a. Device tag.
 - b. Voltage and current ratio for curves.
 - c. Three-phase and single-phase damage points for each transformer.
 - d. No damage, melting, and clearing curves for fuses.
 - e. Cable damage curves.
 - f. Transformer inrush points.
 - g. Maximum fault-current cutoff point.
- F. Completed data sheets for setting of overcurrent protective devices.

3.5 ARC FLASH HAZARD ANALYSIS

- A. The arc flash hazard analysis shall be performed according to the IEEE 1584 equations that are presented in NFPA70E-2009, Annex D.
- B. The short circuit calculations and the clearing times of the phase overcurrent devices will be retrieved from the short circuit and coordination study model.
- C. The flash protection boundary and the incident energy shall be calculated at all significant new equipment locations in the electrical distribution system (transformers, switchboards, automatic transfer switches, distribution panelboards and panelboards) where work could be performed on energized parts.
- D. The Arc-Flash Hazard Analysis shall include all significant locations in 208-volt systems fed from transformers equal to or greater than 75 kVA.
- E. Safe working distances shall be specified for calculated fault locations based upon the calculated arc flash boundary considering an incident energy of 1.2 cal/cm².
- F. The Arc Flash Hazard analysis shall include calculations for maximum and minimum contributions of fault current magnitude. The minimum calculation shall assume that the utility contribution is at a minimum and shall assume a minimum motor load. Conversely, the maximum calculation shall assume a maximum contribution from the utility and shall assume motors to be operating under full-load conditions.
- G. Arc flash computation shall include both line and load side of main breaker calculations, where necessary.
- H. Arc Flash calculations shall be based on actual over current protective device clearing time. Maximum clearing time will be capped at 2 seconds based on IEEE 1584-2002 section B1.2. The arc flash analysis shall be based on the lowest clearing time setting of the over current protective device to minimize the incident energy level without compromising selective coordination.

3.6 FIELD ADJUSTMENT

- A. Adjust protective device settings according to the recommended settings table provided by the coordination study. Field adjustments to be completed by the engineering service division of the equipment manufacturer under the Startup and Acceptance Testing contract portion.
- B. Make minor modifications to equipment as required to accomplish conformance with short circuit and protective device coordination studies.
- C. Notify Project Office in writing of any required major equipment modifications.
- D. Following completion of all studies, acceptance testing and startup by the field engineering service division of the equipment manufacturer, a two-year warranty shall be provided on all components manufactured by the engineering service parent manufacturing company.

3.7 ARC FLASH WARNING LABELS

- A. The vendor shall provide a 3.5 in. x 5 in. thermal transfer type label of high adhesion polyester for each work location device analyzed.
- B. The label shall have an orange header with the wording, “WARNING, ARC FLASH HAZARD”, and shall include the following information:
 - 1. Location designation
 - 2. Nominal voltage
 - 3. Flash protection boundary
 - 4. Hazard risk category
 - 5. Incident energy range
 - 6. Working distance
 - 7. Engineering report number, revision number and issue date.
 - 8. PPE Ratings/classification
- C. Labels shall be machine printed, with no field markings.
- D. Arc flash labels shall be provided in the following manner and all labels shall be based on recommended overcurrent device settings.
 - 1. For each 480 and applicable 208-volt panelboards, one arc flash label shall be provided.
 - 2. For each low voltage switchboard, one arc flash label shall be provided.
 - 3. For each distribution panelboard, one flash label shall be provided.
 - 4. For each panelboard, one flash label shall be provided.
- E. Labels shall be field installed by the engineering service division of the equipment manufacturer under the Startup and Acceptance Testing contract portion.

3.8 ARC FLASH HAZARD TRAINING

- A. The equipment vendor shall train Owner’s personnel of the potential arc flash hazards associated with working on energized equipment (minimum of 8 hours). Maintenance procedures in accordance

with the requirements of NFPA 70E, Standard for Electrical Safety Requirements for Employee Workplaces, shall be provided in the equipment manuals. The training shall be certified for continuing education units (CEUs) by the International Association for Continuing Education Training (IACET). Provide the video of the training recorded on DVD to the Owner.

END OF SECTION 26 05 73

SECTION 26 09 23 - LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following lighting control devices:
 - 1. Outdoor and indoor photoelectric switches.
 - 2. Indoor occupancy sensors.
 - 3. Lighting contactors.
 - 4. Emergency shunt relays.
 - 5. Wall box dimmers.
- B. Related Sections include the following:
 - 1. Division 26 Section "Network Lighting Controls" for low-voltage, manual and programmable lighting control systems.
 - 2. Division 26 Section "Wiring Devices" for manual light switches.

1.3 DEFINITIONS

- A. LED: Light-emitting diode.
- B. PIR: Passive infrared.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Show installation details for occupancy and light-level sensors.
 - 1. Interconnection diagrams showing field-installed wiring.
- C. Occupancy Sensor Submittals
 - 1. Submit data sheets on sensors control modules, wiring diagrams and any related accessories.
 - 2. Submit shop drawings showing sensor layout and coverage pattern on floor plans. Layout shown on floor plans is based on Hubbell Building Automation.

3. Confirm finish of occupancy sensor during shop drawing submittal process, finish to be determined by Architect.

D. Occupancy Sensor Contract Close-Out

1. Provide operating instructions, maintenance manuals and warranty information to Owner.
2. Provide as-built drawings of sensor system wiring.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.6 COORDINATION

- A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.1 OUTDOOR PHOTOELECTRIC SWITCHES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Lutron
 2. Lithonia Lighting; Acuity Lighting Group, Inc.
 3. Square D; Schneider Electric
 4. Eaton
 5. Watt Stopper (The)
 6. Hubbell
- B. Description: Solid state, with SPST or DPST dry contacts rated for 1800-VA tungsten or 1000-VA inductive, to operate connected relay, contactor coils, or microprocessor input; complying with UL 773A.
1. Light-Level Monitoring Range: 1.5 to 10 fc, with an adjustment for turn-on and turn-off levels within that range, and a directional lens in front of photocell to prevent fixed light sources from causing turn-off.
 2. Time Delay: 15-second minimum, to prevent false operation.

3. Surge Protection: Metal-oxide varistor, complying with IEEE C62.41.1, IEEE C62.41.2, and IEEE 62.45 for Category A1 locations.
 4. Mounting: Twist lock complying with IEEE C136.10, with base-and-stem mounting or stem-and-swivel mounting accessories as required to direct sensor to the north sky exposure.
- C. Description: Solid state, with SPST or DPST dry contacts rated for 1800 VA to operate connected load, relay, or contactor coils; complying with UL 773.
1. Light-Level Monitoring Range: 1.5 to 10 fc, with an adjustment for turn-on and turn-off levels within that range.
 2. Time Delay: 30-second minimum, to prevent false operation.
 3. Lightning Arrester: Air-gap type.
 4. Mounting: Twist lock complying with IEEE C136.10, with base.

2.2 INDOOR PHOTOELECTRIC SWITCHES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- C. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
1. Lutron
 2. Eaton Electrical Inc; Cutler-Hammer Products
 3. Lithonia Lighting; Acuity Lighting Group, Inc.
 4. Square D; Schneider Electric
 5. Watt Stopper (The)
- D. Ceiling-Mounted Photoelectric Switch: Solid-state, light-level sensor unit, with separate relay unit mounted on luminaire, to detect changes in lighting levels that are perceived by the eye. Cadmium sulfide photoresistors are not acceptable.
1. Sensor Output: Contacts rated to operate the associated relay, complying with UL 773A. Sensor shall be powered from the relay unit.
 2. Relay Unit: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Power supply to sensor shall be 24-V dc, 150-mA, Class 2 power source as defined by NFPA 70.
 3. Light-Level Monitoring Range: 10 to 200 fc, with an adjustment for turn-on and turn-off levels within that range.
 4. Time Delay: Adjustable from 5 to 300 seconds to prevent cycling, with deadband adjustment.
 5. Indicator: Two LEDs to indicate the beginning of on-off cycles.

2.3 INDOOR OCCUPANCY SENSORS

- A. Manufacturers: Subject to compliance with requirements and basis of design, provide products by one of the following:
1. Hubbell Lighting (basis of design)
 2. Leviton Mfg. Company Inc.
 3. Lithonia Lighting; Acuity Lighting Group, Inc.
 4. Lutron
 5. Sensor Switch, Inc.
 6. Watt Stopper (The)
- B. Quality Assurance
1. The manufacturer shall have a minimum of five years of experience in the sensor and lighting control industry.
 2. Sensors and related relays shall be compatible with the specific lighting types controlled.
 3. All sensors shall be of the same manufacturer, mixing brands of sensors is not acceptable.
 4. All sensors and related equipment shall have a five-year warranty.
 5. All sensors and control modules connected to more than 50VAC shall be listed by Underwriters Laboratories.
 6. All sensors and related equipment shall be manufactured in the United States of America.
- C. General Description: Wall- or ceiling-mounting, solid-state units with a separate relay unit.
1. Operation: Unless otherwise indicated, turn lights on when covered area is occupied and off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
 2. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the relay unit.
 3. Relay Unit: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Power supply to sensor shall be 24-V dc, 150-mA, Class 2 power source as defined by NFPA 70.
 4. Mounting:
 - a. Sensor: Suitable for mounting in any position on a standard outlet box.
 - b. Relay: Externally mounted through a 1/2-inch knockout in a standard electrical enclosure.
 - c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
 5. Indicator: LED, to show when motion is being detected during testing and normal operation of the sensor.
 6. Bypass Switch: Override the on function in case of sensor failure.
 7. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc; keep lighting off when selected lighting level is present.
- D. Dual-Technology Type: Detect occupancy by using a combination of PIR and ultrasonic detection methods in area of coverage. Particular technology or combination of technologies that controls on-off functions shall be selectable in the field by operating controls on unit. All sensors shall have selectable auto-on/auto-off and manual-on/auto-off operations.

1. Sensitivity Adjustment: Separate for each sensing technology.
2. Detector Sensitivity: Detect occurrences of 6-inch- minimum movement of any portion of a human body that presents a target of not less than 36 sq. in., and detect a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical manner at an approximate speed of 12 inches.
3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. when mounted on a 96-inch-high ceiling.
4. Occupancy sensors shown on floor plans are based on the following Hubbell catalogue numbers. Approved equal manufacturers must demonstrate equal coverage patterns and equal characteristics to the specified sensors.

Ceiling Mounted Dual Technology

	<u>Sensor Hubbell Cat. No</u>	<u>Application Area</u>
A..	OMNI-DT2000	1000 to 2000 sq.ft. area
B..	OMNI-DT1000	500 to 1000 sq.ft. area
C.	OMNI - DT500	Up to 500 sq.ft. area

5. Wall-switch sensors – Dual/Adaptive Technology
 - a. Single-relay: Hubbell Cat. No. LH-MTS1-HL; Two-relay/dual switch: Hubbell Cat. No. LH-MTD2-W.
 - b. Description: Adaptive-technology type, 120/277 V, adjustable time delay up to 20 minutes, 180-degree field of view, with a minimum coverage area of 1000 sq. ft.
6. Long-Range Wall-Switch Sensors:
 - a. Hubbell; LODT
 - b. Description: Dual technology, with both passive-infrared- and ultrasonic-type sensing, 120/277 V, adjustable time delay up to 30 minutes, 110-degree field of view, and a minimum coverage area of 1200 sq. ft.
7. All ceiling mounted occupancy sensors, and long range wall-switch sensors require the use of a power supply, Hubbell Cat. No. MP-Power Pack or approved equal. Ceiling mounted occupancy sensors in rooms controlling 120V and 277V luminaires require an additional auxiliary relay, Hubbell Cat. No. MP-S auxiliary relay or approved equal. Contractor is responsible for field verification of required number of power packs:
 - a. One power pack is required for each circuit to be controlled
 - b. One Power pack is required for every three sensors in the zone.
 - c. If multiple circuits are to be controlled by a sensor, an auxiliary relay can be used in conjunction with the power pack.
 - d. The maximum number of sensors that can be put on a power pack is to be reduced by one for each slave pack used.
8. Where ceiling mounted occupancy sensors are provided, provide local wall switch for additional user control, to turn "off" lights when room is occupied.
9. Wall-mounted occupancy sensors shall have manual "on/off" override.

2.4 WALL BOX DIMMERS

- A. Manufacturers: Subject to compliance with requirements and basis of design, provide products by one of the following:
1. Lutron
 2. Hubbell
 3. Leviton
 4. Watt Stopper
 5. Acuity
 6. Eaton
- B. Controls
1. Performance
 - a. Dimmers shall provide full-range, continuously variable control of light intensity.
 - b. Controls shall fit a 1 inch wide, 1.5 inch tall wallplate opening with a vertical linear-slide. Controls shall be thin profile with no exposed heatsink/yoke. Unless otherwise specified, controls shall have a matte finish.
 - c. Controls shall provide a vertical slider allowing the light level or fan speed to be set by the user. Provide "preset" dimmers where the on/off function is independent of the dimmer slider position. This preset function shall be provided as a push on/push off switch integral to the slider knob and visibly distinct from the slider. For preset dimmers, when the lights are on, the slider shall change the light level and when the lights are off, the slider shall preselect the light level the lights will turn on to.
 - d. Control on/off function must be accomplished utilizing a mechanical air-gap switch to totally disconnect power from the load during "off" condition, no leakage current shall be present at the fixture(s).
 - e. Slider shall be captured behind wallplate.
 - f. Preset dimmers shall be capable of multi-location on and mechanical air-gap off using standard 3-way and 4-way switches.
 - g. Controls shall be able to have their visible plastic parts replaced, for color changes in the field, without removing the body of the control from the wall and without requiring special tools.
 - h. Within rated capacity, dimmers shall be available for direct control of incandescent, electronic low voltage, magnetic low voltage, and fluorescent.
 - i. Controls shall be capable of operating at the rated capacity; this includes modified capacities for ganging configurations which require the removal of fins. Operation at rated capacity shall be possible across the full ambient temperature range without shortening design lifetime.
 - j. Dimmer shall provide smooth and continuous Square Law dimming curve, for the full slider travel, on their rated load.
 - k. Controls shall meet the applicable requirements of UL 20 and UL 1472 referring to the inclusion of a visible, accessible air-gap off switch and the limited short circuit test.
 - l. Controls shall meet ANSI/IEEE Std. C62-41-1980, tested to withstand voltage surges of up to 6000V and current surges of up to 200A without damage.

- m. Dimmers shall be designed to reduce interference with radio, audio, and video equipment.
 - n. Controls shall incorporate power-failure memory. Should power be interrupted and subsequently returned, the lights or fans will come back on to the same levels set prior to the power interruption. Restoration to some other default level is not acceptable.
 - o. Controls shall not be susceptible to damage or loss of memory due to static discharge.
 - p. Dimmer shall include voltage compensation to compensate light output for variation in the AC line-voltage. Dimmers in which the light output is not held constant with varying AC line-voltage shall not be acceptable.
 - q. Controls shall operate in an ambient temperature range of 0° C (32° F) to 40° C (104° F).
 - r. 3-way controls shall wire using conventional 3-way and 4-way wire runs.
 - s. Contractors shall install all backboxes with a minimum wallbox depth of 2.5 inches.
2. Electronic (Solid-State) Low Voltage (ELV) Transformer Dimmers.
- a. Dimmers shall contain circuitry specifically designed to control the input of electronic (solid state) low voltage transformers. Dimmers using standard phase control shall not be acceptable.
 - b. Provide ELV dimmers for direct control of up to 600 watts of electronic low voltage load.
 - c. Dimmers shall have a resettable overload protection that automatically shuts off when dimmer capacity is exceeded. Protection methods that are non-resettable or require the device to be removed from the wall to reset shall not be acceptable.
 - d. Dimmers shall be designed to withstand a short, per UL 1472 section 5.10, between load hot and either neutral or ground without damage to the dimmer.
 - e. Dimmers shall have a high-end of no less than 90% of line voltage.
3. Magnetic Low Voltage (MLV) Transformer Dimmers
- a. Provide MLV dimmers for direct control of up to 1500VA of 120 volt magnetic low voltage load.
 - b. Provide MLV dimmers for direct control of up to 1000VA of 277 volt magnetic low voltage load.
 - c. Dimmers shall contain circuitry specifically designed to control and provide a symmetrical AC waveform to the input of magnetic low voltage transformers per UL 1472 section 5.11.
 - d. Dimmers shall not cause a magnetic low voltage transformer to operate above the transformers rated operating current or temperature.
 - e. Dimmers shall have a 90% power limit to provide automatic energy savings and to extend lamp life.
 - f. Dimmer shall be capable of operating in either 3-way switch location.
4. LED Driver Dimmers
- a. Provide wall box dimmer compatible with LED driver.
 - b. Dimmer shall be designed to operate:

- 1) 3 wire driver
- 2) ELV driver
- 3) 0-10V driver
- 4) Addressable driver

5. Remote dimming modules for high power loads.

- a. Where lighting loads exceed the full rated capacity of single dimmers, provide a dimmer driving high power modules. High power module and dimmer shall be from the same manufacturer to ensure compatibility.
- b. High power modules shall be remotely mounted.
- c. High power module shall be rated and UL listed for control of incandescent, magnetic low voltage, electronic low voltage, fluorescent, and neon/cold cathode loads in increments of 2,000 watts up to 30,000 watts.

C. Wallplates

1. Wallplates shall be manufactured from durable polycarbonate plastic with matte finish, and shall attach to the basic components without using exposed hardware or screws.
2. Multigang wallplates shall provide a continuous, seamless cover for control and/or accessory combinations with no exposed hardware or screws. Custom wallplate configurations shall be available.
3. Multigang wallplates shall include snap in auto-align adapter plate for proper device alignment and wallplate attachment.
4. Control, accessory and wallplate profiles shall not exceed .30 inches from wall surface to faceplate front surface.

D. All dimming controls shall be 100% function tested at the time of manufacture. Stastical sampling plan shall not be acceptable.

2.5 EMERGENCY SHUNT RELAY

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Lighting Control and Design, Inc.

B. Description: Normally closed, electrically held relay, arranged for wiring in parallel with manual or automatic switching contacts; complying with UL 924.

1. Coil Rating: 120 or 277 V.

2.6 CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

- B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 18 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 14 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1 SENSOR INSTALLATION

- A. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.
- B. All sensor locations are approximate, refer to manufacturer's installation instructions prior to installation.
- C. Ceiling mount sensors should be located a minimum of six feet from HVAC supply/return vents.
- D. Contractor is responsible for: proper sensitivity and time delay settings (for nonadaptive products) recommended placement, and field verification within respect to power placement.
- E. Sensors mounted over the door must be placed one foot inside the threshold.
- F. Contractor is responsible for installing equipment in compliance with local code.

3.2 CONTACTOR INSTALLATION

- A. Mount electrically held lighting contactors with elastomeric isolator pads, to eliminate structure-borne vibration, unless contactors are installed in an enclosure with factory-installed vibration isolators.

3.3 WIRING INSTALLATION

- A. Wiring Method: Comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be 1/2 inch.
- B. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.
- C. Size conductors according to lighting control device manufacturer's written instructions, unless otherwise indicated.
- D. Splices, Taps, and Terminations: Make connections in metallic junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures. Exposed cable splices, taps and terminations are not acceptable.

3.4 IDENTIFICATION

- A. Identify components and power and control wiring according to Division 26 Section "Identification for Electrical Systems."
 - 1. Identify controlled circuits in lighting contactors.
 - 2. Identify circuits or luminaries controlled by photoelectric and occupancy sensors at each sensor.
- B. Label time switches and contactors with a unique designation.

3.5 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. After installing time switches and sensors, and after electrical circuitry has been energized, adjust and test for compliance with requirements.
 - 2. Operational Test: Verify operation of each lighting control device, and adjust time delays.
- B. Lighting control devices that fail tests and inspections are defective work.

3.6 ADJUSTING

- A. The contractor shall be responsible for making all proper adjustments to assure owner's satisfaction with the occupancy sensor system. A manufacturer's representative shall provide on-site adjustments and train owner's personnel to ensure owner's satisfaction with the occupancy system.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting sensors to suit occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.7 DEMONSTRATION

- A. Coordinate demonstration of products specified in this Section with demonstration requirements for low-voltage, programmable lighting control system specified in Division 26 Section "Network Lighting Controls."
- B. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain lighting control devices. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 26 09 23

SECTION 26 09 36 - MODULAR DIMMING CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Integrated, multi-preset modular dimming controls.
 - a. Low voltage wall stations
 - b. Control interfaces and modules
 - c. Occupancy, Vacancy, and Photocell Sensors
 - d. Emergency Lighting Control (if applicable)

1.3 REFERENCE STANDARDS

- A. ANSI C12.20 - American National Standards for Electricity Meters – 0.2 and 0.5 Accuracy Classes; 2010.
- B. ANSI C82.11 – American National Standard for Lamp Ballasts – High Frequency Fluorescent Lamp Ballasts – Supplements; 2011.
- C. ANSI/ESD S20.20 – Protection of Electrical and Electronic Parts, Assemblies and Equipment (Excluding Electrically Initiated Explosive Devices); 2007.
- D. ASTM D4674 – Standard Practice for Accelerated Testing for Color Stability of Plastics Exposed to Indoor Office Environments; 2002a (Reapproved 2010).

- X. UL 8750 - Light Emitting Diode (LED) Equipment for Use in Lighting Products; Current Edition, Including All Revisions.

1.4 DEFINITIONS

- A. Fade Rate: The time it takes each zone to arrive at the next scene, dependent on the degree of change in lighting level.
- B. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling and power-limited circuits.

- C. Zone: A fixture or group of fixtures controlled simultaneously as a single entity.
- D. Scene: The lighting effect created by adjusting several zones of lighting to the desired intensity.
- E. SCR: Silicon-controlled rectifier.

1.5 SUBMITTALS

- A. Product Data: For all products, including, but not limited to; multi preset modular dimming control; combined modular control systems; interfaces and devices; low voltage communications cabling; control devices, including, but not limited to; switches, sensors, dimming interface, wall plates, and conductors.
 - 1. Catalog cut sheets with performance specifications demonstrating compliance with specified requirements.
 - 2. Project specific elevation, dimension, features, characteristics, ratings, and labels
 - 3. Device plates and plate color, material and finish.
 - 4. Required engraved switch labels and manufacturer engraving template.
 - 5. Required driver and LED combinations compatible with dimmers.
- B. Shop Drawings: Detailed assemblies of components, custom assembled for specific application on this project.
 - 1. Floor Plans: Location, orientation, and coverage area of each sensor; group designations; and other specific design symbols and designations as required defining the installation, location, and configuration of all control devices. Indicate digital control loops on drawings.
 - 2. Provide room/area details including products and sequence of operation for each room, area, and/or networked system.
 - 3. Wiring Diagrams: Power, signal, and control wiring. Include complete system wiring diagram illustrating all interconnections between components specified in this Section and devices furnished with power distribution system components required for building control. Include network cable specification and end-of-line termination details. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines. Coordinate nomenclature and presentation with room wiring diagram. Coordinate integration with mechanical and/or other trades.
 - 4. Wire Termination Diagrams and Schedules: Coordinate nomenclature and presentation with Drawings and block diagram. Differentiate between manufacturer-installed and field-installed wiring.
 - 5. Outline Drawings: Indicate dimensions, weights, arrangement of components, and clearance and access requirements.
- C. Coordination Drawings: Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in other Sections.
 - 1. Show interconnecting signal and control wiring and interfacing devices that prove compatibility of inputs and outputs.
 - 2. For networked controls, list network protocols and provide statements from manufacturers that input and output devices meet interoperability requirements of the network protocol.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NFPA 70 and meet all IECC 2015 energy code requirements.
- D. Source Limitations: Obtain lighting control module and power distribution components through one source from a single manufacturer.
- E. Installer & Commissioner Qualifications
 - 1. The system shall be commissioned by a company that has no less than 7 years of experience in the installation of digital lighting control systems. References shall be provided upon request. The system shall be installed by a company that has experience in deploying dimmable lighting systems. References shall be provided upon request.

1.7 COORDINATION

- A. Coordinate lighting control components to form an integrated interconnection of compatible components.
 - 1. Match components and interconnections for optimum performance of lighting control functions.
 - 2. Coordinate lighting controls with ballast, drivers and dimmer type for all luminaires for a fully compatible system.
 - 3. Coordinate lighting controls with BAS either through IP based intercommunication of system or hardwired auxiliary relay outputs.
- B. Coordinate lighting control components specified in this Section with components specified in Division 26 Section "Panelboards."

1.8 PROJECT CONDITIONS

- A. Do not install equipment until following conditions can be maintained in spaces to receive equipment:
 - 1. Ambient temperature: 0 degrees to 40 degrees C (32 degrees to 104 degrees F).
 - 2. Relative humidity: Maximum 90 percent, non-condensing.
 - 3. Lighting control system must be protected from dust during installation.

1.9 WARRANTY

- A. Provide a five year manufacturer's warranty on all hardware and software
- B. For drivers and ballasts, see section 265100 – Interior Lighting.

1.10 MAINTENANCE MATERIAL SUBMITTALS

- A. Make ordering of new equipment for expansions, replacements, and spare parts available to end-user.
- B. Make new replacement parts available for minimum of 10 years from date of manufacture.

PART 2 - PRODUCTS

2.1 GENERAL DIMMING DEVICE REQUIREMENTS

- A. Compatibility: Dimming control components shall be compatible with other elements of lighting fixtures, ballasts/drivers, transformers, and lighting controls. Dimming control components shall interface with all additional subordinate equipment.
- B. Dimmers and Dimmer Modules: Comply with UL 508.
 - 1. Audible Noise and Radio-Frequency Interference Suppression: Solid-state dimmers shall operate smoothly over their operating ranges without audible lamp or dimmer noise or radio-frequency interference. Modules shall include integral or external filters to suppress audible noise and radio-frequency interference.
 - 2. Dimmer or Dimmer-Module Rating: Not less than 125 percent of connected load unless otherwise indicated.
 - 3. Control all light sources in a smooth continuous manner. Dimmers with visual stepping are not acceptable.
 - 4. Withstand surges without impairment of performance when subjected to surges of 6,000 volts, 3,000 amps per ANSI/IEEE C62.41B.

2.2 MULTIPRESET MODULAR DIGITAL LIGHTING CONTROLS

- A. Basis-of-Design Product: Acuity nLight wired. Subject to compliance with requirements, provide product indicated on Drawings.
 - 1. Acceptable Manufacturers:
 - a. Cooper
 - b. Lutron
 - c. Wattstopper DLM
 - d. Hubbell
- B. Description: Modular digital lighting control system providing manual dimming control consisting of power (relay) packs controlled by wall stations, occupancy and / or vacancy sensors, daylight photosensors, and plug-load controllers. Wall stations shall be adjustable to indicated number of scenes and have color changing capabilities for RGBW fixtures within the space.
- C. Operation: System shall provide standalone lighting control zones for individual spaces. System shall be capable of utilizing room or circuit controllers, digital occupancy sensors, switches, daylight sensors, and accessories required by the lighting and or electrical system parameters.

System shall be capable of incorporating a network backbone for connection of multiple spaces and to allow for remote or time-based operation.

2.3 POWER PACKS AND ROOM CONTROLLERS

A. Description: Power packs and room controllers are individual control units or relays that can control single or multiple zones of luminaires. The control units can be connected to devices in the space wirelessly or via low voltage cable. The control units shall include the following features:

1. Power packs shall incorporate one or more Class 1 relays and contribute low voltage power to the rest of the system. Secondary Packs shall incorporate the relay(s), shall have an optional 2nd relay, 0-10 VDC dimming output, or line voltage dimming output, but shall not be required to contribute system power. Power Supplies shall provide system power only, but are not required to switch line voltage circuit. Auxiliary Relay Packs shall switch low voltage circuits only.
2. Power Packs shall accept 120 or 277 VAC (or optionally 347 VAC), be plenum rated, and provide Class 2 power to the system.
3. Power Pack shall securely mount to junction location through a threaded ½ inch chase nipple or be capable of being secured within a luminaire ballast channel

B. SWITCHING POWER PACKS AND ROOM CONTROLLERS

1. On/off control of lighting circuits through single or multiple relays.
 - a. Provide power packs and/or room controllers that are UL924 listed for switching and dimming of Emergency Power circuits. The unit shall provide normal ON/OFF control of emergency lighting along with the normal lighting. Upon normal power failure the emergency lighting circuit will close, forcing the emergency lighting ON until normal power is restored.
2. Every Power Pack parameter shall be available and configurable remotely from the software and locally via the device push-button
3. When required by local code, Power Pack must install inside standard electrical enclosure and provide UL recognized support to junction box. All Class 1 wiring is to pass through chase nipple into adjacent junction box without any exposure of wire leads

C. DIMMING POWER PACKS AND ROOM CONTROLLERS

1. On/off and dimming control of lighting circuits through single or multiple relays.
 - a. Provide power packs and/or room controllers that are UL924 listed for switching and dimming of Emergency Power circuits. The unit shall provide normal ON/OFF control of emergency lighting along with the normal lighting. Upon normal power failure, the emergency lighting circuit will close, forcing the emergency lighting ON until normal power is restored.
2. Every Power Pack parameter shall be available and configurable remotely from the software and locally via the device push-button

3. When required by local code, Power Pack must install inside standard electrical enclosure and provide UL recognized support to junction box. All Class 1 wiring is to pass through chase nipple into adjacent junction box without any exposure of wire leads
4. One dimming output per relay
 - a. 0-10V Dimming - Where indicated, one 0-10 volt analog output per relay for control of compatible ballasts and LED drivers. The 0-10 volt output shall automatically open upon loss of power to the Room Controller to assure full light output from the controlled lighting.
 - b. Line Voltage, Forward Phase Dimming - Where indicated, one forward phase control line voltage dimming output per relay for control of compatible two-wire or three-wire ballasts, LED drivers, MLV, forward phase compatible ELV, neon/cold cathode and incandescent loads
 - c. Each dimming output channel shall have an independently configurable minimum and maximum calibration trim level to set the dimming range to match the true dynamic range of the connected ballast or driver
 - d. Each dimming output channel shall have an independently configurable minimum and maximum trim level to set the dynamic range of the output within the new 0-100% dimming range defined by the minimum and maximum calibration trim

2.4 WALL OR CEILING MOUNTED OCCUPANCY SENSORS

A. Quality Assurance

1. Sensors and related relays shall be compatible with the specific lighting types controlled.
2. All sensors shall be of the same manufacturer, mixing brands of sensors is not acceptable.
3. All sensors and related equipment shall have a five-year warranty.
4. All sensors and control modules connected to more than 50VAC shall be listed by Underwriters Laboratories.
5. All sensors and related equipment shall be manufactured in the United States of America.

B. General Description: Wall- or ceiling-mounting, solid-state units with a separate relay unit.

1. Operation: Unless otherwise indicated, turn lights on when covered area is occupied and off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 30 minutes.
2. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the relay unit.
3. Relay Unit: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Power supply to sensor shall be 24-V dc, 150-mA, Class 2 power source as defined by NFPA 70.
4. Mounting:
 - a. Sensor: Suitable for mounting in any position on a standard outlet box.
 - b. Relay: Externally mounted through a 1/2-inch knockout in a standard electrical enclosure.
 - c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.

5. Indicator: LED, to show when motion is being detected during testing and normal operation of the sensor.
 6. Bypass Switch: Override the on function in case of sensor failure.
 7. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc; keep lighting off when selected lighting level is present.
 8. Communication and Class 2 low voltage power shall be delivered to each device via standard CAT-5 low voltage cabling with RJ-45 connectors.
 9. Every sensor parameter shall be available and configurable remotely from the software and locally via the device push-button.
 10. Sensors shall be able to function together with other sensors in order to provide expanded coverage areas by simply daisy-chain wiring together the units with CAT-5 cabling.
- C. Dual-Technology Type: Detect occupancy by using a combination of PIR and ultrasonic detection methods in area of coverage. Particular technology or combination of technologies that controls on-off functions shall be selectable in the field by operating controls on unit. All sensors shall have selectable auto-on/auto-off and manual-on/auto-off operations.
1. Sensitivity Adjustment: Separate for each sensing technology.
 2. Detector Sensitivity: Detect occurrences of 6-inch-minimum movement of any portion of a human body that presents a target of not less than 36 sq. in., and detect a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical manner at an approximate speed of 12 inches/s.
 3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 300 sq. ft. when mounted on a 96-inch-high ceiling.
 4. Occupancy Sensing Capabilities
 - a. Occupancy sensors shall be configurable to control a local zone(s)
 - b. Multiple occupancy sensors shall be capable of controlling the same local zones. This capability combines occupancy sensing coverage from multiple sensors without consuming multiple control zones.
 - c. System shall support the following types of occupancy sensing sequence of operations:
 - 1) On/Off Occupancy Sensing
 - 2) Partial-On Occupancy Sensing
 - 3) Partial-Off Occupancy Sensing
 - 4) Vacancy Sensing (Manual-On / Automatic-Off)
 - d. On/Off, Partial-On, and Partial-Off Occupancy Sensing modes shall function according to the following sequence of operation:
 - 1) Occupancy sensors shall automatically turn lights on to a designated level when occupancy is detected. To support fine tuning of Partial-On sequences the designated occupied light level shall support at least 100 dimming levels.
 - 2) Occupancy sensors shall automatically turn lights off or to a dimmed state (Partial-Off) when vacancy occurs or if sufficient daylight is detected. To support fine tuning of Partial-Off sequences the designated unoccupied dim level shall support at least 100 dimming levels.
 - 3) To provide additional energy savings the system shall also be capable of combining Partial-Off and Full-Off operation by dimming the lights to a

- designated level when vacant and then turning the lights off completely after an additional amount of time.
- 4) Photocell readings, if enabled in the Occupancy Sensing control zone, shall be capable of automatically adjusting the light level during occupied or unoccupied conditions as necessary to further reduce energy usage.
 - 5) The use of a wall station shall change the dimming level or turn lights off as selected by the occupant. The lights shall optionally remain in this manually-specified light level until the zone becomes vacant; upon vacancy the normal sequence of operation, as defined above, shall proceed.
- e. Vacancy Sensing mode (also referred to as Manual-On / Automatic-Off) shall function according to the following sequence of operation:
- 1) The use of a wall station is required turn lights on. The system shall be capable of programming the zone to turn on to either to a designated light level or the previous user light level. Initially occupying the space without using a wall station shall not result in lights turning on.
 - 2) Occupancy sensors shall automatically turn lights off or to a dimmed state (Partial-Off) when vacancy occurs or if sufficient daylight is detected. To support fine tuning of Partial-Off sequences the designated unoccupied dim level shall support at least 100 dimming levels.
 - 3) To provide additional energy savings and an enhanced occupant experience, the system shall also be capable of dimming the lights when vacant and then turning the lights off completely after an additional amount of time.
 - 4) To minimize occupant impact in case the area or zone is still physically occupied following dimming or shutoff of the lights due to detection of vacancy, the system shall support an “automatic grace period” immediately following detection of vacancy, during which time any detected occupancy shall result in the lights reverting to the previous level. After the grace period has expired, the use of a wall station is required to turn lights on.
 - 5) Photocell readings, if enabled in the Occupancy Sensing control zone, shall be capable of automatically adjusting the light level during occupied or unoccupied conditions as necessary to further reduce energy usage.
 - 6) At any time, the use of a wall station shall change the dimming level or turn lights off as selected by the occupant. The lights shall optionally remain in this manually-specified light level until the zone becomes vacant; upon vacancy the normal sequence of operation, as defined above, shall proceed.
- f. To accommodate diverse types of environments, occupancy time delays before dimming or shutting off lights shall be specifiable for control zones between 15 seconds to 2 hours.
5. All ceiling and wall mounted occupancy sensors shall be powered via Cat 5e or low voltage cables. When daisy chained using CAT-5e or connected wirelessly to other sensors, power packs, or switches, a lighting control zone is created.
 6. Where ceiling mounted occupancy sensors are provided, provide local wall switch for additional user control, to turn "off" lights when room is occupied.
 7. Wall-mounted occupancy sensors shall have manual "on/off" override.

D. Wired Occupancy and Photosensors

1. Product Series: nCM, nCMB, nRM, nWV, nHW
2. Occupancy sensors shall sense the presence of human activity within the desired space and fully control the on/off function of the lights.
3. Sensors shall utilize passive infrared (PIR) technology, which detects occupant motion, to initially turn lights on from an off state, thus preventing false on conditions. Ultrasonic or Microwave based sensing technologies shall not be accepted.
4. For applications where a second method of sensing is necessary to adequately detect maintained occupancy (such as in rooms with obstructions), a sensor with an additional “dual” technology shall be used.
5. Dual technology sensors shall have one of its two technologies not require motion to detect occupancy. Acceptable dual technology includes PIR/Microphonics (also known as Passive Dual Technology or PDT) which both looks for occupant motion and listens for sounds indicating occupants. Sensors where both technologies detect motion (PIR/Ultrasonic) shall not be acceptable.
6. All sensing technologies shall be acoustically passive, meaning they do not transmit sound waves of any frequency (for example in the Ultrasonic range), as these technologies have the potential for interference with other electronic devices within the space (such as electronic white board readers). Acceptable detection technologies include Passive Infrared (PIR), and/or Microphonics technology. Ultrasonic or Microwave based sensing technologies shall not be accepted.
7. System shall have ceiling, fixture, recessed & corner mounted sensors available, with multiple lens options available customized for specific applications.
8. Communication and low voltage power shall be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
9. All sensors shall have the ability to detect when it is not receiving valid communication and blink its LED in a pattern to visually indicate a potential wiring issue.
10. Sensor programming parameter shall be available and configurable remotely from the software and locally via the device push-button.
11. Ceiling mount occupancy sensors shall be available with zero or one integrated dry contact switching relays, capable of switching 1 amp at 24 VAC/VDC (resistive only).
12. Sensors shall be available with one or two occupancy “poles”, each of which provides a programmable time delay.
13. Sensors shall have optional features for photosensor/daylight override, automatic dimming control, and low temperature/high humidity operation.
14. Photosensor shall provide for an on/off set-point, and a dead band to prevent the artificial light from cycling. Delay shall be incorporated into the photocell to prevent rapid response to passing clouds.
15. Photosensor and dimming sensor’s set-point and dead band shall be automatically calibrated through the sensor’s microprocessor by initiating an “Automatic Set-point Programming” procedure. Min and max dim settings as well as set-point may be manually entered.
16. Dead band setting shall be verified and modified by the sensor automatically every time the lights cycle to accommodate physical changes in the space (i.e., furniture layouts, lamp depreciation, or lamp outages).
17. A dual zone option shall be available for On/Off Photocell, Automatic Dimming Control Photocell, or Combination units. The secondary daylight zone shall be capable of being controlled as an “offset” from the primary zone.

2.5 DIGITAL WALL SWITCHES

A. Wired Wall Switches, Dimmers, Scene Controllers

1. Product Series: nPODM, nPODM xS, nPODM xL
2. Devices shall recess into single-gang switch box and fit a standard GFI opening.
3. Communication and low voltage power shall be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
4. All switches shall have the ability to detect when it is not receiving valid communication and blink its LED in a pattern to visually indicate a potential wiring issue.
5. Devices with mechanical pushbuttons shall provide tactile and LED user feedback.
6. Devices with mechanical pushbuttons shall be made available with custom button labeling.
7. Wall switches & dimmers shall support the following device options:
 - a. Number of control zones: 1, 2 or 4
 - b. Control Types Supported:
 - 1) On/Off
 - 2) On/Off/Dimming
 - 3) On/Off/Dimming/Correlated Color Temperature Control for specific luminaire types
 - c. Colors: Ivory, White, Light Almond, Gray, Black, Red
8. Scene controllers shall support the following device options:
 - a. Number of scenes: 1, 2 or 4
 - b. Control Types Supported:
 - 1) On/Off
 - 2) On/Off/Dimming
 - 3) Preset Level Scene Type
 - 4) On/Off/Dimming/Preset Level for Correlated Color Temperature
 - 5) Reprogramming of other devices within daisy-chained zone so as to implement user selected lighting scene. This shall support manual start/stop from the scene controller, or optionally programmed to automatically end after a user selectable duration between 5 minutes and 12 hours.
 - 6) Selecting a lighting profile to be run by the system's upstream controller so as to implement a selected lighting profile across multiple zones. This shall support manual start/stop from the scene controller, or optionally programmed to automatically end after a user selectable duration between 5 minutes and 12 hours.
 - c. Colors: Ivory, White, Light Almond, Gray, Black, Red

B. Wired Wall Switch Sensors

1. Product Series: nWSX LV
2. Devices shall recess into single-gang switch box and fit a standard GFI opening.
3. Communication and low voltage power shall be delivered to each device via standard low voltage network cabling with RJ-45 connectors.

4. All wall switch sensors shall have the ability to detect when it is not receiving valid communication and blink its LED in a pattern to visually indicate a potential wiring issue.
5. Devices with mechanical pushbuttons shall provide tactile user feedback.
6. Wall switches sensors shall support the following device options:
 - a. User Input Control Types Supported: On/Off or On/Off/Dimming
 - b. Occupancy Sensing Technology: PIR only or Dual Tech acoustic
 - c. Daylight Sensing Option: Inhibit Photosensor
 - d. Colors: Ivory, White, Light Almond, Gray, Black, Red

C. Wired Networked Power Packs and Secondary Packs

1. Product Series: nPP16, nPP16-ER, nPP20-PL, nSP16, nSP5-PCD, nSP5-2P-LVR, nSHADE, nAR40, nEPS-60, nPS-80
2. Power Packs shall incorporate one optional Class 1 relay, optional 0-10 VDC dimming output, and contribute low voltage Class 2 power to the rest of the system.
3. Power Packs shall accept 120 or 277 VAC (or optionally 347 VAC) and carry a plenum rating.
4. Secondary Packs shall incorporate the relay and 0-10 VDC or line voltage dimming output, but shall not be required to contribute system power.
5. Power Supplies shall provide system power only, but are not required to switch line voltage circuit.
6. Auxiliary Relay Packs shall switch low voltage circuits only, capable of switching 1 amp at 40 VAC/VDC (resistive only).
7. Communication shall be delivered to each device via standard low voltage network cabling with RJ-45 connectors. Secondary packs shall receive low voltage power via standard low voltage network cable.
8. Power Pack programming parameters shall be available and configurable remotely from the software and locally via the device push-button.
9. Power Pack shall securely mount through a threaded ½ inch chase nipple or be capable of being secured within a luminaire ballast/driver channel. Plastic clips into junction box shall not be accepted. All Class 1 wiring shall pass through chase nipple into adjacent junction box without any exposure of wire leads. Note: UL Listing under Energy Management or Industrial Control Equipment automatically meets this requirement, whereas Appliance Control Listing does not meet this safety requirement.
10. When required by local code, Power Pack must install inside standard electrical enclosure and provide UL recognized support to junction box. All Class 1 wiring is to pass through chase nipple into adjacent junction box without any exposure of wire leads.
11. Power/Secondary Packs shall be available with the following options:
 - a. Power Pack capable of full 16-Amp switching of all normal power lighting load types, with optional 0-10V dimming output capable of up to 100mA of sink current.
 - b. Secondary Pack with UL924 listing for switching of full 16-Amp Emergency Power circuits, with optional 0-10V dimming output capable of up to 100mA of sink current.
 - c. Power and Secondary Packs capable of full 20-Amp switching of general purpose receptacle (plug-load) control.
 - d. Secondary Pack capable of full 16-Amp switching of all normal power lighting load types.

- e. Secondary Pack capable of 5-Amps switching and dimming 120 VAC incandescent lighting loads or 120/277 VAC line voltage dimmable fluorescent ballasts (2-wire and 3-wire versions).
- f. Secondary Pack capable of 5-Amps switching and dimming of 120/277 VAC magnetic low voltage transformers.
- g. Secondary Pack capable of 4-Amps switching and dimming of 120 VAC electronic low voltage transformers.
- h. Secondary Pack capable of louver/damper motor control for skylights.
- i. Secondary Pack capable of providing a pulse on/pulse off signal for purposes of controlling shade systems via relay inputs.
- j. Secondary Pack capable of switching 1 amp at 40 VAC/VDC (resistive only) with the intent to provide relay signal to auxiliary system (e.g. BMS).
- k. Power Supply capable of providing auxiliary bus power (no switched or dimmed load).

D. Wired Networked Bluetooth® Low Energy Programming Device

- 1. Product Series: nIO BT
- 2. Device shall be plenum rated and be inline wired, screw mountable.
- 3. Communication and low voltage power shall be delivered to device via standard low voltage network cabling with RJ-45 connectors.
- 4. Bluetooth Low Energy connection shall allow connection from smartphone application for programming device settings within the local daisy-chain zone (*see list of available settings in section 2.4-System Software Interfaces, Sub-section E*).
 - a. Device shall provide visual indication of remote Bluetooth connection via LED integrated into device enclosure such that it is visible from all angles while the zone is being programmed.

E. Wired Auxiliary Input / Output (I/O) Devices

- 1. Product Series: nIO-1S, nIO-RLX, nIO-MLO-5STEPA, nIO-MLO-AB, nIO-NLI, nIO-X, nIO-D, nIO-EZ-PH, nIO-EZD
- 2. Devices shall be plenum rated and be inline wired, screw mountable, or have an extended chase nipple for mounting to a ½” knockout.
- 3. Communication and low voltage power shall be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
- 4. Auxiliary Input/Output Devices shall be specified as an input or output device with the following options:
 - a. Contact closure or Pull High input
 - 1) Input shall be programmable to support maintained or momentary inputs that can activate local or global scenes and profiles, activate lights at a preconfigured level, ramp light level up or down, or toggle lights on/off.
 - b. 0-10V analog input
 - 1) Input shall be programmable to function as a daylight sensor.
 - c. RS-232/RS-485 digital input

- 1) Input supports activation of up to 4 local or global scenes and profiles, and on/off/dimming control of up to 16 local control zones.
- d. dimming control output, capable of sinking up to 20mA of current
 - 1) Output shall be programmable to support all standard sequence of operations supported by system.
- e. Digital control output via EldoLED LEDcode communication
 - 1) Output shall be programmable to support light intensity control, as well as optional correlated color temperature (CCT) control, of the connected luminaire.

2.6 DMX COLOR CHANGING SYSTEM

1. Manufacturers

- a. Acceptable: Acuity Brands Lighting, Inc. – System: Acuity Controls
- b. Basis of controls design Manufacturer: Acuity Brands, One Lithonia Way, Conyers, GA 30012. The following may be acceptable with approval if compliant with this specification:
 - 1) Fresco Controls System

Substitutions: Not Permitted

2. General:

- a. Provide system hardware that is designed, tested, manufactured, warranted by a single manufacturer
- b. Operational Life: At least 10 years expected life while operating within the specified ambient temperature and humidity range
- c. Standards Compliance & Compatibility: Provide architectural control product with native DMX512-A control and BACnet/IP
- d. Luminaire Compatibility: Supports RGB luminaires in 8 bit and/or 16 bit configurations also supporting MSB or LSB first luminaire settings. Support native control of Tunable White luminaires.
- e. Design and test equipment to withstand electrostatic discharges without impairment when tested according to IEC 61000-4-2 Level 4
- f. Power Failure Memory: automatically store system settings and recover from a power failure without requiring user input
- g. Wireless devices:
 - 1) Automatically sync for system operation without addressing
 - 2) Send and receive messages for real-time operation and feedback
 - 3) Use industry standard RF protocols
 - 4) Be in compliance with FCC and IEEE standards
- h. Time Clock: automatically adjust for daylight savings time and leap year

3. Dimming and Switching Performance Requirements:
 - a. Electrolytic capacitors operate at least 36 degrees F (20 degrees C) below the capacitor's maximum temperature rating when the device is under full load
 - b. Inrush tolerance: Use MOSFET that has a maximum rating of six times the operating current of the dimmer/relay
 - c. Surge tolerance: Panels are designed and tested to withstand surges of 6,000V, 3,000A according to IEEE C62.41.2 and IEC 61000-4-5 without impairment to performance
 - d. Power failure recovery: When power is interrupted and subsequently restored, within 3 seconds lighting to automatically return to same levels prior to power failure
 - e. Utilize half cycle to half cycle zero cross movement to allow for voltage compensation in order to overcome line noise and lamp flickering
 - f. Incorporate electronic soft start default at initial turn-on that smoothly ramps lights to appropriate levels within 0.5 seconds
 - g. Utilize air gap off to disconnect the load line from the line supply
 - h. Control all light sources in smooth and continuous manner. Dimmers with visible steps are not acceptable
 - i. Assign load type to each dimmer that will provide proper dimming curve for the specific light source to be controlled
 - j. Minimum and maximum light levels are user adjustable on a circuit by circuit basis

4. Touch Panel Controls

- a. Product: Fresco Touch Screen (7TSN)
- b. Preset lighting scene controller
 - 1) General Requirements:
 - a) 7" full color multi-touch capacitive touchscreen for controlling lighting and system components
 - b) Control up to 65,000 zones of lighting/shades per system
 - c) Control up to 36 lighting channels/scenes per touch screen that include on/off, dimming, tunable white, RGB, and/or shade control
 - d) Link up to 24 touch screens for a possibility of 864 lighting zones/scenes
 - e) Connect up to 128 network devices per touch screen
 - f) On screen lighting design
 - g) Lighting zones/scenes can be comprised of lighting intensity, color, color temperature, and luminaire position
 - h) Modify color and color temperature using a digital color palette and dUV rating scale
 - i) Proximity screen sensor for auto "wake-up"
 - j) Auto dimming and user adjustable backlight
 - k) User programmable screen lock limiting access to all feature control and programming
 - l) Full alpha-numeric scene and zone naming
 - m) Configurable interface to reflect project requirements

- n) Lighting zones/scenes support control of forward/reverse phase dimming, 0-10v, RGB, nLight® enabled luminaires, nLight® power packs, DALI, tunable white and moving fixtures
- o) Integral astronomical time clock enables lighting scenes
- p) Partition status control and visualization
- q) Direct DMX control for a single universe (512 slots)
- r) Connect up to 128 nLight® enabled devices
- s) Digital daylight harvesting response
- t) RS-232/contact closure capable for 3rd party integration
- u) Local wireless Bluetooth connectivity with mobile app
- v) Compatible with Fresco Lighting Management Panels (LMP)
- w) Frame Color: Reviewed with architects on room-by-room basis.

2) Electrical:

- a) Fresco Input: 24VDC
- b) Fresco Power Supply: 120-277V AC
- c) RS-485 network terminal
- d) nLight enabled RJ-45 ports (in/out)
- e) CAT5e Ethernet network terminal
- f) DMX/RDM network terminal

3) Mounting:

- a) Installs in a standard triple gang US back box
- b) Remote mounted power supply
- c) Plug in wire harness for RS-485 and DMX connections

4) Protocols:

- a) RS-485
- b) IEEE 802.15 Bluetooth® compliant
- c) Controller is compliant to industry standard ANSI E1.11 - 2008, USITT DMX512-A
- d) Supports extended RDM capability as defined by ANSI E1.20
- e) IEEE 802.11 Ethernet compliant
- f) nLight Digital communication
- g) BACnet/IP ISO 16484-5

5. Mobile Control

- a. Fresco iPad Application
- b. Allows mobile control and programming of the Fresco Touchscreen (7TSN)

1) General Requirements:

- a) Mobile Apple device supports Bluetooth® communication protocol
- b) Provides user control and edit capability of lighting scenes and zones
- c) Edit intensity, color, color temperature, and movement
- d) Edit lighting schedules
- e) Restrict number of users able to connect to touchscreen

- f) Restrict access to making system changes
- g) No PC required for mobile operation

6. Device Quality

- a. Perform 100% function testing of all devices

2.7 WALL BOX ACCESSORIES

A. Wall Plates

- 1. Listed to UL 514C, CSA C22.2 #42.1-00
- 2. Provide an adapter plate for proper device alignment and wall plate attachment.

2.8 SOURCE QUALITY CONTROL

- A. Perform full-function testing on completed assemblies at end of line. Statistical sampling is not acceptable.

2.9 CONDUCTORS AND CABLES

- A. Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- B. Class 2 Control Cable: Multiconductor cable with stranded-copper conductors shall be as required by the equipment manufacturer. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. CAT 5e Cable: Communication and Class 2 low voltage power shall be delivered to each device via standard CAT-5 low voltage cabling with RJ-45 connectors. Pre-terminated Cat 5e cables with RJ-45 connectors. Systems that utilize RJ-45 patch cords but do not provide serial communication data from individual end devices are not acceptable. If manufacturer's pre-terminated Cat 5e cables are not used for the installation, the contractor is responsible for testing each cable following installation and supplying manufacturer with test results.

PART 3 - EXECUTION

3.1 WIRING INSTALLATION

- A. Comply with NECA 1.
- B. Wiring Method: Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be 3/4 inch.

- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.
- D. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.
- E. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.2 INSTALLATION

- A. Install equipment in accordance with manufacturer's installation instructions.
- B. Provide complete installation of system in accordance with Contract Documents.
- C. Provide equipment at locations and in quantities indicated on Drawings. Provide any additional equipment required to provide control intent.
- D. Define each dimmer's/relay's load type, assign each load to a zone, and set control functions.
- E. Mount exterior daylight sensors to point due north with constant view of daylight.
- F. Ensure that daylight sensor placement minimizes sensors view of electric light sources; ceiling mounted and fixture-mounted daylight sensors shall not have direct view of luminaries.

3.3 STARTUP SERVICE AND SUPPORT

- A. Install and program software with initial settings of adjustable values. Make backup copies of software and user-supplied values. Provide current licenses for software.
- B. Engage a factory-authorized service representative to perform startup service. Owner's Representative and Architect shall be notified when startup service visits are scheduled and completed.
 - 1. Complete initial review meeting with construction team and commissioning agent to review installation techniques, project specific wiring requirements, and product information prior to installation of equipment.
 - 2. Complete pre-wire installation and startup checks according to manufacturer's written instructions.
 - 3. Activate light fixtures and verify that all lamps are operating at 100 percent and dimming is functioning.
 - 4. Confirm correct communications wiring, initiate communications between devices and controller/gateways, and program the lighting control system according to approved configuration schedules, time-of-day schedules, and input override assignments.
 - 5. Establish lighting levels for all rooms per sequence of operations.
 - 6. Calibrate all photo cells to appropriate lighting levels.
 - 7. Program all low voltage end devices and test to meet sequence of operation and owner requirements.

3.4 STARTUP AND PROGRAMMING

- A. Provide factory certified field service engineer to complete all onsite tasks and start up requirements as indicated for all luminaires and components. Quantity of days on site shall be provided as required for a complete fully functioning start up. Coordinate testing and demonstration of products specified in this section with testing and demonstration requirements for low voltage, programmable lighting control system specified in Division 26 Section “Modular Dimming Controls”. Technician shall be on site a minimum of 2 days to ensure proper system installation and operation under following parameters:
 - 1. Qualifications for factory certified service engineer:
 - a. Minimum experience of 2 years training in the electrical/electronic field.
 - b. Minimum of 5 installations with the specific lighting control system.
 - c. Certified by the equipment manufacturer on the system installed.
 - d. Visit duration shall be suitable to accomplish required tasks.

- B. First Visit Task: Make visit(s) to the site prior to installation of wiring. Meeting shall include initial review with the construction team to review installation techniques and product information. Meeting shall include start-up checks in accordance with manufacturer’s written instruction.

- C. Second Visit Task: Make visits upon completion of installation of Network Lighting Control System. Visits shall include field testing of lighting control equipment in accordance with manufacturer testing procedure. Coordinate field testing inspections with commissioning agent.
 - 1. Review:
 - a. Verify all luminaires are installed and active, and operate at 100% light output.
 - b. Verify connection and location of controls.
 - c. Verify system operation control by control.
 - d. Configure initial groupings of led drivers for wall controls, daylight sensors and occupant sensors.
 - e. Initial calibration of sensors and setting of photocell to maintain indicated illuminance levels in all spaces.
 - f. Obtain sign-off on system functions.
 - g. Verify proper orientation of manufacturers interfacing equipment.

- D. Third Visit Task:
 - 1. Tuning
 - a. Lighting control system manufacturers shall coordinate on-site meetings with owner and architect to make required lighting adjustments to the system for conformance with the design intent, and preset/zone requirements determined in review with the architect/owner and manufacturer prior to programming. At the completion of the tuning site visits and when all associated adjustments to the system have been completed and tested, the manufacturer shall complete final inspection of the system.

2. Adjustment/Training

- a. Engage a factory-authorized service representative on site to train owner's maintenance personnel to adjust, operate, and maintain the control unit and operator interface. Provide a minimum of one complete training session to be scheduled with owner personnel.
- b. The end customer shall be trained in the usage of the system within 1 month of completion of the startup process.

3.5 CLOSEOUT ACTIVITIES

- A. System Optimization Visit: Lighting control system manufacturer shall provide a factory certified field service engineer on site within 6 months after completion of the final construction phase to evaluate system usage and make adjustments at the direction of the owner.

3.6 MAINTENANCE

- A. Capable of providing on-site service support within 24 hours anywhere in continental United States and within 72 hours worldwide except where special visas are required.

END OF SECTION 26 09 36

SECTION 26 22 00 - LOW-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following types of dry-type transformers rated 600 V and less, with capacities up to 1000 kVA:
 - 1. Distribution transformers.
 - 2. Buck-boost transformers.

1.3 SUBMITTALS

- A. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer indicated.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Wiring Diagrams: Power, signal, and control wiring.
- C. Qualification Data: For testing agency.
- D. Source quality-control test reports.
- E. Field quality-control test reports.
- F. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain each transformer type through one source from a single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers."

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.

1.6 COORDINATION

- A. Coordinate installation of wall-mounting and structure-hanging supports with actual transformer provided.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. ACME Electric Corporation; Power Distribution Products Division
 2. Challenger Electrical Equipment Corp.; a division of Eaton Corp.
 3. Eaton Electrical Inc.; Cutler-Hammer Products
 4. General Electric Company
 5. Magnetek Power Electronics Group
 6. Siemens Energy & Automation, Inc.
 7. Sola/Hevi-Duty
 8. Square D; Schneider Electric

2.2 GENERAL TRANSFORMER REQUIREMENTS

- A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.
- B. Cores: Grain-oriented, non-aging silicon steel.
- C. Coils: Continuous windings without splices except for taps.
 1. Internal Coil Connections: Brazed or pressure type.
 2. Coil Material: Aluminum.

2.3 DISTRIBUTION TRANSFORMERS

- A. Comply with NEMA ST 20, and list and label as complying with UL 1561.
- B. Cores: One leg per phase.
- C. Enclosure: Ventilating, NEMA 250, Type 2.

1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.
- D. Transformer Enclosure Finish: Comply with NEMA 250.
1. Finish Color: Manufacturer's standard.
- E. Taps for Transformers Smaller Than 3 kVA: None.
- F. Taps for Transformers 3 to 15 kVA: Two 5 percent taps below rated voltage.
- G. Taps for Transformers 15 kVA and Larger: Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity.
- H. Insulation Class: 220 deg C, UL-component-recognized insulation system with a maximum of 150 deg C rise above 40 deg C ambient temperature.
- I. Energy Efficiency for Transformers Rated 15 kVA and Larger:
1. Transformers shall meet DOE Energy Efficiency Standards (DOE 10CFR Part 431 Energy Conservation Standards). Transformers shall be provided with DOE 2016 efficiency levels at 50% load.
- J. Electrostatic Shielding: Each winding shall have an independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.
1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
 2. Include special terminal for grounding the shield.
 3. Shield Effectiveness:
 - a. Capacitance between Primary and Secondary Windings: Not to exceed 33 picofarads over a frequency range of 20 Hz to 1 MHz.
 - b. Common-Mode Noise Attenuation: Minimum of minus 120 dBA at 0.5 to 1.5 kHz; minimum of minus 65 dBA at 1.5 to 100 kHz.
 - c. Normal-Mode Noise Attenuation: Minimum of minus 52 dBA at 1.5 to 10 kHz.
- K. Wall Brackets: Manufacturer's standard brackets.
- L. Low-Sound-Level Requirements: Maximum sound levels, when factory tested according to IEEE C57.12.91, as follows:
1. 9 kVA and Less: 40 dBA
 2. 30 to 50 kVA: 45 dBA
 3. 51 to 150 kVA: 50 dBA
 4. 151 to 300 kVA: 55 dBA
 5. 301 to 500 kVA: 60 dBA
 6. 501 to 750 kVA: 62 dBA
 7. 751 to 1000 kVA: 64 dBA

2.4 IDENTIFICATION DEVICES

- A. Nameplates: Engraved, laminated-plastic or metal nameplate for each distribution and buck-boost transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

2.5 SOURCE QUALITY CONTROL

- A. Test and inspect transformers according to IEEE C57.12.91.
- B. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.
- B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.
- C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.
- D. Verify that ground connections are in place and requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install wall-mounting transformers level and plumb with wall brackets fabricated by transformer manufacturer.

3.3 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
- B. Tests and Inspections:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
- C. Remove and replace units that do not pass tests or inspections and retest as specified above.
- D. Infrared Scanning: Two months after Substantial Completion, perform an infrared scan of transformer connections.
 - 1. Use an infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
 - 2. Perform 2 follow-up infrared scans of transformers, one at 4 months and the other at 11 months after Substantial Completion.
 - 3. Prepare a certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and scanning observations after remedial action.
- E. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.5 ADJUSTING

- A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 10 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.
- B. Output Settings Report: Prepare a written report recording output voltages and tap settings.

3.6 CLEANING

- A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION 26 22 00

SECTION 26 24 16 - PANELBOARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Distribution panelboards
2. Lighting and appliance branch-circuit panelboards
3. Load centers
4. Electronic-grade panelboards

1.3 DEFINITIONS

- A. SVR: Suppressed voltage rating
- B. SPD: Surge protective device

1.4 SUBMITTALS

- A. Product Data: For each type of panelboard, switching and overcurrent protective device, surge protective device, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
- B. Shop Drawings: For each panelboard and related equipment.
 1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
 2. Detail enclosure types and details for types other than NEMA 250, Type 1.
 3. Detail bus configuration, current, and voltage ratings.
 4. Short-circuit current rating of panelboards and overcurrent protective devices.
 5. Include evidence of NRTL listing for series rating of installed devices.
 6. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
 7. Include wiring diagrams for power, signal, and control wiring.
- C. Qualification Data: For qualified testing agency.

- D. Field Quality-Control Reports:
 - 1. Test procedures used
 - 2. Test results that comply with requirements
 - 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements
- E. Panelboard Schedules: For installation in panelboards. Submit final versions after load balancing. Provide electronic files in Excel format to Owner. See section titled "Identification of Electrical Systems" for additional requirements.
- F. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices
 - 2. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments
- G. Total Energy Use: Summation of total energy use broken down by component and expressed in terms of total connected power and expected daily power use.

1.5 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
 - 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing
- B. Source Limitations: Obtain panelboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.
- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Comply with NEMA PB 1.
- F. Comply with NFPA 70.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.

- B. Handle and prepare panelboards for installation according to NECA 407 and NEMA PB 1.

1.7 PROJECT CONDITIONS

A. Environmental Limitations:

1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
 - a. Ambient Temperature: Not exceeding 23 deg F to plus 104 deg F.
 - b. Altitude: Not exceeding 6600 feet.

B. Service Conditions: NEMA PB 1, usual service conditions, as follows:

1. Ambient temperatures within limits specified.
2. Altitude not exceeding 6600 feet.

1.8 COORDINATION

- A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.
 1. Warranty Period: Five years from date of Substantial Completion.

1.10 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Keys: Two spares for each type of panelboard cabinet lock.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR PANELBOARDS

- A. Fabricate and test panelboards according to IEEE 344 to withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- B. Enclosures: Flush- and surface-mounted cabinets.
 1. Rated for environmental conditions at installed location.
 - a. Indoor Dry and Clean Locations: NEMA 250, Type 1
 - b. Outdoor Locations: NEMA 250, Type 3R
 - c. Kitchen or Wash-Down Areas: NEMA 250, Type 4X, stainless steel
 - d. Other Wet or Damp Indoor Locations: NEMA 250, Type 4
 - e. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 12
 2. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover.
 3. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.
 4. Finishes:
 - a. Panels and Trim: Steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
 - b. Back Boxes: Galvanized steel.
 - c. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components.
 5. Directory Card: Inside panelboard door, mounted in metal frame with transparent protective cover.
- C. Incoming Mains Location: Top and bottom.
- D. Phase, Neutral, and Ground Buses:
 1. Material: Tin-plated aluminum.
 2. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.
 3. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.
 4. Split Bus: Vertical buses divided into individual vertical sections.
- E. Conductor Connectors: Suitable for use with conductor material and sizes.

1. Material: Tin-plated aluminum.
 2. Main and Neutral Lugs: Mechanical or compression type.
 3. Ground Lugs and Bus-Configured Terminators: Mechanical or compression type.
 4. Feed-Through Lugs: Compression type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
 5. Subfeed (Double) Lugs: Mechanical or compression type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
 6. Gutter-Tap Lugs: Mechanical or compression type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
 7. Extra-Capacity Neutral Lugs: Rated 200 percent of phase lugs mounted on extra-capacity neutral bus.
- F. Service Equipment Label: NRTL labeled for use as service equipment for panelboards or load centers with one or more main service disconnecting and overcurrent protective devices.
- G. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.
- H. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals, as noted in panelboard schedule.
- I. Panelboard Suppressors: As noted on Drawings and in Division 26 Section "Surge Protective Devices for Low-Voltage Electrical Power Circuits". Provide as indicated and specified in Section 26 43 13.
- J. Selective Coordination: Comply with NFPA 70 and Owner's requirements as indicated.

2.2 DISTRIBUTION PANELBOARDS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product name or comparable product by one of the following:
1. Square D "I-Line Series"; a brand of Schneider Electric (Basis of Design)
 2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 3. General Electric
- B. Panelboards: NEMA PB 1, power and feeder distribution type.
- C. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
1. For doors more than 36 inches high, provide two latches, keyed alike.
- D. Mains: Circuit breaker or lugs only as indicated on Drawings and/or Schedules
- E. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: Bolt-on circuit breakers or jaw type plug-on.
- F. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers or jaw type plug-on.

2.3 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following
 - 1. Square D; a brand of Schneider Electric (Basis of Design)
 - 2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - 3. General Electric
- B. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.
- C. Mains: Circuit breaker or lugs only as indicated on drawings and/or schedules
- D. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.
- E. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
- F. Column-Type Panelboards: Narrow gutter extension, with cover, to overhead junction box equipped with ground and neutral terminal buses.

2.4 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product name or comparable product by one of the following:
 - 1. Square D; a brand of Schneider Electric (Basis of Design)
 - 2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - 3. General Electric
- B. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.
 - 1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 - 2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
 - 3. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:
 - a. Instantaneous trip.
 - b. Long- and short-time pickup levels.
 - c. Long- and short-time time adjustments.
 - d. Ground-fault pickup level, time delay, and I^2t response.
 - 4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.

5. GFCI Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).
 6. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30-mA trip).
 7. Arc-Fault Circuit Interrupter (AFCI) Circuit Breakers: Comply with UL 1699; 120/240-V, single-pole configuration.
 8. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:
 - a. Standard frame sizes, trip ratings, and number of poles.
 - b. Lugs: Compression style, suitable for number, size, trip ratings, and conductor materials.
 - c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
 - d. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - e. Communication Capability: Circuit-breaker-mounted, universal-mounted, integral or din-rail-mounted communication module with functions and features compatible with power monitoring and control system specified in Division 26 Section "Electrical Power Monitoring and Control."
 - f. Shunt Trip: 24-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
 9. HACR Circuit Breakers: Single, two, and three-pole configurations rated for protection of heating, air conditioning and refrigeration equipment.
- C. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.
1. Fuses, and Spare-Fuse Cabinet: Comply with requirements specified in Division 26 Section "Fuses."
 2. Fused Switch Features and Accessories: Standard ampere ratings and number of poles.
 3. Auxiliary Contacts: Two normally open and normally closed contact(s) that operate with switch handle operation.

2.5 ACCESSORY COMPONENTS AND FEATURES

- A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.
- B. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.
- C. Contractor shall provide all lugs required for cable sizes shown on single line diagrams.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Receive, inspect, handle, and store panelboards according to NECA 407.
- B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.
- C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install panelboards and accessories according to NECA 407.
- B. Equipment Mounting: Install panelboards on structural channel framing.
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.
 - 2. For panelboards, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to panelboards.
 - 5. Attach panelboard to the vertical finished or structural surface behind the panelboard.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.
- D. Comply with mounting and anchoring requirements specified in Division 26 Section "Mount top of trim 90 inches above finished floor unless otherwise indicated.
- E. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
- F. Install overcurrent protective devices and controllers not already factory installed.
 - 1. Set field-adjustable, circuit-breaker trip ranges.
- G. Install filler plates in unused spaces.
- H. Stub four 1-inch empty conduits from each flush mounted panelboard into accessible ceiling space or space designated to be ceiling space in the future. Where applicable, stub four 1-inch empty conduits into raised floor space.

- I. Arrange conductors in gutters into groups and bundle and wrap with wire ties after completing load balancing.
- J. Comply with NECA 1.

3.3 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Division 26 Section "Identification for Electrical Systems."
- B. Create a directory to indicate installed circuit loads after balancing panelboard loads; incorporate Owner's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.
- C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems." Refer to section titled "Identification for Electrical Systems" for additional requirements.
- D. Device Nameplates: Label each branch circuit device in distribution panelboards with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- E. Tests and Inspections:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Perform the following infrared scan tests and inspections and prepare reports:

- a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Instruments and Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
- F. Panelboards will be considered defective if they do not pass tests and inspections.
- G. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.5 ADJUSTING

- A. Adjust moving parts and operable component to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges as specified in Division 26 Section "Electrical Systems Studies and Analysis."
- C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes.
 - 1. Measure as directed during period of normal system loading.
 - 2. Perform load-balancing circuit changes outside normal occupancy/working schedule of the facility and at time directed. Avoid disrupting critical 24-hour services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
 - 3. After circuit changes, recheck loads during normal load period. Record all load readings before and after changes and submit test records.
 - 4. Tolerance: Difference exceeding 20 percent between phase loads, within a panelboard, is not acceptable. Rebalance and recheck as necessary to meet this minimum requirement.

3.6 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

3.7 COMMISSIONING

- A. Coordinate commissioning and start-up with overall electrical power monitoring and control system specified in Section 26 09 13.

- B. Factory trained technician shall review connections and setup devices, addresses and metering parameters.

END OF SECTION 26 24 16

- B. Shop Drawings: List of legends and description of materials and process used for premarking wall plates.
- C. Samples: One for each type of device and wall plate specified, in each color specified.
- D. Field quality-control test reports.
- E. Operation and Maintenance Data: For wiring devices to include in all manufacturers' packing label warnings and instruction manuals that include labeling conditions.

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of wiring device and associated wall plate through one source from a single manufacturer. Insofar as they are available, obtain all wiring devices and associated wall plates from a single manufacturer and one source.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NFPA 70.

1.6 COORDINATION

- A. Receptacles for Owner-Furnished Equipment: Match plug configurations.
 - 1. Cord and Plug Sets: Match equipment requirements.

1.7 EXTRA MATERIALS

- A. Furnish extra materials described in subparagraphs below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Floor Service Outlet Assemblies: One for every 10, but no fewer than one.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers' Names: Shortened versions (shown in parentheses) of the following manufacturers' names are used in other Part 2 articles:
 - 1. Eaton Wiring Devices/Arrow Hart.
 - 2. Hubbell Incorporated; Wiring Device-Kellems (Hubbell).
 - 3. Leviton Mfg. Company Inc. (Leviton).
 - 4. Pass & Seymour/Legrand; Wiring Devices & Accessories (Pass & Seymour).

2.2 STRAIGHT BLADE RECEPTACLES

- A. Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Eaton/Arrow Hart; 1877 (single), 5362 (duplex).
 - b. Hubbell; HBL5351 (single), CR5362 (duplex).
 - c. Leviton; 5891 (single), PS5362 (duplex).
 - d. Pass & Seymour; 5381 (single), 5362 (duplex).
- B. Tamper-Resistant Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Eaton/Arrow Hart; TR5362.
 - b. Hubbell; TR5362.
 - c. Leviton; TCR20.
 - d. Pass & Seymour; TR5362.
- C. USB Charger, Tamper Resistant, Duplex Convenience Receptacles, 125 V, 20 A with two USB Type A, Class 2.0 ports, 3.1 A minimum, 5 Volt DC: Comply with NEMA WD1, NEMA WD6 configuration 5-20R, and UL 498.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Eaton/Arrow Hart; TR7756
 - b. Hubbell; USB20X2
 - c. Leviton; T5832
 - d. Pass & Seymour; TR5362USB
- D. Receptacles located in damp or wet locations shall be listed weather-resistant (WR) type.

2.3 GFCI RECEPTACLES

- A. General Description: Straight blade, non-feed-through type. Comply with NEMA WD 1, NEMA WD 6, UL 498, and UL 943, Class A, and include indicator light that is lighted when device is tripped.
- B. Duplex GFCI (Self Test) Convenience Receptacles, 125 V, 20 A:
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Eaton/Arrow Hart; SGF20.
 - b. Pass & Seymour; 2084.
 - c. Hubbell
 - d. Leviton
- C. Receptacles located in damp or wet locations shall be listed weather-resistant (WR) type.

2.4 TWIST-LOCKING RECEPTACLES

- A. Single Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration L5-20R, and UL 498.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Eaton/Arrow Hart; AHL520R.
 - b. Hubbell; HBL2310.
 - c. Leviton; 2310.
 - d. Pass & Seymour; L520-R.

