1.1 DESIGN PROFESSIONALS OF RECORD

A. Architect:

1. EwingCole
2. Jason C. Kolano
3. 11036 (North Carolina)
4. Responsible for Division 00-49 and referenced drawings in Construction Documents issuance, except where indicated as prepared by other design professionals of record.

B. Civil/Landscape Engineer:

1. McAdams
2. James Eason
3. 042597 (North Carolina)
4. Responsible for sections:
 - a. 02 41 13 Selective Site Removal
 - b. 32 10 00 Site Clearing
 - c. 31 20 00 Earth Moving
 - d. 31 23 17 Trenching
 - e. 31 23 19 Dewatering
 - f. 31 23 24 Flowable Fill
 - g. 31 25 00 Erosion and Sedimentation Control
 - h. 33 11 00 Water Utility Drainage Piping
 - i. 33 30 00 Sanitary Sewer Utility Distribution System
 - j. 33 41 00 Storm Utility Drainage Piping
 - k. 33 49 13 Storm Drainage Structures

C. Electrical Engineer:

1. Ewing Cole
2. Richard Garman
3. 039066 (North Carolina)
4. Responsible for:
 - a. Division 26 Sections
 - b. Section 28 31 11 "Digital, Addressable Fire Detection and Alarm System"

02/07/2024

D. Mechanical Engineer:

1. EwingCole
2. Richard Calame
3. 049327 (North Carolina)
4. Responsible for Division 23

E. Plumbing Engineer:

1. EwingCole
2. Richard Calame
3. 049327 (North Carolina)
4. Responsible for Division 22

F. Structural Engineer:

1. SKA Consulting Engineers
2. Aaron B. Bopp
3. 029394 (North Carolina)
4. Responsible for Sections:
 - a. 01 41 00 Special Inspections
 - b. 01 41 01 Statement of Special Inspections
 - c. 03 10 00 Concrete Formwork
 - d. 03 20 00 Concrete Reinforcement
 - e. 03 25 00 Adhesive Anchors
 - f. 03 30 00 Cast in Place Concrete
 - g. 05 12 00 Structural Steel
 - h. 05 31 00 Steel Decking

G. Low Voltage:

1. WHJW
2. Todd Semple
- 3.
4. Responsible for: Divisions 27 and 28.

END OF DOCUMENT 00 01 07

SECTION 00 01 15 - DRAWING LIST

Drawings consist of the Contract Drawings and other drawings listed on the Table of Contents page of the separately bound drawing set included on Drawing CS.A, dated January 29, 2024, as modified by subsequent Addenda and Contract modifications, form a part of the contract documents.

END OF SECTION 00 01 15

DOCUMENT 00 11 16 - INVITATION TO BID

1.1 PROJECT INFORMATION

- A. Notice to Bidders: Prequalified bidders are invited to submit bids for Project as described in this Document according to the Instructions to Bidders.
- B. Project Identification: Doak Field Enhancements, Phase 2
1. Project Location: 1081 Varsity Dr., Raleigh, NC 27606
 2. State Construction Office Project No.: 22-24384-01
 3. NC State University Project No.: 202120015
 4. Designer Project No.: 20220400
- C. Owner: State of North Carolina
1. Owning Agency: North Carolina State University, Raleigh, NC
 - a. Point of Contact (Design Phase): Robert Cwikla; (919) 515-6836;
rmcwikla@ncsu.edu.
 - b. Point of Contact (Construction Phase): Mark Michaelson; (919) 513-2752;
mjmichae@ncsu.edu.
 - c. Department: Capital Project Management, Design and Construction
Administrative Services Building III
2601 Wolf Village Way, Suite 331
Raleigh, NC 27695-7520
Campus Box 7520
- D. Architect: EwingCole
Architects.Engineers.Interior Designers.Planners
Federal Reserve Bank Building
100 N. 6th Street
Independence Mall West
Philadelphia, Pennsylvania 19106
215-923-2020

8208 Brownleigh Drive, Suite 200
Raleigh, NC 27617
919-460-6700
- E. Construction Manager: Romeo Guest, A New South Company.

1715 Camden Ave
Durham, NC 27704
919-683-1701
- F. Project Description: Project consists of additions to and alterations of Doak Field at Dail Park, an NCAA baseball stadium on the campus of NC State University. Work areas are as follows:

1. Area A: A 17,000 square-foot addition to the existing Doak Field baseball operations center, containing player training, locker room, and lounge facilities, and extending spectator circulation, seating, and concessions.
2. Area B: Terraced grandstand seating along the third base line with a 1,600 square-foot new construction concession building, adjoining entry gate, and accompanying sitework.

G. Construction Contract: Bids will be received for the following Work:

1. Multiple Contract Project consisting of prime contracts as administered by the Construction Manager.

1.2 BID SUBMITTAL AND OPENING

- A. Owner will receive sealed bids until the advertised bid time and date at the location indicated in the advertisement. Owner will consider bids prepared in compliance with the Instructions to Bidders issued by Owner, and delivered as directed in the advertisement.
- B. Bids will be thereafter publicly opened and read aloud.

1.3 BID SECURITY

- A. Bid security shall be submitted with each bid in the amount specified by the Owner and Construction Manager. No bids may be withdrawn for a period of time after opening of bids as specified by the Owner and Construction Manager. Owner reserves the right to reject any and all bids and to waive informalities and irregularities.

1.4 PREBID CONFERENCE

- A. A pre-bid conference for all bidders will be held at a time and location as publicly advertised. Prospective bidders are requested to attend.

1.5 DOCUMENTS

- A. Printed Procurement and Contracting Documents: Obtain by contacting Construction Manager, or as otherwise directed in the advertisement. Documents will be provided to prime bidders only; only complete sets of documents will be issued.
- B. Online Procurement and Contracting Documents: Obtain access by contacting Constructino Manager. Online access will be provided according to the advertisement.

1.6 TIME OF COMPLETION

- A. Bidders shall begin the Work on receipt of the Notice to Proceed and shall complete the Work within the Contract Time.

1.7 BIDDER'S QUALIFICATIONS

- A. Bidders must be prequalified by Owner and Construction Manager.
- B. Bidders must be properly licensed under the laws governing their respective trades and be able to obtain insurance and bonds required for the Work. A Performance Bond, a separate Labor and Material Payment Bond, and Insurance in a form acceptable to Owner and compliant with the requirements of State Construction Office form OC-15 will be required of the successful Bidder.

END OF DOCUMENT 00 11 16

**INSTRUCTIONS TO BIDDERS
AND
GENERAL CONDITIONS OF THE CONTRACT**

STANDARD FORM FOR CONSTRUCTION PROJECTS

**STATE CONSTRUCTION OFFICE
NORTH CAROLINA
DEPARTMENT OF ADMINISTRATION**

Form OC-15

This document is intended for use on State capital construction projects and shall not be used on any project that is not reviewed and approved by the State Construction Office. Extensive modification to the General Conditions by means of “Supplementary General Conditions” is strongly discouraged. State agencies and institutions may include special requirements in “Division 1 – General Requirements” of the specifications, where they do not conflict with the General Conditions.

Twenty Fourth Edition January 2013

INSTRUCTIONS TO BIDDERS

For a proposal to be considered it must be in accordance with the following instructions:

1. PROPOSALS

Proposals must be made in strict accordance with the Form of Proposal provided therefor, and all blank spaces for bids, alternates, and unit prices applicable to bidder's work shall be properly filled in. When requested alternates are not bid, the proposer shall so indicate by the words "No Bid". Any blanks shall also be interpreted as "No Bid". The bidder agrees that bid on Form of Proposal detached from specifications will be considered and will have the same force and effect as if attached thereto. Photocopied or faxed proposals will not be considered. Numbers shall be stated both in writing and in figures for the base bids and alternates. If figures and writing differ, the written number will supersede the figures.

Any modifications to the Form of Proposal (including alternates and/or unit prices) will disqualify the bid and may cause the bid to be rejected.

The bidder shall fill in the Form of Proposal as follows:

- a. If the documents are executed by a sole owner, that fact shall be evidenced by the word "Owner" appearing after the name of the person executing them.
- b. If the documents are executed by a partnership, that fact shall be evidenced by the word "Co-Partner" appearing after the name of the partner executing them.
- c. If the documents are executed on the part of a corporation, they shall be executed by either the president or the vice president and attested by the secretary or assistant secretary in either case, and the title of the office of such persons shall appear after their signatures. The seal of the corporation shall be impressed on each signature page of the documents.
- d. If the proposal is made by a joint venture, it shall be executed by each member of the joint venture in the above form for sole owner, partnership or corporation, whichever form is applicable.
- e. All signatures shall be properly witnessed.
- f. If the contractor's license of a bidder is held by a person other than an owner, partner or officer of a firm, then the licensee shall also sign and be a party to the proposal. The title "Licensee" shall appear under his/her signature.

Proposals should be addressed as indicated in the Advertisement for Bids and be delivered, enclosed in an opaque sealed envelope, marked "Proposal" and bearing the title of the work, name of the bidder, and the contractor's license number of the bidder. Bidders should clearly mark on the outside of the bid envelope which contract(s) they are bidding.

Bidder shall identify on the bid, the minority businesses that will be utilized on the project with corresponding total dollar value of the bid and affidavit listing good faith efforts or an affidavit indicating work under contract will be self-performed, as required by G.S. 143-128.2(c) and G.S. 143-128.2(f). Failure to comply with these requirements is grounds for rejection of the bid.

For projects bid in the single-prime alternative, the names and license numbers of major subcontractors shall be listed on the proposal form.

It shall be the specific responsibility of the bidder to deliver his bid to the proper official at the selected place and prior to the announced time for the opening of bids. Later delivery of a bid for any reason, including delivery by any delivery service, shall disqualify the bid.

Unit prices quoted in the proposal shall include overhead and profit and shall be the full compensation for the contractor's cost involved in the work. See General Conditions, Article 19c-1.

2. EXAMINATION OF CONDITIONS

It is understood and mutually agreed that by submitting a bid the bidder acknowledges that he has carefully examined all documents pertaining to the work, the location, accessibility and general character of the site of the work and all existing buildings and structures within and adjacent to the site, and has satisfied himself as to the nature of the work, the condition of existing buildings and structures, the conformation of the ground, the character, quality and quantity of the material to be encountered, the character of the equipment, machinery, plant and any other facilities needed preliminary to and during prosecution of the work, the general and local conditions, the construction hazards, and all other matters, including, but not limited to, the labor situation which can in any way affect the work under the contract, and including all safety measures required by the Occupational Safety and Health Act of 1970 and all rules and regulations issued pursuant thereto. It is further mutually agreed that by submitting a proposal the bidder acknowledges that he has satisfied himself as to the feasibility and meaning of the plans, drawings, specifications and other contract documents for the construction of the work and that he accepts all the terms, conditions and stipulations contained therein; and that he is prepared to work in cooperation with other contractors performing work on the site.

Reference is made to contract documents for the identification of those surveys and investigation reports of subsurface or latent physical conditions at the site or otherwise affecting performance of the work which have been relied upon by the designer in preparing the documents. The owner will make copies of all such surveys and reports available to the bidder upon request.

Each bidder may, at his own expense, make such additional surveys and investigations as he may deem necessary to determine his bid price for the performance of the work. Any on-site investigation shall be done at the convenience of the owner. Any reasonable request for access to the site will be honored by the owner.

3. BULLETINS AND ADDENDA

Any addenda to specifications issued during the time of bidding are to be considered covered in the proposal and in closing a contract they will become a part thereof. It shall be the bidder's responsibility to ascertain prior to bid time the addenda issued and to see that his bid includes any changes thereby required.

Should the bidder find discrepancies in, or omission from, the drawings or documents or should he be in doubt as to their meaning, he shall at once notify the designer who will send written instructions in the form of addenda to all bidders. Notification should be no later than seven (7) days prior to the date set for receipt of bids. Neither the owner nor the designer will be responsible for any oral instructions.

All addenda should be acknowledged by the bidder(s) on the Form of Proposal. However, even if not acknowledged, by submitting a bid, the bidder has certified that he has reviewed all issued addenda and has included all costs associated within his bid.

4. BID SECURITY

Each proposal shall be accompanied by a cash deposit or a certified check drawn on some bank or trust company insured by the Federal Deposit Insurance Corporation, or a bid bond in an amount equal to not less than five percent (5%) of the proposal, said deposit to be retained by the owner as liquidated damages in event of failure of the successful bidder to execute the contract within ten (10) days after the award or to give satisfactory surety as required by law (G.S. 143-129).

Bid bond shall be conditioned that the surety will, upon demand, forthwith make payment to the obligee upon said bond if the bidder fails to execute the contract. The owner may retain bid securities of any bidder(s) who may have a reasonable chance of award of contract for the full duration of time stated in the Notice to Bidders. Other bid securities may be released sooner, at the discretion of the owner. All bid securities (cash or certified checks) shall be returned to the bidders promptly after award of contracts, and no later than seven (7) days after expiration of the holding period stated in the Notice to Bidders. Standard Form of Bid Bond is included in these specifications and shall be used.

5. RECEIPT OF BIDS

Bids shall be received in strict accordance with requirements of the General Statutes of North Carolina. Bid security shall be required as prescribed by statute. Prior to the closing of the bid, the bidder will be permitted to change or withdraw his bid. Guidelines for opening of public construction bids are available from the State Construction Office.

6. OPENING OF BIDS

Upon opening, all bids shall be read aloud. Once bidding is closed, there shall not be any withdrawal of bids by any bidder and no bids may be returned by the designer to any bidder. After the opening of bids, no bid may be withdrawn, except under the provisions of General Statute 143-129.1, for a period of thirty days unless otherwise specified. Should the successful bidder default and fail to execute a contract, the contract may be awarded to the next lowest and responsible bidder. The owner reserves the unqualified right to reject any and all bids. Reasons for rejection may include, but shall not be limited to, the following:

- a. If the Form of Proposal furnished to the bidder is not used or is altered.
- b. If the bidder fails to insert a price for all bid items, alternate and unit prices requested.
- c. If the bidder adds any provisions reserving the right to accept or reject any award.
- d. If there are unauthorized additions or conditional bids, or irregularities of any kind which tend to make the proposal incomplete, indefinite or ambiguous as to its meaning.
- e. If the bidder fails to complete the proposal form where information is requested so the bid may be properly evaluated by the owner.
- f. If the unit prices contained in the bid schedule are unacceptable to the owner and the State Construction Office.
- g. If the bidder fails to comply with other instructions stated herein.

7. BID EVALUATION

The award of the contract will be made to the lowest responsible bidder as soon as practical. The owner may award on the basis of the base bid and any alternates the owner chooses.

Before awarding a contract, the owner may require the apparent low bidder to qualify himself to be a responsible bidder by furnishing any or all of the following data:

- a. The latest financial statement showing assets and liabilities of the company or other information satisfactory to the owner.
- b. A listing of completed projects of similar size.
- c. Permanent name and address of place of business.
- d. The number of regular employees of the organization and length of time the organization has been in business under present name.
- e. The name and home office address of the surety proposed and the name and address of the responsible local claim agent.
- f. The names of members of the firms who hold appropriate trade licenses, together with license numbers.
- g. If prequalified, contractor info will be reviewed and evaluated comparatively to submitted prequalification package.

Failure or refusal to furnish any of the above information, if requested, shall constitute a basis for disqualification of any bidder.

In determining the lowest responsible, responsive bidder, the owner shall take into consideration the bidder's compliance with the requirements of G.S. 143-128.2(c), the past performance of the bidder on construction contracts for the State with particular concern given to completion times, quality of work, cooperation with other contractors, and cooperation with the designer and owner. Failure of the low bidder to furnish affidavit and/or documentation as required by G.S. 143-128.2(c) shall constitute a basis for disqualification of the bid.

Should the owner adjudge that the apparent low bidder is not the lowest responsible, responsive bidder by virtue of the above information, said apparent low bidder will be so notified and his bid security shall be returned to him.

8. PERFORMANCE BOND

The successful bidder, upon award of contract, shall furnish a performance bond in an amount equal to 100 percent of the contract price. See Article 35, General Conditions.

9. PAYMENT BOND

The successful bidder, upon award of contract, shall furnish a payment bond in an amount equal to 100 percent of the contract price. See Article 35, General Conditions.

10. PAYMENTS

Payments to the successful bidders (contractors) will be made on the basis of monthly estimates. See Article 31, General Conditions.

11. PRE-BID CONFERENCE

Prior to the date set for receiving bids, the Designer may arrange and conduct a Pre-Bid Conference for all prospective bidders. The purpose of this conference is to review project requirements and to respond to questions from prospective bidders and their subcontractors or material suppliers related to the intent of bid documents. Attendance by prospective bidders shall be as required by the "Notice to Bidders".

12. SUBSTITUTIONS

In accordance with the provisions of G.S. 133-3, material, product, or equipment substitutions proposed by the bidders to those specified herein can only be considered during the bidding phase until ten (10) days prior to the receipt of bids when submitted to the Designer with sufficient data to confirm material, product, or equipment equality. Proposed substitutions submitted after this time will be considered only as potential change order.

Submittals for proposed substitutions shall include the following information:

- a. Name, address, and telephone number of manufacturer and supplier as appropriate.
- b. Trade name, model or catalog designation.
- c. Product data including performance and test data, reference standards, and technical descriptions of material, product, or equipment. Include color samples and samples of available finishes as appropriate.
- d. Detailed comparison with specified products including performance capabilities, warranties, and test results.
- e. Other pertinent data including data requested by the Designer to confirm product equality.

If a proposed material, product, or equipment substitution is deemed equal by the Designer to those specified, all bidders of record will be notified by Addendum.

GENERAL CONDITIONS OF THE CONTRACT

The use or reproduction of this document or any part thereof is authorized for and limited to use on projects of the State of North Carolina, and is distributed by, through and at the discretion of the State Construction Office, Raleigh, North Carolina, for that distinct and sole purpose.

ARTICLE 1 - DEFINITIONS

- a. The **contract documents** consist of the Notice to Bidders; Instructions to Bidders; General Conditions of the Contract; special conditions if applicable; Supplementary General Conditions; the drawing and specifications, including all bulletins, addenda or other modifications of the drawings and specifications incorporated into the documents prior to their execution; the proposal; the contract; the performance bond; the payment bond; insurance certificates; the approval of the attorney general; and the certificate of the Office of State Budget and Management. All of these items together form the contract.
- b. The **owner** is the State of North Carolina through the agency named in the contract.
- c. The **designer(s)** are those referred to within this contract, or their authorized representatives. The Designer(s), as referred to herein, shall mean architect and/or engineer. They will be referred to hereinafter as if each were of the singular number, masculine gender.
- d. The **contractor**, as referred to hereinafter, shall be deemed to be either of the several contracting parties called the "Party of the First Part" in either of the several contracts in connection with the total project. Where, in special instances hereinafter, a particular contractor is intended, an adjective precedes the word "contractor," as "general," "heating," etc. For the purposes of a single prime contract, the term Contractor shall be deemed to be the single contracting entity identified as the "Party of the First Part" in the single Construction Contract. Any references or adjectives that name or infer multiple prime contractors shall be interpreted to mean the single prime Contractor.
- e. A **subcontractor**, as the term is used herein, shall be understood to be one who has entered into a direct contract with a contractor, and includes one who furnishes materials worked to a special design in accordance with plans and specifications covered by the contract, but does not include one who only sells or furnishes materials not requiring work so described or detailed.
- f. **Written notice** shall be defined as notice in writing delivered in person to the contractor, or to a partner of the firm in the case of a partnership, or to a member of the contracting organization, or to an officer of the organization in the case of a corporation, or sent to the last known business address of the contracting organization by registered mail.
- g. **Work**, as used herein as a noun, is intended to include materials, labor, and workmanship of the appropriate contractor.
- h. The **project** is the total construction work to be performed under the contract documents by the several contractors.
- i. **Project Expediter**, as used herein, is an entity stated in the contract documents, designated to effectively facilitate scheduling and coordination of work activities. See Article 14(f) for responsibilities of a Project Expediter. **For the purposes of a single prime contract, the single prime contractor shall be designated as the Project Expediter.**
- j. **Change order**, as used herein, shall mean a written order to the contractor subsequent to the signing of the contract authorizing a change in the contract. The change order shall be signed by the contractor, designer and the owner, and approved by the State Construction Office, in that order (Article 19).

- k. **Field Order**, as used herein, shall mean a written approval for the contractor to proceed with the work requested by owner prior to issuance of a formal Change Order. The field order shall be signed by the contractor, designer, owner, and State Construction Office.
- l. **Time of completion**, as stated in the contract documents, is to be interpreted as consecutive calendar days measured from the date established in the written Notice to Proceed, or such other date as may be established herein (Article 23).
- m. **Liquidated damages**, as stated in the contract documents [, is an amount reasonably estimated in advance to cover the consequential damages associated with the Owner's economic loss in not being able to use the Project for its intended purposes at the end of the contract's completion date as amended by change order, if any, by reason of failure of the contractor(s) to complete the work within the time specified. Liquidated damages does not include the Owner's extended contract administration costs (including but not limited to additional fees for architectural and engineering services, testing services, inspection services, commissioning services, etc.), such other damages directly resulting from delays caused solely by the contractor, or consequential damages that the Owner identified in the bid documents that may be impacted by any delay caused solely by the Contractor (e.g., if a multi-phased project-subsequent phases, delays in start other projects that are dependent on the completion of this Project, extension of leases and/or maintenance agreements for other facilities).
- n. **Surety**, as used herein, shall mean the bonding company or corporate body which is bound with and for the contractor, and which engages to be responsible for the contractor and his acceptable performance of the work.
- o. **Routine written communications between the Designer and the Contractor** are any communication other than a "request for information" provided in letter, memo, or transmittal format, sent by mail, courier, electronic mail, or facsimile. Such communications can not be identified as "request for information".
- p. **Clarification or Request for information (RFI)** is a request from the Contractor seeking an interpretation or clarification by the Designer relative to the contract documents. The RFI, which shall be labeled (RFI), shall clearly and concisely set forth the issue or item requiring clarification or interpretation and why the response is needed. The RFI must set forth the Contractor's interpretation or understanding of the contract documents requirements in question, along with reasons for such an understanding.
- q. **Approval** means written or imprinted acknowledgement that materials, equipment or methods of construction are acceptable for use in the work.
- r. **Inspection** shall mean examination or observation of work completed or in progress to determine its compliance with contract documents.
- s. **"Equal to" or "approved equal"** shall mean materials, products, equipment, assemblies, or installation methods considered equal by the bidder in all characteristics (physical, functional, and aesthetic) to those specified in the contract documents. Acceptance of equal is subject to approval of Designer and owner.
- t. **"Substitution" or "substitute"** shall mean materials, products, equipment, assemblies, or installation methods deviating in at least one characteristic (physical, functional, or aesthetic) from those specified, but which in the opinion of the bidder would improve competition and/or enhance the finished installation. Acceptance of substitution is subject to the approval of the Designer and owner.

- u. **Provide** shall mean furnish and install complete in place, new, clean, operational, and ready for use.
- v. **Indicated and shown** shall mean provide as detailed, or called for, and reasonably implied in the contract documents.
- w. **Special inspector** is one who inspects materials, installation, fabrication, erection or placement of components and connections requiring special expertise to ensure compliance with the approved construction documents and referenced standards.
- x. **Commissioning** is a quality assurance process that verifies and documents that building components and systems operate in accordance to the owner's project requirements and the project design documents.
- y. **Designer Final Inspection** is the inspection performed by the design team to determine the completeness of the project in accordance with approved plans and specifications. This inspection occurs prior to SCO final inspection.
- z. **SCO Final Inspection** is the inspection performed by the State Construction Office to determine the completeness of the project in accordance with NC Building Codes and approved plans and specifications.
- aa. **Beneficial Occupancy** is requested by the owner and is occupancy or partial occupancy of the building after all life safety items have been completed as determined by the State Construction Office. Life safety items include but not limited to fire alarm, sprinkler, egress and exit lighting, fire rated walls, egress paths and security.
- bb. Final Acceptance is the date in which the State Construction Office accepts the construction as totally complete. This includes the SCO Final Inspection and certification by the designer that all punch lists are completed.

ARTICLE 2 - INTENT AND EXECUTION OF DOCUMENTS

- a. The drawings and specifications are complementary, one to the other, and that which is shown on the drawings or called for in the specifications shall be as binding as if it were both called for and shown. The intent of the drawings and specifications is to establish the scope of all labor, materials, transportation, equipment, and any and all other things necessary to provide a bid for a complete job. In case of discrepancy or disagreement in the contract documents, the order of precedence shall be: Form of Contract, specifications, large-scale detail drawings, small-scale drawings.
- b. The wording of the specifications shall be interpreted in accordance with common usage of the language except that words having a commonly used technical or trade meaning shall be so interpreted in preference to other meanings.
- c. The contractor shall execute each copy of the proposal, contract, performance bond and payment bond as follows:
 - 1. If the documents are executed by a sole owner, that fact shall be evidenced by the word "Owner" appearing after the name of the person executing them.
 - 2. If the documents are executed by a partnership, that fact shall be evidenced by the word "Co-Partner" appearing after the name of the partner executing them.

3. If the documents are executed on the part of a corporation, they shall be executed by either the president or the vice president and attested by the secretary or assistant secretary in either case, and the title of the office of such persons shall appear after their signatures. The seal of the corporation shall be impressed on each signature page of the documents.
4. If the documents are made by a joint venture, they shall be executed by each member of the joint venture in the above form for sole owner, partnership or corporation, whichever form is applicable to each particular member.
5. All signatures shall be properly witnessed.
6. If the contractor's license is held by a person other than an owner, partner or officer of a firm, then the licensee shall also sign and be a party to the contract. The title "Licensee" shall appear under his/her signature.
7. The bonds shall be executed by an attorney-in-fact. There shall be attached to each copy of the bond a certified copy of power of attorney properly executed and dated.
8. Each copy of the bonds shall be countersigned by an authorized individual agent of the bonding company licensed to do business in North Carolina. The title "Licensed Resident Agent" shall appear after the signature.
9. The seal of the bonding company shall be impressed on each signature page of the bonds.
10. The contractor's signature on the performance bond and the payment bond shall correspond with that on the contract. The date of performance and payment bond shall not be prior to the date of the contract.

ARTICLE 3 - CLARIFICATIONS AND DETAIL DRAWINGS

- a. In such cases where the nature of the work requires clarification by the designer, such clarification shall be furnished by the designer with reasonable promptness by means of written instructions or detail drawings, or both. Clarifications and drawings shall be consistent with the intent of contract documents, and shall become a part thereof.
- b. The contractor(s) and the designer shall prepare, if deemed necessary, a schedule fixing dates upon which foreseeable clarifications will be required. The schedule will be subject to addition or change in accordance with progress of the work. The designer shall furnish drawings or clarifications in accordance with that schedule. The contractor shall not proceed with the work without such detail drawings and/or written clarifications.

ARTICLE 4 - COPIES OF DRAWINGS AND SPECIFICATIONS

The designer or Owner shall furnish free of charge to the contractors electronic copies of plans and specifications. If requested by the contractor, paper copies of plans and specifications shall be furnished free of charge as follows:

- a. General contractor - Up to twelve (12) sets of general contractor drawings and specifications, up to six (6) sets of which shall include drawings and specifications of all other contracts, plus a clean set of black line prints on white paper of all appropriate drawings, upon which the contractor shall clearly and legibly record all work-in-place that is at variance with the contract documents.

- b. Each other contractor - Up to six (6) sets of the appropriate drawings and specifications, up to three (3) sets of which shall include drawings and specifications of all other contracts, plus a clean set of black line prints on white paper of all appropriate drawings, upon which the contractor shall clearly and legibly record all work-in-place that is at variance with the contract documents.
- c. Additional sets shall be furnished at cost, including mailing, to the contractor upon request by the contractor. This cost shall be stated in the bidding documents.
- d. For the purposes of a single-prime contract, the contractor shall receive up to 30 sets of drawings and specifications, plus a clean set of black line prints on white paper of all appropriate drawings, upon which the contractor shall clearly and legibly record all work-in-place that is at variance with the contract documents.

ARTICLE 5 - SHOP DRAWINGS, SUBMITTALS, SAMPLES, DATA

- a. Within 15 consecutive calendar days after the notice to proceed, each prime contractor shall submit a schedule for submission of all shop drawings, product data, samples, and similar submittals through the Project Expediter to the Designer. This schedule shall indicate the items, relevant specification sections, other related submittal, data, and the date when these items will be furnished to the designer.
- b. The Contractor(s) shall review, approve and submit to the Designer all Shop Drawings, Coordination Drawings, Product Data, Samples, Color Charts, and similar submittal data required or reasonably implied by the Contract Documents. Required Submittals shall bear the Contractor's stamp of approval, any exceptions to the Contract Documents shall be noted on the submittals, and copies of all submittals shall be of sufficient quantity for the Designer to retain up to three (3) copies of each submittal for his own use plus additional copies as may be required by the Contractor. Submittals shall be presented to the Designer in accordance with the schedule submitted in paragraph (a). so as to cause no delay in the activities of the Owner or of separate Contractors.
- c. The Designer shall review required submittals promptly, noting desired corrections if any, and retaining three (3) copies (1 for the Designer, 1 for the owner and 1 for SCO) for his use. The remaining copies of each submittal shall be returned to the Contractor not later than twenty (20) days from the date of receipt by the Designer, for the Contractor's use or for corrections and resubmittal as noted by the Designer. When resubmittals are required, the submittal procedure shall be the same as for the original submittals.
- d. Approval of shop drawings/submittals by the Designer shall not be construed as relieving the Contractor from responsibility for compliance with the design or terms of the contract documents nor from responsibility of errors of any sort in the shop drawings, unless such lack of compliance or errors first have been called in writing to the attention of the Designer by the Contractor.

ARTICLE 6 - WORKING DRAWINGS AND SPECIFICATIONS AT THE JOB SITE

- a. The contractor shall maintain, in readable condition at his job office, one complete set of working drawings and specifications for his work including all shop drawings. Such drawings and specifications shall be available for use by the designer, his authorized representative, owner or State Construction Office.