2.5 PENDANT CORD-CONNECTOR DEVICES

- A. Description: Matching, locking-type plug and receptacle body connector; NEMA WD 6 configurations L5-20P and L5-20R, heavy-duty grade.
 - 1. Body: Nylon with screw-open cable-gripping jaws and provision for attaching external cable grip.
 - 2. External Cable Grip: Woven wire-mesh type made of high-strength galvanized-steel wire strand, matched to cable diameter, and with attachment provision designed for corresponding connector.

2.6 CORD AND PLUG SETS

- A. Description: Match voltage and current ratings and number of conductors to requirements of equipment being connected.
 - 1. Cord: Rubber-insulated, stranded-copper conductors, with Type SOW-A jacket; with green-insulated grounding conductor and equipment-rating ampacity plus a minimum of 30 percent.
 - 2. Plug: Nylon body and integral cable-clamping jaws. Match cord and receptacle type for connection.

2.7 SNAP SWITCHES

- A. Comply with NEMA WD 1 and UL 20.
- B. Switches, 120/277 V, 20 A:
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Eaton/Arrow Hart; 1221 (single pole), 1222 (two pole), 1223 (three way), 1224 (four way).
 - b. Hubbell; CS1221 (single pole), CS1222 (two pole), CS1223 (three way), CS1224 (four way).
 - c. Leviton; 1221-2 (single pole), 1222-2 (two pole), 1223-2 (three way), 1224-2 (four way).

- d. Pass & Seymour; 20AC1 (single pole), 20AC2 (two pole), 20AC3 (three way), 20AC4 (four way).
- C. Pilot Light Switches, 20 A:
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Eaton/Arrow Hart; 1221PL for 120 V and 277 V.
 - b. Hubbell; HPL1221PL for 120 V and 277 V.
 - c. Leviton; 1221-PLR for 120 V, 1221-7PLR for 277 V.
 - d. Pass & Seymour
 - e. r; PS20AC1-PLR for 120 V.
 - 2. Description: Single pole, with neon-lighted handle, illuminated when switch is "ON."
- D. Key-Operated Switches, 120/277 V, 20 A:
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Eaton/Arrow Hart; 1995L.
 - b. Hubbell; HBL1221L.
 - c. Leviton; 1221-2L.
 - d. Pass & Seymour; PS20AC1-L.
 - 2. Description: Single pole, with factory-supplied key in lieu of switch handle.
- E. Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 20 A; for use with mechanically held lighting contactors.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Eaton/Arrow Hart; 1995.
 - b. Hubbell; HBL1557.
 - c. Leviton; 1257.
 - d. Pass & Seymour; 1251.
- F. Key-Operated, Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 20 A; for use with mechanically held lighting contactors, with factory-supplied key in lieu of switch handle.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Eaton/Arrow Hart; 1995L.
 - b. Hubbell; HBL1557L.
 - c. Leviton; 1257L.
 - d. Pass & Seymour; 1251L.
- G. "E" Designated Switches: Switches used for emergency lighting shall be lighted hand type (lighted when load is off) with Red Lexan handle.
- H. "RP" Designated Switches shall be corrosion, moisture and dust resistant assemblies made of yellow neoprene 20 ampere, 277/120 volt.

2.8 WALL PLATES

- A. Single and combination types to match corresponding wiring devices.
 - 1. Plate-Securing Screws: Metal with head color to match plate finish.
 - 2. Material for Finished Spaces: To be selected by Architect.
 - 3. Material for Unfinished Spaces: Galvanized steel.
 - 4. Material for Damp Locations: Cast aluminum with spring-loaded lift cover, and listed and labeled for use in "wet locations."
- B. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with "Extra Duty" type 3R. Metal low profile, expandable from 2-1/2" to 4-1/2" rain-tight while in use with lockable cover as manufactured by TayMac or equal. Finish color to be selected by Architect.

2.9 MULTIOUTLET ASSEMBLIES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Hubbell Incorporated; Wiring Device-Kellems
 - 2. Wiremold Company (The)
- C. Components of Assemblies: Products from a single manufacturer designed for use as a complete, matching assembly of raceways and receptacles.
- D. Raceway Material: Metal, with manufacturer's standard finish options. Finish color to be selected by Architect.
- E. Configuration: Refer to drawings for specific information.
- F. Wire: No. 12 AWG.

2.10 RETRACTABLE CORD REELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Daniel Woodhead Co.
 - 2. McGill
 - 3. Hubbell Company
- B. Description:
 - 1. Electric Cord reel shall be lightweight corrosion-resistant macroblend plastic housing with automatic spring retraction, ratchet lock and lifetime lubrication. Cord reel should be rated for light to medium duty.

2. Cord reel shall have an external spring tension adjustment and an adjustable ball stop on the cord. Provide a 330° pivot base for each cord reel.
3. Cord reel shall have a Type SJO cord with three (3) #16 AWG conductors rated for 300 volts and a length of 30 feet.
4. Cord reel shall have a manufacturer's standard finish to be confirmed by Architect and be UL listed.
5. Provide a NEMA 5-20R, 2 pole, 3 wire receptacle rated for 20 amperes at 125 volts on the end of the cord as indicated on the drawings.

2.11 PIN AND SLEEVE CONNECTORS

- A. Manufacturers: Subject to the compliance with the requirements, provide products by one of the following:
 1. Hubbell Companies; "Circuit Lock" Series (Basis of Design)
 2. Eaton/Arrow Hart; "Pin and Sleeve" Series
 3. Pass and Seymour; "Non-Fusible Interlock" Series
- B. Components of Assemblies: Products from a single manufacturer designed for use as a complete, matching assembly of integral disconnecting means, pin/sleeve receptacle, interlocking device and enclosure. All pin and sleeve devices shall be IEC 60309-1 and IEC 60309-2 rated.
- C. Environmental Operating Conditions: +60 degrees Celsius to -50 degrees Celsius maximum conditions for continuous operation.
- D. Description: Factory-assembled and wired units consisting of an interlocking, non-fused disconnect switch and pin/sleeve receptacle contained within a single, NEMA 4X watertight enclosure.
 1. Integral disconnect switch shall be horsepower rated and be surface mounted via DIN rail connector for future servicing.
 2. Enclosure housing shall use brass inserts and stainless steel screws for proper torque and sealing.
 3. Enclosure shall have a minimum of two (2) molded-in conduit drill points for connection of incoming feeder; location of feeder to be determined in field.
 4. Bottom or top incoming feeder connection shall have watertight conduit hub, grounding plate and integral captured neoprene gasket for watertight seal.
 5. Heavy-duty, lockable handle meeting OSHA Lockout/Tagout regulations.
 6. Two-stage interlocking tamper-proof mechanism to prevent energizing of power until plug and receptacle are fully engaged; Disconnecting of plug from device cannot occur until power is disengaged by moving handle to the "OFF" position.
 7. Integral pre-wired pin and sleeve receptacle.
 8. Spring-loaded liftcover with gasket for watertight seal.
 9. Adjustable mounting feet suitable for surface mounting on smooth and irregular surfaces.
 10. Color-coded rating label and receptacle mount to indicate voltage and amperage of unit.
- E. Refer to drawings for ampacity, wiring configuration, voltage and ratings of pin and sleeve connectors to be used throughout project.

- F. Device maximum voltage rating shall be 600 volts AC with a minimum short circuit rating of 10,000 AIC.
- G. Device operations shall be rated for 15,000 mechanical cycles and 10,000 electrical cycles.
- H. Auxiliary contacts shall be provided where indicated on drawings. Auxiliary contacts shall be rated for 10 amperes at 600 volts and be available as one (1) normally-open and one (1) normally-closed.
- I. Enclosure shall be non-metallic with provisions for grounding and provided with a gray color finish.

2.12 FINISHES

- A. Color: Wiring device catalog numbers in Section Text do not designate device color.
 - 1. Wiring Devices Connected to Normal Power System: To be confirmed by Architect, unless otherwise indicated or required by NFPA 70 or device listing.
 - 2. Wiring Devices Connected to Emergency Power System: .
 - 3. Wiring devices for Automatic Outlet Control Systems shall be permanently marked with the I/O power symbol and the word "Controlled" in accordance with the NEC.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with NECA 1, including the mounting heights listed in that standard, unless otherwise noted.
- B. Coordination with Other Trades:
 - 1. Take steps to ensure that devices and their boxes are protected. Do not place wall finish materials over device boxes and do not cut holes for boxes with routers that are guided by riding against outside of the boxes.
 - 2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
 - 3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
 - 4. Install wiring devices after all wall preparation, including painting, is complete.
- C. Conductors:
 - 1. Do not strip insulation from conductors until just before they are spliced or terminated on devices.
 - 2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.
 - 3. The length of free conductors at outlets for devices shall meet provisions of NFPA 70, Article 300, without pigtails.
 - 4. Existing Conductors:

- a. Cut back and pigtail or replace all damaged conductors.
- b. Straighten conductors that remain and remove corrosion and foreign matter.
- c. Pigtailling existing conductors is permitted provided the outlet box is large enough.

D. Device Installation:

1. Replace all devices that have been in temporary use during construction or that show signs that they were installed before building finishing operations were complete.
2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
4. Connect devices to branch circuits using pigtails that are not less than 6 inches in length.
5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, 2/3 to 3/4 of the way around terminal screw.
6. Use a torque screwdriver when a torque is recommended or required by the manufacturer.
7. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
8. Tighten unused terminal screws on the device.
9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device mounting screws in yokes, allowing metal-to-metal contact.

E. Light Switch Installation

1. Neon or LED lighted handle type light switches - Illuminated when load is "OFF" (meeting the device type, style and color requirements described in other specification sections and drawings) shall be provided for the following applications:
 - a. All "E" designated switches shown on the drawings.
 - b. Manual light switches serving normal and emergency lighting within the following spaces:
 - 1) Electrical Rooms
 - 2) Communications Rooms
 - 3) Mechanical Equipment Rooms
 - 4) Elevator Pits

F. Receptacle Orientation:

1. Install ground pin of vertically mounted receptacles up, and on horizontally mounted receptacles to the left.

G. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.

H. Arrangement of Devices: Unless otherwise indicated, mount flush to finished wall surface, with long dimension vertical. Group adjacent switches under single, multigang wall plates.

I. Adjust locations of floor service outlets and service poles to suit arrangement of partitions and furnishings.

3.2 IDENTIFICATION

- A. Comply with Division 26 Section "Identification for Electrical Systems."

3.3 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
 - 1. Test Instruments: Use instruments that comply with UL 1436.
 - 2. Test Instrument for Convenience Receptacles: Digital wiring analyzer with digital readout or illuminated LED indicators of measurement.
- B. Tests for Convenience Receptacles:
 - 1. Line Voltage: Acceptable range is 105 to 132 V.
 - 2. Percent Voltage Drop under 15-A Load: A value of 6 percent or higher is not acceptable.
 - 3. Ground Impedance: Values of up to 2 ohms are acceptable.
 - 4. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.
 - 5. Using the test plug, verify that the device and its outlet box are securely mounted.
 - 6. The tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, or similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.

END OF SECTION 26 27 26

SECTION 26 28 13 - FUSES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Cartridge fuses rated 600 V and less for use in switches and controllers.
 - 2. Spare-fuse cabinets.

1.3 SUBMITTALS

- A. Product Data: Include the following for each fuse type indicated:
 - 1. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
 - 2. Let-through current curves for fuses with current-limiting characteristics.
 - 3. Time-current curves, coordination charts and tables, and related data.
 - 4. Fuse size for elevator feeders and elevator power module disconnect switches.
- B. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.
 - 1. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
 - 2. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.
- C. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - a. Let-through current curves for fuses with current-limiting characteristics.
 - b. Time-current curves, coordination charts and tables, and related data.
 - c. Ambient temperature adjustment information.

1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain fuses from a single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NEMA FU 1.
- D. Comply with NFPA 70.

1.5 PROJECT CONDITIONS

- A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F or more than 100 deg F, apply manufacturer's ambient temperature adjustment factors to fuse ratings.

1.6 COORDINATION

- A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size.

1.7 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fuses: Quantity equal to 15 percent of each fuse type and size, but no fewer than 3 of each type and size.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cooper Bussman, Inc.
 - 2. Eagle Electric Mfg. Co., Inc.; Cooper Industries, Inc.
 - 3. Ferraz Shawmut, Inc.
 - 4. Tracor, Inc.; Littelfuse, Inc. Subsidiary

2.2 CARTRIDGE FUSES

- A. Characteristics: NEMA FU 1, nonrenewable cartridge fuse; class and current rating indicated; voltage rating consistent with circuit voltage.

2.3 SPARE-FUSE CABINET

- A. Cabinet: Wall-mounted, 0.05-inch- thick steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.
 - 1. Size: Adequate for storage of spare fuses specified with 15 percent spare capacity minimum.
 - 2. Finish: Gray, baked enamel.
 - 3. Identification: "SPARE FUSES" in 1-1/2-inch- high letters on exterior of door.
 - 4. Fuse Pullers: For each size of fuse.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.
- B. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FUSE APPLICATIONS

- A. Motor Branch Circuits: Class RK5, time delay, coordinated by final coordination study.
- B. Other Branch Circuits: Class RK5, time delay, coordinated by final coordination study.
- C. Elevator Branch Circuits (Power Module): Class J, time delay, coordinated by final coordination study.

3.3 INSTALLATION

- A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.
- B. Install spare-fuse cabinet(s).

3.4 IDENTIFICATION

- A. Install labels indicating fuse replacement information on inside door of each fused switch.

END OF SECTION 26 28 13

SECTION 26 28 16 - ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following individually mounted, enclosed switches and circuit breakers:
 1. Fusible switches
 2. Nonfusible switches
 3. Molded-case circuit breakers
 4. Molded-case switches
 5. Enclosures

1.3 DEFINITIONS

- A. GD: General duty
- B. GFCI: Ground-fault circuit interrupter
- C. HD: Heavy duty
- D. RMS: Root mean square
- E. SPDT: Single pole, double throw
- F. GFEP: Ground-fault equipment protection
- G. HACR: Heating, air conditioning, refrigeration rated circuit breaker
- H. AFCI: Arc-fault circuit interrupter
- I. SWD: Switch rated circuit breaker
- J. HID: High-intensity discharge switch rated circuit breaker

1.4 SUBMITTALS

- A. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
 - 1. Enclosure types and details for types other than NEMA 250, Type 1.
 - 2. Current and voltage ratings.
 - 3. Short-circuit current rating.
 - 4. UL listing for series rating of installed devices.
 - 5. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Qualification Data: For testing agency.
- D. Field quality-control test reports including the following:
 - 1. Test procedures used.
 - 2. Test results that comply with requirements.
 - 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- E. Manufacturer's field service report.
- F. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.
 - 2. Time-current curves, including selectable ranges for each type of circuit breaker.

1.5 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
 - 1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

- C. Comply with NFPA 70.
- D. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions, unless otherwise indicated:
 - 1. Ambient Temperature: Not less than minus 22 deg F and not exceeding 104 deg F.
 - 2. Altitude: Not exceeding 6600 feet.

1.7 COORDINATION

- A. Coordinate layout and installation of switches, circuit breakers, and components with other construction, including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Spares: For the following:
 - a. Potential Transformer Fuses: 15 percent.
 - b. Control-Power Fuses: 15 percent.
 - c. Fuses and Fusible Devices for Fused Circuit Breakers: 15 percent.
 - d. Fuses for Fusible Switches: 15 percent.
 - e. Fuses for Fused Power Circuit Devices: 15 percent.
 - 2. Spare Indicating Lights: Six of each type installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 FUSIBLE AND NONFUSIBLE SWITCHES

- A. Manufacturers:

1. Square D/Group Schneider (Basis of Design).
 2. General Electric Co.; Electrical Distribution & Control Division.
 3. Siemens Energy & Automation, Inc.
 4. Eaton Corporation; Cutler-Hammer Products.
 5. Hubbell
- B. Fusible Switch, 600 A and Smaller: NEMA KS 1, Type HD, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.
- C. Nonfusible Switch, 600 A and Smaller: NEMA KS 1, Type HD, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.
- D. Accessories:
1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
 2. Neutral Kit: Internally mounted; insulated, capable of being grounded, and bonded; and labeled for copper and aluminum neutral conductors.
 3. Auxiliary Contact Kit: Auxiliary set of contacts arranged to open before switch blades open.

2.3 MOLDED-CASE CIRCUIT BREAKERS AND SWITCHES

- A. Manufacturers:
1. Square D/Group Schneider (Basis of Design)
 2. General Electric Co.; Electrical Distribution & Control Division.
 3. Siemens Energy & Automation, Inc.
 4. Eaton Corporation; Cutler-Hammer Products
- B. Molded-Case Circuit Breaker: NEMA AB 1, with interrupting capacity to meet available fault currents.
1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
 3. Electronic Trip-Unit Circuit Breakers: RMS sensing; field-replaceable rating plug; with the following field-adjustable settings:
 - a. Instantaneous trip.
 - b. Long- and short-time pickup levels.
 - c. Long- and short-time time adjustments.
 - d. Ground-fault pickup level, time delay, and I^2t response.
 4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller and let-through ratings less than NEMA FU 1, RK-5.

5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker and trip activation on fuse opening or on opening of fuse compartment door.
6. GFCI Circuit Breakers: Single- and two-pole configurations with Class A 5-mA trip sensitivity.
7. GFEP Circuit Breakers: Single- and two-pole configurations with Class B 30-mA trip sensitivity.
8. AFCI Circuit Breaker: Single- and two-pole configurations with arc-fault protection.
9. SWD Circuit Breaker: Single-pole configuration, rated for switching fluorescent lighting circuits.
10. HID Circuit Breaker: Single- and two-pole configurations, rated for switching high-intensity discharge circuits.
11. HACR Circuit Breakers: Single-, two- and three-pole configurations, rated for protecting heating, air conditioning and refrigeration equipment.

C. Molded-Case Circuit-Breaker Features and Accessories:

1. Standard frame sizes, trip ratings, and number of poles.
2. Lugs: Mechanical style with compression lug kits suitable for number, size, trip ratings, and conductor material.
3. Application Listing: Type SWD for switching fluorescent lighting loads; Type HACR for heating, air-conditioning, and refrigerating equipment; Type HID for switching high-intensity discharge lighting loads.
4. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
5. Arc-Fault Protection: Integrally mounted relay and trip unit with fixed pickup and time-delay settings, push-to-test feature, and arc-fault indicator.
6. Communication Capability: Circuit-breaker-mounted, universal-mounted integral or din-rail-mounted communication module with functions and features compatible with power monitoring and control system specified in Division 26 Sections "Switchboards" and "Electrical Metering" where required by drawings and/or other specifications.
7. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 55 percent of rated voltage.
8. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage with field-adjustable 0.1- to 0.6-second time delay.
9. Auxiliary Switch: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.

D. Molded-Case Switches: Molded-case circuit breaker with fixed, high-set instantaneous trip only, and short-circuit withstand rating equal to equivalent breaker frame size interrupting rating.

E. Molded-Case Switch Accessories:

1. Lugs: Mechanical style with compression lug kits suitable for number, size, trip ratings, and material of conductors.
2. Application Listing: Type HACR for heating, air-conditioning, and refrigerating equipment.
3. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 55 percent of rated voltage. Provide "dummy" trip unit where required for proper operation.

4. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage with field-adjustable 0.1- to 0.6-second time delay. Provide "dummy" trip unit where required for proper operation.
5. Auxiliary Switch: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
6. Key Interlock Kit: Externally mounted to prohibit operation; key shall be removable only when switch is in off position.

2.4 ELEVATOR POWER MODULE PANEL

A. Available Manufacturers:

1. Cooper/Bussman (Basis of Design)
2. Cutler Hammer
3. Square D

B. Provide Power Module Panel as shown on drawings for single and multi-elevator machine rooms. The Power Module panel shall be constructed, listed and certified to the standards as listed. The Power Module Panel shall be rated as indicated on single line diagrams with copper bus.

C. The Power Module Panel shall have individual horsepower rated fusible feeder switches with shunt trip capabilities. Feeder switches shall have ampere ratings based upon elevator manufacturer requirements and utilize class J fuses.

D. All shunt trip fusible feeder switches shall have an accessory a relay, control power transformer and other options (as listed below).

E. The control power transformer shall be 100VA with primary and secondary fuses. The primary voltage rating shall be 480 volts with a 120 volt secondary. The isolation relay shall be 3PDT, 10 amp, 120V. The coil of the isolation relay shall be 120V AC or 24V DC. Contractor shall confirm voltage with fire alarm manufacturer. A normally open dry contact shall be provided by the fire Alarm Safety System to energize the isolation relay and activate the shunt trip solenoid (140VA inrush at 120V). (Note: if 24V DC coil is selected, a separate 24V DC source and contact may need to be provided in order to comply with the Fire Alarm Safety System power requirements.)

F. Additional accessories provided for each fusible shunt trip switch include:

1. Key to Test Switch
2. ON Pilot Light (Red)
3. 1P NC Mechanical Interlock (required for hydraulic elevators with automatic recall)
4. Fire Alarm voltage Monitoring Relay (needed to comply with NFPA 72)

G. The module shall have been successfully tested to a short circuit rating with Bussmann Low-Peak Class J fuses at 200,000 amps RMS symmetrical. All switches shall have shunt trip capabilities at 120V AC or 24V DC from remote fire alarm system signal.

2.5 ENCLOSURES

- A. NEMA AB 1 and NEMA KS 1 to meet environmental conditions of installed location.
 - 1. Outdoor Locations: NEMA 250, Type 3R.
 - 2. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
 - 3. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CONCRETE BASES

- A. Coordinate size and location of concrete bases. Verify structural requirements with structural engineer.
- B. Concrete base is specified in Division 26 Section "Hangers and Supports for Electrical Systems," and concrete materials and installation requirements are specified in Division 03.

3.3 INSTALLATION

- A. Comply with applicable portions of NECA 1, NEMA PB 1.1, and NEMA PB 2.1 for installation of enclosed switches and circuit breakers.
- B. Mount individual wall-mounting switches and circuit breakers with tops at uniform height, unless otherwise indicated. Anchor floor-mounting switches to concrete base.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- B. Enclosure Nameplates: Label each enclosure with engraved metal or laminated-plastic nameplate as specified in Division 26 Section "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including connections. Report results in writing.
- B. Prepare for acceptance testing as follows:
 - 1. Inspect mechanical and electrical connections.
 - 2. Verify switch and relay type and labeling verification.
 - 3. Verify rating of installed fuses.
 - 4. Inspect proper installation of type, size, quantity, and arrangement of mounting or anchorage devices complying with manufacturer's certification.
- C. Testing Agency: Engage a qualified testing and inspecting agency to perform the following field tests and inspections and prepare test reports:
- D. Perform the following field tests and inspections and prepare test reports:
 - 1. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.5 for switches and Section 7.6 for molded-case circuit breakers. Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Infrared Scanning:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each enclosed switch and circuit breaker. Open or remove doors or panels so connections are accessible to portable scanner.
 - b. Instruments, Equipment and Reports:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 - 2) Prepare a certified report that identifies enclosed switches and circuit breakers included and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 ADJUSTING

- A. Set field-adjustable switches and circuit-breaker trip ranges.

3.7 CLEANING

- A. On completion of installation, vacuum dirt and debris from interiors; do not use compressed air to assist in cleaning.

B. Inspect exposed surfaces and repair damaged finishes.

END OF SECTION 26 28 16

SECTION 26 29 13 - ENCLOSED CONTROLLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes AC, enclosed controllers rated 600 V and less, of the following types:
 - 1. Across-the-line, manual and magnetic controllers.
 - 2. Reduced-voltage controllers.
 - 3. Multispeed controllers.
- B. Related Sections include the following:
 - 1. Division 26 Section "Surge Protective Devices for Low-Voltage Electrical Power Circuits" for low-voltage power, control, and communication surge suppressors.

1.3 SUBMITTALS

- A. Product Data: For each type of enclosed controller. Include dimensions and manufacturer's technical data on features, performance, electrical characteristics, ratings, and finishes.
- B. Shop Drawings: For each enclosed controller.
 - 1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings. Include the following:
 - a. Each installed unit's type and details.
 - b. Nameplate legends.
 - c. Short-circuit current rating of integrated unit.
 - d. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices in combination controllers.
 - 2. Wiring Diagrams: Power, signal, and control wiring.
- C. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around enclosed controllers where pipe and ducts are prohibited. Show enclosed controller layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

- D. Qualification Data: For manufacturer.
- E. Field quality-control test reports.
- F. Operation and Maintenance Data: For enclosed controllers to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. Routine maintenance requirements for enclosed controllers and all installed components.
 - 2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
- G. Load-Current and Overload-Relay Heater List: Compile after motors have been installed and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.
- H. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed and arrange to demonstrate that dip switch settings for motor running overload protection suit actual motor to be protected.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer. Maintain, within 100 miles of Project site, a service center capable of providing training, parts, and emergency maintenance and repairs.
- B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
 - 1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- C. Source Limitations: Obtain enclosed controllers of a single type through one source from a single manufacturer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with NFPA 70.
- F. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed controllers, minimum clearances between enclosed controllers, and for adjacent surfaces and other items. Comply with indicated maximum dimensions and clearances.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store enclosed controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- B. If stored in areas subject to weather, cover enclosed controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; install electric heating of sufficient wattage to prevent condensation.

1.6 PROJECT CONDITIONS

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 - 1. Notify Construction Manager and Owner no fewer than two weeks in advance of proposed interruption of electrical service.
 - 2. Indicate method of providing temporary utilities.
 - 3. Do not proceed with interruption of electrical service without Construction Manager's and Owner's written permission.

1.7 COORDINATION

- A. Coordinate layout and installation of enclosed controllers with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."
- D. Coordinate features of enclosed controllers and accessory devices with pilot devices and control circuits to which they connect.
- E. Coordinate features, accessories, and functions of each enclosed controller with ratings and characteristics of supply circuit, motor, required control sequence, and duty cycle of motor and load.

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Spare Fuses: Furnish one spare for every five installed, but no fewer than one set of three of each type and rating.
2. Indicating Lights: Two of each type installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB Power Distribution, Inc.; ABB Control, Inc. Subsidiary
 2. Cerus
 3. Danfoss Inc.; Danfoss Electronic Drives Div.
 4. Eaton Corporation; Cutler-Hammer Products
 5. General Electrical Company; GE Industrial Systems
 6. Rockwell Automation; Allen-Bradley Co.; Industrial Control Group
 7. Siemens/Furnas Controls
 8. Square D
 9. Toshiba International Corporation

2.2 ACROSS-THE-LINE ENCLOSED CONTROLLERS

- A. Manual Controller: NEMA ICS 2, general purpose, Class A, with "quick-make, quick-break" toggle or pushbutton action, and marked to show whether unit is "OFF," "ON," or "TRIPPED."
1. Overload Relay: Ambient-compensated type with inverse-time-current characteristics and NEMA ICS 2, Class 10 tripping characteristics. Relays shall have heaters and sensors in each phase, matched to nameplate, full-load current of specific motor to which they connect and shall have appropriate adjustment for duty cycle.
- B. Magnetic Controller: NEMA ICS 2, Class A, full voltage, nonreversing, across the line, unless otherwise indicated.
1. Control Circuit: 120 V; obtained from integral control power transformer with a control power of sufficient capacity to operate connected pilot, indicating and control devices, plus 100 percent spare capacity.
 2. Adjustable Solid State Overload Relay: Dip switch selectable for motor running overload protection with NEMA ICS 2, Class 10 tripping characteristic, and selected to protect motor against voltage and current unbalance and single phasing. Provide relay with Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
- C. Combination Magnetic Controller: Factory-assembled combination controller and disconnect switch.

1. Fusible Disconnecting Means: NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 947-4-1, as certified by an NRTL.
2. Nonfusible Disconnecting Means: NEMA KS 1, heavy-duty, nonfusible switch.
3. Circuit-Breaker Disconnecting Means: NEMA AB 1, motor-circuit protector with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

2.3 MULTISPEED ENCLOSED CONTROLLERS

- A. Multispeed Enclosed Controller: Match controller to motor type, application, and number of speeds; include the following accessories:
1. Compelling relay to ensure that motor will start only at low speed.
 2. Accelerating relay to ensure properly timed acceleration through speeds lower than that selected.
 3. Decelerating relay to ensure automatically timed deceleration through each speed.

2.4 ENCLOSURES

- A. Description: Flush- or surface-mounting cabinets as indicated. NEMA 250, Type 1, unless otherwise indicated to comply with environmental conditions at installed location.
1. Outdoor Locations: NEMA 250, Type 3R.
 2. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
 3. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.

2.5 ACCESSORIES

- A. Devices shall be factory installed in controller enclosure, unless otherwise indicated.
- B. Refer to the HPE drawings for control switches and stations to be factory installed on controller.
- C. Provide pilot light in cover, red LED type.
- D. Provide reset button, and Hand-Off-Automatic switch in cover, field convertible to Off/Auto or Start/Stop push button.
- E. Provide two sets of normally open auxiliary contacts in addition to standard auxiliary holding contacts supplied with each contactor. Provide one set of auxiliary contacts convertible to normally closed. Where starter is provided with Division 23 equipment, it is to be provided with necessary contacts required to operate mechanical equipment and Automatic Temperature Controls, Division 23.
- F. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.

- G. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.
- H. Control Relays: Auxiliary and adjustable time-delay relays.
- I. Phase-Failure and Undervoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connection. Provide adjustable undervoltage setting.
- J. Current-Sensing, Phase-Failure Relays for Bypass Controllers: Solid-state sensing circuit with isolated output contacts for hard-wired connection; arranged to operate on phase failure, phase reversal, current unbalance of from 30 to 40 percent, or loss of supply voltage; with adjustable response delay.

2.6 FACTORY FINISHES

- A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested enclosed controllers before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and surfaces to receive enclosed controllers for compliance with requirements, installation tolerances, and other conditions affecting performance.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Select features of each enclosed controller to coordinate with ratings and characteristics of supply circuit and motor; required control sequence; duty cycle of motor, controller, and load; and configuration of pilot device and control circuit affecting controller functions.
- B. Select horsepower rating of controllers to suit motor controlled. Horsepower ratings indicated on drawings are for basis of design only. Coordinate horsepower rating of controllers with the motor horsepower supplied with the equipment furnished under Division 22 and 23

3.3 INSTALLATION

- A. For control equipment at walls, mount on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."
- B. Install freestanding equipment on concrete bases.

- C. Enclosed Controller Fuses: Install fuses in each fusible switch. Comply with requirements in Division 26 Section "Fuses."

3.4 CONCRETE BASES

- A. Coordinate size and location of concrete bases. Verify structural requirements with structural engineer.
- B. Concrete base is specified in Division 26 Section "Hangers and Supports for Electrical Systems," and concrete materials and installation requirements are specified in Division 03.

3.5 IDENTIFICATION

- A. Identify enclosed controller, components, and control wiring according to Division 26 Section "Identification for Electrical Systems."

3.6 CONTROL WIRING INSTALLATION

- A. Install wiring between enclosed controllers according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- B. Bundle, train, and support wiring in enclosures.
- C. Connect hand-off-automatic switch and other automatic-control devices where applicable.
 - 1. Connect selector switches to bypass only manual- and automatic-control devices that have no safety functions when switch is in hand position.
 - 2. Connect selector switches with enclosed controller circuit in both hand and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.7 CONNECTIONS

- A. Conduit installation requirements are specified in other Division 26 Sections. Drawings indicate general arrangement of conduit, fittings, and specialties.
- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

3.8 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each enclosed controller element, bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to perform the following:
 - 1. Inspect controllers, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
 - 2. Assist in field testing of equipment including pretesting and adjusting of solid-state controllers.
 - 3. Report results in writing.
- C. Testing Agency: Owner will engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.
- D. Testing Agency: Engage a qualified testing and inspecting agency to perform the following field tests and inspections and prepare test reports:
- E. Perform the following field tests and inspections and prepare test reports:
 - 1. Perform each electrical test and visual and mechanical inspection, except optional tests, stated in NETA ATS, "Motor Control - Motor Starters and Motor Control - Adjustable Speed Drive Systems." Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3.9 ADJUSTING

- A. Set field-adjustable switches and circuit-breaker trip ranges.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain enclosed controllers. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 26 29 13

SECTION 26 43 13 – SURGE PROTECTIVE DEVICES FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes SPD for low-voltage power, control, and communication equipment.
- B. Related Sections include the following:
 - 1. Division 26 Section "Wiring Devices" for devices with integral SPD.
 - 2. Division 26 Section "Panelboards" for factory-installed SPD.
 - 3. Division 26 Section "Switchboards" for factory-installed SPD.

1.3 DEFINITIONS

- A. ATS: Acceptance Testing Specifications.
- B. SVR: Suppressed voltage rating.
- C. SPD: Surge Protective Device.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating weights, operating characteristics, furnished specialties, and accessories.
- B. Product Certificates: For surge protective devices, signed by product manufacturer certifying compliance with the following standards:
 - 1. UL 1283
 - 2. UL 1449 (3rd Edition 2009)
- C. Qualification Data: For testing agency.
- D. Field quality-control test reports, including the following:
 - 1. Test procedures used.
 - 2. Test results that comply with requirements
 - 3. Failed test results and corrective action taken to achieve requirements.

- E. Operation and Maintenance Data: For surge protective devices to include in emergency, operation, and maintenance manuals.
- F. Warranties: Special warranties specified in this Section.

1.5 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
 - 1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- B. Source Limitations: Obtain surge protective devices and accessories through one source from a single manufacturer.
- C. Product Options: Drawings indicate size, dimensional requirements, and electrical performance of suppressors and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with IEEE C62.41, "IEEE Guide for Surge Voltages in Low Voltage AC Power Circuits," and test devices according to IEEE C62.45, "IEEE Guide on Surge Testing for Equipment Connected to Low-Voltage AC Power Circuits."
- F. Comply with UL 1283, "Electromagnetic Interference Filters," and UL 1449, "Standard for Surge Protective Devices." Provide a Manufacturer's Certificate certifying transient voltage surge suppression device complies with UL1449 Third Edition Surge Voltage Ratings.

1.6 PROJECT CONDITIONS

- A. Service Conditions: Rate surge protective devices for continuous operation under the following conditions, unless otherwise indicated:
 - 1. Maximum Continuous Operating Voltage: Not less than 115 percent of nominal system operating voltage.
 - 2. Operating Temperature: 30 to 120 deg F.
 - 3. Humidity: 0 to 85 percent, noncondensing.
 - 4. Altitude: Less than 12,000 feet above sea level.

1.7 COORDINATION

- A. Coordinate location of field-mounted surge protective devices to allow adequate clearances for maintenance.
- B. Coordinate surge protection devices with Division 26 Section "Electrical Power Monitoring and Control."

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of surge suppressors that fail in materials or workmanship within ten years from date of Substantial Completion.
- B. Special Warranty for Cord-Connected, Plug-in Surge Protective Devices: Manufacturer's standard form in which manufacturer agrees to repair or replace electronic equipment connected to circuits protected by surge suppressors.

1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Replaceable Protection Modules: One of each size and type installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Square D; Schneider Electric (Basis of Design)
 - 2. Cutler-Hammer, Inc.; Eaton Corporation
 - 3. General Electric

2.2 SERVICE ENTRANCE SURGE PROTECTIVE DEVICES

- A. Surge Protection Device Description: Modular design with field-replaceable modules, sine-wave-tracking type with the following features and accessories:
 - 1. Fuses, rated at 200-kA interrupting capacity.
 - 2. Fabrication using bolted compression lugs for internal wiring.
 - 3. Integral disconnect switch.
 - 4. Redundant suppression circuits.
 - 5. Redundant replaceable modules.

6. Arrangement with copper bus bars and for bolted connections to phase buses, neutral bus, and ground bus.
 7. LED indicator lights for power and protection status.
 8. Audible alarm, with silencing switch, to indicate when protection has failed.
 9. One set of dry contacts rated at 5 A and 250-V ac, for remote monitoring of protection status. Coordinate with electrical power monitoring and control system.
 10. Surge-event operations counter.
- B. Peak Single-Impulse Surge Current Rating: 240 kA per phase.
- C. Connection Means: Permanently wired.
- D. Protection modes and UL 1449 VPR for grounded wye circuits with voltages of 480Y/277, 3-phase, 4-wire circuits shall be as follows:
1. Line to Neutral: 1200 V for 480Y/277, 700V for 208Y/120.
 2. Line to Ground: 1200 V for 480Y/277, 700V for 208Y/120.
 3. Neutral to Ground: 1200 V for 480Y/277, 700V for 208Y/120.

2.3 DISTRIBUTION PANELBOARD SPD'S

- A. Surge Protective Device: IEEE C62.41-compliant, integrally mounted, plug-in solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, UL 1449, third edition, short-circuit current rating matching or exceeding the panelboard short-circuit rating, and with the following features and accessories:
1. Accessories:
 - a. Integral disconnect switch.
 - b. Redundant suppression circuits.
 - c. Redundant replaceable modules.
 - d. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
 - e. LED indicator lights for power and protection status.
 - f. Audible alarm, with silencing switch, to indicate when protection has failed.
 - g. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of system operation. Contacts shall reverse position on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with electrical power monitoring system.
 - h. Six-digit, transient-event counter set to totalize transient surges.
- B. Peak Single-Impulse Surge Current Rating: 160 kA per phase.
- C. Protection modes and UL 1449 VPR for grounded wye circuits with voltages of 480Y/277 208Y/120, 3-phase, 4-wire circuits shall be as follows:
1. Line to Neutral: 1200 V for 480Y/277, 700 V for 208Y/120.
 2. Line to Ground: 1200 V for 480Y/277, 700 V for 208Y/120.
 3. Neutral to Ground: 1200 V for 480Y/277, 700 V for 208Y/120.

D. Protection modes and UL 1449 VPR for voltages of 480, 3-phase, 3-wire, delta circuits shall be as follows:

1. Line to Line: 2000 V for 480 V, 1200 V for 240 V
2. Line to Ground: 1200 V for 480 V, 1200 V for 240 V

2.4 SPD'S FOR APPLIANCE AND LIGHTING PANELBOARDS

A. Surge Protection Device: IEEE C62.41-compliant, integrally mounted, plug-in solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, UL 1449, third edition, short-circuit current rating matching or exceeding the panelboard short-circuit rating, and with the following features and accessories:

1. Accessories:
 - a. Integral disconnect switch.
 - b. Redundant suppression circuits.
 - c. Redundant replaceable modules.
 - d. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
 - e. LED indicator lights for power and protection status.
 - f. Audible alarm, with silencing switch, to indicate when protection has failed.
 - g. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of system operation. Contacts shall reverse position on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with electrical power monitoring system.
 - h. Six-digit, transient-event counter set to totalize transient surges.

B. Peak Single-Impulse Surge Current Rating: 80 kA per phase.

C. Protection modes and UL 1449 VPR for grounded wye circuits with voltages of 480Y/277, 208Y/120, 3-phase, 4-wire circuits shall be as follows:

1. Line to Neutral: 1200 V for 480Y/277, 700 V for 208Y/120.
2. Line to Ground: 1200 V for 480Y/277, 700 V for 208Y/120.
3. Neutral to Ground: 1200 V for 480Y/277, 700 V for 208Y/120.

D. Protection modes and UL 1449 SVR for voltages of 480, 3-phase, 3-wire, delta circuits shall be as follows:

1. Line to Line: 2000 V for 480 V, 1200 V for 240 V
2. Line to Ground: 1200 V for 480 V, 1200 V for 240 V

2.5 ENCLOSURES

A. NEMA 250, with type matching the enclosure of panel or device being protected.

PART 3 - EXECUTION

3.1 INSTALLATION OF SURGE PROTECTION DEVICES

- A. Switchboards, distribution panelboards, lighting panelboards, appliance panelboards, and electronic grade panelboards integral to electrical equipment.
- B. Install devices for panelboard and auxiliary panels with conductors or buses between surge protective device and points of attachment as short and straight as possible. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.
 - 1. Provide multipole, 30-A minimum circuit breaker integral into the panelboard the SPD is installed as a dedicated disconnect for suppressor, unless otherwise indicated.
- C. Install indicator lights, trouble alarms and surge counter in face of switchboard, switchgear and panelboard.

3.2 PLACING SYSTEM INTO SERVICE

- A. Do not energize or connect service entrance equipment, panelboards, control terminals and data terminals to their sources until surge protection devices are installed and connected.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust equipment installation, including connections, and to assist in field testing. Report results in writing.
 - 1. Verify that electrical wiring installation complies with manufacturer's written installation requirements.
- B. Testing: Engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports:
- C. Testing: Perform the following field tests and inspections and prepare test reports:
 - 1. After installing surge protection devices, but before electrical circuitry has been energized, test for compliance with requirements.
 - 2. Complete startup checks according to manufacturer's written instructions.
 - 3. Perform each visual and mechanical inspection and electrical test stated in NETA ATS, "Surge Arresters, Low-Voltage Surge Protection Devices" Section. Certify compliance with test parameters.
 - 4. Test units to specified surge ratings to ensure devices will achieve required life expectancy and reliability. Testing to full ratings also verifies internal construction quality of suppressors. Provide withstand testing for each mode and each phase basis.
 - 5. Perform actual Let-Through voltage test data in form of oscillography results for ANSI/IEEE C62.41 Catalog C3 (20 kV, 10 kA), Catalog C1 (6 kV, 3 kA), and Catalog. B3 (6 kv, 500 A at 100 kHz) tested in accordance with ANSI/IEEE C62.45.

6. Perform spectrum analysis of each unit based on MIL-STD-220A test procedures between 50 kHz and 200 kHz verifying device noise attenuation exceeds 45 dB at 100 kHz.
 7. Perform test verifying suppressors can survive published surge current rating for each mode and each phase basis. Test wave based on ANSI/IEEE C62.41, 8x20 microsecond current wave.
 8. Test Reports: Provide test reports indicating compliance with all testing requirements and procedures, including the following:
 - a. Indicate Let-Through voltage test data.
 - b. Submit spectrum analysis of each unit.
 - c. Submit test reports from nationally recognized independent testing laboratory verifying suppressors can survive published surge current rating.
- D. Remove and replace malfunctioning units and retest as specified above.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain transient voltage suppression devices. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 26 43 13

SECTION 26 51 00 - INTERIOR LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Interior lighting fixtures, lamps, and drivers
 - 2. Emergency lighting units
 - 3. Exit signs
 - 4. Lighting fixture supports
- B. Related Sections include the following:
 - 1. Division 26 Section "Lighting Control Devices" for automatic control of lighting, including time switches, photoelectric relays, occupancy sensors, wall box dimmers, and multipole lighting relays and contactors.
 - 2. Division 26 Section "Network Lighting Controls" for manual or programmable control systems with low-voltage control wiring or data communication circuits.

1.3 DEFINITIONS

- A. BF: Ballast factor
- B. CRI: Color-rendering index
- C. HID: High-intensity discharge
- D. LER: Luminaire efficacy rating
- E. Luminaire: Complete lighting fixture, including ballast housing if provided

1.4 SUBMITTALS

- A. Product Data: For each type of lighting fixture, arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:
 - 1. Physical description of lighting fixture including dimensions.
 - 2. Emergency lighting units including battery and charger.

3. Driver, including manufacturer.
 4. Energy-efficiency data, including lamp type, manufacturer.
 5. Lamp and driver warranty information.
 6. Life, output, and energy-efficiency data for lamps.
 7. Photometric data, in IESNA format, based on laboratory tests of each lighting fixture type, outfitted with lamps, ballasts, and accessories identical to those indicated for the lighting fixture as applied in this Project.
 - a. For indicated fixtures, photometric data shall be certified by a qualified independent testing agency. Photometric data for remaining fixtures shall be certified by the manufacturer.
- B. Luminaire submittals not including lamp and driver types and manufacturer's name will be returned marked "not reviewed". Lamp and ballast types and manufacturer's name must be submitted with the luminaire submittals in order to review.
- C. Shop Drawings: Show details of nonstandard or custom lighting fixtures. Indicate dimensions, weights, methods of field assembly, components, features, and accessories.
1. Wiring Diagrams: Power and control wiring.
- D. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
1. Lighting fixtures.
 2. Suspended ceiling components.
 3. Structural members to which suspension systems for lighting fixtures will be attached.
 4. Other items in finished ceiling including the following:
 - a. Air outlets and inlets
 - b. Speakers
 - c. Sprinklers
 - d. Smoke and fire detectors
 - e. Occupancy sensors
 - f. Access panels
 5. Perimeter moldings.
- E. Samples for Verification: Interior lighting fixtures designated for sample submission in Interior Lighting Fixture Schedule. Each sample shall include the following:
1. Lamps: Specified units installed
 2. Accessories: Cords and plugs
- F. Product Certificates: For each type of driver for bi-level and dimmer-controlled fixtures, signed by product manufacturer.
- G. Qualification Data: For agencies providing photometric data for lighting fixtures.
- H. Field quality-control test reports.

- I. Operation and Maintenance Data: For lighting equipment and fixtures to include in emergency, operation, and maintenance manuals.
- J. Warranties: Special warranties specified in this Section.

1.5 QUALITY ASSURANCE

- A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NFPA 70
- D. Comply with the recommended standards of the Illuminating Engineering Society of North America.
- E. Comply with the requirements of ASHRAE 90.1, Energy Standard for Buildings, Except Low-Rise Residential Buildings.
- F. LED Compliance: LED components, lamps, drivers and fixtures shall comply with: PCC 47 CFR Part 15; UL 8750; ANSI/NEMA Standards C78.377, NEMA SSL-1, ANSI C82.77, IESNA Standards TM-16-05, RP-16, LM-79, LM-80 and TM-21.

1.6 COORDINATION

- A. Coordinate layout and installation of lighting fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including HVAC equipment, fire-suppression system, and partition assemblies.

1.7 WARRANTY

- A. Special Warranty for Emergency Lighting Batteries: Manufacturer's standard form in which manufacturer of battery-powered emergency lighting unit agrees to repair or replace components of rechargeable batteries that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Emergency Lighting Unit Batteries: 10 years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining nine years.
 - 2. Warranty Period for Emergency drivers and Self-Powered Exit Sign Batteries: Seven years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining six years.

- B. Special Warranty for Complete LED Luminaire Assembly: Provide a five year manufacturer's warranty on LED luminaires including full replacement of any failed components and \$50 labor allowance for each luminaire. Warranty shall be from the date of Substantial Completion.

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Lamps: 10 for every 100 of each type and rating installed. Furnish at least one of each type.
 - 2. Plastic Diffusers and Lenses: 1 for every 100 of each type and rating installed. Furnish at least one of each type.
 - 3. Battery and Charger Data: One for each emergency lighting unit.
 - 4. Drivers: 1 for every 100 of each type and rating installed. Furnish at least one of each type.
 - 5. Globes and Guards: 1 for every 30 of each type and rating installed. Furnish at least one of each type.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers
 - 1. Luminaires
 - a. Refer to "Luminaire Schedule", herein or on the Drawings.
 - 2. LED Lamps and Modules:
 - a. Philips
 - b. General Electric
 - c. Osram-Sylvania
 - d. Cree
 - e. Nichia
 - f. Xicato
 - g. Bridgelux
 - 3. LED Power Supplies
 - a. Osram-Sylvania
 - b. General Electric
 - c. Philips
 - 4. LED Dimming Drivers
 - a. Lutron

5. Substitutions -Under provisions of Division 1

- a. All proposed substitutions to the listed approved manufacturers must be submitted in writing for approval by the design professional a minimum of 10 working days prior to the Bid Date and shall be made available to all bidders.
- b. Any substitutions (other than as directed by the owner) proposed by the contractor after the bid date shall be reviewed by the electrical engineer at a rate of \$150 per hour at the contractors expense. A signed contract between the contractor and the design professional for such work is required before commencement of review.
- c. By using pre-approved substitutions, the contractor accepts responsibility and associated costs for all required modifications to circuiting, devices and wiring. The contractor shall provided complete engineered shop drawings (including power wiring) with deviations from the original design highlighted in an alternate color to the engineer for review and approval prior to rough-in.

2.2 LIGHTING FIXTURES AND COMPONENTS, GENERAL REQUIREMENTS

- A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.
- B. Luminaires shall bear UL inspection label, suitable to application and installed environment.
- C. Furnish on request I.T.L. and/or E.T.L. test reports for luminaires furnished.
- D. Metal Parts: Free of burrs and sharp corners and edges.
- E. Sheet Metal Components: Steel, unless otherwise indicated. Form and support to prevent warping and sagging.
- F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.
- G. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:
 1. White Surfaces: 85 percent
 2. Specular Surfaces: 83 percent
 3. Diffusing Specular Surfaces: 75 percent
 4. Laminated Silver Metalized Film: 90 percent
- H. Plastic Diffusers, Covers, and Globes:
 1. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
 - a. Lens Thickness: At least 0.125 inch minimum unless different thickness is indicated.
 - b. UV stabilized.
 2. Glass: Annealed crystal glass, unless otherwise indicated.

- I. Luminaire housing and door frame shall be fully sealed against light leakage. Light leaks between ceiling trims of recessed luminaires and ceiling will not be acceptable.
- J. Alzak parabolic cones shall be guaranteed against fading for a minimum of 2 years. In the event of premature fading, luminaire manufacturer shall replace cones and pay for both labor and material costs.
- K. Adjustable luminaires shall be capable of being locked into position. Aim and adjust all adjustable luminaires to the satisfaction of the Owner and the Architect.
- L. Maximum depth of recessed tubular-fluorescent luminaires shall not exceed 6 inches including mounting yokes. Reflector and lamp positions shall provide highest efficiency and even brightness to eliminate lamp lines on diffusers.
- M. Recessed luminaires shall be removable from below to provide access to outlet or prewired luminaire box.
- N. A snap type local disconnect shall be provided for all luminaires. The disconnect shall disconnect all supply conductors simultaneously, including the grounded conductor. The line side terminals of the disconnecting means shall be guarded. The disconnecting means shall be located inside or outside the luminaire housing, but must be accessible to qualified persons before servicing or maintaining the ballast or lamps.

2.3 EMERGENCY POWER UNIT

- A. Internal Type: Self-contained, modular, battery-inverter unit, factory mounted within lighting fixture body and compatible with driver. Comply with UL 924.
 - 1. Emergency Connection: Operate LED module continuously at an output of 1100 lumens. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture driver.
 - 2. Test Push Button and Indicator Light: Visible and accessible without opening fixture or entering ceiling space.
 - a. Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
 - b. Indicator Light: LED indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
 - 3. Battery: Sealed, maintenance-free, nickel-cadmium type.
 - 4. Charger: Fully automatic, solid-state, constant-current type with sealed power transfer relay.
 - 5. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
 - 6. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

- B. External Type: Self-contained, modular, battery-inverter unit, suitable for powering one or more fluorescent lamps, remote mounted from lighting fixture. Comply with UL 924.
1. Emergency Connection: Operate one fluorescent lamp continuously. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture ballast.
 2. Battery: Sealed, maintenance-free, nickel-cadmium type.
 3. Charger: Fully automatic, solid-state, constant-current type.
 4. Housing: NEMA 250, Type 1 enclosure.
 5. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
 6. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
 7. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
 8. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.
 9. External type must be provided for all sealed fixtures.

2.4 EXIT SIGNS

- A. Description: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.
- B. Internally Lighted Signs:
1. Lamps for AC Operation: LEDs, 70,000 hours minimum rated lamp life.
 2. Self-Powered Exit Signs (Battery Type): Integral automatic charger in a self-contained power pack.
 - a. Battery: Sealed, maintenance-free, nickel-cadmium type.
 - b. Charger: Fully automatic, solid-state type with sealed transfer relay.
 - c. Operation: Relay automatically energizes lamp from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
 - d. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
 - e. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
 - f. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
 - g. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

3. Master/Remote Sign Configurations:
 - a. Master Unit: Comply with requirements above for self-powered exit signs, and provide additional capacity in LED power supply for power connection to remote unit.
 - b. Remote Unit: Comply with requirements above for self-powered exit signs, except omit power supply, battery and test features. Arrange to receive full power requirements from master unit. Connect for testing concurrently with master unit as a unified system.
4. Type "X" Directional Exit Signs shall have directional indicating chevrons pointing in direction of travel.

2.5 EMERGENCY LIGHTING UNITS

- A. Description: Self-contained units complying with UL 924.
 1. Battery: Sealed, maintenance-free, lead-acid type.
 2. Charger: Fully automatic, solid-state type with sealed transfer relay.
 3. Operation: Relay automatically turns lamp on when power supply circuit voltage drops to 80 percent of nominal voltage or below. Lamp automatically disconnects from battery when voltage approaches deep-discharge level. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
 4. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
 5. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
 6. Wire Guard: Heavy-chrome-plated wire guard protects lamp heads or fixtures.
 7. Integral Time-Delay Relay: Holds unit on for fixed interval of 15 minutes when power is restored after an outage.
 8. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
 9. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

2.6 LIGHTING FIXTURE SUPPORT COMPONENTS

- A. Comply with Division 26 Section "Hangers and Supports for Electrical Systems" for channel- and angle-iron supports and nonmetallic channel and angle supports.
- B. Single-Stem Hangers: 1/2-inch steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture.
- C. Twin-Stem Hangers: Two, 1/2-inch steel tubes with single canopy designed to mount a single fixture. Finish same as fixture.

- D. Wires: ASTM A641/A641M, Class 3, soft temper, zinc-coated steel, 12 gage.
- E. Wires for Humid Spaces: ASTM A580/A580M, Composition 302 or 304, annealed stainless steel, 12 gage.
- F. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.
- G. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Lighting fixtures: Set level, plumb, and square with ceilings and walls. Install lamps in each fixture.
- B. Support for Lighting Fixtures in or on Grid-Type Suspended Ceilings: Use grid as a support element. Coordinate with ceiling installer (Division 9).
 - 1. Install a minimum of four ceiling support system rods or wires for each fixture. Attach to grid and locate not more than 6 inches from lighting fixture corners.
 - 2. Support Clips: Fasten to lighting fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.
 - 3. Fixtures of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two 3/4-inch metal channels spanning and secured to ceiling tees.
 - 4. Install at least one independent support rod or wire from structure to a tab on lighting fixture. Wire or rod shall have breaking strength of the weight of fixture at a safety factor of 3.
- C. Suspended Lighting Fixture Support:
 - 1. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.
 - 2. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.
 - 3. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end.
- D. Adjust aimable lighting fixtures to provide required light intensities. Adjust to satisfaction of Architect and Owner.
- E. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- F. Do not install reflector cones and visible trim of luminaires until completion of plastering, ceiling tile work, painting, and general cleanup. Installation of reflector cones and visible trim of luminaires shall be carefully coordinated with ceiling openings to prevent light leaks at the ceiling plane. Handle cones and trim carefully to avoid scratching or finger printing. Luminaires shall be completely clean at time of acceptance by Owner.

- G. Plaster frames (frame-in-kits) for all recessed fixtures shall be installed per manufacturer's instructions and in a rigid manner so as not to allow fixture frame or housing to move or shift when trim is removed or fixture is relamped. If plaster frame shifts when relamped or trim is not tight to ceiling, or the fixture has not been installed per the manufacturer's instructions, the Contractor shall resecure frames and have ceiling patched and refinished at their expense. General Contractor to spackle gap between rough g.w.b. opening and the plaster frame of light fixture to avoid light-leak and allow for narrow or flangeless trims to be used.
- H. Drywall suspension ceiling systems will be provided with supplemental steel stud channels at luminaire locations for supporting luminaires to ceiling system under Section 09 26 00, Gypsum Wallboard Systems. Securely fasten recessed and/or surface mounted luminaires to steel channels with approved earthquake clips or clamping devices. Where required by local codes, where ceiling systems are not seismically braced or where the weight of the luminaire may cause deformation of the suspended ceiling, provide independent seismic restraint supports for luminaires connected to the structure above. The amount of deformation allowed is specified in Section 09 26 00.
- I. Where MC and/or AC cable is not allowed for branch circuiting as described in Specification Section 260519, extend conduit to an accessible junction box within six feet of luminaires and provide a maximum six foot length of flexible conduit (Greenfield) and wire to each luminaire. Where MC and/or AC cable is allowed for branch circuiting as described in Specification Section 260519, extend AC and/or MC cable to an accessible junction box within six feet of luminaires and provide a maximum six foot length of AC and/or MC cable to each luminaire. Locate box so that luminaires can be readily moved into adjacent modules and to provide access to space above ceiling. Support flexible conduit or cable from structure; do not lay on ceiling tiles or attach to any support systems.
- J. Properly align all surface type luminaires. Bolt together so that alignment will be permanent.
- K. Mount under cabinet luminaires as indicated on architectural details. If cabling to luminaires is not concealed, provide wiremold cover to conceal wiring, color as directed by Architect.
- L. Provide mock-ups of fixtures as specified for approval of Engineer/Architect/Owner prior to release of fixture order.
- M. Provide aiming of adjustable fixtures to the satisfaction of Engineer/Architect/Owner.

3.2 FIELD QUALITY CONTROL

- A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.
- B. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

END OF SECTION 26 51 00

SECTION 26 56 00 - EXTERIOR LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Exterior luminaires with lamps and drivers
 - 2. Luminaire-mounted photoelectric relays
 - 3. Poles and accessories
- B. Related Sections include the following:
 - 1. Division 26 Section "Interior Lighting" for exterior luminaires normally mounted on exterior surfaces of buildings

1.3 DEFINITIONS

- A. CRI: Color-rendering index
- B. HID: High-intensity discharge
- C. Luminaire: Complete lighting fixture, including driver housing if provided
- D. Pole: Luminaire support structure
- E. Standard: Same definition as "Pole" above

1.4 STRUCTURAL ANALYSIS CRITERIA FOR POLE SELECTION

- A. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied as stated in AASHTO LTS-4.
- B. Wind Load: Pressure of wind on pole and luminaire, calculated and applied as stated in AASHTO LTS-4.

1.5 SUBMITTALS

- A. Product Data: For each luminaire, pole, and support component, arranged in order of lighting unit designation. Include data on features, accessories, finishes, and the following:
1. Physical description of luminaire, including materials, dimensions, effective projected area, and verification of indicated parameters.
 2. Details of attaching luminaires and accessories.
 3. Details of installation and construction.
 4. Luminaire materials.
 5. Photometric data based on laboratory tests of each luminaire type, complete with indicated lamps, drivers, and accessories.
 - a. For indicated luminaires, photometric data shall be certified by a qualified independent testing agency. Photometric data for remaining luminaires shall be certified by manufacturer.
 6. Photoelectric relays.
 7. Drivers, including energy-efficiency data, manufacturer, warranty information
 8. LED modules/lamps, including life, output, and energy-efficiency data, manufacturer, warranty information.
 9. Materials, dimensions, and finishes of poles.
 10. Means of attaching luminaires to supports, and indication that attachment is suitable for components involved.
 11. Anchor bolts for poles.
- B. Luminaire submittals not including lamp and driver types and manufacturer's name will be returned marked not reviewed. Lamp and driver types and manufacturer's name must be submitted with the luminaire submittals in order to review.
- C. Shop Drawings:
1. Anchor-bolt templates keyed to specific poles and certified by manufacturer.
 2. Design calculations, certified by a qualified professional engineer, indicating strength of screw foundations and soil conditions on which they are based.
 3. Wiring Diagrams: Power and control wiring.
- D. Samples for Verification: For products designated for sample submission in Exterior Lighting Device Schedule. Each sample shall include lamps and drivers.
- E. Pole and Support Component Certificates: Signed by manufacturers of poles, certifying that products are designed for indicated load requirements in AASHTO LTS-4 and that load imposed by luminaire has been included in design.
- F. Qualification Data: For agencies providing photometric data for lighting fixtures.
- G. Field quality-control test reports.
- H. Operation and Maintenance Data: For luminaires and poles to include in emergency, operation, and maintenance manuals.

- I. Warranty: Special warranty specified in this Section.

1.6 QUALITY ASSURANCE

- A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.
- B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with IEEE C2, "National Electrical Safety Code."
- E. Comply with NFPA 70.
- F. Comply with the recommended standards of the Illuminating Engineering Society of North America.
- G. Comply with the requirements of ASHRAE 90.1, Energy Standard for Buildings, Except Low-Rise Residential.
- H. LED Compliance: LED components, lamps, drivers and fixtures shall comply with: PCC 47 CFR Part 15; UL 8750; ANSI/NEMA Standards C78.377, NEMA SSL-1, ANSI C82.77, IESNA Standards TM-16-05, RP-16, LM-79, LM-80 and TM-21.
- I. Luminaires shall bear UL inspection label, suitable to application and installed environment.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Package aluminum poles for shipping according to ASTM B 660.
- B. Store poles on decay-resistant-treated skids at least 12 inches above grade and vegetation. Support poles to prevent distortion and arrange to provide free air circulation.
- C. Retain factory-applied pole wrappings on fiberglass poles until right before pole installation. Handle poles with web fabric straps.
- D. Retain factory-applied pole wrappings on metal poles until right before pole installation. For poles with nonmetallic finishes, handle with web fabric straps.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace products that fail in materials or workmanship; that corrode; or that fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation within specified warranty period. Manufacturer may exclude lightning damage, hail damage, vandalism, abuse, or unauthorized repairs or alterations from special warranty coverage.
1. Warranty Period for Complete Luminaire Assembly (including LED modules, drivers, etc.): Five years from date of Substantial Completion.
 2. Warranty Period for Metal Corrosion: Five years from date of Substantial Completion.
 3. Warranty Period for Color Retention: Five years from date of Substantial Completion.
 4. Warranty Period for Poles: Repair or replace lighting poles that fail in finish, materials, and workmanship within manufacturer's standard warranty period, but not less than three years from date of Substantial Completion.

1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. LED Modules: 1 for every 30 of each type and rating installed. Furnish at least one of each type.
 2. Glass and Plastic Lenses, Covers, and Other Optical Parts: 1 for every 30 of each type and rating installed. Furnish at least one of each type.
 3. Drivers: 1 for every 30 of each type and rating installed. Furnish at least one of each type.
 4. Globes and Guards: 1 for every 20 of each type and rating installed. Furnish at least one of each type.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In Exterior Lighting Device Schedule where titles below are column or row headings that introduce lists, the following requirements apply to product selection:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
- B. Acceptable Manufacturers
1. Luminaires
 - a. Refer to "Luminaire Schedule", herein or on the Drawings.
 2. LED Lamps and Modules
 - a. Phillips

- b. Osram-Sylvania
 - c. General Electric
 - d. Cree
 - e. Nichia
 - f. Xicato
 - g. Bridgelux
3. LED Drivers
- a. Philips
 - b. General Electric
 - c. Osram-Sylvania
4. LED Dimming Drives
- a. Lutron
5. Substitutions -Under provisions of Division 1
- a. All proposed substitutions to the listed approved manufacturers must be submitted in writing for approval by the design professional a minimum of 10 working days prior to the Bid Date and shall be made available to all bidders.
 - b. Any substitutions (other than as directed by the owner) proposed by the contractor after the bid date shall be reviewed by the electrical engineer at a rate of \$150 per hour at the contractor's expense. A signed contract between the contractor and the design professional for such work is required before commencement of review.
 - c. By using pre-approved substitutions, the contractor accepts responsibility and associated costs for all required modifications to circuiting, devices and wiring. The contractor shall provided complete engineered shop drawings (including power wiring) with deviations from the original design highlighted in an alternate color to the engineer for review and approval prior to rough-in.

2.2 LUMINAIRES, GENERAL REQUIREMENTS

- A. Luminaires shall comply with UL 1598 and be listed and labeled for installation in wet locations by an NRTL acceptable to authorities having jurisdiction.
- B. Comply with IESNA RP-8 for parameters of lateral light distribution patterns indicated for luminaires.
- C. Metal Parts: Free of burrs and sharp corners and edges.
- D. Sheet Metal Components: Corrosion-resistant aluminum, unless otherwise indicated. Form and support to prevent warping and sagging.
- E. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use. Provide filter/breather for enclosed luminaires.

- F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position. Doors shall be removable for cleaning or replacing lenses. Designed to disconnect ballast when door opens.
- G. Exposed Hardware Material: Stainless steel.
- H. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
- I. Light Shields: Metal baffles, factory installed and field adjustable, arranged to block light distribution to indicated portion of normally illuminated area or field.
- J. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:
 - 1. White Surfaces: 85 percent
 - 2. Specular Surfaces: 83 percent
 - 3. Diffusing Specular Surfaces: 75 percent
- K. Lenses and Refractors Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in luminaire doors.
- L. Adjustable luminaires shall be capable of being locked into position. Aim and adjust all adjustable luminaires to the satisfaction of the Owner and the Architect.
- M. All exterior luminaires, and those in wet/damp locations, shall be fitted with seals and gaskets to form a weatherproof, watertight assembly, and shall be of rust resistant construction and finish.
- N. Luminaire Finish: Manufacturer's standard paint (unless otherwise noted in luminaire schedule) applied to factory-assembled and -tested luminaire before shipping. Where indicated, match finish process and color of pole or support materials.
- O. Factory-Applied Finish for Steel Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
 - 2. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
 - a. Color: As selected by Architect from manufacturer's full range.
- P. Factory-Applied Finish for Aluminum Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
 - a. Color: As selected by Architect from manufacturer's full range.

2.3 LUMINAIRE-MOUNTED PHOTOELECTRIC RELAYS

- A. Comply with UL 773 or UL 773A.
- B. Contact Relays: Factory mounted, single throw, designed to fail in the on position, and factory set to turn light unit on at 1.5 to 3 fc and off at 4.5 to 10 fc with 15-second minimum time delay. Relay shall have directional lens in front of photocell to prevent artificial light sources from causing false turnoff.
 1. Relay with locking-type receptacle shall comply with NEMA C136.10.
 2. Adjustable window slide for adjusting on-off set points.

2.4 LED SYSTEMS

- A. The LED module itself and all its components must not be subjected to mechanical stress.
- B. Assembly must not damage or destroy conducting paths on the circuit board.
- C. Installation of LED modules (with power supplies) shall adhere to all applicable electrical and safety standards.
- D. Correct electrical polarity shall be clearly identified.
- E. LED module must be protected from unbalanced voltage drop, and/or overload.
- F. Ensure that the power supply is of adequate power to operate the total load.
- G. Utilize standard ESD precautions when installing the module.
- H. Install system according to the manufacturers heat sinking parameters.
- I. For applications involving exposure to humidity and dust, the module shall be protected by a fixture or housing with a suitable protection glass. The module shall be protected against condensation water by treatment with an appropriate circuit board conformal coating. The conformal coating should have the following features.

1. Optical transparency
 2. UV resistance
 3. Thermal expansion properties matching those of the module (15-30 x 10-6cm/cm/K)
 4. Low permeability of steam for all climate conditions
 5. Resistance against corrosive environments
- J. The LED Module shall be operated with an electronically stabilized power supply offering protection against short circuits, overload and overheating.
- K. All LED products shall respect Intellectual Property Rights and shall have a Solid State License for the product. Unlicensed products are not acceptable.
- L. LED Driver shall be installed inside an electrical enclosure suitable for use in dry, damp, or wet location as required by fixture listing.
- M. Wiring inside electrical enclosure shall comply with 600V/105°C rating or higher.
- N. LED Driver shall meet the following:
1. Class A sound rating.
 2. An operating ambient temperature range of -20°C to 55°C.
 3. A maximum life expectancy of 50,000 hours at Tcase of $\leq 70^{\circ}\text{C}$.
 4. A maximum life expectancy of 100,000 hours at Tcase of $\leq 62^{\circ}\text{C}$.
 5. Function to reduce output power to LEDs if its maximum allowable case temperature is exceeded.
 6. A failure rate of $\leq 0.01\%$ per 1,000 hours at Tcase of $\leq 70^{\circ}\text{C}$.
 7. A failure rate of 0.01% - 0.02% per 1,000 hours at Tcase of 70°C - 80°C.
 8. Tolerance for sustained open circuit and short circuit output conditions without damage.
 9. Power Factor > 90%.
 10. Total harmonic Distortion < 20%.
 11. Compliance with FCC rules and regulations, as per Title 47 CFR Part 15 Non-Consumer (Class A).
- O. Where a dimming LED driver is specified, ensure compatibility of driver and dimming control system.

2.5 POLES AND SUPPORT COMPONENTS, GENERAL REQUIREMENTS

- A. Structural Characteristics: Comply with AASHTO LTS-4.
1. Wind-Load Strength of Poles: Adequate at indicated heights above grade without failure, permanent deflection, or whipping in steady winds of speed indicated in Part 1 "Structural Analysis Criteria for Pole Selection" Article, with a gust factor of 1.3.
 2. Strength Analysis: For each pole, multiply the actual equivalent projected area of luminaires and brackets by a factor of 1.1 to obtain the equivalent projected area to be used in pole selection strength analysis.
- B. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts, unless otherwise indicated.

- C. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.
 - 1. Materials: Shall not cause galvanic action at contact points.
 - 2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication, unless stainless-steel items are indicated.
 - 3. Anchor-Bolt Template: Plywood or steel.
- D. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete."
- E. Power-Installed Screw Foundations: Factory fabricated by pole manufacturer, with structural steel complying with ASTM A36/A36M and hot-dip galvanized according to ASTM A123/A123M; and with top-plate and mounting bolts to match pole base flange and strength required to support pole, luminaire, and accessories.
- F. Breakaway Supports: Frangible breakaway supports, tested by an independent testing agency acceptable to authorities having jurisdiction, according to AASHTO LTS-4.

2.6 STEEL POLES

- A. Poles: Comply with ASTM A 500, Grade B, carbon steel with a minimum yield of 46,000 psig; 1-piece construction up to 40 feet in height with access handhole in pole wall.
 - 1. Shape: See Schedule on Drawings.
 - 2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- B. Steel Mast Arms: continuously welded to pole attachment plate. Material and finish same as pole.
- C. Brackets for Luminaires: Detachable, cantilever, without underbrace.
 - 1. Adapter fitting welded to pole and bracket, then bolted together with stainless or galvanized-steel bolts.
 - 2. Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire.
 - 3. Match pole material and finish.
- D. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.
- E. Intermediate Handhole and Cable Support: Weathertight, 3-by-5-inch handhole located at midpoint of pole with cover for access to internal welded attachment lug for electric cable support grip.
- F. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.

- G. Cable Support Grip: Wire-mesh type with rotating attachment eye, sized for diameter of cable and rated for a minimum load equal to weight of supported cable times a 5.0 safety factor.
- H. Platform for Lamp and Ballast Servicing: Factory fabricated of steel with finish matching that of pole.
- I. Factory-Painted Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
 - 2. Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.
 - 3. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
 - a. Color: As selected by Architect from manufacturer's full range.

2.7 ALUMINUM POLES

- A. Poles: Seamless, extruded structural tube complying with ASTM B 429, Alloy 6063-T6 with access handhole in pole wall.
- B. Poles: ASTM B 209, 5052-H34 marine sheet alloy with access handhole in pole wall.
 - 1. Shape: See Schedule on Drawings.
 - 2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- C. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.
- D. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
- E. Brackets for Luminaires: Detachable, with pole and adapter fittings of cast aluminum. Adapter fitting welded to pole and bracket, then bolted together with stainless-steel bolts.
 - 1. Tapered oval cross section, with straight tubular end section to accommodate luminaire.
 - 2. Finish: Same as luminaire.
 - 3. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.

4. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
5. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
 - a. Color: As selected by Architect from manufacturer's full range.

2.8 COMPOSITE POLES

- A. Poles: Comply with ANSI C136.20, with access handhole in pole wall.
 1. Mounting: Embedded.
 2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- B. Resin Color: As selected by Architect from manufacturer's full range; provide uniform coloration throughout entire wall thickness.
- C. Surface Finish: Pigmented polyurethane, with a minimum dry film thickness of 1.5 mils.

2.9 POLE ACCESSORIES

- A. Duplex Receptacle (when indicated on drawings): 120 V, 20 A in a weatherproof assembly complying with Division 26 Section "Wiring Devices" for ground-fault circuit-interrupter type.
 1. Recessed, 12 inches above finished grade.
 2. Nonmetallic polycarbonate plastic or reinforced fiberglass cover, that when mounted results in NEMA 250, Type 3R enclosure.
 3. With cord opening.
 4. With lockable hasp and latch that complies with OSHA lockout and tag-out requirements.
- B. Base Covers: Manufacturers' standard metal units, arranged to cover pole's mounting bolts and nuts. Finish same as pole.
- C. Decorative accessories, supplied by decorative pole manufacturer, include the following:
 1. Banner Arms (if indicated on drawings): See drawing details for material information.

PART 3 - EXECUTION

3.1 LUMINAIRE INSTALLATION

- A. Install lamps/LED modules in each luminaire.

- B. Fasten luminaire to indicated structural supports.
 - 1. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.
- C. Adjust luminaires that require field adjustment or aiming. Position adjustable flood luminaires and landscape luminaries at night to satisfaction of the Architect and Owner. Include adjustment of photoelectric device to prevent false operation of relay by artificial light sources.
- D. Install exterior luminaires on building on rust-resistant nonferrous cast outlet boxes set flush in exterior walls and fitted with seals and gaskets. Conceal all wiring in or within the construction.
- E. Install exterior luminaires where surface mounted using rust-resistant nonferrous outlet boxes and fittings.

3.2 POLE INSTALLATION

- A. Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on the pole.
- B. Clearances: Maintain the following minimum horizontal distances of poles from surface and underground features, unless otherwise indicated on Drawings:
 - 1. Fire Hydrants and Storm Drainage Piping: 60 inches.
 - 2. Water, Gas, Electric, Communication, and Sewer Lines: 10 feet.
- C. Concrete Pole Foundations: Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- D. Foundation-Mounted Poles: Mount pole with leveling nuts, and tighten top nuts to torque level recommended by pole manufacturer.
 - 1. Use anchor bolts and nuts selected to resist seismic forces defined for the application and approved by manufacturer.
 - 2. Grout void between pole base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space.
 - 3. Install base covers, unless otherwise indicated.
 - 4. Use a short piece of 1/2-inch- diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.
- E. Embedded Poles with Tamped Earth Backfill: Set poles to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.
 - 1. Dig holes large enough to permit use of tampers in the full depth of hole.
 - 2. Backfill in 6-inch layers and thoroughly tamp each layer so compaction of backfill is equal to or greater than that of undisturbed earth.