- b. The contractor shall maintain at the job office, a day-to-day record of work-in-place that is at variance with the contract documents. Such variations shall be fully noted on project drawings by the contractor and submitted to the designer upon project completion and no later than 30 days after final acceptance of the project.
- c. The contractor shall maintain at the job office a record of all required tests that have been performed, clearly indicating the scope of work inspected and the date of approval or rejection.

ARTICLE 7 - OWNERSHIP OF DRAWINGS AND SPECIFICATIONS

All drawings and specifications are instruments of service and remain the property of the owner. The use of these instruments on work other than this contract without permission of the owner is prohibited. All copies of drawings and specifications other than contract copies shall be returned to the owner upon request after completion of the work.

ARTICLE 8 - MATERIALS, EQUIPMENT, EMPLOYEES

- a. The contractor shall, unless otherwise specified, supply and pay for all labor, transportation, materials, tools, apparatus, lights, power, heat, sanitary facilities, water, scaffolding and incidentals necessary for the completion of his work, and shall install, maintain and remove all equipment of the construction, other utensils or things, and be responsible for the safe, proper and lawful construction, maintenance and use of same, and shall construct in the best and most workmanlike manner, a complete job and everything incidental thereto, as shown on the plans, stated in the specifications, or reasonably implied therefrom, all in accordance with the contract documents.
- b. All materials shall be new and of quality specified, except where reclaimed material is authorized herein and approved for use. Workmanship shall at all times be of a grade accepted as the best practice of the particular trade involved, and as stipulated in written standards of recognized organizations or institutes of the respective trades except as exceeded or qualified by the specifications.
- c. Upon notice, the contractor shall furnish evidence as to quality of materials.
- d. Products are generally specified by ASTM or other reference standard and/or by manufacturer's name and model number or trade name. When specified only by reference standard, the Contractor may select any product meeting this standard, by any manufacturer. When several products or manufacturers are specified as being equally acceptable, the Contractor has the option of using any product and manufacturer combination listed. However, the contractor shall be aware that the cited examples are used only to denote the quality standard of product desired and that they do not restrict bidders to a specific brand, make, manufacturer or specific name; that they are used only to set forth and convey to bidders the general style, type, character and quality of product desired; and that equivalent products will be acceptable. Request for substitution of materials, items, or equipment shall be submitted to the designer for approval or disapproval; such approval or disapproval shall be made by the designer prior to the opening of bids. Alternate materials may be requested after the award if it can clearly be demonstrated that it is an added benefit to the owner and the designer and owner approves.
- e. The designer is the judge of equality for proposed substitution of products, materials or equipment.

- g. If at any time during the construction and completion of the work covered by these contract documents, the language, conduct, or attire of any workman of the various crafts be adjudged a nuisance to the owner or designer, or if any workman be considered detrimental to the work, the contractor shall order such parties removed immediately from grounds.

ARTICLE 9 - ROYALTIES, LICENSES AND PATENTS

It is the intention of the contract documents that the work covered herein will not constitute in any way infringement of any patent whatsoever unless the fact of such patent is clearly evidenced herein. The contractor shall protect and save harmless the owner against suit on account of alleged or actual infringement. The contractor shall pay all royalties and/or license fees required on account of patented articles or processes, whether the patent rights are evidenced hereinafter.

ARTICLE 10 - PERMITS, INSPECTIONS, FEES, REGULATIONS

- a. The contractor shall give all notices and comply with all laws, ordinances, codes, rules and regulations bearing on the conduct of the work under this contract. If the contractor observes that the drawings and specifications are at variance therewith, he shall promptly notify the designer in writing. See Instructions to Bidders, Paragraph 3, Bulletins and Addenda. Any necessary changes required after contract award shall be made by change order in accordance with Article 19. If the contractor performs any work knowing it to be contrary to such laws, ordinances, codes, rules and regulations, and without such notice to the designer, he shall bear all cost arising therefrom. Additional requirements implemented after bidding will be subject to equitable negotiations.
- b. All work under this contract shall conform to the North Carolina State Building Code and other State, local and national codes as are applicable. The cost of all required inspections and permits shall be the responsibility of the contractor and included within the bid proposal. All water taps, meter barrels, vaults and impact fees shall be paid by the contractor unless otherwise noted.
- d. Projects constructed by the State of North Carolina or by any agency or institution of the State are not subject to inspection by any county or municipal authorities and are not subject to county or municipal building codes. The contractor shall, however, cooperate with the county or municipal authorities by obtaining building permits. Permits shall be obtained at no cost.
- e. Projects involving local funding (community colleges) are subject also to county and municipal building codes and inspection by local authorities. The contractor shall pay the cost of these permits and inspections.

ARTICLE 11 - PROTECTION OF WORK, PROPERTY AND THE PUBLIC

- a. The contractors shall be jointly responsible for the entire site and the building or construction of the same and provide all the necessary protections, as required by the owner or designer, and by laws or ordinances governing such conditions. They shall be responsible for any damage to the owner's property, or of that of others on the job, by them, their personnel, or their subcontractors, and shall make good such damages. They shall be responsible for and pay for any damages caused to the owner. All contractors shall have access to the project at all times.
- b. The contractor shall provide cover and protect all portions of the structure when the work is not in progress, provide and set all temporary roofs, covers for doorways, sash and windows, and all other materials necessary to protect all the work on the building, whether set by him, or any of the subcontractors. Any work damaged through the lack of proper protection or from any other cause, shall be repaired or replaced without extra cost to the owner.
- c. No fires of any kind will be allowed inside or around the operations during the course of construction without special permission from the designer and owner.
- d. The contractor shall protect all trees and shrubs designated to remain in the vicinity of the operations by building substantial boxes around same. He shall barricade all walks, roads, etc., as directed by the designer to keep the public away from the construction. All trenches, excavations or other hazards in the vicinity of the work shall be well barricaded and properly lighted at night.
- e. The contractor shall provide all necessary safety measures for the protection of all persons on the job, including the requirements of the A.G.C. *Accident Prevention Manual in Construction*, as amended, and shall fully comply with all state laws or regulations and North Carolina State Building Code requirements to prevent accident or injury to persons on or about the location of the work. He shall clearly mark or post signs warning of hazards existing, and shall barricade excavations, elevator shafts, stairwells and similar hazards. He shall protect against damage or injury resulting from falling materials and he shall maintain all protective devices and signs throughout the progress of the work.
- f. The contractor shall adhere to the rules, regulations and interpretations of the North Carolina Department of Labor relating to Occupational Safety and Health Standards for the Construction Industry (Title 29, Code of Federal Regulations, Part 1926, published in Volume 39, Number 122, Part II, June 24, 1974, *Federal Register*), and revisions thereto as adopted by General Statutes of North Carolina 95-126 through 155.
- g. The contractor shall designate a responsible person of his organization as safety officer/inspector to inspect the project site for unsafe health and safety hazards, to report these hazards to the contractor for correction, and whose duties also include accident prevention on the project, and to provide other safety and health measures on the project site as required by the terms and conditions of the contract. The name of the safety inspector shall be made known to the designer and owner at the time of the preconstruction conference and in all cases prior to any work starting on the project.
- h. In the event of emergency affecting the safety of life, the protection of work, or the safety of adjoining properties, the contractor is hereby authorized to act at his own discretion, without further authorization from anyone, to prevent such threatened injury or damage.

Any compensation claimed by the contractor on account of such action shall be determined as provided for under Article 19(b).

- i. Any and all costs associated with correcting damage caused to adjacent properties of the construction site or staging area shall be borne by the contractor. These costs shall include but not be limited to flooding, mud, sand, stone, debris, and discharging of waste products.

ARTICLE 12 - SEDIMENTATION POLLUTION CONTROL ACT OF 1973

- a. Any land-disturbing activity performed by the contractor(s) in connection with the project shall comply with all erosion control measures set forth in the contract documents and any additional measures which may be required in order to ensure that the project is in full compliance with the Sedimentation Pollution Control Act of 1973, as implemented by Title 15, North Carolina Administrative Code, Chapter 4, Sedimentation Control, Subchapters 4A, 4B and 4C, as amended (15 N.C.A.C. 4A, 4B and 4C).
- b. Upon receipt of notice that a land-disturbing activity is in violation of said act, the contractor(s) shall be responsible for ensuring that all steps or actions necessary to bring the project in compliance with said act are promptly taken.
- c. The contractor(s) shall be responsible for defending any legal actions instituted pursuant to N.C.G.S. 113A-64 against any party or persons described in this article.
- d. To the fullest extent permitted by law, the contractor(s) shall indemnify and hold harmless the owner, the designer and the agents, consultants and employees of the owner and designer, from and against all claims, damages, civil penalties, losses and expenses, including, but not limited to, attorneys' fees, arising out of or resulting from the performance of work or failure of performance of work, provided that any such claim, damage, civil penalty, loss or expense is attributable to a violation of the Sedimentation Pollution Control Act. Such obligation shall not be construed to negate, abridge or otherwise reduced any other right or obligation of indemnity which would otherwise exist as to any party or persons described in this article.

ARTICLE 13 - INSPECTION OF THE WORK

- a. It is a condition of this contract that the work shall be subject to inspection during normal working hours and during any time work is in preparation and progress by the designer, designated official representatives of the owner, State Construction Office and those persons required by state law to test special work for official approval. The contractor shall therefore provide safe access to the work at all times for such inspections.
- b. All instructions to the contractor will be made only by or through the designer or his designated project representative. Observations made by official representatives of the owner shall be conveyed to the designer for review and coordination prior to issuance to the contractor.
- c. All work shall be inspected by designer, special inspector and/or State Construction Office prior to being covered by the contractor. Contractor shall give a minimum two weeks notice unless otherwise agreed to by all parties. If inspection fails, after the first reinspection all costs associated with additional reinspections shall be borne by the contractor.

- d. Where special inspection or testing is required by virtue of any state laws, instructions of the designer, specifications or codes, the contractor shall give adequate notice to the designer of the time set for such inspection or test, if the inspection or test will be conducted by a party other than the designer. Such special tests or inspections will be made in the presence of the designer, or his authorized representative, and it shall be the contractor's responsibility to serve ample notice of such tests.
- e. All laboratory tests shall be paid by the owner unless provided otherwise in the contract documents except the general contractor shall pay for laboratory tests to establish design mix for concrete, and for additional tests to prove compliance with contract documents where materials have tested deficient except when the testing laboratory did not follow the appropriate ASTM testing procedures.
- f. Should any work be covered up or concealed prior to inspection and approval by the designer, special inspector, and/or State Construction Office such work shall be uncovered or exposed for inspection, if so requested by the designer in writing. Inspection of the work will be made upon notice from the contractor. All cost involved in uncovering, repairing, replacing, recovering and restoring to design condition, the work that has been covered or concealed will be paid by the contractor involved.

ARTICLE 14 - CONSTRUCTION SUPERVISION AND SCHEDULE

- a. Throughout the progress of the work, each contractor shall keep at the job site, a competent superintendent and supervisory staff satisfactory to the designer and the owner. The superintendent and supervisory staff shall not be changed without the consent of the designer and owner unless said superintendent ceases to be employed by the contractor or ceases to be competent as determined by the contractor, designer or owner. The superintendent and other staff designated by the contractor in writing shall have authority to act on behalf of the contractor, and instructions, directions or notices given to him shall be as binding as if given to the contractor. However, directions, instructions, and notices shall be confirmed in writing.
- b. The contractor shall examine and study the drawings and specifications and fully understand the project design, and shall provide constant and efficient supervision to the work. Should he discover any discrepancies of any sort in the drawings or specifications, he shall report them to the designer without delay. He will not be held responsible for discrepancies in the drawings and/or specifications, but shall be held responsible to report them should they become known to him.
- c. All contractors shall be required to cooperate and consult with each other during the construction of this project. Prior to installation of work, all contractors shall jointly prepare coordination drawings, showing locations of various ductworks, piping, motors, pumps, and other mechanical or electrical equipment, in relation to the structure, walls and ceilings. These drawings shall be submitted to the designer through the Project Expediter for information only. Each contractor shall lay out and execute his work to cause the least delay to other contractors. Each contractor shall be financially responsible for any damage to other contractor's work and for undue delay caused to other contractors on the project.
- d. The contractor is required to attend job site progress conferences as called by the designer. The contractor shall be represented at these job progress conferences by both home office and project personnel. These representatives shall have authority to act on behalf of the contractor. These meetings shall be open to subcontractors, material

suppliers and any others who can contribute toward maintaining required job progress. It shall be the principal purpose of these meetings, or conferences, to effect coordination, cooperation and assistance in every practical way toward the end of maintaining progress of the project on schedule and to complete the project within the specified contract time. Each contractor shall be prepared to assess progress of the work as required in his particular contract and to recommend remedial measures for correction of progress as may be appropriate. The designer or his authorized representative shall be the coordinator of the conferences and shall preside as chairman. The contractor shall turn over a copy of his daily reports to the Designer and Owner at the job site progress conference. Owner will determine daily report format.

- e. The contractor(s) shall, employ an engineer or a land surveyor licensed in the State of North Carolina to lay out the work and to establish a bench mark in a location where same will not be disturbed and where direct instruments sights may be taken.
- f. The designer shall designate a Project Expediter on projects involving two or more prime contracts. The Project Expediter shall be designated in the Supplementary General Conditions. The Project Expediter shall have at a minimum the following responsibilities.
 - 1. Prepare the project construction schedule and shall allow all prime contractors (multi-prime contract) and subcontractors (single-prime contract) performing general, plumbing, HVAC, and electrical work equal input into the preparation of the initial construction schedule.
 - 2. Maintain a project progress schedule for all contractors.
 - 3. Give adequate notice to all contractors to ensure efficient continuity of all phases of the work.
 - 4. Notify the designer of any changes in the project schedule.
 - 5. Recommend to the owner whether payment to a contractor shall be approved.
- g. It shall be the responsibility of the Project Expediter to cooperate with and obtain from several prime contractors and subcontractors on the job, their respective work activities and integrate these activities into a project construction schedule in form of a detailed bar chart or Critical Path Method (CPM), schedule. Each prime contractor shall provide work activities within fourteen (14) days of request by the Project Expediter. A “work activity”, for scheduling purposes, shall be any component or contractual requirement of the project requiring at least one (1) day, but not more than fourteen (14) days, to complete or fulfill. The project construction schedule shall graphically show all salient features of the work required to construct the project from start to finish and within the allotted time established in the contract. The time (in days) between the contractor’s early completion and contractual completion dates is part of the project total float time; and shall be used as such, unless amended by a change order. On a multi-prime project, each prime contractor shall review the proposed construction schedule and approve same in writing. The Project Expediter shall submit the proposed construction schedule to the designer for comments. The complete Project construction schedule shall be of the type set forth in the Supplementary General Condition or subparagraph (1) or (2) below, as appropriate:

1. For a project with total contracts of \$500,000 or less, a bar chart schedule will satisfy the above requirement. The schedule shall indicate the estimated starting and completion dates for each major element of the work.
2. For a project with total contracts over \$500,000, a Critical Path Method (CPM) schedule shall be utilized to control the planning and scheduling of the Work. The CPM schedule shall be the responsibility of the Project Expediter and shall be paid for by the Project Expediter.