- F. Embedded Poles with Concrete Backfill: Set poles in augered holes to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.
 - 1. Make holes 6 inches in diameter larger than pole diameter.
 - 2. Fill augered hole around pole with air-entrained concrete having a minimum compressive strength of 3000 psi at 28 days, and finish in a dome above finished grade.
 - 3. Use a short piece of 1/2-inch- diameter pipe to make a drain hole through concrete dome. Arrange to drain condensation from interior of pole.
 - 4. Cure concrete a minimum of 72 hours before performing work on pole.
- G. Poles and Pole Foundations Set in Concrete Paved Areas: Install poles with minimum of 6-inch-wide, unpaved gap between the pole or pole foundation and the edge of adjacent concrete slab. Fill unpaved ring with pea gravel to a level 1 inch below top of concrete slab.
- H. Raise and set poles using web fabric slings (not chain or cable).
- I. Mount poles on approved foundations, setting them plumb and true utilizing leveling nuts and torquing top nuts adjusted to a value recommended by pole manufacturer.
- J. Tack-weld top nuts in place. Grout void space between pole base and concrete foundation with nonshrinking material. Provide short piece of 1/8 inch diameter drain pipe through grout from pole interior to outside.
- K. Exercise care in unloading and erecting poles and touch up burns, scratches and chips in finish by using matching materials provided by manufacturer.
- L. Coordinate installation of bases with work performed in Section 02200.
- M. Protect all luminaires, poles and wiring during construction period from damage or breakage and leave in operating condition.
- N. Securely fasten luminaires in place; properly connect to branch circuits with solderless connectors and tape; install specified lamps.
- O. Relocate existing luminaires and poles where indicated. Move and reinstall at new location or turn over to Owner as directed.
- P. Provide underground wiring in conduit with watertight connections. Make cable entrances to and from pole, post or bollard type luminaires, in 1 inch (minimum) galvanized rigid metal conduit through foundation terminating 2 inches above top of foundation in a bushing.

3.3 BOLLARD LUMINAIRE INSTALLATION

- A. Align units for optimum directional alignment of light distribution.
- B. Install on concrete base with top 4 inches above finished grade or surface at bollard location, unless noted otherwise per drawings. Cast conduit into base, and shape base to match shape of bollard base. Finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Division 03 Section "Cast-in-Place Concrete."

3.4 INSTALLATION OF INDIVIDUAL GROUND-MOUNTING LUMINAIRES

- A. Install on concrete base with top 4 inches, unless otherwise noted, above finished grade or surface at luminaire location. Cast conduit into base, and finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Division 03 Section "Cast-in-Place Concrete."

3.5 CORROSION PREVENTION

- A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.
- B. Steel Conduits: Comply with Division 26 Section "Raceway and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch-thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

3.6 GROUNDING

- A. Ground metal poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."
 - 1. Install grounding electrode for each pole, unless otherwise indicated.
 - 2. Install grounding conductor pigtail in the base for connecting luminaire to grounding system.
- B. Ground nonmetallic poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."
 - 1. Install grounding electrode for each pole.
 - 2. Install grounding conductor and conductor protector.
 - 3. Ground metallic components of pole accessories and foundations.

3.7 FIELD QUALITY CONTROL

- A. Inspect each installed fixture for damage. Replace damaged fixtures and components.
- B. Illumination Observations: Verify normal operation of lighting units after installing luminaires and energizing circuits with normal power source.
 - 1. Verify operation of photoelectric controls.
- C. Illumination Tests:
 - 1. Measure light intensities at night. Use photometers with calibration referenced to NIST standards. Comply with the following IESNA testing guide(s):
 - a. IESNA LM-5, "Photometric Measurements of Area and Sports Lighting."
 - b. IESNA LM-50, "Photometric Measurements of Roadway Lighting Installations."

- c. IESNA LM-52, "Photometric Measurements of Roadway Sign Installations."
 - d. IESNA LM-64, "Photometric Measurements of Parking Areas."
 - e. IESNA LM-72, "Directional Positioning of Photometric Data."
- D. Completely test entire installation and leave in satisfactory operating condition.
- E. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

END OF SECTION 26 56 00

SECTION 27 10 00 - STRUCTURED CABLING SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. The work included under this Specification consists of furnishing labor, equipment, materials, supplies and performing operations necessary to complete the installation. The Contractor shall provide and install the required material whether specifically addressed in the technical specifications or not.
- B. The work includes, but not be limited to the following:
 - 1. Wall lining.
 - 2. Cable runway.
 - 3. Power distribution units
 - 4. Busbar and bonding of runway and mounting frames within telecommunications rooms

1.3 REFERENCED STANDARDS AND CODES

- A. Compliance with the following published codes, standards, and tests and recommended methods of trade, industry, or governmental organizations are required for Work in this section.
 - 1. Execute work in accordance with the following list of TIA standards.
 - a. TIA-569-D Commercial Building Standard for Telecommunications Pathways and Spaces
 - b. TIA-606-C Administration Standard for Commercial Telecommunications Infrastructure
 - c. ANSI/TIA-607-C, Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises
 - 2. Other
 - a. BICSI Telecommunications Distribution Methods Manual (TDMM), 14th Edition
 - b. NECA/BICSI 607-2011, Standard for Telecommunications Bonding and Grounding Planning and Installation Methods for Commercial Buildings
 - c. National Electrical Code, NEC 2020
 - d. Underwriters Laboratories (UL)
 - e. Americans with Disabilities Act (ADA)
 - f. Requirements of the local authority having jurisdiction (AHJ).

1.4 DEFINITIONS

- A. In addition to those Definitions of Division 01, the following list of terms as used in this Section shall be defined as follows:

1. Furnish – To purchase, procure, acquire, and deliver complete with related accessories.
2. Install – To set in place, join, attach, link, set up or otherwise connect together and test until complete before turning over to the Owner, all parts, items, or equipment supplied by Contractor.
3. Provide – To furnish and install.
4. Some processes, methods, and procedures, as well as spaces, rooms and structure, may be abbreviated or used interchangeably within this section. The following list is presented to reconcile these differences within this section.
 - a. Structured Cabling System (SCS): A SCS is defined as all required cabling including hardware, termination blocks, cross connect wire or cordage, patch panels, patch cords, telecommunication outlets, work area cords, UTP and fiber optic cable installed and configured to provide computer data and voice connectivity from each data or voice device to the network file server or voice network/switch designated as the service point of the local area network.
 - b. Telecommunications Space (TS) - A common area used for telecommunications cabling terminations and the location of telecommunications equipment.
 - c. Equipment Room (ER) - An environmentally controlled space that is the primary point of interconnection between the communication facility provided by the public switched telephone company network and the building's communications facility.
 - d. Telecommunications Room (TR) – An environmentally controlled space that is the telecommunications structured cabling distribution point. The TR is designated for housing communications equipment and related wiring that serves a specific area of the building. Formally known as an IDF.
 - e. Horizontal Distribution Cabling - The telecommunications cable, Category or fiber optic, routed between a TR, TE or the ER and a work area outlet.
 - f. WAO: Work Area Outlet. The workstation end-point of horizontal distribution cable. An icon legend is provided on the related drawings, and symbols or legends represent the type and quantity of cables terminated at the WAO.
 - g. TMGB: Telecommunications Main Grounding Busbar - The common source for bonding telecommunications equipment within the ER.
 - h. TGB: Telecommunications Grounding Busbar - The common source for bonding telecommunications equipment within the EF, TR or TE.
 - i. TBB: Telecommunications Bonding Backbone.
 - j. TBC: Telecommunications Bonding Conductor.

1.5 PROJECT CONDITIONS

- A. Verify dimensions and conditions on the job site applicable to this work. Notify the Architect in writing of discrepancies, conflicts, or omissions promptly upon discovery.
- B. The drawings diagrammatically show device outlet locations and arrangements of equipment fitting the space available without interference. If conditions exist which make it impossible to install work as shown, recommend solutions and submit drawings to the Architect for approval showing how the work may be installed.
- C. If a conflict develops between the contract documents and the appropriate codes and is reported to the Architect prior to bid opening, the Architect will prepare the necessary clarification.

When a conflict is reported after contract award, propose a resolution of the conflict and, upon approval, perform work.

- D. During the course of construction, room names and/or room numbers may be changed. For continuity during installation the Contractor shall refer to rooms and spaces by their identities as shown on the ES series drawings. This shall apply to all correspondence, RFI's, proposal requests, and submittal packages pertaining to this Section.
- E. Provide temporary or permanent protection of products bearing the UL label that risk exposure to conditions that may compromise any portion of the product.

1.6 SCOPE SUMMARY

- A. This entire specification section and the project drawings define the requirements for the installation of equipment in telecommunications spaces to support a SCS. The following is intended to summarize the Work and clarify design intent and is not an exhaustive description of the work required.
- B. Coordinate exact location and installation of the following:
 - a. Conduits, wire-ways, cable trays external to the telecommunication spaces, floor boxes, wall boxes, pull boxes, and junction boxes
 - b. Slots and sleeves
 - c. Firestopping products
 - d. AC power circuits for telecommunications equipment
 - e. AC power circuits within telecommunications spaces
 - f. Plywood wall linings within telecommunications spaces
 - g. Lighting requirements within telecommunications spaces
 - h. MEP systems and equipment terminating within or intersecting telecommunications spaces
 - i. Telecommunications grounding and bonding system required for telecommunications spaces
 - j. Wireless access points data outlet with light fixtures, HVAC ductwork, and architectural elements
 - k. Incoming service provider circuits
- C. Deliver Submittals, Shop Drawings and Cable Test Records as specified herein.
- D. Obtain permits, licenses, or other municipal requirements and pay any fees required for the execution of this Work.
- E. Provide bonding of equipment racks, and cable pathway system in accordance with equipment manufacturer's requirements and ANSI/TIA 607-C Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications.
- F. Supply accessories and minor equipment parts required to make telecommunications spaces ready for SCS and other systems to be installed in the space, even if not specifically mentioned in these Specifications or on the drawings, without claim for additional payment.

1.7 CONTRACTOR QUALIFICATIONS

- A. Must have five plus (5+) years of experience with equipment and systems of the specified types.
- B. Must have completed a minimum of three comparable scaled projects within the last two years.
- C. Must maintain a fully staffed and equipped service facility.
- D. Must perform operations necessary to complete the telecommunications space build out in accordance with these specifications utilizing related drawings.
- E. At the request of the Architect, the Contractor must demonstrate an adequate staff with commensurate technical experience available.
- F. At the request of the Architect, the Contractor must demonstrate adequate plant and equipment available to complete the work.

1.8 PRE-CONSTRUCTION SUBMITTALS

- A. Project Submittal Requirements are defined in the Project Manual. The successful Contractor must make one single, complete pre-construction Submittal package as defined and described in the General Section, with the following additional technology specific details.
 - 1. Provide a Drawing-List of submitted drawings. The submittal shop drawings are to be used by the Contractor as a basis for revision mark ups to create the “as-built” conditions.
 - a. Execute drawings at an appropriate scale but no smaller than 1/8”.
 - b. Large-sheet drawings.
 - 1) Submit drawings rendered in AutoCAD™ or an AutoCAD™-compatible application.
 - 2) Create drawings using a monochromatic scheme and industry-standard graphics with varied line types and weight so the attributes of the various elements of the image are readily discernible.
 - 3) Provide enlarged floor plans of Telecom Rooms with cable tray and racks shown in the rooms shown to scale.
 - 4) Depict any special installation details or unique means and methods necessary to successfully complete the telecommunications pathways installation.
 - 2. Submit appropriate cut sheets and samples for products as detailed in project specifications and drawings. Submittals shall be in electronic PDF format.
 - 3. Work shall not proceed without the approval of the submitted items.
 - 4. No substituted materials shall be installed except by written approval. Only those products that are listed as “or equivalent” in Part 2 of this specification will be considered for substitution. Substitution requests must be submitted as defined in the Project Manual. No substitutions will be considered during the submittal process.
 - 5. Project Submittals Requirements: The pre-construction submittal is required to verify the Contractor will obtain the specified product, understands the processes and procedures, and understands the requirements to install specified equipment system as shown on the drawings.
 - a. The Submittal package is to be delivered for approval prior to commencement of Work, no later than twenty (20) days after issuance of Notice to Proceed.
 - b. Any submittals beyond the original submittal and one resubmittal will result in charges to the Contractor (charged for third and any subsequent reviews).

- c. Additional review fees will be at the prevailing rate in effect at the time that the additional review(s) is (are) required.

1.9 CLOSE-OUT SUBMITTALS

- A. After substantial completion of the installation, revise all drawings to reflect the actual names and numbers assigned to the spaces. Use the actual names and numbers on the as-built drawings, and administration documents.
- B. Submit Close-out documentation in accordance with Division 1 of the Project Manual and any applicable supplements.
- C. Segregate documents into separate sections containing data relevant to operational, maintenance and warranty issues.
- D. Appropriately duplicate data within the other separate sections when it will reasonably clarify procedures, i.e.: operational data in maintenance binder.
- E. Electronic document shall contain the following information:
- F. Products List Document(s)
 - 1. Provide a final, complete list of products and product data sheets (PDS) in an electronic Adobe PDF file format that have been incorporated within the Work, arranged in the same order as specified in the pre-construction submittal.
- G. Record Drawings
 - 1. Provide drawings showing final “owner” room numbering only. Coordinate with the architect prior to submission.
 - 2. Provide “as-built” drawings of the completed cabling installation.
 - 3. The as-built drawings shall indicate:
 - a. The actual locations of racks and pathways.
 - b. The identity information for each Equipment Room
 - c. All field changes, corrections, modifications, and updates to the shop drawings
 - 4. Warranty and Maintenance Document(s)
 - a. Provide a statement explaining the terms and conditions of the Extended Product Warranty and the Application Assurance Warranty to include but not limited to the warranty commencement date and length of warranty. Provide warranty certificates issued by manufacturer.
 - b. Provide a list of contact names, telephone numbers, and hours of operation for normal warranty service.
 - c. Provide a contact name/number for 365/7/24 emergency warranty service with an explanation of limiting conditions if applicable.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Ship product in its original container, to prevent damage or entrance of foreign matter.
- B. Handling and shipping in accordance with manufacturer’s recommendation.

- C. Provide protective covering during construction, to prevent damage or entrance of foreign matter.
- D. Provide warning placards, warning tape or protective barrier systems for temporary protection of products or personnel during installation processes.
- E. Replace at no expense to Owner, product damaged during storage, handling or the course of construction.

1.11 PRODUCT WARRANTY

- A. Contractor's warranty covering all installed products and labor against defects in materials and workmanship for a period of 1 year.
 - 1. Within the 1-year warranty period, answer service calls within 4 hours and begin work to correct the deficiency within twenty-four hours.
- B. Manufacturer Warranty starts the date of projects warranty certification issue to the District from the manufacturer.
- C. A manufacturer's Representative shall inspect and certify all work to validate the manufacturer's warranty

PART 2 - PRODUCTS

2.1 GENERAL

- A. Related Divisions and articles remain applicable to the products specified herein. Any repetition of related specification is for emphasis only.
- B. Products shall be new, free from defects and listed by UL when an applicable UL Standard exists. Provide product of a given type from one manufacturer.
- C. Regardless of the length or completeness of the descriptive paragraph herein, provide product complying with the specified manufacturers published specifications.
- D. Product not specifically identified within this document but which is required for the successful implementation of the intended system(s), shall be of the same class and quality as the specified product and equipment.
- E. Cable and wiring devices provided shall be listed and labeled by Underwriters Laboratories, Inc. for the intended use under the latest appropriate testing standard.
- F. Basis-of-Design Product:
 - 1. Product manufacture and part numbers listed are provide as performance standard, provide products as specified or equivalent product.

2.2 PLYWOOD BACKBOARD (PLYWOOD WALL LINING)

- A. 4' W x 8' H x 3/4" D
 - 1. Fire-rated plywood
 - 2. A/C grade, void-free
 - 3. Paint all sides with Latex Fire Retardant paint
 - 4. Acceptable product
 - a. (As approved by the AHJ)

2.3 CABLE RUNWAY

- A. 12" Wide Cable Runway
 - 1. UL Classified
 - 2. Black in color
 - 3. 1-1/2" x 3/8" tubular steel side rail (stringer)
 - 4. 1/2" x 1" tubular steel cross member
 - 5. 9" cross member spacing
 - 6. Acceptable product
 - a. Chatsworth 10250-712
 - b. Substitutions: Under provisions of Division 01
- B. 12" Wide Cable Runway, Movable Cross Member
 - 1. Required for mounting cross member radius drops
 - 2. Black in color
 - 3. Acceptable product
 - a. Chatsworth Product 12115-712
 - b. Substitutions: Under provisions of Division 01
- C. 12" Wide Cable Runway, Radius Drop - Cross Member
 - 1. Black in color
 - 2. Acceptable product
 - a. Chatsworth 12100-712
 - b. Substitutions: Under provisions of Division 01
- D. 12" Wide Cable Runway, Radius Drop - Stringer
 - 1. Black in color
 - 2. Acceptable product
 - a. Chatsworth 12101-701
 - b. Substitutions: Under provisions of Division 01
- E. Cable Retaining Post
 - 1. Black in color
 - 2. 8" height
 - 3. Acceptable product
 - a. Chatsworth 10596-708
 - b. Substitutions: Under provisions of Division 01

- F. End Closing Kit
 - 1. UL Classified
 - 2. Acceptable product
 - a. Chatsworth ~~11700-71210642-001~~

- G. Butt-Splice Kit
 - 1. UL Classified
 - 2. Acceptable product
 - a. Chatsworth 16301-701
 - b. Substitutions: Under provisions of Division 01

- H. Junction-Splice Kit
 - 1. UL Classified
 - 2. Acceptable product
 - a. Chatsworth 10616-701
 - b. Substitutions: Under provisions of Division 01

- I. Triangular Support Bracket
 - 1. 100 pound load rating
 - 2. Black in color
 - 3. Acceptable product
 - a. Chatsworth 11746-712
 - b. Substitutions: Under provisions of Division 01

- J. Wall Angle Support Bracket
 - 1. Black in color
 - 2. Acceptable product
 - a. Chatsworth 11420-701
 - b. Substitutions: Under provisions of Division 01

- K. Vertical Wall Bracket
 - 1. Black in color
 - 2. Acceptable product
 - a. Chatsworth Product 10608-701
 - b. Substitutions: Under provisions of Division 01

- L. Protective End Caps
 - 1. Acceptable product
 - a. Chatsworth 10642-001
 - b. Substitutions: Under provisions of Division 01

- M. Touch-Up Paint
 - 1. Black in color
 - 2. Acceptable product

- a. Chatsworth 25400-700
- b. Substitutions: Under provisions of Division 01

2.4 GROUNDING

A. Primary Bonding Busbar:

- 1. 4" x 12 x 1/4" copper
- 2. UL listed
- 3. BICSI AND ANSI /TIA hole patterns
- 4. Comes with mounting brackets
- 5. Approved products:
 - a. Chatsworth Part # 40153-012
 - b. Cooper B-Line Part # SBTMGB12
 - c. Substitutions: Under provisions of Division 01

B. Secondary Bonding Busbar:

- 1. 2" x 12 x 1/4" copper
- 2. UL listed
- 3. BICSI AND ANSI /TIA hole patterns
- 4. Comes with mounting brackets
- 5. Approved products:
 - a. Chatsworth Part # 13633-012
 - b. Cooper B-Line Part # SBTGBK
 - c. Substitutions: Under provisions of Division 01

C. #6 CU ground wire:

- 1. Green THHN
- 2. UL listed

D. #6 grounding lug:

- 1. Mechanical compression
- 2. 2 hole
- 3. Approved products:
 - a. Chatsworth Part # 40162-913
 - b. Cooper B-Line Part # SB47902
 - c. Substitutions: Under provisions of Division 01

PART 3 - EXECUTION

3.1 BACKBOARDS

- A. Provide rated fire retardant, painted plywood on walls of telecommunications rooms as shown on the drawings and secured flush with wall framework.
- B. Install with fire rating stamp visible on each sheet of plywood.

- C. Fire retardant paint shall be light in color to enhance lighting.
- D. Install sheets side by side 6" off the floor with the 8' length vertical unless otherwise noted on the drawings.
- E. Provide two overlapping layers of the specified plywood when covering masonry walls.
- F. Plywood shall be permanently fastened to the wall by means of wall anchors utilizing galvanized, zinc plated, or stainless steel hardware with a flat head.
 - 1. Finished installation shall have a flush appearance with countersunk screw heads to prevent splitting of the plywood.
 - 2. Drywall screws are not acceptable.
- G. Plywood and paint shall be coordinated with the AHJ to meet applicable codes.

3.2 CABLE RUNWAY

- A. Provide cable runway as required to maintain cable fill ratios specified in referenced Standards, to provide routing and support of cables entering into and within the rooms and properly support cable distribution.
- B. Provide overhead ladder runway in the configuration as shown on the drawings.
 - 1. Provide wall angle brackets and attach the ends of the ladder runway to walls.
 - 2. Where possible, provide and attach the ladder runway to equipment cabinets with cabinet to runway mounting plates and elevation kits.
 - 3. Provide support for the ladder runway every 5 feet.
 - a. Cable runway will be mounted at a height of 7'-6" or 6" above equipment cabinets/racks unless noted otherwise.
 - b. Support runway with equipment cabinets
 - c. Support runway with triangle wall brackets
 - d. Support runway from above with (2) support brackets and 3/8" threaded rod attached to building structure.
 - 1) Attach threaded rod to building structure using concrete anchors, beam clamps, or other devices designed for building attachment. Connections must have a pull-out strength and be spaced to provide support for the ladder runway to meet the manufacturer's load rating for the ladder runway.
 - 2) Provide plastic threaded rod covers to cover lower 2 feet of threaded rod.
 - 4. Provide any seismic bracing required by local codes for free-standing racks designed and sealed by a registered professional engineer licensed to practice in the state.
 - 5. Field cuts must be filed smooth, dressed square, and painted to match.
 - 6. Provide end caps on all exposed ladder runway ends.
 - 7. Provide and connect all ladder runway with appropriate butt splice kits, junction splice kits and other hardware designed for assembly of the runway system.
 - 8. Provide cable radius drop out from ladder runway to vertical cable managers at every location where cables transition from the runway to the cable managers.
 - 9. Use moveable cross members where required to mount the cable radius drop out so cables can be routed directly into the vertical cable managers.

3.3 AC POWER AND GROUNDING

- A. Coordinate with electrical contractor placement of electrical outlets at specified telecom open racks, cabinets and Enclosures.
- B. Provide a Telecommunications Bonding Infrastructure compliant with the authorities having jurisdiction.
- C. Provide a PBB and SBB sized as described in Part 2 and shown on the drawings.
- D. Provide connection from all equipment racks and ladder runway within the telecommunications room, and cable tray and conduit that enter the room to the PBB or SBB.
 - 1. Provide a home run #6 CU ground wire from each equipment rack unless drawings provide alternative grounding scheme.
 - 2. Provide a home run #6 CU ground wire from each independent group of ladder runway sections.
 - 3. Provide #6 CU ground strap between ladder sections to create a single ground plane.
 - 4. Provide a home run #6 CU ground wire from any cable tray or conduit that enters the room.
 - 5. Terminate ground wire with a two-hole #6 ground lug.
 - 6. Use correctly sized compress tools
 - 7. Strip insulated ground wire in accordance with manufacturer installation instructions to ensure exposed conductors are not too long, too short or are not nicked or cut.
 - 8. Clean ground wire conductors in accordance with manufacturer installation instruction prior to installing irreversible compression connectors.
 - 9. Provide compression connectors utilizing the tool and die recommended by the compression connector manufacturer.
 - 10. Ensure the die index number is embossed on the connector barrel and the die index number is visible when the connector is installed.
 - 11. Remove any finish and make-bare any metallic surface at the point where ground wires are connected to and or terminated on equipment frames, racks, cable runway or cable tray.
 - 12. Provide joint compound for copper-to-copper and copper-to-steel connections in accordance with manufacturer installation instructions
- E. Coordinate and verify that final connection of the Equipment Grounding System for the building has been tested and accepted for use prior to connecting any portion of the Telecommunications Bonding Infrastructure to the Equipment Grounding System.
 - 1. Bond PBB to main electrical service ground with #3/0 CU insulated cable.
 - a. Terminate with two-hole #3/0 ground lug.
 - 2. Connect busbar to building structural steel with #6 CU ground wire.
 - a. Terminate with two-hole #6 ground lug.
 - 3. Use correctly sized compress tools.

3.4 FINAL INSPECTION

- A. Be cognizant of the project schedule and execute work to comply with the Project Schedule for Final Inspection.

- B. Ensure that the project management and the Architect are made aware of any issues that may prevent the completion of work prior to the scheduled final inspection time-frame.
- C. If the Contract Documents, law, ordinances, rules, regulations or orders of any public authority having jurisdiction require any Work to be inspected, tested or approved, the Contractor must give timely notice to the Owner and the Consultant of the readiness and the date arranged so they may observe such inspection, testing or approval procedure. Should the material or Work fail to comply with the requirements of the Contract Documents, the Contractor must bear all costs to replace, fix, and/or re-terminate the failed work.

END OF SECTION 27 11 00

SECTION 27 41 16 - INTEGRATED AUDIO/VIDEO SYSTEMS AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Integrated Audio-Video Systems and Equipment as part of the Work.

1.2 RELATED DOCUMENTS

- A. General provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections apply to this section.
- B. Reference the Project Manual for related specification sections.
- C. Reference the Project Drawings for additional information.

1.3 SECTION INCLUDES

- A. Project instructions for the Contractor and System description details
- B. System product description
- C. Project completion instructions for the Contractor

1.4 RESPONSIBILITY

- A. Responsibilities include, but are not limited to, the following items:
 - 1. Provide materials, equipment, transportation, and labor necessary for a fully working, tested, and calibrated system. Supply accessories and minor equipment items (such as, but not limited to, power strips, adapters, connectors, mounting hardware, etc.) needed for a complete system, even if not specifically mentioned in these Specifications. Notify the Architect of any discrepancies in part numbers or quantities before bid. Failing to provide such notification, supply items and quantities according to the intent of the Specification and Drawings, without claim for additional payment.
 - 2. Specifications and drawings are complementary. Work called for by one is binding as if called for by both. Any discrepancies between specifications and drawings shall be brought to the attention of the Architect for clarification during the bidding period. No allowance shall subsequently be made to the Contractor by reason of his failure to have brought said discrepancies to the attention of the Architect.
 - 3. Execute work in accordance with the National Electrical Code (NEC), the National Electrical Safety Code, the Occupational Safety and Health Act (OSHA), applicable State and Local codes, ordinances, regulations, authority having jurisdiction (AHJ), and

manufacturer's recommendations. If a conflict develops between the contract documents and the appropriate codes and is reported to the Architect prior to bid opening, the Architect will prepare the necessary clarification. Where a conflict is reported after contract award, propose a resolution of the conflict and, upon approval, perform Work.

4. Required licenses, insurance and permits including payment of charges and fees
5. Verification of dimensions and conditions at the job site.
6. Coordinate location and installation of equipment with other building elements.
7. Preparation of submittal information
8. Pick-up of Owner Furnished Equipment (OFE) and incorporation into project if applicable.
9. Development and implementation of control system software code and control panel layouts, which will become the property of the Owner
10. Final tests and adjustments, written report, and documentation
11. Instruction of operating personnel
12. Provision of manuals
13. Maintenance services and warranty.

1.5 REFERENCES

- A. Published specification standards, tests or recommended methods of trade, industry or governmental organizations apply to Work in this section where cited below:
1. American National Safety Institute (ANSI)
 2. American Society of Testing and Materials (ASTM)
 3. Electronics Industries Association (EIA)
 4. Federal Communications Commission (FCC)
 5. National Electrical Manufacturer's Association (NEMA)

1.6 DEFINITIONS

- A. In addition to those Definitions of Division 1, the following list of terms as used in this specification shall be defined as follows:
1. Furnish - To purchase, procure, acquire, and deliver complete with related accessories.
 2. Install - To set in place, join, attach, link, set up or otherwise connect together and test until complete before turning over to the Owner, all parts, items, or equipment supplied by Contractor.
 3. Provide - To furnish and install.

1.7 DESCRIPTIONS & REQUIREMENTS

- A. The following is intended to further describe the Work and clarify design intent and is not an exhaustive description of the systems.

- B. LOCKER ROOM
 - 1. The locker room will be equipped with audio-visual technology to support the functions of the space and coaching staff needs.
 - 2. Provide multiple flat panel displays within Locker Room to support viewing of owner-furnished TV set-up boxes. Control for TVs and set-top boxes will be via manufacturer remotes.
 - 3. Provide a high-fidelity sound system utilizing a distributed loudspeaker system for audio playback within the locker room. Audio sources will include a local audio input plate and Bluetooth connectivity as well as a signal for the existing PA system.
 - 4. Provide a control system with button panel interfaces to allow users to control audio functions such as System On/Off, Source Selection, Volume Level, etc.

- C. PLAYER LOUNGE
 - 1. Provide multiple flat panel displays within player lounge space to support viewing of video sources. The displays will be sized appropriately for viewing and will be able to support ultra-high-definition (UHD) resolution for compatibility with modern laptops and devices.
 - 2. Input sources could include the following:
 - a. HDMI Inputs
 - b. TV Set Top Boxes
 - 3. Provide a high-fidelity sound system utilizing a distributed loudspeaker system for audio playback within the lounge space. Audio sources will include those accompanying video sources, as well as local audio inputs and Bluetooth connectivity.
 - 4. Provide a control system with touch or button panel interfaces to allow users to control audio-visual functions such as System On/Off, Source Selection, Volume Level, etc.

- D. BATTING AREA
 - 1. The Batting area will be equipped with audio-visual technology to support the functions of the space and coaching staff needs.
 - 2. Provide multiple flat panel displays within Batting area to support viewing of owner-furnished TV set-up boxes. Control for TVs and set-top boxes will be via manufacturer remotes.
 - 3. Provide a high-fidelity sound system utilizing a distributed loudspeaker system for audio playback within the locker room. Audio sources will include a local audio input plate and Bluetooth connectivity as well as a signal for the existing PA system.
 - 4. Provide a control system with button panel interfaces to allow users to control audio functions such as System On/Off, Source Selection, Volume Level, etc.

- E. Lobby
 - 1. Provide a flat panel display within Lobby to support viewing of owner-furnished TV set-up boxes. Control for TVs and set-top boxes will be via manufacturer remotes.

- F.

1.8 SUBMITTALS

- A. Provide submittals in accordance with Conditions of the Contract and Division 1, Submittal Procedures section unless otherwise indicated.
- B. Submittals shall contain sufficient information to describe the Work to be performed. Reviewed shop drawings are to be used for final coordination and construction.
- C. Shop drawings must be original work produced by the Contractor responsible for performing the work defined in this specification. Scanning, photographic copying, materially copying, or any other reproducing the contents of the drawings or specifications contained within the Contract Documents will be marked as unacceptable and not reviewed for any content. No claim shall be made for delay, undue burden, or additional costs for the effort to produce shop drawings, schedules, and equipment lists addressing this specification or the overall project manual.
- D. Supplementary submittal requirements:
 - 1. Provide the following in one electronic submission for review within thirty days of issuance of Notice to Proceed (NTP) and prior to commencement of Work:
 - a. Complete schedule of submittals.
 - b. Chronological schedule of Work in bar chart form.
 - c. Product Data Sheets:
 - 1) Provide a complete table of contents with the following information:
 - 2) Project title.
 - 3) Submittal number. In the case of a resubmittal, use the original submittal number immediately followed by the suffix "R" immediately followed by a unique number and be numbered in consecutive order.
 - 4) Date of submission.
 - 5) Provide a list of and Manufacturer's data sheets on products to be incorporated with the Work. Arrange data sheets in the same order they appear in this specification. Where a data sheet shows more than one product, indicate the model being proposed with an arrow or other appropriate symbol.
 - 6) Submit manufacturer's product literature for each type of firestop material to be used. Literature shall include documentation of UL classifications or approved third party testing. Manufacturer's name and number for each part shall be included. Submit drawings of through penetrations, which include the system to be utilized for the firestopping application. Drawing shall indicate construction of wall or floor assembly; size, number and material of penetrating items; firestop system designation; required F-rating, T-rating and remarks.
 - 7) Upon Owners and/or Consultant's request provide (3) three copies of the submittals. Bind submittal in titled three ring D style binders sized for 150 per cent of the material. Maximum size: three-inch spine. Use multiple volumes as required. Separate major grouping with labeled binder tabs.
 - 8) Submissions that do not follow the format and configuration described above will be returned without review.
 - d. Shop Drawings:

- 1) Functional Diagrams/Schematics:
 - a) Detailed wiring diagrams showing interconnection of components and products, wiring and cabling diagrams depicting cable types and designators, and device designators for each system. Provide connector designations and terminal strip identification, along with color codes for cables connecting to these devices. Give each component a unique designator and use this designator consistently throughout the project.
- 2) Coordination Drawings:
 - a) Prepare and submit a set of coordination drawings showing major elements, components, and devices of the audio and video system in relationship with other building components. Prepare drawings to an accurate scale of 1/8"=1'-0" or larger on suitable sized media.
 - b) Prepare floor plans, reflected ceiling plans, elevations, sections, and details to conclusively coordinate and integrate all equipment. Indicate locations where space is limited, and where sequencing and coordination of installations is of importance to the efficient flow of the Work including but not necessarily limited to the following:
 - (1) Equipment housings
 - (2) Ceiling and wall mounted devices
 - (3) Raceways
 - (4) Cabling
- e. Equipment: Location of equipment within racks, consoles, or on tables, with dimensions; wire routing and cabling within housings; AC power outlet and terminal strip locations.
- f. Patch panel(s): Layouts and designation (labeling) strips, including color schemes.
- g. Full fabrication details of any custom enclosures and millwork indicating size, material, finish and openings for equipment.
- h. Structural rigging and mounting details:
 - 1) Loudspeaker rigging, suspension, and mounting detail drawings shall be signed and sealed by a professional engineer licensed to practice in the state in which the project is located. The signed and sealed drawings noted above to include the following:
 - a) Analysis of all components in the load path and attachment method to building structure for suspended loudspeakers.
 - b) Attachment method for mounting brackets at ceilings, walls, or other building features.
 - c) Detail the product manufacturer, part numbers, and load capacity of the hardware fittings and materials selected for suspended or mounted loudspeakers.
 - d) A copy of the design calculations.
 - e) Secondary steel required for attachment to the building structure.
 - f) Custom brackets, mounts, suspension grids or trusses, loudspeaker cabinet frames, or loudspeaker brackets.
 - g) Loudspeaker brackets or mounts provided by the specific loudspeaker manufacturer being installed that do not include traceability data.
 - 2) Risk analysis data as referenced in Part 3.2, F
 - 3) Stamping Engineer post-installation sign-off as described in Part 3.2, F
 - 4) Proof of ETCP certification for on-site rigging crew.

- i. Projector, loudspeaker, camera mounting details, include hardware types and load capacity.
 - j. Fabricated Plates and Panels
 - 1) Provide complete drawings on custom fabricated plates or panels. Drawings shall include dimensioned locations of components, component types, engraving information, plate material and color, and bill of material.
 - k. Labeling
 - 1) Equipment and cabling labeling scheme. Include font sizes and styles, explanation of scheme, and designator schedule.
 - l. Schedules
 - 1) Wiring schedule showing source and destination of wiring and indicating which wiring is in conduit. Junction box schedule showing type of box, size, mounting and location. Include this information with remainder of wiring diagrams.
 - m. Control System Software
 - 1) Provide electronic copies of proposed control system user interfaces within sixty (60) days of issuance of Notice to Proceed (NTP).
 - n. IP Addresses
 - 1) Coordinated with the venue IT Administrator, provide a list of IP addresses, by device, used in the project.
 - o. Consultant's project documents in electronic format will not be supplied to the Contractor for their use as part of submittals.
 - p. Detail drawings executed at an appropriate scale, but not smaller than 1/8 inch = 1'-0".
 - q. Submissions that do not follow the format and configuration described above will be returned without review.
 - r. Any other pertinent data which is necessary to provide the Work.
2. Control System Software:
- a. Provide electronic copies of proposed control system user interfaces within sixty (60) days of issuance of Notice to Proceed (NTP).

E. Resubmission requirements:

- 1. Make all requested corrections or change in submittals required. Resubmit for review until no exceptions are taken.
- 2. Indicate all changes that have been made other than those requested.

1.9 CONTRACT CLOSE-OUT DOCUMENTS:

A. Provide submittals in accordance with Conditions of the Contract and Division 1, Submittal Procedures section unless otherwise indicated, after substantial completion but prior to final observation:

B. Supplementary submittal requirements:

- 1. Provide the following in one electronic submission for review.
 - a. Equipment Manuals:
 - 1) Manufacturer's owner/instruction manual for each type of Product by manufacturer and model or part number unless specified otherwise herein
 - 2) Supply manufacturer's serial numbers for each Product

- 3) For custom circuits or modifications, a description of the purpose, capabilities, and operation of each item
 - 4) Separately bind list by manufacturer and model or part number of Products incorporated within the Work, arranged in alpha numeric order. When applicable, bind Manufacturer's warranty statements separately.
 - b. Test Reports: Recorded findings of Commissioning.
 - c. Signed copy of turn over equipment to Owner including quantity, make and model.
 - d. Copy of any program or hardware setup files.
 - e. System Operation and Instructions: Prepare a complete and typical procedure for the operation of the equipment as a system, organized by subsystem or activity.
 - 1) This procedure should describe the operation of system capabilities.
 - 2) Assume the intended reader of the manual to be technically inexperienced but unfamiliar with the components and the facility.
 - f. Provide Consultant with copy of Owner training video.
 - g. Service Information, including service phone number(s) and hours; service schedule; description of products recommended or provided for maintenance purposes, and instructions for the proper use of these products.
 - h. Any other pertinent data generated during the Project or required for future service.
 - i. Within three (3) weeks of final observation, submit the following in one electronic submission for review. Upon Owners and/or Consultant's request provide (3) three copies of the following:
 - 1) Record drawings: Final rendition of Shop Drawings depicting what is actually incorporated within the Work.
 - 2) Hardcopy full size set of Record drawings.
 - 3) Three (3) compact disc or DVD's containing Record drawings in AutoCAD editable DWG format and Adobe PDF format. Resolution to be sufficient to permit Owner's technicians to be able to clearly read all notes and text on screen.
 - 4) One set of signed proof-of-training documents.
2. Submittal Format:
- a. Record Drawings: Drawings executed at an appropriate scale, but not smaller than 1/8 inch = 1'-0".
 - b. Segregate documents into separate binders containing data relevant to operational, maintenance, and warranty issues. Appropriately duplicate data within the separate bindings when it will reasonably clarify procedures, e.g., operational data in maintenance binding.
 - c. Bind Project Record Manual in titled three ring D style binders sized for 150 per cent of the material. Maximum size: three inch spine. Use multiple volumes as required. Separate major grouping with labeled binder tabs.

C. Resubmission requirements:

1. Make all requested corrections or change in submittals required. Resubmit for review until no exceptions are taken.
2. Indicate all changes that have been made other than those requested.

1.10 CUSTOM SOFTWARE

A. Introduction:

1. Proprietary software provided for the Technical Systems shall be subject to this software license between the Contractor and the Owner as an essential element of the system as defined in the system specification and associated documents, drawings and agreement.
2. Contractor shall agree that 3rd party proprietary software provided with the system shall be subject to this agreement.
3. Contractor and Owner agree that this software license is deemed to be part of, and subject to, the terms of the Agreement applicable to both parties; and shall supersede any standard manufacturer or Contractor's standard license agreement.
4. Proprietary software shall be defined to include, but not be limited to, device and system specific software and firmware designed to run on conventional computer based operating platforms as well as all micro-processor based hardware used to program, setup, or operate the system or its components.
5. For sake of this agreement, MS Windows® shall not be considered "proprietary" software, unless a non-public version of Windows® or any of its components are critical to the operation of the system in which case it shall be deemed proprietary.

B. License Grant and Ownership:

1. Contractor hereby grants to Owner a perpetual, non-exclusive, site license to all software for Customer's use in connection with the establishment, use, maintenance and modification of the system implemented by Contractor. Software shall mean executable object code of software programs and the patches, scripts, modifications, enhancements, designs, concepts or other materials that constitute the software programs necessary for the proper function and operation of the system as delivered by the Contractor and accepted by the Owner.
2. Except as expressly set forth in this agreement, Contractor shall at all times own all intellectual property rights in the software. Any and all licenses, product warranties or service contracts provided by third parties in connection with any software, hardware or other software or services provided in the system shall be delivered to Owner for the sole benefit of Owner.
3. Owner may supply to Contractor or allow the Contractor to use certain proprietary information, including service marks, logos, graphics, software, documents and business information and plans that have been authored or pre-owned by Contractor. All such intellectual property shall remain the exclusive property of Owner and shall not be used by Contractor for any purposes other than those associated with delivery of the system.

C. Copies, Modifications, and Use:

1. Source code shall be available to Owner for a period of not less than 10 years.
2. Owner may make copies of the software for archival purposes and as required for modifications to the system. All copies and distribution of the software shall remain within the direct control of Owner and its representatives.
3. Owner may make modifications to the source code version of the software, if and only if the results of all such modifications are applied solely to the system. In no way does this Software License confer any right for Owner to license, sublicense, sell, or otherwise authorize the use of the software, whether in executable form, source code or otherwise, by any third parties.
4. All express or implied warranties relating to the software shall be deemed null and void in case of any modification to the software made by any party other than Contractor.

D. Warranties and Representations:

1. Contractor represents and warrants to Owner that:
 - a. It has all necessary rights and authority to execute and deliver this Software License and perform its obligations hereunder and to grant the rights granted under this Software License to Owner;
 - b. The goods and services provided by contractor under this Software License, including the software and all intellectual property provided hereunder, are original to Contractor or its subcontractors or partners; and
 - c. The software, as delivered as part of the system, will not infringe or otherwise violate the rights of any third party, or violate any applicable law, rule or regulation.
2. Contractor further represents and warrants that, throughout the System Warranty Period, the executable object code of software and the system will perform substantially in accordance with the System Specifications and Agreement. If the software fails to perform as specified and accepted all remedies are pursuant to the policies set forth in the Specification and in the Agreement. No warranty of any type or nature is provided for the source code version of the software which is delivered as is.
3. Except as expressly stated in this Agreement, there are no warranties, express or implied, including, but not limited to, the implied warranties of fitness for a particular purpose, of merchantability, or warranty of no infringement of third party intellectual property rights.

1.11 QUALITY ASSURANCE

- A. Qualifications: Contractor to be experienced in the provision of systems similar in complexity to those required for this project, and meet the requirements listed below. Provide documentation at the time of bid to support these qualifications:
 1. Form of corporation.
 2. No less than three years' experience with equipment and systems of the specified types.
 3. Experience with at least three comparable scale projects within the last three years.
 4. Be a franchised dealer and service facility for the manufacturer's products furnished.
 5. Maintain a fully staffed and equipped service facility with full-time field technicians.
 6. Have at least one supervisory on-site employee who has completed and has been certified CTS-I by Infocomm.
 7. Supervision of all rigging by an ETCP certified rigger for all work associated with suspension or mounting of overhead equipment.
 8. Adequate plant capacity and equipment to complete the Work.
 9. Adequate staff with commensurate technical experience.
 10. Suitable financial status (i.e., bonding and materials purchase capacity) to meet the obligations of the Work.
 11. Adequate regional service organization to meet warranty response requirements of the Project.
 12. Provide listing with appropriate explanation regarding the status of Contractor's resolved or unresolved legal disputes within the last six calendar years.
 13. Provide listing with appropriate explanation regarding any projects within the last 3 years where the Contractor has failed to meet construction schedules due to Contractor's cause.
 14. Completed current version of the AIA Contractor's Qualification Form.
- B. Subcontractors: at the time of bid, the Contractor shall provide a list of structural, electrical, sound, or any other subcontractors intended to do the Work, or are being retained as local

service providers throughout the warranty period. Subcontractors shall be appropriately state licensed in their specialty and must provide the same qualification documents as the Contractor.

- C. Work: Perform Work in compliance with the applicable standards listed herein and governing codes and regulations of the authorities having jurisdiction and the Contract Documents.
 - 1. Drawings and specification requirements govern where they exceed Code and Regulation requirements.
 - 2. Where requirements between governing Codes and Regulations vary, the more restrictive provision applies.
 - 3. Nothing in the Contract Documents grants authority or permission to disregard or violate any legal requirements.
- D. Coordinate exact location and installation of equipment, power, grounding, and raceway requirements with the Architect.

1.12 DELIVERY, STORAGE & HANDLING

- A. Ship Products in its original container, to prevent damaging or entrance of foreign matter.
- B. Handling and shipping in accordance with Manufacturer's recommendation.
- C. Provide protective covering during construction of all installed devices, to prevent damaging or entrance of foreign matter.
- D. Replace at no expense to Owner, Products damaged during storage, handling or the course of construction.

1.13 PROJECT CONDITIONS

- A. Verify conditions on the job site applicable to this work. Notify Architect in writing of discrepancies, conflicts, or omissions promptly upon discovery.
- B. The Drawings diagrammatically show cabling and arrangements of equipment fitting the space available without interference. If conditions exist which make it impossible to install work as shown, recommend solutions and/or submit drawings to Architect for approval, showing how the work may be installed.

1.14 WARRANTY

- A. Warrant labor and equipment for one year following the date of substantial completion to be free of defects and deficiencies, and to conform to the drawings and specifications as to kind, quality, function, and characteristics. Repair or replace defects occurring in labor or equipment within the Warranty period without charge.

- B. This warranty is in addition to any specific warranties issued by manufacturers for greater periods of time.
- C. Within the warranty period, answer service calls within twenty four (24) hours during normal working hours and correct the deficiency within forty eight (48) hours.
- D. Provide Owner with the name and telephone number of the person to call for service. This information to be part of Project Closeout Documents.
- E. Thirty days prior to the end of the warranty period provide a complete checkout of all system components. Repair or replace any defective equipment discovered during the testing. Correct any defects in wiring or other functional problems reported by Owner. Warranty replacement and service of equipment shall not apply to Owner furnished equipment (OFE). Coordinate observation visit with the Owner.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Products quantity is as required. If a quantity is given, provide at least the given amount. Some product listed may not be required to fulfill the obligations of the Work.
- B. Equipment and materials shall be new and conform to applicable UL or ANSI provisions.
- C. Regardless of the length or completeness of the descriptive paragraph herein, provide Products complying with the specified manufacturer's published specifications.
- D. Remove or blank out all manufacturers' names, logos, or other symbols from loudspeakers or other objects placed in view of the public. If logos are removable, remove and repaint to the color of the adjacent surface and reattach.
- E. Take care during installation to prevent scratches, dents, chips, etc.

2.2 ACCEPTABLE MANUFACTURERS

- A. Model numbers and manufacturers included in this specification are listed as a standard of function, performance, and quality.
- B. Refer to General and Supplementary Conditions and Division 1 Specification Sections for equipment substitution procedure.

- C. If a specified product has been discontinued by a manufacturer, provide the replacement model (as certified by the manufacturer) at no additional cost.
- D. Where required provide manufacturer's rack mount adapter or one manufactured by Middle Atlantic or Winstead unless specified elsewhere.

2.3 INPUT SOURCES

A. Bluetooth with Analog Input Plate (BT, Type1):

- 1. Bluetooth, RCA, and 3.5MM inputs
- 2. 3.5MM outputs
- 3. Dante/AES67 connectivity
- 4. 2-gang Decora style
- 5. Acceptable Product:
 - a. Atterotech unD6IO-BT

2.4 DIGITAL SIGNAL PROCESSORS

- A. Signal processing shall be performed by a computer-based system.
- B. The DSP system shall be fully operational 60 days prior to the first use of the installed system.
- C. The system shall have the following capabilities:
 - 1. Digital Signal Processing Unit:
 - a. Interior configuration of signal flow and routing to be fully user configurable
 - b. Unit to permit hardwire connection of external switches for recalling presets
 - c. Unit to have no external user adjustable controls
 - d. Dante compatible
 - e. Acceptable Product to include the following:
 - 1) QSC QSYS Core 110f (DSP, Type 1)
 - 2) QSC SLDAN-8-P (8 x 8 soft Dante)
 - 3) QSC SLDAN-16-P (16 x 16 soft Dante)
 - 4) QSC SLDAN-32-P (32 x 32 soft Dante)
 - 5) QSC SLQSE-110-P
 - 6) QSC SLQUD-110-P

2.5 POWER AMPLIFIERS

A. Power Amplifiers:

- 1. Provide protection of circuit components in the event of input over-drive, output overload, or short circuits
- 2. Frequency response: ± 1 dB, 20 Hz to 20 kHz with less than 1 percent THD at rated output
- 3. Input impedance: 10 kohms balanced

4. Output regulation: 2 dB from no load to full load conditions
5. Noise generation: at least 85 dB below rated output with input shorted
6. Ventilation: variable speed fans that shut off when the amplifier is operating under light or no-load conditions
7. Bowl System: adequate power supply capacity to maintain DSP power through emergency power take over, should building power be lost. Or, provide adequate UPS to maintain amplifiers needed for sustaining intelligibility standards through emergency power take over, should building power be lost.
8. Acceptable Products:
 - a. Type 1 Power Amplifier: - 8 Channel, 300 Watts Continuous per Channel at 70V/8 Ohms:
 - 1) QSC CX-Q 4K8
 - b. Type 2 Power Amplifier: - 8 Channel, 600 Watts Continuous per Channel at 70V/8 Ohms:
 - 1) QSC CX-Q 8K8

2.6 LOUDSPEAKERS

A. Type 1 Loudspeakers:

1. 6.5-inch coaxial in-ceiling loudspeaker
2. 110-degree conical coverage
3. 16 Ohm or 70V selectable with tap points at 60W, 30W, 15W, 7.5W
4. 88dB 1Watt/1meter Sensitivity
5. 107dB Peak SPL
6. Acceptable Product:
 - a. JBL Control 26CT

B. Type 2 Loudspeakers:

1. 8-inch High-Impact In-Ceiling Subwoofer
2. 8 Ohm or 70V selectable with tap points at 80W, 40W, 20W, 10W
3. 95dB 1Watt/1meter Sensitivity
4. 108dB Peak SPL
5. Acceptable Product:
 - a. JBL Control 40CST

C. Type 3 Loudspeakers:

1. Compact Full-Range Pendant Loudspeaker
2. 120-degree conical coverage
3. 8 Ohm or 70V selectable with tap points at 60W, 30W, 15W, 7.5W
4. 88dB 1Watt/1meter Sensitivity
5. 105dB Peak SPL
6. Acceptable Product:
 - a. JBL Control 26CT

D. Type 4 Loudspeakers:

1. Pendant Subwoofer with Crossover
2. 8 Ohm or 70V selectable with tap points at 110W, 55W, 30W, 15W

3. 88dB 1Watt/1meter Sensitivity
4. 107dB Peak SPL
5. Acceptable Product:
 - a. JBL Control 60PST

E. Type 5 Loudspeakers:

1. Extended Range Full-Range Pendant Speaker
2. 120-degree conical coverage
3. 8 Ohm or 70V selectable with tap points at 60W, 30W, 15W, 7.5W
4. 90dB 1Watt/1meter Sensitivity
5. 109dB Peak SPL
6. Acceptable Product:
 - a. JBL Control 67PT

F. Type 6 Loudspeakers:

1. Pendant Subwoofer with Crossover
2. 8 Ohm or 70V selectable with tap points at 110W, 55W, 30W, 15W
3. 88dB 1Watt/1meter Sensitivity
4. 107dB Peak SPL
5. Acceptable Product:
 - a. JBL Control 60PST

2.7 VIDEO DISPLAYS

A. 43" Display:

1. Provide Commercial Grade LCD UHD TV Display
2. Native Resolution 3840 x 2160
3. RS232C Control Input
4. Two (2) HDMI/HDCP Inputs
5. USB 2.0 Inputs
6. VESA Standard Mount
7. Acceptable Product:
 - a. Samsung QB43B w/ Chief MTM1U

B. 50" Display:

1. Provide Commercial Grade LCD UHD TV Display
2. Native Resolution 3840 x 2160
3. RS232C Control Input
4. Two (2) HDMI/HDCP Inputs
5. USB 2.0 Inputs
6. VESA Standard Mount
7. Acceptable Product:
 - a. Samsung QB50B w/ Chief LTM1U

C. 55" Display:

1. Provide Commercial Grade LCD UHD TV Display
2. Native Resolution 3840 x 2160

3. RS232C Control Input
4. Two (2) HDMI/HDCP Inputs
5. USB 2.0 Inputs
6. VESA Standard Mount
7. Acceptable Product:
 - a. Samsung QB55B w/ Chief LTM1U

D. 65" Display:

1. Provide Commercial Grade LCD UHD TV Display
2. Native Resolution 3840 x 2160
3. RS232C Control Input
4. Two (2) HDMI/HDCP Inputs
5. USB 2.0 Inputs
6. VESA Standard Mount
7. Acceptable Product:
 - a. Samsung QB65B w/ Chief LTM1U

E. 75" Display:

1. Provide Commercial Grade LCD UHD TV Display
2. Native Resolution 3840 x 2160
3. RS232C Control Input
4. Two (2) HDMI/HDCP Inputs
5. USB 2.0 Inputs
6. VESA Standard Mount
7. Acceptable Product:
 - a. Samsung QB75B w/ Chief LTM1U

2.8 AV SOURCES

A. TV SET-TOP BOX (TV-SET, Type 1)

1. Owner-Furnished TV set top box.

B. AppleTV Player (APPLE, Type 1)

1. Acceptable Product
 - a. Apple TV 4k 64GB

C. Music Player (Music, Type 1)

1. 4 stereo zones of network music replay
2. Integration with local network content storage
3. PC/Mac, iOS/Android and third-party control
4. Security preventing unauthorized control
5. Replay from locally connected USB drives
6. Streaming via ethernet for increased reliability
7. Seamless Integration with Control Systems.
8. Acceptable Product
 - a. Bluesound-Professional B400S

2.9 TRANSMITTERS/RECEIVERS

- A. DM Transmitter Wall Plate (DMTX, Type 1):
 - 1. Converts HDMI to CAT5e/6.
 - 2. Available in black or white. Color to be selected by Architect.
 - 3. Acceptable Product:
 - a. Crestron DM-TX-4KZ-100-C-1G

2.10 ENCODERS/DECODERS

- A. Streaming Transport Chassis (CHASSIS, Type 1):
 - 1. DM Card Chassis
 - 2. 8 slot, rack-mounted solution for DM-NVX-C & DMCF
 - 3. 2-space 19-inch rack-mountable
 - 4. Provide as many Chassis needed per AV Equipment Rack. Reference AV drawings.
 - 5. Acceptable Product:
 - a. Crestron DMF-CI-8
- B. Streaming Transport Encoder Card with DM Input (ENCODER, Type 1)
 - 1. 4K60 4:4:4 video over standard Gigabit Ethernet
 - 2. Encoder functionality for use with DM NVX products that can function as decoders
 - 3. DM input for interoperability with DM 8G+ output devices and DM Lite transmitters, including DM 8G+ and DM Lite wall plate transmitters
 - 4. Acceptable Product:
 - a. Crestron DM-NVX-E760C
- C. Streaming Transport Encoder Card (ENCODER, Type 2)
 - 1. 4K60 4:4:4 HDR Network AV Encoder Card
 - 2. HDR10, HDR10+, and Dolby Vision video support
 - 3. Encoder functionality for use with DM NVX products that can function as decoders
 - 4. Acceptable Product:
 - a. Crestron DM-NVX-E30C
- D. Streaming Transport Encoder/Decoder (DECODER, Type 1)
 - 1. 4K60 4:4:4 video over standard Gigabit Ethernet
 - 2. HDR10, HDR10+, and Dolby Vision video support
 - 3. Dante or AES67 audio embedding and de-embedding
 - 4. Acceptable Product:
 - a. Crestron DM-NVX-363

2.11 AV NETWORK HARDWARE

- A. Ethernet Switch (AV SWITCH, Type 1):
 - 1. 1-GB Ports
 - 2. Nonblocking backplane
 - 3. Layer 3

4. IGMP implementation
5. Sufficient bandwidth uplinks for all AV over IP encoders and decoders
6. PoE and PoE+ ports
7. Compatible and approved by DSP and amplifier system manufacturer
8. Provide Fiber Optic adaptors as required
9. Recess switch into rack far enough to cover with a blank panel
10. Provide label on blank cover stating "Priority Communications System Only"
11. Compliant with venue IT Standards
12. Acceptable Product:
 - a. Netgear M4250 series
 - b. Luxul AV-Series
 - c. Cisco Catalyst 9300 series

2.12 CONTROL SYSTEM

A. Control System (CP, Type 1)

1. 4-Series Control Engine
2. Ports: RS232/422/485
3. Eight relays
4. Eight I/O channels
5. Supports up to 10 simultaneously running programs
6. Acceptable Product to include:
 - a. Crestron CP4N

2.13 USER INTERFACES

A. Touch Panel (TP, Type 1):

1. 10.1 in. (257 mm) widescreen active-matrix color display and 1920 x 1200 WUXGA display resolution
2. Capacitive touch screen display
3. Built-in speakers and microphone
4. H.265, H.264, or MJPEG streaming video display
5. Built-in Bluetooth communications beacon
6. Built-in web browsing
7. Single wire Ethernet connection with PoE or PoE+ power
8. Dual USB 2.0 ports for room availability accessories
9. Acceptable Product:
 - a. Crestron TSW-1070-B-S

2.14 POWER SYSTEMS

A. Power Protection:

1. Provide surge protection devices to maintain clean power to the following equipment:
 - a. All computer CPU's and associated video monitors
 - b. All Audio System Network equipment
 - c. All low level (mic or line) processing equipment with internal microprocessor or DSP chips

- d. Mixing Console(s)
- 2. Acceptable Product:
 - a. Surge-X SX-1120RT
 - b. Furman P-1800 PFR
 - c. Juice Goose RX100

B. Backup Power:

- 1. Provide UPS systems for:
 - a. Computer CPU's and associated video monitors
 - b. DSP
 - c. Audio related network equipment
 - d. AV Control Systems
- 2. UPS's shall be on-line style with sufficient battery reserve to operate for 15 minutes. Size each UPS unit for 25 percent additional capacity.
- 3. Coordinate make and model with the Owner and/or IT Administrator to provide consistency throughout the venue.
- 4. Acceptable Product:
 - a. APC SMT2200RM2U
 - b. Juice Goose SCV-30001
 - c. Tripp Lite SM2200RMXL2UP

C. Backup Power:

- 1. Provide UPS systems for:
 - a. Computer CPU's and associated video monitors
 - b. DSP
 - c. Audio related network equipment
 - d. AV Control Systems
- 2. UPS's shall be on-line style with sufficient battery reserve to operate for 15 minutes. Size each UPS unit for 25 percent additional capacity.
- 3. Coordinate make and model with the Owner and/or IT Administrator to provide consistency throughout the venue.
- 4. Acceptable Product:
 - a. Tripp Lite SU1500RTXLCD2U

D. Rack Lighting and Power Strip:

- 1. Nema 20A plug
- 2. 20 Amp/2400 Watt rating
- 3. Front panel AC voltmeter
- 4. Dual front panel pullout dimmable lights
- 5. Spike and surge suppression with over-voltage shutdown
- 6. Rack Mountable
- 7. Acceptable Product:
 - a. Furman PL-Pro C
 - b. Middle Atlantic PDLT-815RVA
 - c. Juice Goose JG 8LED

2.15 EQUIPMENT HOUSING AND ACCESSORIES

- A. Configure equipment racks for proper airflow and cooling
- B. Middle Atlantic systems listed below are approved for use on this project and are listed to set the acceptable standard of performance. Equipment housing systems from Lowell or other approved equivalents are also acceptable provided they meet the performance specifications of the approved listed equipment housing systems.
- C. Equipment Racks:
 - 1. Type: Frame and panel with locking rear door
 - 2. Size: 36-inches deep with 44 units of vertical space
 - 3. Construction: Factory assembled 16-gauge cold-rolled steel frames with all corners welded
 - 4. Black enameled finish
 - 5. Provide all necessary side panels, trim pieces, tops, and blank panels
 - 6. Provide Middle Atlantic VBK-W27-W32 Vent Blocker kit(s) and configure for proper airflow and cooling of rack
 - 7. Acceptable Product:
 - a. Middle Atlantic Products MRK series
- D. Rack Drawer:
 - 1. Spring loaded latch
 - 2. Black textured finish
 - 3. Acceptable Product:
 - a. Middle Atlantic TD series
- E. Low Profile Keyboard Shelf:
 - 1. Sliding black laminate shelf
 - 2. Single rack space
 - 3. Acceptable Product:
 - a. Middle Atlantic SSL
- F. Computer Shelf:
 - 1. Flanged construction
 - 2. 16 Gauge steel
 - 3. Black powder coat finish
 - 4. Acceptable Product:
 - a. Middle Atlantic U4
- G. Universal Rack Shelf:
 - 1. Black textured powder coat finish
 - 2. Acceptable Product:
 - a. Middle Atlantic RSU-129
- H. Universal Mounting Trays:
 - 1. Multiple Devices

2. Acceptable Product:
 - a. Extron RSU 126
 3. Single Device
 4. Acceptable Product:
 - a. Extron RSB 126
- I. Blank Rack Panels:
1. Flanged construction
 2. 16 Gauge steel
 3. Black powder coat finish
 4. Acceptable Product:
 - a. Middle Atlantic SB series
- J. Vent Rack Panels:
1. Flanged construction
 2. 16 Gauge steel
 3. Black powder coat finish
 4. Acceptable Product:
 - a. Middle Atlantic VTF series
- K. Rack Fan:
1. 10" or 4.5"(x4), 115V
 2. Include cord and hardware
 3. Acceptable Product:
 - a. Middle Atlantic FAN10 with GUARD-10
 - b. Middle Atlantic FAN with GUARD
- L. Fan Thermostat Control:
1. Switched 15A duplex outlet
 2. Temperature Range: 50 – 90 Degrees
 3. On and Stand-by LED indicators
 4. Integral mounting ears
 5. Provide for each rack fan assembly
 6. Acceptable Product:
 - a. Middle Atlantic FC-4-1C
- M. Rack Temperature Display:
1. Provide one display in top front panel space of each rack
 2. Decora mount in 1-RU rack panel
 3. Digital readout in Fahrenheit or Celsius
 4. Connect to DAP GPIO for high temperature alarm to the Audio Control Booth
 5. Acceptable Products:
 - a. Middle Atlantic TEMP-DEC with DECP-1X1 Panel.
- N. Rack Light:
1. Provide 60W incandescent or 13W fluorescent work light
 2. Located in all equipment racks over 36 RU's high

3. Acceptable Product:
 - a. Middle Atlantic WL-60
 - b. Lowell RL-1

O. Copper Bus Bars:

1. Material: Solid copper, 1/8 thick and 2-inches wide with threaded 10/32 holes
2. Height: 70-inch for 40-RU or larger racks and 21-inch for racks under 40-RU
3. Wire each circuit ground to bus bar and isolated outlet ground
4. Terminate two #6 wires between rack and buss bar
5. Provide with nylon isolation mounts
6. Provide one bus bar in each rack
7. Acceptable Product:
 - a. Middle Atlantic BB-40
 - b. Middle Atlantic BB-12

P. Equipment Rack Screws:

1. Install rack mounted equipment with black 10-32 star post security screws with flat nylon washers
2. Quantity as required
3. Provide one spare bit located in a clear plastic bag attached to the inside of each equipment rack in plain view
4. Acceptable Product:
 - a. Middle Atlantic HTX
 - b. Raxxess PNTX

Q. Wire Duct:

1. Purpose: signal wire routing in rack
2. Acceptable Product:
 - a. Panduit Type E Slotted

R. Surface Mount Wire Duct:

1. Signal level cabling, loudspeaker level cabling, electrical
2. Acceptable Product:
 - a. Wiremold 4000 Series

2.16 PLATES AND PANELS

- A. Provide plates and panels and as described in Drawings. Engrave as shown on Drawings. Other Plates and Panels may be required to satisfy the requirements of the Work.
- B. Custom panels shall be flanged standard EIA sizes, brushed black anodized finish unless otherwise noted.
- C. Plate finish shall be coordinated with the Architect. Plastic plates are not acceptable.

- D. Panel, plate, and label engraving shall be 1/8-inch block sans serif characters unless noted otherwise. On dark panels or pushbuttons, letters shall be white; on stainless steel or brushed natural aluminum pushbuttons, letters shall be black.

- E. Custom and/or Engraved Panels:
 - 1. Custom panels constructed of 1/8-inch brushed aluminum
 - 2. Finish: black anodize
 - 3. Acceptable Product:
 - a. RCI Custom
 - b. ProCo
 - c. Whirlwind

- F. Patch Panels for Audio/Video plate tie lines:
 - 1. Flat all-metal Shielded modular patch panels
 - 2. Mounts to standard cabinets and EIA 19" Racks
 - 3. 16-ports per 1U panel
 - 4. Strain relief bar includes cable tie slots for managing and supporting cables
 - 5. Label area to correspond to unique ID number of AV, AVC, FB plates (Labels to be printed, not hand-written)
 - 6. Utilizes Mini-Com Shielded snap-in modules
 - 7. Acceptable Product to include:
 - a. Panduit #CP16WSBLY
 - b. Panduit TX6 10Gig Shielded Modules
 - c. Mounting screws as needed

2.17 CABLES & WIRING

- A. All electrical conductors installed under this contract, except where otherwise specified, shall be soft drawn annealed stranded copper having a conductivity of not less than 98% of pure copper, and meet appropriate ratings (e.g., CMR, CMP, etc.)

- B. Cable shall carry appropriate fire rating (e.g., CMR, CMP, OFNR, OFNP, etc.) on jacket of cable.

- C. Where cables are routed through cable tray, provide tray rated cable of equal specification.

- D. Where speaker cables are run exposed through a return air plenum, provide plenum rated cable of equal specification.

- E. Where cabling is run through in-grade pathways, provide direct burial cable, underground rated, or cable treated with water blocking. Adjust conduit sizes accordingly to accommodate larger diameter cable.

- F. Shielded cables located in raceways shall have aluminum foil shield with drain wire.

G. The Belden cables listed below are approved for use on this project and are listed to set the acceptable standard of performance. If field conditions or actual cable pathway requires tray or plenum cable, provide version of cable that meets required rating. Cables from Liberty, Commscope, Gepeco, Clark, Windy City, and West Penn are also acceptable provided they meet the performance specifications of the approved listed cables.

H. Loudspeaker Cables:

1. Amplifier to Rack Room Terminals:
 - a. Distance not to exceed 25 feet.
 - b. 12 gauge twisted pair, jacketed.
 - c. Acceptable Product:
 - 1) Belden 5000UP
2. Rack Room Terminals to Junction Box Terminals near loudspeaker, low impedance:
 - a. 10 gauge twisted pair, jacketed.
 - b. Acceptable Product:
 - 1) Non-Plenum: Belden 5T00UP
 - 2) Plenum: Belden 6T00UP
 - 3) In-grade: Belden 1313A
3. Rack Room Terminals to Junction Box Terminals near loudspeaker, 70V Zones:
 - a. 12 gauge twisted pair, jacketed.
 - b. Acceptable Product:
 - 1) Non-Plenum: Belden 5000UP
 - 2) Plenum: Belden 6000UE
 - 3) In-grade: Belden 1311A
4. Drop cable from Junction Box Terminals to Loudspeaker Array:
 - a. Eight conductors, 10 gauge, twisted pairs, SOOW rubber jacketed.
 - b. Acceptable Product:
 - 1) General Cable-Carrol 09008
5. Junction Box Terminals to Loudspeaker:
 - a. Distance not to exceed 15 feet.
 - b. 12 gauge, twisted pairs, SOOW rubber jacketed.
 - c. Acceptable Product:
 - 1) General Cable-Carrol 02724 (two-conductor)
 - 2) General Cable-Carrol 02726 (four-conductor)
 - 3) General Cable-Carrol 09208 (eight conductor)

I. Ethernet Cable:

1. Category 6 non-bonded pairs
2. Acceptable Product:
 - a. Non-Plenum / Riser: Belden 2412
 - b. Plenum: Belden 1352A
 - c. In-grade: Belden OSP6F
 - d. Tactical: Belden 1303E

J. Fiber Optic Cable:

1. Armored Single Mode Fiber Optic Cable
2. Acceptable Product:

- a. 6 Strand:
 - 1) Non-Plenum / Riser: Belden FDSH0065F
 - 2) Plenum / In-grade: Belden FDSD006A9
- b. 12 Strand:
 - 1) Non-Plenum / Riser: Belden FDSH0125F
 - 2) Plenum / In-grade: Belden FDSD012A9
- c. 24 Strand:
 - 1) Non-Plenum / Riser: Belden FDSH0245F
 - 2) Plenum / In-grade: Belden FDSD024A9
- d. 48 Strand:
 - 1) Non-Plenum / Riser: Belden FDSH048AK
 - 2) Plenum / In-grade: Belden FDSD048AK

K. Category 6A Patch Cables:

- 1. Rack Patch Cables
- 2. Length as required
- 3. Acceptable Product:
 - a. Belden 10GX UTP LSZH series

L. Fiber Patch Cables:

- 1. Rack Patch Cables
- 2. Length as required
- 3. Connector type as required
- 4. Acceptable Product:
 - a. Belden FP series

PART 3 - EXECUTION

3.1 GENERAL

- A. Coordinate incorporation of the Work specified herein with other project work so as to facilitate a cohesive final Products.
- B. The installation recommendations contained within ASDI and Telecommunications Distribution Methods Manual are mandatory minimum standards and requirements.
- C. Mount equipment and enclosures plumb and level.
- D. Permanently installed equipment to be firmly and safely held in place. Design equipment supports to support loads imposed with a safety factor of at least five. Seismic bracing shall be installed on appropriate equipment where local codes require such installation.
- E. Verify all locations of equipment in all rooms with Owner's Representative, Owner, and Consultant.

3.2 INSTALLATION

A. Installation of cable and wiring

1. Cabling and Wiring:

- a. Install cable in a manner to adhere to manufacturer's specifications for maximum cable pulling tension, minimum bend radius, and restrictions.
- b. Provide appropriate support at all horizontal-to-vertical transitions in order to keep the weight of the cable from degrading at the point of transition.
- c. If a J-hook or trapeze system is used to support cable bundles, all horizontal cables shall be supported at a maximum of 48-inch (1.2 meter) intervals. At no point shall the cables rest on light fixtures, acoustic ceiling grids, panels, conduits, sprinkler pipe, water pipe and/or HVAC system ducting.
- d. Horizontal distribution cables shall be bundled in groups of no more than 50 cables when being supported by J-Hook or trapeze systems. Cable bundle quantities in excess of 50 cables may cause deformation of the bottom cables within the bundle and degrade cable performance. An exception to this rule is when cable is installed in cable tray systems.
- e. Cable shall be installed above fire-sprinkler systems and shall not be attached to the system or any ancillary equipment or hardware. The cable system and support hardware shall be installed so that it does not obscure any valves, fire alarm conduit, boxes, or other control devices
- f. Cables shall not be attached to ceiling grid or lighting fixture wires. Where support for horizontal cable is required, install appropriate carriers to support the cabling.
- g. Any cable damaged or exceeding recommended installation parameters during installation shall be replaced prior to final acceptance at no cost to the Owner.
- h. Cables shall be identified by a self-adhesive machine label in accordance with the System Documentation Section of this specification and ANSI/TIA/EIA-606-A. The cable label shall be applied to the cable behind the faceplate on a section of cable that can be accessed by removing the cover plate.
- i. Unshielded twisted pair cable shall be installed so that there are no bends smaller than four times the cable outside diameter at any point in the run and at the termination field.
- j. Provide splice free wiring and cabling from origination to destination. Cables shall be installed in continuous lengths from origin to destination (no splices). Properly designed transition points, or consolidation points are not considered 'splice' points.
- k. Make joints and connections with rosin-core 60/40 solder or with mechanical connectors specifically intended for the type and class of cable being used. Where spade lugs are used, crimp properly with ratchet type tool.
- l. Take precaution to prevent and guard against electromagnetic and electrostatic hum. For line-level audio signal, float cable shield at one end. Shield not connected to be folded back over cable jacket and covered with heat-shrink tubing. Do not cut off unused shield.
- m. Isolate cables and wires of different signals or different levels; and separate, organize, and route to restrict channel crosstalk or feedback oscillation in any amplifier section. Keep wiring separated into groups for microphone level circuits, line level circuits, loudspeaker circuits, and power circuits.
- n. Connect cable to active components through XLR connections whenever multiple formats are available. Make connections to speaker transformers with properly

sized closed end connectors crimped with factory approved ratchet type tool. Wire nut or "Scotchlock" connectors are not acceptable. Do not wrap audio cable splices or connections with adhesive backed tape.