Bar Chart Schedule: Where a bar chart schedule is required, it shall be time-scaled in weekly increments, shall indicate the estimated starting and completion dates for each major element of the work by trade and by area, level, or zone, and shall schedule dates for all salient features, including but not limited to the placing of orders for materials, submission of shop drawings and other Submittals for approval, approval of shop drawings by designers, the manufacture and delivery of material, the testing and the installation of materials, supplies and equipment, and all Work activities to be performed by the Contractor. The Contractor shall allow sufficient time in his schedule for all commissioning, required inspections and completion of final punchlist(s). Each Work activity will be assigned a time estimate by the Contractor. One day shall be the smallest time unit used.

CPM Schedule: Where a CPM schedule is required, it shall be in time-scaled precedence format using the Project Expediter's logic and time estimates. The CPM schedule shall be drawn or plotted with activities grouped or zoned by Work area or subcontract as opposed to a random (or scattered) format. The CPM schedule shall be time-scaled on a weekly basis and shall be drawn or plotted at a level of detail and logic which will schedule all salient features of the work to be performed by the Contractor. The Contractor shall allow sufficient time in his schedule for all commissioning, required inspections and completion of final punchlist(s).. Each Work activity will be assigned a time estimate by the Contractor. One day shall be the smallest time unit used.

The CPM schedule will identify and describe each activity, state the duration of each activity, the calendar dates for the early and late start and the early and late finish of each activity, and clearly highlight all activities on the critical path. "Total float" and "free float" shall be indicated for all activities. Float time shall not be considered for the exclusive use or benefit of either the Owner or the Contractor, but must be allocated in the best interest of completing the Work within the Contract time. Extensions to the Contract time, when granted by Change Order, will be granted only when equitable time adjustment exceeds the Total Float in the activity or path of activities affected by the change. On contracts with a price over \$2,500,000, the CPM schedule shall also show what part of the Contract Price is attributable to each activity on the schedule, the sum of which for all activities shall equal the total Contract Price.

Early Completion of Project: The Contractor may attempt to complete the project prior to the Contract Completion Date. However, such planned early completion shall be for the Contractor's convenience only and shall not create any additional rights of the Contractor or obligations of the Owner under this Contract, nor shall it change the Time

for Completion or the Contract Completion Date. The Contractor shall not be required to pay liquidated damages to the Owner because of its failure to complete by its planned earlier date. Likewise, the Owner shall not pay the Contractor any additional compensation for early completion nor will the Owner owe the Contractor any compensation should the Owner, its officers, employees, or agents cause the Contractor not to complete earlier than the date required by the Contract Documents.

- h. The proposed project construction schedule shall be presented to the designer no later than fifteen (15) days after written notice to proceed. No application for payment will be processed until this schedule is accepted by the designer and owner.
- i. The approved project construction schedule shall be distributed to all contractors and displayed at the job site by the Project Expediter.
- j. The several contractors shall be responsible for their work activities and shall notify the Project Expediter of any necessary changes or adjustments to their work. The Project Expediter shall maintain the project construction schedule, making biweekly adjustments, updates, corrections, etc., that are necessary to finish the project within the Contract time, keeping all contractors and the designer fully informed. Copy of a bar chart schedule annotated to show the current progress shall be submitted by the Contractor(s) to the designer, along with monthly request for payment. For project requiring CPM schedule, the Contractor shall submit a biweekly report of the status of all activities. The bar chart schedule or status report shall show the actual Work completed to date in comparison with the original Work scheduled for all activities. If any activities of the work of several contractors are behind schedule, the contractor must indicate in writing, what measures will be taken to bring each such activity back on schedule and to ensure that the Contract Completion Date is not exceeded. A plan of action and recovery schedule shall be developed and submitted to the designer by the Project Expediter, when (1) the contractor's report indicates delays, that are in the opinion of the designer or the owner, of sufficient magnitude that the contractor's ability to complete the work by the scheduled completion is brought into question; (2) the updated construction schedule is thirty (30) days behind the planned or baseline schedule and no legitimate time extensions, as determined by the Designer, are in process; and (3) the contractor desires to make changes in the logic (sequencing of work) or the planned duration of future activities of the CPM schedule which, in the opinion of the designer or the owner, are of a major nature. The plan of action, when required shall be submitted to the Owner for review within two (2) business days of the Contractor receiving the Owner's written demand. The recovery schedule, when required, shall be submitted to the Owner within five (5) calendar days of the Contractor's receiving the Owner's written demand. Failure to provide an updated construction schedule or a recovery schedule may be grounds for rejection of payment applications or withholding of funds as set forth in Article 33.
- k. The Project Expediter shall notify each contractor of such events or time frames that are critical to the progress of the job. Such notice shall be timely and reasonable. Should the progress be delayed due to the work of any of the several contractors, it shall be the duty of the Project Expediter to immediately notify the contractor(s) responsible for such delay, the designer, the State Construction Office and other prime contractors. The designer shall determine the contractor(s) who caused the delays and notify the bonding company of the responsible contractor(s) of the delays; and shall make a recommendation to the owner regarding further action.
- l. Designation as Project Expediter entails an additional project control responsibility and does not alter in any way the responsibility of the contractor so designated, nor the

responsibility of the other contractors involved in the project. The project expeditor's Superintendent(s) shall be in attendance at the Project site at all times when work is in progress unless conditions are beyond the control of the Contractor or until termination of the Contract in accordance with the Contract Documents. It is understood that such Superintendent shall be acceptable to the Owner and Designer and shall be the one who will be continued in that capacity for the duration of the project unless he ceases to be on the Contractor's payroll or the Owner otherwise agrees. The Superintendent shall not be employed on any other project for or by the Contractor or by any other entity during the course of the Work. If the Superintendent is employed by the Contractor on another project without the Owner's approval, then the Owner may deduct from the Contractor's monthly general condition costs and amount representing the Superintendent's cost and shall deduct that amount for each month thereafter until the Contractor has the Superintendent back on the Owner's Project full-time.

ARTICLE 15 - SEPARATE CONTRACTS AND CONTRACTOR RELATIONSHIPS

- a. Effective from January 1, 2002, Chapter 143, Article 8, was amended, to allow public contracts to be delivered by the following delivery methods: single-prime, dual (single-prime and separate-prime), construction manager at risk, and alternative contracting method as approved by the State Building Commission. The owner reserves the right to prepare separate specifications, receive separate bids, and award separate contracts for such other major items of work as may be in the best interest of the State. For the purposes of a single prime contract, refer to Article 1 – Definitions.
- b. All contractors shall cooperate with each other in the execution of their work, and shall plan their work in such manner as to avoid conflicting schedules or delay of the work. See Article 14, Construction Supervision.
- c. If any part of contractor's work depends upon the work of another contractor, defects which may affect that work shall be reported to the designer in order that prompt inspection may be made and the defects corrected. Commencement of work by a contractor where such condition exists will constitute acceptance of the other contractor's work as being satisfactory in all respects to receive the work commenced, except as to defects which may later develop. The designer shall be the judge as to the quality of work and shall settle all disputes on the matter between contractors.
- d. Any mechanical or electrical work such as sleeves, inserts, chases, openings, penetrations, etc., which is located in the work of the general contractor shall be built in by the general contractor. The respective mechanical and electrical contractors shall set all sleeves, inserts and other devices that are to be incorporated into the structure in cooperation and under the supervision of the general contractor. The responsibility for the exact location of such items shall be that of the mechanical and/or electrical contractor.
- e. The designer and the owner shall have access to the work whenever it is in preparation and progress and during normal working hours. The contractor shall provide facilities for such access so the designer may perform his functions under the contract documents.
- f. Should a contractor cause damage to the work or property of another contractor, he shall be directly responsible, and upon notice, shall promptly settle the claim or otherwise resolve the dispute.

ARTICLE 16 - SUBCONTRACTS AND SUBCONTRACTORS

- a. Within thirty (30) days after award of the contract, the contractor shall submit to the designer, owner and to the State Construction Office a list giving the names and addresses of subcontractors and equipment and material suppliers he proposes to use, together with the scope of their respective parts of the work. Should any subcontractor be disapproved by the designer or owner, the designer or owner shall submit his reasons for disapproval in writing to the State Construction Office for its consideration with a copy to the contractor. If the State Construction Office concurs with the designer's or owner's recommendation, the contractor shall submit a substitute for approval. The designer and owner shall act promptly in the approval of subcontractors, and when approval of the list is given, no changes of subcontractors will be permitted except for cause or reason considered justifiable by the designer or owner.
- b. The designer will furnish to any subcontractor, upon request, evidence regarding amounts of money paid to the contractor on account of the subcontractor's work.
- c. The contractor is and remains fully responsible for his own acts or omissions as well as those of any subcontractor or of any employee of either. The contractor agrees that no contractual relationship exists between the subcontractor and the owner in regard to the contract, and that the subcontractor acts on this work as an agent or employee of the contractor.
- d. The owner reserves the right to limit the amount of portions of work to be subcontracted as hereinafter specified.

ARTICLE 17 - CONTRACTOR AND SUBCONTRACTOR RELATIONSHIPS

The contractor agrees that the terms of these contract documents shall apply equally to each subcontractor as to the contractor, and the contractor agrees to take such action as may be necessary to bind each subcontractor to these terms. The contractor further agrees to conform to the Code of Ethical Conduct as adopted by the Associated General Contractors of America, Inc., with respect to contractor-subcontractor relationships, and that payments to subcontractors shall be made in accordance with the provisions of G.S. 143-134.1 titled Interest on final payments due to prime contractors: payments to subcontractors.

- a. On all public construction contracts which are let by a board or governing body of the state government or any political subdivision thereof, except contracts let by the Department of Transportation pursuant to G.S. 136-28.1, the balance due prime contractors shall be paid in full within 45 days after respective prime contracts of the project have been accepted by the owner, certified by the architect, engineer or designer to be completed in accordance with terms of the plans and specifications, or occupied by the owner and used for the purpose for which the project was constructed, whichever occurs first. Provided, however, that whenever the architect or consulting engineer in charge of the project determines that delay in completion of the project in accordance with terms of the plans and specifications is the fault of the contractor, the project may be occupied and used for the purposes for which it was constructed without payment of any interest on amounts withheld past the 45 day limit. No payment shall be delayed because of the failure of another prime contractor on such project to complete his contract. Should final payment to any prime contractor beyond the date such contracts have been certified to be completed by the designer or architect, accepted by the owner, or occupied by the owner and used for the purposes for which the project was constructed, be delayed by more than 45 days, said prime contractor shall be paid interest, beginning on the 46th day, at the rate of one percent (1%) per month or fraction thereof unless a lower rate is

agreed upon on such unpaid balance as may be due. In addition to the above final payment provisions, periodic payments due a prime contractor during construction shall be paid in accordance with the payment provisions of the contract documents or said prime contractor shall be paid interest on any such unpaid amount at the rate stipulated above for delayed final payments. Such interest shall begin on the date the payment is due and continue until the date on which payment is made. Such due date may be established by the terms of the contract. Funds for payment of such interest on state-owned projects shall be obtained from the current budget of the owning department, institution or agency. Where a conditional acceptance of a contract exists, and where the owner is retaining a reasonable sum pending correction of such conditions, interest on such reasonable sum shall not apply.

- b. Within seven days of receipt by the prime contractor of each periodic or final payment, the prime contractor shall pay the subcontractor based on work completed or service provided under the subcontract. Should any periodic or final payment to the subcontractor be delayed by more than seven days after receipt of periodic or final payment by the prime contractor, the prime contractor shall pay the subcontractor interest, beginning on the eighth day, at the rate of one percent (1%) per month or fraction thereof on such unpaid balance as may be due.
- c. The percentage of retainage on payments made by the prime contractor to the subcontractor shall not exceed the percentage of retainage on payments made by the owner to the prime contractor. Any percentage of retainage on payments made by the prime contractor to the subcontractor that exceeds the percentage of retainage on payments made by the owner to the prime contractor shall be subject to interest to be paid by the prime contractor to the subcontractor at the rate of one percent (1%) per month or fraction thereof.
- d. Nothing in this section shall prevent the prime contractor at the time of application and certification to the owner from withholding application and certification to the owner for payment to the subcontractor for unsatisfactory job progress; defective construction not remedied; disputed work; third-party claims filed or reasonable evidence that claim will be filed; failure of subcontractor to make timely payments for labor, equipment and materials; damage to prime contractor or another subcontractor; reasonable evidence that subcontract cannot be completed for the unpaid balance of the subcontract sum; or a reasonable amount for retainage not to exceed the initial percentage retained by owner.

ARTICLE 18 - DESIGNER'S STATUS

- a. The designer shall provide general administration of the performance of construction contracts, including liaison and necessary inspection of the work to ensure compliance with plans and specifications. He is the agent of the owner only for the purpose of constructing this work and to the extent stipulated in the contract documents. He has authority to direct work to be performed, to stop work, to order work removed, or to order corrections of faulty work, where any such action by the designer may be necessary to assure successful completion of the work.
- b. The designer is the impartial interpreter of the contract documents, and, as such, he shall exercise his powers under the contract to enforce faithful performance by both the owner and the contractor, taking sides with neither.
- c. Should the designer cease to be employed on the work for any reason whatsoever, then the owner shall employ a competent replacement who shall assume the status of the former designer.

- d. The designer and his consultants will make inspections of the project. He will inspect the progress, the quality and the quantity of the work.
- e. The designer and the owner shall have access to the work whenever it is in preparation and progress during normal working hours. The contractor shall provide facilities for such access so the designer and owner may perform their functions under the contract documents.
- f. Based on the designer's inspections and evaluations of the project, the designer shall issue interpretations, directives and decisions as may be necessary to administer the project. His decisions relating to artistic effect and technical matters shall be final, provided such decisions are within the limitations of the contract.

ARTICLE 19 - CHANGES IN THE WORK

- a. The owner may have changes made in the work covered by the contract. These changes will not invalidate and will not relieve or release the contractor from any guarantee given by him pertinent to the contract provisions. These changes will not affect the validity of the guarantee bond and will not relieve the surety or sureties of said bond. All extra work shall be executed under conditions of the original contract.
- b. Except in an emergency endangering life or property, no change shall be made by the contractor except upon receipt of approved change order or written field order from the designer, countersigned by the owner and the state construction office authorizing such change. No claim for adjustments of the contract price shall be valid unless this procedure is followed.

A field order, transmitted by fax, electronically, or hand delivered, may be used where the change involved impacts the critical path of the work. A formal change order shall be issued as expeditiously as possible.

In the event of emergency endangering life or property, the contractor may be directed to proceed on a time and material basis whereupon the contractor shall proceed and keep accurately on such form as specified by the designer or owner, a correct account of costs together with all proper invoices, payrolls and supporting data. Upon completion of the work the change order will be prepared as outlined under either Method "c(1)" or Method "c(2)" or both.

- c. In determining the values of changes, either additive or deductive, contractors are restricted to the use of the following methods:
 - 1. Where the extra work involved is covered by unit prices quoted in the proposal, or subsequently agreed to by the Contractor, Designer, Owner and State Construction Office the value of the change shall be computed by application of unit prices based on quantities, estimated or actual as agreed of the items involved, except in such cases where a quantity exceeds the estimated quantity allowance in the contract by one hundred percent (100%) or more. In such cases, either party may elect to proceed under subparagraph c2 herein. If neither party elects to proceed under c2, then unit prices shall apply.
 - 2. The contracting parties shall negotiate and agree upon the equitable value of the change prior to issuance of the change order, and the change order shall stipulate the corresponding lump sum adjustment to the contract price.

- d. Under Paragraph "b" and Methods "c(2)" above, the allowances for overhead and profit combined shall be as follows: all contractors (the single contracting entity (prime), his subcontractors(1st tier subs), or their sub-subcontractors (2nd tier subs, 3rd tier subs, etc)) shall be allowed a maximum of 10% on work they each self-perform; the prime contractor shall be allowed a maximum of 5% on contracted work of his 1st tier sub; 1st tier, 2nd tier, 3rd tier, etc contractors shall be allowed a maximum of 2.5% on the contracted work of their subs. ; Under Method "c(1)", no additional allowances shall be made for overhead and profit. In the case of deductible change orders, under Method "c(2)" and Paragraph (b) above, the contractor shall include no less than five percent (5%) profit, but no allowances for overhead.
- e. The term "net cost" as used herein shall mean the difference between all proper cost additions and deductions. The "cost" as used herein shall be limited to the following:
1. The actual costs of materials and supplies incorporated or consumed as part of the work;
 2. The actual costs of labor expended on the project site; labor expended in coordination, change order negotiation, record document maintenance, shop drawing revision or other tasks necessary to the administration of the project are considered overhead whether they take place in an office or on the project site.
 3. The actual costs of labor burden, limited to the costs of social security (FICA) and Medicare/Medicaid taxes; unemployment insurance costs; health/dental/vision insurance premiums; paid employee leave for holidays, vacation, sick leave, and/or petty leave, not to exceed a total of 30 days per year; retirement contributions; worker's compensation insurance premiums; and the costs of general liability insurance when premiums are computed based on payroll amounts; the total of which shall not exceed thirty percent (30%) of the actual costs of labor;
 4. The actual costs of rental for tools, excluding hand tools; equipment; machinery; and temporary facilities required for the work;
 5. The actual costs of premiums for bonds, insurance, permit fees, and sales or use taxes related to the work.

Overtime and extra pay for holidays and weekends may be a cost item only to the extent approved by the owner.

- f. Should concealed conditions be encountered in the performance of the work below grade, or should concealed or unknown conditions in an existing structure be at variance with the conditions indicated by the contract documents, the contract sum and time for completion may be equitably adjusted by change order upon claim by either party made within thirty (30) days after the condition has been identified. The cost of such change shall be arrived at by one of the foregoing methods. All change orders shall be supported by a unit cost breakdown showing method of arriving at net cost as defined above.
- g. In all change orders, the procedure will be for the designer to request proposals for the change order work in writing. The contractor will provide such proposal and supporting data in suitable format. The designer shall verify correctness. Delay in the processing of the change order due to lack of proper submittal by the contractor of all required supporting data shall not constitute grounds for a time extension or basis of a claim. Within fourteen (14) days after receipt of the contractor's accepted proposal including all supporting documentation required by the designer, the designer shall prepare the change order and forward to the contractor for his signature or otherwise respond, in writing, to

the contractor's proposal. Within seven (7) days after receipt of the change order executed by the contractor, the designer shall, certify the change order by his signature, and forward the change order and all supporting data to the owner for the owner's signature. The owner shall execute the change order and forward to the State Construction Office for final approval, within seven (7) days of receipt. The State Construction Office shall act on the change order within seven (7) days. In case of emergency or extenuating circumstances, approval of changes may be obtained verbally by telephone or field orders approved by all parties, then shall be substantiated in writing as outlined under normal procedure.

- h. At the time of signing a change order, the contractor shall be required to certify as follows:

"I certify that my bonding company will be notified forthwith that my contract has been changed by the amount of this change order, and that a copy of the approved change order will be mailed upon receipt by me to my surety."

- i. A change order, when issued, shall be full compensation, or credit, for the work included, omitted or substituted. It shall show on its face the adjustment in time for completion of the project as a result of the change in the work.
- j. If, during the progress of the work, the owner requests a change order and the contractor's terms are unacceptable, the owner, with the approval of the State Construction Office, may require the contractor to perform such work on a time and material basis whereupon the contractor shall proceed and keep accurately on such form as specified by the Designer or owner, a correct account of cost together with all proper invoices, payrolls and supporting data. Upon completion of the work a change order will be prepared with allowances for overhead and profit per paragraph d. above and "net cost" and "cost" per paragraph e. above. Without prejudice, nothing in this paragraph shall preclude the owner from performing or to have performed that portion of the work requested in the change order.

ARTICLE 20 - CLAIMS FOR EXTRA COST

- a. Should the contractor consider that as a result of instructions given by the designer, he is entitled to extra cost above that stated in the contract, he shall give written notice thereof to the designer within seven (7) days without delay. The written notice shall clearly state that a claim for extra cost is being made and shall provide a detailed justification for the extra cost. The contractor shall not proceed with the work affected until further advised, except in emergency involving the safety of life or property, which condition is covered in Article 19(b) and Article 11(h). No claims for extra compensation shall be considered unless the claim is so made. The designer shall render a written decision within seven (7) days of receipt of claim.
- b. The contractor shall not act on instructions received by him from persons other than the designer, and any claims for extra compensation or extension of time on account of such instruction will not be honored. The designer shall not be responsible for misunderstandings claimed by the contractor of verbal instructions which have not been confirmed in writing, and in no case shall instructions be interpreted as permitting a departure from the contract documents unless such instruction is confirmed in writing and supported by a properly authorized change order.
- c. Should a claim for extra compensation that complies with the requirements of (a) above by the contractor and is denied by the designer or owner, and cannot be resolved by a

representative of the State Construction Office, the contractor may request a mediation in connection with GS 143-128(f1) in the dispute resolution rules adopted by the State Building Commission (1 N.C.A.C. 30H .0101 through .1001). If the contractor is unable to resolve its claim as a result of mediation, the contractor may pursue the claim in accordance with the provisions of G.S. 143-135.3, or G.S. 143-135.6 where Community Colleges are the owner, and the following:

1. A contractor who has not completed a contract with a board for construction or repair work and who has not received the amount he claims is due under the contract may submit a verified written claim to the director of the State Construction Office of the Department of Administration for the amount the contractor claims is due. The director may deny, allow or compromise the claim, in whole or in part. A claim under this subsection is not a contested case under Chapter 150B of the General Statutes.
2. (a) A contractor who has completed a contract with a board for construction or repair work and who has not received the amount he claims is due under the contract may submit a verified written claim to the director of the State Construction Office of the Department of Administration for the amount the contractor claims is due. The claim shall be submitted within sixty (60) days after the contractor receives a final statement of the board's disposition of his claim and shall state the factual basis for the claim.
 - (b) The director shall investigate a submitted claim within ninety (90) days of receiving the claim, or within any longer time period upon which the director and the contractor agree. The contractor may appear before the director, either in person or through counsel, to present facts and arguments in support of his claim. The director may allow, deny or compromise the claim, in whole or in part. The director shall give the contractor a written statement of the director's decision on the contractor's claim.
 - (c) A contractor who is dissatisfied with the director's decision on a claim submitted under this subsection may commence a contested case on the claim under Chapter 150B of the General Statutes. The contested case shall be commenced within sixty (60) days of receiving the director's written statement of the decision.
 - (d) As to any portion of a claim that is denied by the director, the contractor may, in lieu of the procedures set forth in the preceding subsection of this section, within six (6) months of receipt of the director's final decision, institute a civil action for the sum he claims to be entitled to under the contract by filing a verified complaint and the issuance of a summons in the Superior Court of Wake County or in the superior court of any county where the work under the contract was performed. The procedure shall be the same as in all civil actions except that all issues shall be tried by the judge, without a jury.

ARTICLE 21 - MINOR CHANGES IN THE WORK

The designer will have the authority to order minor changes in the work not involving an adjustment in the contract sum or time for completion, and not inconsistent with the intent of the contract documents. Such changes shall be effected by written order, copied to the State Construction Office, and shall be binding on the owner and the contractor.

ARTICLE 22 - UNCORRECTED FAULTY WORK

Should the correction of faulty or damaged work be considered inadvisable or inexpedient by the owner and the designer, the owner shall be reimbursed by the contractor. A change order will be issued to reflect a reduction in the contract sum.

ARTICLE 23 - TIME OF COMPLETION, DELAYS, EXTENSION OF TIME

- a. The time of completion is stated in the Supplementary General Conditions and in the Form of Construction Contract. The Project Expediter, upon notice of award of contract, shall prepare a construction schedule to complete the project within the time of completion as required by Article 14.
- b. The contractors shall commence work to be performed under this agreement on a date to be specified in a written Notice to Proceed from the designer and shall fully complete all work hereunder within the time of completion stated. Time is of the essence and the contractor acknowledges the Owner will likely suffer financial damage for failure to complete the work within the time of completion. For each day in excess of the above number of days, the contractor(s) shall pay the owner the sum stated as liquidated damages reasonably estimated in advance to cover the losses to be incurred by the owner by reason of failure of said contractor(s) to complete the work within the time specified, such time being in the essence of this contract and a material consideration thereof.
- c. In the event of multiple prime contractors, the designer shall be the judge as to the division of responsibility between the contractor(s), based on the construction schedule, weekly reports and job records, and shall apportion the amount of liquidated damages to be paid by each of them, according to delay caused by any or all of them.
- d. If the contractor is delayed at any time in the progress of his work solely by any act or negligence of the owner, the designer, or by any employee of either; by any separate contractor employed by the owner; by changes ordered in the work; by labor disputes at the project site; by abnormal weather conditions not reasonably anticipated for the locality where the work is performed; by unavoidable casualties; by any causes beyond the contractor's control; or by any other causes which the designer and owner determine may justify the delay, then the contract time may be extended by change order only for the time which the designer and owner may determine is reasonable.

Time extensions will not be granted for rain, wind, snow or other natural phenomena of normal intensity for the locality where work is performed. For purpose of determining extent of delay attributable to unusual weather phenomena, a determination shall be made by comparing the weather for the contract period involved with the average of the preceding five (5) year climatic range during the same time interval based on the National Oceanic and Atmospheric Administration National Weather Service statistics for the locality where work is performed and on daily weather logs kept on the job site by the contractor reflecting the effect of the weather on progress of the work and initialed by the designer's representative. No weather delays shall be considered after the building is dried in unless work claimed to be delayed is on the critical path of the baseline schedule or approved updated schedule. Time extensions for weather delays, acts of God, labor disputes, fire, delays in transportation, unavoidable casualties or other delays which are beyond the control of the Owner do not entitle the Contractor to compensable damages for delays. Any contractor claim for compensable damages for delays is limited to delays caused solely by the owner or its agents. Contractor caused delays shall be accounted for before owner or designer caused delays in the case of concurrent delays.

- e. Request for extension of time shall be made in writing to the designer, copies to the owner and SCO, within twenty (20) days following cause of delay. In case of continuing cause for delay, the Contractor shall notify the Designer to the designer, copies to the owner and SCO, of the delay within 20 days of the beginning of the delay and only one claim is necessary.
- f. The contractor shall notify his surety in writing of extension of time granted.
- g. No claim for time extension shall be allowed on account of failure of the designer to furnish drawings or instructions until twenty (20) days after demand for such drawings and/or instructions. See Article 5c. Demand must be in written form clearly stating the potential for delay unless the drawings or instructions are provided. Any delay granted will begin after the twenty (20) day demand period is concluded.

ARTICLE 24 - PARTIAL UTILIZATION/BENEFICIAL OCCUPANCY

- a. The owner may desire to occupy or utilize all or a portion of the project prior to the completion of the project.
- b. Should the owner request a utilization of a building or portion thereof, the designer shall perform a designer final inspection of area after being notified by the contractor that the area is ready for such. After the contractor has completed designer final inspection punch list and the designer has verified, then the designer shall schedule a beneficial occupancy inspection at a time and date acceptable to the owner, contractor(s) and State Construction Office. If beneficial occupancy is granted by the State Construction Office, in such areas the following will be established:
 - 1. The beginning of guarantees and warranties period for the equipment necessary to support. in the area.
 - 2. The owner assumes all responsibilities for utility costs for entire building.
 - 2. Contractor will obtain consent of surety.
 - 3. Contractor will obtain endorsement from insurance company permitting beneficial occupancy.
- c. The owner shall have the right to exclude the contractor from any part of the project which the designer has so certified to be substantially complete, but the owner will allow the contractor reasonable access to complete or correct work to bring it into compliance with the contract.
- d. Occupancy by the owner under this article will in no way relieve the contractor from his contractual requirement to complete the project within the specified time. The contractor will not be relieved of liquidated damages because of beneficial occupancy. The designer may prorate liquidated damages based on the percentage of project occupied.

ARTICLE 25 - FINAL INSPECTION, ACCEPTANCE, AND PROJECT CLOSEOUT

- a. Upon notification from the contractor(s) that the project is complete and ready for inspection, the designer shall make a Designer final inspection to verify that the project is complete and ready for SCO final inspection. Prior to SCO final inspection, the contractor(s) shall complete all items requiring corrective measures noted at the Designer

final inspection. The designer shall schedule a SCO final inspection at a time and date acceptable to the owner, contractor(s) and State Construction Office.

- b. At the SCO final inspection, the designer and his consultants shall, if job conditions warrant, record a list of items that are found to be incomplete or not in accordance with the contract documents. At the conclusion of the SCO final inspection, the designer and State Construction Office representative shall make one of the following determinations:
 - 1. That the project is completed and accepted.
 - 2. That the project will be accepted subject to the correction of the list of discrepancies (punch list). All punch list items must be completed within thirty (30) days of SCO final inspection or the owner may invoke Article 28, Owner's Right to Do Work.
 - 4. That the project is not complete and another date for a SCO final inspection will be established.
- c. Within fourteen (14) days of final acceptance per Paragraph b1 or within fourteen (14) days after completion of punch list per Paragraph b2 above, the designer shall certify the work and issue applicable certificate(s) of compliance.
- d. Any discrepancies listed or discovered after the date of SCO final inspection and acceptance under Paragraphs b1 or b2 above shall be handled in accordance with Article 42, Guarantee.
- f. The final acceptance date will establish the following:
 - 1. The beginning of guarantees and warranties period.
 - 2. The date on which the contractor's insurance coverage for public liability, property damage and builder's risk may be terminated.
 - 3. That no liquidated damages (if applicable) shall be assessed after this date.
 - 4. The termination date of utility cost to the contractor.
- g. Prior to issuance of final acceptance date, the contractor shall have his authorized representatives visit the project and give full instructions to the designated personnel regarding operating, maintenance, care, and adjustment of all equipment and special construction elements. In addition, the contractor shall provide to the owner a complete instructional video (media format acceptable to the owner) on the operation, maintenance, care and adjustment of all equipment and special construction elements.**

ARTICLE 26 - CORRECTION OF WORK BEFORE FINAL PAYMENT

- a. Any work, materials, fabricated items or other parts of the work which have been condemned or declared not in accordance with the contract by the designer shall be promptly removed from the work site by the contractor, and shall be immediately replaced by new work in accordance with the contract at no additional cost to the owner. Work or property of other contractors or the owner, damaged or destroyed by virtue of such faulty work, shall be made good at the expense of the contractor whose work is faulty.