- o. Cover edges of cable and wire pass-through holes in chassis, housings, boxes, etc., with rubber grommets or Brady GRNY nylon grommeting.
 - p. Execute wiring in strict adherence to:
 - 1) Phillip Giddings. Audio System Design and Installation. Indianapolis: Howard W. Sams & Co., 1990.
 - 2) Don Davis and Carolyn Davis. Appendix II, Recommended Wiring Practices. Sound System Engineering, 2nd Edition. Indianapolis: Howard W. Sams & Co., 1989.
 - 3) AV Installation Handbook Second Edition: The Best Practices for Quality Audiovisual Systems, Infocomm, 2009
2. Equipment Housing Cabling and Wiring:
- a. Lace, tie, or harness wire or cable as required herein, and in accordance with accepted professional practice. Dress, lace or harness all wire or cable to prevent mechanical stress on electrical connections; no wire or cable shall be supported by a connection point. Install cable and wire neatly tied in manageable bundles with cable lengths cut to minimize excess cable slack but still allow for service and testing. Provide horizontal support bars if cable bundles sag. Reference photos below for standard of quality.

- b. Provide adequate service loops so that equipment mounted on rack slides may be pulled fully out, to their locked position without straining cable.
 - c. Neatly bundle excess AC power cable from housing mounted equipment with plastic cable ties.
 - d. Provide plastic cable ties or Velcro straps to bundle cabling and wiring. Electrical tape and adhesive backed cable tie anchors are not acceptable.
 - e. Install with connections completely visible and labeled.
 - f. Provide termination resistors, if required, of 5 per cent tolerance; fully visible and not concealed.
- B. Installation of connectors, plates & panels:
- 1. Install panel mounted connectors rigidly attached to panels, plumb and level.

2. Custom rack panels shall be 1/8 inch thick aluminum, standard EIA sizes, brushed black anodized finish (brushed in direction of aluminum grain only), unless otherwise noted.
3. Custom connector plates (speaker, microphone, etc.) are typically stainless steel, unless otherwise noted or specified. However, verify plate finish with Architect.
4. Install XLR type connectors in accordance with IEC-268 standard, with a wiring scheme of pin 2 hot (high), pin 3 (low), and pin 1 screen (shield).
5. Other Plates and Panels may be required to satisfy the requirements of the Work.

C. Installation power and grounding:

1. Coordinate final connection of power and ground wiring to housings.
2. Hardwire power wiring directly to internal AC receptacles to ensure uninterrupted operation.
3. Provide 3-conductor, isolated ground, 120 VAC outlets as required within each housing. Provide a minimum of two spare outlets in each rack.
4. Provide a copper ground buss top to bottom in each housing, insulated from the housing. Ground equipment chassis not having a three wire power cord to these busses using 6/32 nuts, bolts and lock-washers with No. 12 wire. Connect green ground wire from each AC outlet in housing to this buss bar.
5. Replace manufacturers supplied 18 gauge IEC power cords with UL listed 18 gauge pre-molded 6", 12", 18", or 24". Use minimum length required. No looped or cable tied IEC power cords will be permitted within the equipment rack.
6. Replace manufacturers supplied 14 gauge IEC power cords with UL listed 14 gauge pre-molded 18" or 36" for all equipment IEC capable. Use minimum length required and minimize looped or cable tied IEC power cords present in the equipment rack.

D. Installation of electronic equipment:

1. Take appropriate precautions against electrostatic discharge (ESD). Establish a personal ground before handling electronic equipment through the use of a grounded wrist wrap and/or an anti-static floor pad.
2. Take appropriate precautions to protect the equipment from damage during installation. Equipment to be installed free of damages, scratches, dents, etc.
3. Mount trim potentiometers, custom circuit cards, relays, and transformers (except large 70V units) in shielded enclosures, and mark their function and connections with engraved lamicoïd labels.
4. Mount equipment plumb and level, firmly and safely held in place.

E. Installation of equipment housing:

1. Mount equipment in racks and consoles and fully wire and test before delivery to job site. If field conditions prevent prior assembly of racks, notify Owner in writing that racks will be fabricated on site and the reasons for the change.
2. Secure rack mounted devices utilizing all available fastener mounting positions on device.
3. Provide rear support for housing mounted equipment greater than 15 inches deep.
4. Provide blank panels to fill unused panel space within the equipment housing.
5. If Key door locks are required, key each housing type alike.
6. Looking at the rack from the rear, locate AC power and speaker wiring on the left; line level audio, video, and RF wiring on the right.

7. Provide shaft locks or security covers on non-user operated equipment having front panel controls. These panels are to be installed at the conclusion of testing.
8. If forced air active thermal management is used, provide ventilation blocking material on the front, sides, and rear of the equipment rack as needed. Reference Middle Atlantic Products “Controlling the Temperature Inside Equipment Racks”.
9. Panels or equipment mounted on the rear rack rails shall not block access to any front mounted components.
10. If equipment rack is not equipped with casters, provide two inch high wood base to isolate equipment rack from floor. Wood base should be capable of supporting the load.

F. Installation of loudspeakers:

1. The Contractor is responsible for final design and engineering of loudspeaker rigging, attachments, brackets, and hoisting.
2. Loudspeakers shall be mounted at the operating position in a safe, secure, and permanent manner.
3. Provide custom rigging as needed.
4. Suspension and Mounting:
 - a. Static and dynamic equipment loads shall be suspended or mounted in compliance with the following ANSI/ESTA standards, using the latest available versions of the standards:
 - 1) ANSI E1.4-2-2021 Statically Suspended Rigging Systems
 - 2) ANSI E1.56-2018 Rigging Support Points
 - 3) ANSI E1.6-1-2021 Powered Hoist Systems
 - 4) ANSI E1.8-2012 Loudspeaker Enclosures Intended for Overhead Suspension
 - b. Rigging, mounting, and support systems for overhead suspended loudspeakers shall be reviewed and certified by a registered Professional Engineer (PE), in the employ of the Contractor, licensed to practice in the State in which the project is located. Documentation shall be included as a submittal item. Once the systems are installed, the PE shall physically inspect, at the Contractor’s cost, the methods and means used to verify compliance with the original design.
5. General Guidelines:
 - a. Paint loudspeakers, supports, and related hardware color as directed by the Owner.
 - b. The aiming direction of all loudspeakers shall be adjustable by no less than ± 5 degrees horizontally and vertically.
 - c. Loudspeakers are to be oriented parallel to their mounting surface unless otherwise noted.
 - d. Provide a safety cable connected to a secondary location for each loudspeaker.
 - e. All loudspeakers located in ceiling tiles shall be located in the center of the tile unless noted otherwise.
 - f. Paint loudspeakers to match surroundings. Confirm color selection with the Architect during the submittal phase.
 - g. Exterior loudspeaker cabinets shall be constructed of materials designed for permanent outdoor exposure conditions with a minimum IP 54 rating, and a minimum expected 10-year life span. Exterior and interior surfaces of the cabinets shall be protected from the effects of water, moisture, and humidity. The exterior surface shall also be protected from the effects of ultraviolet radiation to prevent fading and color change. The cabinets shall be shaped and oriented in a manner that minimizes the possibility of water pooling on any cabinet surface. Associated

hardware shall be inherently non-corrosive, performing to the standards of 304 Stainless Steel or higher.

G. Installation of projectors:

1. Confirm distance of specified projection lens before mounting projector.
2. Projectors shall be mounted plumb and level at the operating position in a safe, secure and permanent manner.
3. All hardware required to locate the mount and projector at the required location shall be provided.
4. Projectors shall be mounted using tamper proof secure hardware.
5. Contractor may be required to adjust projection screen and lift upper and lower limit switches for projection screens and lifts specified elsewhere and not installed as part of this Contract.

H. Installation of flat panel monitors:

1. Confirm location before mounting.
2. Monitors shall be mounted plumb and level at the operating position in a safe, secure and permanent manner.
3. All hardware required to locate the mount and monitor at the required position shall be provided.
4. Locate monitor on the center line of the room unless noted otherwise.

I. Loose Equipment

1. Provide loose equipment as indicated on drawings.
2. Unpackage and assemble items.
3. Place items in designated storage or refer to Owner for direction on final location and storage of loose equipment.

3.3 FIRESTOP

- A. A fire-stop system is comprised of the item or items penetrating the fire rated structure, the opening in the structure and the materials and assembly of the materials used to seal the penetrated structure. Fire-stop systems comprise an effective block for fire, smoke, heat, vapor and pressurized water stream.
- B. All penetrations through fire-rated building structures (walls and floors) shall be sealed with an appropriate fire-stop system. This requirement applies to through penetrations (complete penetration) and membrane penetrations (through one side of a hollow fire rated structure). Any penetrating item i.e., riser slots and sleeves, cables, conduit, cable tray, and raceways, etc. shall be properly fire-stopped.
- C. Fire-stop systems shall be reviewed by a Professional Engineer (PE) licensed to practice in the State in which the project is located. Stamped drawings showing the fire stop systems shall be included as a submittal item. Once the systems are installed, the engineer of record for the firestop system shall physically inspect the methods and means used to verify compliance with the original design.

- D. A drawing showing the proposed fire-stop system, stamped/embossed by the PE shall be provided to the Owner's Technical Representative prior to installing the fire-stop system(s).
- E. All fire-stop systems shall be installed in accordance with the manufacturer's recommendations and shall be completely installed and available for observation by the local authorities prior to cable system acceptance.

3.4 CONTROL SYSTEM PROGRAMMING

A. Transport Control

1. Provide standard Stop, Play, Pause, Fast Forward and Rewind for each playback device and menu control for DVD players. Buttons should be arranged in a conventional fashion that will be familiar to the normal user.
2. The selected control function should be displayed by showing the appropriate button "pressed". It should remain this way until another function is selected.
3. For devices that will go into a standby mode after a period of time, the control system shall sense this mode and restore normal operating mode once a transport function has been selected. This may require the use of current sensors to determine the state of the unit. No direct user action should be required at the playback device to restore the normal operating mode.

B. Screen/Shade Control

1. In addition to up-down functions, provide a Stop function to allow the movement to be halted. Once movement has been stopped, the up or down buttons should resume travel in the selected direction.
2. Control system shall not prevent screen/shade wall controls from being used as well.
3. Touch panel controls should be readily accessible to the user to permit direct control of shades or screen with having to navigate through multiple control pages.

C. Room Combining

1. Combining of adjacent areas shall be done through a graphical representation of the physical areas to be combined. Use of a floor plan metaphor is recommended with the graphic oriented correctly with respect to control panel location.
2. Use buttons or other appropriate objects placed along the common wall to enable the combining function.
3. When spaces are combined, the graphic appearance of those areas shall change to reflect this configuration. Once an area is separated from a combination, the color of its area should revert to the normal room color.
4. Common control functions between combined rooms shall be linked, allowing control of the combined area from any one of the touch panels. Examples of common functions include:
 - a. Background music selection,
 - b. Background music volume
 - c. Background music muting
 - d. Lighting preset recall
 - e. Master volume (not individual channel volume)

5. When combining adjacent rooms, the control system shall force the common functions to a predetermined default configuration so all rooms have the same configuration.
6. To avoid unintentional changes, a control panel will not be able to operate a function in a remote location without also operating that same function in the room where the panel is located.

D. Level Control

1. Objects requiring level adjustment such as volume or tone controls shall be through Up/Down buttons with a graphical representation of the actual level.
2. Increment of level change to be adjusted for reasonable range without the need to push the Up or Down buttons needlessly.

E. Volume Mute

1. Where the ability to mute the sound is needed, the button shall use the label “Vol On” and “VOL OFF” instead of Mute and Unmute. When in a “VOL OFF” mode, pushing the “VOL UP” button shall restore the sound and bring the system out of the muted mode.
2. VOL ON/OFF buttons shall change color to indicate the status of the button.

F. Standard Colors

1. Control functions shall be color coded to add clarity and show relationships between different groups of controls.
2. The color Red shall be reserved to indicate a fault or abnormal condition.
3. Green may be used to indicate normal operation, but may be used for standard control colors as well.
4. Similar controls should maintain the same color scheme across all control pages.
5. When a function is selected, the graphical depiction of that button should appear to be pressed and its color change to a darker shade of the regular button color.
6. Color schemes used for background and foreground objects should be selected to be complimentary and provide a consistent theme throughout the control pages.

G. Minimum Button Size and Placement

1. Minimum visual size of a button is 3/8” wide by 1/4” high.
2. Spacing between buttons should be no less than 1/16”.
3. Where buttons are immediately adjacent, the active selection area of the button should be reduced to 80% of the visual area of the button.

H. Button Actions

1. When a function on a control page is selected, that button or visual object associated with that function should change to reflect what has been chosen.
2. For functions that are momentary selections (i.e., VOL UP), the change of state is visible for as long as the button is being pressed.
3. For function that are maintained selections (i.e., PLAY), the change of state remains visible until another function is selected and resets the previous function.
4. The state change of a button or visible object should depict real-world objects as much as possible including the appearance of the button be pressed inward, change in shade of the original color, but not a change in hue.

I. Labels

1. Use of simple words or titles are preferred to indicate functionality, navigation and system status.
2. Use of stylish symbols should be avoided unless their identity is commonly recognized by the general public. Standard symbols for transport functions are acceptable.
3. Labels should be presented in a clear, sans serif type face that will remain legible on lower resolution touch panels.
4. Where physical buttons are present along the side of a touch panel, these buttons should be engraved and filled with a contrasting color.

J. Power On/Off

1. For panels requiring an ON/OFF control, these functions should be linked through current sensors or other methods for the control system to detect the power on condition of the component being controlled.
2. Powering off a system should not interfere with the ability of a projector to complete its cool down cycle.

K. Look & Feel

1. Control pages should utilize a clean, elegant but stylish appearance.
2. Use a common graphical template across all control pages for a consistent look.
3. The touch screen layout should utilize graphical elements such as drop shadows, gradient fills and transparency to provide a pleasing overall appearance.
4. Utilize graphical representations of floor plans to convey location information.
5. Include company logos, icons or watermarks to portray the corporate identity.
6. Provide clear navigation tools for moving between control pages.
7. Each sub-page should have a "BACK" button to return to the previous page. This button should appear in the same location on each page.
8. Provide a "HELP" button or icon on each user page to provide clear, non-technical instructions on how to use the functions available to regular users.

L. Security

1. Provide password access to control pages not intended to be accessed by the general public.
2. Unless otherwise noted, provide a minimum of three levels of access
 - a. General User
 - b. Non-Technical Employee
 - c. AV Technician
3. Segregate the control functions to only allow authorized individuals access to more sophisticated control pages.
4. Provide a timeout feature to automatically return the control panel back to the default opening screen after 30 seconds of inactivity. After this reset, passwords must be reentered to return to a previous control page.

M. Presets

1. For systems that have different operating modes or configurations, provide the ability to store and recall preset combinations of system settings.

2. Provide a "Preset" page that permits a minimum of five presets to be recalled. Each button to include a label describing the function or configuration associated with that button.
3. Provide the ability for new presets to be stored over previous settings. New preset to be able to change the label to reflect the new or revised configuration.
4. When a preset has been recalled, the control page should indicate the active configuration.

3.5 LABELING OF EQUIPMENT

- A. Provide each terminal strip with a unique descriptor and a numerical designator for each terminal. Show terminal strip descriptor and designator on system schematic drawing.
- B. Provide logical and legible cable and wiring label permanently affixed for easy identification.
 1. Labels on cables to be adhesive strip type covered with clear heat-shrink tubing. Factory stamped heat shrink tubing may be used in lieu of the adhesive strip style.
 2. Wiring designator to be an alpha-numeric code unique for each cable. Actual cable designation assignments to be determined by Contractor. Add cable designation codes to system schematic drawings.
 3. Locate the cable designator at the origination and destination of each circuit within 3 inches of the point of termination or connection. Provide cable designator on circuits with intermediate splice points with an additional suffix to indicate each segment.

3.6 ENGRAVING

- A. Text font: 1/8 inch block sans serif characters unless noted otherwise.
- B. On dark materials, provide white characters; on stainless steel or brushed natural aluminum plates, or light-colored materials, provide black characters.
- C. Provide at least two lines of text with first line listing the general device name, e.g., amplifier. Second line to include schematic reference of the device, e.g., AMP-1.
- D. Equipment label: black with white characters except where indicated.

3.7 COMMISSIONING

- A. Prior to energizing or testing the system, ensure the following:
 1. All products are installed in proper and safe manner according to manufacturer's instructions.
 2. Insulation and shrink tubing are present were required.
 3. Dust, debris, solder splatter, etc. is removed.
 4. Cable is dressed, routed, and labeled; connections are consistent with regard to polarity.
 5. Labeling has been provided.

6. Temporary facilities and utilities have been properly disconnected, removed and disposed of off-site.
 7. Products are neat, clean and unmarred and parts securely attached.
 8. Broken work, including glass, raised flooring and supports, ceiling tiles and supports, walls, doors, etc. have been replaced or properly repaired, and debris cleaned up and discarded.
- B. Prior to energizing the System verify and perform the following tests and adjustments in compliance with applicable EIA standards.
1. Electronic devices are properly grounded.
 2. Test each AC power receptacle with a circuit checker for proper hot, neutral and ground connections.
 3. Verify each individual component is operating properly.
 4. Verify each individual component's performance meets the manufacturer's published performance for this unit.
 5. Measure and record the DC resistance between the technical ground in any equipment rack or console and the main building ground. Resistance should be 0.15 ohms or less.
- C. Speaker Circuit Verification Test
1. Measure the impedance of each speaker line leaving the equipment racks.
 2. For constant voltage systems measure the impedance at 100 (or 250) Hz, 1 KHz and 8 (or 10) KHz of each line leaving the equipment rack with the line disconnected from the driving source. For band limited devices, use a frequency appropriate for the operating range of the transducer.
 3. When documenting the results of these tests, include the calculated impedance based on number of units on a line and the size and distance of the run. Correct any field readings that differ more than 20% from the calculated impedance.
 4. Include the results of the tests in the Project Record Manual.
- D. Speaker Polarity Verification Test
1. Use an electronic polarity checker, TEF-20, SYSID, SIM II, Smaart, or other similar device to test each loudspeaker. All speakers should have the same relative polarity.
 2. Follow manufacturer's recommendations in conducting the tests.
 3. Include the results of the tests in the Project Record Manual.
- E. Audio Signal Paths
1. Verify operation from each source device through all switching, amplification and distribution devices.
- F. System Gain Adjustment
1. Adjust each active device to have proper gain structure from the mixer output to the input of the amplifier.
 2. With all amplifiers turned off, connect a sine wave or pink noise generator to the input of the mixer. Using an RMS AC voltmeter with a dB scale, adjust the mixer to an output between -10 and 0 dBu. Once the level has been established, it should remain unchanged throughout the test. All equalizers should be set flat for this test.

3. Follow the signal flow from the mixer to each subsequent component. Measure the input level and output level of each device at the point of connection to the device. The input level reading should differ no more than 0.25 dB from the level recorded for the preceding device. Diagnose and correct the wiring or equipment when any readings exceed this range.
4. Adjust the output of each component to achieve the proper output level.
5. Record the output levels of each device in the Project Record Manual.

G. Signal Delay Adjustment

1. Adjust the delay to each subsystem to ensure proper synchronization between the main speakers and delayed speakers.
2. Using a TEF 20, SYSID, Smaart, SIM II, or other acceptable time based measurement system, measure the arrival time of the distant signal and then measure the arrival of the local signal.
3. Based on the arrival times measured, adjust the delay applied to the local speakers to synchronize them with the distant speakers. Repeat the test to verify the delay has been set to within 1 ms of the arrival of the distant signal. Once the precise delay time has been determined, provide an additional 10 ms of Haas effect delay to maintain directional orientation toward the original sound source.
4. Continue to test and adjust each separate subsystem with a dedicated delay channel.
5. Provide hard-copy printout of each delay adjustment showing first the arrival times with no delay set and then the result after the delay has been adjusted. Record the settings of each delay in the Project Record Manual.

H. Remote Input Verification Test

1. Using a microphone or portable signal generator, connect to each microphone/line level receptacle throughout the facility.
2. Verify that the receptacle under test appears at the correct input and is operating properly.
3. In a similar manner, check all remote tielines and media related lines for correct wiring and labeling.

I. System Equalization

1. Using a RTA, TEF 20, SYSID, or SMAART, equalize all loudspeaker systems to provide a suitable frequency response as follows:
 - a. Speech Reinforcement Systems: flat response from 125 Hz to 2.5 KHz, with 2 dB roll off above.
 - b. Program Reproduction Systems: flat response from 65 Hz to 8 KHz, with 2 dB roll off above.
2. Verify system gain and amplifier levels.
3. Provide program levels of at least 85 dB and speech reinforcement levels of at least 70 dB in the seating area without objectionable distortion, buzzes, or rattles.
4. Provide hard copy printouts of the spectral response with the test data.

J. RFI and Parasitic Oscillation

1. With systems operating check to ensure that all systems are free from spurious oscillation and radio frequency interference in the absence of audio signal.

K. Buzzes, Rattles and other Distortions

1. Adjust the system for normal operating level in the space. Apply a slow sine wave sweep from 60 Hz to 3 KHz and listen carefully for buzzes, rattles and other objectionable distortions.
2. Correct the cause of the defect. If the cause is not from the system. Bring the cause to the attention of the GC, indicating cause and suggestive corrective actions.

L. Video Systems Test

1. Projected images and screen must be plumb with respect to ceiling line.

M. Video System Tests. Verify performance of all video equipment, components and systems, as specified herein.

1. Video (signal):
 - a. S/N (peak to RMS), unweighted DC to 4.2 MHz: 55 dB minimum.
 - b. Crosstalk, unweighted DC to 4.2 MHz: 45 dB minimum.
 - c. Frequency Response: Within plus to minus 0.5 dB to 4.2 MHz.
 - d. Line and Field Tilt: 2% maximum.
 - e. Differential Gain: 2% maximum.
 - f. Differential Phase: 2 degrees maximum.
 - g. Frequency Response: DC to 4.2 MHz within plus or minus 0.5 dB.

N. Video Signal Paths

1. Verify operation from each source device through all switching, amplification and distribution devices.

O. Video Test Report shall include the following:

1. Test Failures and Notices
 - a. Sink Device EDID Test – Open items or failures shall not be accepted.
 - b. Cable Length Test – Open items or failures shall not be accepted.
 - c. HDCP KSV Limitations – Limitations shall not be accepted.
 - d. Cable Limitations - Limitations shall not be accepted.
 - e. EDID Limitations - Limitations shall not be accepted.
 - f. Cable Length Limits exceeded – Failing cables shall not be accepted.
2. Device Model Number, Serial Number, and Firmware Version for main chassis and each input and output card.
3. Device Model Number, Serial Number, and Firmware Version for connected transmitter and receiver devices.
4. EDID – Input Resolution and 3D support status for each input.
5. EDID – Supported Output Resolution and 3D support status for devices connected to each output.
6. EDID – Supported Audio formats for each input.
7. EDID – Supported Audio formats for devices connected to each output.

P. Control Systems

1. Verify operational functions of the control system and all interfaced devices.
2. Verify operational functionality of any wireless user devices.

3.8 CAT5E/CAT6 CABLE CERTIFICATION

A. General Field Test Requirements

1. All CAT5E/CAT6 cabling links installed as part of this scope shall be tested for the following, in accordance with the field test specifications defines in ANSI/TIA-568-C.2 “Commercial Balanced Twisted-Pair Telecommunications Cabling and Components Standard.” This document will be referred to as the “Category 5e Standard”:
 - a. Wire Map
 - b. Length
 - c. Insertion Loss
 - d. NEXT loss
 - e. PS NEXT Loss
 - f. ACR-F Loss
 - g. PS ACR-F Loss
 - h. Return Loss
 - i. Propagation Loss
 - j. Delay Skew
2. The installed twisted-pair horizontal links shall be tested from terminated end point to terminated end point for compliance with the “Permanent Link” performance specification as defined in the Category 5e Standard.
3. One hundred percent of the installed cabling links must pass the requirements of the Category 5e standard mentioned above and as further detailed in Section B below. Any failing link must be diagnosed and corrected. The corrective action shall be followed with a new test to prove that the corrected link meets the performance requirements. The final and passing result of the tests for all links shall be provided in the test results documentation in accordance with Section C below.
4. The test equipment (tester) shall comply with the accuracy requirements for level IIe field testers as defined in ANSI/TIA-1152. The tester including the appropriate interface adapter must meet the specified accuracy requirements. The accuracy requirements for the permanent link test configuration (baseline accuracy plus adapter contribution) are specified in Table 2 of ANSI/TIA-1152 (Table 2 in this TIA document also specifies the accuracy requirements for the channel configuration).
5. The RJ45 test plug shall fall within the values specified in ANSI/TIA-568-C Annex C for NEXT, FEXT and Return Loss.
6. The tester shall be within the calibration period recommended by the vendor in order to achieve the vendor-specified measurement accuracy.
7. The tester interface adapters must be of high quality and the cable shall not show any twisting or kinking resulting from coiling and storing of the tester interface adapters. In order to deliver optimum accuracy, preference is given to a permanent link interface adapter for the tester that can be calibrated to extend the reference plane of the Return Loss measurement to the permanent link interface. To ensure that normal handling on the job does not cause measurable Return Loss change, the adapter cord cable shall not be of twisted-pair construction.
8. The Pass or Fail condition of the link-under-test is determined by the results of the required individual tests (detailed in Section 4.2.2 of ANSI/TIA-1152). Any Fail result yields a Fail for the link-under-test. In order to achieve an overall Pass condition, the results for each individual test parameter must Pass.
9. A Pass or Fail result for each parameter is determined by comparing the measured values with the specifies test limits for that parameter.

B. Performance Test Parameters

1. The test parameters are defined by the Category 5e Standard. The test of each link shall contain all of the following parameters as detailed below. In order to pass the test, all measurements (at each frequency in the range from 1 MHz through 100 MHz) must meet or exceed the limit value determined in the above mentioned standard.
2. Wire Map - Shall report Pass if the wiring of each wire-pair from end to end is determined to be correct.
3. Length – The field tester shall be capable of measuring length of all pairs of a basic link or channel based on the propagation delay measurement and the average value for NVP. The physical length of the link shall be calculated using the pair with the shortest electrical delay. This length figure shall be reported and shall be used for making the Pass/Fail decision. The Pass/Fail criteria are based on the maximum length allowed for the Permanent Link configuration (90 meters – 295 feet) plus 10% to allow for the variation and uncertainty of NVP.
4. Insertion Loss (Attenuation) – Insertion Loss is a measure of signal loss in the permanent link or channel. The term “Attenuation” has been used to designate “Insertion Loss.” Insertion Loss shall be tested from 1 MHz through 100 MHz in maximum step size of 1 MHz. It is preferred to measure insertion loss at the same frequency intervals as NEXT loss in order to provide a more accurate calculation of the Attenuation-to-Crosstalk Ratio (ACR) parameter. Minimum test results documentation (summary results): Identify the worst wire pair (1 of 4 possible). The test results of the worst wire pair must show the highest attenuation value measured (worst case), the frequency at which the worst case value occurs, and the test limit value at this frequency.
5. NEXT Loss – Pair-to-pair near end crosstalk loss (abbreviated as NEXT loss) shall be tested for each wire pair combination from each end of the link (a total of 12 pair combinations). This parameter is to be measured from 1 through 100 MHz. NEXT Loss measures the crosstalk disturbance on a wire pair at the end from which the disturbance signal is transmitted (near-end) on the disturbing pair. The maximum step size for NEXT loss measurements shall not exceed the maximum step size defined in the Category 5e Standard as shown in Table 1. Minimum test results documentation (summary results): Identify the wire pair combination that exhibits the worst value of NEXT (worst case). NEXT is to be measured from each end of the link-under-test. These wire pair combinations must be identified for the tests performed from each end. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.

Table 1 – Maximum frequency step size as defined in ANSI/TIA-1152

Frequency Range (MHz)	Maximum Step size (MHz)
1 - 31.25	0.15
31.26 - 100	0.25

6. PS NEXT Loss – Power Sum NEXT Loss shall be evaluated and reported for each wire pair from both ends of the link under-test (a total of eight results). PS NEXT Loss captures the combined near-end crosstalk effect (statistical) on a wire pair when all other pairs actively transmit signals. Like NEXT this test parameter must be evaluated from 1 through 100 MHz and the step size may not exceed the maximum step size defined in the Category 5e Standard as shown in Table 1. Maximum test results documentation (summary results): Identify the wire pair that exhibits the worst-case margin and the wire pair that exhibits the worst value for PS next. These wire pairs must be identified for the tests performed from each end. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.

7. ACR-F Loss, pair to pair – Attenuation Crosstalk Ratio Far-end is calculated from the pair-to-pair FEXT Loss. It shall be measured for each wire-pair combination from both ends of the link under-test. FEXT Loss measures the crosstalk disturbance on a wire pair at the opposite end (far-end) from which the transmitter emits the disturbing signal on the disturbing pair. FEXT is measured to compute ACR-F Loss that must be evaluated and reported in the test results. ACR-F measures the relative strength of the far-end crosstalk disturbance relative to the attenuated signal that arrives at the end of the link. This test yields 24 wire pair combinations. ACR-F is to be measured 1 through 100 MHz and the maximum step size for FEXT loss measurements shall not exceed the maximum step size defined as the standard as in Table 1. Minimum test results documentation (summary results): Identify the wire pair combination that exhibits the worst value for ACR-F. There wire pairs must be identified for the tests performed from each end. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.
8. PS ACR-F Loss – Power Sum Attenuation Crosstalk Ratio Far-end is a calculated parameter that combines the effect of the FEXT disturbance from three wire pairs of the fourth one. This test yields eight wire-pair combinations. Each wire-pair is evaluated from 1 through 100 MHz in frequency increments that do not exceed the maximum step size defined in the standard as shown in Table 1. Minimum test results documentation (summary results): Identify the wire pair that exhibits the worst pair combinations must be identified for the tests performed from each end. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.
9. Return Loss – Return Loss (RL) measures the total energy reflected on each wire pair. Return Loss is to be measured from both ends of the link-under-test for each wire pair. This parameter is also to be measured from 1 through 100 MHz in frequency increments that do not exceed the maximum step size defined in the Category 5e Standard as shown in Table 1. Minimum test results documentation (summary results): Identify the wire pair that exhibits the worst value of Return Loss. These wire pairs must be identified for the tests performed from each end. Each reported case should include the frequency at which it occurs as well as the test limit value at this frequency.
10. Propagation Delay – Propagation delay is the time required for the signal to travel from one of the links to the other. This measurement is to be performed for each of the four wire pairs. Minimum test results documentation (summary results): Identify the wire pair with the worst propagation delay. The report shall include the propagation delay value measured as well as the test limit value.
11. Delay Skew – [as defined in the Category 5e Standard; Section 6.2.19] This parameter shows the difference in propagation delay between the four wire pairs. The pair with the shortest propagation delay between the four wire pairs. The pair with the shortest propagation delay is the reference pair with a delay skew value of zero. Minimum test results documentation (summary results): Identify the wire pair with the worst-case propagation delay (the longest propagation delay). The report shall include the delay skew value measured as well as the test limit value.

C. Test Result Documentation

1. The test results/measurements shall be transferred into a Windows based database utility that allows for the maintenance, inspection, and archiving of these test records. A guarantee must be made that the measurement results are transferred to the PC unaltered, i.e., “as saved in the tester” at the end of each test and that these results cannot be modified at a later time.

2. The database for the completed job shall be stored and delivered on CD-ROM or DVD including the software tools required to view, inspect, and print any selection of test reports.
3. A paper copy of the test results shall be provided that lists all the links that have been tested with the following summary information:
 - a. The identification of the link in accordance with the naming convention defined in the overall system documentation.
 - b. The overall Pass/Fail evaluation of the link-under-test including the NEXT Headroom (overall worst case) number.
 - c. The date and time the test results were saved in the memory of the tester.
4. General information to be provided in the electronic data base with the test results information for each link:
 - a. The identification of the customer site as specified by the end-user.
 - b. The identification of the link in accordance with the naming convention defined in the overall system documentation.
 - c. The overall Pass/Fail evaluation of the link-under-test
 - d. The name of the test limit selected to execute the stored test results
 - e. The cable type and value of NVP used for length calculations
 - f. The date and time the test results were saved in the memory of the tester
 - g. The brand name, model, and serial number of the tester.
 - h. The identification of the tester interface
 - i. The revision of the tester software and the revision of the test limits database in the tester
 - j. The test results information must contain information on each of the required test parameters that are listed in Section B and as further detailed below under paragraph C5.
5. For each of the frequency-dependent test parameters, the value measured at every frequency during the test is stored. The PC-resident database program must be able to process the stored results to display and print a color graph of the measured parameters. The PC-resident software must also provide a summary numeric format in which some critical information is provided numerically as defined by the summary results (minimum numeric test results documentation) as outlined above for each of the test parameters.
6. The detailed test results data to be provided in the electronic database must contain the following information:
 - a. Length: Identify the wire-pair with the shortest electrical length, the value of the length rounded to the nearest 0.1 m330 and test limit value.
 - b. Propagation delay: Identify the pair with the shortest propagation delay, the value measured in nanoseconds (ns) and the test limit value.
 - c. Delay Skew: Identify the pair with the largest value for delay skew, the value measured in nanoseconds (ns) and the test limit value.
 - d. Insertion Loss (Attenuation): Minimum test results documentation as explained in Section B for the worst pair.
 - e. Return Loss: Minimum test results documentation as explained in Section B for the worst pair as measured from each end of the link.
 - f. NEXT, ACR-F: Minimum test results documentation as explained in Section B for the worst pair combination as measured from each end of the link.
 - g. PS NEXT and PS ACR-F: Minimum test results documentation as explained in Section B for the worst pair combination as measured from each end of the link.

3.9 FINAL OBSERVATION & TESTING

- A. Upon completion of installation, initial adjustments, tests and measurements specified in Part 3, and submission and review of the results, a final observation and test will be performed by the Owner or Owner's representative no earlier than two weeks after receipt of the written results.
- B. Provide a minimum of one (1) person for observation and testing familiar with aspects of the System to assist the Owner.
- C. The process of testing the System may necessitate moving and adjusting certain components.
- D. Testing includes operation of each major system and any other components deemed necessary. Perform tests and provide required test equipment, tools and material required to make any necessary repairs, corrections, or adjustments.
- E. The following procedures will be performed on each System:
 - 1. Observation of the methods and means employed to incorporate the System within the facility.
 - 2. Verification of proper operation, from controlling devices to controlled devices.
 - 3. Verification of proper adjustment, balance, and alignment of equipment for optimum quality and to meet the manufacturer's published specifications. Establish and mark normal settings for each level control, and appropriately record these settings within the Record Documents.
 - 4. Other tests on equipment or systems deemed appropriate.
- F. In the event the need for further adjustment or work becomes evident during testing, the Contractor is to continue his work until the System is acceptable at no addition to the contract price. If approval is delayed because of defective equipment, or failure of equipment or installation to meet the requirements of these specifications and any extension of the observation and testing period is required, the Contractor shall pay for additional time and expenses of the Owner at the standard rate in effect at that time.

3.10 TEST EQUIPMENT

- A. Thirty days prior to start of testing, provide a list to the Owner of test equipment make, model numbers and calibration dates that will be used.
- B. The following equipment shall be available on site for the entire test period through final system testing.
 - 1. Sound Level Meter : ANSI S1.4-1971 Type S1A with digital or analog display. Meter to provide ranges of 40 to 120 dBA.
 - 2. Pink Noise Source - Equal energy per octave bandwidth 20 Hz to 20,000 Hz, ± 1 dB (long-term average) at 0 dBm output. Stability: ± 2 dB per day.
 - 3. Dual-trace oscilloscope - 100 MHz bandwidth, 1 mV/cm sensitivity.
 - 4. Impedance Meter - Capable of testing audio lines at three frequencies, minimum, between 250 Hz and 5k Hz. Measurement Range: 1 ohm to 100 kohms.

5. Audio Oscillator: bandwidth 20 Hz to 20k Hz \pm .5 dB at 0 dBm output. Output to be balanced. Oscillator to include adjustable output level over the range from -30 dBu to +10 dBu.
 6. Multimeter - Measurement range, DC to 20k Hz, 100 mV to 300 V, 10 ma to 10 A, dB.
 7. NTSC Test generator
 8. Real time analyzer with LED or CRT display. The unit shall meet the filter requirements of ANSI S1.11 Class III for one third octave filters.
 9. Video (analog) test generator capable of generating signal up to 1920 x 1200 with audio.
 10. Video (digital) test generator capable of generating signal up to 1920 x 1200 with audio.
 11. Ladders and scaffolding necessary to inspect elevated equipment, junction boxes, etc.
- C. Provide three portable VHF or UHF business band radios for use during acceptance testing with transmission range sufficient to cover entire project. Include rechargeable batteries and recharger along with holster for wearing on belt. Radios to be available for duration of testing process, including any follow-up visits required prior to final acceptance.

3.11 INSTRUCTION OF OWNER PERSONNEL

- A. Provide instruction to Owner designated personnel focusing on the use, operation and maintenance of the systems, scheduled as a minimum of two separate sessions, by an instructor fully knowledgeable and qualified in system operation. The System Reference Manuals should be complete and on site at the time of this instruction. Coordinate schedule of demonstration with Owner's Representative.
1. AV System
 - a. 4 hours of instruction
- B. Video record all training sessions and compile a training video to be provided to the Owner on DVD.
- C. Provide sign in sheet to document the attendee's presence.
- D. If Contractor is not properly equipped to conduct Owner training on particular equipment, arrange for factory representatives of the equipment to be present to provide training at no additional cost to the Owner.

3.12 CLEANUP AND REPAIR

- A. Upon completion of the work, remove refuse and rubbish from and about the premises. Leave areas and equipment clean and in an operational state. Repair any damage caused to the premises by the installation of systems at no cost to the Owner.

END OF SECTION 27 41 16

SECTION 27 41 16.1 – BOWL SOUND SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including all General and Supplementary Conditions and Division 1 Specification sections shall apply to this section and shall be considered as forming an integral part of this Work. These documents are referred to as the Project General Conditions in the remainder of these Specifications.
- B. The Common Work Results shall apply to Work specified in this Section.
- C. The following sections are related and have interaction between them.
 - 1. Division 26 Electrical
 - 2. Division 27 Structured Cabling and Pathways

1.2 REFERENCES

- A. Published specification standards, tests or recommended methods of trade, industry or governmental organizations apply to Work in this section where cited below:
 - 1. American National Safety Institute (ANSI)
 - 2. American Society of Testing and Materials (ASTM)
 - 3. Electronics Industries Association (EIA)
 - 4. Federal Communications Commission (FCC)
 - 5. National Electrical Manufacturer's Association (NEMA)
 - 6. National Electrical Code (NEC)
 - 7. Underwriters Laboratories (UL)
 - 8. Occupational Safety and Health Administration (OSHA)
 - 9. Society of Motion Picture and Television Engineers (SMPTE)
 - 10. Building Industry Consulting Service International (BICSI)
 - 11. Davis and Davis, Sound System Engineering (3rd Edition) (SSE), Howard W. Sams, 2006
 - 12. Giddings, Audio System Design and Installation (ASDI), Howard W. Sams, 2013
 - 13. AV Installation Handbook Second Edition: The Best Practices for Quality Audiovisual Systems, Infocomm (AVIH), 2009

1.3 SUMMARY OF WORK

- A. Work specified in this Section includes a variety of component and cabling re-location, removal and re-installation for the existing 1st base line field lighting standard speaker cluster.
- B. The stadium's sound system was installed by Precision Audio. It is recommended that they are contacted to perform this work. Scott Carneval 919-820-9910.
- C. Contractor will provide personnel and field equipment necessary to:

1. Remove and store the existing speaker assembly.
2. Remove low voltage speaker cabling.
3. Re-install new low voltage speaker cabling to the new lighting standard location as noted on the architectural drawings.
4. Re-install speaker assembly or provide new components on new lighting pole location.
5. Aim, calibrate, tune, test for optimal performance to areas of coverage.

6.

1.4 PROJECT CONDITIONS

- A. Verify all conditions on the job site applicable to this work. Notify Owner/Owner's Representative in writing of discrepancies, conflicts, or omissions within three (3) days of discovery.

PART 2 - PRODUCTS

2.1 GENERAL

- A. All cabling, connectors, termination panels and distribution methods shall be new and for use in the existing bowl sound system.

PART 3 - EXECUTION

3.1 GENERAL

- A. Take care to prevent scratches, dents, chips, etc.
- B. Mount equipment and enclosures plumb and square. Permanently placed equipment to be firmly and safely held in place. Design equipment supports to support loads imposed with a safety factor of at least three. Seismic bracing shall be placed on appropriate equipment where local codes require such installation.
- C. Cover edges of cable pass-through holes in chassis, racks, boxes, etc., with rubber grommets or Brady GRNY nylon grommets.
- D. Adhere to all local and national electrical codes and standards.
- E. Cable Labeling
 - 1. Cables and wiring to be logical, legible, and permanently labeled for easy identification. Labels on cables to match existing conditions.

3.2 TESTS AND ADJUSTMENTS

- A. Verify the following before beginning actual tests and adjustments on the system:
 - 1. Electronic devices are properly grounded.
 - 2. Powered devices have AC power from the proper circuit and hot, neutral, and ground conductors are connected correctly.
 - 3. Insulation and shrink tubing are present where required.
 - 4. Dust, debris, solder splatter, etc. are removed.
 - 5. Cable is dressed, routed, and labeled; connections are consistent regarding polarity.

3.3 INSTALLATION

- A. Installation shall include all required and operationally necessary low voltage speaker cabling for the new speaker location.
- B. Cable shall carry appropriate fire rating (e.g. CMR, CMP, OFNR, OFNP, etc.) on jacket of cable.
- C. Do not damage any signal cabling that may be co-located with this new cabling. In the event of damage, bring damage to the attention of the owner and propose acceptable repairs.

3.4 TESTING AND COMMISSIONING

- A. The Contractor shall be responsible for testing and commissioning the installation in accordance with all system and manufacturer recommendations.
- B. Testing shall be comprehensive and sufficient to demonstrate compliance with each requirement.
- C. Final tests shall be conducted in the presence of the Contracting Officer or Owner.

END OF SECTION 27 41 16.1

SECTION 28 05 00 – COMMON WORK RESULTS FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 SUMMARY

- A. See individual related documents for summary of work for each section.
- B. Work will consist of providing and installing prescribed systems and equipment, in accordance with the Owner's directives and needs. Contractor will design, install, and configure systems to provide the exact function described herein, when specified, and will be held to the operational criteria. Contractor will be responsible for providing and installing a complete and fully operational system, with the intended features and capabilities, whether or not all required parts, components, systems or accessories are specified in the construction documents. Contractor will provide all required parts, components, systems, materials, accessories, and programming needed for a complete and working system, without additional cost to Owner.
- C. Although such work is not specifically indicated, provide, and install supplementary or miscellaneous items, appurtenances, and devices incidental to, or necessary for, a sound, secure and complete installation.

1.2 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including all General and Supplementary Conditions and Division 1 Specification sections, will apply to this section and will be considered as forming an integral part of this Work. These documents are referred to as the Project General Conditions in the remainder of these Specifications. Where the Project General Conditions conflict with the requirements defined herein, the more stringent of the requirements and the Project General Conditions will prevail.
- B. This Specification Section incorporates general requirements for the following security sections.
 - 1. 28 05 13 Conductors and Cables for Electronic Security

1.3 RELATED WORK NOT IN THIS SECTION

- A. General and specific provisions of these Specifications apply to the work specified in this Section, as well as:
 - 1. Mockups
 - 2. Division 07 Firestopping
 - 3. Division 08 Door Hardware
 - 4. Division 26 Electrical
 - 5. Division 27 Structured Cabling System

1.4 DEFINITIONS

- A. Owner's Representative: The representative or representatives appointed by the Owner responsible for project construction supervision.
- B. Provide: To purchase, deliver to site and furnish all labor and material as necessary for a complete and operational system as specified herein.
- C. Contractor: The Party contracted by the Owner or their designated representative to Provide Work specified herein.
- D. Contract Documents: Documents used to specify the Work and govern the work of Contractor in their entirety or in part.
- E. Work: The entire completed construction of the individual parts of the project as specified herein.
- F. Local Authority Having Jurisdiction: The local governmental entity responsible for adopting and enforcing all code requirements at the location Work is being performed.
- G. Project General Conditions: Include all relevant contractual requirements for the Project to include Division 1 General Conditions as well as Owner-provided and established contractual provisions.
- H. Security Subsystem Specifications: Those specifications that apply to security subsystems for which these General Security Requirements apply.
- I. The following are definitions utilized within this specification section:
 - 1. (ACS) Access Control System
 - 2. (VMS) Video Management System
 - 3. (GUI) Graphical User Interface
 - 4. (IP) Internet Protocol
 - 5. (KVM) Keyboard Video Mouse
 - 6. (UI) User Interface

1.5 SOFTWARE AND NETWORK

- A. Custom Software Overview:
 - 1. Integration of the Division 28 sections, including programming and development of any custom software that may be required of this section, is the responsibility of the Contractor(s). It is the responsibility of the Contractor(s) to work with the Owner and manufacturer(s) to develop these integrations. When custom modules are required, it will be the responsibility of the Contractor(s) to coordinate with manufacturer(s) for APIs and SDKs in order to have the programs written.
 - a. Custom software programming must be contracted to the manufacturer to write; however, the expense of the development will be the responsibility of this section.
 - b. Any custom software developed for this project shall be maintained for changes to all systems integrated for a minimum of five years after completion of the project.

1.6 REFERENCES

- A. American National Standards Institute (ANSI)
- B. Electronic Industry Association (EIA)
- C. National Electric Code (NEC)
- D. Telecommunications Industry Association (TIA)
- E. National Electrical Manufacturer's Association (NEMA)
- F. Underwriters Laboratories (UL)
- G. National Fire Protection Association (NFPA)
- H. Federal Communications Commission (FCC)
- I. Institute of Electrical and Electronics Engineers (IEEE)
- J. Occupational and Safety Health Administration (OSHA)
- K. Open Network Video Interface (ONVIF)

1.7 APPLICABLE CODES AND STANDARDS

- A. The Contractor will ensure that all Work provided under this section will meet the minimum requirements of all applicable codes and standards, as determined by the LAHJ.
- B. Where the requirements of this section exceed the minimum requirements of the LAHJ, this section will govern. Where codes conflict with the Contract Documents, codes will govern. Where any applicable codes and standards conflict between themselves, the more stringent will apply.
- C. Nothing in this section will relieve Contractor from the responsibility for compliance with all applicable codes, standards, or specifications which are generally recognized to be applicable to the Work specified herein.
- D. Contractor will make application for, and obtain, any and all permits required by federal, state, county, city or other LAHJ over the work. In the event inspections are required, it will be the responsibility of Contractor to schedule and ensure the completion of said inspections and to ensure that all necessary certificates are issued, obtained, and delivered to the Owner.
- E. Within this Section and the Security Subsystem Specifications, reference is made to United States-based standards, codes, and legislation. For projects outside the United States, the corresponding local codes, standards, and legislation will apply, except where local requirements are less stringent than those proscribed within the referenced United States requirements. In these cases, the referenced United States requirements will apply.

1.8 SUBMITTALS

- A. General:

1. Coordination is required with the Contractor for complete shop drawings and submittal packages.
2. Provide simultaneously the following for approval thirty (30) days after issuance of notice to proceed and prior to commencement of work:
 - a. Complete schedule of submittals.
 - b. Chronological schedule of work in bar chart form.
3. Submittal format:
 - a. Provide a unique control number in consecutive order.
 - b. Provide a complete table of contents with the following information:
 - 1) Project title and number.
 - 2) Submittal number.
 - a) In the case of a re-submittal, use the original submittal number immediately followed by the suffix "R" immediately followed by a unique number and be numbered in consecutive order.
 - c. Date of submission.
 - d. Referenced addendum or change order number as applicable.
 - e. Referenced specification Section, Part, Article, Paragraph, and page number or drawing reference as applicable:
 - 1) Index by the data in specification order, manufacturer, and model or part number unless specified otherwise herein.
 - f. Each submission page stamped with Contractor's certification stamp, initialed, or signed certifying:
 - 1) Review, approval, and acceptance of submission.
 - 2) Certification of product compliance to specification.
 - 3) Verification products may be incorporated within the work.
 - g. Arrange product data list in specification order when applicable followed by unspecified product arrange by manufacturer and model or part number. Follow list by manufacturer's data sheets, arranged in the same order. Where a data sheet shows more than one product, indicate the model being proposed with an arrow or other appropriate symbol.
 - h. Drawings executed at an appropriate scale, but not smaller than 1/8" = 1'-0". Provide one (1) reproducible and two (2) bound prints of which the processed reproducible will be returned to Contractor, additional prints will not be reviewed or returned.
 - i. Submittal documents shall be computer generated. Free-hand sketches or reproductions of Contract Documents will not be acceptable, and Contractor will be deemed nonresponsive.

B. Samples as required within these specifications:

1. Provide cable samples of all cables specified in this division:
 - a. Each cable sample will have the rating as required by the NEC printed on the jacket by the manufacturer:
 - 1) Identify each sample with the specification section it is being submitted for.
2. Provide a letter from the manufacturer with estimated lead time for each type of cable.

C. Prefabrication as required within these specifications:

1. Prefabrication submittals will be submitted in English in addition to the local language. Submittals not translated to English will be rejected without review.

2. Prefabrication submittals will completely demonstrate the Contractor's understanding and interpretation of the systems, equipment, devices, and components being installed. Prefabrication submittals will consist of shop drawings and product data as defined herein. Submittals will clearly show materials, dimensions, operational features, durability, technical limitations and requirements, and all other information required for a complete and thorough review.
3. Acceptance of prefabrication submittals by the Owner's Representative will not relieve Contractor from any responsibility to Provide Work as defined in the Contract Documents. No portion of the Work will commence until the Owner's Representative has approved the prefabrication submittals in writing.
4. All prefabrication submittals will be submitted by Contractor in their complete form. Partial submittals will not be considered.

D. Action Submittal:

1. This submittal is intended to be used when a substitution is being requested.
2. Product Data:
 - a. Provide a list of, and manufacturer's data sheets on, product(s) to be incorporated within the work:
 - 1) Manufacturer's product technical datasheet for each product in sufficient detail to facilitate proper evaluation to the product's suitability for incorporation within the work. Where multiple products are shown on the same datasheet, the product intended to be used shall be identified in a manner that can be photocopied in black and white.
 - 2) Manufacturer's wiring diagram for electrically actuated units in sufficient detail to facilitate proper evaluation to the products suitability for incorporation within the work.
 - 3) Organize the data sheets in the order of the specification.
3. Comparison Matrix:
 - a. Provide a Matrix showing the features of the specified product in one column with the next column depicting how the proposed item's features compared.
 - b. Highlight any item that does not exceed the specification or feature of the specified device.
 - c. Provide documentation showing the device being substituted is on the approved devices list:
 - 1) If generic ONVIF driver is used the Contractor will show that the substituted product will have the same quality and features as the native driver for the originally specified product.
4. Shop Drawings:
 - a. See below.
5. Samples, if required by Owner or Architect.

E. Informative Submittal:

1. This submittal is intended to be used when using specified equipment.
2. Product Data:
 - a. Provide a list of, and the manufacturer's data sheets on, product to be incorporated within the work:
 - 1) Manufacturer's product technical datasheet for each product in sufficient detail to facilitate proper evaluation to the products suitability for

incorporation within the work. Where multiple products are shown on the same datasheet the product intended to be used shall be identified in a manner that can be photocopied in black and white.

- 2) Manufacturer's wiring diagram for electrically actuated units in sufficient detail to facilitate proper evaluation to the products suitability for incorporation within the work.
 - 3) Organize the data sheets in the order of the specification.
3. Shop Drawings:
 - a. See below.
 4. Samples if required by owner or architect.

F. Shop Drawings:

1. Shop Drawings will be computer generated in AutoCAD® Revit. Coordinate version with Owner's Representative. Drawings will be precisely scaled. Free-hand sketches or reproductions of Contract Documents will not be acceptable, and Contractor will be deemed nonresponsive.
2. PDF prints will be produced of all sheets and organized following the architectural numbering format.
3. Coordinate with the Owner's Representative to obtain architectural model/backgrounds in electronic or hardcopy format for use in the Shop Drawings.
4. Shop Drawings will consist, at a minimum, of the following:
 - a. Floor plan drawings indicating the location of all security devices as well as all wire runs and designations.
 - b. Plans, elevations, and details indicating dimensions, gauges, reinforcement, anchorage, and other installation details for each device as required.
 - c. System point-to-point diagram indicating the inter-relationship of all security system peripheral devices, control panels, software/monitoring workstations, and other components as necessary for a complete and operational system.
 - d. Typical wiring diagrams for each system peripheral device.
 - e. Specific wiring diagrams for each system control panel, power supply, video recorder or other device or equipment that controls or communicates with multiple peripheral devices.
 - f. Fabrication shop drawings for all custom equipment.
 - g. Installation: Special details depicting methods and means specific to each product, assembly and each product manufacturer's recommended installation methods and means.
 - h. Equipment: Location of equipment, with dimensions; wire routing and cabling within housings; AC power outlet and terminal strip locations. This will include equipment closet layouts, power inserters, camera power supplies etc.
 - i. Camera mounting details for each camera position. Each mounting detail will contain sufficient scaled detail to indicate the entire coverage area and attachments.
 - j. Control software screens. Provide color printouts of screen layout for camera, floor layouts, and controls. This requirement is to be coordinated with the GUI development process.
 - k. Fabricated plates and panels: Provide complete drawings on custom fabricated plates or panels. Drawings to include dimensioned locations of components, component types, engraving information, plate material and color, and bill of material.

- l. Labeling: Representative equipment and cabling labeling scheme. Include font sizes and styles, explanation of scheme, and descriptor and designator schedule.
- m. Any other pertinent data generated which is necessary to provide the Work.
- n. Seek the services of a state licensed structural engineer to stamp and approve mounting details of cameras mounted on any location requiring a foundation, dedicated poles (such as outside locations), or where the objects are mounted over seating areas.
- o. Copying contract documents and returning them as shop drawings will be considered as nonresponsive.

G. Record Documents:

- 1. Submit four (4) bound originals of the following Project Record Manual information after substantial completion and prior to final inspection:
 - a. Product Data: Product actually incorporated within the Work:
 - 1) Manufacturer's data for each type of product conforming to the scheme specified herein.
 - 2) Include manufacturer's serial numbers within the list of products.
 - 3) All product data for the Project will be tabulated into a comprehensive list of equipment to be provided for the Project, including quantities, manufacturer names, model numbers, description, and any applicable options. The product data submittal will be of sufficient detail that the Owner's Representative may readily identify the equipment and materials proposed.
 - b. Provide all product data in hard copy organized in three (3) ring binders as well as three (3) in electronic formats on CD or USB thumb drive. Bind Project Record Manual in titled three ring D-style binders sized for 150-percent of the material in general conditions sections described previously as part of this specification. Maximum size: three-inch ring. Use multiple volumes if necessary:
 - 1) Product data will consist, at a minimum, of the following:
 - a) Product data sheets for each piece of equipment included in the project identifying the following:
 - (1) Materials and Fabrication.
 - (2) Tolerance
 - (3) Power and environmental / HVAC requirements.
 - (4) Special criteria related to particular systems and components.
 - (5) Specifically, and clearly, mark items submitted where multiple items and options occur on a sheet.
 - c. Identify all Parts and Components by name and manufacturer's number:
 - 1) Manufacturers' brochures for each of the system components included. Contractor will submit original brochures; copies will not be acceptable. Where information is in color, all copies will be provided in color.
 - 2) Schedules will independently identify each piece of equipment, component, and device provided for the project; including project name/number reference, product name and number, installation location, and conductor/cable identifications that devices are connected to.
 - d. Reference both manufacturer and construction document identification.
 - e. For information submitted in a schedule, include information independently in an organized and consistent format.
 - f. Provide programming point information within the schedules:

- 1) At the request of the Owner's Representative and as identified in Security Subsystem Specifications, submit color samples for specific pieces of equipment.
- 2) Where test data is required by the Security Subsystem Specifications or Project General Conditions, all tests must be specific to products supplied specific for this project.
- 3) Certificates and Testing Information:
 - a) Provide a manufacturer's certificate certifying that Products meet or exceed specified requirements.
 - b) Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by Product testing agency.
- 4) The Owner's Representative will have the right to request additional information as required for a proper review of the submittal information.
- 5) For custom circuits or modifications, a description of the purpose, capabilities, and operation of each item.
- 6) Manufacturer's wiring diagram for each type of product actually incorporated.
- 7) Manufacturer's maintenance and care instructions.
- g. Record Drawings: Final rendition of submission depicting what is actually incorporated within the Work.
- h. Test Reports: Recorded findings of Contractor's Commissioning.
- i. System Operation and Instructions: Prepare a complete and typical procedure for the operation of the equipment as a system, organized by subsystem or activity.
 - 1) This procedure should describe the operation of system capabilities.
 - 2) Assume the intended reader of the manual to be technically inexperienced and unfamiliar with this facility.
- j. Maintenance Instructions: Maintenance phone number(s) and hours, maintenance schedule, description of products recommended or provided for maintenance purposes, and instructions for the proper use of these products.
- k. Any other pertinent data generated during the Project or required for future service.
- l. Segregate documents within the three separate bindings containing data relevant to operational, maintenance and warranty issues. Appropriately duplicate data within the separate bindings when it will reasonably clarify procedures, e.g., operational data in maintenance binding.
- m. Provide the same layout in PDF form within the electronic storage media listed above. The bindings would be electronic folders. All PDF files must be flattened so that any notes or comments are not able to be moved accidentally when selected.

1.9 CLOSEOUT SUBMITTAL

- A. Copy of Maintenance contracts.
- B. Operation and Maintenance Manual and Schedule.
- C. Bonds.
- D. Warranty Documentation.
- E. Record Documentation.

F. Copy of software.

1.10 MAINTENANCE MATERIAL SUBMITTAL

A. Copy of Maintenance contracts.

B. Operation and Maintenance Manual and Schedule.

1.11 RESUBMITTAL

A. Resubmission Requirements:

1. Make any requested corrections or change in submittals required. Resubmit for review until no exceptions are taken.

a. Indicate any changes that have been made other than those requested. Identify each change or correction with the appropriate delta identifier and cloud the change.

B. Replace, at no expense to Owner, product damaged during storage, handling, or the course of construction.

1.12 SITE DOCUMENTATION

A. Contractor will maintain up-to-date record drawings on site for inspection by the Owner's Representative. Each change to the original approved submittal data and deviation from the Contract Documents will be indicated on the record drawings. Contractor will ensure that the record drawings are protected against soiling, tears, or other damage or defacement. At the conclusion of the Project the Contractor will incorporate all changes on the record drawings into electronic format and will submit the completed set as As-Built documentation as defined in the section titled "Record Documentation" herein.

1.13 QUALITY ASSURANCE

A. Contractor will have a minimum of five (5) years of experience in the design, installation, and commissioning of projects of a similar nature. Contractor will provide evidence of completion of at least two (2) projects of a similar size which have been in operation a minimum of one (1) year.

B. The Contractor will be equipped to support the Project from a local field office. The office will offer twenty-four (24) hour emergency service with a maximum response time of four (4) hours. The Contractor will have an in-depth understanding of all local codes and requirements for the area that the Project is located in.

C. Contractor will be an authorized dealer of each of the major access control, intrusion detection, and video product lines specified in the associated specification sections. Contractor will provide written proof of dealership status along with bid.

D. In addition to experience requirements stated, Owner's Representative reserves the right to require:

1. Site visit to at least two (2) facilities where installations have occurred and are in use.
2. Owner approval.
3. Surety bond backed warranty.
4. Proof that Contractor or bidder is familiar with installations to be made.
5. Background information on prior installations, including the following information:
 - a. Owner, Architect, and Contractor contacts
 - b. Names
 - c. Phone numbers
 - d. Addresses

1.14 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle products in accordance with manufacturer's recommendations, so as to minimize the opportunity for damage, deterioration, or loss.
- B. The Owner assumes no liability or responsibility for loss by theft, vandalism, or burglary of material or equipment stored on site.
- C. Deliver all equipment and material to the site in the manufacturer's original sealed packaging. Packaging is to provide factory identification of items contained within the packaging and protection until the items or materials are installed. Inspect all equipment and material upon delivery to ensure that they are free from damage and in accordance with the Contract Documents.
- D. Store products in their original packaging until installation. Protect from spoilage, moisture, all weather-related conditions, corrosion, breakage, or other damaging elements. Store in conditions that will ensure all required manufacturer's environmental criteria are maintained until use of material or products.
- E. Acceptance of the products constitutes the Contractor's acknowledgment that products or materials are satisfactory for use.

1.15 TECHNICAL SYSTEMS SOFTWARE LICENSE

- A. Introduction:
 1. All proprietary software provided for the Technical Systems will be subject to this software license agreement between the Contractor and the Owner as an essential element of the system as defined in the system specification and associated documents, drawings, and agreement.
 2. Contractor will agree that 3rd party (e.g., manufacturer's) proprietary software provided with the system will be subject to this agreement.
 3. Contractor and Owner agree this software license is deemed to be part of, and subject to, the terms of the Agreement applicable to both parties; and will supersede any standard manufacturer or Contractor's standard license agreement.
 4. Proprietary software will be defined to include, but not be limited to, device and system specific software and firmware designed to run on conventional computer based operating platforms as well as all micro-processor-based hardware used to program, setup, or operate the system or its components.

5. For sake of this agreement, MS Windows® will not be considered “proprietary” software, unless a non-public version of Windows® or any of its components are critical to the operation of the system in which case it will be deemed proprietary.

B. License Grant and Ownership:

1. Contractor hereby grants to Owner a perpetual, non-exclusive, site license to all software for Customer’s use in connection with the establishment, use, maintenance, and modification of the system implemented by Contractor. Software will mean executable object code of software programs and the patches, scripts, modifications, enhancements, designs, concepts, or other materials that constitute the software programs necessary for the proper function and operation of the system as delivered by the Contractor and accepted by the Owner.
2. Except as expressly set forth in this paragraph, the Contractor, at all times, will own all intellectual property rights in the software. Any, and all, licenses, product warranties, or service contracts provided by third parties in connection with any software, hardware, or other software or services provided in the system will be delivered to Owner for the sole benefit of Owner.
3. Owner may supply to Contractor or allow the Contractor to use certain proprietary information, including service marks, logos, graphics, software, documents, and business information and plans that have been authored or pre-owned by Contractor. All such intellectual property will remain the exclusive property of Owner and will not be used by Contractor for any purposes other than those associated with delivery of the system.
4. Contractor shall provide all licenses or modules to make the system fully functional.

C. Copies, Modification, and Use

1. Source code will be available to Owner for a period of not less than ten (10) years.
2. Owner may make copies of the software for archival purposes and as required for modifications to the system. All copies and distribution of the software will remain within the direct control of Owner and its representatives.
3. Owner may make modifications to the source code version of the software, if, and only if, the results of all such modifications are applied solely to the system. In no way does this Software License confer any right in Owner to license, sublicense, sell, or otherwise authorize the use of the software, whether in executable form, source code or otherwise, by any third parties.
4. All express or implied warranties relating to the software will be deemed null and void in case of any modification to the software made by any party other than Contractor.
5. During the life of the system (defined as a period of not less than ten (10) years and not more than fifteen (15) years), the Contractor will provide software updates in accordance with all necessary support requirements to maintain the system. This will include a commitment to provide appropriate patches, fixes, and interface updates as necessary to maintain the operability and security of the system at a level commensurate with the original system:
 - a. In the event computer and/or processor hardware refinements and updates are necessary to support software updates five (5) years after substantial completion, said hardware will be provided to Owner at negotiated terms between the Contractor and the Owner.

- b. Labor will be in accordance with change order rates of the original contract, as adjusted for inflation in accordance with conditions and limitations of the general Contractor or U.S. Bureau of Labor Statistics' Consumer Price Index (CPI).
- 6. All hardware supplied will support software updates for a period of not less than five (5) years following substantial completion.

PART 2 - PRODUCTS

2.1 MATERIALS, EQUIPMENT, AND DEVICES

- A. Herein, and within the related Sections of Work identified herein, performance requirements and other specifications related to equipment to be provided as part of this Project are listed. Contractor will refer to the identified product or a known equal for acceptable manufacturers of equipment.
- B. "Or approved equal" basis:
 - 1. The products are listed, or are on, an approved equal basis. The known equals to the products specified are listed in each section.
 - 2. Substitute products not listed in this section may be submitted for approval during the question-and-answer period of the bidding phase. See substitution requirements in this section.
 - 3. Substitution approvals will be based on the complete functionality, integration, operation, and user interface as it compares to the specified product(s).
 - 4. Products not approved prior to the bidding phase will be deemed non-responsive.
- C. Provide products of types, materials, sizes, capacities, and electrical characteristics as indicated. Products will meet the following requirements:
 - 1. Design and construction will be as recommended by manufacturer and as required for installation.
 - 2. Provide manufacture's standard product as indicated by published product information.
- D. Where special power treatment is required, such as filtering or spike elimination that may be required for proper operation of the system, Contractor will provide as part of the system.
- E. Acceptable product will be as indicated in each section. All products will meet the following requirements:
 - 1. Manufacturer will have a minimum of five (5) years' experience producing the specific types of products to be used.
 - 2. All like equipment, components, and devices will be by one (1) manufacturer where possible unless the major component manufacturer does not provide a specific device, (example; 180° or 360° camera).
 - 3. Where different manufacturers must be provided, all products will be totally compatible.
- F. Where specific model numbers are not provided for a specific manufacturer, information is provided to indicate the level of quality to be met by other approved manufacturers:

1. Systems provided are to be of factory designed, independently tested, published components; coordinated, designed, and interfaced to perform as one unitized system.
2. Include all required wire, cable, fittings, and miscellaneous accessories.
3. Unless specifically noted, components and system logic will be provided through microprocessors and pre-designed cards.
4. Provide low voltage components and devices where possible.
5. Provide only systems designed for continuous 24-hour, 7 days a week operation.

2.2 FABRICATION

A. Electronic Equipment and Components:

1. To the greatest extent possible, provide standard equipment and components, designed to operate as complete coordinated systems capable of interfacing with all related systems required for the work.
2. Where custom fabricated and integrated systems or components, such as vehicular pedestals, are required or indicated, provide compatible components and complete system to attain performance and operational capabilities intended.

B. Factory finish all components:

1. Where selected color is not specifically identified in contract documents, submit sample materials finished with actual colors and textures. Contractor will submit for approval the full range of colors and textures for approval by the Owner's Representative.
2. See Security Subsystem Sections for specific finishes.

C. Provide factory-fabricated wire of the size, rating, material, and type as indicated for each service. Where not indicated, provide proper selection as required to comply with installation requirements and with local standards adopted by the LAHJ.

PART 3 - EXECUTION

3.1 EXAMINATION AND SITE PREPARATION

- A. Prior to bidding, examine the project (if under construction) for nature, scope, and intent of all work to be performed and notify Owner's Representative in writing of any conditions determined to be detrimental to proper completion of the Work.
- B. Submission of a bid/proposal will constitute that examination has been made, and any difficulties foreseen identified and noted. Any claims for labor, work, materials, or equipment for difficulties encountered which should have been foreseen, will not be recognized; and will be taken care of by the Contractor at no additional cost to the Owner.
- C. Do not proceed with Work until all unsatisfactory conditions have been corrected.
- D. Prior to installation of systems components and devices, verify all required preparations have properly occurred and those substrates are acceptable for installation:
 1. Verify all rough-ins and field dimensions.

2. Report any discrepancies, unsatisfactory conditions and prevailing conditions that will adversely affect satisfactory execution of work for systems included under this specification section.
 - a. Do not proceed with work until unsatisfactory conditions have been corrected.
 - b. Owner's Representative reserves the right to review proposed methods of direction, reject proposed methods and have the installation done in a satisfactory method at the Contractor's cost.
 - c. Installation constitutes acceptance of responsibility for performance.

3.2 INSTALLATION

- A. Install all system components in accordance with manufacturer's written instructions, in compliance with all applicable codes and standards, and in accordance with recognized industry practices.
- B. Ensure that all equipment is properly installed to avoid mechanical stresses, twisting or misalignment of equipment that may be exerted by clamps, supports and cabling.
- C. Thoroughly clean all areas and spaces where work is performed or used as access to work. Completely remove all paints, mortars, oils, or other residues and otherwise restore all surfaces to their original condition. Upon completion of the work, remove refuse and rubbish from, and about, areas of work. Repair any damage caused to the premises by the installation of systems at no cost to the Owner.
- D. Grounding:
 1. Provide equipment grounding connections for all systems as indicated herein and in the Contract Documents. Ensure and demonstrate that resistance to solid earth for signals is less than or equal to three (3) ohms.
 2. In no event will the AC neutral conductor, either in a power panel or in receptacle outlets, be used for a reference ground.
 3. Ground all equipment in accordance with the manufacturers' requirements. Contractor will be responsible for diagnosis and correction of all problems related to improper grounding, including that which causes damage to equipment.
- E. All equipment will be installed square and plumb. Ensure that all equipment is clean and free of paint and other foreign materials.
- F. All installation practices will adhere to all applicable regulations, codes, ordinances, and standards as required by the LAHJ.
- G. Clearly identify points of connection for wiring from building power system to work of this section, and requirements for connection to materials and equipment supplied under other Sections of Work.
- H. Provide all transformers, relays and other accessories as required for a complete and operational system as defined herein and as required by the Security Subsystem Specifications. Furnish and install all fastenings, plates and other incidental items required for complete and operational installation.

- I. Labeling: All cables will be permanently labeled at their point of termination with mechanically produced labels. Label text will match that indicated on the record drawings.
- J. Contractor will ensure that all equipment installations and mounting are in strict accordance with requirements for applicable seismic classification.
- K. Prior to installation, ensure that each installation area meets the following conditions:
 - 1. All wet work is completed.
 - 2. Area is dust free.
 - 3. All work regarding painting is completed
- L. Anchor components securely in place, plumb, level, and accurately aligned. Provide separators and isolators to prevent corrosion and electrolytic deterioration.
- M. Protect installed equipment from damage and spoilage.
- N. Touch up minor scratches and abrasions with manufacturer's touch-up paint, as necessary.
- O. Double-sided foam tape will not be used to secure any terminal boxes, relay bases, or circuit boards, etc.
- P. All device mounting will be of a permanent nature.
- Q. During installation, care will be exercised at all times to protect Owner property.

3.3 COORDINATION

- A. Coordinate all Work to be performed with the General Contractor as necessary for smooth and expedient completion. Ensure critical path to completion where Work specified herein is dependent upon completion of Work by other trades or by Owner. Coordinate with other trades to avoid conflicts where Work in a certain area requires exclusive use of the area for the duration of the Work.
- B. Coordinate arrangement and quantity of security-related assemblies with ceiling space configuration and with other components occupying ceiling space, including structural members, ductwork, electrical raceways, lighting fixtures and other items.
- C. Furnish any inserts required for building into concrete, masonry, and other work to support and attach work of this section. Furnish in ample time to comply with schedule of work into which inserts are built.

3.4 SYSTEM STARTUP

- A. Subsequent to installation, clean each system component of dirt, dust, oils, and other residues incurred from project activities and prepare the system for activation by following each manufacturer's recommended procedures for adjustment, alignment, and synchronization.
- B. Program the system in accordance with the Owner's instructions and with the requirements of this Section.

3.5 SYSTEM TEST AND VERIFICATIONS

- A. Contractor will coordinate with Owner's Representative for final tests and inspections in the presence of the Owner and other representatives as the Owner's Representative deems appropriate.
- B. Contractor will develop a Final Test and Acceptance (FTAA) Plan. The plan will include the following components:
 - 1. Contractor will produce an item-by-item completion matrix indicating completion or incompleteness for each item included in this Section and any additional direction, addenda, or bulletins issued by the Owner's Representative. For each incomplete item, indicate the date of completion.
 - 2. The FTAA Plan will incorporate Owner-provided startup checklists and will follow the Owner standards.
 - 3. Contractor will perform a complete test of the systems installed to include visual inspections and operational tests of all components. Contractor will submit a report of the test to include system reports produced by the system software for each of the components tested and visual inspection reports for each component.
 - 4. FTAA Plan will identify each component of the system, intent of test, method or methods of test, and expected results. Each component listed in the plan will include space for test part signatures, brief comments, time of test, and pass/fail check boxes.
 - 5. The FTAA plan will be submitted to the Owner's Representative thirty (30) days prior to the scheduled final test.
- C. Contractor will ensure that the system is on and fully operational prior to the start of the test. Contractor will provide a minimum of two (2) employees to conduct the test, one of whom will operate software and other head-end equipment, while the other accompanies the Owner's Representative.
- D. Owner's Representative will observe a complete and thorough demonstration of the systems for compliance and issue a final report. Once all items in the report deemed non-operational or non-compliant with the Specification have been corrected and verified by the Owner's Representative the systems will be deemed acceptable.
- E. In the event the need for further adjustment or work becomes evident during testing, the Contractor is to continue his work until the System is acceptable at no addition to the contract price. If approval is delayed because of defective or failed equipment or installation to meet the requirements of these specifications and any extension of the observation and testing period is required, the Contractor shall pay for additional time and expenses of the Owner at the standard rate in effect at that time.
- F. Provide manufacturer's supervision of final testing of each system.
- G. Each system must test free from interference, opens, grounds, and short circuits.
- H. Following completion of the Final Test, the system will undergo a thirty (30) day Operational Demonstration Test (ODT) or Burn-In period. This operational demonstration period will start when all specified systems and equipment have been installed and "Substantial Completion" is reached, with no more than a moderate number of punch list items remaining. During this period, the system will be operated under a normal facility traffic load for no less than thirty

(30) days. If any item or system fails during the ODT, the 30-day burn-in period will be suspended for that item until repaired or replaced. Once repaired or replaced, the burn-in period will recommence. Final system acceptance of the entire project will be withheld until after successful completion of this operational demonstration period for all systems and components.

3.6 RECORD DOCUMENTATION

- A. Subsequent to completion, the Contractor will submit record documentation for the Project. Record documentation will consist of operation & maintenance manuals, As-Built drawings, and a document deviation log. All record documentation will be submitted in digital and hard copy format. Record documentation will meet the following requirements:
1. Digital format: Provide computerized disks, USB drive or compact disks as desired by Owner.
 2. Hard Copy: Provide a single copy, hard cover three ring binder for review purposes.
 3. Provide three (3) final hard copies each in hard covered three ring binder.
- B. Operations & Maintenance manuals will meet the following requirements:
1. Divide into sections for each system, clearly demarcated by a divider titled with the system:
 - a. Provide each divider with a tab.
 - b. Title each divider with machine print, no smaller than 12-point, to match tabs.
 2. Each section will be sub-divided into consistent sub-sections of information:
 - a. Provide each section with a table of contents.
 - b. Follow each table of contents with contact person information including their name, responsibility, phone number, and address.
 - c. Provide a section with a list of equipment, devices and components included in the section.
 - d. Include in the list the manufacturer, parts number, and contact person to call for questions on each item.
 - e. Follow the list provided with technical information on each listed item, in the order of the list:
 - 1) Product data sheets which include but are not limited to pictures, descriptions, dimensions, electrical diagrams, circuit board layouts, etc.
 - 2) Product specifications including but not limited to power requirements, operational criteria, environmental requirements, optical descriptions, etc.
 - f. Provide information related to the operation of equipment, devices, and components:
 - 1) Information provided will be specific to the product models actually installed on the project.
 - 2) Provide information as presented during the training sessions for each system provided for the facility.
 - g. Provide complete information required for care and maintenance of all equipment, devices, and components installed on the project. Information will include, but is not limited to:
 - 1) Cleaning: Special procedures or use of special chemicals.

- 2) Maintaining: Maintenance schedules and tasks, application of products critical to proper operation, types of environmental conditions which need to be maintained or avoided.
- 3) Trouble Shooting: Instructions for how to proceed should a problem occur, method of determining the seriousness of the problem, repair instructions for minor problems.
- h. Provide other Project Specific Information:
 - 1) List of wires, color codes, description of type, tag identification reference.
 - 2) As-Built drawings.
- i. Provide Operations & Maintenance manuals in accordance with the Project General Conditions or as specified in this Section. Where there are conflicts between the Project General Conditions and this Section, provide in accordance with the stricter requirements between the Sections:
 - 1) Where not addressed in other Sections, provide per this specification Section.
 - 2) See Security Subsystem Specifications for any additional requirements.

C. As-Built drawings will meet the following requirements:

- 1. As-Built drawings will consist of all information indicated under the section herein entitled “Shop Drawings” but updated to include the actual conditions encountered during installation.
- 2. As-Built drawings will indicate all cable pathways, termination box location(s), and other information related to above-ceiling or concealed equipment locations.
- 3. Contractor will provide drawings showing all changes occurring related to documents provided on the project directly related to this section, and all Security Subsystem Specification sections.
- 4. Contractor will provide scaled drawings of the same formatted size as those originally issued as contract drawings.
- 5. Changes will be indicated with referenced graphics that are properly noted:
 - a. Clouding will be bold, but without interfering with or obscure documentation information.
 - b. Notes will be alphabetically or numerically referenced.
 - c. Notations will not interfere with other information on the documents.
- 6. Drawings will be completed in a digital format using AutoCAD® Software. Version of files provided to be determined by the Owner’s Representative at the time that submittal of the information is required.

D. The document deviation log will meet the following requirements:

- 1. Contractor will provide a tracking log of changes made to the project that occurred that were in deviation of construction documents, and will be included:
 - a. Notification date: Provide day that Owner’s Representative was notified that a deviation was required or requested.
 - b. Approval Date: Provide the day that approval was provided by the Owner’s Representative.
 - c. Reason that deviation was required or made.
- 2. Provide drawings and photographs of all custom details, and details originally in the contract drawings that were modified:

- a. Drawings to be submitted on 8 ½-inch x 11-inch sheets or larger.
- b. Provide photos that are 5-inch x 7-inch in size or larger. Photographs will be clear, focused, and taken with the proper light:
 - 1) All details will be clearly visible.
 - 2) All text will be legible.

3.7 ACCEPTANCE

- A. System Warranty will not start until Acceptance. Acceptance will be withheld until the following activities have been successfully completed:
 1. Acceptance of all submittals.
 2. Delivery of final documentation.
 3. Successful final test and inspection.
 4. Successful operational demonstration test.
 5. Successful training and demonstration, including operation of systems using the manuals.
- B. System Contractor will be present at the first use of the facility. The Contractor will be on site the day before the event in addition to the day of the event. The event will be decided by the operators as to which one the systems Contractor should attend.

3.8 WARRANTY

- A. In addition to all guarantees specified in the Project General Conditions and specific Warranty requirements stated in the Security Subsystem Specifications, furnish the following warranty:
 1. Period: The Contractor will guarantee all labor, workmanship, and materials for a period of one (1) year from the date of Final Acceptance. Should failure occur within the first year to the system, the Contractor will provide all labor and materials necessary to restore the system to the condition required for the final test and acceptance at no cost to the Owner.
 2. Tie-ins: During the Warranty period, additional components may be connected to the installed systems. New devices will be connected in the same manner as shown in the Contract Documents and the existence of the new connections will not void this guarantee. Where software is part of the system, new information will be entered in the database to extend operation of the system.
- B. Contractor shall respond to a request for assistance within four (4) hours of receipt and have the repair completed, or temporality repaired, to the satisfaction of the Owner within 24-hours during the warranty period at no additional cost to the Owner. After-hours service will be available within the four (4) hour window, whether or not the Owner elects to purchase a service contract from the Contractor.
- C. Contractor's guarantee will include all costs related to troubleshooting, repair, and replacement of defective Work, including costs of labor, transportation, materials, equipment, and other costs as necessary to restore the system to a complete and operational state:
 1. The Owner must not be without an operational system or component of the system should it require a return to the factory for repair or replacement. It will be the responsibility of the Contractor to replace the component during the 24-hour time period outlined above.

- D. Contractor will provide local service by factory trained personnel from an authorized dealer of the equipment manufacturer. Contractor will provide written proof from the equipment manufacturer that said Contractor is duly authorized to sell, service and maintain the specified products. The dealer will have available stock of the manufacturer's standard parts for the primary system components and devices. The dealer will provide sufficient parts in inventory or readily available such that repair will be completed in no more than 24-hours. The inventory of spare parts requirement is assuming availability of components through a dealer network and/or obtained from respective manufacturers within the required time frame.
- E. The Contractor will offer an "Optional Three (3) Year Maintenance after Warranty" and an "Optional Five (5) Year Maintenance after Warranty" package to the Owner containing price, terms, and conditions shown for each year. The Owner will inform the Contractor of the acceptance or rejection of the package prior to the end of the warranty period.
- F. Contractor will correct any software or firmware defects identified during the Warranty period without additional cost to the Owner.
- G. This warranty will be in addition to, and not a limitation, of other rights the Owner may have under the Contract Documents.
- H. Contractor will warrant that all Work furnished in this project will be of good quality, free from faults and defects, and in conformance with the Contract Documents.

END OF SECTION 28 05 00

SECTION 28 05 13
CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including all General and Supplementary Conditions and Division 1 Specification sections, shall apply to this section and shall be considered as forming an integral part of this Work. These documents are referred to as the Project General Conditions in the remainder of these Specifications.
- B. The Common Work Results for Electronic Security Section shall apply to Work specified in this Section. Where similar requirements headings are listed herein, they are to augment the requirements indicated within the Common Work Results for Electronic Security Section. Nothing herein shall be construed as relieving the Contractor from the requirements identified in the Common Work Results for Electronic Security Section.
- C. Not all cables shown within this section will be used on this project.
- D. The following sections are related and have interaction between them:
 - 1. 28 05 00 Common Work Results for Electronic Security
- E. Other related sections:
 - 1. Division 07 Firestopping
 - 2. Division 08 Door Hardware
 - 3. Division 26 Electrical
 - 4. Division 27 Structured Cabling System

1.2 DEFINITIONS

- A. AWG: American Wire Gauge

1.3 REFERENCES

- A. National Electrical Code (NEC)
- B. NFPA 70
- C. UL 294 and UL 1076 as required where applicable
- D. FCC Rules and Regulations
- E. Part 15 Class A or B as applicable
- F. Applicable Federal, State, and Local laws, regulations, and other codes
- G. CE mark, as and where applicable
- H. C-Tick mark, as and where applicable

1.4 SUMMARY OF WORK

- A. Work specified in this Section includes cables used for security systems.

1.5 SUBSTITUTION

- A. Refer to Section 28 05 00 Common Work Results for Electronic Security.

1.6 SUBMITTALS

- A. Refer to Section 28 05 00 Common Work Results for Electronic Security.

PART 2 - PRODUCTS

2.1 GENERAL

- A. “Or approved equal” basis
 1. The products are listed on an “approved equal” basis. The known equals to the products specified are listed in each section.
 2. Substitute products not listed in this section may be submitted for approval during the question-and-answer period of the bidding phase. See substitution requirements in this section.
 3. Substitution approvals will be based on the complete functionality, integration, operation, and user interface as it compares to the specified product(s).
 4. Products not approved prior to the bidding phase will be deemed non-responsive.
- B. Pathway shall follow structured cabling Division 27 standards.
- C. Provide Wet Rated Cable as required due to project raceways/pathways.

2.2 MISCELLANEOUS EQUIPMENT

- A. Demarcation Enclosure for Wet to Dry rated cabling
 1. Provide a Nema 3R rated enclosure with hinge, horizontally swinging lid, and cam lock.
 2. Size the enclosure as needed for the contents.
 3. Enclosure contents shall be:
 - a. Phoenix Perforated NS 35/7,5 DIN rail to support DIN rail mounted items.
 - b. Terminal Block and Accessories
 - 1) DIN rail mounted Phoenix universal screw terminal block model UT 2,5 BU (quantity as needed).
 - 2) DIN rail mounted Phoenix ground modular terminal block model UT 2,5 GN (quantity as needed).
 - 3) End clamp model CLIPFIX 35-5 (quantity as needed).
 - c. Zack marker strips model ZB 5 (quantity as needed).
 - d. Contractor shall label each terminal block to indicate its purpose and use.
 - e. Contractor shall provide quantities as needed to provide one wire per terminal.

2.3 CABLES AND WIRING

- A. 18 AWG, 6 Conductor Stranded Overall Shield (Type A)
 - 1. Provide Windy City Wire 442351 (Plenum)
 - 2. Known equals:
 - a. Superior Essex
 - b. Belden
 - c. Bertek
 - d. Commscope
 - e. General
 - 3. Wet Rated Cable
 - a. Windy City Wire 714410VNIQ
 - b. Approved equal.

- B. 18 AWG, 4 Conductor Stranded Unshielded (Type B)
 - 1. Provide Windy City Wire 442380 (Plenum)
 - 2. Known equals:
 - a. Superior Essex
 - b. Belden
 - c. Commscope
 - d. General
 - 3. Wet Rated Cable
 - a. Windy City Wire 727310VNIQ
 - b. Approved equal.

- C. 16 AWG, 2 Conductor Stranded Unshielded (Type C)
 - 1. Provide Windy City Wire 441360 (Plenum)
 - 2. Known equals:
 - a. Superior Essex
 - b. Belden
 - c. Commscope
 - d. General
 - 3. Wet Rated Cable
 - a. Windy City Wire 728110VNIQ
 - b. Approved equal.

- D. 18 AWG, 2 Conductor Stranded Shielded with drain (Type E)
 - 1. Provide Windy City Wire 442320 (Plenum)
 - 2. Known equals:
 - a. Superior Essex
 - b. Belden
 - c. Commscope
 - d. General
 - 3. Wet Rated Cable
 - a. Windy City Wire 714110VNIQ
 - b. Approved equal.

- E. Composite Access Controlled Door Cable (Type F)
 - 1. Provide Windy City Wire 4461230 (Plenum)
 - 2. Known equals:

- a. Superior Essex
- b. Belden
- c. Commscope
- d. General
- e. West Penn
- f. Honeywell
- 3. Wet Rated Cable
 - a. Windy City Wire 4461111WBT
 - b. Approved equal.
- F. Composite Copper Fiber (Type J)
 - 1. Coordinate provisioning of Composite Copper Fiber cable per Owner/Division 27 standards.
- G. Network Communication Cable (Type M)
 - 1. Coordinate provisioning of Category cable per Owner/Division 27 standards.

PART 3 - EXECUTION

3.1 LABELING

- A. Provide labeling in accordance with TIA/EIA 606-A Level 2 numbering and ID format.
- B. Mechanically print and install in accordance with manufacturer recommendations and drawing details.
- C. Labels shall be single line, all capital letters, and bold font. Select font size and color that can be easily read on the applicable device or cable during installation, inspection, and for service maintenance.
- D. Ensure all surfaces are clean prior to final placement of labeling products. Follow manufacturer recommendations for cleaning.
- E. Handwritten labels are unacceptable.
- F. Provide labeling as required for the following:
 - 1. Horizontal and Backbone cabling:
 - a. Locate the cable designator within 4-inches of the point of termination at the workstation end of the horizontal cable.
 - b. Locate the cable designator within 12-inches of the end of the cable jacket at the TR end of the horizontal cable.
 - c. Locate the cable designator within 12-inches of the end of the cable jacket for backbone terminations utilizing rack-mount patch panels or blocks.
 - d. Locate the cable designator within 12-inches of the end of the cable jacket for backbone terminations utilizing wall-mount patch panels or blocks.
 - e. Junction boxes, pull boxes, HCP's.
 - f. Termination patch panels and blocks.
 - g. Grounding and bonding equipment.
 - h. Equipment cabinets, racks, frames, and enclosures.

- i. Locate lamacoid labels on the front and rear of equipment cabinets at the top of the cabinet doors. For cabinets equipped with removable doors, one additional pair of labels shall be located on the inside top of the frame.
 - j. Locate lamacoid labels on the front and rear of equipment racks attached to the top horizontal cross-members.
 - k. Locate lamacoid labels on the top horizontal cross-member of wall-mount frames.
- G. Provide machine generated labels for each system associated with the Electronic Security System to include, but not limited to, the following:
 - 1. Conduit pathways including:
 - a. Junction boxes
 - b. Pull boxes
 - c. Horizontal connection points
 - d. Conduit
 - e. Cable tray
 - f. Grounding busbars
 - g. Voltage protection equipment
- H. Provide machine generated labels for each component associated with the Electronic Security System to include, but not limited to, the following:
 - 1. Access Control Panels
 - 2. Cameras
 - 3. Readers
 - 4. Door Contacts
 - 5. Termination blocks
 - 6. Patch panels
 - 7. Equipment cabinets, racks, frames, and enclosures
 - 8. Power distribution units, power strips
- I. Provide machine generated labels for each cable associated with the Electronic Security System to include, but not limited to, the following:
 - 1. Copper backbone cables
 - 2. Fiber optic backbone cables
 - 3. Horizontal premise cables
 - 4. Grounding and bonding conductors
- J. Provide lamacoid labels for specified equipment.
- K. Provide machine generated placards as specified for each technical enclosure.
- L. Provide labeling materials designed for a lifetime equal to the system, component or cable being identified.
- M. Provide labels on the face of wall mount equipment and on the wall adjacent to the equipment.

3.2 DELIVERY, STORAGE, AND HANDLING

- A. Refer to Section 28 05 00 Common Work Results for Electronic Security.

3.3 SYSTEM TEST AND VERIFICATION

- A. Refer to Section 28 05 00 Common Work Results for Electronic Security.

3.4 WARRANTY

- A. Refer to Section 28 05 00 Common Work Results for Electronic Security.

3.5 COORDINATION

- A. Coordinate custom SCS report requirements. Submit report templates to the Owner's Representative for review and acceptance.

END OF SECTION 28 05 13

SECTION 28 31 11 - DIGITAL, ADDRESSABLE FIRE DETECTION AND ALARM SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This section includes the design and provision of a new, complete, multiplex/addressable fire alarm system as described herein and on the Contract Drawings. The system shall include all wiring, raceways, pull boxes, terminal cabinets, outlet and mounting boxes, control equipment, alarm, and supervisory signal initiating devices, alarm notification appliances, and all other accessories and miscellaneous items required for a complete operating system even though each item is not specifically mentioned or described. The system layout on the drawings is generic.
- B. Extent of the Work: The system shall be installed in accordance with the drawings, specifications and referenced publications.
- C. Existing Fire Alarm Equipment: Existing fire alarm equipment shall be maintained fully operational until the new equipment has been tested and accepted by the Owner. As new equipment is installed, it shall be labeled "NOT IN SERVICE" until the new equipment is accepted. Once the new system is completed, tested, and accepted by the Owner it shall be placed in service and connected to a UL listed central station service. All new equipment shall have tags removed and the existing equipment shall be tagged "NOT IN SERVICE" until removed from the building.
- D. Equipment Removal: After acceptance of the new system by the Owner, all existing equipment not connected to the new system shall be removed and all damaged surfaces shall be restored. The material shall be removed from the site and disposed of by the Contractor.
- E. Repair Service/Replacement Parts: Repair services and replacement parts for the system shall be furnished under this contract and be available for a period of 10 years after the date of final acceptance of this work by the Owner. On-site service during the guarantee period shall be provided within 24 hours after notification. All repairs shall be completed within 48 hours after notification.
- F. Section Includes:
 - 1. Fire-alarm control unit (Existing - For Reference Only)
 - 2. Manual fire-alarm boxes
 - 3. System smoke detectors
 - 4. System Carbon Monoxide Detectors
 - 5. System Multi-Criteria detectors
 - 6. Nonsystem smoke detectors

7. Heat detectors
8. Notification appliances
9. Firefighters' two-way telephone communication service
10. Magnetic door holders
11. Amplifiers, pre-amplifiers, and tone generators
12. Remote annunciator
13. Addressable interface device
14. Digital alarm communicator transmitter
15. Device guards

1.3 REFERENCES AND REQUIREMENTS OF REGULATORY AGENCIES AND STANDARDS

- A. Codes and Standards: The fire alarm equipment and installation shall conform to the requirements of all applicable codes, rules, regulations and standards, including, but not limited to, the following:
 1. 2018 North Carolina State Building Code
 2. 2018 North Carolina Existing Building Code
 3. 2018 North Carolina Fire Prevention Code
 4. 2020 North Carolina State Electrical Code (NFPA 70 – 2020)
- B. NEMA ICS-6: Enclosures for Industrial Control and Systems
- C. NICET: National Institute for Certification in Engineering Technologies

1.4 DEFINITIONS

- A. Alarm Signal: A signal which indicates a state of emergency requiring immediate notification of the fire department and of the building occupants. These are signals such as the operation of a manual pull station, the activation of a smoke detector with alarm-verification feature, the activation of a waterflow switch in a sprinkler system, a fire pump running switch, or the operation of a pressure switch in a fire suppression system caused by the flow of fire extinguishing agent.
- B. Class A Wiring: A circuit that is monitored for integrity such that a single break, a single wire-to-wire short, or a single loss of carrier condition will be indicated by a trouble signal on the FACP no matter where the break, short or loss of carrier condition occurs. This circuit will allow all functions of the affected circuit to remain operational in the event of a single open or single ground. In accordance with NFPA 72, this would be Style 6, Class A wiring for signaling line circuits, Style 7 Class A wiring for network circuits, and Class A wiring for Initiating Device Circuits and for Notification Appliance Circuits.
- C. Class B Wiring: A circuit that is monitored for integrity such that a single break, a single wire-to-wire short, or a single loss of carrier condition will be indicated by a trouble signal on the FACP no matter where the break, short or loss of carrier condition occurs, but which would prohibit devices beyond the fault, short or carrier loss from remaining operational. In accordance with NFPA 72, this would be Style 4, Class B wiring for signaling line circuits and Class B wiring for, initiating device circuits and notification appliance circuits.

- D. Fire Alarm Control Panel (FACP): A master control panel having the features of a fire alarm control unit and to which all fire alarm control units are interconnected. The panel has central processing, memory, input and output terminals, and video display units (VDUs).
- E. Initiating Device: A system component that originates transmission of a change of state condition, which initiates an appropriate response via the fire alarm system.
- F. Initiating Device Circuit: A circuit to which automatic or manual initiating devices are connected where the signal received does not identify the individual device operated.
- G. Interface Device: An addressable device which interconnects hard wired systems or devices to a multiplex system.
- H. Install: To set in position and connect or adjust for use.
- I. LED: Light-emitting diode.
- J. Manual Pull Station: A fire alarm box as indicated in NFPA 72.
- K. Monitor/Control Modules: Addressable fire alarm devices installed to provide supervised monitoring or control of accessory equipment.
- L. Multiplex System: A system in which multiple signals are transmitted via the same conduction path to a remote fire alarm control unit and fire alarm control panel, decoded and separated so that each signal will initiate the specified response.
- M. NICET: National Institute for Certification in Engineering Technologies.
- N. Notification Appliance Circuit: A circuit to which notification appliances are connected to visually and audibly indicate an alarm signal.
- O. Pathway Survivability
 - 1. Level 1. Pathway survivability Level 1 shall consist of pathways in buildings that are fully protected by an automatic sprinkler system in accordance with NFPA 13, Standard for the Installation of Sprinkler Systems, with any interconnecting conductors, cables, or other physical pathways installed in metal raceways.
 - 2. Level 2. Pathway survivability Level 2 shall consist of one or more of the following:
 - a. 2-hour fire-rated circuit integrity (CI) cable
 - b. 2-hour fire-rated cable system electrical circuit protective system(s)
 - c. 2-hour fire-rated enclosure or protected area
 - d. 2-hour performance alternatives approved by the authority having jurisdiction
 - 3. Level 3. Pathway survivability Level 3 shall consist of pathways in buildings that are fully protected by an automatic sprinkler system in accordance with NFPA 13, Standard for the Installation of Sprinkler Systems, and one or more of the following:
 - a. 2-hour fire rated circuit integrity (CI) cable
 - b. 2-hour fire rated cable system (electrical circuit protective system(s))
 - c. 2-hour fire rated enclosure or protected area

- d. 2-hour performance alternatives approved by the authority having jurisdiction
- P. Provide: To furnish and install the stated equipment or materials.
- Q. Remote Fire Alarm Control Unit: A control panel, remote from the fire alarm control panel, that receives inputs from automatic and manual fire alarm devices; may supply power to detection devices and interface devices; may provide transfer of power to the notification appliances; may provide transfer of condition to relays or devices connected to the control unit; and reports to and receives signals from the fire alarm control panel.
- R. Signaling Line Circuit: A circuit to which any combination of circuit interfaces, control units, or transmitters are connected and over which multiple system input signals or output signals, or both, are carried.
- S. Supervisory Signal: A signal which indicates the impairment of a fire protection system which may prevent its normal use. These are signals from switches, such as a tamper switch, a fire pump phase reversal switch, or a fire pump loss of phase switch.
- T. Tamper Switch: A valve monitor switch as indicated in NFPA 72.
- U. Terminal Cabinet: A steel cabinet with locking, hinge-mounted door in which terminal strips are securely mounted. Minimum size is 8 inch x 8 inch.
- V. Trouble Signal: A signal which indicates that a fault, such as an open circuit or ground, has occurred in the fire alarm system or in a separate subsystem, whose control panel is monitored by the fire alarm system.

1.5 SYSTEM DESCRIPTION

- A. General: System shall be a complete, supervised, noncoded, UL-certified addressable system fire alarm system with multiplexed signal transmission. System shall conform to NFPA 72. The system shall have an interconnected riser loop or network having Class X supervision. The return portion of the loop shall be remote from the supply portion of the loop. The system shall have Style 4 Class B circuits for each floor. The system shall operate in the alarm mode upon actuation of any alarm initiating device. The system shall remain in the alarm mode until all initiating device(s) are reset and the fire alarm control panel is manually reset and restored to normal. The system shall provide the following functions and operating features:
 - 1. The FACP and fire alarm control units shall provide power, annunciation, supervision and control for the system.
 - 2. Provide Class B initiating device circuits.
 - 3. Provide Style 4 Class B signaling line circuits for each floor.
 - 4. Provide Style 7 Class A signaling line circuits for the network.
 - 5. Provide Class B notification appliance circuits.
 - 6. Provide electrical supervision of the primary power (AC) supply, presence of the battery, battery voltage, and placement of system modules within the control panel.
 - 7. Provide an audible and visual trouble signal to activate upon a single break or open condition, or ground fault which prevents the required operation of the system. The trouble signal shall also operate upon loss of primary power (AC) supply, absence of a battery supply, low battery voltage, or removal of alarm or supervisory panel modules. Provide a

- trouble alarm silence feature which will silence the audible trouble signal, without affecting the visual indicator. After the system returns to normal operating conditions, the trouble signal shall again sound until the trouble is acknowledged. A smoke detector in the process of being verified for the actual presence of smoke shall not initiate a trouble condition.
8. Provide a notification appliance silencing switch which, when activated, will cause the notification appliances to cease operating, but not affect the liquid crystal display or the automatic notification of the central station service. This switch shall be overridden upon activation of a subsequent alarm.
 9. Provide alarm verification capability for area smoke detectors.
 10. Provide program capability via switches in a locked portion of the FACP to bypass the automatic notification appliance circuits, air handler shutdown, features. Operation of this programming shall indicate this action on the FACP display and printer output.
 11. All alarm, supervisory, or trouble signals shall be automatically transmitted to a UL listed central station.
 12. Alarm functions shall override trouble or supervisory functions. Supervisory functions shall override trouble functions.
 13. The system shall be capable of being programmed in the field. All programmed information shall be stored in nonvolatile memory.
 14. The system shall be capable of operating, supervising, and/or monitoring both addressable and nonaddressable alarm and supervisory devices.
 15. There shall be no limit, other than maximum system capacity, as to the number of addressable devices which may be in alarm simultaneously.
 16. Where the fire alarm system is responsible for initiating an action in another emergency control device or system, such as an HVAC system, the addressable fire alarm relay shall be within 3 feet of the emergency control device.
 17. An alarm signal shall automatically initiate the following functions:
 - a. Transmission of an alarm signal to a UL listed Central Station.
 - b. Visual indication of the device operated on the fire alarm control panel (FACP), video display unit (VDU). Indication on the graphic annunciator shall be by floor, zone or circuit, and type of device.
 - c. Operation of a duct smoke detector shall shut down the appropriate air handler and/or smoke damper(s) in accordance with the International Mechanical Code and NFPA 90A.
 - d. Operation of a heat detector or a sprinkler waterflow switch in an elevator machinery room shall operate shunt trip circuit breaker(s) to shut down power to the elevators in accordance with ANSI A17.1.
 18. A supervisory signal shall automatically initiate the following functions:
 - a. Transmission of a supervisory signal to a UL listed Central Station.
 - b. Visual indication of the device operated on the fire alarm control panel (FACP), video display unit (VDU), and on the graphic annunciator.
 19. A trouble condition shall automatically initiate the following functions:
 - a. Transmission of a trouble signal to a UL listed Central Station.
 - b. Visual indication of the system trouble on the FACP, VDU, and on the graphic annunciator.
 - c. Recording of the event via the system printer.

20. The maximum permissible elapsed time between the actuation of an initiating device and its indication at the FACP shall be fifteen seconds.
21. The maximum elapsed time between the occurrence of the trouble condition and its indication at the FACP shall not exceed 200 seconds.
22. A Positive-Alarm-Sequence in accordance with NFPA 72 shall be utilized.

1.6 PERFORMANCE REQUIREMENTS

A. System Monitoring:

1. Valves: Each valve affecting the proper operation of a fire protection system, including automatic sprinkler control valves, standpipe control valves, sprinkler service entrance valve, valves at fire pumps, and valves at backflow preventers, whether supplied under this contract or existing, shall be monitored to ensure its proper position. Each tamper switch shall be provided with a separate address. Tamper switches shall be furnished and installed by Division 21 and connected to the fire alarm system by Division 28.

B. Overvoltage and Surge Protection

1. Signaling Line Circuit Surge Protection: For systems having circuits located outdoors, all communications equipment shall be protected against surges induced on any signaling line circuit. All cables and conductors, which serve as communications links, shall have surge protection circuits installed at each end.
2. Sensor Wiring Surge Protection: All digital and analog inputs and outputs shall be protected against surges induced by sensor wiring installed outdoors.

1.7 SUBMITTALS

A. General Submittal Requirements:

1. Submittals shall be approved by authorities having jurisdiction prior to submitting them to Architect.
2. The fire alarm equipment distributor shall submit, in accordance with Division 1 requirements, documentation as specified in the Quality Assurance portion of this Section. When the distributor intends to utilize the services of a manufacturer-affiliated company in the system design, the distributor shall submit a letter of intent to do so, addressed to the Architect, which includes the name of the manufacturer-affiliated company, the names and qualifications of the NICET-certified employees of the company, and which describes the delegation of fire alarm system design responsibilities.
3. Shop Drawings shall be prepared by persons with the following qualifications:
 - a. Trained and certified by manufacturer in fire-alarm system design.
 - b. NICET-certified fire-alarm technician, Level III minimum.
 - c. Licensed or certified by authorities having jurisdiction.
 - d. Drawings and Calculations to be sealed by a registered Professional Engineer in the project State.

B. Product Data: For each type of product indicated.

C. Shop Drawings: For fire-alarm system. Include plans, elevations, sections, details, and attachments to other work.

1. Comply with recommendations in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72.
2. Provide point-to-point wiring diagrams showing the points of connection and terminals used for all electrical field connections in the system, including all interconnections between the equipment or systems which are supervised or controlled by the system. Diagrams shall show all connections from field devices to the FACP and remote fire alarm control units, initiating circuits, switches, relays and terminals. Provide isometric drawing showing device locations, terminal cabinet locations, and all circuit layouts for all floors. Submit shop drawings not smaller than 30 inches by 42 inches. Shop drawings shall be prepared on a Computer Aided Drafting (CAD) system.
3. Provide a complete description of the system operation.
4. Provide a complete list of devices, device addresses, and corresponding messages.
5. Include voltage drop calculations for notification appliance circuits.
6. Include battery-size calculations.
7. Include performance parameters and installation details for each detector, verifying that each detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
8. Include plans, sections, and elevations of heating, ventilating, and air-conditioning ducts, drawn to scale and coordinating installation of duct smoke detectors and access to them. Show critical dimensions that relate to placement and support of sampling tubes, detector housing, and remote status and alarm indicators. Locate detectors according to manufacturer's written recommendations.
9. Include voice/alarm signaling-service equipment rack or console layout, grounding schematic, amplifier power calculation, and single-line connection diagram.
10. Include annotated catalog data showing manufacturer's name, model, voltage, and catalog numbers for all equipment and components. Where multiple configurations of equipment or options are available, indicate specific configuration being submitted.
11. Provide complete battery calculations for both the alarm and supervisory power requirements. Ampere-hour requirements for each system component shall be submitted with the calculations.
12. Provide complete riser diagrams indicating the wiring sequence of all devices and their connections to the control equipment. Provide a color code schedule for the wiring.
13. Provide floor plans showing the location of all devices and equipment. Show locations for all conduit and for all junction boxes used for T-taps. Indicate conduit fill percentages on the plans.
14. Provide data on each circuit to indicate that there is at least 25% spare capacity for notification appliances, 25% spare capacity for initiating devices. Provide circuit numbers for audible devices and load calculations for each circuit.
15. Provide a schedule of initiating device addresses and indicating device zones and subzones.
16. Include submittal data for all wire, terminal cabinets, and raceways.
17. Provide data to indicate that the amplifiers have sufficient capacity to simultaneously drive all fire alarm speakers at their highest tap setting plus 25% spare capacity.
18. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of cable and conduits.

D. Delegated-Design Submittal:

1. For smoke and heat detectors indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - a. Drawings showing the location of each smoke and heat detector, ratings of each, and installation details as needed to comply with listing conditions of the detector.
 - b. Design Calculations: Calculate requirements for selecting the spacing and sensitivity of detection, complying with NFPA 72.
- E. Qualification Data: For qualified Installer.
- F. Seismic Qualification Certificates: For fire-alarm control unit, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- G. Field quality-control reports.
- H. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals. Provide bound copies of an operation and maintenance manual. The manual shall include an index, copies of all approved shop drawings and submittal materials updated to "As Built", and a complete parts list of all components. The manual shall also include a list of recommended spare parts. The spare parts list shall include, for each item, the manufacturer's name, the serial number of the part, an ordering number, if appropriate, and a physical and electrical description of the part. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 1. Prepare and submit detailed CAD-based "As-Built" drawings. The drawings shall include complete plan view wiring diagrams showing connections between all devices and equipment, both factory and field wired, including, but not limited to, locations for all conduit and for all junction boxes used for T-taps. Indicate conduit fill percentages on the plans. All equipment in panels shall be shown in the as-built orientation. Include a riser diagram and drawings showing the as-built location and address or circuit number of all devices and equipment.
 2. Comply with the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
 3. Provide "Record of Completion Documents" according to NFPA 72 article "Permanent Records" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter.
 4. Record copy of site-specific software.
 5. Matrix of Operations including all system inputs and outputs.
 6. Provide "Maintenance, Inspection and Testing Records" according to NFPA 72 article of the same name and include the following:
 - a. Frequency of testing of installed components
 - b. Frequency of inspection of installed components
 - c. Requirements and recommendations related to results of maintenance.

- d. Manufacturer's user training manuals
 - 7. Manufacturer's required maintenance related to system warranty requirements.
 - 8. Abbreviated operating instructions for mounting at fire-alarm control unit.
 - 9. Include an electronic copy of the programming on CD for use by the Owner.
 - 10. Copy of NFPA 25.
- I. Software and Firmware Operational Documentation:
- 1. Software operating and upgrade manuals.
 - 2. Program Software Backup: On magnetic media or compact disk, complete with data files.
 - 3. Device address list.
 - 4. Printout of software application and graphic screens.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: Installation shall be accomplished by a Contractor with a minimum of five years' experience in the installation of fire alarm systems. Contractor shall show evidence of certification of at least one employee directly responsible for the work by the National Institute for Certification in Engineering Technologies (NICET) at Level II, III, or IV in the Fire Alarm Systems subfield of Fire Protection Engineering Technology. Any proposed installer who cannot show evidence of such qualifications may be rejected. The services of a technician provided and certified by the control equipment manufacturer shall be provided to supervise installation adjustments and tests of the system. Personnel shall be trained and certified by manufacturer for installation of units required for this Project.
- B. Distributor Qualifications:
- 1. The manufacturer's equipment distributor shall show evidence of certification by the manufacturer in the technical support of the system installed under this contract.
 - 2. The distributor shall show evidence of certification of at least one employee by the National Institute for Certification in Engineering Technologies (NICET) at Level III or IV in the Fire Alarm Systems subfield of Fire Protection Engineering Technology. If such a certified individual is not employed, adequate documentation shall be provided to show comparable training and experience of an existing employee. At a minimum, comparable training and experience shall consist of five years of progressive experience in the installation and design of fire alarm systems of similar size and complexity to that specified herein
 - 3. In lieu of an employee with NICET Level III or IV certification, the distributor shall show evidence of at least one employee with a minimum of three years of progressive experience in the design of fire alarm systems and, in addition, the distributor shall show evidence of technical support in the design, installation, and testing of the systems from a manufacturer-affiliated company, which shall show evidence of certification of at least one employee by the National Institute for Certification in Engineering Technologies (NICET) at level III or IV in the Fire Alarm Systems subfield of Fire Protection Engineering Technology
- C. Manufacturer Qualifications:
- 1. Testing Services or Laboratories: Construct all fire alarm and fire detection equipment in accordance with the latest edition of the following publications from Underwriters Laboratories (UL) and Factory Mutual Engineering Corporation (FM).

2. UL Fire Protection Equipment Directory
3. UL Electrical Construction Materials Directory
4. UL 464 - Audible Signal Appliances
5. UL 864 - Control Units for Fire Protective Signaling Systems
6. UL 1480 - Speakers for Fire Protective Signaling Systems
7. UL 1971 - Signaling Devices for the Hearing Impaired.
8. Factory Mutual Approval Guide.

- D. Source Limitations for Fire-Alarm System and Components: Obtain fire-alarm system from single source from single manufacturer. Components shall be compatible with, and operate as, an extension of existing system.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. NFPA Certification: Obtain certification according to NFPA 72 by a UL-listed alarm company.

1.9 PROJECT CONDITIONS

- A. Interruption of Existing Fire-Alarm Service: Do not interrupt fire-alarm service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary guard service according to requirements indicated:
1. Notify Owner no fewer than two days in advance of proposed interruption of fire-alarm service.
 2. Do not proceed with interruption of fire-alarm service without Owner's written permission.

1.10 SEQUENCING AND SCHEDULING

- A. Existing Fire-Alarm Equipment: Maintain existing equipment fully operational until new equipment has been tested and accepted. As new equipment is installed, label it "NOT IN SERVICE" until it is accepted. Remove labels from new equipment when put into service and label existing fire-alarm equipment "NOT IN SERVICE" until removed from the building.
- B. Equipment Removal: After acceptance of new fire-alarm system, remove existing disconnected fire-alarm equipment and wiring.

1.11 SOFTWARE SERVICE AGREEMENT

- A. Comply with UL 864.
- B. Technical Support: Beginning with Substantial Completion, provide software support for two years.
- C. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of software.

1. Provide 30 days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

1.12 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Lamps for Remote Indicating Lamp Units: Quantity equal to 10 percent of amount installed, but no less than 1 unit.
 2. Lamps for Strobe Units: Quantity equal to 10 percent of amount installed, but no less than 1 unit.
 3. Keys and Tools: One extra set for access to locked and tamperproofed components. Keys and locks for all equipment shall be identical where possible. Provide not less than six keys of each type required. Identify keys by an appropriate number stamped on each key or on a metal tag attached thereto. Provide a key numbering chart in each operation and maintenance manual furnished.
 4. Audible and Visual Notification Appliances: One of each type installed.
 5. Fuses: Two of each type installed in the system.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products to match existing.
- B. Basis-of-Design Product: Subject to compliance with requirements, provide products by Bosch Security Systems or comparable product by one of the following:
 1. Faraday.
 2. Fike Corporation.
 3. Fire-Lite Alarms.
 4. GAMEWELL.
 5. GE UTC Fire & Security; A United Technologies Company.
 6. Notifier.
 7. Siemens Industry, Inc.; Fire Safety Division.
 8. Silent Knight.
 9. SimplexGrinnell LP.

2.2 SYSTEMS OPERATIONAL DESCRIPTION

- A. Fire-alarm signal initiation shall be by one or more of the following devices and systems:
 1. Manual stations
 2. Heat detectors
 3. Flame detectors
 4. Smoke detectors

- [Duct smoke detectors
- 5. Automatic sprinkler system water flow
- 6. Fire-extinguishing system operation
- 7. Fire standpipe system

B. Fire-alarm signal shall initiate the following actions:

1. Continuously operate alarm notification appliances.
2. Identify alarm at fire-alarm control unit.
3. Transmit an alarm signal to the remote alarm receiving station.
4. Unlock electric door locks in designated egress paths.
5. Release fire and smoke doors held open by magnetic door holders.
6. Activate voice/alarm communication system.
7. Switch heating, ventilating, and air-conditioning equipment controls to fire-alarm mode.
8. Close smoke dampers in air ducts of designated air-conditioning duct systems.
9. Recall elevators to primary or alternate recall floors.
10. Activate emergency lighting control.
11. Activate emergency shutoffs for gas and fuel supplies.

C. Supervisory signal initiation shall be by one or more of the following devices and actions:

1. Valve supervisory switch.
2. Low-air-pressure switch of a dry-pipe sprinkler system.
3. Elevator shunt-trip supervision.
4. Duct smoke detectors.

D. System trouble signal initiation shall be by one or more of the following devices and actions:

1. Open circuits, shorts, and grounds in designated circuits.
2. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
3. Loss of primary power at fire-alarm control unit.
4. Ground or a single break in fire-alarm control unit internal circuits.
5. Abnormal ac voltage at fire-alarm control unit.
6. Break in standby battery circuitry.
7. Failure of battery charging.
8. Abnormal position of any switch at fire-alarm control unit or annunciator.

E. System Trouble and Supervisory Signal Actions: Initiate notification appliance and annunciate at fire-alarm control unit. Record the event on system printer.

2.3 FIRE-ALARM CONTROL UNIT (EXISTING TO REMAIN)

A. General Requirements for Fire-Alarm Control Unit:

1. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864 and listed and labeled by an NRTL.

- a. System software and programs shall be held in flash electrically erasable programmable read-only memory (EEPROM), retaining the information through failure of primary and secondary power supplies.
 - b. Include a real-time clock for time annotation of events on the event recorder and printer.
2. Addressable initiation devices that communicate device identity and status.
 - a. Smoke sensors shall additionally communicate sensitivity setting and allow for adjustment of sensitivity at fire-alarm control unit.
 - b. Temperature sensors shall additionally test for and communicate the sensitivity range of the device.
 3. Addressable control circuits for operation of mechanical equipment.
- B. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire-alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.
1. Annunciator and Display: Liquid-crystal type, 3 line(s) of 40 characters, minimum.
 2. Keypad: Arranged to permit entry and execution of programming, display, and control commands.
- C. Circuits:
1. Initiating Device, Notification Appliance, and Signaling Line Circuits: NFPA 72, Class B.
 - a. Initiating Device Circuits: Class B
 - b. Notification Appliance Circuits: Class B
 - c. Signaling Line Circuits: Class B
 - d. Each circuit shall be provided with 25% spare capacity.
 2. Serial Interfaces: Two RS-232 ports for printers.
 3. Pathway Survivability. Emergency Communication Systems - Pathway survivability levels shall be as required in NFPA 72. Notification and communication circuits required to ensure operation of the emergency communication system shall meet the following:
 - a. In-building fire emergency voice/alarm communications systems shall either
 - 1) For systems employing relocation or partial evacuation require, a Level 2 or 3 pathway survivability shall be required.
 - 2) For systems that do not employ relocation or partial evacuation a Level 0 through 3 pathway survivability shall be required.
 - b. In-building mass notification systems shall have a Level 0 pathway survivability
 - c. Two-way in-building wired emergency communications systems shall have a pathway survivability of Level 2 or Level 3.
 - d. Two-way radio communications enhancement systems used in lieu of a two-way in-building wired emergency communications system, it shall have a pathway survivability of Level 2 or 3.

- e. Area of refuge (area of rescue assistance) emergency communications systems shall have a pathway survivability of Level 2 or 3. Circuits intended to transmit off-premises shall have a pathway survivability of Level 0 through 3.
- D. Stairwell Pressurization: Provide an output signal using an addressable relay to start the stairwell pressurization system. Signal shall remain on until alarm conditions are cleared and fire-alarm system is reset. Signal shall not stop in response to alarm acknowledge or signal silence commands.
 - 1. Pressurization starts when any alarm is received at fire-alarm control unit.
 - 2. Alarm signals from smoke detectors at pressurization air supplies have a higher priority than other alarm signals that start the system.
- E. Smoke-Alarm Verification:
 - 1. Initiate audible and visible indication of an "alarm-verification" signal at fire-alarm control unit.
 - 2. Activate an NRTL-listed and -approved "alarm-verification" sequence at fire-alarm control unit and detector.
 - 3. Record events by the system printer.
 - 4. Sound general alarm if the alarm is verified.
 - 5. Cancel fire-alarm control unit indication and system reset if the alarm is not verified.
- F. Notification Appliance Circuit: Operation shall sound in a slow whoop pattern.
- G. Elevator Recall:
 - 1. Smoke detectors at the following locations shall initiate automatic elevator recall. Alarm-initiating devices, except those listed, shall not start elevator recall.
 - a. Elevator lobby detectors except the lobby detector on the designated floor.
 - b. Smoke detector in elevator machine room.
 - c. Smoke detectors in elevator hoistway.
 - 2. Elevator lobby detectors located on the designated recall floors shall be programmed to move the cars to the alternate recall floor.
 - 3. Heat detector in an elevator shaft or elevator machine room shall shut down elevators associated with the location.
- H. Door Controls: Door hold-open devices that are controlled by smoke detectors at doors in smoke barrier walls shall be connected to fire-alarm system.
- I. Remote Smoke-Detector Sensitivity Adjustment: Controls shall select specific addressable smoke detectors for adjustment, display their current status and sensitivity settings, and change those settings. Allow controls to be used to program repetitive, time-scheduled, and automated changes in sensitivity of specific detector groups. Record sensitivity adjustments and sensitivity-adjustment schedule changes in system memory and print out the final adjusted values on system printer.
- J. Transmission to Remote Alarm Receiving Station: Automatically transmit alarm, supervisory, and trouble signals to a remote alarm station.

- K. Voice/Alarm Signaling Service: Central emergency communication system with redundant microphones, preamplifiers, amplifiers, and tone generators provided in a separate cabinet located in the fire command center.
1. Indicated number of alarm channels for automatic, simultaneous transmission of different announcements to different zones or for manual transmission of announcements by use of the central-control microphone. Amplifiers shall comply with UL 1711 and be listed by an NRTL.
 - a. Allow the application of and evacuation signal to indicated number of zones and, at same time, allow voice paging to the other zones selectively or in any combination.
 - b. Programmable tone and message sequence selection.
 - c. A fire alarm shall activate a slow whoop or other tone for three cycles followed by a voice message which is repeated until the control panel is reset. Automatic messages shall be broadcast through all speakers. A live voice message shall override the automatic. When using the microphone, live messages shall be broadcast through speakers throughout the building. The system shall be capable of operating all speakers at the same time. The digitized voice message shall consist of a nonvolatile (EPROM) microprocessor based input to the amplifiers. The microprocessor shall actively interrogate all circuitry, field wiring and digital coding necessary for the immediate and accurate rebroadcasting of the stored voice data into the appropriate amplifier input. Loss of operating power, supervisory power or any other malfunction which could render the digitized voice module inoperative shall automatically cause the slow whoop tone to take over all functions assigned to the failed unit.
 - d. Standard digitally recorded messages for "Evacuation" and "All Clear."
 - e. Generate tones to be sequenced with audio messages of type recommended by NFPA 72 and that are compatible with tone patterns of notification appliance circuits of fire-alarm control unit.
 2. Status Annunciator: Indicate the status of various voice/alarm speaker zones and the status of firefighters' two-way telephone communication zones.
 3. Preamplifiers, amplifiers, and tone generators shall automatically transfer to backup units, on primary equipment failure.
- L. Printout of Events: On receipt of signal, print alarm, supervisory, and trouble events. Identify zone, device, and function. Include type of signal (alarm, supervisory, or trouble) and date and time of occurrence. Differentiate alarm signals from all other printed indications. Also print system reset event, including same information for device, location, date, and time. Commands initiate the printing of a list of existing alarm, supervisory, and trouble conditions in the system and a historical log of events.
- M. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory and digital alarm communicator transmitters shall be powered by 24-V dc source.
1. Alarm current draw of entire fire-alarm system shall not exceed 80 percent of the power-supply module rating.
- N. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch. Provide the battery powered secondary power system with sufficient capacity to operate the complete alarm system in normal or supervisory (nonalarm) mode for a period

of 24 hours. Following this period of operation on battery power, the batteries shall have sufficient capacity to operate the system during a fire or other emergency condition for a period of 5 minutes. Fifteen minutes of evacuation alarm operation at maximum connected load shall be considered the equivalent of 2 hours of emergency operation.

1. Batteries: Sealed, valve-regulated, recombinant lead acid Sealed lead calcium.

O. Instructions: Computer printout or typewritten instruction card mounted behind a plastic or glass cover in a stainless-steel or aluminum frame. Include interpretation and describe appropriate response for displays and signals. Briefly describe the functional operation of the system under normal, alarm, and trouble conditions.

2.4 MANUAL FIRE-ALARM BOXES

A. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.

1. Double-action mechanism requiring two actions to initiate an alarm, pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.
2. Station Reset: Key- or wrench-operated switch.
3. Stations shall be supplied with screw terminals for making connections.
4. Indoor Protective Shield: Factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm. Lifting the cover actuates an integral battery-powered audible horn intended to discourage false-alarm operation.
5. Weatherproof Protective Shield: Factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm.

2.5 SYSTEM SMOKE DETECTORS

A. General Requirements for System Smoke Detectors:

1. Comply with UL 268; operating at 24-V dc, nominal.
2. Detectors shall be two wire type.
3. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
4. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
5. Integral Visual-Indicating Light: LED type indicating detector has operated and power-on status.
6. Detectors shall have alarm verification capability and environmental compensation feature.
7. Smoke detectors shall be listed for use with the fire alarm control panel.
8. Provide self-restoring type detectors which do not require any readjustment after actuation to restore it to normal operation.

9. All detectors shall have an insect screen and, as required, one set of auxiliary contacts, one each normally open and normally closed (Form "C").
10. Remote Control: Unless otherwise indicated, detectors shall be analog-addressable type, individually monitored at fire-alarm control unit for calibration, sensitivity, and alarm condition and individually adjustable for sensitivity by fire-alarm control unit.
 - a. Rate-of-rise temperature characteristic shall be selectable at fire-alarm control unit for 15 or 20 deg F per minute.
 - b. Fixed-temperature sensing shall be independent of rate-of-rise sensing and shall be settable at fire-alarm control unit to operate at 135 or 155 deg F.
 - c. Provide multiple levels of detection sensitivity for each sensor.

B. Photoelectric Smoke Detectors:

1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
 - a. Primary status
 - b. Device type
 - c. Present average value
 - d. Present sensitivity selected.
 - e. Sensor range (normal, dirty, etc.)

C. Ionization Smoke Detector:

1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
 - a. Primary status
 - b. Device type
 - c. Present average value
 - d. Present sensitivity selected.
 - e. Sensor range (normal, dirty, etc.)

D. Duct Smoke Detectors: Photoelectric type complying with UL 268A.

1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
 - a. Primary status
 - b. Device type
 - c. Present average value
 - d. Present sensitivity selected.
 - e. Sensor range (normal, dirty, etc.)

3. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.
4. Duct smoke detectors shall be furnished, wired and programmed by the Division 28 contractor and installed by the Division 23 contractor. The Division 28 contractor shall coordinate sampling tube sizes and locations with Division 23.
5. Each sensor shall have multiple levels of detection sensitivity.
6. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
7. All duct smoke detectors located above finished ceilings or otherwise hidden from view shall be furnished with remote alarm indicator lamps, identification nameplates, and test stations. Do not locate test stations in finished corridor ceilings or walls. Install test stations in nearest mechanical or electrical room.
8. Relay Fan Shutdown: Rated to interrupt fan motor-control circuit.

E. Aspiration Type Smoke Detectors: complying with UL 268.

1. It shall consist of an air sampling pipe network to transport air to the detection system, supported by calculations from a computer-based design modeling tool.
2. Shall be approved to provide very early smoke detection and provide four output levels corresponding to Alert, Action, Fire 1 and Fire 2. These levels shall be programmable and able to be set at sensitivities ranging from 0.005 – 20% obsc/m.
3. Shall report any fault on the unit by using configurable fault output relays.
4. Shall be self monitoring for filter contamination.
5. Shall incorporate a flow sensor in each pipe and provide staged airflow faults.
6. Sampling Pipe:
 - a. The sampling pipe shall be smooth bore with an internal diameter between 15-25mm. Normally, pipe with an outside diameter of 25mm and internal diameter of 21mm should be used.
 - b. The pipe material should be suitable for the environment in which it is installed or should be the material as required by the specifying body.
 - c. All joints in the sampling pipe must be airtight and made by using solvent cement, except at entry to the detector.
 - d. The pipe shall be identified as Aspirating Smoke Detector Pipe (or similar wording) along its entire length at regular intervals not exceeding the manufacturer's recommendation or that of local codes and standards.
 - e. All pipes should be supported at not less than 1.5m centers, or that of the local codes or standards.
 - f. The far end of each trunk or branch pipe shall be fitted with an end cap and drilled with a hole appropriately sized to achieve the performance as specified and as calculated by the system design.

2.6 CARBON MONOXIDE DETECTORS

A. General: Carbon monoxide detector listed for connection to fire-alarm system.

1. Mounting: Adapter plate for outlet box mounting.
2. Testable by introducing test carbon monoxide into the sensing cell.
3. Detector shall provide alarm contacts and trouble contacts.

4. Detector shall send trouble alarm when nearing end-of-life, power supply problems, or internal faults.
5. Comply with UL 2075.
6. Locate, mount, and wire according to manufacturer's written instructions.
7. Provide means for addressable connection to fire-alarm system.
8. Test button simulates an alarm condition.

2.7 MULTICRITERIA DETECTORS

- A. Mounting: Adapter plate for outlet box mounting. Twist-lock base interchangeable with smoke-detector bases.
- B. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
- C. Automatically adjusts its sensitivity by means of drift compensation and smoothing algorithms. The detector shall send trouble alarm if it is incapable of compensating for existing conditions.
- D. Test button tests all sensors in the detector.
- E. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
 1. Primary status.
 2. Device type.
 3. Present sensitivity selected.
 4. Sensor range (normal, dirty, etc.).
- F. Sensors: The detector shall be comprised of four sensing elements including a smoke sensor, a carbon monoxide sensor, an infrared sensor, and a heat sensor.
 1. Smoke sensor shall be photoelectric type as described in "System Smoke Detectors" Article.
 2. Carbon monoxide sensor shall be as described in "Carbon Monoxide Detectors" Article.
 3. Heat sensor shall be as described in "Heat Detectors" Article.
 4. Each sensor shall be separately listed according to requirements for its detector type.

2.8 NONSYSTEM SMOKE DETECTORS

- A. Single-Station Smoke Detectors:
 1. Comply with UL 217; suitable for NFPA 101, residential occupancies; operating at 120-V ac with 9-V dc battery as the secondary power source. Provide with "low" or "missing" battery chirping-sound device.
 2. Auxiliary Relays: One Form C rated at 0.5 A, Form A and one Form C, both rated at 0.5 A.
 3. Audible Notification Appliance: Piezoelectric sounder rated at 90 dBA at 10 feet according to UL 464.
 4. Visible Notification Appliance: 177-cd strobe.
 5. Heat sensor, 135 deg F combination rate-of-rise and fixed temperature.

6. Test Switch: Push to test; simulates smoke at rated obscuration.
7. Tandem Connection: Allow tandem connection of number of indicated detectors; alarm on one detector shall actuate notification on all connected detectors.
8. Plug-in Arrangement: Detector and associated electronic components shall be mounted in a plug-in module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
9. Self-Restoring: Detectors shall not require resetting or readjustment after actuation to restore them to normal operation.
10. Integral Visual-Indicating Light: LED type indicating detector has operated and power-on status.

B. Single-Station Duct Smoke Detectors:

1. Comply with UL 268A; operating at 120-V ac.
2. Sensor: LED or infrared light source with matching silicon-cell receiver.
 - a. Detector Sensitivity: Smoke obscuration between 2.5 and 3.5 percent/foot when tested according to UL 268A.
3. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. The fixed base shall be designed for mounting directly to air duct. Provide terminals in the fixed base for connection to building wiring.
 - a. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.
4. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
5. Relay Fan Shutdown: Rated to interrupt fan motor-control circuit.

2.9 HEAT DETECTORS

- A. General Requirements for Heat Detectors: Comply with UL 521.
- B. Heat Detector, Combination Type: Actuated by either a fixed temperature of 135 deg F or a rate of rise that exceeds 15 deg F per minute unless otherwise indicated.
 1. Mounting: Adapter plate for outlet box mounting. Twist-lock base interchangeable with smoke-detector bases.
 2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
- C. Heat Detector, Fixed-Temperature Type: Actuated by temperature that exceeds a fixed temperature of 190 deg F.
 1. Mounting: Adapter plate for outlet box mounting. Twist-lock base interchangeable with smoke-detector bases.
 2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

D. Continuous Linear Heat-Detector System:

1. Detector Cable: Rated detection temperature 155 deg F. NRTL listed for "regular" service and a standard environment. Cable includes two steel actuator wires twisted together with spring pressure, wrapped with protective tape, and finished with PVC outer sheath. Each actuator wire is insulated with heat-sensitive material that reacts with heat to allow the cable twist pressure to short-circuit wires at the location of elevated temperature.
2. Control Unit: Two-zone or multizone unit as indicated. Provide same system power supply, supervision, and alarm features as specified for fire-alarm control unit.
3. Signals to Fire-Alarm Control Unit: Any type of local system trouble shall be reported to fire-alarm control unit as a composite "trouble" signal. Alarms on each detection zone shall be individually reported to central fire-alarm control unit as separately identified zones.
4. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

2.10 NOTIFICATION APPLIANCES

A. General Requirements for Notification Appliances: Connected to notification appliance signal circuits, zoned as indicated, equipped for mounting as indicated and with screw terminals for system connections.

1. Combination Devices: Factory-integrated audible and visible devices in a single-mounting assembly, equipped for mounting as indicated and with screw terminals for system connections.

B. Chimes, Low-Level Output: Vibrating type, 75-dBA minimum rated output.

C. Visible Notification Appliances: Xenon strobe lights comply with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch-high letters on the lens.

1. Rated Light Output: field selectable to 15/30/75/110 cd, set as shown on drawings.
2. Mounting: Wall/ceiling mounted unless otherwise indicated.
3. For units with guards to prevent physical damage, light output ratings shall be determined with guards in place.
4. Flashing shall be in a temporal pattern, synchronized with other units.
5. Strobe Leads: Factory connected to screw terminals.
6. Mounting Faceplate: Factory finished, white or red. See drawings for color preference.

D. Voice/Tone Notification Appliances:

1. Appliances shall comply with UL 1480 and shall be listed and labeled by an NRTL.
2. Field selectable wattage taps from ¼ to 2 watts. Setting determined by contractor's final certification / test.
3. Mounting: surface mounted and bidirectional.
4. Matching Transformers: Tap range matched to acoustical environment of speaker location.

2.11 AMPLIFIERS, PRE-AMPLIFIERS, AND TONE GENERATORS

- A. General: Any amplifiers, preamplifiers, tone generators, digitized voice drives and all other hardware necessary for a complete, operational voice/alarm signaling service conforming to NFPA 72 shall be housed in a remote fire alarm control unit at the locations shown on the drawings, terminal cabinet, or in the fire alarm control panel. The system shall automatically operate and control all building fire alarm speakers.
- B. Construction: All amplifiers shall utilize computer grade solid-state components and shall be provided with output protection devices sufficient to protect the amplifier against any transient up to ten (10) times the highest rated voltage in the system.
- C. Inputs: Each system shall be equipped with separate inputs from the tone generator, digitalized voice driver and panel mounted microphone. Microphone inputs shall be of the low impedance, balanced line type. Both microphone and tone generator input shall be operational on any amplifier.
- D. Tone Generator: The tone generator shall be of the modular, plug-in type with securely attached labels to identify the component as a tone generator and to identify the specific tone it produces. The tone generator shall produce a slow whoop, high/low, horn, chime, beep, stutter, wail, and bell tones as directed by the Owner and be constantly repeated until interrupted by either the digitalized voice message, the microphone input or the alarm silence mode as specified. Each slow whoop cycle shall last approximately four (4) seconds. The tone generator shall be single channel with an automatic backup generator per channel such that failure of the primary tone generator causes the backup generator to automatically take over the functions of the failed unit and also causes transfer of the common trouble relay.
- E. Protection Circuits: Each amplifier shall be constantly supervised for any condition which could render the amplifier inoperable at its maximum output. Failure of any component shall cause automatic transfer to a designated backup amplifier, illumination of a visual "amplifier trouble" indicator on the control panel, appropriate logging of the condition on the system printer and other actions for trouble conditions as specified.

2.12 ADDRESSABLE INTERFACE DEVICE

- A. Monitor Module Description: Microelectronic monitor module, NRTL listed for use in providing a system address for alarm-initiating devices for wired applications with normally open contacts. Addressable monitor module shall provide an individual address for each device below using a supervised Class B circuit:
 - 1. Sprinkler Waterflow: Paddle type switch
 - 2. Sprinkler/standpipe valve supervisory switch
 - 3. Each nonaddressable initiating device
- B. Control Module Description: Addressable control module shall provide normally-open, normally-closed Form C contacts for auxiliary control purposes. Integral Relay: Capable of providing a direct signal. All activation and power circuits required shall be provided from the fire alarm system for the following:

1. Air Handler Shutdown: Provide addressable control module as a separate or integral component of the air handler duct smoke detectors required by Division 23. Control wiring between control module and air handler control unit shall be provided by Division 23, with coordination through the General Contractor.

2.13 DIGITAL ALARM COMMUNICATOR TRANSMITTER

- A. Digital alarm communicator transmitter shall be acceptable to the remote central station and shall comply with UL 632 and be listed and labeled by an NRTL.
- B. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire-alarm control unit and automatically capture one telephone line(s) and dial a preset number for a remote central station. When contact is made with central station(s), signals shall be transmitted. If service on line is interrupted for longer than 45 seconds, transmitter shall initiate a local trouble signal and transmit the signal indicating loss of telephone line to the remote alarm receiving station over the remaining line. Transmitter shall automatically report telephone service restoration to the central station. If service is lost on both telephone lines, transmitter shall initiate the local trouble signal.
- C. Local functions and display at the digital alarm communicator transmitter shall include the following:
 1. Verification that both telephone lines are available.
 2. Programming device.
 3. LED display.
 4. Manual test report function and manual transmission clear indication.
 5. Communications failure with the central station or fire-alarm control unit.
- D. Digital data transmission shall include the following:
 1. Address of the alarm-initiating device.
 2. Address of the supervisory signal.
 3. Address of the trouble-initiating device.
 4. Loss of ac supply or loss of power.
 5. Low battery.
 6. Abnormal test signal.
 7. Communication bus failure.
- E. Secondary Power: Integral rechargeable battery and automatic charger.
- F. Self-Test: Conducted automatically every 24 hours with report transmitted to central station.
- G. A $\frac{3}{4}$ inch conduit with the required conductors shall be extended from the dialer to the nearest telephone terminal board. The telephone company shall provide and install interface terminal block. Electrical Contractor shall terminate conductors on one side of this terminal block as directed by the telephone company. The Owner shall contract with the telephone company for a private line for the dialer.

2.14 DEVICE GUARDS

- A. Description: Welded wire mesh of size and shape for the manual station, smoke detector, gong, or other device requiring protection.
1. Factory fabricated and furnished by manufacturer of device.
 2. Finish: Paint of color to match the protected device.

2.15 SURGE SUPPRESSION

- A. Provide line voltage and low voltage surge suppression devices to suppress all voltage transients which might damage the control panel and transmitter components. Mount suppressors in separate enclosure(s) adjacent to control panel and transmitter unless suppressors are specifically UL listed or FM approved for mounting inside the control panel and transmitter provided and approved for such use by the control panel and transmitter manufacturer.
1. Line Voltage Surge Suppressor: Suppressor shall be UL 1449 listed with a maximum 330 volt clamping level and a maximum response time of 5 nanoseconds. Suppressor shall also meet IEEE C62.41.1 and IEEE C62.41.2 category B tests for surge capacity. Suppressor shall be a multi-stage construction which includes inductors and silicon avalanche zener diodes. Suppressor shall have a long-life indicating lamp (light emitting diode or neon lamp) which extinguishes upon failure of protection components. Fuses shall be externally accessible. Wire in series with the incoming power source to the protected equipment using screw terminations.
 2. Low Voltage Surge Suppressor: Provide for all circuits which leave the building shell and as shown on the contract drawings. When circuits interconnect two or more buildings, provide an arrester at the circuit entrance to each building. Suppressor shall be UL 497B listed with a maximum 30 volt clamping level and a maximum response time of 5 nanoseconds. Suppressor shall have multi-stage construction and both differential/common mode protection.

PART 3 - EXECUTION

3.1 EQUIPMENT INSTALLATION

- A. Comply with NFPA 72, the plan drawings, specifications, manufacturer's recommendations, and all applicable codes for installation of fire-alarm equipment. All wiring shall be installed in compliance with NFPA 70, *National Electrical Code*[®].
- B. Equipment Mounting: Install fire-alarm control unit on concrete base with tops of cabinets not more than 72 inches above the finished floor. Comply with requirements for concrete base specified in Division 03 Section "Cast-in-Place Concrete."
1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Equipment Mounting: Install fire-alarm control unit on finished floor with tops of cabinets not more than 72 inches above the finished floor.
1. Comply with requirements for seismic-restraint devices specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
 2. Comply with requirements for seismic-restraint devices specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- D. Connecting to Existing Equipment: Verify that existing fire-alarm system is operational before making changes or connections.
1. Connect new equipment to existing control panel in existing part of the building.
 2. Connect new equipment to existing monitoring equipment at the supervising station.
 3. Expand, modify, and supplement existing control monitoring equipment as necessary to extend existing control monitoring functions to the new points. New components shall be capable of merging with existing configuration without degrading the performance of either system.
- E. Smoke- or Heat-Detector Spacing:
1. Comply with NFPA 72, "Smoke-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for smoke-detector spacing.
 2. Comply with NFPA 72, "Heat-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for heat-detector spacing.
 3. Smooth ceiling spacing shall not exceed 30 feet.
 4. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas shall be determined according to Appendix A in NFPA 72.
 5. HVAC: Locate detectors not closer than 3 feet from air-supply diffuser or return-air opening.
 6. Lighting Fixtures: Locate detectors not closer than 12 inches from any part of a lighting fixture.
- F. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend the full width of duct.
- G. Remote Status and Alarm Indicators: Install near each smoke detector and each sprinkler water-flow switch and valve-tamper switch that is not readily visible from normal viewing position.
- H. Audible Alarm-Indicating Devices: Install not less than 6 inches below the ceiling. Install bells and horns on flush-mounted back boxes with the device-operating mechanism concealed behind a grille.
- I. Visible Alarm-Indicating Devices: Install adjacent to each alarm bell or alarm horn and at least 6 inches below the ceiling.
- J. Device Location-Indicating Lights: Locate in public space near the device they monitor.

- K. Manual Pull Stations: Locate manual pull stations where shown on the drawings. Provide recessed back boxes in which the station operating mechanisms shall be mounted.

3.2 CONNECTIONS

- A. For fire-protection systems related to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements in Division 08 Section "Door Hardware." Connect hardware and devices to fire-alarm system.
 - 1. Verify that hardware and devices are NRTL listed for use with fire-alarm system in this Section before making connections.
- B. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 3 feet from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.
 - 1. Smoke dampers in air ducts of designated air-conditioning duct systems.
 - 2. Alarm-initiating connection to elevator recall system and components.
 - 3. Alarm-initiating connection to activate emergency lighting control.
 - 4. Alarm-initiating connection to activate emergency shutoffs for gas and fuel supplies.
 - 5. Supervisory connections at valve supervisory switches.
 - 6. Supervisory connections at elevator shunt trip breaker.

3.3 FIELD WIRING

- A. Wire Nuts are not permitted. Multiple wires on a single terminal are prohibited.
- B. Signaling Line circuits, initiating device circuits, and notification appliance circuits shall be supervised in accordance with the requirements of NFPA 72.
- C. Provide wiring within cabinets installed parallel with or at right angles to the sides and back of the enclosure. All conductors which are terminated, spliced, or otherwise interrupted in any enclosure associated with the fire alarm system shall be connected to terminal blocks. Mark each terminal in accordance with the wiring diagrams of the system. Make all connections with either crimp-on terminal spade lugs or with pressure type terminal blocks.
- D. Provide a terminal cabinet where any circuit tap is made.
- E. For alarm and supervisory initiating device circuit and alarm indicating circuit wiring for the low voltage portion of the fire alarm system, provide all wiring as recommended by the equipment manufacturer. Provide wiring operating at 120 VAC as minimum No. 12 AWG solid copper having similar insulation.
- F. Conductors shall be run in metal raceway including EMT and rigid conduit.
- G. Signaling Line Circuits, Initiating Device Circuits and Notification Appliance Circuits:

1. Power-Limited Circuits: For interior wiring (in raceways) use power-limited insulated multiconductor cable types except where a 2-hour fire rated cable assembly is required.
 - a. Number of conductors and conductor size as recommended by the Company producing the system, except that conductor size shall not be less than No. 18 AWG for signaling line circuits and not less than No. 16 AWG for initiating device circuits and notification appliance circuits.
 - b. Using Non-power-Limited Wiring On Power-Limited Circuits: Wiring size and types specified for NONPOWER-limited circuits may be used for power-limited circuits if power-limited circuits are reclassified and the power-limited markings are eliminated. Refer to NEC Article 760-52(a) Exception No. 3.
 - H. Distinctively color code all wiring differently from the normal building wiring. Audible alarm indicating devices shall be color coded differently from alarm initiating circuits. Use different colors for visual alarm indicating devices.
 - I. Where the fire alarm system is responsible for initiating an action in another emergency control device or system, such as an HVAC system or elevator system, the addressable fire alarm interface module shall be within 10 feet of the emergency control device.
 - J. Provide a terminal cabinet where any circuit tap is made.
 - K. Provide wiring within cabinets installed parallel with or at right angles to the sides and back of the enclosure. All conductors which are terminated, spliced, or otherwise interrupted in any enclosure associated with the fire alarm system shall be connected to terminal blocks. Mark each terminal in accordance with the wiring diagrams of the system. Make all connections with either crimp-on terminal spade lugs or with pressure type terminal blocks.
- 3.4 IDENTIFICATION
- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
 - B. All junction boxes shall be sprayed red and labeled "Fire Alarm". Wiring color code shall be maintained throughout the installation.
 - C. Install framed instructions in a location visible from fire-alarm control unit.
 - D. Provide fire alarm circuit conductors with color coded insulation or use color coded tape at each conductor termination and in each junction box and interface panel.
 - E. Distinctively color code all wiring differently from the normal building wiring. Audible alarm notification appliance circuits shall be colored differently from signaling line circuits. Use different colors for visual alarm notification appliance circuits.

3.5 GROUNDING

- A. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.

3.6 FIELD QUALITY CONTROL

- A. Field tests shall be witnessed by authorities having jurisdiction.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
 - 1. Visual Inspection: Conduct visual inspection prior to testing.
 - a. Inspection shall be based on completed Record Drawings and system documentation that is required by NFPA 72 in its "Completion Documents, Preparation" Table in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter.
 - b. Comply with "Visual Inspection Frequencies" Table in the "Inspection" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.
 - 2. System Testing: Comply with "Test Methods" Table in the "Testing" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
 - 3. Intelligibility testing of the System shall be accomplished in accordance with NFPA 72 for Voice Evacuation Systems, IEC 60268-16, and ASA S3.2. Following are the specific requirements for intelligibility tests:
 - a. Intelligibility Requirements: Verify intelligibility by measurement after installation.
 - b. Ensure that a CIS value greater than the required minimum value is provided in each area where building occupants typically could be found. The minimum required value for CIS is 0.8.
 - c. Areas of the building provided with hard wall and ceiling surfaces (such as metal or concrete) that are found to cause excessive sound reflections may be permitted to have a CIS score less than the minimum required value and if building occupants in these areas can determine that a voice signal is being broadcast and they must walk no more than 33 feet to find a location with at least the minimum required CIS value within the same area.
 - d. Areas of the building where occupants are not expected to be normally present are permitted to have a CIS score less than the minimum required value if personnel can determine that a voice signal is being broadcast and they must walk no more than 50 feet to a location with at least the minimum required CIS value within the same area.
 - e. Take measurements near the head level applicable for most personnel in the space under normal conditions (e.g., standing, sitting, sleeping, as appropriate).
 - f. The distance the occupant must walk to the location meeting the minimum required CIS value shall be measured on the floor or other walking surface as follows:
 - 1) Along the centerline of the natural path of travel, starting from any point subject to occupancy with less than the minimum required CIS value.

- 2) Curving around any corners or obstructions, with a 12 inches clearance there from.
 - 3) Terminating directly below the location where the minimum required CIS value has been obtained.
- g. Use commercially available test instrumentation to measure intelligibility as specified by ISO 7240-19 and ISO 7240-16 as applicable. Use the mean value of at least three readings to compute the intelligibility score at each test location.
4. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.
 5. Test visible appliances for the public operating mode according to manufacturer's written instructions.
 6. Factory-authorized service representative shall prepare the "Fire Alarm System Record of Completion" in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72 and the "Inspection and Testing Form" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72. After final testing is complete provide a letter certifying that the installation is complete and fully operable. The letter shall include the names and titles of the witnesses to the preliminary tests. An authorized representative from each supplier of equipment shall be in attendance at the preliminary testing to make necessary adjustments.
 7. Audibility tests shall be performed to verify compliance with the requirements of the Americans with Disabilities Act Accessibility Guidelines (ADAAG). If the system does not meet the intended performance of the ADAAG, the fire alarm system distributor shall provide additional speakers and system expansion parts to accommodate them, as required to meet the required audibility levels.
- E. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.
- F. Fire-alarm system will be considered defective if it does not pass tests and inspections.
- G. Prepare test and inspection reports.
- H. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.
- I. Annual Test and Inspection: One year after date of Substantial Completion, test fire-alarm system complying with visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

3.7 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain fire-alarm system. Training sessions shall cover all aspects of system performance, including system architecture, signaling line circuit configurations, sensor and other initiating device types, locations, and addresses, fire alarm control panel function key operation, and other functions as designated by the Owner. All training sessions shall be conducted following final system certification. All training sessions shall be conducted by an authorized fire alarm system distributor representative.

- B. Provide training sessions (minimum of three) for all security personnel on all shifts designated by the Owner.
- C. Comprehensive system troubleshooting training shall be provided for a single individual designated by the Owner. This session shall be separate and distinct from the above described sessions.

3.8 SERVICE AGREEMENT

- A. Included in the bid price shall be a one year service contract, effective upon final system acceptance, to provide all service required beyond the capability of the facility personnel. Contract shall include all service and repairs required and annual system testing and inspection in accordance with NFPA 72.

3.9 WARRANTY

- A. The contractor shall warrant the completed fire alarm system wiring and equipment to be free from inherent mechanical and electrical defects for a period of one (1) year from the date of the completed and certified test or from the date of first beneficial use.