- b. Correction of condemned work described above shall commence within twenty-four (24) hours after receipt of notice from the designer, and shall make satisfactory progress, as determined by the designer, until completed.
- c. Should the contractor fail to proceed with the required corrections, then the owner may complete the work in accordance with the provisions of Article 28.

ARTICLE 27 - CORRECTION OF WORK AFTER FINAL PAYMENT

See Article 35, Performance Bond and Payment Bond, and Article 42, Guarantee. Neither the final certificate, final payment, occupancy of the premises by the owner, nor any provision of the contract, nor any other act or instrument of the owner, nor the designer, shall relieve the contractor from responsibility for negligence, or faulty material or workmanship, or failure to comply with the drawings and specifications. Contractor shall correct or make good any defects due thereto and repair any damage resulting there from, which may appear during the guarantee period following final acceptance of the work except as stated otherwise under Article 42, Guarantee. The owner will report any defects as they may appear to the contractor and establish a time limit for completion of corrections by the contractor. The owner will be the judge as to the responsibility for correction of defects.

ARTICLE 28 - OWNER'S RIGHT TO DO WORK

If, during the progress of the work or during the period of guarantee, the contractor fails to prosecute the work properly or to perform any provision of the contract, the owner, after seven (7) days' written notice sent by certified mail, return receipt requested, to the contractor from the designer, may perform or have performed that portion of the work. The cost of the work may be deducted from any amounts due or to become due to the contractor, such action and cost of same having been first approved by the designer. Should the cost of such action of the owner exceed the amount due or to become due the contractor, then the contractor or his surety, or both, shall be liable for and shall pay to the owner the amount of said excess.

ARTICLE 29 - ANNULMENT OF CONTRACT

If the contractor fails to begin the work under the contract within the time specified, or the progress of the work is not maintained on schedule, or the work is not completed within the time above specified, or fails to perform the work with sufficient workmen and equipment or with sufficient materials to ensure the prompt completion of said work, or shall perform the work unsuitably or shall discontinue the prosecution of the work, or if the contractor shall become insolvent or be declared bankrupt or commit any act of bankruptcy or insolvency, or allow any final judgment to stand against him unsatisfied for a period of forty-eight (48) hours, or shall make an assignment for the benefit of creditors, or for any other cause whatsoever shall not carry on the work in an acceptable manner, the owner may give notice in writing, sent by certified mail, return receipt requested, to the contractor and his surety of such delay, neglect or default, specifying the same, and if the contractor within a period of seven (7) days after such notice shall not proceed in accordance therewith, then the owner shall, declare this contract in default, and, thereupon, the surety shall promptly take over the work and complete the performance of this contract in the manner and within the time frame specified. In the event the surety shall fail to take over the work to be done under this contract within seven (7) days after being so notified and notify the owner in writing, sent by certified mail, return receipt requested, that he is taking the same over and stating that he will diligently pursue and complete the same, the owner shall have full power and authority, without violating the contract, to take the prosecution of the work out of the hands of said contractor, to appropriate or use any or all contract materials and equipment on the grounds as may be suitable and acceptable and may enter into an agreement, either by public letting or negotiation, for the completion of said contract according to the terms and provisions thereof

or use such other methods as in his opinion shall be required for the completion of said contract in an acceptable manner. All costs and charges incurred by the owner, together with the costs of completing the work under contract, shall be deducted from any monies due or which may become due said contractor and surety. In case the expense so incurred by the owner shall be less than the sum which would have been payable under the contract, if it had been completed by said contractor, then the said contractor and surety shall be entitled to receive the difference, but in case such expense shall exceed the sum which would have been payable under the contract, then the contractor and the surety shall be liable and shall pay to the owner the amount of said excess.

ARTICLE 30 - CONTRACTOR'S RIGHT TO STOP WORK OR TERMINATE THE CONTRACT

- a. Should the work be stopped by order of a court having jurisdiction, or by order of any other public authority for a period of three months, due to cause beyond the fault or control of the contractor, or if the owner should fail or refuse to make payment on account of a certificate issued by the designer within forty-five (45) days after receipt of same, then the contractor, after fifteen (15) days' written notice sent by certified mail, return receipt requested, to the owner and the designer, may suspend operations on the work or terminate the contract.
- b. The owner shall be liable to the contractor for the cost of all materials delivered and work performed on this contract plus 10 percent overhead and profit and shall make such payment. The designer shall be the judge as to the correctness of such payment.

ARTICLE 31 - REQUEST FOR PAYMENT

- a. Not later than the fifth day of the month, the contractor shall submit to the designer a request for payment for work done during the previous month. The request shall be in the form agreed upon between the contractor and the designer, but shall show substantially the value of work done and materials delivered to the site during the period since the last payment, and shall sum up the financial status of the contract with the following information:
 1. Total of contract including change orders.
 2. Value of work completed to date.
 3. Less five percent (5%) retainage, provided however, that after fifty percent (50%) of the contractor's work has been satisfactorily completed on schedule, with approval of the owner and the State Construction Office and written consent of the surety, further requirements for retainage will be waived only so long as work continues to be completed satisfactorily and on schedule.
 4. Less previous payments.
 5. Current amount due.
- b. The contractor, upon request of the designer, shall substantiate the request with invoices of vouchers or payrolls or other evidence.
- c. Prior to submitting the first request, the contractor shall prepare for the designer a schedule showing a breakdown of the contract price into values of the various parts of the work, so arranged as to facilitate payments to subcontractors in accordance with Article 17, Contractor and Subcontractor Relationships. The contractor(s) shall list the

value of each subcontractor and supplier, identifying each minority business subcontractor and supplier as listed in Affidavit C, if applicable.

- d. When payment is made on account of stored materials and equipment, such materials must be stored on the owner's property, and the requests for payments shall be accompanied by invoices or bills of sale or other evidence to establish the owner's title to such materials and equipment. Such payments will be made only for materials that have been customized or fabricated specifically for this project. Raw materials or commodity products including but not limited to piping, conduit, CMU, metal studs and gypsum board may not be submitted. Responsibility for such stored materials and equipment shall remain with the contractor regardless of ownership title. Such stored materials and equipment shall not be removed from the owner's property. Should the space for storage on-site be limited, the contractor, at his option, shall be permitted to store such materials and/or equipment in a suitable space off-site. Should the contractor desire to include any such materials or equipment in his application for payment, they must be stored in the name of the owner in an independent, licensed, bonded warehouse approved by the designer, owner and the State Construction Office and located as close to the site as possible. The warehouse selected must be approved by the contractor's bonding and insurance companies; the material to be paid for shall be assigned to the owner and shall be inspected by the designer. Upon approval by the designer, owner and SCO of the storage facilities and materials and equipment, payment therefore will be certified. Responsibility for such stored materials and equipment shall remain with the contractor. Such stored materials and equipment shall not be moved except for transportation to the project site. Under certain conditions, the designer may approve storage of materials at the point of manufacture, which conditions shall be approved by the designer, the owner and the State Construction Office prior to approval for the storage and shall include an agreement by the storing party which unconditionally gives the State absolute right to possession of the materials at anytime. Bond, security and insurance protection shall continue to be the responsibility of the contractor(s).
- e. In the event of beneficial occupancy, retainage of funds due the contractor(s) may be reduced with the approval of the State Construction Office to an equitable amount to cover the list of items to be completed or corrected. Retainage may not be reduced to less than two and one-half (2 1/2) times the estimated value of the work to be completed or corrected. Reduction of retainage must be with the consent and approval of the contractor's bonding company.

ARTICLE 32 - CERTIFICATES OF PAYMENT AND FINAL PAYMENT

- a. Within five (5) days from receipt of request for payment from the contractor, the designer shall issue and forward to the owner a certificate for payment. This certificate shall indicate the amount requested or as approved by the designer. If the certificate is not approved by the designer, he shall state in writing to the contractor and the owner his reasons for withholding payment.
- b. No certificate issued or payment made shall constitute an acceptance of the work or any part thereof. The making and acceptance of final payment shall constitute a waiver of all claims by the owner except:
 - 1. Claims arising from unsettled liens or claims against the contractor.
 - 2. Faulty work or materials appearing after final payment.
 - 3. Failure of the contractor to perform the work in accordance with drawings and specifications, such failure appearing after payment.

4. As conditioned in the performance bond and payment bond.
- c. The making and acceptance of final payment shall constitute a waiver of all claims by the contractor except those claims previously made and remaining unsettled (Article 20(c)).
- d. Prior to submitting request for final payment to the designer for approval, the contractor shall fully comply with all requirements specified in the “project closeout” section of the specifications. These requirements include but not limited to the following:
 1. Submittal of Product and Operating Manuals, Warranties and Bonds, Guarantees, Maintenance Agreements, As-Built Drawings, Certificates of Inspection or Approval from agencies having jurisdiction. (The designer must approve the Manuals prior to delivery to the owner).
 2. Transfer of Required attic stock material and all keys in an organized manner.
 3. Record of Owner’s training.
 4. Resolution of any final inspection discrepancies.
 5. Granting access to Contractor’s records, if Owner’s internal auditors have made a request for such access pursuant to Article 52.
- e. The contractor shall forward to the designer, the final application for payment along with the following documents:
 1. List of minority business subcontractors and material suppliers showing breakdown of contract amounts and total actual payments to subs and material suppliers.
 2. Affidavit of Release of Liens.
 3. Affidavit of contractors of payment to material suppliers and subcontractors. (See Article 36).
 4. Consent of Surety to Final Payment.
 5. Certificates of state agencies required by state law.
- f. The designer will not authorize final payment until the work under contract has been certified by designer, certificates of compliance issued, and the contractor has complied with the closeout requirements. The designer shall forward the contractor’s final application for payment to the owner along with respective certificate(s) of compliance required by law.

ARTICLE 33 - PAYMENTS WITHHELD

- a. The designer with the approval of the State Construction Office may withhold payment for the following reasons:
 1. Faulty work not corrected.

2. The unpaid balance on the contract is insufficient to complete the work in the judgment of the designer.
 3. To provide for sufficient contract balance to cover liquidated damages that will be assessed.
- b. The secretary of the Department of Administration may authorize the withholding of payment for the following reasons:
 1. Claims filed against the contractor or evidence that a claim will be filed.
 2. Evidence that subcontractors have not been paid.
 - c. The Owner may withhold all or a portion of Contractor's general conditions costs set forth in the approved schedule of values, if Contractor has failed to comply with: (1) a request to access its records by Owner's internal auditors pursuant to Article 52; (2) a request for a plan of action and/or recovery schedule under Article 14.j or provide The Owner; (3) a request to provide an electronic copies of Contractor's baseline schedule, updates with all logic used to create the schedules in the original format of the scheduling software; and (4) Contractor's failure to have its Superintendent on the Project full-time; (
 - d. When grounds for withholding payments have been removed, payment will be released. Delay of payment due the contractor without cause will make owner liable for payment of interest to the contractor in accordance with G.S. 143-134.1. As provided in G.S.143-134.1(e) the owner shall not be liable for interest on payments withheld by the owner for unsatisfactory job progress, defective construction not remedied, disputed work, or third-party claims filed against the owner or reasonable evidence that a third-party claim will be filed.

ARTICLE 34 - MINIMUM INSURANCE REQUIREMENTS

The work under this contract shall not commence until the contractor has obtained all required insurance and verifying certificates of insurance have been approved in writing by the owner. These certificates shall document that coverages afforded under the policies will not be cancelled, reduced in amount or coverages eliminated until at least thirty (30) days after mailing written notice, by certified mail, return receipt requested, to the insured and the owner of such alteration or cancellation. If endorsements are needed to comply with the notification or other requirements of this article copies of the endorsements shall be submitted with the certificates.

a. Worker's Compensation and Employer's Liability

The contractor shall provide and maintain, until final acceptance, workmen's compensation insurance, as required by law, as well as employer's liability coverage with minimum limits of \$100,000.

b. Public Liability and Property Damage

The contractor shall provide and maintain, until final acceptance, comprehensive general liability insurance, including coverage for premises operations, independent contractors, completed operations, products and contractual exposures, as shall protect such contractors from claims arising out of any bodily injury, including accidental death, as well as from claims for property damages which may arise from operations under this contract, whether such operations be by the contractor or by any subcontractor, or by

anyone directly or indirectly employed by either of them and the minimum limits of such insurance shall be as follows:

Bodily Injury: \$500,000 per occurrence
Property Damage: \$100,000 per occurrence / \$300,000 aggregate

In lieu of limits listed above, a \$500,000 combined single limit shall satisfy both conditions.

Such coverage for completed operations must be maintained for at least two (2) years following final acceptance of the work performed under the contract.

c. Property Insurance (Builder's Risk/Installation Floater)

The contractor shall purchase and maintain property insurance until final acceptance, upon the entire work at the site to the full insurable value thereof. This insurance shall include the interests of the owner, the contractor, the subcontractors and sub-subcontractors in the work and shall insure against the perils of fire, wind, rain, flood, extended coverage, and vandalism and malicious mischief. If the owner is damaged by failure of the contractor to purchase or maintain such insurance, then the contractor shall bear all reasonable costs properly attributable thereto; the contractor shall effect and maintain similar property insurance on portions of the work stored off the site when request for payment per articles so includes such portions.

d. Deductible

Any deductible, if applicable to loss covered by insurance provided, is to be borne by the contractor.

e. Other Insurance

The contractor shall obtain such additional insurance as may be required by the owner or by the General Statutes of North Carolina including motor vehicle insurance, in amounts not less than the statutory limits.

f. Proof of Carriage

The contractor shall furnish the owner with satisfactory proof of carriage of the insurance required before written approval is granted by the owner.

ARTICLE 35 - PERFORMANCE BOND AND PAYMENT BOND

- a. Each contractor shall furnish a performance bond and payment bond executed by a surety company authorized to do business in North Carolina. The bonds shall be in the full contract amount. Bonds shall be executed in the form bound with these specifications.
- b. All bonds shall be countersigned by an authorized agent of the bonding company who is licensed to do business in North Carolina.

ARTICLE 36 - CONTRACTOR'S AFFIDAVIT

The final payment of retained amount due the contractor on account of the contract shall not become due until the contractor has furnished to the owner through the designer an affidavit signed, sworn and notarized to the effect that all payments for materials, services or subcontracted work in connection with his contract have been satisfied, and that no claims or

liens exist against the contractor in connection with this contract. In the event that the contractor cannot obtain similar affidavits from subcontractors to protect the contractor and the owner from possible liens or claims against the subcontractor, the contractor shall state in his affidavit that no claims or liens exist against any subcontractor to the best of his (the contractor's) knowledge, and if any appear afterward, the contractor shall save the owner harmless.

ARTICLE 37 - ASSIGNMENTS

The contractor shall not assign any portion of this contract nor subcontract in its entirety. Except as may be required under terms of the performance bond or payment bond, no funds or sums of money due or become due the contractor under the contract may be assigned.

ARTICLE 38 - USE OF PREMISES

- a. The contractor(s) shall confine his apparatus, the storage of materials and the operations of his workmen to limits indicated by law, ordinances, permits or directions of the designer and owner and shall not exceed those established limits in his operations.
- b. The contractor(s) shall not load or permit any part of the structure to be loaded with a weight that will endanger its safety.
- c. The contractor(s) shall enforce the designer's and owner's instructions regarding signs, advertisements, fires and smoking.
- d. No firearms, any type of alcoholic beverages, or drugs (other than those prescribed by a physician) will be permitted at the job site.

ARTICLE 39 - CUTTING, PATCHING AND DIGGING

- a. The contractor shall do all cutting, fitting or patching of his work that may be required to make its several parts come together properly and fit it to receive or be received by work of other contractors shown upon or reasonably implied by the drawings and specifications for the completed structure, as the designer may direct.
- b. Any cost brought about by defective or ill-timed work shall be borne by the party responsible therefor.
- c. No contractor shall endanger any work of another contractor by cutting, digging or other means. No contractor shall cut or alter the work of any other contractor without the consent of the designer and the affected contractor(s).

ARTICLE 40 - UTILITIES, STRUCTURES, SIGNS

- a. The contractor shall provide necessary and adequate facilities for water, electricity, gas, oil, sewer and other utility services which maybe necessary and required for completion of the project including all utilities required for testing, cleaning, balancing, and sterilization of designated plumbing, mechanical and electrical systems. Any permanent meters installed shall be listed in the contractor's name until work has a final acceptance. The contractor will be solely responsible for all utility costs prior to final acceptance. Contractor shall contact all affected utility companies prior to bid to determine their requirements to provide temporary and permanent service and include all costs associated with providing those services in their bid. Coordination of the work of the utility companies during construction is the sole responsibility of the contractor.

- b. Meters shall be relisted in the owner's name on the day following final acceptance of the Project Expediter's work, and the owner shall pay for services used after that date.
- c. The owner shall be reimbursed for all metered utility charges after the meter is relisted in the owner's name and prior to completion and acceptance of the work of **all** contractors. Reimbursement shall be made by the contractor whose work has not been completed and accepted. If the work of two or more contractors has not been completed and accepted, reimbursement to the owner shall be paid by the contractors involved on the basis of assessments by the designer.
- d. Prior to the operation of permanent systems, the Project Expediter will provide temporary power, lighting, water, and heat to maintain space temperature above freezing, as required for construction operations.
- e. All contractors shall have the permanent building systems in sufficient readiness for furnishing temporary climatic control at the time a building is enclosed and secured. The HVAC systems shall maintain climatic control throughout the enclosed portion of the building sufficient to allow completion of the interior finishes of the building. A building shall be considered enclosed and secured when windows, doorways (exterior, mechanical, and electrical equipment rooms), and hardware are installed; and other openings have protection which will provide reasonable climatic control. The appropriate time to start the mechanical systems and climatic condition shall be jointly determined by the contractor(s), the designer and owner. Use of the equipment in this manner shall be subject to the approval of the Designer and owner and shall in no way affect the warranty requirements of the contractor(s).
- f. The electrical contractor shall have the building's permanent power wiring distribution system in sufficient readiness to provide power as required by the HVAC contractor for temporary climatic control.
- g. The electrical contractor shall have the building's permanent lighting system ready at the time the general contractor begins interior painting and shall provide adequate lighting in those areas where interior painting and finishing is being performed.
- h. Each prime contractor shall be responsible for his permanently fixed service facilities and systems in use during progress of the work. The following procedures shall be strictly adhered to:
 - 1. Prior to final acceptance of work by the State Construction Office, each contractor shall remove and replace any parts of the permanent building systems damaged through use during construction.
 - 2. Temporary filters as recommended by the equipment manufacturer in order to keep the equipment and ductwork clean and free of dust and debris shall be installed in each of the heating and air conditioning units and at each return grille during construction. New filters shall be installed in each unit prior to the owner's acceptance of the work.
 - 3. Extra effort shall be maintained to keep the building and the site adjacent to the building clean and under no circumstances shall air systems be operated if finishing and site work operations are creating dust in excess of what would be considered normal if the building were occupied.
 - 4. It shall be understood that any warranty on equipment presented to the owner shall extend from the day of final acceptance by the owner. The cost of warranting the

equipment during operation in the finishing stages of construction shall be borne by the contractor whose system is utilized.

5. The electrical contractor shall have all lamps in proper working condition at the time of final project acceptance.
 - i. The Project Expediter shall provide, if required and where directed, a shed for toilet facilities and shall furnish and install in this shed all water closets required for a complete and adequate sanitary arrangement. These facilities will be available to other contractors on the job and shall be kept in a neat and sanitary condition at all times. Chemical toilets are acceptable.
 - j. The Project Expediter shall, if required by the Supplementary General Conditions and where directed, erect a temporary field office, complete with lights, telephone, heat and air conditioning. A portion of this office shall be partitioned off, of sufficient size, for the use of a resident inspector, should the designer so direct.
 - k. On multi-story construction projects, the Project Expediter shall provide temporary elevators, lifts, or other special equipment for the general use of all contractors. The cost for such elevators, lifts or other special equipment and the operation thereof shall be included in the Project Expediter's bid.
 - l. The Project Expediter will erect one sign on the project if required. The sign shall be of sound construction, and shall be neatly lettered with black letters on white background. The sign shall bear the name of the project, and the names of prime contractors on the project, and the name of the designer and consultants. Directional signs may be erected on the owner's property subject to approval of the owner with respect to size, style and location of such directional signs. Such signs may bear the name of the contractor and a directional symbol. No other signs will be permitted except by permission of the owner.

ARTICLE 41 - CLEANING UP

- a. The contractors shall keep the building and surrounding area reasonably free from rubbish at all times, and shall remove debris from the site on a timely basis or when directed to do so by the designer or Project Expediter. The Project Expediter shall provide an on site refuse container(s) for the use of all contractors. Each contractor shall remove their rubbish and debris from the building on a daily basis. The Project Expediter shall broom clean the building as required to minimize dust and dirt accumulation.
- b. The Project Expediter shall provide and maintain suitable all-weather access to the building.
- c. Before final inspection and acceptance of the building, each contractor shall clean his portion of the work, including glass, hardware, fixtures, masonry, tile and marble (using no acid), clean and wax all floors as specified, and completely prepare the building for use by the owner, with no cleaning required by the owner.

ARTICLE 42 - GUARANTEE

- a. The contractor shall unconditionally guarantee materials and workmanship against patent defects arising from faulty materials, faulty workmanship or negligence for a period of twelve (12) months following the date of final acceptance of the work or beneficial occupancy and shall replace such defective materials or workmanship without cost to the owner.

- b. Where items of equipment or material carry a manufacturer's warranty for any period in excess of twelve (12) months, then the manufacturer's warranty shall apply for that particular piece of equipment or material. The contractor shall replace such defective equipment or materials, without cost to the owner, within the manufacturer's warranty period.
- c. Additionally, the owner may bring an action for latent defects caused by the negligence of the contractor which is hidden or not readily apparent to the owner at the time of beneficial occupancy or final acceptance, whichever occurred first, in accordance with applicable law.
- d. Guarantees for roof, equipment, materials, and supplies shall be stipulated in the specifications sections governing such roof, equipment, materials, or supplies.

ARTICLE 43 - CODES AND STANDARDS

Wherever reference is given to codes, standard specifications or other data published by regulating agencies including, but not limited to, national electrical codes, North Carolina state building codes, federal specifications, ASTM specifications, various institute specifications, etc., it shall be understood that such reference is to the latest edition including addenda published prior to the date of the contract documents.

ARTICLE 44 - INDEMNIFICATION

To the fullest extent permitted by law, the contractor shall indemnify and hold harmless the owner, the designer and the agents, consultants and employees of the owner and designer, from and against all claims, damages, losses and expenses, including, but not limited to, attorneys' fees, arising out of or resulting from the performance or failure of performance of the work, provided that any such claim, damage, loss or expense (1) is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the work itself) including the loss of use resulting there from, and (2) is caused in whole or in part by any negligent act or omission of the contractor, the contractor's subcontractor, or the agents of either the contractor or the contractor's subcontractor. Such obligation shall not be construed to negate, abridge or otherwise reduce any other right or obligation of indemnity which would otherwise exist as to any party or person described in this article.

ARTICLE 45 - TAXES

- a. Federal excise taxes do not apply to materials entering into state work (Internal Revenue Code, Section 3442(3)).
- b. Federal transportation taxes do not apply to materials entering into state work (Internal Revenue Code, Section 3475(b) as amended).
- c. North Carolina sales tax and use tax, as required by law, do apply to materials entering into state work and such costs shall be included in the bid proposal and contract sum.
- d. Local option sales and use taxes, as required by law, do apply to materials entering into state work as applicable and such costs shall be included in the bid proposal and contract sum.
- e. **Accounting Procedures for Refund of County Sales & Use Tax**

Amount of county sales and use tax paid per contractor's statements:

Contractors performing contracts for state agencies shall give the state agency for whose project the property was purchased a signed statement containing the information listed in G.S. 105-164.14(e).

The Department of Revenue has agreed that in lieu of obtaining copies of sales receipts from contractors, an agency may obtain a certified statement as of April 1, 1991 from the contractor setting forth the date, the type of property and the cost of the property purchased from each vendor, the county in which the vendor made the sale and the amount of local sales and use taxes paid thereon. If the property was purchased out-of-state, the county in which the property was delivered should be listed. The contractor should also be notified that the certified statement may be subject to audit.

In the event the contractors make several purchases from the same vendor, such certified statement must indicate the invoice numbers, the inclusive dates of the invoices, the total amount of the invoices, the counties, and the county sales and use taxes paid thereon.

Name of taxing county: The position of a sale is the retailer's place of business located within a taxing county where the vendor becomes contractually obligated to make the sale. Therefore, it is important that the county tax be reported for the county of sale rather than the county of use.

When property is purchased from out-of-state vendors and the county tax is charged, the county should be identified where delivery is made when reporting the county tax.

Such statement must also include the cost of any tangible personal property withdrawn from the contractor's warehouse stock and the amount of county sales or use tax paid thereon by the contractor.

Similar certified statements by his subcontractors must be obtained by the general contractor and furnished to the claimant.

Contractors are not to include any tax paid on supplies, tools and equipment which they use to perform their contracts and should include only those building materials, supplies, fixtures and equipment which actually become a part of or annexed to the building or structure.

ARTICLE 46 - EQUAL OPPORTUNITY CLAUSE

The non-discrimination clause contained in Section 202 (Federal) Executive Order 11246, as amended by Executive Order 11375, relative to equal employment opportunity for all persons without regard to race, color, religion, sex or national origin, and the implementing rules and regulations prescribed by the secretary of Labor, are incorporated herein.

ARTICLE 47 - EMPLOYMENT OF INDIVIDUALS WITH DISABILITIES

The contractor(s) agree not to discriminate against any employee or applicant for employment because of physical or mental disabilities in regard to any position for which the employee or applicant is qualified. The contractor agrees to take affirmative action to employ, advance in employment and otherwise treat qualified individuals with such disabilities without discrimination based upon their physical or mental disability in all employment practices.

ARTICLE 48 - ASBESTOS-CONTAINING MATERIALS (ACM)

The State of North Carolina has attempted to address all asbestos-containing materials that are to be disturbed in the project. However, there may be other asbestos-containing materials in the work areas that are not to be disturbed and do not create an exposure hazard.

Contractors are reminded of the requirements of instructions under Instructions to Bidders and General Conditions of the Contract, titled Examination of Conditions. Statute 130A, Article 19, amended August 3, 1989, established the Asbestos Hazard Management Program that controls asbestos abatement in North Carolina. The latest edition of *Guideline Criteria for Asbestos Abatement* from the State Construction Office is to be incorporated in all asbestos abatement projects for the Capital Improvement Program.

ARTICLE 49 - MINORITY BUSINESS PARTICIPATION

GS 143-128.2 establishes a ten percent (10%) goal for participation by minority businesses in total value of work for each State building project. The document, *Guidelines for Recruitment and Selection of Minority Businesses for Participation in State Construction Contracts* including Affidavits and Appendix E are hereby incorporated into and made a part of this contract.

ARTICLE 50 – CONTRACTOR EVALUATION

The contractor's overall work performance on the project shall be fairly evaluated in accordance with the State Building Commission policy and procedures, for determining qualifications to bid on future State capital improvement projects. In addition to final evaluation, interim evaluation may be prepared during the progress of project. The document, Contractor Evaluation Procedures, is hereby incorporated and made a part of this contract. The owner may request the contractor's comments to evaluate the designer.

ARTICLE 51 – GIFTS

Pursuant to N.C. Gen. Stat. § 133-32, it is unlawful for any vendor or contractor (i.e. architect, bidder, contractor, construction manager, design professional, engineer, subcontractor, supplier, vendor, etc.), to make gifts or to give favors to any State employee. This prohibition covers those vendors and contractors who: (1) have a contract with a governmental agency; or (2) have performed under such a contract within the past year; or (3) anticipate bidding on such a contract in the future. For additional information regarding the specific requirements and exemptions, vendors and contractors are encouraged to review G.S. Sec. 133-32.

During the construction of the Project, the Contractor is prohibited from making gifts to any of the Owner's employees, Owner's project representatives (architect, engineers, construction manager and their employees), employees of the State Construction Office and/or any other State employee that may have any involvement, influence, responsibilities, oversight, management and/or duties that pertain to and/or relate to the contract administration, financial administration and/or disposition of claims arising from and/or relating to the Contract and/or Project.

ARTICLE 52 – AUDITING-ACCESS TO PERSONS AND RECORDS

In accordance with N.C. General Statute 147-64.7, the State Auditor shall have access to Contractor's officers, employees, agents and/or other persons in control of and/or responsible for the Contractor's records that relate to this Contracts for purposes of conducting audits under the referenced statute. The Owner's internal auditors shall also have the right to access and copy the Contractor's records relating to the Contract and Project during the term of the Contract and within two years following the completion of the Project/close-out of the Contract to verify accounts, accuracy, information, calculations and/or data affecting and/or

relating to Contractor's requests for payment, requests for change orders, change orders, claims for extra work, requests for time extensions and related claims for delay/extended general conditions costs, claims for lost productivity, claims for loss efficiency, claims for idle equipment or labor, claims for price/cost escalation, pass-through claims of subcontractors and/or suppliers, and/or any other type of claim for payment or damages from Owner and/or its project representatives.

ARTICLE 53 – NORTH CAROLINA FALSE CLAIMS ACT

The North Carolina False Claims Act ("NCFCA"), N.C. Gen. Stat. § 1-605 through 1-618, applies to this Contract. The Contractor should familiarize itself with the entire NCFCA and should seek the assistance of an attorney if it has any questions regarding the NCFCA and its applicability to any requests, demands and/or claims for payment its submits to the State through the contracting state agency, institution, university or community college.