END OF SECTION 28 31 11

SECTION 31 10 00 - SITE CLEARING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Removing existing vegetation.
2. Clearing and grubbing (if needed).
3. Stripping and stockpiling topsoil (if needed).
4. Removing above- and below-grade site improvements.
5. Disconnecting, capping or sealing, removing site utilities, and abandoning site utilities in place.
6. Temporary erosion- and sedimentation-control measures.

1.2 DEFINITIONS

- A. Subsoil: All soil beneath the topsoil layer of the soil profile, and typified by the lack of organic matter and soil organisms.
- B. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil; but in disturbed areas such as urban environments, the surface soil can be subsoil.
- C. Topsoil: Top layer of the soil profile consisting of existing native surface topsoil or existing in-place surface soil and is the zone where plant roots grow. Its appearance is generally friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects more than 2 inches in diameter; and free of subsoil and weeds, roots, toxic materials, or other non-soil materials.
- D. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction, and indicated on Drawings.
- E. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction, and indicated on Drawings defined by a circle concentric with each tree with a radius 1.5 times the diameter of the drip line unless otherwise indicated on plans.
- F. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.3 MATERIAL OWNERSHIP

- A. Except for stripped topsoil and other materials indicated to be stockpiled or otherwise remain Owner's property, cleared materials shall become Contractor's property and shall be removed from Project site.

1.4 SUBMITTALS

- A. Record Drawings: Identifying and accurately showing locations of capped utilities and other subsurface structural, electrical, and mechanical conditions.

1.5 QUALITY ASSURANCE

- A. Pre-installation Conference: Conduct conference at the Project site.

1.6 PROJECT CONDITIONS

- A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.
 1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.

2. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.
- B. Utility Locator Service: Notify "North Carolina OneCall (811)" for area where Project is located before site clearing.
- C. The Contractor shall be responsible for locating underground utilities prior to commencing work and / or excavation. If necessary, the construction manager may obtain the services of a commercial utilities locator and/or various utility companies who may have lines inside the area. In addition, Contractors shall contact the Owner's Representative at least five days prior to excavation. The Contractor will be responsible for utility interruptions caused by construction operations including excavations
- D. Do not commence site clearing operations until temporary erosion- and sedimentation-control measures are in place and erosion control permit is obtained and posted at job-site.
- E. Soil Stripping, Handling, and Stockpiling: Perform only when the topsoil is dry or slightly moist.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Satisfactory Soil Material: Requirements for satisfactory soil material are specified in Division 31 Section "Earth Moving."
 1. Obtain approved borrow soil material off-site when satisfactory soil material is not available on- site.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Protect and maintain benchmarks and survey control points from disturbance during construction.
- B. Install temporary construction fencing per Section 01 "Temporary Facilities and Controls".
- C. Locate and clearly identify trees, shrubs, and other vegetation to remain or to be relocated. Wrap a 1-inch blue vinyl tie tape flag around each tree trunk at 54 inches above the ground.
- D. Protect existing site improvements to remain from damage during construction.
 1. Restore damaged improvements to their original condition, as acceptable to Owner.

3.2 TEMPORARY EROSION AND SEDIMENTATION CONTROL

- A. Provide temporary erosion- and sedimentation-control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to erosion- and sedimentation-control Drawings and requirements of NC State University and NCDEQ.
- B. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.
- C. Inspect, maintain, and repair erosion- and sedimentation-control measures during construction until permanent vegetation has been established.
- D. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.

3.3 EXISTING UTILITIES

- A. Owner will arrange for disconnecting and sealing indicated utilities that serve existing structures before site clearing, when requested by Contractor.
 - 1. Verify that utilities have been disconnected and capped before proceeding with site clearing.
- B. Locate, identify, disconnect, and seal or cap utilities indicated to be removed or abandoned in place.
 - 1. Coordinate with Owner prior to shutting off any utilities.
 - 2. Arrange with utility companies to shut off indicated utilities.
- C. Locate, identify, and disconnect utilities indicated to be abandoned in place.
- D. Interrupting Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
 - 1. Notify Owner, and Engineer not less than (72) hours in advance of proposed utility interruptions.
 - 2. Do not proceed with utility interruptions without Engineer's written permission.
- E. Excavate for and remove underground utilities indicated to be removed.

3.4 CLEARING AND GRUBBING

- A. Remove obstructions, trees, shrubs, and other vegetation to permit installation of new construction.
 - 1. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.
 - 2. Grind down stumps and remove roots, obstructions, and debris to a depth of 18 inches below exposed subgrade.
 - 3. Chip removed tree branches and dispose of off-site.
- B. Fill depressions caused by clearing and grubbing operations with satisfactory soil material unless further excavation or earthwork is indicated.
 - 1. Place fill material in horizontal layers not exceeding a loose depth of 8 inches, and compact each layer to a density equal to adjacent original ground.

3.5 TOPSOIL STRIPPING

- A. Remove sod and grass before stripping topsoil.
- B. Strip topsoil to a minimum depth of 6 inches in a manner to prevent intermingling with underlying subsoil or other waste materials.
 - 1. Remove subsoil and non-soil materials from topsoil, including clay lumps, gravel, and other objects more than 2 inches in diameter; trash, debris, weeds, roots, and other waste materials.
- C. Stockpile topsoil away from edge of excavations without intermixing with subsoil. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust and erosion by water.
 - 1. Limit height of topsoil stockpiles to 72 inches.
 - 2. Dispose of surplus topsoil. Surplus topsoil is that which exceeds quantity indicated to be stockpiled or reused.
 - 3. Stockpile surplus topsoil to allow for re-spreading deeper topsoil.

3.6 SITE IMPROVEMENTS

- A. Remove existing above- and below-grade improvements as indicated and necessary to facilitate new construction.

- B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.
 - 1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut along line of existing pavement and concrete to remain before removing adjacent existing pavement or concrete. Saw-cut faces vertically.

3.7 DISPOSAL OF SURPLUS AND WASTE MATERIALS

- A. Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris, and legally dispose of them off Owner's property.
- B. Separate recyclable materials produced during site clearing from other non-recyclable materials. Store or stockpile without intermixing with other materials and transport them to recycling facilities. Do not interfere with other Project work.

END OF SECTION 31 10 00

SECTION 31 20 00 - EARTH MOVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. North Carolina Department of Transportation and NC State Design and Construction Guideline Standard Specifications and Details where applicable.

1.2 SUMMARY

A. Section Includes:

1. Preparing subgrades for slabs-on-grade, walks, pavements, turf and grasses, and plants.
2. Excavating and backfilling for structures.
3. Subbase course for concrete walks and pavements.
4. Subbase course and base course for asphalt paving.
5. Subsurface drainage backfill for walls and trenches.
6. Excavating and backfilling trenches for utilities and pits for buried utility structures.

B. Related Sections:

1. Division 01 Section "Construction Progress Documentation" for recording pre-excavation and earth moving progress.
2. Division 01 Section "Temporary Facilities and Controls" for temporary controls, utilities, and support facilities; also for temporary site fencing if not in another Section.
3. Division 31 Section "Site Clearing" for site stripping, grubbing, stockpiling topsoil, and removal of above- and below-grade improvements and utilities.
4. Division 31 Section "Erosion and Sedimentation Control".
5. Division 33 Section "Storm Utility Drainage Piping".

1.3 UNIT PRICES

- A. Work of this Section is affected by unit prices and quantity allowances for earth moving specified in Division 01 Section "Unit Prices".
- B. Rock Measurement: Volume of rock actually removed, measured in original position, but not to exceed the following. Unit prices for rock excavation include replacement with approved materials for that condition.
 1. 24 inches outside of concrete forms other than at footings.
 2. 12 inches outside of concrete forms at footings.
 3. 6 inches outside of minimum required dimensions of concrete cast against grade.
 4. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
 5. 6 inches beneath bottom of concrete slabs-on-grade.
 6. 6 inches beneath pipe in trenches, and the greater of 24 inches wider than pipe or 42 inches wide.

1.4 DEFINITIONS

- A. Backfill: Soil material or controlled low-strength material used to fill an excavation.

1. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.
 2. Final Backfill: Backfill placed over initial backfill to fill a trench.
- B. Base Course: Aggregate layer placed between the subbase course and hot-mix asphalt paving.
- C. Bedding Course: Aggregate layer placed over the excavated subgrade in a trench before laying pipe.
- D. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.
- E. Design Subgrade: Final subgrade elevation shown on site grading plan.
- F. Drainage Course: Aggregate layer supporting the slab-on-grade that also minimizes upward capillary flow of pore water.
- G. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.
1. Authorized Additional Excavation: Excavation below design subgrade elevations or beyond indicated lines and dimensions as directed by Engineer or Owner's Testing Agency. Authorized additional excavation and replacement material will be paid for according to Contract provisions for unit prices.
 2. Bulk Excavation: Excavation more than 10 feet in width and more than 30 feet in length.
 3. Unauthorized Excavation: Excavation below design subgrade elevations or beyond indicated lines and dimensions without direction by Engineer or Owner's Testing Agency. Unauthorized excavation, as well as remedial work directed by Engineer, shall be without additional compensation.
- H. Fill: Soil materials used to raise existing grades.
- I. Rock: Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material that exceed 1 cu. yd. for bulk excavation or 3/4 cu. yd. for footing, trench, and pit excavation that cannot be removed by rock excavating equipment equivalent to the following in size and performance ratings, without systematic drilling, ram hammering, ripping, or blasting, when permitted:
1. Excavation of Footings, Trenches, and Pits: Late-model, track-mounted Caterpillar 330 (or equivalent) using new rock teeth.
 2. Bulk Excavation: Late-model, Caterpillar D-8 (or equivalent) pulling a single-tooth ripper.
- J. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and electrical appurtenances, or other man-made stationary features constructed above or below the ground surface.
- K. Structural Fill: Soil free of trash, refuse, frozen material, or other deleterious materials, and contains less than 3% organics. Shall be free of rock or gravel larger than allowed for fill or backfill material as specified hereinafter or as shown on the drawings.
- L. Subgrade: Uppermost surface of an excavation or the top surface of a fill or backfill immediately below subbase, drainage fill, drainage course, or topsoil materials.
- M. Utilities: On-site underground pipes, conduits, ducts, and cables, as well as underground services within buildings.

1.5 SUBMITTALS

- A. Product Data: For each type of the following manufactured products required:

1. Geosynthetics.
 2. Lime and/or cement utilized for soil/base modification.
 3. ABC stone
 4. Detector warning tapes.
- B. Material Test Reports: For each off-site soil material proposed for fill and backfill as follows:
5. Classification according to ASTM D 2487 or method approved by Owner Representative.
 6. Laboratory compaction curve according to ASTM D 698 or method approved by Owner Representative.
- C. Blasting plan approved by authorities having jurisdiction and only if Owner pre-approves of blasting.
- D. Seismic survey report from seismic survey agency.
- E. Pre-excavation Photographs or Videotape: Show existing conditions of adjoining construction and site improvements, including finish surfaces that might be misconstrued as damage caused by earth moving operations. Submit before earth moving begins.

1.6 QUALITY ASSURANCE

- A. Blasting: Comply with applicable requirements in NFPA 495, "Explosive Materials Code," and prepare a blasting plan reporting the following:
1. Types of explosive and sizes of charge to be used in each area of rock removal, types of blasting mats, sequence of blasting operations, and procedures that will prevent damage to site improvements and structures on Project site and adjacent properties.
 2. Seismographic monitoring during blasting operations.
- B. Seismic Survey Agency: An independent testing agency, acceptable to authorities having jurisdiction, experienced in seismic surveys and blasting procedures to perform the following services:
1. Report types of explosive and sizes of charge to be used in each area of rock removal, types of blasting mats, sequence of blasting operations, and procedures that will prevent damage to site improvements and structures on Project site and adjacent properties.
 2. Seismographic monitoring during blasting operations.
- C. Owner's Testing Agency Qualifications: Qualified according to ASTM E 329 and ASTM D 3740 for testing indicated.
- D. Pre-excavation Conference: Conduct conference at the Project Site prior to commencement of site grading.

1.7 PROJECT CONDITIONS

- A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during earth moving operations.
1. Do not close or obstruct streets, parking lots, access drives, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
 2. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.
- B. Improvements on Adjoining Property: Authority for performing earth moving indicated on property adjoining Owner's property will be obtained by Owner before award of Contract.

1. Do not proceed with work on adjoining property until directed by Owner.
- C. Utility Locator Service: Notify "North Carolina OneCall (811)" for area where Project is located before beginning earth moving operations.
- D. Do not commence earth moving operations until temporary erosion- and sedimentation-control measures, specified in Division 31 Sections "Site Clearing" and "Erosion and Sedimentation Control" are in place.
- E. Do not commence earth moving operations until a Town of Wendell Permit and NCDEMLR Erosion Control Plan Letter of Approval are obtained and posted at the project site.
- F. Do not commence earth moving operations until plant-protection measures shown on the Construction Drawings are in place.
- G. The following practices are prohibited within protection zones:
 1. Storage of construction materials, debris, or excavated material.
 2. Parking vehicles or equipment.
 3. Foot traffic.
 4. Erection of sheds or structures.
 5. Impoundment of water.
 6. Excavation or other digging unless otherwise indicated.
 7. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.
- H. Do not direct vehicle or equipment exhaust towards protection zones.
- I. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

- A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations.
- B. Satisfactory Soils: Unified Soil Classification System (USCS) Groups SM, SC, SW, SP, ML, and CL according to ASTM D 2487, or a combination of these groups; free of rock or gravel larger than 3 inches in any dimension, debris, waste, frozen materials, greater than 3% organic material, and other deleterious matter; have a standard Proctor maximum dry density of at least 90 pounds per cubic foot (pcf). USCS groups CH and MH found at the project site can be used, provided the moisture content can be controlled, but should not be placed within 2 feet of final subgrade elevations.
 1. Compact to not less than 95% of the standard Proctor maximum below 12" and not less than 98% of the standard Proctor maximum for the last 12".
- C. Unsatisfactory (or Unsuitable) Soils: Soils not meeting Satisfactory Soils as described in 2.1.B.
 1. On-site borrow materials with natural moisture contents at time of excavation below or up to 10 percent wet of the soil's optimum moisture content shall not be classified as unsatisfactory if the material otherwise meets the material requirements for satisfactory materials. The contractor shall wet or dry these materials to the acceptable moisture range, chemical dry, or replace with off-site borrow at no additional cost to the Owner

2. On-site borrow materials with moisture contents more than 10 percent wet of the soil's optimum moisture content may be considered unsatisfactory. If unsatisfactory soils are found, a meeting with owner and owners testing agency will be required prior to hauling off material.
 3. Additional materials deemed unsatisfactory or unsuitable by Owner's Representative.
- D. Base Course: Aggregate meeting the ABC stone requirements specified in section 1005-3 and 1005-4 of the North Carolina Department of Transportation Standard Specifications for Roads and Structures, Current Edition.
 - E. Engineered Fill: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; with at least 90 percent passing a 1-1/2-inch sieve and not more than 12 percent passing a No. 200 sieve.
 - F. Structural Fill: Same as Satisfactory Soils.
 - G. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; except with 100 percent passing a 1-inch sieve and not more than 8 percent passing a No. 200 sieve.
 - H. Drainage Course: Narrowly graded mixture of washed crushed stone, or crushed or uncrushed gravel; ASTM D 448; coarse-aggregate grading Size 57; with 100 percent passing a 1-1/2-inch sieve and 0 to 5 percent passing a No. 8 sieve.
 - I. Filter Material: Narrowly graded mixture of natural or crushed gravel, or crushed stone and natural sand; ASTM D 448; coarse-aggregate grading Size 67; with 100 percent passing a 1-inch sieve and 0 to 5 percent passing a No. 4 sieve.
 - J. Sand: ASTM C 33; fine aggregate.
 - K. Topsoil: Due to previous project work on campus, there is a current stockpile of topsoil onsite. Based on recommendations from the current Project Representatives onsite it is believed that the topsoil needed for this project is stockpiled onsite.

2.2 GEOTEXTILES

- A. Subsurface Drainage / Separation Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; complying with AASHTO M 288 and the following, measured per test methods referenced:
 1. Grab Tensile Strength: 205 lb; ASTM D 4632.
 2. Grab Tensile Elongation: 50%; ASTM D 4632.
 3. Trapezoidal Tear Strength: 80 lb; ASTM D 4533.
 4. CBR Puncture Strength: 500 lb; ASTM D 6241.
 5. Apparent Opening Size: No. 80 sieve, maximum; ASTM D 4751.
 6. Permittivity: 0.2 per second, minimum; ASTM D 4491.
 7. UV Stability: 50 percent after 500 hours' exposure; ASTM D 4355.
- B. Stabilization Geotextile: Woven geotextile fabric, manufactured for separation applications, made from polyolefins or polyesters; with elongation less than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:
 1. Grab Tensile Strength: 247 lbf; ASTM D 4632.
 2. Sewn Seam Strength: 222 lbf; ASTM D 4632.
 3. Tear Strength: 90 lbf; ASTM D 4533.

4. Puncture Strength: 90 lbf; ASTM D 4833.
5. Apparent Opening Size: No. 60 sieve, maximum; ASTM D 4751.
6. Permittivity: 0.02 per second, minimum; ASTM D 4491.
7. UV Stability: 50 percent after 500 hours' exposure; ASTM D 4355.

2.3 ACCESSORIES

- A. Identification of underground utilities shall be provided per the latest version of NC State Design and Construction Guidelines.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Follow Construction Sequence provided on Drawings.
- B. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earth moving operations.
- C. Protect and maintain erosion and sedimentation controls during earth moving operations.
- D. Remove from site, material encountered in grading operations that does not meet the definition of Satisfactory Soils (2.1.B). Dispose of in manner satisfactory to Owner and local governing agencies. Backfill areas with layers of satisfactory material and compact as specified herein. Materials encountered within the top 6 inches of existing site elevations (prior to stripping) are the responsibility of the Contractor at no additional cost to the Owner (i.e. allowances only apply to depths below top 6 inches of existing site elevations, prior to stripping).
- E. Prior to placing fill in low areas, such as previously existing creeks, or ponds, perform following procedures:
 1. Drain water out by gravity with ditch having flow line lower than lowest elevation in low area. If drainage cannot be performed by gravity ditch, use adequate pump to obtain the same results.
 2. After drainage of low area is complete, remove muck, mud, debris, and other unsatisfactory material by using acceptable equipment and methods that will keep natural soils underlying low area dry and undisturbed. Materials encountered within the top 6 inches of existing site elevations (prior to stripping) are the responsibility of the Contractor at no additional cost to the Owner (i.e. allowances only apply to depths below top 6 inches of existing site elevations, prior to stripping).
 3. All muck, mud, and other materials removed from low areas shall be dried on-site by spreading in thin layers for observation. Material shall be inspected and, if found to be satisfactory for use as fill material, shall be incorporated into lowest elevation of site filling operation, but not within 5'-0" of perimeter of paving or retaining wall subgrade. If, after observation, material is found to be unsatisfactory, it shall be removed from site.
- F. After topsoil stripping, notify Owner's Testing Agency. Proof-roll exposed subgrades in fill areas with a pneumatic-tired and loaded 10-wheel, tandem-axle dump truck weighing not less than 20 tons to identify soft pockets and areas of excess yielding. Do not proof-roll wet or frozen subgrades.
 1. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph.

2. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Engineer or Owner's Testing Agency, and replace with compacted backfill or fill as directed. Materials encountered within the top 6 inches of existing site elevations (prior to stripping) are the responsibility of the Contractor at no additional cost to the Owner (i.e. allowances only apply to depths below top 6 inches of existing site elevations, prior to stripping).
- G. Protect subgrades and foundation soils from freezing temperatures and frost. Remove temporary protection before placing subsequent materials.
- 3.2 DEWATERING
- A. Design:
1. Designate and obtain the services of a qualified dewatering specialist to provide dewatering plan as may be necessary to complete the Work.
 2. Contractor shall be responsible for the accuracy of the drawings, design data, and operational records required.
 3. Contractor shall be responsible for the design, installation, operation, maintenance, and any failure of any component of the system.
- B. Damages:
1. Contractor shall be responsible for an shall repair any damage to work in place, other contractor's equipment, utilities, residences, highways, roads, railroads, private and municipal well systems, adjacent structures, natural resources, habitat, existing wells, and the excavation. Contractor responsibility shall also include, damage to the bottom due to heave and including but not limited to, removal and pumping out of the excavated area that may result from Contractor's negligence, inadequate or improper design and operation of the dewatering system, and any mechanical or electrical failure of the dewatering system.
 2. Remove subgrade materials rendered unsatisfactory by excessive wetting and replace with approved backfill material at no additional cost to the Owner.
- C. Maintaining Excavation in Dewatering Condition
1. Dewatering shall be a continuous operation. Interruptions due to power outages or any other reason will be permitted.
 2. Continuously maintain excavation in a dry condition with positive dewatering methods during preparation of subgrade, installation of pipe, and construction of structures until the critical period of construction or backfill is completed to prevent damage of subgrade support, piping, structure, side slopes, or adjacent facilities from flotation or other hydrostatic pressure imbalance.
 3. Provide standby equipment on site, installed, wired, and available for immediate operation if required to maintain dewatering on a continuous basis in the vent any part of the system becomes inadequate or fails. If dewatering requirements are not satisfied due to inadequacy or failure of dewatering system, perform such work as may be required to restore damaged structures and foundation soils at no additional cost to Owner.
 4. System maintenance shall include but not be limited to 24-hour supervision by personnel skilled in the operation, maintenance, and replacement of system components and any other work required to maintain excavation in dewatered condition.
- D. System Removal: Upon completion of the work, remove dewatering equipment from the site, including related temporary electrical service.

- E. Wells shall be removed or cut off a minimum of 3 feet below final ground surface, capped and abandoned in accordance with regulations by agencies having jurisdiction.

3.3 EXPLOSIVES

- A. Explosives: Obtain written permission from authorities having jurisdiction including Owner before bringing explosives to Project site or using explosives on Project site.
 - 1. Perform blasting without damaging adjacent structures, property, or site improvements.
 - 2. Perform blasting without weakening the bearing capacity of rock subgrade and with the least-practicable disturbance to rock to remain.

3.4 EXCAVATION, GENERAL

- A. Unclassified Excavation: Excavate to design subgrade elevations regardless of the character of surface and subsurface conditions encountered. Unclassified excavated materials may include pavements, underground structures, utilities, obstructions, and other items indicated to be removed; together with soil, boulders, and rock. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation, removal of obstructions, or unsuitable soils to subgrade elevation.
 - 1. If excavated materials intended for fill and backfill include unsatisfactory soil materials and rock, replace with satisfactory materials. Contractor will be paid for disposal and replacement of unsatisfactory materials encountered at depths greater than 6 inches below the existing ground surface elevation, prior to stripping.
 - 2. Remove rock to lines and grades indicated to permit installation of permanent construction without exceeding the following dimensions:
 - b. 24 inches outside of concrete forms other than at footings. 12 inches outside of concrete forms at footings.
 - c. 6 inches outside of minimum required dimensions of concrete cast against grade.
 - d. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
 - e. 6 inches beneath bottom of concrete slabs-on-grade subbase materials.
 - f. 6 inches beneath pipe in trenches, and the greater of 24 inches wider than pipe or 42 inches wide.
- B. Unsatisfactory Soils: Volume of soils not meeting the definition of Satisfactory Soils (2.1.B), or determined by the Owner's Testing Agency to be unstable or unsuitable for subgrade support, measured in original position, and replaced with satisfactory structural fill/subgrade/foundation material that meets the allowable design bearing pressure, compaction requirements, and settlement limitations specified in the geotechnical report and construction documents for the site and structure. Unsatisfactory soils shall not be removed until approved and cross-sectioned by Owner's Testing Agency. Changes in the Contract Sum or the Contract Time will be in accordance with Allowances and Unit Prices provisions for removal and replacement of unsuitable soils. No changes in the Contract Sum or the Contract Time if unsatisfactory materials are encountered within 6 inches below the existing ground surface elevation, prior to stripping.

3.5 EXCAVATION FOR STRUCTURES

- A. Excavate to indicated elevations and dimensions within a tolerance of plus or minus 1 inch. If applicable, extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections.

1. Excavations for Footings and Foundations: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other work.
 2. Deep Foundations: Stop excavations 6 to 12 inches (150 to 300 mm) above bottom of pile cap before deep foundations are placed. After foundations have been installed, remove loose and displaced material. Excavate to final grade, leaving solid base to receive concrete caps.
 3. Excavation for Underground Tanks, Basins, and Mechanical or Electrical Utility Structures: Excavate to elevations and dimensions indicated within a tolerance of plus or minus 1 inch (25 mm). Do not disturb bottom of excavations intended as bearing surfaces.
- B. Excavations at Edges of Tree- and Plant-Protection Zones:
1. Excavate by hand to indicated lines, cross sections, elevations, and subgrades. Use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.
 2. Cut and protect roots according to requirements in Division 01 Section "Temporary Tree and Plant Protection."

3.6 EXCAVATION FOR WALKS AND PAVEMENTS

- A. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

3.7 EXCAVATION FOR UTILITY TRENCHES

- A. Excavate trenches to indicated gradients, lines, depths, and elevations.
1. Excavate trenches to allow installation of top of pipe below frost line.
- B. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit.
1. Clearance: 6 inches each side of pipe or conduit.
- C. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade.
1. For pipes and conduit less than 6 inches in nominal diameter, hand-excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.
 2. For pipes and conduit 6 inches or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe or conduit circumference. Fill depressions with tamped sand backfill.
 3. For flat-bottomed, multiple-duct conduit units, hand-excavate trench bottoms and support conduit on an undisturbed subgrade.
 4. Excavate trenches 6 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.
- D. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation, removal of obstructions, or unsuitable soils to trench bottom.
- E. Trenches in Tree- and Plant-Protection Zones:

1. Hand-excavate to indicated lines, cross sections, elevations, and subgrades. Use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.
2. Do not cut main lateral roots or taproots; cut only smaller roots that interfere with installation of utilities.
3. Cut and protect roots according to requirements in Division 01 Section "Temporary Tree and Plant Protection."

3.8 SUBGRADE EVALUATION

- A. Notify Owner's Testing Agency when excavations have reached required subgrade.
- B. If Owner's Testing Agency determines that Unsatisfactory Soils (3.4.B) are present, continue excavation and replace with compacted backfill or fill material as directed.
- C. Proof-roll final subgrade below pavements with a pneumatic-tired and loaded 10-wheel, tandem-axle dump truck weighing not less than 20 tons to identify soft pockets and areas of excess yielding. Do not proof- roll wet or frozen subgrades.
 1. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph.
 2. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Engineer or Owner's Testing Agency, and replace with compacted backfill or fill as directed.
- D. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation, removal of obstructions, or Unsatisfactory soils to subgrade elevation.
- E. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by Engineer, without additional compensation.

3.9 UNAUTHORIZED EXCAVATION

- A. Fill unauthorized excavations as directed by Engineer.

3.10 STORAGE OF SOIL MATERIALS

- A. Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
 1. Stockpile soil materials away from edge of excavations.
 2. Place silt fence approximately 3-ft from edge of stockpile.
 3. Do not store within drip line of remaining trees.

3.11 BACKFILL

- A. Place and compact backfill in excavations promptly, but not before completing the following:
 1. Construction below finish grade including, where applicable, subdrainage, dampproofing, waterproofing, and perimeter insulation.
 2. Surveying locations of underground utilities for Record Documents.
 3. Testing and inspecting underground utilities.
 4. Removing concrete formwork.
 5. Removing trash and debris.
 6. Removing temporary shoring and bracing, and sheeting.

7. Installing permanent or temporary horizontal bracing on horizontally supported walls.

B. Place backfill on subgrades free of mud, frost, snow, or ice.

3.12 UTILITY TRENCH BACKFILL

A. Place backfill on subgrades free of mud, frost, snow, or ice.

B. Place and compact bedding course on trench bottoms and where indicated. Shape bedding course to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits.

C. Trenches under Footings: Backfill trenches excavated under footings and within 18 inches of bottom of footings with satisfactory soil.

D. Trenches under Roadways: After installing and testing piping or conduit less than 30 inches below surface of roadways, completely encase piping or conduit in a minimum of 4 inches of concrete before backfilling or placing roadway subbase course. Concrete is specified in Division 03 Section "Cast-in-Place Concrete."

E. Backfill voids with satisfactory soil compacted in accordance with specifications provided herein while removing shoring and bracing.

F. Place and compact initial backfill of subbase material and satisfactory soil, free of particles larger than 1 inch in any dimension, to a height of 12 inches over the pipe or conduit.

1. Carefully compact initial backfill under pipe haunches and compact evenly up on both sides and along the full length of piping or conduit to avoid damage or displacement of piping or conduit. Coordinate backfilling with utilities testing.

G. Place and compact final backfill of satisfactory soil to final subgrade elevation.

H. All underground piping and utilities (both metallic and non-metallic), except lawn irrigation lines, shall have two stages of identification and/or warning by a combination of non-detectable and detectable warning tapes.

I. Install warning tape (detectable warning tape) directly on top of the pipeline and permanently secured to the pipeline at 10' intervals.

J. Install identification tape (non-detectable warning tape) approximately 18" to 30" above the service pipe, but a minimum of 10" and a maximum of 24" below finished grade.

K. Install tracer wire to bottom of pipe taped at a maximum of 10' intervals. An insulated copper tracer wire or other approved conductor shall be installed along the length of the pipe to all nonmetallic piping, including irrigation lines, and metallic pipe with compression gasket fittings installed underground. Access shall be provided to the tracer wire or the tracer wire shall terminate aboveground at the end of the nonmetallic piping. The tracer wire size shall be copper single-conductor 10AWG minimum and the insulation type suitable for direct burial with type "UF" (Underground Feeder) insulation and shall be continuous along the pipeline passing through the inside of each valve box or manhole.

3.13 SOIL FILL

A. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.

B. Place and compact fill material in layers using satisfactory fill (or structural fill) to required elevations.

C. Place soil fill on subgrades free of mud, frost, snow, or ice.

3.14 SOIL MOISTURE CONTROL

- A. Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 3 percent of optimum moisture content.
 - 1. Do not place backfill or fill soil material on surfaces that are muddy, frozen, or contain frost or ice.
 - 2. On-site borrow materials with natural moisture contents below or up to 10 percent wet of the soil's optimum moisture content shall not be classified as unsatisfactory if the material otherwise meets the material requirements for satisfactory materials. The contractor shall wet or dry these materials to the acceptable moisture range, chemical dry, or replace with off-site borrow at no additional cost to the Owner.
 - 3. On-site borrow materials with moisture content more than 10 percent wet of the soil's optimum moisture content may be considered unsatisfactory.
 - 4. Remove and replace, or scarify and air dry, otherwise satisfactory soil material that exceeds optimum moisture content by 3 percent and is too wet to compact to specified dry unit weight.

3.15 COMPACTION OF SOIL BACKFILLS AND FILLS

- A. Place backfill and fill soil materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.
- B. Place backfill and fill soil materials evenly on all sides of structures to required elevations, and uniformly along the full length of each structure.
- C. Compact as follows:

Location	Percent of Maximum Laboratory Density ASTM D698
Subgrade and Fill below Structures and Pavement (top 12 inches)	98
Subgrade and Fill below Structures and Pavement (below top 12 inches)	95
Subgrade & Fill in All other Areas	90

3.16 GRADING

- A. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.
 - 1. Provide a smooth transition between adjacent existing grades and new grades.
 - 2. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.
- B. Site Rough Grading: Slope grades to direct water away from buildings and to prevent ponding. Finish subgrades to required elevations within the following tolerances:
 - 1. Turf or Unpaved Areas: Plus or minus 1 inch.
 - 2. Walks: Plus or minus 1 inch.
 - 3. Pavements: Plus or minus 1/2 inch.

3.17 SUBSURFACE DRAINAGE

- A. Subdrainage Pipe: Specified in Division 33 Section "Subdrainage."

- B. Subsurface Drain: Place subsurface drainage geotextile around perimeter of subdrainage trench. Place a 6-inch course of filter material on subsurface drainage geotextile to support subdrainage pipe. Encase subdrainage pipe in a minimum of 12 inches of filter material, placed in compacted layers 6 inches thick, and wrap in subsurface drainage geotextile, overlapping sides and ends at least 6 inches.
 - 1. Compact each filter material layer to 95 percent of maximum dry unit weight according to ASTM D 698 with a minimum of two passes of a plate-type vibratory compactor.
- C. Drainage Backfill: Place and compact filter material over subsurface drain, in width indicated, to within 12 inches of final subgrade, in compacted layers 6 inches thick. Overlay drainage backfill with one layer of subsurface drainage geotextile, overlapping sides and ends at least 6 inches.
 - 1. Compact each filter material layer to 95 percent of maximum dry unit weight according to ASTM D 698 with a minimum of two passes of a plate-type vibratory compactor.
 - 2. Place and compact impervious fill over drainage backfill in 6-inch- thick compacted layers to final subgrade.

3.18 BASE COURSES UNDER PAVEMENTS AND WALKS

- A. Place base course on subgrades approved by the Owner's Testing Agency free of mud, frost, snow, or ice.
- B. On prepared subgrade, place base course under pavements and walks as follows:
 - 1. Place base course material over subgrade under hot-mix asphalt pavement.
 - 2. Shape base course to required crown elevations and cross-slope grades.
 - 3. Place base course 10 inches or less in compacted thickness in a single layer.
 - 4. Place base course that exceeds 10 inches in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches thick or less than 4 inches thick.
 - 5. Compact base course at moisture content within +/- 2% of optimum moisture to required grades, lines, cross sections, and thickness to not less than 98 percent of maximum dry unit weight according to ASTM D1556 as modified by NCDOT.
- C. Pavement Shoulders: Place shoulders along edges of base course to prevent lateral movement. Construct shoulders, at least 12 inches wide, of satisfactory soil materials and compact simultaneously with each base layer to not less than 98 percent of maximum dry unit weight according to the standard Proctor maximum dry density (ASTM D698).

3.19 FIELD QUALITY CONTROL

- A. Owner's Testing Agency: Owner will engage a qualified geotechnical engineering testing agency to perform tests and inspections.
- B. Allow testing agency to evaluate and test subgrades and each fill or backfill layer. Proceed with subsequent earth moving only after test results for previously completed work comply with requirements.
- C. Footing Subgrade: At footing subgrades, at least one test of each soil stratum will be performed to verify design bearing capacities. Subsequent verification and approval of other footing subgrades may be based on a visual comparison of subgrade with tested subgrade when approved by Engineer.

- D. Testing agency will test compaction of soils in place according to ASTM D 1556, ASTM D 2167, ASTM D 2922, and ASTM D 2937, as applicable. Tests will be performed at the following locations and frequencies:
 - 1. Paved: At subgrade and at each compacted fill and backfill layer, at least one test for every 2500 sq. ft. or less of paved area, but in no case fewer than three tests.
 - 2. Foundation Wall Backfill: At each compacted backfill layer, at least one test for every 100 feet or less of wall length, but no fewer than two tests.
 - 3. Trench Backfill: At each compacted initial and final backfill layer, at least one test for every 150 feet or less of trench length, but no fewer than two tests.
- E. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil materials to depth required; recompact and retest until specified compaction is obtained.

3.20 PROTECTION

- A. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.
- B. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.
 - 1. Scarify or remove and replace soil material to depth as directed by Engineer; reshape and recompact.
- C. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.
 - 1. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to greatest extent possible.
- D. Maintain subgrades to receive base course stone within compaction and moisture requirements continuously until stone is placed.

3.21 DISPOSAL OF SURPLUS AND WASTE MATERIALS

- A. Transport surplus satisfactory soil and topsoil to designated storage areas on Owner's property or remove from site and legally dispose as directed by Engineer. Stockpile or spread soil as directed by Engineer.
 - 1. Remove waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off Owner's property.

END OF SECTION 31 20 00

SECTION 31 23 17 – TRENCHING

PART 1 - GENERAL

1.1 GENERAL NOTES

- A. Prior to beginning Work, Contractor to request a field inspection with the Owner and Engineer for inspection before project start and before project acceptance.
- B. Trenches for underground piping, where necessary shall be excavated to the required depth and bell holes shall be provided where necessary to insure uniform bearing. Trench excavation lines shall provide sufficient clearance for proper execution of underground work.
- C. Trenches shall be open cut from the surface. Irregularities at bottom of trench, or where excavation is below required depth shall be refilled to required grade with compacted soil, or flowable fill at direction of onsite geotechnical engineer.
- D. The Contractor shall be held responsible for the sufficiency of sheeting and bracing and for all damages to property or injury to persons resulting from improper quality, strength, placing and maintenance of trench shoring, sheeting or bracing.
- E. Existing utility lines to be retained that are shown on construction drawings or locations of which are made known to the Contractor prior to excavation operations, shall be protected from damage during excavation and backfilling, and if damaged shall be repaired by Contractor, at own expense.
- F. Existing utility lines found during excavations that were not shown on construction drawings or made known to Contractor prior to excavation shall be protected and remain uninterrupted until approval by Owner or Engineer to proceed.
- G. The Contractor shall be responsible for providing and maintaining a pedestrian and traffic control plan in accordance with Owner standards.
- H. All underground utilities encountered during the projects construction shall be located by a Professional Land Surveyor licensed in North Carolina.

1.2 DEFINITIONS

- A. Standard Specifications: When referenced in this section, shall mean Department of Transportation Standard Specifications For Roads And Structures (Latest Version). Parts of these Standard Specifications that are specifically referenced shall become part of this section as though stated herein in full. In case of a discrepancy between the requirements of the Standard Specifications and the requirements stated herein, the requirements herein shall prevail.

1.3 SUMMARY

- A. Section Includes:
 - 1. Excavating trenches for utilities from 5 feet outside any building to terminating connection.
 - 2. Compacted fill from top of utility bedding to finished grade.
 - 3. Backfilling and compaction.

1.4 SUBMITTALS

- A. Excavation Protection Plan: Describe sheeting, shoring, and bracing materials and installation required to protect excavations and adjacent structures and property; include structural calculations to support plan.

B. Product Data: Geotextile fabric indicating fabric and construction.

C. Materials Source: Name of imported fill materials suppliers.

1.5 QUALITY ASSURANCE

A. Use this Article to specify compliance with overall reference standards affecting products and installation.

B. Perform Work according to NCDOT, City of Raleigh, and NC State standards.

C. Prepare excavation protection plan under direct supervision of professional engineer experienced in design of this Work and licensed in State of North Carolina.

1.6 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.7 COORDINATION

A. Verify Work associated with lower elevation utilities is complete before placing higher elevation utilities.

PART 2 - PRODUCTS

2.1 FILL MATERIALS

A. Subsoil Fill: Type as specified in Standard Specifications.

B. Structural Fill: Type as specified in Standard Specifications.

C. Granular Fill: Type as specified in Standard Specifications.

D. Concrete:

1. Lean concrete.

2.2 ACCESSORIES

A. Geotextile Fabric: Non-biodegradable, non-woven. Use NCDOT standard for fabric application and type by use.

PART 3 - EXECUTION

3.1 LINES AND GRADES

A. Lay pipes to lines and grades indicated.

1. Engineer may make changes in lines, grades, and depths of utilities when changes are required for Project conditions.

B. Use laser-beam instrument with qualified operator to establish lines and grades.

3.2 PREPARATION

A. Call local utility line information service at 811 not less than three working days before performing Work.

1. Request underground utilities to be located and marked within and surrounding construction areas.

B. Identify required lines, levels, contours, and datum locations.

C. Protect plant life, lawns, and other features remaining as portion of final landscaping.

D. Protect benchmarks, existing structures, trees, sidewalks, paving, and curbs from excavating equipment and vehicular traffic.

- E. Maintain and protect above and below grade utilities indicated to remain.
- F. Establish temporary traffic control and detours when trenching is performed in public right-of-way. Relocate controls and reroute traffic as required during progress of Work.

3.3 TRENCHING

- A. Excavate subsoil required for utilities.
- B. Remove lumped subsoil, boulders, and rock over 6 inches.
- C. Perform excavation within 24 inches of existing utility service according to utility's requirements.
- D. Do not advance open trench more than 200 feet ahead of installed pipe.
- E. Cut trenches sufficiently wide to enable installation and allow inspection. Remove water or materials that interfere with Work, dewater in accordance with Section 31 23 19.
- F. Excavate bottom of trenches to a maximum of 2 feet past outside diameter dimensions or outside of concrete cradle.
- G. Excavate trenches to depth indicated on Drawings. Provide uniform and continuous bearing and support for bedding material and pipe.
- H. When Project conditions permit, slope side walls of excavation starting 24 inches above top of pipe. When side walls cannot be sloped, provide sheeting and shoring to protect excavation as specified in this Section.
- I. When subsurface materials at bottom of trench are loose or soft, excavate to greater depth as directed by onsite Owner's Testing Agency until suitable material is encountered.
- J. Cut out soft areas of subgrade not capable of compaction in place. Backfill with flowable fill or Owner's Testing Agency approved fill and compact to density equal to or greater than requirements for subsequent backfill material.
- K. Trim excavation. Hand trim for bell and spigot pipe joints. Remove loose matter.
- L. Correct areas over excavated areas with compacted backfill as specified for authorized excavation or replace with fill concrete as directed by Engineer.
- M. Remove excess subsoil not intended for reuse, from Site.
- N. Stockpile excavated material in area designated on Site according to Section 31 25 00.

3.4 SHEETING AND SHORING

- A. Sheet, shore, and brace excavations to prevent danger to persons, structures and adjacent properties and to prevent caving, erosion, and loss of surrounding subsoil.
- B. Support trenches excavated through unstable, loose, or soft material. Provide sheeting, shoring, bracing, or other protection to maintain stability of excavation or at direction of onsite geotechnical engineer.
- C. Design sheeting and shoring to be removed at completion of excavation Work.
- D. Repair damage caused by failure of sheeting, shoring, or bracing and for settlement of filled excavations or adjacent soil.
- E. Repair damage to new and existing Work from settlement, water or earth pressure or other causes resulting from inadequate sheeting, shoring, or bracing.

3.5 BACKFILLING

- A. Backfill trenches to contours and elevations with Satisfactory Soils per Section 312000.

- B. Systematically backfill to allow maximum time for natural settlement. Do not backfill over porous, wet, frozen, or spongy subgrade surfaces.
- C. Place fill material in continuous layers and compact to 95 percent of the material's standard Proctor maximum dry density ASTM D698), except in the top 12 inches where this shall be increased to 98 percent.
- D. Protect open trench to protect the public.

3.6 FIELD QUALITY CONTROL

- A. Perform laboratory material tests according to ASTM D698.
- B. Perform in place compaction tests according to following:
 - 1. Density Tests: ASTM D698.
 - 2. Moisture Tests: ASTM D3017.
- C. When tests indicate Work does not meet specified requirements, remove Work, replace, compact, and retest.
- D. Test as required in Section 31200, "Field Quality Control".

3.7 PROTECTION OF FINISHED WORK

- A. Reshape and re-compact fills subjected to vehicular traffic during construction.

END OF SECTION 31 23 17

SECTION 31 23 19 – DEWATERING

PART 1 - GENERAL

1.1 GENERAL NOTES

- A. Excavations should be kept dry at all times by means of cofferdams, trenches, sumps, pumps or other equipment or arrangements required and approved.
- B. Prevent surface water from flowing into excavations, ponding on prepared subgrades and from flooding Project site and surroundings.
- C. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation and/or subsurface seepage.
- D. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations or trenches. Establish and maintain temporary drainage ditches and other diversions outside excavation limits as required and approved by Owner or Engineer.
- E. Do not use excavations or trenches as temporary drainage ditches.

1.2 SUMMARY

- A. Section Includes:
 - 1. Construction site dewatering.

1.3 DEFINITIONS

- A. Dewatering includes the following:
 - 1. Removing surface or ground water from within excavations or trenches.
 - 2. Disposing of removed water.
- B. Surface Water Control: Removal of surface water within open excavations.

1.4 PERFORMANCE REQUIREMENTS

- A. Dewatering Performance: Design, furnish, install, test, operate, monitor, and maintain dewatering system of sufficient scope, size, and capacity to control hydrostatic pressures and to lower, control, remove, and dispose of ground water and permit excavation and construction to proceed on dry, stable subgrades.
 - 1. Delegated Design: Design dewatering system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 - 2. Continuously monitor and maintain dewatering operations to ensure erosion control, stability of excavations and constructed slopes, that excavation does not flood, and that damage to subgrades and permanent structures is prevented.
 - 3. Prevent surface water from entering excavations by grading, dikes, or other means.
 - 4. Accomplish dewatering without damaging existing buildings, structures, and site improvements adjacent to excavation.
 - 5. Remove dewatering system when no longer required for construction.

1.5 QUALITY ASSURANCE

- A. Pre-installation Conference: Conduct conference at Project site.
 - 1. Review methods and procedures related to dewatering including, but not limited to, the following:
 - a. Inspection and discussion of condition of site to be dewatered including coordination with temporary erosion control measures and temporary controls and protections.

- b. Proposed site clearing and excavations.

1.6 PROJECT CONDITIONS

- A. Survey Work: Engage a qualified land surveyor to survey adjacent structures and site improvements, establishing exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks and record existing elevations.
 - 1. During dewatering, regularly resurvey benchmarks, maintaining an accurate log of surveyed elevations for comparison with original elevations. Promptly notify Engineer if changes in elevations occur or if any damage is evident in adjacent construction.

PART 2 - PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION

- A. Conduct additional borings and investigations to supplement subsurface investigations identified as required to complete dewatering system design.
- B. Call Local Utility Line Information service at 811 not less than three working days before performing Work.
 - 1. Request underground utilities to be located and marked within and surrounding construction areas.

3.2 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by dewatering operations.
 - 1. Prevent surface water and subsurface or ground water from entering excavations, from ponding on prepared subgrades, and from flooding site and surrounding area.
 - 2. Protect subgrades and foundation soils from softening and damage by rain or water accumulation.
- B. Install dewatering system to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.
- C. Provide temporary grading to facilitate dewatering and control of surface water.
- D. Monitor dewatering systems continuously.
- E. Promptly repair damages to adjacent facilities caused by dewatering.
- F. Protect and maintain temporary erosion and sedimentation controls, which are specified in Section 31 25 00 during dewatering operations.

3.3 INSTALLATION

- A. Contractor shall furnish, install, operate, and maintain any pumping equipment, etc. needed for removal of water from various parts of the site at no additional cost to the Owner.
- B. Work shall be in accordance with NCDOT standards.

3.4 FIELD QUALITY CONTROL

- A. Provide continual observation to ensure that subsurface soils are not being removed by the dewatering operation.

END OF SECTION 31 23 19

SECTION 31 23 24 - FLOWABLE FILL

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Flowable fill for:
 - a. Structure backfill.
 - b. Utility bedding.
 - c. Utility backfill.
 - d. Filling abandoned utilities.
 - e. Concrete Cradle.

1.2 DEFINITIONS

- A. Utility: Any buried pipe, duct, conduit, manhole, tank, or cable.
- B. Excavatable Flowable Fill: Lean cement concrete fill used where future excavation may be required such as fill for utility trenches, bridge abutments, and culverts.
- C. Non-excavatable Flowable Fill: Lean cement concrete fill used where future excavation is not anticipated such as fill below structure foundations and filling abandoned utilities.

1.3 SUBMITTALS

- A. Materials Source: Name of flowable fill materials suppliers.
- B. Mix Design:
 - 1. Furnish flowable fill mix design for each specified strength. Furnish separate mix designs when admixtures are require for following:
 - a. Flowable fill Work during hot and cold weather.
 - b. Air entrained flowable fill Work.
 - 2. Identify design mix ingredients, proportions, properties, admixtures, and tests.
 - 3. Furnish test results to certify flowable fill mix design properties meet or exceed specified requirements.
- C. Delivery Tickets:
 - 1. Furnish duplicate delivery tickets indicating actual materials delivered to Project Site.

1.4 QUALITY ASSURANCE

- A. Perform Work according to State of North Carolina Department of Transportation standards.
- B. Manufacturer: Company specializing in manufacturing products specified in this Section with three years' experience.
 - 1. Product source approved by authority having jurisdiction.

1.5 ENVIRONMENTAL REQUIREMENTS

- A. Do not install flowable fill during inclement weather or when ambient temperature is less than 40 degrees F.

PART 2 - PRODUCTS

2.1 FLOWABLE FILL

- A. Furnish materials according to State of North Carolina Department of Transportation standards.
- B. Flowable Fill: Excavatable type.

C. Flowable Fill for Stormwater Control Measure cradle: Non-Excavatable Type; 750 psi minimum.

2.2 MATERIALS

A. Portland Cement: ASTM C150 Type I - Normal.

B. Fine Aggregates: ASTM C33.

C. Water: Clean and not detrimental to concrete.

2.3 ADMIXTURES

A. Furnish materials according to State of North Carolina Department of Transportation standards.

2.4 MIXES

A. Mix and deliver flowable fill according to ASTM C94/C94M, Option C.

B. Flowable Fill Design Mix:

ITEM	EXCAVATABLE	NON-EXCAVATABLE
Cement Content	75 to 100 lb/cu yd	100 to 150 lb/cu yd
Fly Ash Content	None	150 to 600 pcf
Water Content	As specified	As specified
Air Entrainment	5-35 percent	5-15 percent
28-Day Compressive Strength	Maximum 100 psi	Minimum 125 psi
Unit Mass (Wet)	80 to 110 pcf	100 to 125 pcf
Temperature, Minimum at Point of Delivery	50 degrees F	50 degrees F

C. Provide water content in design mix to produce self-leveling, flowable fill material at time of placement.

D. Design mix air entrainment and unit mass are for laboratory design mix and source quality control only.

2.5 SOURCE QUALITY CONTROL

A. Test and analyze properties of flowable fill design mix and certify results for following:

1. Properties of hardened flowable fill design mix including:

- a. Compressive strength at 1 day, 7 days, and 28 days. Report compressive strength of each specimen and average specimen compressive strength.
- b. Unit mass for each specimen and average specimen unit mass at time of compressive strength testing.

B. Prepare delivery tickets containing following information:

1. Project designation.
2. Date.
3. Time.
4. Class and quantity of flowable fill.
5. Actual batch proportions.
6. Free moisture content of aggregate.
7. Quantity of water withheld.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify excavation is complete.
- B. Verify utility installation is complete and tested before placing flowable fill.
- C. Verify excavation is dry and dewatering system is operating, if required.

3.2 PREPARATION

- A. Support and restrain utilities to prevent movement and flotation during installation of flowable fill.
- B. Protect structures and utilities from damage caused by hydraulic pressure of flowable fill before fill hardens.
- C. Protect utilities to prevent intrusion of flowable fill.

3.3 INSTALLATION - FILL, BEDDING, AND BACKFILL

- A. Place flowable fill by chute, pumping or other methods approved by Engineer.
 - 1. When required, place flowable fill under water using tremie procedure.
 - 2. Do not place flowable fill through flowing water.
- B. Place flowable fill in lifts to prevent lateral pressures from exceeding structural capacity of structures and utilities.
- C. Place flowable fill evenly on both sides of utilities to maintain alignment.
- D. Place flowable fill to elevations indicated without vibration or other means of compaction.

3.4 INSTALLATION - FILLING ABANDONED UTILITIES

- A. Perform work in accordance with Standard Specifications and Construction Drawings.
- B. Verify pipes and conduits are not clogged and are sufficiently empty to permit gravity installation of flowable fill for entire length indicated to be filled.
- C. Seal lower end of pipes and conduits by method to contain flowable fill and to vent trapped air caused by filling operations.
- D. Place flowable fill using method to ensure there are no voids.
 - 1. Fill pipes and conduits from high end.
 - 2. Fill manholes, tanks, and other structures from grade level access points.
- E. After filling pipes and conduits seal both ends.

3.5 FIELD QUALITY CONTROL

- A. Perform testing according to ASTM C94/C94M.
 - 1. Take samples for tests for every 150 cu yd of flowable fill, or fraction thereof, installed each day.
 - 2. Sample, prepare and test four compressive strength test cylinders according to ASTM D4832. Test one specimen at 3 days, one at 7 days, and two at 28 days.
 - 3. Measure temperature at point of delivery when samples are prepared.
- B. Defective Flowable Fill: Fill failing to meet following test requirements or fill delivered without following documentation.
 - 1. Test Requirements:
 - a. Minimum temperature at point of delivery.
 - b. Compressive strength requirements for each type of fill.
 - 2. Documentation: Duplicate delivery tickets.

3.6 CLEANING

- A. Remove spilled and excess flowable fill from Project Site.
- B. Restore facilities and Site areas damaged or contaminated by flowable fill installation to existing condition before installation.

END OF SECTION 31 23 24

SECTION 31 25 00 - EROSION AND SEDIMENTATION CONTROL

PART 1 - GENERAL

1.1 SUMMARY

- A. This section covers work necessary for stabilization of soil to prevent erosion during and after construction and land disturbance activities. The work shall include furnishing all labor, materials, tools, and equipment to perform all work and services necessary for or incidental to the furnishing and installation, complete, of all operations in connection with erosion control as shown on drawings and as specified, in accordance with provisions of the Contract Documents, and completely coordinated with work of all other trades. The Contractor shall insure that all sedimentation features are in place prior to construction as necessary. Contractor shall remove the features as ground cover is established with approval of the Engineer and/or controlling authorities.
- B. The minimum areas requiring soil erosion and sediment control measures are indicated on the Drawings. The right is reserved to modify the use, location, and quantities of soil erosion and sedimentation control measures based on activities of the Contractor and as the Engineer considers to be the best interest of the Owner.
- C. Any governmental agency standard as noted below should be referenced as the latest, most recent, or current version of the referenced standard.
- D. The Contractor shall implement the approved Erosion and Sediment Control plan and follow all state requirements regarding sedimentation and erosion control. Construction methods shall minimize sedimentation and erosion.
- E. See additional information noted on the Drawings.

1.2 DEFINITIONS

- A. NCDOT: North Carolina Department of Transportation
- B. NCDEQ - DEMLR: North Carolina Department of Environmental Quality - Division of Energy, Mineral, and Land Resources.
- C. Standard Erosion Control Specification: North Carolina Erosion and Sediment Control Planning and Design Manual, latest version. Available at the following location:
<http://deq.nc.gov/about/divisions/energy-mineral-land-resources/energy-mineral-land-permit-guidance/erosion-sediment-control-planning-design-manual>

1.3 GENERAL

- A. All activities shall conform to the Standard Erosion Control Specification: North Carolina Erosion and Sediment Control Planning and Design Manual, latest version; the approved erosion control permit; the Specifications; and the Drawings. In the event of a conflict, the more stringent requirement shall apply.
- B. The Sections of the Standard Erosion Control Specifications referenced include, but are not limited to:

Standard & Specification No	Title
6.06	Temporary Gravel Construction Entrance / Exit
6.10	Temporary Seeding

6.17	Rolled Erosion Control Products
6.20	Temporary Diversions
6.32	Temporary Slope Drains
6.51	Hardware Cloth and Gravel Inlet Protection
6.62	Sediment Fence (Silt Fence)
6.64	Skimmer Sediment Basin
6.66	Compost Sock
6.80	Construction Road Stabilization
6.83	Check Dam

- C. Soil erosion stabilization and sedimentation control shall consist of the following elements:
1. Maintenance of existing permanent or temporary storm drainage piping and channel systems, as necessary.
 2. Construction of temporary erosion control facilities such as silt fences, inlet protection, etc.
 3. Topsoil, Temporary Seeding, and Sod:
 - a. Placement and maintenance of Temporary Seeding on all areas disturbed by construction, as necessary.
 - b. Placement of permanent topsoil, fertilizer, and sod, etc. in areas as specified on the Drawings.
 4. It is the intent that all areas in which construction activities have disturbed existing vegetation shall be temporarily seeded, as required, top soiled, and permanently sodded.
- D. The Contractor shall be responsible for phasing Work in areas allocated for his / her exclusive use during this Project, including any proposed stockpile areas, to restrict sediment transport. This will include installation of any temporary erosion control devices, ditches, or other facilities that may be required to comply with NCDEQ regulations and requirements.
- E. The areas set aside for the Contractor's use during the Project may be temporarily developed to provide satisfactory working, staging, and administrative areas for his / her exclusive use. Preparation of these areas shall be in accordance with other requirements contained within these Specifications and shall be done in a manner to both control all sediment transport from the project area, and to permit the area to be returned to design grades and drainage patterns upon completion of the project.
- F. Upon completion of the Project, all areas that have been disturbed by the Contractor shall be stabilized by top-soiling and permanent sodding seeding as shown on the Drawings.
- G. All permanent stockpiles, if any, shall be seeded with soil stabilization seed and protected by construction of two (2) rows of silt fence.
- H. Sediment transport and erosion from working stockpiles shall be controlled and restricted from moving beyond the immediate stockpile area by construction of temporary silt fence, as

necessary. The Contractor shall keep these temporary facilities in operational condition by regular cleaning, re-grading, and maintenance.

- I. The Contractor shall maintain all elements of the Soil Erosion Stabilization and Sedimentation Control systems to be constructed during this Project for the duration of his / her activities on this Project. Formal inspections made jointly by the Contractor and the Engineer shall be conducted every week to evaluate the Contractor's conformance to the requirements of both these Specifications and NCDEQ regulations.
- J. Maintenance of the Soil Erosion Stabilization and Sedimentation Control systems constructed as part of this project shall be in accordance with the Drawings and NCDEQ Standard Erosion Control Specifications.
- K. Contractor shall remove all erosion control measures from the site once permit requirements for vegetation establishment have been met. All areas disturbed during the removal of erosion control measures shall be raked, stabilized, and planted per the Drawings.

1.4 SUBMITTALS

- A. Submittals shall be made in accordance with the Specifications, Section 013300, "Submittal Procedures."
- B. In addition, the Contractor shall provide the following specific information:
 - 1. If Contractor plans to vary erosion control phasing from the Drawings, then he / she shall submit a written plan, including definition and locations of phased erosion and sediment control for areas that will be disturbed during staged construction sequences. This information shall be provided to the Engineer and Owner, for review, before commencing any Work on the Project.

1.5 QUALITY ASSURANCE

- A. Perform Work according to NCDEQ-DEMLR standards.

1.6 INSPECTIONS AND RECORD KEEPING

- A. The Contractor is responsible for self-inspection of sedimentation and erosion control devices throughout the life of the Work, including preparation of self-inspection reports and NPDES Self-Monitoring Reports, to make sure the approved erosion and sedimentation control plan is being followed. To simplify documentation of Self-Inspection Reports and NPDES Self-Monitoring Reports, Contractor shall use a combined form available at <http://deq.nc.gov/about/divisions/energy-mineral-land-resources/erosion-sediment-control/forms>
- B. Contractor shall refer to Self-Inspection Reports Reporting Requirements on Drawings.

PART 2 - PRODUCTS

2.1 AGGREGATE

- A. Temporary Construction Entrance
 - 1. Furnish according to Standard Erosion Control Specification
- B. Silt Fence Outlet
 - 1. Furnish according to Standard Erosion Control Specification

2.2 GEOTEXTILES

- A. Sediment Fence Geotextile
 - 1. Furnish according to Standard Erosion Control Specification

- B. Construction Entrance Geotextile
 - 1. Furnish according to Standard Erosion Control Specification
- C. Rolled Erosion Control Blanket
 - 1. Rolled erosion control blankets shall have a minimum allowable shear stress of 1.5-lbs/ft² and a minimum longevity of 12 months
 - 2. Anchoring devices for rolled erosion control blankets shall be minimum 11 gauge staples, 1-in wide, and 6-in long or 12-in minimum length wooden stakes.
- 2.3 TEMPORARY SLOPE DRAINS
 - A. Furnish according to Standard Erosion Control Specification
- 2.4 SKIMMER BASIN
 - A. Skimmer shall meet the design requirements of the drawings and the Standard Erosion Control Specifications
 - B. Porous baffles shall be furnished according to Standard Erosion Control Specification
- 2.5 SEDIMENT FENCE STEEL POSTS
 - A. Furnish according to Standard Erosion Control Specification
- 2.6 SEDIMENT FENCE FABRIC REINFORCEMENT
 - A. Furnish according to Standard Erosion Control Specification
- 2.7 COIR FIBER WATTLE
 - A. Coir Fiber Wattle shall meet the following specifications:
 - 1. 100% Coir (Coconut) Fibers
 - 2. Minimum Diameter 12 in.
 - 3. Minimum Density 3.5 lb/ft³ +/- 10%
 - 4. Net Material Coir Fiber
 - 5. Net Openings 2 in. x 2 in.
 - 6. Net Strength 90 lbs.
 - 7. Minimum Weight 2.6 lbs./ft. +/- 10%
- 2.8 PLANTING MATERIALS
 - A. Temporary Seeding and Soil Supplements:
 - 1. Furnish according to Standard Erosion Control Specification
 - B. Permanent Seeding (if used)
 - 1. Furnish according to Standard Erosion Control Specification
 - C. Sod (if used)
 - 1. Furnish according to Owner requirements matching the existing natural turf within the project area.

PART 3 - EXECUTION

3.1 GENERAL

- A. The Contractor shall install erosion and sediment control measures and maintain in accordance with the Drawings, the sequence of construction shown on the Drawings are made a part of these Contract Documents.

- B. The Contractor shall install any additional measures which the Engineer or Inspector may deem necessary to comply with the Standard Erosion Control Specification general criteria or NCDEQ Erosion Control requirements, at no additional cost to the Owner.
- C. The Contractor shall provide and maintain Temporary Seeding at all times.

3.2 SILT FENCE

- A. Silt fence to be installed as indicated on Drawings and per the Standard Erosion Control Specification. Silt fence to be placed prior to demolition, trench installations, or other clearing activities. Silt fence may be temporarily removed and replaced to facilitate construction.
- B. Maintenance shall be performed per the Standard Erosion Control Specification.
- C. After ground cover has been established and approved by Engineer and NCDEQ Erosion Control Inspector, the silt fence shall be removed and disposed of in an approved off-site location at the Contractor's expense.

3.3 SILT FENCE OUTLETS

- A. Install silt fence outlets per the details shown on Drawings and per the Standard Erosion Control Specification.
- B. Maintenance shall be performed per the Standard Erosion Control Specification.
- C. Contractor to verify silt fence outlet placement at low points as they exist or develop. Additional silt fence outlets may be required to prevent erosion during and after construction and land disturbance activities. If additional silt fence outlets are necessary, Contractor to add additional silt fence outlets per Engineer, NCDEQ Erosion Control Inspector, or Owner direction at no additional cost to the Owner.

3.4 TEMPORARY DIVERSION DITCHES AND SLOPE DRAINS

- A. Install temporary diversion ditches as shown on the drawings, details and per the Standard Erosion Control Specification.
- B. Where shown on the drawings, install rolled erosion control blankets and rock check dams per the details and the Standard Erosion Control Specification.
- C. Install temporary slope drains per the drawings and the Standard Erosion Control Specification where runoff from diversion ditches enters the sediment basins, as shown on the drawings.
- D. Maintenance shall be performed per the Standard Erosion Control Specification.

3.5 SKIMMER BASINS

- A. Install skimmer basins as shown on the drawings per the details and the Standard Erosion Control Specification.
- B. Maintenance shall be performed per the Standard Erosion Control Specification.

3.6 INLET PROTECTION

- A. Install Inlet Protection per the detail shown on Drawings and per the Standard Erosion Control Specification.
- B. Inlet protection shall be placed at the upstream side of any pipe or structure discharging outside of the disturbed limits. See Drawings for location.

3.7 CONSTRUCTION ENTRANCE

- A. Install construction entrance per the detail shown on Drawings and per the Standard Erosion Control Specification.

B. Shall be maintained in a condition to prevent tracking or direct flow of mud onto adjacent roadways.

3.8 STOCKPILES

- A. Install stockpiles per the detail shown on Drawings and per the Standard Erosion Control Specification.
- B. Stockpile height shall not to exceed 15 feet and side slopes shall be 2 (H) to 1 (V) or flatter.
- C. Stockpile shall have a minimum double row of silt fence as shown on Drawings.

3.9 GROUND STABILIZATION

A. Contractor shall provide ground stabilization per the Standard Erosion Control Specification and in accordance with the table below:

Site Area Description	Stabilization Time Frame	Stabilization Time Frame Exceptions
Perimeter Dikes, Swales, Ditches, and Slope	7 Days	None
High Quality Water (HQW) Zones	7 Days	None
Slopes Steeper Than 3:1	7 Days	If Slopes are 10' or less in length and are not steeper than 2:1, 14 Days
Slopes 3:1 or Flatter	14 Days	7-Days for slopes greater than 50-ft in length
All other areas with slopes flatter than 4:1	14 Days	None (except for perimeters and HQW zones)

3.10 TEMPORARY SEEDING

- A. Temporary Seeding is to be placed and maintained over all disturbed areas prior to Permanent Sodding per the detail shown on Drawings and per the Standard Erosion Control Specification
- B. Maintain Temporary Seeding until such time as areas are approved for permanent seeding. As a minimum, maintenance shall include the following:
 1. Fix-up and reseedling of bare areas or re-disturbed areas.
 2. Mowing for stands of grass or weeds exceeding 6 inches in height.

END OF SECTION 31 25 00

SECTION 321813 - SYNTHETIC TURF SURFACING SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Synthetic turf surfacing, for installation as a drainable recreational surface, including:
 - a. Aggregate base course.
 - b. Perimeter board.
 - c. Synthetic turf.
 - d. Turf infill.

1.2 REFERENCES

- A. ASTM International (ASTM): www.astm.org:
 - 1. ASTM D1335 - Test Method for Tuft Bind of Pile Yarn Floor Coverings.
 - 2. ASTM D2859 - Standard Test Method for Ignition Characteristics of Finished Textile Floor Covering Materials.
 - 3. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.3 ADMINISTRATIVE REQUIREMENTS

- A. Preinstallation Conference: Conduct conference at Project site following award of contract. Review methods and procedures related to synthetic turf surfacing installation including, but not limited to, construction schedule, availability of materials, equipment and facilities needed to make progress and avoid delays, installation procedures, inspection procedures, and coordination with other work.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product specified.
- B. Shop Drawings: Provide installation details including roll and seaming layout, methods of attachment and details at penetrations and terminations
- C. Samples: For each type of synthetic turf surfacing indicated.
 - 1. Minimum 12-by-12-inch- square sample of synthetic turf surface with edge attachment and carpet seam.
 - 2. 1/2 lb samples of base course and infill component material. Label sample identifying the material, its source, and evidence of compliance with specified product characteristics and testing

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Installation Schedule: Showing planned commencement and completion dates for each portion of the Work; include critical dates indicated on Owner's project schedule.
- C. Warranty: Sample warranty specified in this Section.

1.6 MAINTENANCE SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Seaming Materials: Sufficient quantity for 100 sq. ft.
 - 2. Synthetic Turf Fiber: Sufficient quantity for 100 sq. ft.
 - 3. Infill Material: Sufficient quantity for 100 sq. ft., in weatherproof bags.
- B. Maintenance Data: For synthetic grass surfacing system and maintenance equipment, to be included in maintenance manuals. Include the following:
 - 1. Manufacturer's written instructions manual for routine cleaning, adjustment, grooming, and other maintenance procedures. Include activities and procedures that could be detrimental to the synthetic grass surfacing system and should be avoided.
 - 2. Owner's manuals for field grooming and sweeping equipment.
 - 3. Warranty information for grooming and sweeping equipment.
- C. Project Record Drawings: Record locations of seams and drains.
- D. Warranty: 3 signed copies of executed warranty.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A firm experienced in manufacturing synthetic turf surfacing materials in applications similar to those specified for this project, with a record of successful service for a minimum of 5 years.
- B. Installer Qualifications: An experienced Installer certified by the manufacturer, employing workers trained and approved by manufacturer, who has successfully installed work similar in design and extent to that required for the project, in not less than 5 projects of similar scope.
- C. Source Limitations: Obtain synthetic turf surfacing materials through one source from a single manufacturer.
 - 1. Provide secondary materials including adhesives, paint, thread, and repair materials of type and from source recommended by manufacturer of synthetic turf surfacing materials.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials to the site in original, unopened containers, wrapping, or packaging, with manufacturer's labels intact, identifying project, material, and production run or lot number for fabric roll.
- B. Immediately following delivery, inspect materials and components for damaged or defective items, including materials that are not uniform in color, out of tolerance regarding edge alignment and minimum pile height. Materials that are found to be damaged or defective shall be replaced at no additional cost to the Owner.
- C. Store materials in a secure, dry, well-ventilated location where protected from weather, exposure to UV, soil, dust, moisture and other contaminants. Store fabric rolls horizontally, on a flat surface. Store infill materials indoors, in a secure, ventilated location to ensure materials will remain dry.
- D. Handle according to manufacturer's recommendations to prevent damage, deterioration, distortion, or soiling.

1.9 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit synthetic turf surfacing installation to be performed according to manufacturers' written instructions and warranty requirements.

1.10 COORDINATION

- A. Coordinate installation of synthetic turf surfacing's with installation of site paving, playground equipment, adjacent lawns, landscaping materials, site lighting, and related work.

1.11 WARRANTY

- A. **Manufacturer's Warranty:** Submit manufacturer's standard published limited warranty form in which manufacturer agrees to repair or replace components of synthetic turf surfacing installation installed by manufacturer-certified Installer that fail in materials under normal use and maintenance, or provide other relief, within specified warranty period.
 - 1. Failures include ultraviolet degradation, backing integrity, more than 50 percent loss of face fiber, and loss of tuft bind strength.
 - 2. Warranty Period: Life of product.
- B. **Installer Project Warranty:** Submit synthetic turf surfacing Installer's warranty, signed by Installer, covering the Work of this Section, including installation of all components of synthetic turf surfacing system, for the following warranty period:
 - 1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Basis of Design:** FieldTurf Commercial
 - 1. Submit requests for substitution in accordance with Division 01 section "Substitution Requests".
- B. **Manufacturers:** Subject to requirements of this Section, provide products from one of the following:
 - 1. FieldTurf Commercial, a Tarkett Sports Company, 175 N Industrial Blvd, Calhoun, GA 30701; (866) 327-9887; www.fieldturfcommercial.com.
 - 2. SYNLawN, Dalton GA 30721; (866) 796-5296; www.synlawn.com.
 - 3. XGrass, 242 Duckworth Rd, Dalton, GA 30721; (877) 881-8477; www.xgrass.com.
- C. **Source Limitations:** Obtain synthetic turf surfacing materials through one source from a single manufacturer.
 - 1. Provide secondary materials including adhesives, paint, thread, and repair materials of type and from source recommended by manufacturer of synthetic turf surfacing materials.

2.2 PERFORMANCE REQUIREMENTS

- A. **Fire-Test-Response Characteristics:** Provide products with the critical radiant flux classification indicated in Part 2, as determined by testing identical products per ASTM E648 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.
- B. **Accessibility Requirements:** Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1.
 - 1. Provide synthetic turf system meeting requirements of ASTM F1951.
- C. **Drainage Requirements:** Synthetic grass surface shall drain at a rate of 300 inches or more, of water per hour when tested per ASTM D4491.

2.3 SYSTEM DESIGN

- A. Synthetic grass surfacing system specifically designed and recommended by the manufacturer for outdoor, permeable installations with underdrains.
- B. Synthetic grass surfacing system constructed to maximize dimensional stability, to resist damage during normal use, and to minimize UV degradation, including fading.
- C. Synthetic grass surfacing system resistant to staining, weather, insects, rot, mildew, and fungus growth, and shall be non-allergenic and non-toxic.

2.4 SYNTHETIC TURF SURFACING

- A. Synthetic Turf Surfacing: Complete surfacing system, consisting of delustered UV-stabilized antimicrobial synthetic yarns bound to water-permeable primary and secondary backing. Non-abrasive blades with low surface temperature. Anti-Static and Ultra Violet reflective pigment-enhanced.
 - 1. Basis of Design Product: Command Duo w/ aggregate base
 - 2. Artificial Turf Fiber and Construction Characteristics:
 - a. Color: as selected by Architect from manufacturer's full range
 - b. Finished Pile Height, ASTM D5823: 1-1/2 inch.
 - c. Finished Pile Weight, ASTM D5848: 55 oz/sq. yd. minimum
 - d. Primary Backing: tufted polypropylene fabric
 - e. Secondary Backing: porous, capable of securing yarns to primary backing
 - 3. Performance Characteristics:
 - a. Tuft Bind, ASTM D1335: Not less than 8 lb.
 - b. Grab tear strength, ASTM D5034: Not less than 200 lbf.
 - c. Elongation to break, ASTM D2256: Not less than 30 percent.
 - d. Yarn breaking strength, ASTM D5793: Not less than 20 lb.
 - e. Flammability, ASTM D2859: Pass.
 - f. Fire Test Exposure, ASTM E108: Class A.

2.5 BASE SYSTEM MATERIALS

- A. Aggregate Subbase Course: Sound crushed graded stone or gravel complying with ASTM D 448 for Size No. 57.
- B. Aggregate Base Course: Sound crushed graded stone or gravel complying with ASTM D 448 for Size No. 8.
- C. Aggregate Top Course: Decomposed granite fines.
- D. Perimeter Nailer Board: Manufacturer's approved wood/polymer composite nailer/edger board, size as shown on Drawings, but not less than 2 by 4 nominal.
- E. Turf Spikes: Manufacturer's approved soil spikes, 12 inches long.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine synthetic turf surfacing base and perimeter conditions, with Installer present, for compliance with requirements for installation tolerances, and other conditions affecting performance of the Work.

1. Verify substrate meets profile required.
2. Confirm base material, compaction of substrate, permeability, and drainage system installation meets requirements.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SUBBASE AND AGGREGATE COURSE PREPARATION

A. General: Prepare substrates to receive surfacing products according to synthetic turf surfacing manufacturer's written instructions. Verify that substrates are sound and without high spots, ridges, holes, and depressions. Remove organic debris. Grade soil subgrade level and compact.

B. Finish grade soil subgrade with slope between 0.5 percent and 1.0 percent toward path of site drainage.

C. Place aggregate base course, compact by tamping with plate vibrator to 90 percent of ASTM D 1557 maximum laboratory density, and screed to depth indicated. Install 4-inch base course unless otherwise indicated.

1. Slope base course between 0.5 percent and 1.0 percent, measured from the longitudinal center of the installation towards the edges. Grade base course to tolerance of within 0.5 inch of design grade, and with a maximum variation of 0.25 inch in 10 feet in any direction.

D. Install perimeter nailer board as indicated on approved shop drawings, using soil nails of size and spacing indicated.

3.3 SYNTHETIC TURF INSTALLATION

A. General: Comply with synthetic turf surfacing manufacturer's written installation instructions. Install synthetic turf surfacing over area and in thickness indicated.

B. Synthetic Turf: Loose-lay artificial turf and allow fabric to relax for period recommended by manufacturer. Stretch carpet; spot adhere to drainage mat and attach at perimeter in accordance with approved submittals.

C. Seaming: Form seams flat and snug, with no gaps or fraying. Remove yarns that are trapped within seams. Form seams as recommended in synthetic turf manufacturer's written instructions using manufacturer's provided or recommended materials.

D. Attachment: Attach turf fabric to perimeter restraint system and fasten in the field of the turf as indicated on approved submittals.

3.4 INSTALLATION, INFILL

A. Mix and install infill material components in accordance with manufacturer's requirements for approved system. Groom material and leave surface ready for use.

3.5 PROTECTION

A. Protect completed installation from damage. Prevent traffic over system prior to acceptance by Owner.

3.6 DEMONSTRATION

A. Instruct Owner's personnel in proper inspection and maintenance of synthetic turf surfacing. Review manufacturer's recommended maintenance procedures and warranty terms and conditions.

END OF SECTION 321813

SECTION 33 11 00 - WATER UTILITY DISTRIBUTION SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Materials, Installation, and Testing shall be in accordance with City of Raleigh standards and specifications. See Appendix A City of Raleigh Public Utilities Department Handbook (CORPUD) sections on Domestic Water.
 - 1. Please note the highlighted text in the sections provided within this Project Manual are from the published CORPUD and are not indicative of any special requirements of the Project.
 - 2. All references to pay items, allowances, and Contract language within the CORPUD are not applicable to this project and should be omitted from the bid.
- B. Section 31 23 17 Trenching
- C. Section 31 23 19 Dewatering
- D. Section 31 23 24 Flowable Fill

1.2 SUBMITTALS

- A. Product Data: For each type of the following manufactured or supplied products required:
 - 1. Pipe Materials
 - 2. Fittings, gaskets, and other appurtenances

PART 2 - PRODUCTS

2.1 MATERIALS

- A. All materials including but not inclusive of pipe, fittings, gaskets, etc. shall be provided in accordance to the water material standards provided in the Water Materials section of the CORPUD.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Installation shall be coordinated with Engineer and NC State inspectors for schedule inspections prior to being backfilled.

3.2 INSTALLATION

- A. Installation per respective CORPUD section.

3.3 FIELD QUALITY CONTROL

- A. All Chlorination, Hydrostatic, and Bacteriological preparation and testing shall be performed per the CORPUD Water Construction Standards.
- B. Engineer shall be notified of testing schedule and results.
- C. No additional payments will be made for failed tests.

END OF SECTION 33 11 00

SECTION 33 30 00 – SANITARY SEWER UTILITY DISTRIBUTION SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Materials, Installation, and Testing shall be in accordance with City of Raleigh standards and specifications. See Appendix B City of Raleigh Public Utilities Department Handbook (CORPUD) sections on Sanitary Sewer.
 - 1. Please note the highlighted text in the sections provided within this Project Manual are from the published CORPUD and are not indicative of any special requirements of the Project.
 - 2. All references to pay items, allowances, and Contract language within the CORPUD are not applicable to this project and should be omitted from the bid.
- B. Section 31 23 17 Trenching
- C. Section 31 23 19 Dewatering
- D. Section 31 23 24 Flowable Fill

1.2 SUBMITTALS

- A. Product Data: For each type of the following manufactured or supplied products required:
 - 1. Pipe Materials
 - 2. Fittings, gaskets, and other appurtenances
 - 3. Manholes
 - 4. Cleanout lids
 - 5. Ring and covers

PART 2 - PRODUCTS

2.1 MATERIALS

- A. All materials including but not inclusive of pipe, fittings, gaskets, etc. shall be provided in accordance to the sewer material standards provided in the Sewer Materials section of the CORPUD.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Installation shall be coordinated with Engineer and NC State inspectors for schedule inspections prior to being backfilled.

3.2 INSTALLATION

- A. Installation per respective CORPUD section.

3.3 FIELD QUALITY CONTROL

- A. All testing shall be performed per the CORPUD Construction Specifications for Sewer Mains
- B. Engineer shall be notified of testing schedule and results.
- C. No additional payments will be made for failed tests.

END OF SECTION 33 30 00

SECTION 33 41 00 - STORM UTILITY DRAINAGE PIPING

PART 1 - GENERAL

1.1 GENERAL NOTES

- A. All storm drainage structures, related piping and accessories shall be in accordance with the State of North Carolina Department of Transportation standards and supplemented with any applicable NC State standards. If discrepancies exist, they should be brought to the Engineer's attention immediately.
- B. Refer to construction drawings for number, location and details of all proposed structures and pipes.

1.2 RELATED DOCUMENTS

- A. Materials, Installation, and Testing shall be in accordance with NCDOT and NC State standards and specifications.

1.3 SUMMARY

- A. Section includes but not limited to the following items and appurtenances shown on drawings and specified in this Section:
 - 1. Pipe and fittings.
 - 2. inlets and outlets.

1.4 DEFINITIONS

- A. RCP: Reinforced Concrete Pipe.
- B. NCDOT: North Carolina Department of Transportation.
- C. HDPE: High Density Polyethylene.

1.5 SUBMITTALS

- A. Product Data: Manufacturer information describing part, accessories, connections and any standard details.
- B. Manufacturer's Instructions: Special procedures required to install specified products.
- C. Shop Drawings: Indicate Part Sizes, connection sizes, elevations and connection parts.
- D. Manufacturer's Certificate: Products meet or exceed specified requirements.
- E. Qualifications Statements:
 - 1. Qualifications for manufacturer, and installer.
 - 2. Manufacturer's approval of installer.
- F. Field quality-control reports.
- G. Project Record Documents: Record actual locations of catch basins, drop inlets, yard inlets and grate/rim and invert elevations.
- H. Operation and Maintenance Data: Submit any special requirements for maintenance.

1.6 QUALITY ASSURANCE

- A. Perform Work according to State of North Carolina Department of Transportation and NC State standards.
- B. Fabricator: Company specializing in fabricating products specified in this Section with three years' experience.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Protect pipe, pipe fittings, and seals from dirt and damage.

- B. Store according to manufacturer's instructions.
- C. Protect any UV sensitive materials from sunlight by using manufacturer recommendations.

1.8 PROJECT CONDITIONS

- A. Interruption of Existing Storm Drainage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
 - 1. Notify Owner's Representative no fewer than (72) hours in advance of proposed interruption of service.
 - 2. Do not proceed with interruption of service without Owner's Representative's written permission
- B. Field Measurements: Verify field measurements prior to fabrication. Indicate field measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 CONCRETE PIPE AND FITTINGS

- A. Reinforced-Concrete Pipe and Fittings: ASTM C 76. Pipe and special fittings installed with 10 feet or less cover over top of pipe shall be Class III, and all other pipe and special fittings shall be Class IV. Basis of acceptance of reinforced concrete pipe shall be the 0.01" crack.
 - 1. Bell-and-spigot ends and sealant joints with ASTM C 990, bitumen or butyl-rubber sealant.

2.2 PIPE OUTLETS

- A. Riprap Basins: Broken, irregularly sized and shaped, graded stone according to NCDOT Section 1042 "Riprap Materials". See plans for Class/Sizing.
- B. Filter Stone: According to NCDOT Section 1005 "General Requirements for Aggregate", #57 or #67 clean stone as specified on plans.
- C. Energy Dissipaters: Broken, irregularly sized and shaped, graded stone according to NCDOT Section 1042 "Riprap Materials". See plans for Class/Sizing.

2.3 HDPE PIPE AND FITTINGS

- D. HDPE Pipe and Fittings: All HDPE pipe shall conform to ASTM F2648 and be dual wall, smooth interior pipe with soil tight gaskets and fittings. Fittings shall conform to ASTM F2306 where applicable.

PART 3 - EXECUTION

3.1 EARTHWORK

- A. Excavation, trenching, and backfilling are per NCDOT Standard Specifications.

3.2 EXAMINATION

- A. Verify that excavations, dimensions and elevations are as indicated.
- B. Check pipes for cracks or other compromising features.
 - 1. Any irregularities shall be reported and approved prior to installation.

3.3 PREPARATION

- A. Correct over-excavation with coarse aggregate.
- B. Prepare base in accordance with applicable NCDOT standard.

3.4 PIPING INSTALLATION

- A. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground storm drainage piping. Location and arrangement of piping layout take into account design considerations. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.
- B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements.
- C. Install manholes for changes in direction unless fittings are indicated. Use fittings for branch connections unless direct tap into existing sewer is indicated.
- D. Install proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.
- E. When installing pipe under streets or other obstructions that cannot be disturbed, use pipe-jacking process of microtunneling.
- F. Laser Equipment: Contractor shall utilize laser equipment to ensure that piping is installed at elevations and slopes indicated on plans.
- G. Install gravity-flow, nonpressure drainage piping according to the following:
 - 1. Install piping pitched down in direction of flow.
 - 2. Install piping at invert elevations as specified in the storm drainage table.
 - 3. NCDOT Standard Specifications Division 3, Section 300 or one of the following.
 - 4. Install reinforced-concrete piping according to ASTM C 1479 and ACPA's "Concrete Pipe Installation Manual."
 - 5. Install HDPE Piping according to ASTM D2321 "Standard Practice for Underground Installation of thermoplastic Pipe for Sewers and Other Gravity-Flow Applications"

3.5 PIPE JOINT CONSTRUCTION

- A. Join gravity-flow, nonpressure drainage piping according to the following:
 - 1. Join reinforced-concrete piping according to ACPA's "Concrete Pipe Installation Manual" or NCDOT
 - 2. Join HDPE piping according to ASTM and Manufacturer's Recommendations to ensure a soil tight joint.

3.6 STORMWATER INLET AND OUTLET INSTALLATION

- A. Construct inlet head walls, aprons, and sides of reinforced concrete, as indicated.
- B. Construct riprap of broken stone, as indicated.
- C. Install outlets that spill onto grade, anchored with concrete, where indicated.
- D. Install outlets that spill onto grade, with flared end sections that match pipe, where indicated.
- E. Construct energy dissipaters at outlets, as indicated.

3.7 CONNECTIONS

- A. Make connections to existing underground manholes.
 - 1. Make branch connections from side into underground manholes and structures by cutting into existing unit and creating an opening large enough to allow 3 inches of concrete to be packed around entering connection. Cut end of connection pipe passing through pipe or structure wall to conform to shape of and be flush with inside wall unless otherwise indicated. On outside of manhole, or structure wall, encase entering connection in 6 inches of concrete for minimum length of 12 inches to provide additional support of collar from connection to undisturbed ground.

- a. Use concrete that will attain a minimum 28-day compressive strength of 3000 psi unless otherwise indicated.
- b. Use epoxy-bonding compound as interface between new and existing concrete and piping materials.
2. Protect existing piping, manholes, and structures to prevent concrete or debris from entering while making tap connections. Remove debris or other extraneous material that may accumulate.

3.8 CLOSING ABANDONED STORM DRAINAGE SYSTEMS

- A. Abandoned Piping: Close open ends of abandoned underground piping indicated to remain in place. Include closures strong enough to withstand hydrostatic and earth pressures that may result after ends of abandoned piping have been closed. Use either procedure below:
 1. Close open ends of piping with at least 8-inch thick, brick masonry bulkheads.
 2. Close open ends of piping with threaded metal caps, plastic plugs, or other acceptable methods suitable for size and type of material being closed. Do not use wood plugs.
- B. Abandoned Manholes and Structures: Excavate around manholes and structures as required and use one procedure below:
 1. Remove manhole or structure and close open ends of remaining piping.
 2. Remove top of manhole or structure down to at least 48 inches below final grade. Fill to within 12 inches of top with stone or gravel. Fill to top with concrete.
- C. Backfill to grade according to Division 31 Section "Earth Moving."

3.9 IDENTIFICATION

- A. Arrange for installation of green warning tape directly over piping and at outside edge of underground structures.
 1. Use identification tape or non-detectable warning tape over all underground lines outside building footprint in the backfill approximately 18" to 30" above the service pipe, but a minimum of 10" and a maximum of 24" below finished grade.
 2. Use detectable warning tape over ferrous and nonferrous piping and over edges of underground manholes. Tape all underground lines outside building footprint directly on top of the pipeline and permanently secured to the pipeline at 10' intervals.
 3. Use insulated copper tracer wire or other approved conductor installed adjacent to underground nonmetallic piping and metallic pipe with compression gasket fittings installed underground. Access shall be provided to the tracer wire, or the tracer wire shall terminate aboveground at the end of the nonmetallic piping. The tracer wire size shall not be less than 10AWG and the insulation type suitable for direct burial. The tracer wire size shall be copper single conductor 10AWG minimum and the insulation type suitable for direct burial with type "UF" (Underground Feeder) insulation and shall be continuous along the pipeline passing through the inside of each valve box or manhole.

3.10 FIELD QUALITY CONTROL

- A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches of backfill is in place, and again at completion of Project.
 1. Submit separate reports for each system inspection.
 2. Defects requiring correction include the following:
 - a. Alignment: Less than full diameter of inside of pipe is visible between structures.
 - b. Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
 - c. Damage: Crushed, broken, cracked, or otherwise damaged piping.
 - d. Infiltration: Water leakage into piping.
 - e. Exfiltration: Water leakage from or around piping.

3. Replace defective piping using new materials and repeat inspections until defects are within allowances specified.
 4. Re-inspect and repeat procedure until results are satisfactory.
- B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.
1. Do not enclose, cover, or put into service before inspection and approval.
 2. Test completed piping systems according to requirements of authorities having jurisdiction.
 3. Schedule tests and inspections by authorities having jurisdiction with at least 24 hours' advance notice.
 4. Submit separate report for each test.
 5. Gravity-Flow Storm Drainage Piping: Test according to requirements of authorities having jurisdiction, UNI-B-6, and the following:
 - a. Exception: Piping with soil tight joints unless required by authorities having jurisdiction.
 - b. Option: Test concrete piping according to ASTM C 924. C. Leaks and loss in test pressure constitute defects that must be repaired.
 - c. Replace leaking piping using new materials and repeat testing until leakage is within allowances specified.

3.11 CLEANING

- A. Clean interior of piping of dirt and superfluous materials. Flush with water.

END OF SECTION 33 41 00

SECTION 33 49 13 - STORM DRAINAGE STRUCTURES

PART 1 - GENERAL

1.1 GENERAL NOTES

- A. All storm drainage structures, related piping and accessories shall be in accordance with the State of North Carolina Department of Transportation standards, and supplemented with any applicable NC State standards. If discrepancies exist they should be brought to the Engineer's attention immediately.
- B. Refer to construction drawings for number, location and details of all proposed structures and pipes.

1.2 RELATED DOCUMENTS

- A. Materials, Installation, and Testing shall be in accordance with NCDOT and NC State standards and specifications.

1.3 SUMMARY

- A. Section includes but not limited to the following items and appurtenances shown on drawings and specified in this Section:
 - 1. Catch Basins.
 - 2. Drop Inlets.
 - 3. Junction Boxes/Manholes.
 - 4. Headwalls.
 - 5. Accessories.
 - 6. Stormwater Structures.
 - 7. Concrete.

1.4 DEFINITIONS

- A. RCP: Reinforced Concrete Pipe
- B. NCDOT: North Carolina Department of Transportation.

1.5 SUBMITTALS

- A. Product Data: Manufacturer information describing part, accessories, connections and any standard details.
 - 1. Provide back up calculations or data from the Yard Inlet and Trench Drain grates proposed.
- B. Manufacturer's Instructions: Special procedures required to install specified products.
- C. Shop Drawings: Indicate Part Sizes, connection sizes, elevations and connection parts.
- D. Manufacturer's Certificate: Products meet or exceed specified requirements.
- E. Qualifications Statements:
 - 1. Qualifications for manufacturer, and installer.
 - 2. Manufacturer's approval of installer.
- F. Field quality-control reports.
- G. Project Record Documents: Record actual locations of catch basins, drop inlets, yard inlets and grate/rim and invert elevations.
- H. Operation and Maintenance Data: Submit any special requirements for maintenance.

1.6 QUALITY ASSURANCE

- A. Perform Work according to State of North Carolina Department of Transportation and NC State standards.
- B. Fabricator: Company specializing in fabricating products specified in this Section with three years' experience.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store according to manufacturer's instructions.
- B. Protect any UV sensitive materials from sunlight by using manufacturer recommendations.
- C. Handle manholes according to manufacturer's written rigging instructions.
- D. Handle catch basins, drop inlets, and headwalls according to manufacturer's written rigging instructions.

1.8 PROJECT CONDITIONS

- A. Interruption of Existing Storm Drainage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
 - 1. Notify Owner's Representative no fewer than (72) hours in advance of proposed interruption of service.
 - 2. Do not proceed with interruption of service without Owner's Representative's written permission.
- B. Field Measurements: Verify field measurements prior to fabrication. Indicate field measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 CATCH BASINS

- A. All catch basins to be precast in accordance with the NCDOT standard specifications.
- B. Catch Basins Lids and Frames:
 - 1. Materials: Cast Iron
 - 2. Lid: Shall be in accordance with applicable NCDOT standard detail as noted.
 - 3. Nominal Lid and Frame Size: *Varies*, see signed construction drawings.
- C. Connections
 - 1. All connections to be in accordance with the NCDOT standard specifications.

2.2 DROP INLETS

- A. All drop inlets to be precast in accordance with the NCDOT standard specifications.
- B. Drop inlet Lids and Frames
 - 1. Materials: Cast Iron
 - 2. Lid: Shall be in accordance with applicable NCDOT standard specifications.
 - 3. Nominal Lid and Frame Size: *Varies*, see signed construction drawings.
- C. Connections
 - 1. All connections to be in accordance with the NCDOT standard specifications.

2.3 JUNCTION BOXES/MANHOLES

- A. All drop inlets to be precast in accordance with the NCDOT standard specifications

- B. Connections
 - 1. Connections to be minimum soil-tight.
 - 2. All connections to be in accordance with NCDOT standard specifications.
 - C. Lids and Frames:
 - 1. Shall be in accordance with applicable NCDOT standard specifications
- 2.4 HEADWALLS
- A. Materials
 - 1. Reinforced Concrete. To be precast in accordance with the applicable NCDOT standard specifications.
 - B. Connections
 - 1. Connections to be minimum soil-tight.
 - 2. All connections to be in accordance with NCDOT standard specifications.
 - C. Design
 - 1. Design of headwall to be completed by registered Professional Engineer licensed in North Carolina.
 - 2. Contractor to submit shop drawings to Engineer and Owner for approval. Engineer to only approve shop drawings on the basis of dimensions and size. Engineer not responsible for any footing, shoring or structural aspect of headwall.
- 2.5 INLINE PVC DRAINAGE BASINS (YARD INLETS)
- A. Materials
 - 1. PVC meeting ASTM D1784 standards
 - 2. Joints meeting ASTM D3212
 - 3. Gaskets meeting ASTM F477
 - 4. Grates: Ductile Iron
 - B. Connections
 - 1. All connections must be soil tight.
 - C. Sizing
 - 1. All Inline PVC Drains and Grates must be sized to convey at least the flow shown on the Drawings.
- 2.6 MODULAR TRENCH DRAIN
- A. Materials
 - 1. Modular system from one single manufacturer that can provide a continuous slope trench to match the length shown on the Drawings and meet flow requirements below.
 - 2. All grates shall be stainless steel, heel safe (per ASME A112.6.3) and meet all requirements of the American Disabilities Act.
 - 3. Drain body should be resistant to both traffic loads and UV impacts.
 - B. Sizing
 - 1. Drain and grate(s) must be sized to convey at least the flow shown on the Drawings.
 - 2. Trench drain shall provide drain performance without the need for bypass drains or excessive ponding (more than 2") during the flow shown on the Drawings.
- 2.7 ACCESSORIES
- A. Any other required accessories for installation shall be engineer approved prior to installation.

2.8 STORMWATER STRUCTURES

- A. Cast-in-Place Concrete, Stormwater Structures: Construct of reinforced-concrete bottom, walls, and top; according to ASTM C 890 structural loading; of depth, shape, dimensions, and appurtenances indicated.
- B. Steps: Provide steps as shown on the Drawings in manholes, risers, transition cones, and transition top sections in accordance with NCDOT STD 840.66. Steps shall be spaced at 16" O.C.
- C. Energy Dissipaters: Refer to Drawings for shape and sizing; Design in accordance with NC Erosion and Sediment Control Planning and Design Manual.

2.7 CONCRETE

- A. General: Cast-in-place concrete according to ACI 318, ACI 350/350R, and the following:
 - 1. Cement: ASTM C 150, Type II.
 - 2. Fine Aggregate: ASTM C 33, sand.
 - 3. Coarse Aggregate: ASTM C 33, crushed gravel.
 - 4. Water: Potable.
- B. Portland Cement Design Mix: 4000 psi minimum, with 0.45 maximum water/cementitious materials ratio.
 - 1. Reinforcing Fabric: ASTM A 185/A 185M, steel, welded wire fabric, plain.
 - 2. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (420 MPa) deformed steel.
- C. Manhole Channels and Benches: Factory or field formed from concrete. Portland cement design mix, 4000 psi minimum, with 0.45 maximum water/cementitious materials ratio. Include channels and benches in manholes.
 - 1. Channels: Concrete invert, formed to same width as connected piping, with height of vertical sides to three-fourths of pipe diameter. Form curved channels with smooth, uniform radius and slope.
 - a. Invert Slope: 2 percent through manhole.
 - 2. Benches: Concrete, sloped to drain into channel.
 - a. Slope: 50 percent.
- D. Ballast and Pipe Supports: Portland cement design mix, 3000 psi minimum, with 0.58 maximum water/cementitious materials ratio.
 - 1. Reinforcing Fabric: ASTM A 185/A 185M, steel, welded wire fabric, plain.
 - 2. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (420 MPa) deformed steel.

PART 3 - EXECUTION

3.1 EARTHWORK

- A. Excavation, trenching, and backfilling are per NCDOT Standard Specifications.

3.2 EXAMINATION

- A. Verify that excavations, dimensions and elevations are as indicated.
- B. Check structures for cracks or other compromising features.
 - 1. Any irregularities shall be reported and approved prior to installation.

3.3 PREPARATION

- A. Correct over-excavation with coarse aggregate.
- B. Prepare base in accordance with applicable NCDOT standards.

3.4 INSTALLATION

- A. Installation Standards: Install Work according to NCDOT standards and manufacturer recommendations. If discrepancies exist they should be brought to Engineer's attention immediately.

3.5 FIELD QUALITY CONTROL

- A. Request inspection by Engineer prior to back filling any aggregate.
- B. If inspections indicate that Work does not meet specified requirements, remove Work, replace and request additional inspections.
- C. Provide a signed and sealed as-built survey by a licensed Land Surveyor in North Carolina for all locations, lengths, sizes and inverts of all storm drainage structures and piping. Land surveyor should also indicate any and all underground utilities encountered during excavation, including elevations tied to local control.

3.6 CLEANING

- A. Clean interior of structures of dirt and superfluous materials. Flush with water.

Designer Waste Information Form

Project Name:		
Project Designer:		Date:
This form is to be completed by the designer and included with SD documents. Waste Management Plan will be based off of this form.		
Waste Type (Condition of waste can determine category. Damaged Universal Waste can become Hazardous Waste)	Present at Site (Y/N)	Comments
Hazardous Waste and Material		
Asbestos		
Chemical Waste (liquid and solid)		
Lead Containing Paint/ Lead Based Paint Chips/ Lead Debris		
PCB containing items (ballasts, caulk, etc.)		
Mercury contaminated debris/ piping/ P-traps		
Broken fluorescent lamps		
Universal Waste		
Mercury containing items (batteries, switches, etc.)		
Batteries (all types)		
Fluorescent Lamps - Intact		
Non-Regulated Waste		
Drywall		
Insulation		
Broad loom carpet		
Vinyl composition tile		
Acoustic ceiling tile		
Treated wood and MDF		
Other Regulated Waste		
Refrigeration equipment		
Tires		
Recyclable		
White goods (lab refrigerators to be disposed of)		
Roofing materials (asphalt, shingles, gravel, metal) non-ACM or lead		
Oil		
Metal (fixtures, piping, ductwork, studs, wiring)		
Cardboard		
Untreated wood		
Aggregate, concrete, brick, asphalt		
Carpet tile		
Non-PCB ballasts		

SEWER MATERIAL STANDARDS

I. GENERAL MATERIAL

Current specifications of the American Society for Testing Materials (ASTM), American Water Works Association (AWWA), the American National Standards Institute (ANSI), the American Association of State Highway and Transportation Officials (AASHTO), and Ductile Iron Pipe Research Association (DIPRA) shall apply in all cases where material is covered by an item in these specifications. All material used shall conform fully to these current standards or be removed from the job at the direction of the Public Utilities Director.

Pipe specimens shall be subjected to tests by an independent testing laboratory at such time as the Public Utilities Department may direct or as specified herein. Pipe not meeting these specifications will be ordered removed by the inspector, and such pipe shall be immediately removed from the job site and not transported to any portion of the project being constructed.

These specifications are not to be considered as proprietary in any way. When a particular brand is listed, it is only used as an aid in describing the type of material being requested.

2. PIPE MATERIALS (Gravity Mains Only)

a. Centrifugally Cast Fiberglass Reinforced Polymer Mortar (CCFRPM) Pipe

Centrifugally Cast Fiberglass Reinforced Polymer Mortar (CCFRPM) Pipe shall conform to ASTM D3262 for CCFRPM pipe manufactured of "Fiberglass (Glass-Fiber-Reinforced Thermosetting-Resin) materials and to the following requirements.

1. CCFRPM pipe shall be as manufactured by HOBAS Pipe USA or approved equal.
2. CCFRPM pipe shall only be allowed for 18" diameter and larger pipe.
3. Pipe shall be suitable for laying condition as shown in standard detail S-1 at the depth indicated on the Drawings. Pipe manufacturer to verify pipe selection and document to the Engineer prior to ordering and manufacture of pipe.
4. Pipe shall conform to ASTM D2412 for minimum stiffness and external loading characteristics.
5. Couplings, fittings, and push-on joints shall be manufactured with flexible elastomeric seals conforming to the requirements of ASTM D4161 and ASTM F477 and shall meet or exceed the pipe class at the location of its installation.
6. Pipe joint shall be push-on type couplings unless specified otherwise.
7. Pipe shall meet the minimum requirements of ASTM D3681 and ASTM D3262. Manufacturer shall provide complete 10,000-hour test results on pipe produced at the proposed location of manufacture. Results shall reflect that the pipe has a minimum allowable strain of no less than .9% at fifty years when tested in accordance with ASTM D3681 and ATM 3262
8. Normal production pipe for this project shall not incorporate raw materials that are not in compliance with ASTM D3681 and ASTM D3262
9. Interior of the pipe shall be manufactured using a non structural resin with a minimum allowable elongation of 50% when measured in accordance with ASTM D638. The liner nominal thickness shall be 40-mils.
10. Exterior pipe surfaces shall be comprised of a layer of sand and resin to provide UV protection to the exterior.

11. For pipe installed in steel encasement pipe joint shall be flush type and capable of meeting the above requirements.

b. Ductile Iron Pipe and Fittings

Ductile iron pipe and fittings used for sanitary sewers shall be manufactured in accordance with AWWA Standards C-150 and C-110 respectively. The minimum pressure class pipe shall be class 250 or a greater class may be required based upon the depth of cover and laying conditions. Pipe shall be supplied in 18 or 20 foot nominal lengths. Pipe and fittings shall have a minimum working pressure of 250 psi, and minimum iron strength of 30,000 psi. Ductile iron may be used for any sewer main 8-inch and larger. Pipe joints shall be the "Push-on" type manufactured in accordance with AWWA Standard C-111-95.

Interior Linings for Ductile Iron Force Mains and Sewer Interceptors

All force mains, fittings, and gravity interceptors 12-inches and larger shall be lined with an amine cured novalac ceramic epoxy containing at least 20% by volume of ceramic quartz pigment. The lining material shall have a permeability rating of zero when tested in accordance with Method A – ASTM E96-66, Procedure A with test duration of 30 days. The lining shall be applied by a competent firm with a successful history of applying linings to the interior of ductile iron pipe and fittings. Within 8 hours of surface preparation, the interior of the pipe shall receive 40 mils nominal DFT. No lining shall take place when the substrate or ambient temperature is below 40° F. The surface shall also be dry and dust free. The lining shall not be used on the faces of the flanges (if applicable).

Due to the tolerances involved, the gasket area and spigot end up to 6-inches back from the end of the spigot end must be coated with 6 mils nominal, 10 mils maximum of PROTECTO Joint Compound or approved equal. The Joint Compound shall be applied by brush to ensure coverage. Care should be taken that the Joint Compound is smooth without excess buildup in the gasket seat or on the spigot ends. Coating of the gasket seat and spigot ends shall be done after the application of the lining.

The number of coats of lining material applied and the touch up and repair of the lining shall be as recommended by the manufacturer. The pipe manufacturer shall provide a certification attesting that the application meets or exceeds the requirements of these specifications.

Lining material shall be PROTECTO 401, or approved equal.

c. PVC Gravity Sanitary Sewer Pipe

PVC gravity sanitary sewer pipe and related fittings shall be manufactured in accordance with all the requirements of ASTM D-3034-98 SDR 35 Type PSM polyvinyl chloride sewer pipe and fitting. PVC gravity sewer pipe may be used for 8, 10, 12 or 15 inch mains and shall be supplied in 12.5 foot lengths with bell-and-spigot joints. ASTM F679-95 shall establish the requirements for 18, 21, 24 and 27-inch diameter PVC, SDR 35 gravity sewer pipe. The length of joints shall be at least 11 feet for the larger PVC pipe, unless approved differently by the Public Utilities Director. All fittings shall use rubber gaskets, which conform to the requirements of ASTM F477-99.

3. PIPE MATERIALS (Force Mains)

a. Ductile Iron Pipe and Fittings

All Ductile Iron sewer force mains shall be pressure class or thickness class ductile iron pipe designed in accordance with AWWA Standard C-150. Design shall be done for external and internal pressures separately, using the larger of the two for the next design thickness. An additional allowance shall be made for corrosion and casting tolerances. The thickness design for external and internal pressures shall use the following conditions:

- 1) 3 feet minimum cover or as shown on the plans;
- 2) Laying condition - Type 1;
- 3) A minimum working pressure of 150 psi for pipes 16 inches and smaller in diameter, and for 24 inches and larger pipe, the design working pressure shall be as determined by the Public Utilities Director, and
- 4) A surge pressure of 300 psi.

All calculations for thickness shall be in accordance with AWWA Standard C-150, and the calculations shall be submitted to the Public Utilities Director for approval prior to shipping any pipe. The minimum thickness shall be pressure class 350 for pipes 6 inches through 12 inches and pressure class 250 for pipes 16 inches and larger in diameter.

The ductile iron pipe shall be manufactured in accordance with all applicable requirements of AWWA Standard C-151. The ductile iron pipe shall be supplied in nominal lengths of 18 or 20 feet.

Ductile iron pipe shall be externally bituminous coated in accordance with AWWA C-151.

Pipe joints shall be mechanical or "push-on" manufactured in accordance with AWWA Standard C-111.

Each joint of ductile iron pipe shall be hydrostatically tested before the outside coating and inside lining are applied at the point of manufacture to 500 psi. Testing may be performed prior to machining bell and spigot. Failure of ductile iron pipe shall be defined as any rupture or leakage of the pipe wall.

All materials used in the production of the pipe are to be tested in accordance with AWWA Standard C-151 for their adequacy within the design of the pipe, and certified test results are to be provided to the City upon request. All certified tests, hydrostatic and material are to be performed by an independent testing laboratory at the expense of the pipe manufacturer.

Push-on and mechanical joint pipe shall be as manufactured by the American Cast Iron Pipe Company, United States Pipe and Foundry Company, Griffin Pipe Products Company, McWane Cast Iron Pipe Company or approved equal.

Restrained joints shall be TR Flex or **HP LOK** as manufactured by U.S. Pipe, **Lok-Ring** or **Flex-Ring** as manufactured by American Pipe, Super-Lock as manufactured by Clow, **Bolt-Lok** or **Snap-Lok** as manufactured by Griffin or approved equal.

Interior Linings for Ductile Iron Force Mains

All force mains and fittings shall be lined with an amine cured novalac ceramic epoxy containing at least 20% by volume of ceramic quartz pigment. The lining material shall have a permeability rating of zero when tested in accordance with Method A – ASTM E96-66, Procedure A with test duration of 30 days. The lining shall be applied by a competent firm with a successful history of applying linings to the interior of ductile iron pipe and fittings. Within 8 hours of surface preparation, the interior of the pipe shall receive 40 mils nominal DFT. No lining shall take place when the substrate or ambient temperature is below 40° F. The surface shall also be dry and dust free. The lining shall not be used on the faces of the flanges (if applicable).

Due to the tolerances involved, the gasket area and spigot end up to 6-inches back from the end of the spigot end must be coated with 6 mils nominal, 10 mils maximum of PROTECTO Joint Compound or approved equal. The Joint Compound shall be applied by brush to ensure coverage. Care should be taken that the Joint Compound is smooth without excess buildup in the gasket seat or on the spigot ends. Coating of the gasket seat and spigot ends shall be done after the application of the lining.

The number of coats of lining material applied and the touch up and repair of the lining shall be as recommended by the manufacturer. The pipe manufacturer shall provide a certification attesting that the application meets or exceeds the requirements of these specifications.

Lining material shall be PROTECTO 401, or approved equal.

b. Polyvinyl Chloride (PVC) Force Main Pipe and Fittings

Pipe and fitting size, pressure class and DR shall be as indicated on the drawings.

PVC Materials shall comply with ASTM D1784 with a cell classification of 12454-B.

PVC force mains 4"-12" shall conform to AWWA C900 and the following requirements:

1. outside diameter shall conform to Ductile Iron pipe.
2. Pipe shall be a minimum of pressure class 200 with a minimum standard dimension ration of DR14.
3. Pipe shall have plain end and elastomeric-gasket bell ends.
4. Fittings shall conform to AWWA C100 or C153 and have mechanical joints. Fittings shall be made of gray-iron or ductile iron. Interior of fittings shall be lined with Protecto 401 as specified above.

PVC force mains 14"-24" shall conform to AWWA C905 and the following requirements:

1. Outside diameter shall conform to Ductile Iron pipe.
2. Pipe shall be a minimum of pressure class 200 with a minimum standard dimension ration of DR14.
3. Pipe shall have plain end and elastomeric-gasket bell ends.
4. Fittings shall conform to AWWA C100 or C153 and have mechanical joints. Fittings shall be made of gray-iron or ductile iron. Interior of fittings shall be lined with Protecto 401 as specified above.

4. STEEL PIPE (AERIAL and BORED)

Steel pipe for aerial creek crossings shall be high strength steel, helical or straight seam welded manufactured in accordance with ASTM A 139 and consisting of grade “B” steel with a minimum yield strength of 35,000 psi. Thickness, diameter, and allowable spans shall be according to Detail S-12.

Boring installations shall be high strength steel, spiral welded or smooth-wall seamless manufactured in accordance with ASTM A252 and consisting of grade 2 steel with a minimum yield strength of 35,000 psi. The minimum inside diameter of steel encasements shall be eight inches greater than the inside dimension of the carrier pipe. The minimum casing pipe wall thickness shall be 0.375” for bored encasement and in accordance with the table provided below. Thicker encasement pipe may be required by the North Carolina Department of Transportation, railroads, or other agencies.

Carrier Pipe Nominal Diameter (inches)	Encasement Minimum Inside Diameter (inches)	Encasement Nominal Wall Thickness (inches)
6	14	0.375
8	16	0.375
10	18	0.375
12	20	0.375
14	24	0.375
16	26	0.500
18	30	0.500
20	32	0.500
24	36	0.625
30	42	0.625
36	48	0.750
42	56	0.875

The outside of steel pipe for aerial crossings shall be coated with 1 coat of a compatible acrylic polyurethane with a total dry film thickness of 2 – 5 mils per coat. The Acrylic Polyurethane coating shall be Tnemec Endura Shield Series 73, or approved equal. Primer shall be applied as recommended by the manufacturer.

No coatings required for buried or bored encasements but must conform to the noted wall thickness in the table above. All encasement pipe must be approved by the appropriate controlling agency (i.e. NCDOT, RR, etc.) prior to ordering the material.

All carrier piping shall be restrained joint ductile iron TR Flex as manufactured by U.S. Pipe, Lok-Ring or Flex-Ring as manufactured by American Pipe, Super-Lock as manufactured by Clow, Bolt-Lok or Snap-Lok as manufactured by Griffin or approved equal. One joint of restrained pipe must extend beyond the ends of the encasement pipe for boring installations. The restrained joint pipe shall be from manhole to manhole in aerial installations. The minimum inside diameter casing pipe shall be eight inches greater than the inside dimension of the carrier pipe.

Both ends of the casing shall be mortared. Metal "spider" pipe alignment devices shall be installed in all casings with a minimum of two spiders per pipe joint one fourth of the pipe joint length in from both the bell and spigot ends. See Detail S-39.

5. CURED IN PLACE PIPE LINING (CIPP)

CIPP lining may be allowed in lieu of replacing the existing downstream sewer main with Protecto 401 lined DIP or PVC pipe when a new forcemain discharges to an existing sanitary sewer main,

When allowed, the CIPP must adhere to the following specifications.

References:

The latest revision of the publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by basic designation only.

1. American Society of Testing Materials (ASTM)
 - a. D790 Test Method for Flexural Properties of Unreinforced Plastics and Electrical Insulation Materials
 - b. D2412 Test Method for determination of External Loading Characteristics of Plastic Pipe by Parallel-Plate Loading.
 - c. F1216 Practice for Rehabilitation of Existing Pipe Lines and Conduits by the Inversion and Curing of a Resin-Impregnated Tube.

Fabricate a flexible tube to a size that when installed will neatly fit the internal circumference of the conduit specified. Allowance shall be made for circumferential stretching during insertion.

The minimum length shall be that deemed necessary by the contractor to effectively span the distance from the inlet to the outlet of the respective manholes. The contractor shall verify the lengths in the field before impregnation. Individual inversion runs can be made over one or more manhole sections as determined in the field by the contractor and approved by the Engineer.

Furnish a general purpose, unsaturated, polyester resin and catalyst system compatible with the reconstruction inversion process that provides the cured physical strengths specified. CIPP lining shall be Insituform by Insituform Technologies, INC., Inliner by Inliner USA, Inc., KM-Inliner by Spiniello Limited, Inc. or Cure-Line by pipelining Products, Inc. or approved equal.

Physical Strength:

<u>U.S. Licensor Standard</u>	<u>Results</u>
Flexural Stress	#101 (Modified ASTM D-790) 4,500 psi
Flexural Modulus of Elasticity	#101 (Modified ASTM D-790) 250,000psi

Design Thickness:

The liner shall be designed in accordance with the applicable provision of the referenced ASTM standards as structural pipe linings for “fully deteriorated gravity pipe conditions” and shall meet the following design conditions:

1. AASHTO H-20 Live Load with two trucks passing for FFP in streets.
2. Soil weight 120 pounds per cubic foot. Coefficient of friction $K' = .130r$ for the installed depths.
3. Estimated maximum groundwater levels at the height of the manholes.
4. Service temperature range shall be 40-150 degrees F.

6. MANHOLES AND RELATED MATERIALS

Manholes will be precast reinforced concrete. Eccentric or concentric cones may be used on 8 through 12-inch mains. Concentric cones will be used on all 15 inch and larger mains. These different type manholes shall conform to these specifications and the City of Raleigh Standard Details. All manholes located outside public right-of-way must be **three feet** above the 100-year flood or be sealed as per Details S-24 & S-27. “Candy cane” vent stacks on sewer manholes must be “factory” fabricated and “hot dipped” galvanized, NOT field fabricated and galvanized. All manholes with vent stacks shall be water tight per Detail S-24. All Cam Lock manhole covers outside the 100-year flood plain must be vented with one 1-inch hole in the cover and as per Detail S-27. All manhole covers installed within streets, parking lots, and other paved areas shall have only one 1-inch hole, which shall be off center and fitted with a rubber grommet, unless seal-down manholes are required.

Interior Linings for Precast Reinforced Concrete Manholes

All sanitary sewer interceptor/outfall manholes **on lines 12-inches and larger**, and manholes receiving a sanitary sewer force main discharge shall be internally coated with a **polyurea/polyurethane coating. Duramer 1030** shall be applied in one coat of a 20% solids, deeply penetrating, dual-component polyurea primer (0.5 – 1.0 mils dry film thickness, 150 ft²/gal), one intermediate coat of a dual component polyurea (50-100 mils dry film thickness, 50 ft²/gal) and one top coat of a 65% solids, two-part polyurea (7.5-10 mils dry film thickness, 125 ft²/gal). All coats can be applied by brush, spray, or roller. **Sherflex Elastomeric Polyurethane shall be applied according to manufacturer’s recommendations.** Polyurea/polyurethane coatings shall be Duramer 1030 as manufactured by SewerKote, **Sherflex Elastomeric Polyurethane as manufactured by Sherwin-Williams**, or approved equal.

a. **Precast Reinforced Concrete Manholes**

The concentric and eccentric manholes shall be designed and manufactured in accordance with ASTM C478-97. Manhole diameters shall be 4, 5, or 6 feet in diameter as determined by the table within Sewer Design standards for main size or depth. The walls shall be a minimum of 5 inches thick and have a 6-inch minimum base. O-ring or "ram neck" joint seal shall be used for all manhole joints. All exterior joints shall be wrapped with a butyl resin sealant of 8” width. The "O" ring joint shall conform to the requirements of ASTM C443-98. A flexible rubber boot shall be supplied with the manholes to tie the pipe to the barrel section. These gaskets and clamps shall meet the requirements of ASTM C923. See Detail S-24 – S-27.

The manufacturer shall submit drawings showing the reinforcing, pipe openings and other details for approval by the Public Utilities Director. Also, the manufacturer shall provide

certified test reports indicating that the materials comply with the requirements of ASTM C478-97. "Extended base" precast sections must comply with Detail S-21 dimensions and equivalent reinforcing.

b. Related Materials

- 1) Manhole rings and covers shall be manufactured to the dimensions shown on the Details S-25 through S-27 and shall be made from Class 30 gray iron, meeting the requirements of ASTM A48-94ae1. All covers must be domestically cast and so indicated by manufacturer name and "USA" in castings. Covers shall have "DANGER PERMIT REQUIRED – CONFINED SPACE DO NOT ENTER" cast onto the face as shown in Detail S-25. All manhole rings on flat-top manholes shall be cast into the manhole top, as shall be the flange for the vent stack, if applicable. See Details S-24. **Cam Lock covers shall be used on all manholes that are within easements. See details 24 & 27.**
- 2) Manhole steps shall be made from reinforcing steel which is rubber plastic coated to provide for safer footing. These steps shall be furnished in accordance with the Detail S-28 and the applicable OSHA regulations. Steps shall also be provided on outside of raised manholes when top elevation is greater than three (3) feet above existing ground elevation. All traffic bearing castings must be Class 35 or greater.
- 3) Cement used in masonry or reinforced concrete units shall be Type I, CSA normal, meeting ASTM C150-99, unless otherwise approved by the Public Utilities Director.
- 4) Concrete shall be only plant-mixed or transit-mixed concrete conforming to ASTM C33-99ae1 as to aggregates and to ASTM C94/C94M-99e1 for ready-mixed concrete.

Concrete shall be of three types as based on 28-day compressive strength:

Type AA	4500 psi.
Type A	3000 psi.
Type B	2500 psi.

Concrete shall be air-entrained, unless specified otherwise, with 4 to 6% air. Retarders and accelerators shall be used only as directed by the engineer.

Concrete used for structures such as sewage lift stations and other reinforced concrete structures shall meet all applicable provisions of the NCDOT specifications regarding manufacturer, delivery and placement.

- 5) Steel reinforcing for concrete structures shall meet all applicable provisions of the NCDOT specifications as to manufacture, fabrication and placement.
- 6) Mortar used for sewer structures shall conform to ASTM specification C144-99 as to aggregate and strength. Mortar shall be prepared from cement in perfect condition and shall be prepared in boxes for that purpose. No mortar that has stood beyond forty-five minutes shall be used. Proportion by volume for different kinds of work shall be:

Brick Masonry - 1 part cement to 2 parts sand

Pointing - 1 part cement to 1 part sand

- 7) Rubber boot sleeves shall meet or exceed ASTM C923 for connecting pipes to thru the barrel section of the manhole. Boot sleeves shall have stainless steel expansion bands and pipe clamps that meet or exceed ASTM C923 and A167.
- 8) Manhole inverts shall be constructed with a width equal to that of the effluent pipe, height to the springline and invert “shelves” from that point upward at a 60 deg. angle to the manhole walls. The invert shall be brushed and troweled that a minimum energy loss occurs in the manhole from invert roughness. “Bowl” shaped invert will not be allowed.

7. MISCELLANEOUS MATERIALS

a. PVC Sewer Service Pipe

PVC sewer service pipe shall be schedule 40 PVC including the clean-out stack provided that a bronze clean-out slotted plug for location purposes.

b. PVC Sewer Pipe and Saddles

PVC sewer pipe, saddles and adapters shall conform to the requirements of ASTM D3034-98. The saddle shall be installed in accordance with Standard Details S-31 and S-32.

c. Sewer Air Release/Vacuum Breaker Valve Material

Air release/vacuum breaker valves on sewer force mains shall be in accordance with Detail S-9.

d. Concrete Structures and Access Hatches

All other concrete structures and access hatches installed within highway right of ways shall be H-20 load rated.

CONSTRUCTION SPECIFICATIONS FOR SEWER MAINS

As part of the requirement to obtain construction approval for sewer main extensions, the engineer shall affix the appropriate permit sticker to the original drawings. **The various permit stickers are included in appendix D.**

The requirements contained in this section shall apply to sanitary sewer main installations constructed for the Public Utilities Department or for private developers who may or may not dedicate the sewer improvements to the City. All necessary construction permits must be obtained before construction may begin in accordance with the North Carolina State Law. A sewer plug permit must also be obtained.

Any Contractor performing work within the City of Raleigh or City of Raleigh Merger Areas such as Garner, Knightdale, Wendell, Zebulon, Wake Forest, and Rolesville , shall have on each job site a copy of these specifications.

1. SCOPE OF WORK

- a. The contractor shall furnish all materials, equipment, and labor for excavation, installation, backfilling of sewer mains and related appurtenances as shown on the plans. The Public Works Department and/or Public Utilities Department shall conduct all City inspections on main extension projects.
- b. It shall be the contractor's responsibility to notify the Public Utilities and Public Works Departments at least twenty-four hours in advance of beginning any construction work on any project. The contractor must call the Public Utilities Department at 996-4540 and Public Works Department at 996-6810 and give the location, project name, individuals name, company name, start date and indicate if it involves a sewer extension and state the start date. Contractors must call the Public Utilities Inspections staff at 996-2737 at least twenty-four hours in advance for an inspection in the Garner, Knightdale, Wendell, Zebulon, Wake Forest, and Rolesville Utility area.
- c. Once construction has begun, the contractor shall contact Public Works at 890-3030 each morning by 9:00 a.m. to notify where and what will be done that day. The City requires a 24 hour notice prior to an inspection. Any work requiring inspector's observation outside of the normal work day, shall be charged at the current inspector hourly rate.
- d. **In all Sewer Bypass Pumping operations, a bypass plan sealed by a N.C. Professional Engineer must be submitted for approval to the Public Utilities Department prior to pumping operations (Plans may be submitted to administration staff at One Exchange Plaza, Suite 620, Raleigh, NC 27601) Pumps should be sized to handle the peak daily flow (2.5 times the average daily flow) for the line or area of work. The contractor shall secure pumps from a pump supplier according to the provided flow information. Pumping operations must be monitored 24 hours a day for each day of the pumping operation by qualified personnel in order to respond to problems or failures. 100% redundancy is required for pumping operations. In addition, back up pumps are to be connected to the bypass force main to facilitate immediate use upon failure of the primary pumps. Sewer service outages must be scheduled one week in advance and may not last longer than eight hours.**
- e. If a developer, engineer or contractor proceeds with the main installation prior to permit issuance the City requires the main to be reinstalled and the developer, engineer or

contractor shall be fully liable for all actions and costs, including prosecution by the City or the State for proceeding with installation prior to issuance of appropriate permit(s).

- f. "Field changes" are not considered approved by the Public Utilities Department unless revised plans have been submitted to the Public Utilities Department, reviewed and approved. Therefore, the contractor that proceeds with construction prior to this approval is at his/her own risk.
- g. Contractors working (excavation, boring, or other subsurface breach) around or in the vicinity of sewer force mains 8 inches in diameter or larger shall be required to physically spot the existing line to be verified by P.U.D. distribution staff or inspection staff. If other existing lines sizes are in question of conflict the contractor shall be directed by P.U.D. staff of the level of subsurface investigation needed to locate the existing line.

2. GENERAL TESTING REQUIREMENTS

- a. The City may perform and shall require the contractor to perform, such destructive and nondestructive testing, as it deems necessary in order to inspect the materials and workmanship. See specific testing requirements within this section. These tests shall be in accordance with the procedures established by ASTM and AASHTO. The City shall reserve the right to modify the procedures in testing ditch and backfill compaction to allow a deeper test to be made by using the sand-cone method and/or nuclear testing gauges.
- b. All new sanitary sewer mains must be cleaned to the satisfaction of the inspector by jetting or balling prior to final inspection and acceptance by the City.
- c. Prior to final inspection all sanitary sewer mains shall be camera inspected. In areas where the manholes are installed within the street, the camera inspection shall take place just prior to the final lift of surface course asphalt. Failed inspections will require a follow up inspection and subsequent re-inspection fee.

3. SEWER CONSTRUCTION PLUGS

- a. A sewer plug permit must be obtained prior to beginning construction. See General Policies and Regulation Section for application.
- b. Mechanical plugs (non-pneumatic) must be installed for the duration of construction of any sanitary sewer extension. Plugs are to be installed on the upstream end of the new main at the first manhole from the existing tie-in, until final acceptance.
- c. All plugs must be securely tied off with steel cable within the manhole and must have a secure marking attached to the plug indicating the utility contractor to whom the plug belongs.
- d. All plugs must be monitored during construction to insure the plug is functioning as required.
- e. Prior to removing the plug, the contractor must sign a plug removal form verifying that the sewer facilities are sufficient and functionally complete. All plugs must be removed by the contractor upon acceptance that the sewer facilities are sufficiently functionally complete

to accept flow and PRIOR to the mains above the plug location being placed into service and/or accepting any flow of sewage.

4. HANDLING AND STORAGE OF MATERIALS

- a. The contractor shall be responsible for the shipping and storing of all sewer materials. Any material which is damaged or defective shall be replaced by the contractor at the contractors' own expense.
- b. The loading and unloading of all pipe, manholes and other accessories shall be in accordance with the manufacturer's recommended practices and shall at all times be performed with care to avoid any damage to the material.
- c. The contractor shall locate and provide the necessary storage areas for materials and equipment. If private property is being used for storage areas, then the contractor must have the written consent from the owner. Without this written consent, all material and equipment shall be stored within the existing rights-of-way and easements of the project. Pipe may not be prestrung along job site; it must be delivered to and removed from job site each day.
- d. All materials, once on the job site, shall be stored in accordance with the manufacturer's recommendations. All PVC sewer pipe shall be protected from the sun's ultra violet rays if stored on the job site longer than twenty days.
- e. All pipes shall be kept free of dirt and other debris. Any damage relating to the coating of the various materials for sewer and water mains shall be repaired in a manner approved by the City. Machined manhole frames and covers shall remain intact until construction is complete.
- f. The contractor shall be responsible for safeguarding and protecting all material and equipment stored on the job site. The contractor shall be responsible for the storage of materials in a safe and professional manner to prevent injuries, during and after working hours, until the project is complete.

5. BARRICADES, SIGNS AND STREET PROVISIONS

- a. Signs, barricades, warning lights, guard rails and flaggers shall be employed as necessary when construction endangers either vehicular or pedestrian traffic. These devices shall remain in place until the traffic may proceed normally again. The contractor shall hold the City harmless for any damages or injuries caused by the construction of sewer mains.
- b. Detours shall be set up and maintained by the contractor under the direction of the City of Raleigh Department of Transportation and North Carolina Department of Transportation. Notice must be given a week in advance of the detour so that necessary notification of the traveling public may be made. The contractor will furnish all barricades, signs, lights and other safety devices to protect his/her construction. The contractor is in no way relieved of liability for providing this protection because the detour is approved by others.
- c. Construction work zone signs and signing procedures shall conform to the MUTCD and supplements and to all applicable federal, state and local codes. The contractor shall be responsible for securing the necessary permits from the City's Transportation and

Inspections Departments for all work to be performed in the public rights-of-way.

6. PROPERTY PROTECTION

Trees, fences, poles and all other property shall be protected unless their removal is authorized, and any property not authorized for removal, but damaged by the contractor, shall be restored by the contractor to the owner's satisfaction. Existing manholes within the work zone and outside of the pavement shall be protected by orange safety fence.

7. GENERAL CONSTRUCTION SAFETY

- a. The contractor and any subcontractors shall be responsible for the total compliance with all federal, state and local ordinances, laws and regulations as related to safe construction practices and to protecting the employees and the public's health and safety.
- b. The contractor shall ensure that all Occupational Safety and Health Administration (OSHA) regulations and standards are followed during all phases of the construction project.
- c. The City shall not be responsible for contractor's adherence to OSHA regulations and standards. However, the City may report known violations or unsafe practices to the appropriate enforcement agency.
- d. The contractor shall furnish safety equipment necessary to inspect the work including, but not limited to ladders, gas detectors/oxygen sensors, blowers, etc.

8. ENCROACHMENT CONTRACTS AND PERMITS

- a. Prior to actual construction, the contractor shall acquire the necessary encroachments from NCDOT when working within the rights-of-way of state system roads or highways. The encroachment permit shall be kept on the job site at all times.
- b. The contractor shall be responsible for securing all other local and state and federal permits required for the utility construction. The contractor must have an approved set of permitted construction plans on site at all times.
- c. The contractor must have an approved set of permitted construction plans on site at all times.
- d. For projects which require construction plan approval, all environmental permits and NCDOT encroachments must be provided prior to plan approval. See general policies and regulations section Page 25.

9. PAVEMENT REMOVAL AND REPLACEMENT

- a. Any pavement that must be removed shall be cut along straight lines with the appropriate saw cut machine. A street cut permit is required. The removal and replacement of the pavement shall conform to the information shown in Details S-1 thru S-4.

- b. All cuts of City streets must be patched the same day with a temporary or permanent patch. Once work has been completed, all temporary patches shall be replaced with permanent ones. All work from patching shall be cleaned up at the same time of patching
- c. The City of Raleigh shall perform density tests as needed to determine contractor's compactive efforts. See Notes 2 and 3 of details S-3 & S-4.
- d. Pavement cuts shall be confined to a maximum trench bottom width as shown in Details S-4 & S-5, plus 12 inches on either side.
- e. Asphalt compaction shall be done with a gasoline or diesel powered smooth drum asphaltic roller.
- f. Pavement cuts within NCDOT Right of Way shall not be performed without the proper encroachment permits on site. All patching of NCDOT pavements shall conform to the approved on site encroachment permit.

10. EXCAVATION

- a. Prior to any excavation or construction, the contractor shall locate all existing utilities in the field. If help is needed in locating utilities operated by the Public Utilities Department, the contractor should contact the Operations Division (996-2737).
- b. Trench width shall be a minimum of twelve inches plus outside diameter of pipe and a maximum of twenty-four inches plus outside diameter of pipe, unless additional trench width is required by OSHA. Trench width shall be measured between the faces of the cut at the top elevation of the pipe bell as shown in Details S-4 & S-5.
- c. Trench bottom conformation, where no special bedding is required, may be that referred to herein as flat bottom where the trench bottom is excavated slightly above grade and cut down to pipe grade by hand in the fine-grading operation. Where the trench bottom is inadvertently cut below grade, it shall be filled to grade with an approved material and thoroughly tamped.
- d. The maximum length of open trench shall be no more than three-hundred feet unless approval is obtained from the Public Utilities Director.
- e. The contractor shall, at the contractor's own expense, keep all trenches free from water during the excavation for construction of sewer mains. The water shall be pumped out of the trench or build check dams to keep it out of the ditch in such a manner as not to cause injury to the public health, private property or the work in progress. Erosion control measures shall be taken during this pumping.
- f. In trenches where water is present or dewatering is required, the trench shall be stabilized with #67 stone. When the contractor encounters material during trench excavation, at the opinion of the inspector or Public Utilities Director, that is unsuitable (i.e. "muck"), this material shall be replaced with material that is considered suitable prior to the pipe laying operations. In this case, construction fabrics may be required to prevent the migration of side support away from the pipe.
- g. Safety and convenience of the public necessitate that all work, including excavation, be done in such a manner as to cause minimum traffic interruption, both pedestrian and

vehicular. Utilities such as fire hydrants, valves, etc., shall be accessible at all times. Gutters and drains shall be left open and clear at all times, and the contractor shall be responsible for all drainage around his work. Unless specifically waived by the Public Works Department, provisions shall be made to maintain vehicular traffic on all streets in which work is in progress, and suitable walkways shall be maintained for pedestrian travel.

- h. Sheeting or bracing shall be used wherever necessary to prevent failure of the trench banks. All sheeting shall conform to AASHTO and OSHA safety standards. The decision of the Engineer relative to bracing for the protection of property of the City shall be binding upon the contractor. The removal of sheeting shall be done in such a manner as to minimize the loss of friction between the backfill and trench walls

11. ROCK EXCAVATION

- a. Rock shall be defined as that solid material that cannot be excavated, in the opinion of the Public Utilities Director or Engineer, by any means other than drilling and blasting, drilling and wedging, or boulders and broken concrete exceeding ½ cubic yard in volume. Rock shall be excavated to the same limits as earth excavation except that the trench shall be made six inches lower than the outer bottom of the pipe, and this six inches shall be refilled with six inches of #67 stone and thoroughly compacted to the sub-grade level. All blasting shall be done after coordination with the City Inspector and subject to all applicable regulations. The City reserves the right to require the removal of rock by means other than blasting where any pipe or conduit is either too close to or so situated with respect to the blasting as to make blasting hazardous. Rock taken from the ditch shall immediately be hauled away and disposed of by the contractor.
- b. Blasting procedures shall conform to all applicable local, state and federal laws and ordinances. A blasting permit shall be obtained from the City of Raleigh Fire Marshal's Office, prior to any blasting. The application shall be obtained 24-hours before any blasting takes place, and the Fire Marshal may specify the hours of blasting. The contractor shall take all necessary precautions to protect life and property, including the use of an approved blasting mat where there exists the danger of throwing rock or overburden. The contractor shall keep the explosive materials that are on the job site in specially constructed boxes provided with locks. Failure to comply with this specification shall be grounds for suspension of blasting operations until full compliance is made. No blasting shall be allowed unless a galvanometer is employed to check cap circuits. Where blasting takes place within five-hundred feet of a utility, structure or property which could be damaged by vibration, concussion or falling rock, the contractor shall be required to take seismograph readings and to keep a blasting log containing the following information for each and every shot.
 - 1) Date of shot
 - 2) Time of shot
 - 3) Crew Supervisor
 - 4) Number and depth of holes
 - 5) Approximate depth of overburden
 - 6) Amount and type of explosive used in each hole
 - 7) Type of caps used (instant or delay)
 - 8) The weather
 - 9) Seismograph instrument and readings

- c. This blasting log shall be made available to the Public Utilities Director or Engineer upon request and shall be kept in an orderly manner. It shall be the contractor's responsibility to have adequate insurance to cover any damages resulting from blasting so to save the City of Raleigh harmless from any claims.

12. TRENCH PREPARATION

- a. Trench excavation shall conform to the line and depth shown on the plans. The trench shall be properly braced and shored so that workers may work safely and efficiently. When water is being pumped from the trench, the pump discharge shall follow natural drainage channels, drains or storm sewers. In no case may trench water or groundwater be pumped into or allowed to enter the sanitary sewer system. See erosion control section for appropriate siltation prevention measures prior to pumping.
- b. The width and type of trench may vary with the depth of cut, and the trench shall be constructed in accordance with the dimensions and other information shown on Details S-4 & S-5.
- c. Pipe Clearance in rock shall be a minimum of six inches on each side and bottom for mains fifteen inches in diameter and less. For larger size mains, the minimum clearance shall be nine inches on the sides and bottom.
- d. If unstable conditions are encountered, the trench shall conform to the requirements as stated in this Handbook.

13. PIPE INSTALLATION

- a. The pipe material listed above shall be installed in accordance with the manufacturer's recommendations and the requirements of these specifications.
- b. All sewer mains and manholes shall be laid to the line and grade shown on the plans.
- c. No deviations from line and grade shall be made, unless they have been approved by the Public Utilities Department or Engineer and identified on the "as-builts".
- d. The sewer pipe installation shall start at the outlet end and proceed upstream to the termination of the project as shown on the plans. The bell ends shall point upstream. Exceptions to this provision will be considered on a case by case basis, when requested in writing by the owner of the development at the time engineering construction plans are submitted to the City for review and approval. The development owner must agree to hold the City harmless. He must accept full responsibility for compliance with state and federal regulations of the Clean Water Act, including any associated penalties which could reach up to \$25,000/ day, for the release of wastewater from sanitary sewer to the environment, which are not connected to existing sewer due to the granting of an exception to the pipe laying sequence required in the Public Utilities Handbook. The development owner must further agree to not request building permits, if an exception is granted for that portion of the development, until connecting sewer is constructed and accepted by the City.

- e. While working on any part of an existing sewer main, the contractor shall maintain the existing sewage flow. No discharge of sewage to the storm waters will be allowed. Water for the flushing of new sanitary sewer mains must be obtained through a fire hydrant meter and must be pumped out and may not be discharged into the sanitary sewer system. Construction requiring existing sewer flow to be pumped from existing manholes shall be the responsibility of the contractor and must be approved prior to proceeding by the Public Utilities Director or the City Inspector according to **Section 1. d., Scope of Work for Bypass Pumping.**
- f. After the trench foundation has been properly graded with bell holes, the pipe shall be carefully lowered into the trench with approved methods. Under no circumstances shall the pipe or accessories be dropped or dumped into the trench. All damaged pipe shall be properly repaired or replaced at the contractor's expense.
- g. The pipe interior shall be kept clean before and after installation by means approved by the Public Utilities Director or Engineer. Pipe ends shall be plugged at the end of each workday or when work is temporarily stopped. The plugs shall be watertight so the water and debris will be kept out.
- h. When installing a sewer main, the horizontal separation from any water main shall be ten feet. If this separation cannot be maintained due to existing conditions, the variation allowed is the water main in a separate trench with the elevation of the water main at least 18 inches above the top of the sewer and must be approved by the Public Utilities Director. All distances are measured from the outside diameter to outside diameter. Where it is impossible to obtain proper separation, or anytime a sanitary sewer passes over a water main, DIP materials or steel encasement extended 10' on each side of crossing must be specified & installed to waterline specifications.
- i. Maintain 24" min. vertical separation at all sanitary sewer & storm drain crossings. Where adequate separations cannot be achieved, specify DIP materials & a concrete cradle having 6" min. clearance (per COR PUD detail S-49)
- j. All other underground utilities shall cross water & sewer facilities with 18" min. vertical separation required
- k. Railroad crossings shall be made following all precautionary construction measures required by the railroad officials.
- l. All sewer crossings under state system roads shall be made in accordance with the requirements of NC DOT as defined in their encroachment permits.
- m. Where conditions are, in the opinion of the Public Utilities Department or Engineer, unsuitable for laying pipe because of weather or trench conditions, the Contractor shall be required to cease work until permission is given by the Public Utilities Director or Engineer for work to commence again, providing such conditions have been corrected.

14. LAYING CCFRPM GRAVITY SEWER PIPE

All CCFRPM pipe shall be installed per manufacturer recommendations and the following requirements:

- a. Do not exceed forces recommended by the manufacturer when joining pipe.

- b. Gasket shall be wiped clean prior to joining. Damaged, defective, or bulging gaskets shall be replaced with a new coupling.
- c. Wipe the plain end of pipe clean prior to insertion in the socket.
- d. Apply joint lubricant, as approved by the pipe manufacturer, to pipe end and elastomeric gaskets.
- e. For handling pipe, use textile slings or other suitable materials or a forklift. Use of cables or chains is not permitted. Damaged pipe will be rejected.
- f. Pipe shall be free of nicks, scratches, and gouges at the time of installation. Visible gouges shall be cause for rejection of pipe.

For depths of cover of 0' to 40' CCFRPM pipe shall be bedded in a minimum of 6" Class I material. Embedment and initial backfill shall be Class I material to 6" above the top of pipe. Backfill the remaining 6" of initial backfill with Class I, II, or III material. See Detail S-1.

15. LAYING PVC GRAVITY SEWER PIPE

The foundation for PVC gravity sewer pipes shall be a firm flat bottom trench of 4 inches of Class I material as defined in ASTM D2321-89(1995) compacted with bell holes. See Details S-2, S-3, & S-5. Class II material may be used if contractor can verify that this type of soil is native to the site by having soil tests made by a soil testing agency. Sample borings shall be taken on 200 feet intervals and to a depth equal to or greater than the trench bottom shown on the plans. The results must be approved by the Public Utilities Director prior to pipe installation.

16. LAYING PVC FORCE MAIN PIPE

Install C900 and C905 PVC pipe in conformance with AWWA C605. Clean bell and spigot ends prior to jointing. Ends of field cut pipe shall be beveled with file. Gasket shall be clean and lightly lubricated. Joint shall be made as recommended by the manufacturer.

17. LAYING DUCTILE IRON SEWER PIPE

- a. Ductile iron pipe shall be installed in accordance with the requirements of AWWA Standard C-600. See Detail S-4.
- b. Sewer pipe shall be laid to the line and grade shown on the plans. There shall be a minimum horizontal separation between water and sewer utilities of ten feet and a vertical separation of 18 inches.
- c. Protection shall be afforded to all underground and surface structures using methods acceptable to the Public Utilities Director or Engineer. This protection shall be furnished by the contractor at the contractors' own expense.
- d. Deviation from line and grade may be made on revised plans upon approval by the Public Utilities Department and identified on "as built" when such deviations arise from grade or line conflicts with existing utilities, structures or other sources of conflict.
- e. Subsurface explorations shall be made by the contractor at the direction of the Public Utilities Director or Engineer where it is necessary to determine the location of existing pipes, valves or other underground structures.
- f. Depth of pipe cover, unless shown otherwise on the plans shall be a minimum of three feet outside of travel ways and five feet inside of travel ways. Depth of cover shall be

measured from the established street grade or the surface of the permanent improvement to the top of the barrel of the pipe.

- g. After the foundation has been properly graded, bedded when applicable, and the bell holes dug, the pipe and accessories shall be carefully lowered into the trench by approved methods. Under no circumstances shall the pipe or accessories be dropped or dumped into the trench. All damaged pipe and accessories shall be removed from the job. All damaged pipe shall be replaced at the expense of the contractor.
- h. installation of pipe and jointing of pipe shall be done according to manufacturer's recommendation with care being taken to provide uniform bearing for the pipe. Bell and spigot of pipe shall be cleaned and properly lubricated where a mechanical joint of a "push on" type joint is employed.
- i. Open ends of pipe shall be plugged with a standard plug or cap at all times when pipe installation is not in progress. Trench water shall not be permitted to enter pipe.
- j. Bell ends will face the direction of installation which must be upgrade unless otherwise directed by the Public Utilities Director or Engineer.
- k. Where conditions are, in the opinion of the City Inspector, unsuitable for pipe installation because of weather or trench conditions, the contractor shall be required to cease work until permission is given by the City Inspector for work to commence again providing such conditions have been corrected.

18. INSTALLING CIPP LINER

Installation Preparations

Adhere to the methods listed below to produce a high quality rehabilitated pipeline by the cured-in-place inversion method. The finished product is to be of highest quality and shall eliminate infiltration problems which exist in the existing wastewater pipeline.

Installation Preparation: The following installation preparation procedures shall be adhered to by the Contractor.

- a. Cleaning of Sewer Line: Remove debris from the sewer line in accordance with Public Utilities standards
- b. Inspection of Pipelines: perform inspection of pipelines shall be by experienced personnel trained in locating breaks, obstacles, and service connections by closed circuit television. Carefully inspect the interior of the pipeline to determine the location of conditions which may prevent proper installation and it shall be noted so that these conditions can be corrected. Internal T.V. inspection shall be in accordance with Public Utilities standards
- c. Bypassing Sewage: Provide for the flow of sewage around the section or sections of pipe designated for reconstruction. The bypass shall be made in accordance with City of Raleigh Standards set forth in this handbook.
- d. Line Obstructions: Clear the line of obstruction such as solids, dropped joints, protruding service connections or collapse pipe that will prevent the installation. If inspection reveals an obstruction that cannot be removed by conventional sewer cleaning equipment, then make a point repair excavation to uncover and remove or repair the obstruction. Such excavation shall be approved in writing by the engineer prior to the commencement or the work.

Installation Procedure

- a. Designate a location where the reconstruction tube will be vacuum impregnate prior to the installation. Allow the engineer to inspect the materials and “wet-out” procedure. Use a catalyst system compatible with the resin and reconstruction tube.
- b. The wet out reconstruction tube shall be inserted through an existing manhole or other approved access by means of an inversion process and the application of hydrostatic head sufficient to fully extend it to the next designated manhole or termination point. Insert the reconstruction tube into the vertical inversion standpipe with the impermeable plastic membrane side out. At the lower end of the inversion standpipe, the reconstruction tube shall be turned inside out and attached to the standpipe so that a leak proof seal is created. The inversion head will be adjusted to be of sufficient height to cause the impregnate tube in the invert from manhole to manhole and hold the tube tight to the pipe wall, produce dimples at side connections and flared ends at the manholes. The use of a lubricant is recommended. Care shall be taken during the elevated curing temperature so as not to overstress the felt fiber. In certain cases, the contractor may elect to use a top inversion where the reconstruction tube is attached to the top ring and the standpipe is formed from the reconstruction tube itself.
- c. Curing: After inversion is completed, supply a suitable heat source and water recirculation equipment. Equipment shall be capable of delivering hot water throughout the section by means of a pressuring hose to uniformly raise the water temperature above the temperature required to affect a cure of the resin. The temperature shall be determined by the resin\catalyst system employed.
- d. Fit heat source with suitable monitors to gauge the temperature of the incoming and outgoing water supply. Place a gauge between the impregnated reconstruction tube and the pipe invert at the remote manhole to determine the temperature during cure. Water temperature in the line during the cure period shall be as recommended by the resin manufacturer. Initial cure shall be deemed to be completed when inspection of the exposed portion of cured pipe appear to be hard and sound and the remote temperature sensor indicates that the temperature is of a magnitude to realize an exothermic. The cur period shall be of a duration recommended by the resin manufacturer, as modified for the cured in place inversion process, during which time the recirculation of the water and cycling of the heat exchanger to maintain the temperature continues.
- e. Cool down: cool the hardened pipe to a temperature below 100° F before relieving the static head in the inversion standpipe. Cool-down may be accomplished by the introduction of cool water into the inversion standpipe to replace water being drained from a small hole made in the downstream end. Care shall be taken in the release of the static head so that a vacuum will not be developed that could damage the newly installed pipe.
- f. Finish: the finished pipe shall be continuous over the entire length of an inversion run and be as free as commercially practicable from vision defects such as foreign inclusions, dry spots, pinholes and delaminating.
- g. Sealing pipe at manholes: if due to broken or misaligned pipe at the manhole wall, the new pipe fails to make a tight seal, apply the seal at that point. The seal shall be of a resin mixture compatible with the pipe.
- h. Service connections: Fully reopen the existing active service connections in each length of sewer following lining. Reopen service connections from inside the sewer by means of a closed-circuit television camera, controlled cutting device appropriate for CIPP lining and the rehabilitates sewer pipe. Clean and neatly cut openings flush with the lateral pipe. Liner penetrations of openings shall be watertight.
- i. Air test and Camera the main per specifications below.

19. SEWER LATERALS

- a. Pipe for 4 inch sewer laterals shall be PVC pipe or DIP. Where installation by boring is specified, four-inch ductile iron pipe shall be used. DIP (4" only) must be used for deep or shallow installations under the same standards as sewer mains. Aerial service installations shall be constructed of 4" DIP. A minimum grade of 1% shall be maintained with four and six-inch pipe. Each lateral shall be sealed at the end with an approved watertight plug. Lateral installation for four-inch services shall conform to Standard Detail S-30. A six-inch service lateral must connect to a manhole. All laterals shall be left exposed until the inspectors can verify the installation of each plug.
- b. Each sewer lateral shall be installed from the main to the street right-of-way line or easement line where a one piece combination wye and 1/8 bend and cleanout stack will be installed. The wyes on the laterals shall be sealed at the property line with a permanent plug.
- c. Trench support, bedding and backfill for laterals shall conform to the same specifications as those for sewer mains. **Class II, III, and IV materials may be used for PVC sewer lateral bedding in lieu of Class I materials.** The contractor shall properly backfill under all wye and lateral connections at the main. The lateral connection at the main shall be backfilled with #67 stone.
- d. Where laterals are bored, the face of the bore cut shall be a distance of five feet from the edge of the pavement on either side, unless approval to the contrary is given by the Public Utilities Director.
- e. Sewer laterals four inches in diameter shall be connected to the main by means of an in-line wye or a tap and saddle, installed over a hole cut in the top quadrant of the main at an angle of forty-five degrees, with respect to direction of flow. The hole shall be cut with a mechanical circle type saw cutter designed for the particular use and rendering a smooth, uniform cut with no damage to the main and which retrieves the coupon. See saddle installations on Standard Detail S-31.
- f. All 4" sewer services may be tapped directly into 8, 10, and 12-inch mains or manholes in accordance with Details S-31 and S-32. Taps can only be made by using a mechanical tapping machine or other approved device. All sanitary sewer service connections 6 inches and larger shall be made into manholes only. Service connections on mains 15 inches and larger are only allowed at manholes. Service clean-outs shall be located at the right-of-way line or the easement boundary line. The maximum vertical drop for a 6-inch service into a manhole shall be 10 feet.
- g. All laterals tapped on newly constructed mains shall be air tested with the main. All laterals tied to a newly constructed manhole shall be vacuum tested with the manhole or conduct a separate air or water head test before any plumber connections are made.

20. MANHOLES

- a. Manhole dimensions shall conform to those shown on Detail S-24. Manholes on all lines twelve inches in diameter or smaller shall have an inside diameter of four feet.

- b. Inverts shall be constructed with a width equal to that of the effluent pipe, height to the springline and invert "shelves" from that point upward at 60 deg. to manhole walls, it shall be so brushed and troweled that a minimum energy loss occurs in the manhole from invert roughness. The maximum grade on an invert of less than 2.5 feet shall be no greater than 6 inches across the manhole. "Bowl" shaped inverts shall not be allowed in the sanitary sewer collection system. What is this trying to achieve?
- c. Foundation for manholes shall be in accordance with Detail S-21, unless approval to the contrary is given by the Public Utilities Director.
- d. All manholes in road right-of-ways will be flush with grade not withstanding 100 year flood requirements. In easements, manholes will be a minimum of 12 inches above ground.
- e. All new manholes must be vacuum tested in accordance with the following procedure:
- 1) The Contractor shall furnish all labor, equipment, and any appurtenant items necessary to satisfactorily perform the vacuum test. All equipment will be approved for vacuum testing.
 - 2) All lifting holes shall be plugged with an approved non-shrink grout.
 - 4) All pipes entering the manhole shall be plugged. The contractor shall securely brace the plugs to keep them from being drawn into the manhole. All service connections tied to manholes shall also be vacuum tested with the manholes.
 - 5) The test head shall be placed inside the top of the cone section of the manhole and the seal inflated in accordance with the manufacturer's recommendations.
 - 6) Manhole vacuum tester shall be as manufactured by Cherne Manhole Testing or approved equal. A vacuum of 10-inches of mercury shall be drawn and the vacuum pump shut off. Inflate the compressor band to effect a seal between the vacuum base and the manhole cone section. Connect the vacuum pump to the outlet port with the valve open. With the valves closed, the time for the vacuum to drop to 9-inches of mercury shall not be less than that shown in the following table.

Manhole Depth	Diameter of Manhole		
	48" Dia.	60" Dia.	72" Dia.
10 Ft. or Less	60 Sec.	75 Sec.	90 Sec.
>10 Ft. but <15 Ft.	75 Sec.	90 Sec.	105 Sec.
>15 Ft.	90 Sec.	105 Sec.	120 Sec.

(Times shown are minimum elapsed times for a drop in vacuum of 1-inch of mercury).

- 7) If the manhole fails the initial test, necessary repairs shall be made with an approved non-shrink grout while the vacuum is still being drawn. Retesting shall proceed and continue until a satisfactory test is accomplished.
- f. All manhole rings on manholes other than flat-tops shall be bolted to the cone section and sealed down with asphaltic cement or “ram-neck. See Detail S-25.
- g. All manhole joints must be waterproofed with asphaltic cement or “ram-neck”. All exterior joints shall be wrapped with a butyl resin sealant of 8” width.
- h. All main and service pipe connections into manholes must be cored with a concrete coring machine and the pipe connection must be made with a flexible rubber boot.
- i. Adjustment rings used within streets shall be fixed with mortar or a urethane based manhole joint seal by A.I.T. or approved equal.

21. BACKFILLING

- a. The backfilling of the trench after the pipe installation and testing shall be in accordance with Details S-4 & S-5 & S-1 for the various pipe materials.
 - 1) For depths of cover of 0’ to 40’ CCFRPM pipe shall be bedded in a minimum of 6” Class I material. Embedment and initial backfill shall be Class I material to 6” above the top of pipe. Backfill the remaining 6” of initial backfill with Class I, II, or III material. See Detail S-1.
 - 2) The haunching for PVC pipes shall be with #67 stone (Class I material) 4 inches below and up to the springline of the pipe. Care shall be taken to work the haunching well under the bottom of the pipe. The initial and final backfill shall be with suitable native material. No rocks, boulders or stones four inches or larger shall be included in the backfill. The haunching shall be tamped to 95% standard Proctor density in six-inch lifts.
 - 3) For PVC sewer installations, Class II material may be allowed for the bedding, housing and initial backfill if the contractor can verify that this type of soil is native to the site by having soil tests made by a soil testing agency. Soil sample borings shall be taken as directed by the City inspector to a depth equal to or greater than the trench bottom elevation shown on the plans or in the specs. The results must be approved by the Public Utilities Director prior to pipe installation. The bedding and backfilling shall be in conformance with ASTM standards and the various soil classes are defined below:
 - (a) Class I - Angular, 6 to 40mm (1/4 to 1 1/2 inch), graded stone, including a number of fill materials that have regional significance such as coral, slag, cinders, crushed stone and crushed shells.
 - (b) Class II - Coarse sands and gravels with maximum particle size of 40mm (1 1/2 inch), including variously graded sands and gravels containing small percentages of fines, generally granular and noncohesive, either wet or dry. Soil Types GW, GP, SW and SP are included in this class. (GW - well graded gravel, GP - poorly graded gravel, SW - well graded sand, SP - poorly graded sand.)

- (c) Class III - Fine sand and clay type gravels, including fine sands, sand-clay mixtures and gravel-clay mixtures. Soil Types GM, GC, SM and SC are included in this class. (GM - silty gravel, GC - clayey gravel, SM - silty sand, SC - clayey sand.)
 - (d) Class IV - Silt, silty clays and clays, including inorganic clays and silts of medium to high plasticity and liquid limits. Soil Types MH, ML, CH and CL are included in this class. These materials are not recommended for bedding, haunching or initial backfill on PVC pipes. (MH - silty soil with high liquid limit, ML - silty soil with low liquid limit, CH - clayey soil with high liquid limit, CL - clayey soil with low liquid limit.)
- 4) All backfill shall be compacted in six-inch lifts measured from the foundation to one foot above the top of the pipe and then in twelve-inch lifts to the top of the trench when in easements. Sewer mains in street rights-of-way shall be compacted in six-inch lifts all the way to the top of the trench.
 - 5) Material for backfilling shall be approved by the inspector. In areas where settlement or bearing capacity are not a major consideration, the engineer may give permission for a low grade of material to be backfilled from a point two foot above the top of the pipe, but in no event will excavated rock larger than four inches at any point be used for backfill material.
 - 6) Where backfill material is unsuitable, in the opinion of the Public Utilities Director or Engineer, the contractor may be directed to dispose of the unsuitable material and provide material suitable to the Public Utilities Director or Engineer.
 - 7) All backfill shall be compacted in six-inch lifts measured from the pipe foundation upward. Backfill for roadway shall be compacted to at least 95% of maximum soil density in those areas where the supporting capacity of the soil is of prime consideration. Laboratory determination of maximum soil density will follow the procedure of AASHTO T99-86. Field determination of the density of the soil in place shall follow the procedure of AASHTO T191-86 or T204-86. The result of any one test may be a minimum of 90% of maximum density, but the average of any three tests in an area shall be 95% of maximum density. All tests shall be conducted at the direction of the City Inspector, and the cost of such tests will be borne by the contractor with the provision that the City will test an area two times only where both tests fail. The contractor shall then be required to submit satisfactory evidence that his ditch compaction meets the specifications.

PVC Force mains

PVC pipe shall be installed in accordance with AWWA C605. At a minimum, all PVC pipe shall be installed at a Type 3 laying condition as specified by AWWA C605 for depth of installation from 4-ft to 10-ft measured from the top of the pipe. The Type 3 laying condition requires the pipe to be bedded on a minimum of 4-inches of select granular material that will conform to the bottom of the pipe. Select granular material shall consist of well-graded sand, gravel, crushed gravel, crushed stone or crushed slag composed of hard, tough and durable particles, and shall contain not more than 10 percent by weight of material passing a 0.075 mm (No. 200) mesh sieve and no less than 95 percent by weight passing the 25 mm (1 inch) sieve. Pipe installation on a flat bottom trench is unacceptable.

Embedment material shall be compacted to the top of the pipe. When using mechanical compactors, avoid contact with the pipe. When compacting over the pipe crown, a minimum cover of at least 8-inches or more in conformance with the manufacturer's requirements shall be maintained over the top of the pipe prior to compacting. The maximum embedment sizing shall be limited to materials passing a 3/4-inch sieve for angular materials or 1-1/2-inches for rounded rock. Embedment materials consisting of select material or native soils shall be well drained, granular, free of rocks and other foreign materials and shall be selected and placed to prevent gouges, crimping, or puncture of pipe, joints or appurtenances.

22. SURFACE RESTORATION

- a. All disturbed surfaces and property thereon, shall be restored to a condition equal to that existing before construction began, and the contractor shall maintain and be responsible for all ditches in paved streets, curbs, gutters or sidewalks until the contractor repaves the trench cuts. The contractor, with permission of the inspector, may place temporary or permanent asphaltic material in the cut. Asphalt compaction shall be done with a gasoline or diesel powered smooth drum asphaltic roller.
- b. All easements will be seeded with grass and left so they can be mowed by conventional mowers, unless approved by the Public Utilities Department for rip-rap or other specified material. In remote areas, easements will be seeded with a quality fescue grass. In residential areas, easements will be seeded with either falcon or rebel fescue or leaf mulch at the request of property owner. The contractor shall guarantee a good uniform stand of grass and shall reseed any bare or thin spots. The contractor will be responsible for a one-year warranty on materials and workmanship.

23. EROSION CONTROL

Erosion control measures shall be performed by the contractor, conforming to the requirements of, and in accordance with plans approved by the State of North Carolina Department of Environment and Natural Resources, North Carolina Sedimentation Control Commission and City of Raleigh Inspections Department Erosion Control Division, and as per the erosion control plan portion of the construction drawings and these specifications. The contractor shall not allow mud and debris to accumulate in the streets. The sedimentation and erosion control plan and permit shall remain on site at all times. Should the contractor pump water from trenches during construction, appropriate siltation preventative measures shall be taken prior to the entry into any storm drain or stream. All materials used for erosion control shall be approved by the Engineer prior to installation by the contractor.

- a. Temporary and permanent erosion control measures shall be shown on the plans. Temporary and permanent erosion control work shall be coordinated throughout the project to provide effective and continuous erosion control throughout construction and post construction, which minimizes siltation of streams, lakes, reservoirs, other water impoundments, ground surface, or other property. Seeding and mulching shall be carried out immediately behind construction.
- b. Temporary erosion control measures shall include but not be limited to swaled easements, silt fences, crushed stone check dam devices, silt basins (sedimentation traps), mulching, earth berms, and rip-rap.

- c. Permanent erosion control measures shall include but not be limited to swaled easements, rip-rap, and seeding of disturbed areas.
- d. Erosion and siltation shall be controlled on projects by using swales to control run-off and convey run-off to controlled discharge points, by silt fences, rip-rap, crushed stone, and earth berms to contain silt, with pipe culverts where major access or haul roads cross drainage ditches or streams, silt basins where pipe lines cross drainage ditches or streams, and seeding and mulching will be performed as soon after pipe installation as possible. When temporary measures are removed after completion of the project the disturbed area must be stabilized, if necessary.

24. MAINTAINING SERVICE

When replacing or extending sewer mains, the contractor shall maintain existing service to all property being served through bypass pumping or other means of maintaining service.

25. GUARANTEE

The contractor shall guarantee all material, equipment and workmanship for a period of at least one year after final acceptance by the City. The Public Works Department's Construction Inspection Division is responsible for the issuance of final acceptance letters by the City.

For projects in Merger Areas the Public Utilities Department Construction Inspection Division is responsible for issuance of final acceptance letters.

26. WETLAND/ STREAM BUFFERS

Conditions of 401/404 permits shall be strictly followed to the satisfaction of Corp of Engineers. All Neuse Riparian buffers shall be maintained as required by NCDWQ.

27. TEST AND INSPECTION (GRAVITY SEWERS)

- a. Sewer lines shall be visually inspected from every manhole by use of mirrors, television cameras or other devices for visual inspections, and the lines shall exhibit a fully circular pattern when viewed from one manhole to the next. Lines which do not exhibit a true line and grade and have structural defects shall be corrected to meet these specifications. Manholes that are installed within the street shall be camera inspected just prior to the final lift of surface course asphalt.
- b. Sewer lines will be tested by using the low pressure air test. Sewer laterals will be tested along with the main. It is imperative that proper plugs be installed on the laterals at the cleanout stack. All plugs should be properly installed to withstand the test pressure. Mechanical plugs must be installed throughout the time of construction of any sanitary sewer extension, until final acceptance. All plugs must be securely tied off with steel cable within the manhole and must have a secure marking attached to the plug indicating the utility contractor to whom the plug belongs. All plugs must be removed by the contractor upon acceptance that the sewer facilities are sufficiently functionally complete so as to accept flow and PRIOR to the mains above the plug location being placed into service and/or accepting any flow of sewage.

- c. The low pressure air test in accordance with ASTM F1417 or C924 (F1417 for PVC and Ductile; C924 for Concrete Pipe) will be used on all mains and laterals. Prior to testing, the main shall be clean of debris (to the satisfaction of the inspector) and flushed with water. In doing the air test, it is necessary that plugs be secured properly and braced. In doing the air test, no person will be allowed in the main while it is pressurized. The line is to be pressurized to 4 psi initially and stabilized. After stabilization, the pressure will be decreased to 3.5 psi, and the inspector will determine how long it takes for the pressure in the line to drop to 2.5 psi.

To simplify the ASTM procedure, use the following table to determine the test time. If there are multiple sizes, add the various times together.

Normal Pipe Size (inches)	Time (Minutes/100ft.)
4	.3
6	.7
8	1.2
10	1.5
12	1.8
15	2.1
18	2.4
21	3.0
24	3.6
27	4.2
30	4.8
33	5.4
36	6.0
42	7.3

If the pressure stays between 3.5 and 2.5 psi for the test time length, the pipe is acceptable. If not, the section is not properly installed. Correct and retest.

- d. A hydrostatic leakage exfiltration or infiltration test shall not exceed 100 gallons per inch of pipe diameter per mile per day for any section of the system. An exfiltration or infiltration test shall be performed with a minimum positive head of 2 feet. All tests shall be made in the presence of the contractor or his representative and the Public Utilities Director, City Inspector or Engineer.
- f. Materials and construction methods called for in these specifications are of such nature as to insure maximum protection for the sewer from infiltration. The contractor shall be responsible for the sewer conforming to the above limits for a period of one year from the date of final acceptance.
- g. When sanitary sewer services are installed as a part of the same approval of the sanitary sewer mains, such as in new subdivisions/annexation areas, the air test of the sewer mains shall be performed with the services and clean-outs in place. Services tied to a newly constructed manhole shall be vacuum tested with the manhole. Services not tested with newly constructed mains or manholes shall have a separate air test before any plumber connections are made.

28. DEFLECTION TESTING FOR PVC SEWER PIPES

No sooner than thirty days after final backfill installation, a deflection test shall be executed on the sewer line. The maximum allowable deflection shall be five percent for PVC sewer pipes. The test shall use a minimum of nine pronged mandrel pulled through the pipe. The mandrel size shall be calculated by (1-allowable deflection percent) x (Base Inside Diameter). The base inside diameter is the diameter as identified in the shop drawing or advertised pipe literature. It shall not include any additional reduction pipe diameter due to manufacturing tolerances.

The contact length of the mandrel shall be at least eight inches.

Any lines not meeting this test shall be corrected by the contractor and the test repeated.

29. PIGGING (FORCE MAIN SEWERS)

All new mains with gate valves must be pigged with a polyethylene "pig", 5#/cubic foot density, at the conclusion of installation.

The pig must be blown at the end of the main by means of the following:

- a. 4" main - 4" blow-off
- b. 6" main - 6" blow-off
- c. 8" and 12" main - blow-off assembly as shown on Standard Water Details W-21 & W-22
- d. 16" – 24" main – To be determined by the field inspector

The contractor installing the line shall write the name of the company and street name in which the work is taking place on the pig in a manner in which it will not rub off.

30. HYDROSTATIC TESTING (FORCE MAIN SEWERS)

- a. All main installations shall be pressure tested between each main line valve in accordance with the latest AWWA Standard C-600-87. The test shall be performed using a suitable pump and an accurate pressure gauge. Immediately upon completion of a section of main, 150 psi (\pm 5 psi) of pressure shall be applied and held for two hours. The acceptable leakage rate shall not exceed 0.092 gallons per inch of pipe diameter per 1,000 feet of pipe per hour.

Failure of the force main to comply with the above acceptable leakage rate shall require the contractor to replace any defective materials to insure a watertight installation. After any inadequacies have been corrected, the leakage rate will again be tested. This test shall be repeated until that portion of main is brought to compliance with the permissible leakage rate.

- b. Prerequisite conditions for inspection prior to testing shall be as follows:

- 1) Valves shall be properly located, operable, and at correct elevation. Valve boxes or manholes shall be centered over operating nuts, and the top of the box or manhole shall be at proper elevation.

- 2) Lines shall be properly vented where entrapped air is a consideration.

31. SEWER MAIN AND SERVICE STUB ABANDONMENT

Sewer service stub to a main shall be abandoned by removing the saddle and replacing the saddle with a 360 degree stainless steel sleeve. At in-line wyes the service lateral shall be cut within 12" of the wye and a mechanical cap installed on DIP/cast services or glued to PVC services and the abandoned wye to be surrounded with 1 ft³ of concrete. The remaining portion of the sewer service stub shall be removed from the main to the right of way line and shall be disposed of properly. Sewer main abandonment must be performed in accordance with a plan approved by the Public Utilities Department. Service stub and main abandonment require a stub permit for inspection by the Public Works Department 919-996-4540. Raleigh Public Utilities Department will oversee stub abandonment in the merger towns 919-996-4540.

General Requirements;

- A Property owner is responsible for proper abandonment of all unused existing service stubs.
- All abandoned meters are to be removed by the Raleigh Meters Division prior to service abandonment. (919-996-2742).
- The Raleigh Public Utilities operations staff will not abandon an existing service stub unless it is part of a service renewal as required by ordinance.
- For circumstances that may not be addressed by this clarification or a variance from this procedure please contact the Raleigh Public Utilities Department Development staff at 919-996-4540.

LICENSED UTILITY CONTRACTOR REQUIRED SERVICE ABANDONMENT PERMITS

Contractor installed domestic (3/4" thru 12"), irrigation water (3/4" thru 10"), sewer (4" thru 8") and fire hydrant (6") service stub;

Commercial; All domestic and/or irrigation, sewer and fire hydrant abandonment requires a stub permit for each connection to a water or sewer main.

Residential/Individual; All domestic water and/or irrigation and sewer service stubs abandonment installation requires a stub permit. Exception; Irrigation splits installed with a new domestic service. Irrigation splits on an existing tap requires a stub permit.

Demolition Permits; Plans are required to show all existing services to be abandoned included temporary construction water using existing meter(s). Plan review required.

Sewer Stubs in Easements; A licensed and bonded utility or plumbing contractor may install a sewer stub on a sewer main located within a dedicated easement and requires the issuance of a stub permit. Raleigh Ordinance 10-6082

Street cut permits are required for pavement repair in ROW.

City of Raleigh Capital Projects

A licensed utility contractor performing City contracted water or sewer main replacement work is not required to obtain a stub or street cut permit for abandoned services or mains.

Water and Sewer Main Abandonment

All water and sewer main abandonment requires plan submittal for review by the Raleigh Public Utilities Development Staff by submission of plans through the Raleigh Development Customer Service Center

32. SEALED AS BUILT PLANS

Certified surveyed "As built" plans and profiles, sealed by a Professional Land Surveyor, shall be furnished to the Public Works Department by the engineer upon completion and acceptance of the public main by the City and at completion of private systems. For development projects in the merger towns as-builts must be submitted directly to the inspector.

34. SEWER BACKWATER VALVE

Pursuant to NC State Plumbing Code, homes and other buildings constructed with sanitary sewer drains with an elevation lower than one (1) foot above the next upstream manhole in the sanitary sewer collection system must be equipped with a sewer backwater valve, installed at a location where it can be maintained. See Details S-38 & S-42.

WATER MATERIAL STANDARDS

1. GENERAL MATERIAL REQUIREMENTS Current specifications of the American Society for Testing Materials (ASTM), American Water Works Association (AWWA), Ductile Iron Pipe Research Association (DIPRA), American Association of State Highway and Transportation Officials (AASHTO), and the American National Standards Institute (ANSI) shall apply in all cases where material is covered by an item in these specifications. All material used shall conform fully to these current standards or be removed from the job at the direction of the Public Utilities Director.

Pipe specimens shall be subjected to tests by an independent testing laboratory at such time as the Public Utilities Department may direct or as specified herein. Pipe not meeting these specifications will be ordered removed by the inspector, and such pipe shall be immediately removed from the job site and not transported to any portion of the project being constructed.

Detail or shop drawings of fire hydrants, valves, air release valves, tapping sleeves and tapping saddles must be approved by the Public Utilities Department prior to installation.

These specifications are not to be considered as proprietary in any way. When a particular brand is listed, it is only used as an aid in describing the type of material being requested.

2. MATERIALS – WATER MAIN AND FITTINGS

a. Water Mains

All water mains shall be pressure class or thickness class ductile iron pipe designed in accordance with AWWA Standard C-150. Design shall be done for external and internal pressures separately, using the larger of the two for the next design thickness. An additional allowance shall be made for corrosion and casting tolerances. The thickness design for external and internal pressures shall use the following conditions:

- 1) 3 feet minimum cover or as shown on the plans;
- 2) Laying condition - Type 1;
- 3) A minimum working pressure of 150 psi for pipes 16 inches and smaller in diameter, and for 24 inches and larger pipe, the design working pressure shall be as determined by the Public Utilities Director, and
- 4) A surge pressure of 300 psi.

All calculations for thickness shall be in accordance with AWWA Standard C-150, and the calculations shall be submitted to the Public Utilities Director for approval prior to shipping any pipe. The minimum thickness shall be pressure class 350 for pipes 6 inches through 12 inches and pressure class 250 for pipes 16 inches and larger in diameter.

The ductile iron pipe shall be manufactured in accordance with all applicable requirements of AWWA Standard C-151. The ductile iron pipe shall be supplied in nominal lengths of 18 or 20 feet.

The ductile iron pipe shall be cement-mortar lined with a sealcoat in accordance with AWWA Standard C-104. Ductile iron pipe shall be externally bituminous coated in accordance with AWWA C-151.

Pipe joints shall be mechanical or "push-on" manufactured in accordance with AWWA Standard C-111.

Each joint of ductile iron pipe shall be hydrostatically tested before the outside coating and inside lining are applied at the point of manufacture to 500 psi. Testing may be performed prior to machining bell and spigot. Failure of ductile iron pipe shall be defined as any rupture or leakage of the pipe wall.

All materials used in the production of the pipe are to be tested in accordance with AWWA Standard C-151 for their adequacy within the design of the pipe, and certified test results are to be provided to the City upon request. All certified tests, hydrostatic and material are to be performed by an independent testing laboratory at the expense of the pipe manufacturer.

Push-on and mechanical joint pipe shall be as manufactured by the American Cast Iron Pipe Company, United States Pipe and Foundry Company, Griffin Pipe Products Company, McWane Cast Iron Pipe Company or approved equal.

Restrained joints shall be TR Flex or **HP LOK** as manufactured by U.S. Pipe, **Lok-Ring** or Flex-Ring as manufactured by American Pipe, Super-Lock as manufactured by Clow, **Bolt-Lok or Snap-Lok** as manufactured by Griffin or approved equal.

b. Fittings

All fittings shall be manufactured in accordance with AWWA C-110 or C-153 for ductile iron compact fittings. The fittings shall be tested and the manufacturer shall provide certified test results when requested by the City. This testing shall include hydrostatic proof testing of the fittings.

All fittings shall be mechanical joint with the exception of certain above ground piping which may require flange fittings. Mechanical joints shall be manufactured in accordance with AWWA Standard C-111.

All fittings shall be cast iron or ductile iron and shall have a minimum working pressure rating of 250 psi and minimum iron strength of 30,000 psi.

All fitting interiors shall be cement-mortar lined with a sealcoat in accordance with AWWA Standard C-104, and the outside shall be bituminous coated.

Restrained mechanical glands may be used where restraint is needed except when welded restraining rings are required. Restrained mechanical glands provide additional restraint, but do not take the place of required concrete blocking.

45° and 90° bends shall be allowed in the water distribution system for all line sizes when required.

c. Gate Valves

Cast iron or ductile iron resilient wedge style vertical or horizontal gate valves and tapping valves shall be used for all main line and hydrant branch valves in sizes from 6 inches through 24 inches. American, Mueller, Kennedy, AVK, Clow, M&H, and Waterous valves in accordance with AWWA C-509-94, C-515, or the appropriate AWWA standard

as applicable, shall be used. All resilient wedge valves shall have internal and external epoxy coating, O-ring seals at the stuffing box and bonnet to body and dual O-rings at the stem seal above the thrust collar.

Tapping valves shall be the same valves as gate valves listed above, subject to the standards, providing that tapping valves shall have the tapping ring.

Gate valves twelve (12) inches in diameter and smaller, shall be mechanical joint or hub-end all-bell. They shall be "O" ring, open-left valves of the non-rising stem type. These valves shall be designed for a minimum of 175 psi working pressure and 300 psi hydrostatic test pressure with a two (2) inch operating nut. Valves shall be cast iron or ductile iron.

Valves sixteen (16) inches in diameter or greater may be the horizontal gate type or butterfly type, as specified on construction plans, or gate valves as specified above.

Gate valves, horizontal gate valves or butterfly valves shall be used for all main line and hydrant branch valves in sizes 16 inches through 24 inches.

d. Valve Boxes

Adjustable valve boxes shall be class 35 gray cast iron and manufactured in accordance with ASTM A48 and be of the dimensions specified in Detail W-17 of these specifications. Lids shall have the word "Water" cast into the lid. See Detail W-18. All castings must be domestically cast and so indicated by the manufacturers name and "USA" cast into all sections of the valve box. All castings must meet or exceed AASHTO H-20 load rating. Total valve box weight shall be a minimum of 85 lbs and have a minimum lid weight of 25 lbs. **Mueller Model AJBV 5 adjustables are permissible.**

e. Butterfly Valves

Butterfly valves sixteen inches or greater than (16) inches in diameter shall be Class 150B and shall conform to the latest AWWA Standards C-504, as manufactured by Mueller, Kennedy, Pratt, **DeZURIK**, or **Val-Matic** for rubber sealed butterfly valves and valve operating assemblies. "O" ring seals shall also be used exclusively with worm gear.

All valve end connections shall be mechanical joint or victaulic, as required by the detail drawings. Valve seats shall be stainless steel, bronze mating or resilient material. Resilient seat shall be mechanically attached to the valve disc, or mechanically retained in the valve body. Resilient seat shall be fully field adjustable by mechanical means. The valve disc shaft shall be stainless steel or either stub or thru-shaft design. Shafts shall be provided with two-way disc thrusters that are fully adjustable from the outside. Valve shaft bearings shall be heavy duty bronze, properly fitted into hubs integrally cast in the body of the valves.

All butterfly valve **gear actuators** shall be according to **AWWA C-504**. The valve operator shall be furnished with a two-inch square operating nut, and be so mounted that the valve will open-left (counter-clockwise). The butterfly valve operator shall have AWWA stops, be suitable for submersible service and be sized in accordance with AWWA torque requirements for a full 150B rated valve.

The manufacturer of the butterfly valve shall be fully responsible for the satisfactory performance of the assembled valve and operator unit. The specified operators shall be factory mounted by the valve manufacturer and shipped to the job site as an operating unit. External painting, hydrostatic testing, travel stop adjustments and crating for shipment shall be in complete compliance with the latest AWWA specification for butterfly valves.

All butterfly valves shall be installed in a standard eccentric precast manhole (diameter appropriate with size valve). Standard Detail W-16

f. Fire Hydrants

Fire hydrants shall comply with AWWA C-502-94 as manufactured for the City of Raleigh by Kennedy, Mueller, Clow, American Darling.

City of Raleigh and all merger area fire hydrant nozzles shall have National Standard Threads.

The City of Raleigh may require fire hydrants to resist accidental and deliberate contaminations of the water supply.

All fire hydrants shall have 2-two-and one-half inch nozzles, and 1- 5” Storz connection nozzle. The nozzle shall be an integral part of the fire hydrant and must be furnished by the manufacturer or authorized distributor designated by the manufacturer. Storz connector shall have the following characteristics: brass hydrant nozzle connection; have hard anodized aluminum Storz ramps and lugs (hydrant and cap side); and require a high-torque Storz spanner wrench in order for the cap to be removed.

See Details W-5 through W-6 for hydrant information pertaining to each town.

The hydrant valve opening shall be five and one-quarter inches with no exceptions. Bronze to bronze threads shall be provided between the hydrant seat or seat ring and the seating attaching assembly. All hydrants must include cast or ductile epoxy lined shoe, rubber drain seals and positive, protective valve stop device.

Hydrants shall be open-left type and shall have a six-inch hub-end or mechanical joint elbow. The hydrant barrel shall be of sufficient length to provide a minimum of three and one-half feet of bury and be of the break-away impact type.

Fire Hydrant Colors

City of Raleigh public fire hydrants shall be painted solid red.

Town of Wendell public fire hydrants shall be painted safety yellow with high reflective aluminum silver caps, bonnets, and operating nuts.

Town of Zebulon public fire hydrants shall be painted red with silver bonnets and operating nuts.

Town of Wake Forest and Town of Garner public and private fire hydrants shall be painted safety yellow with silver caps and operating nuts.

Town of Knightdale public fire hydrants shall be painted solid red

Town of Rolesville public fire hydrants shall be shall be painted solid red
Operating nuts on hydrants connected to public mains 12" or larger shall be
painted black.

Operating nuts on hydrants connected to public mains of any other size shall be
painted silver.

g. Air Release Valves

Water Air release valves shall be two-inch Crispin Pressure Air Valves, Model P 20, with a vacuum check unit, or two-inch Val-Matic, Model VM-45, with a vacuum check unit or equal as approved by the Public Utilities Director. These valves shall be suitable for 150 psi working pressure and designed to allow air to escape automatically while the main is in service and under pressure. The valve shall be housed in a City of Raleigh approved eccentric manhole and shall be installed in accordance with Detail W-19 of these specifications. Air release valve locations shall be approved by the Public Utilities Department, or as shown on the plans. The engineer must field stake the air release location.

h. Tapping Sleeves and Tapping Saddles

Tapping sleeves shall be Mueller mechanical joint, Mueller Outlet Seal, American Uniseal, Kennedy Square Seal, or Clow F5205 or F5207. 100% stainless steel sleeves may also be used, as manufactured by **Smith-Blair, Romac, Ford, or JCM** provided that all metallic parts of the sleeves shall be 100% stainless steel including bolts. Ductile iron flanges may be included on sleeves or saddles. **Test assembly seals with water according to AWWA C-223.** All sleeves shall have a minimum of 150 psi working pressure. All taps shall be machine drilled--no burned taps will be allowed.

Tapping saddles may be used on mains 16-inches and larger. In 16 and 24 inch saddles as manufactured by Mueller, American, Kennedy and Clow tapping saddles shall be manufactured of ductile iron providing a factor of safety of 2.5 at a working pressure of 250 psi. In main sizes of 30-inch and larger, ductile iron tapping saddles as manufactured by American Pipe Company or US Pipe Company shall be utilized.

Saddles shall be equipped with a standard AWWA C-110-98 flange connection. Sealing gaskets shall be "O" ring type, high quality molded rubber having an approximate seventy durometer hardness, placed into a groove on the curved surface of the tapping saddle. Straps shall be of alloy steel. Saddles may be used for taps one-half the size of the main or less (i.e. 8-inch tapping saddle for use on a 16-inch main).

i. Water Service Connections

Water service pipe for 3/4 - to 2-inch connections shall be type "K" soft copper with no joints or couplings in the right-of-way. On these water services, the fittings shall be flared copper type brass fittings or compression type fittings.

1 1/2 inch and 2 inch taps may only be made with use of a double strap bronze saddle.

Corporation cocks for direct 3/4" and 1" taps may be used on ductile iron pipe and shall have AWWA Standard tapered threads. Unions shall be three piece copper to copper.

Curb stops used on gang meter assemblies shall be as manufactured by Mueller, Oniseal, Hayes NuSeal, Ford, A.Y. McDonald ball valve. All corporation stops and curb stops shall be bronze ball valves and shall be appropriate material to material corporation and curb stops as manufactured by Mueller, Ford, and A.Y. McDonald and must have a complete ball and installed in a valve box.

Curb stops are required for ¾" through 2" meters and shall be located 1' from the meter box on the street side. Curb stops shall be installed in a curb stop box as manufactured by Ford, A. Y. McDonald, or Trumbull.

Water meter gang assemblies of ¾" and 1" meters may be allowed on ¾-inch to 2-inch service connections and shall conform to the requirements shown in Detail W-26. A deviation from this standard may be warranted in some circumstances. Calculations will be required to support the deviation.

Service saddles shall be all bronze with double bronze straps and with a neoprene "O" ring gasket attached to the body. The clamp shall have corporation cock threads. These clamps shall be as Mueller H-16100 series, Jones J 979 or approved equal.

For services greater than 2 inches, the water service pipe shall be 4, 6, 8 or 12 inches in diameter and shall be of ductile iron pipe. Cast iron or ductile iron fittings shall be used on these services. All taps will be made by using the appropriate size tapping sleeve and valve. See Detail W-14. On a "dry line", the connection may be made with a "TEE and Valve" as shown in Detail W-15.

Coppersettors or copper meter yokes shall be 5/8 inch and 12 inches in height as manufactured by Ford or approved equal. All coppersettors shall have locking wings on the angle valve and be of the Ford angle check type.

Curb stops on gang meter assemblies shall be as manufactured by Mueller, Oniseal, Hayes Nuseal, Ford, and A.Y. McDonald. All corporation stops and curb stops shall be bronze ball valves and shall be appropriate material to material as manufactured by Mueller, Ford, and A.Y. McDonald.

j. Meters

All water meters shall be provided and installed by the City of Raleigh Public Utilities Department Meters Division.

k. Meter Boxes and Vaults

All meter boxes and vaults shall be constructed of cast iron, precast concrete, concrete block, high-density polyethylene, or cast-in-place concrete as on details W-23 thru W-35. Meter vault access doors shall be aluminum slam lock type as manufactured by Halliday, U.S.F. Fabrication, or approved equal.

Meter boxes and vaults shall not be placed within sidewalks or driveways unless no other alternatives are available and approval is obtained by the Public Utilities Director. Traffic rated lids and vaults shall be installed for all meters 1 ½" and larger.

The meter box must be set to grade. If for some reason, the grade is altered, then the meter box must be adjusted to match the new grade. This includes the addition of topsoil by a landscape contractor or homeowner, flower gardens, etc.

l. Steel Encasement Pipe

Steel pipe for boring installations shall be high strength steel, welded or smooth-wall seamless manufactured in accordance with ASTM A252 and consisting of grade 2 steel with a minimum yield strength of 35,000 psi. The minimum casing pipe wall thickness shall be 0.375” for bored encasement.

No coatings required for buried or bored encasements but must conform to the noted wall thickness in the table below. All encasement pipe must be approved by the appropriate controlling agency (i.e. NCDOT, RR, etc.) prior to ordering the material.

All carrier piping shall be restrained joint ductile iron. One joint of restrained pipe must extend beyond the ends of the encasement pipe. The minimum inside diameter of steel encasements shall be eight inches greater than the inside dimension of the carrier pipe. See the following table for encasement diameter and thickness:

Carrier Pipe Nominal Diameter (inches)	Encasement Minimum Inside Diameter (inches)	Encasement Nominal Wall Thickness (inches)
6	14	0.375
8	16	0.375
10	18	0.375
12	20	0.375
14	24	0.375
16	26	0.500
18	30	0.500
20	32	0.500
24	36	0.625
30	42	0.625
36	48	0.750
42	56	0.875

Both ends of the casing shall be mortared. Metal "spider" pipe alignment devices shall be installed in all casings with a minimum of two “spiders” per pipe joint one fourth of the pipe joint length in from both the bell and spigot ends. See Detail W-40.

m. Irrigation Rain Sensors

Irrigation rain sensors are devices mounted in an open outdoor area at least five feet from any structure and wired to the common wire of all permanent in ground irrigation systems. Rain sensors shall be capable of overriding the irrigation controller when 1/4” of rainfall has occurred to keep the system from watering in the rain. Rain sensors shall also be UL listed and installed per the manufacturer’s recommendations.

n. Irrigation Programmable Controllers

Irrigation programmable controllers are devices installed on all permanent in ground irrigation systems that operate the watering cycle of an irrigation system. Controllers shall be programmable by day of the week and UL listed.

WATER CONSTRUCTION STANDARDS (Public and Private Systems)

As part of the requirement to obtain construction approval for water main extensions, the engineer shall affix the appropriate permit sticker to the original drawings. The various permit stickers are included in appendix D.

The requirements contained in this section shall apply to water main installations constructed for the Public Utilities Department or for private developers who may or may not dedicate the water improvements to the City. All necessary construction permits must be obtained before construction may begin in accordance with North Carolina State Law.

Any Contractor performing work within the City of Raleigh or City of Raleigh Merger Areas such as Garner, Knightdale, Wendell, Zebulon, Wake Forest, and Rolesville, shall have on each job site a copy of these specifications.

1. SCOPE OF WORK

- a. The contractor shall furnish all materials, equipment, and labor for excavation, installation, backfilling of water mains and related appurtenances as shown on the plans. The Public Works Department and/or Public Utilities Department shall conduct all City inspections on main extension projects.
- b. It shall be the contractor's responsibility to notify the Public Utilities and Public Works Departments at least twenty-four hours in advance of beginning any construction work on any project. The contractor must call the Public Utilities Department at 996-4540 and Public Works at 996-6810 and give the location, project name, individual's name, company name, start date and indicate if it involves water extensions.
- c. Contractor shall contact the Public Works department at 996-6810 by 4:15 PM each day to notify where and what will be done the following day. For any work conducted in Garner, Knightdale, Wendell, Zebulon, Wake Forest, and Rolesville or outside the City of Raleigh Service Area the contractor shall contact the Public Utilities Department at 996-4540 by 4:15 PM to notify where and what will be done the following day. Any work requiring inspector observation outside of the normal workday, Monday-Friday, 7:30 a.m. to 4:15 p.m. will be charged to the contractor at the current inspector hourly rate.
- d. If a developer, engineer or contractor proceeds with the main installation prior to permit issuance the City may require the work to be reinstalled and the developer, engineer or contractor shall be fully liable for all actions and costs, including prosecution by the City or the State for proceeding with installation prior to issuance of appropriate permit(s).
- e. "Field changes" are not considered approved by the Public Utilities Department unless revised plans have been submitted to the Public Utilities Department, reviewed and approved. Therefore, the contractor that proceeds with construction prior to this approval, is at his/her own risk.
- f. Contractors working (excavation, boring, or other subsurface breach) around or in the vicinity of existing water lines 12 inches in diameter or larger shall be required to physically spot the existing line to be verified by P.U.D. distribution staff or inspection staff. If other existing lines sizes are in question of conflict the contractor shall be directed by P.U.D. staff of the level of subsurface investigation needed to locate the existing line.

\

2. GENERAL TESTING REQUIREMENTS

The City may perform and shall require the contractor to perform, such destructive and nondestructive testing, as it deems necessary in order to inspect the materials and workmanship. These tests shall be in accordance with the procedures established by ASTM and AASHTO. The City shall reserve the right to modify the procedures in testing ditch and backfill compaction to allow a deeper test to be made by using the sand-core method and/or nuclear testing gauges.

3. HANDLING AND STORAGE OF MATERIALS

- a. The contractor shall be responsible for the shipping and storing of all water materials. The contractor shall replace any material which is damaged or defective.
- b. The loading and unloading of all pipe, valves, hydrants, and other accessories shall be in accordance with the manufacturer's recommended practices and shall at all times be performed with care to avoid any damage to the material.
- c. The contractor shall locate and provide the necessary storage areas for materials and equipment. If private property is being used for storage areas, then the contractor must have the written consent from the owner. Without this written consent, all material and equipment shall be stored within the existing rights-of-way and easements of the project. Pipe may not be prestrung along job site; it must be delivered to and removed from job site each day. In extenuating circumstances when the inspector authorizes pipe to remain on the project from one day to the next, the ends of the pipe must be sealed.
- d. All materials, once on the job site, shall be stored in accordance with the manufacturer's recommendations.
- e. All pipes shall be kept free of dirt and other debris. Any damage relating to the coating of the various materials for water mains shall be repaired in a manner approved by the City.
- f. The contractor shall be responsible for safeguarding and protecting all material and equipment stored on the job site. The contractor shall be responsible for the storage of materials in a safe and workmanlike manner to prevent injuries, during and after working hours, until the project is complete.

4. BARRICADES, SIGNS AND STREET PROVISIONS

- a. Signs, barricades, warning lights, guard rails and flaggers shall be employed as necessary when construction endangers either vehicular or pedestrian traffic. These devices shall remain in place until the traffic may proceed normally again. The contractor shall hold the City harmless for any damages or injuries caused by the construction of water mains.
- b. Detours and all traffic control measures shall be set up and maintained by the contractor under the direction of the City of Raleigh Department of Transportation and the North Carolina Department of Transportation. Notice must be given a week in advance of the detour so that necessary notification of the traveling public may be made. The contractor will furnish all barricades, signs, lights and other safety devices to protect his/her construction. The contractor is in no way relieved of liability for providing this protection because others approve the detour.

- c. Construction work zone signs and signing procedures shall conform to the MUTCD and supplements and to all applicable federal, state and local codes. The contractor shall be responsible for securing the necessary permits from the City's and the State's Department of Transportation and Inspections for all work to be performed in the public rights-of-way.

5. PROPERTY PROTECTION

Trees, fences, poles and all other property shall be protected unless their removal is authorized, and any property not authorized for removal, but damaged by the contractor, shall be restored by the contractor to the owner's satisfaction.

6. GENERAL CONSTRUCTION SAFETY

- a. The contractor and any subcontractors shall be responsible for the total compliance with all federal, state and local ordinances, laws and regulations as related to safe construction practices and to protecting the employees and the public's health and safety.
- b. The contractor shall ensure that all Occupational Safety and Health Administration (OSHA) regulations and standards are followed during all phases of the construction project.
- c. The City shall not be responsible for the contractor's adherence to OSHA regulations and standards. However, the City may report known violations or unsafe practices to the appropriate enforcement agency.
- d. The contractor shall be required to furnish safety equipment necessary to inspect the work including, but not limited to ladders, gas detectors/oxygen sensors, blowers, etc.

7. ENCROACHMENT CONTRACTS AND PERMITS

- a. Prior to actual construction, the contractor shall acquire the necessary encroachments from NCDOT when working within the rights-of-way of state system roads or highways. The encroachment permit shall be kept on the job site at all times.
- b. The contractor shall be responsible for securing all other local, state and federal permits required for the utility construction.
- c. The contractor must have an approved set of permitted construction plans on site at all times.
- d. For projects which require construction plan approval, all environmental permits and NCDOT encroachments must be provided prior to plan approval. See general policies and regulations section Page 25.

8. PAVEMENT REMOVAL AND REPLACEMENT

- a. All pavements to be removed shall be cut along straight lines with the appropriate saw cut machine. The removal and replacement of the pavement shall conform to the information shown in Details W-1 & W-2.

- b. All cuts of City streets must be patched the same day with a temporary or permanent patch. Once work has been completed, all temporary patches shall be replaced with permanent ones. All work from patching shall be cleaned up at the same time of patching.
- c. The City of Raleigh shall perform density tests as needed to determine contractor's compactive efforts. See Note 2 and 3 of detail W-2.
- d. Pavement cuts shall be confined to a maximum trench bottom width as shown in Details W-1 thru W-3, plus 12 inches on either side.
- e. Asphalt compaction shall be done with a gasoline or diesel powered smooth drum asphaltic roller.
- f. Pavement cuts within NCDOT Right of Way shall not be performed without the proper encroachment permits on site. All patching of NCDOT pavements shall conform to the approved on site encroachment permit.

9. VALVE OPERATIONS

- a. No valve in the existing system shall be operated without following the procedure outlined below. Failure to comply with these requirements shall be grounds for suspension of pipe-laying operations until written assurance can be obtained from a company official that such noncompliance will not occur again. The contractor should be aware that the City regards violations of these requirements as justifying punitive measures.
- b. Notification procedures are as follows:
 - 1) The contractor shall notify the Public Utilities Department's Water Distribution Division at 996-2737 in order to request the operation of any valves. At least twenty-four hours notice must be given to the Public Utilities Department, and at least twenty-four hours notice must be given to each customer affected by a water cut-off. The contractor is responsible for notifying the affected customers. All valve operations shall be done by Public Utilities Department personnel or by the City's inspector for a particular project. It is illegal for anyone other than a City of Raleigh employee to operate an existing water main valve, unless accompanied by a City of Raleigh employee.
 - 2) The contractor shall provide the following information when calling the Water Distribution Division for valve operation:
 - (a) Name of person calling;
 - (b) Name of company;
 - (c) Telephone number of company;
 - (d) Location of valve and map number if available;
 - (e) Reason for requesting operating and whether to be closed or open;
 - (f) Time valve to be opened or closed, and
 - (g) Approximate time water line to be out of service.
- c. Each time a contractor needs a valve operated, he/she shall again secure permission, following the steps outlined.

- d. System valves shall be defined as any valve, which has main pressure against either gate face. Newly installed tapping valves and control valves to networks not yet accepted for service are considered as system valves and should only be operated under guidance of City of Raleigh Inspectors Valves within a network still under construction are not considered as system valves.
- e. All newly installed system valves that connect to the active distribution system shall have a valve box cover painted "red" in color and installed on the corresponding valve box to signify that the valve and main are not in service. The "red" valve box cover shall remain in place until the new main is placed into service, when at such time it shall be replaced with a cover as shown on detail W-18.

10. EXCAVATION

- a. Prior to any excavation or construction, the contractor shall locate all existing utilities in the field. If help is needed in locating utilities operated by the Public Utilities Department, the contractor should contact the Operations Division (996-2737).
- b. Trench width shall be a minimum of twelve inches plus outside diameter of pipe and a maximum of twenty-four inches plus outside diameter of pipe, unless OSHA requires additional trench width. Trench width shall be measured between the faces of the cut at the top elevation of the pipe bell as shown in Detail W-3.
- c. Trench bottom conformation, where no special bedding is required, may be that referred to herein as flat bottom where the trench bottom is excavated slightly above grade and cut down to pipe grade by hand in the fine-grading operation. Where the trench bottom is inadvertently cut below grade, it shall be filled to grade with an approved material and thoroughly compacted to 95% or use #67 stone to bring to grade.
- d. The maximum length of open trench shall be no more than three hundred feet, unless approval is obtained from the Public Utilities Director.
- e. The contractor shall, at his/her own expense, keep all trenches free from water during the excavation for construction of foundations, masonry, water mains. The water shall be pumped out of the trench or check dams shall be built to keep it out of the ditch in such a manner as not to cause injury to the public health, private property or the work in progress. Erosion control measures shall be utilized during this pumping.
- f. In trenches where water is present or dewatering is required, the trench shall be stabilized with #67 stone. When the contractor encounters material during trench excavation, at the opinion of the inspector, or Public Utilities Director, that is unsuitable (i.e. "muck"), this material shall be replaced with material that is considered suitable prior to the pipe laying operations. In this case, construction fabrics may be required to prevent the migration of side support away from the pipe.
- g. Safety and convenience of the public necessitate that all work, including excavation, be done in such a manner as to cause minimum traffic interruption, both pedestrian and vehicular. Utilities such as fire hydrants, valves, etc., shall be accessible at all times. Gutters and drains shall be left open and clear at all times, and the contractor shall be responsible for all drainage around his work. Unless specifically waived by the Public Works Department, provisions shall be made to maintain vehicular traffic on all streets in which work is in progress, and suitable walkways shall be maintained for pedestrian travel.

- h. Sheeting or bracing shall be used wherever necessary to prevent failure of the trench banks. All sheeting shall conform to AASHTO and OSHA safety standards. The decision of the Public Utilities Director or Engineer relative to bracing for the protection of property of the City shall be binding upon the contractor. The removal of sheeting shall be done in such a manner as to minimize the loss of friction between the backfill and trench walls.

11. ROCK EXCAVATION

- a. Rock shall be defined as that solid material that cannot be excavated, in the opinion of the Public Utilities Director or Engineer, by any means other than drilling and blasting, drilling and wedging, or boulders and broken concrete exceeding ½ cubic yard in volume. Rock shall be excavated to the same limits as earth excavation except that the trench shall be made 6- inches lower than the outer bottom of the pipe. This 6-inches shall be refilled with 6-inches of #67 stone and thoroughly compacted to the sub-grade level. All blasting shall be done under the supervision of the City Inspector or Engineer and subject to all applicable regulations. The City reserves the right to require the removal of rock by means other than blasting where any pipe or conduit is either too close to or so situated with respect to the blasting as to make blasting hazardous. Rock taken from the ditch shall immediately be hauled away and disposed of by the contractor.

- b. Blasting procedures shall conform to all applicable local, state and federal laws and ordinances. A blasting permit shall be obtained from the City of Raleigh Fire Marshal's Office, prior to any blasting. The application shall be obtained 24-hours before any blasting takes place, and the Fire Marshal may specify the hours of blasting. The contractor shall take all necessary precautions to protect life and property, including the use of an approved blasting mat where there exists the danger of throwing rock or overburden. The contractor shall keep explosive materials that are on the job site in special constructed boxes provided with locks. Failure to comply with this specification shall be grounds for suspension of blasting operations until full compliance is made. No blasting shall be allowed unless a galvanometer is employed to check cap circuits. Where blasting takes place within five-hundred feet of a utility, structure or property which could be damaged by vibration, concussion or falling rock, the contractor shall be required to take seismograph readings and to keep a blasting log containing the following information for each and every shot.

- 1) Date of shot
- 2) Time of shot
- 3) Crew Supervisor
- 4) Number and depth of holes
- 5) Approximate depth of overburden
- 6) Amount and type of explosive used in each hole
- 7) Type of caps used (instant or delay)
- 8) The weather
- 9) Seismograph instrument and readings

- c. This blasting log shall be made available to the Public Utilities Director or Engineer upon request and shall be kept in an orderly manner. It shall be the contractor's responsibility to have adequate insurance to cover any damages resulting from blasting so to hold the City of Raleigh harmless from any claims.

12. TRENCH PREPARATION

- a. Trench excavation shall conform to the line and depth shown on the plans. The trench shall be properly braced and drained so that workers may work therein safely and efficiently. When water is being pumped from the trench, the pump discharge shall follow natural drainage channels, drains or storm sewers. In discharging trench water, it will be necessary to follow standard erosion control measures so as to minimize erosion and sedimentation. In no case may trench water or groundwater be pumped into or allowed to enter the sanitary sewer system.
- b. The width of the trench may vary with the depth of cut and other conditions the trench shall be in accordance with the dimensions set forth by OSHA and other information shown on Detail W-3.
- c. The foundations for ductile iron shall be a firm and stable flat bottom (Type 1) trench with bell holes so that the pipe rests uniformly on the entire barrel length. See Detail W-3.
- d. Pipe clearance in rock shall be a minimum of six inches below and on each side of the pipe for sized sixteen inches and less in diameter. For sizes larger than sixteen inches in diameter, the minimum clearance shall be nine inches below and on each side.

13. PIPE INSTALLATION

- a. Ductile iron pipe shall be installed in accordance with the requirements of AWWA Standard C-600.
- b. Water pipe shall be laid to the line and grade shown on the plans with all valves and hydrants located as shown on the plans.
- c. Protection shall be afforded to all underground and surface structures using methods acceptable to the Public Utilities Director or Engineer. This protection shall be furnished by the contractor at the contractors' own expense.
- d. Deviation from line and grade may be made only on revised plans upon approval by Public Utilities Department and identified on "as built" when such deviations arise from grade or line conflicts with existing utilities, structures or other sources of conflict.
- e. Subsurface explorations shall be made by the contractor at the direction of the Public Utilities Director or Engineer where it is necessary to determine the location of existing pipes, valves or other underground structures.
- f. Depth of pipe cover, unless shown otherwise on the plans shall be three feet above top of pipe. Depth of cover shall be measured from the established street grade or the surface of the permanent improvement to the top of the barrel of the pipe. **If minimum cover cannot be maintained due to other agency/development infrastructure projects existing water lines shall be relocated or protected with casings or concrete. In no case shall sub grade construction excavations come within less than 2 feet of the existing pipe crown.**
- g. After the foundation has been properly graded, bedded when applicable, and the bell holes dug, the pipe and accessories shall be carefully lowered into the trench by approved methods. Under no circumstances shall the pipe or accessories be dropped or dumped into the trench. All damaged pipe and accessories shall be removed from the job.

- h. Pipe interior shall be swabbed clean with sodium hypochlorite solution before it is laid, and any pipe which cannot be cleaned with a swab shall be removed and cleaned with suitable apparatus. Any pipe showing evidence of oil, tar or grease shall be permanently marked and removed from the job.
- i. Laying of pipe and jointing of pipe shall be done according to manufacturer's recommendation with care being taken to provide uniform bearing for the pipe. Bell and spigot of pipe shall be cleaned and properly lubricated where a mechanical joint of a "push on" type joint is employed. No chlorine powder or tablets shall be put in the lines during installation.
- j. Open ends of pipe shall be plugged with a standard plug or cap at all times when pipe laying is not in progress. Trench water shall not be permitted to enter pipe.
- k. Pipe cutting for inserting valves, fittings or closure pieces shall be done in a neat and workmanlike manner in accordance with the manufacturer's recommendations and without damage to the pipe.
- l. Bell ends will face the direction of laying unless otherwise directed by the Public Utilities Director or Engineer. For lines on an appreciable slope, the Public Utilities Director or Engineer may also require that bell ends face upgrade.
- m. Maximum horizontal deflections for ductile iron pipe shall be as follows for an eighteen foot joint of pipe:

Maximum Deflection in Inches		
Pipe Size	Mech. Joint	Push-on-joint
6	27	19
8	20	19
10	20	19
12	20	19
14	13	11
16	13	11
18	11	11
20	11	11
24	9	11
30	9	11
36	8	11
42	7	7
48	7	7

- n. When installing water &/or sewer mains, the horizontal separation between utilities shall be 10'. If this separation cannot be maintained due to existing conditions, the variation allowed is the water main in a separate trench with the elevation of the water main at least 18" above the top of the sewer & must be approved by the Public Utilities Director. All distances are measured from outside diameter to outside diameter

Where it is impossible to obtain proper separation, or anytime a sanitary sewer passes over a water main, DIP materials or steel encasement extended 10' on each side of crossing must be specified & installed to waterline specifications

Maintain 18" min. vertical separation at all water main & RCP storm drain crossings; Where adequate separations cannot be achieved, specify DIP materials & a concrete cradle having 6" min. clearance (per CORPUD detail W-41)

All other underground utilities shall cross water & sewer facilities with 18" min. vertical separation required

- o. Maintain 18" min. vertical separation at all water main & storm drain crossings. Where adequate separations cannot be achieved, specify DIP materials & a concrete cradle having 6" min. clearance (per COR PUD details W-41.)
- p. All other underground utilities shall cross water & sewer facilities with 18" min. vertical separation required
- q. Railroad crossings shall be made following all precautionary construction measures required by the railroad officials.
- r. All water crossings under the state system roads shall be made in accordance with the requirements of the NC DOT as defined in their encroachment permits.
- s. Where conditions are, in the opinion of the City Inspector unsuitable for laying pipe because of weather or trench conditions, the contractor shall be required to cease work until permission is given by the City Inspector for work to commence again providing such conditions have been corrected.

14. REACTION BLOCKING

- a. All fittings or components subject to hydrostatic thrust shall be securely anchored by the use of concrete thrust blocks poured in place, unless otherwise directed by the engineer. The reaction areas required for these thrust blocks shall be given to the contractor by the inspector, and the contractor shall install the blocks according to directions provided by the inspector. Where concrete must be reinforced, the contractor shall furnish such reinforcing as is required.
- b. Required reaction bearing areas will be taken from the schedule herein. See Details W-10 & W-11. Areas given are vertical plans measured in solid material normal to the thrust line of the fitting.
- c. Material for reaction blocking shall be transit-mixed concrete. This concrete shall have a twenty-eight day compressive strength of 3000 psi. Any metal used to resist thrust which is not encased in concrete shall be "hot dipped" galvanized.
- d. Valves on ductile iron lines shall be anchored with thrust collars as shown in Details W-7 thru W-9.

15. BACKFILLING PIPE

- a. The backfilling of the trench after the pipe installation and testing shall be in accordance with Details W-3 for ductile iron.

Ductile iron pipe shall be backfilled with suitable native material. No rocks, boulders or stone four inches or larger shall be included in the backfill for at least two feet above the top of the pipe.

- b. All backfill shall be compacted in six-inch lifts measured from the pipe foundation upward. Backfill for roadway shall be compacted to at least 95% of maximum soil density in those areas where the supporting capacity of the soil is of prime consideration. Laboratory determination of maximum soil density will follow the procedure of AASHTO T99-86. Field determination of the density of the soil in place shall follow the procedure of AASHTO T191-86 or T204-86. The result of any one test may be a minimum of 90% of maximum density, but the average of any three tests in an area shall be 95% of maximum density. All tests shall be conducted at the direction of the City Inspector, and the cost of such tests will be borne by the contractor with the provision that the City will test an area two times only where both tests fail. The contractor shall then be required to submit satisfactory evidence that his ditch compaction meets the specifications.
- c. Deficiency of backfill material shall be supplied by the contractor where this deficiency results from any cause other than rejection of unsuitable backfill material (other than rock) by the City Inspector. In cases where the City Inspector directs, the contractor shall dispose of unsuitable backfill material and provide suitable backfill material.

Where excavated material has been rendered unsuitable, either before or after excavation, by inclement weather or type of material, the contractor must correct the moisture or furnish replacement backfill material.

- d. Backfilling shall not be allowed, except with permission of the City Inspector. When a ditch is flooded or the weather is unsuitable, the contractor shall not backfill unless permission is given by the City Inspector. No backfilling with frozen material shall be allowed.

16. SETTING VALVES AND VALVE BOXES

- a. Valves shall be set at locations shown on the plans with care being taken to support the valve properly and to accurately position the valve box over the operating nut of the valve. Where pavement exists, the box shall be adjusted to finished street grade and a concrete pad two-feet square and six inches thick shall be poured around the box two inches from the top of finished grade as shown in Detail W-17. When valves are located in street rights-of-way, but out of pavement, the boxes shall be adjusted to finished grade and a concrete pad two-feet square and six-inches thick shall be poured around the box one-half inch from the top. When valves are located outside of street rights-of-way, the boxes shall be at finish grade, and a concrete block two-feet square and six-inches thick shall be poured around the box at grade line. Valve locations out of street rights-of-way shall be marked with a metal post having a minimum diameter of two inches and a minimum bury of three feet with a minimum of three feet exposed. The exposed portion shall be painted bright orange and shall be placed so that a valve operating tool has free operation.
- b. When a tapping sleeve and valve are being used, the valve, sleeve and machine assembly shall be air tested to hold at 150 psi for a five-minute duration in the presence of the inspector prior to drilling or tapping the main. All tap coupons shall be given to the city inspector. The valve shall be in the closed position during the testing.

- c. Reverse taps are not permitted unless approved by the Public Utilities Director. They must have sufficient cover and be marked with a 4 inch PVC marker at the tapping valve identified with an "R" designation.

17. SETTING FITTINGS

Fittings shall be set at locations shown on the plans with care being taken to properly "bell-up" joints and support the body of the fitting. All dead-end lines shall be plugged with mechanical joint plugs or caps and anchored by using thrust collars and blocking as shown on Details W-7 thru W-12.

18. SETTING HYDRANTS

- a. Specific directions are required for the setting of all hydrants. In streets where paving is proposed in the near future, the contractor will be given line and grade stakes for hydrants. It is mandatory for the contractor to preserve these stakes for the inspector to verify that the hydrant was set correctly. In areas where paving is not anticipated in the near future, hydrants shall be set according to the inspector's directions. When fire hydrants are installed behind guard rails breakaway flanges shall be installed at the ground level and flush with the top of the guard rail. In these installations where multiple barrel extensions are required the fire hydrant stems shall be a single one piece unit. In general, hydrants shall be located in a manner to provide complete accessibility and minimize possibility of damage from vehicles or injury to pedestrians.
- b. Hydrant installation shall be as shown in Detail W-4 and shall be restrained from the main to the hydrant with a mechanical joint pipe restraining system. If the distance is greater than 20 feet the hydrant branch shall be restrained for the entire length with a mechanical joint pipe restraining system. When hydrants are used as blow-off assemblies, the valves shall be rodded to a thrust block. Restraining rods and accessories shall be "hot dipped" galvanized. Detail W-4A is another available option.
- c. Before a hydrant is set, all dirt and foreign matter shall be removed from the interior of the hydrant.
- d. Hydrants shall be bagged to indicate "out of service" until all testing is complete and the mains are placed in service. Bags shall be large enough to cover the entire hydrant and shall be black in color. Bags shall be secured with duct tape at the base of the hydrant and shall be removed immediately after the hydrants are placed in service.

19. SETTING BLOW-OFFS AND RELEASE VALVES

- a. Blow-offs and drainage branches shall not be connected to any sewer, submerged in any stream, or be installed in any other manner that will permit back siphonage into the distribution system.
- b. All air release valves and blow-offs shall be installed as shown on Details W-19 - W-22. Air release valves must be such that provisions can be made by the contractor to get the flow of water to a natural drainage way.

20. SURFACE RESTORATION

- a. All disturbed surfaces and property thereon, shall be restored to a condition equal to that existing before construction began, and the contractor shall maintain and be responsible for all ditches in paved streets, curbs, gutters or sidewalks until the contractor repaves the trench cuts. The contractor, with permission of the inspector, may place temporary or permanent asphaltic material in the cut. Asphalt compaction shall be done with a gasoline or diesel powered smooth drum asphaltic roller.
- b. All easements will be seeded with grass and left so they can be mowed by conventional mowers, unless approved by the Public Utilities Department for rip-rap or other specified material. In remote areas, easements will be seeded with a quality fescue grass. In residential areas, easements will be seeded with either falcon or rebel fescue or leaf mulch at the request of property owner. The contractor shall guarantee a good uniform stand of grass and shall reseed any bare or thin spots. The contractor will be responsible for a one-year warranty on materials and workmanship.

21. EROSION CONTROL

Erosion control measures shall be performed by the contractor, conforming to the requirements of, and in accordance with plans approved by the State of North Carolina Department of Environment and Natural Resources, North Carolina Sedimentation Control Commission and City of Raleigh Inspections Department Erosion Control Division, and as per the erosion control plan portion of the construction drawings and these specifications. The sedimentation and erosion control plan and permit shall remain on site at all times. The contractor shall not allow mud and debris to accumulate in the streets. Should the contractor pump water from trenches during construction, appropriate siltation preventative measures shall be taken prior to the entry into any storm drain or stream. All measures must be taken so that stormwater runoff does not go to the pipes or manholes of the utility system. All materials used for erosion control shall be approved by the Engineer prior to installation by the contractor.

- a. Temporary and permanent erosion control measures shall be shown on the plans. Temporary and permanent erosion control work shall be coordinated throughout the project to provide effective and continuous erosion control throughout construction and post construction, which minimizes siltation of streams, lakes, reservoirs, other water impoundments, ground surface, or other property. Seeding and mulching shall be carried out immediately behind construction.
- b. Temporary erosion control measures shall include but not be limited to swales in the easements, silt fences, crushed stone check dam devices, silt basins (sedimentation traps), mulching, earth berms, and rip-rap.
- c. Permanent erosion control measures shall include but not be limited to swales in the easements, rip rap and seeding of disturbed areas.
- d. Erosion and siltation shall be controlled on projects by using swales to control run-off and convey run-off to controlled discharge points, by silt fences, rip-rap, crushed stone, and earth berms to contain silt, with pipe culverts where major access or haul roads cross drainage ditches or streams, silt basins where pipe lines cross drainage ditches or streams, and seeding and mulching will be performed as soon after pipe installation as possible. When temporary measures are removed after completion of the project the disturbed area must be stabilized, if necessary.

22. MAINTAINING SERVICE

When replacing or extending water mains the contractor shall maintain continuous water service to all existing residences and businesses.

23. GUARANTEE

The contractor shall guarantee all material, equipment and workmanship for a period of at least one-year after final acceptance by the City. The Public Works Department Construction Inspection Division is responsible for the issuance of final acceptance letters by the City.

For projects in Merger Areas the Public Utilities Department Construction Inspection Division is responsible for issuance of final acceptance letters.

24. WETLAND/STREAM BUFFERS

Conditions of 401/404 permits shall be strictly followed to the satisfaction of Corps of Engineers. All Neuse Riparian buffers shall be maintained as required by the North Carolina Division of Water Quality.

25. GENERAL WATER MAIN TESTING SEQUENCE

Water mains shall be tested in the following general sequence:

- a) "Pigging" main (mains with gate valves)
- b) Flush the main (all flush water shall be de-chlorinated using methods acceptable to the City of Raleigh Public Utilities Department);
- c) Perform the hydrostatic tests;
- d) Introduce the appropriate amount of chlorine by tapping the main;
- e) Hold the chlorine solution in the main for at least twenty-four hours and no more than seventy-two hours;
- f) Flush the main (all flush water shall be de-chlorinated using methods acceptable to the City of Raleigh Public Utilities Department);
- g) Sample for the bacteriological tests; and
- h) Water mains shall be placed into service within 48 hours of meeting bacteriological analysis requirements. If no activity is anticipated on a water main for the first 30 days after it is placed into service, the contractor shall notify the City of Raleigh Public Utilities Department at 870-2870 and provide the location and permit number.

26. PIGGING

All new mains with gate valves must be pigged with a polyethylene "pig", 5#/cubic foot density at the conclusion of installation.

The pig must be blown at the end of the main by means of the following:

- a) 4" main - 4" blow-off (private only)
- b) 6" main - fire hydrant or 6" blow-off
- c) 8" and 12" through blow-off assembly as on Details W-21 & W-22
- d) 16" – 24" As determined by the field inspector

The contractor installing the line shall write the name of the company and street name in which the work is taking place on the pig in a manner in which it will not rub off.

27. HYDROSTATIC TESTS

- a. All main installations including private distribution and fire lines to the buildings shall be pressure tested between each main line valve in accordance with AWWA C-600. The test shall be performed using a suitable pump and an accurate pressure gauge. Immediately upon completion of a section of main, 150 psi (\pm 5 psi) of pressure shall be applied and held for two hours. Fire lines shall be tested at 200 psi. The acceptable leakage rate shall not exceed .092 gallons per inch of pipe diameter per 1,000 feet of pipe per hour.

Failure of the water main to comply with the above acceptable leakage rate, shall require the contractor to replace any defective materials to insure a watertight installation. If it is deemed that the existing blow-off valve is the cause of failure, the party responsible for the water main extension shall also be responsible for adding a valve at that location and abandoning the existing valve. After any inadequacies have been corrected, the leakage rate will again be tested. This test shall be repeated until that portion of main is brought to compliance with the permissible leakage rate.

- b. Prerequisite conditions for inspection prior to testing shall be as follows:
 - 1) Hydrants shall be properly located, operable, plumb and at correct elevation.
 - 2) Valves shall be properly located, operable and at correct elevation. Valve boxes or manholes shall be centered over operating nuts, and the top of the box or manhole shall be at proper elevation.
 - 3) Lines shall be properly vented where entrapped air is a consideration.

28. CHLORINATION

- a. All additions or replacements to the water system, including fire lines and backflow prevention devices, shall be chlorinated before being placed in service. Such chlorination must take place under the supervision of an inspector.
- b. Pipe subjected to contaminating materials shall be treated as directed by the Public Utilities Department or Engineer. Should such treatment fail to cleanse the pipe, replacement shall be required. The City shall bear no portion of any cost sustained by the contractor in meeting this specification.
- c. Chlorination of a completed line shall be carried out after completing the pressure test and in the following manner.

- 1) Taps will be made at the control valve at the upstream end of the line and at all extremities of the line including valves. These taps shall be located in such a manner as to allow HTH solution to be fed into all parts of the line.
- 2) A solution of water containing high test hypochlorite (70%) available chlorine or chlorine gas solution shall be introduced into the line by regulated pumping at the control valve tap. The solution shall be of such a concentration that the line shall have a uniform concentration of 50 ppm total chlorine immediately after chlorination. The chart below shows the required quantity of 70% HTH compound to be contained in solution in each 1000-foot section of line to produce the desired concentration of 50 ppm.

Pipe Size	Pounds of high Test Hypochlorite (70%) Per 1000' of Line
6"	.88
8"	1.56
10"	2.42
12"	3.50
14"	4.76
16"	6.22
20"	9.76
24"	14.00
30"	21.00
36"	31.50
48"	56.00

- 3) The HTH solution shall be circulated in the main by opening the control valve and systematically manipulating hydrants and taps at the line extremities. The HTH solution must be pumped in at a constant rate for each discharge rate in order that a uniform concentration will be produced in the mains.
- 4) Services shall be sterilized by methods acceptable to the Public Utilities Director or Engineer, and the contractor shall have the same responsibility for laterals as for mains in regard to bearing full cost of any corrective measures needed to comply with bacteriological or other requirements.
- 5) HTH solution shall remain in lines for no less than twenty-four hours, unless otherwise directed by the Public Utilities Director or Engineer.
- 5) Extreme care will be exercised at all times to prevent the HTH solution from entering existing mains.

29. BACTERIOLOGICAL SAMPLING

- a. Free residual chlorine after twenty-four hours shall be at least 10 ppm, or the Public Utilities Department or Engineer will require the lines be re-chlorinated.
- b. Mains will be flushed with a blow-off assembly of sufficient size to effectively clean the main. Detail W-22. Flushing of lines may proceed after twenty-four hours, provided the free residual chlorine analysis is satisfactory. Flushing shall be continued until chlorine returns to normal level. In times of water shortages or distribution main problems, the flushing operation may be delayed. The Public Utilities Department shall determine when flushing is allowable. The contractor shall advise the inspector prior to the chlorination and flushing so that the inspector can advise the Public Utilities Department of the construction location, size and length of mains. All tests will be done in the presence of an inspector. Flushing will be for short duration. Sufficient precautions must be taken to the satisfaction of the inspector to ensure that the impact of the water is absorbed and the water is conveyed without erosion or property drainage. All flush water shall be de-chlorinated using methods acceptable to the City of Raleigh Public Utilities Department.
- c. After flushing is completed, the Public Works Department or Public Utilities Department Inspector shall collect samples for turbidity and bacteriological analysis for each section of pipe between main line valves. Sample point locations shall be determined by a representative of the engineer or owner. A custody seal shall be placed on each set of turbidity and bacteriological bottles. A chain of custody form must be completed for sample set(s) collected and must be delivered along with the sample(s). A turbidity test will be done. If the turbidity exceeds 1 NTU, the sample fails and a bacteriological test will not be set up. The Public Utilities Department will perform the turbidity and bacteriological analysis.
- d. Samples will be accepted between 8:00 AM and 12 NOON and 1PM and 3:30 PM Monday through Thursday, excluding holidays. Special arrangements may be made for samples to be accepted outside of this time frame by calling the laboratory in advance.
- e. In the event that two successive bacteriologic tests fail, that section of the main shall be re-chlorinated by the contractor and new tests performed prior to moving to the next section of main.

30. SERVICE CONNECTIONS

- a. Taps shall be made only on a line under pressure and after the main has been tested and chlorinated. No taps on dry lines shall be allowed, unless specific authorization from the **Public Utilities Department** is obtained.
- b. Taps shall be at an angle of forty-five degrees to a perpendicular plane through the center line of the pipe as shown is in Detail W-23.
- c. The maximum size of a direct tap shall be 1" for mains 6" and larger. Larger taps may be made by using a service saddle.
- d. Services larger than two inches shall be made by using a tapping sleeve and valve. Service size shall match tap size.

The typical tapping sleeve and valve is shown in Standard Detail W-14.