The purpose of the NCFCA "is to deter persons from knowingly causing or assisting in causing the State to pay claims that are false or fraudulent and to provide remedies in the form of treble damages and civil penalties when money is obtained from the State by reason of a false or fraudulent claim." (Section 1-605(b).) A contractor's liability under the NCFCA may arise from, but is not limited to: requests for payment, invoices, billing, claims for extra work, requests for change orders, requests for time extensions, claims for delay damages/extended general conditions costs, claims for lost productivity, claims for loss efficiency, claims for idle equipment or labor, claims for price/cost escalation, pass-through claims of subcontractors and/or suppliers, documentation used to support any of the foregoing requests or claims, and/or any other request for payment from the State through the contracting state agency, institution, university or community college. The parts of the NCFCA that are most likely to be enforced with respect to this type of contract are as follows:

- A "claim" is "[a]ny request or demand, whether under a contract or otherwise, for money or property and whether or not the State has title to the money or property that (i) is presented to an officer, employee, or agent of the State or (ii) is made to a contractor ... if the money or property is to be spent or used on the State's behalf or to advance a State program or interest and if the State government: (a) provides or has provided any portion of the money or property that is requested or demanded; or (b) will reimburse such contractor ... for any portion of the money or property which is requested or demanded." (Section 1-606(2).)
- "Knowing" and "knowingly." – Whenever a person, with respect to information, does any of the following: (a) Has actual knowledge of the information; (b) Acts in deliberate ignorance of the truth or falsity of the information; and/or (c) Acts in reckless disregard of the truth or falsity of the information. (Section 1-606(4).) Proof of specific intent to defraud is not required. (Section 1-606(4).)
- "Material" means having a natural tendency to influence, or be capable of influencing, the payment or receipt of money or property. (Section 1-606(4).)
- Liability. – "Any person who commits any of the following acts shall be liable to the State for three times the amount of damages that the State sustains because of the act of that person[:]. ... (1) Knowingly presents or causes to be presented a false or fraudulent claim for payment or approval. (2) Knowingly makes, uses, or causes to be made or used, a false record or statement material to a false or fraudulent claim. (3) Conspires to commit a violation of subdivision (1), (2) ..." (Section 1-607(a)(1), (2).)

- The NCFCA shall be interpreted and construed so as to be consistent with the federal False Claims Act, 31 U.S.C. § 3729, et seq., and any subsequent amendments to that act. (Section 1-616(c).)

Finally, the contracting state agency, institution, university or community college may refer any suspected violation of the NCFCA by the Contractor to the Attorney General's Office for investigation. Under Section 1-608(a), the Attorney General is responsible for investigating any violation of NCFCA, and may bring a civil action against the Contractor under the NCFCA. The Attorney General's investigation and any civil action relating thereto are independent and not subject to any dispute resolution provision set forth in this Contract. (See Section 1-608(a).)

ARTICLE 54 – TERMINATION FOR CONVENIENCE

Owner may at any time and for any reason terminate Contractor's services and work at Owner's convenience. Upon receipt of such notice, Contractor shall, unless the notice directs otherwise, immediately discontinue the work and placing of orders for materials, facilities and supplies in connection with the performance of this Agreement.

Upon such termination, Contractor shall be entitled to payment only as follows: (1) the actual cost of the work completed in conformity with this Agreement; plus, (2) such other costs actually incurred by Contractor as are permitted by the prime contract and approved by Owner; (3) plus ten percent (10%) of the cost of the work referred to in subparagraph (1) above for overhead and profit. There shall be deducted from such sums as provided in this subparagraph the amount of any payments made to Contractor prior to the date of the termination of this Agreement. Contractor shall not be entitled to any claim or claim of lien against Owner for any additional compensation or damages in the event of such termination and payment.

SUPPLEMENTARY GENERAL CONDITIONS (SGC's) OF THE CONTRACT

The use or reproduction of this document or any part thereof is authorized for and limited to use on projects of North Carolina State University, and is distributed by, through and at the discretion of the University for that distinct and sole purpose. This document supplements but does not alter in any way the requirements of the General Conditions of the Contract.

TABLE OF CONTENTS

1.0	SGC Article 1 – Definitions.....	3
2.0	SGC Article 14 – Construction Supervision and Schedule	3-4
3.0	SGC Article 23 - Time Of Completion, Delays, Extension of Time	4
4.0	SGC Article 40 – Utilities, Structures, Signs	5

1.0 SGC Article 1 – Definitions

- A. As defined in Article 1 of the General Conditions, the Supplementary General Conditions are considered part of the contract documents.
- B. The Owner is the State of North Carolina through North Carolina State University.
- C. Provide shall mean purchase, deliver, and install, new, clean, and completely operational, fully tested and ready for use.

2.0 SGC Article 14 – Construction Supervision and Schedule

- A. The contractor(s) shall employ an engineer or a land surveyor licensed in the State of North Carolina to lay out the work and to establish a benchmark nearby in a location where same will not be disturbed and where direct instruments sights may be taken.
- B. The designer shall designate a Project Expediter on projects involving two or more prime contracts. The Project Expediter shall be the General Contractor unless determined otherwise by the designer. The Project Expediter shall have the responsibilities described in Article 14.f. of the General Conditions.
- C. Project Construction Schedule. North Carolina State University requires a CPM schedule for all projects, regardless of size and/or dollar amount. Bar Chart schedules may be allowed on a case-by-case basis. All CPM schedules shall meet the requirements of the General Conditions as well as the following:
 - 1. The CPM Baseline Schedule or Updated Schedule shall consist of the computer files on electronic media necessary to recreate the schedule. Files shall consist of four discrete items:
 - a) The Activity description including the original and remaining durations, and percent complete. Show other computed information such as early and late computed start and finish times and various types of floats.
 - b) The logical predecessor and successor relationships that connect the various activities together to form a CPM network. All activities shall be linked with no

NC State University Design and Construction Guidelines

Supplementary General Conditions

constraints placed on any activity unless critical milestone dates are dictated in the contract.

- c) Constraints listing if any must exist.
 - d) All hidden codes or constraints assigned to activities by the Scheduler, which help define the intended workflow or project organization.
2. Each schedule submittal shall include a cover letter, a narrative, a hard copy of the schedule and the schedule files on electronic media. The schedule update narrative should state what activity changes happened on the project, including missing data, upcoming changes, documented delays, potential delays and other facts.
 3. Contractors and subcontractors shall include a minimum of five (5) full days in their base bid for their project superintendent and project manager to attend a preliminary scheduling meeting with the project expediter. Each contractor shall attend additional scheduling meetings as required until an acceptable construction schedule conforming to the contract time is completed and approved via signing of the printed schedule by the single or each prime contractor (project manager and superintendent). Copies of the signed schedule shall be given to the Designer, Owner and each signatory; the original shall be displayed at the jobsite. The submitted schedule shall show the contract project completion date.
 4. The schedule shall be updated monthly or at the Designer and/or Owner's request. The project expediter shall make all updates, adjustments, corrections, etc., with input provided from the other prime or subcontractors. It will be the responsibility of each prime and/or subcontractor to either agree or disagree with the updated schedule via signing and dating the schedule submitted by the project expediter or providing a written summary of schedule exceptions and/or inaccuracies.
 5. Project expediter is required to provide an updated construction schedule with each monthly payment application. It will be the responsibility of each prime and/or subcontractor to either agree or disagree with the updated schedule via signing and dating the schedule submitted by the project expediter or providing a written summary of schedule exceptions and/or inaccuracies. Payment requests received without one or the other of the above will be considered incomplete and will be returned as being incomplete. The only contractor required to submit a copy of the updated progress schedule with his monthly payment application is the project expediter.
 6. A completion or finish schedule is required at 80% project completion, illustrating tasks remaining to complete the project. The designer and Owner are required to approve finish schedule.
 7. Project expediter shall include all relevant testing and inspections on the CPM schedule, including but not limited to: telecom/data wiring tests and as-built drawings, fire alarm system testing, fire suppression system testing, piping pressure testing, all applicable NFPA, DOI, DOL tests and commissioning activities.
 8. The Contractor will schedule as Milestones in the CPM schedule and ensure they are met the following activities: MEPFP Coordination drawings, Casework and Fume Hood Submittals and shop drawings shall be submitted to the design team for review NO LATER than 30 days after the Notice To Proceed.

NC State University Design and Construction Guidelines

Supplementary General Conditions

3.0 SGC Article 23 - Time Of Completion, Delays, Extension of Time

A. For each day in excess of the number of days shown below, the contractor(s) shall pay the owner liquidated damages in the amount of \$_____ per consecutive calendar day. [Designer and Owner to jointly determine amount of LD's based on specific project requirements.]

This project does not include Commissioning

B. The time of completion for this project is _____ consecutive calendar days and begins on the date stated in the Designer's Notice to Proceed letter issued to the contractor.

This project includes Commissioning

B. The time of completion to SUBSTANTIAL COMPLETION for this project is _____ consecutive calendar days and begins on the date stated in the Designer's Notice to Proceed letter issued to the contractor. SUBSTANTIAL COMPLETION for this project is defined as the General Contractor and its subcontractors having completed the following:

1. GC's Pre-Final Punch List
2. Testing Adjusting and Balancing (TAB) is complete per the project specifications.
3. Pre-Functional Testing shall be complete and the completed report shall be issued to the design team prior to SUBSTANTIAL COMPLETION.

For a period not to exceed _____ weeks following immediately after SUBSTANTIAL COMPLETION, the Owner's agents will perform Enhanced Start UP of MEP systems and punch list generation and back punch activities. The contractor will be responsible for assisting in all testing and punch activities including the completion of all adjusting, balancing, repairing, correcting, replacing and completing unacceptable or otherwise incomplete work identified by the design team.

NC State University Design and Construction Guidelines

Supplementary General Conditions

4.0 SGC Article 40 – Utilities, Structures, Signs

- A. UTILITIES FOR NEW BUILDINGS - The Project Expediter will make arrangements with the appropriate utility service providers to provide temporary utilities to the site. The Project Expediter shall bear the costs of providing all temporary utilities to the site and all charges for temporary utilities during the project duration.
- B. UTILITIES FOR EXISTING BUILDINGS – The Project Expediter will make arrangements with either the appropriate utility service providers or with NCSU (if the existing building is already metered) to provide temporary utilities to the site. The University will bear the cost of all temporary utilities except the use of supplemental generators for power. The contractor may use what is available on site without affecting the ongoing operations of the Owner in any way, but may not request additional services that are not already present. Anything additional required by the contractor will be procured and paid for by the contractor

SECTION 01 10 00 - SUMMARY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Project information.
2. Work covered by the Contract Documents
3. Phased construction.
4. Work by Owner.
5. Work under separate contracts.
6. Future work.
7. Owner-furnished products, Contractor-installed products.
8. Access to site.
9. Owner occupancy requirements.
10. Work restrictions.
11. Specification formats and drawing conventions.
12. Seismic Requirement.
13. Substrate for Floor Materials.
14. Miscellaneous Provisions.
 - a. Project Identification and Temporary Signs
 - b. Compliance with industry standards
 - c. Electrical ratings
 - d. References

- B. Related Sections include the following:

1. Division 01 Section "Temporary Facilities and Controls" for limitations and procedures governing temporary use of Owner's facilities.

1.3 PROJECT INFORMATION

- A. Project Identification: Doak Field Enhancements, Phase 2

1. Project Location: 1081 Varsity Dr., Raleigh, NC 27606
2. State Construction Office Project No.: 22-24384-01
3. NC State University Project No.: 202120015

4. Designer Project No.; 20220400

B. Owner: State of North Carolina

1. Owning Agency: North Carolina State University, Raleigh, NC
 - a. Point of Contact (Design Phase): Robert Cwikla; (919) 515-6836;
rmcwikla@ncsu.edu.
 - b. Point of Contact (Construction Phase): Mark Michaelson; (919) 513-2752;
mjmichae@ncsu.edu.
 - c. Department: Capital Project Management, Design and Construction
Administrative Services Building III
2601 Wolf Village Way, Suite 331
Raleigh, NC 27695-7520
Campus Box 7520

C. Architect: EwingCole

Architects.Engineers.Interior Designers.Planners
Federal Reserve Bank Building
100 N. 6th Street
Independence Mall West
Philadelphia, Pennsylvania 19106
215-923-2020

8208 Brownleigh Drive, Suite 200
Raleigh, NC 27617
919-460-6700

D. Construction Manager: Romeo Guest, A New South Company.

1715 Camden Ave
Durham, NC 27704
919-683-1701

1. Construction Manager has been engaged for this Project to serve as an advisor to Owner and to provide assistance in administering the Contract for Construction between Owner and each Contractor, according to a separate contract between Owner and Construction Manager.
2. Construction Manager for this Project is Project's constructor. The terms "Construction Manager" and "Contractor" are synonymous.

1.4 WORK COVERED BY CONTRACT DOCUMENTS

A. The Work of Project is defined by the Contract Documents and consists of the following:

1. Area A: A 17,000 square-foot addition to the existing Doak Field baseball operations center, containing player training, locker room, and lounge facilities, and extending spectator circulation, seating, and concessions.
2. Area B: Terraced grandstand seating along the third base line with a 1,600 square-foot new construction concession building, adjoining entry gate, and accompanying sitework.

- B. Type of Contract:
 - 1. Project will be administered by Construction Manager as noted above.
 - 2. Project will be constructed under coordinated, concurrent multiple contracts. Contracts for this Project are administered by the Construction Manager.

1.5 PHASED CONSTRUCTION

- A. The Work shall be conducted in two phases, with each phase substantially complete as indicated:
 - 1. Phase 1 (Package B): Field Service Building, associated sitework, and storm management device beyond center field. Work of this phase shall be contracted separately and be substantially complete and ready for occupancy before commencement of the Work described in Phase 2 (Package A).
 - 2. Phase 2 (Package A): The remaining Work shall be substantially complete and ready for occupancy at time of Final Acceptance for the Work.
- B. Before commencing Work of each phase, submit an updated copy of Contractor's construction schedule showing the sequence, commencement and completion dates, and move-out and -in dates of Owner's personnel for all phases of the Work.

1.6 WORK BY OWNER

- A. General: Cooperate fully with Owner so work may be carried out smoothly, without interfering with or delaying work under this Contract or work by Owner. Coordinate the Work of this Contract with work performed by Owner.
- B. Preceding Work: Owner will perform the following construction operations at Project site. Those operations are scheduled to be substantially complete before work under this Contract begins.
 - 1. Phase 1 of the Doak Field Enhancements, described under Package B and administered under separate contract.
- C. Concurrent Work: Owner will perform the following construction operations at Project site. Those operations will be conducted simultaneously with work under this Contract.
 - 1. No concurrent work will be performed.
- D. Subsequent Work: Owner will perform the following additional work at site after Substantial Completion. Completion of that work will depend on successful completion of preparatory work under this Contract.
 - 1. Installation of food service equipment by Owner's designated concessions vendor.

1.7 OWNER-FURNISHED CONTRACTOR-INSTALLED PRODUCTS

- A. Owner will furnish products indicated. The Work includes providing support systems to receive Owner's equipment [and making plumbing, mechanical, and electrical connections].

1. Owner will arrange for and deliver Shop Drawings, Product Data, and Samples to Contractor.
2. Owner will arrange and pay for delivery of Owner-furnished items according to Contractor's Construction Schedule.
3. After delivery, Owner will inspect delivered items for damage. Contractor shall be present for and assist in Owner's inspection.
4. If Owner-furnished items are damaged, defective, or missing, Owner will arrange for replacement.
5. Owner will arrange for manufacturer's field services and for delivery of manufacturer's warranties to Contractor.
6. Owner will furnish Contractor the earliest possible delivery date for Owner-furnished products. Using Owner-furnished earliest possible delivery dates, Contractor shall designate delivery dates of Owner-furnished items in Contractor's Construction Schedule.
7. Contractor shall review Shop Drawings, Product Data, and Samples and return them to [Architect] [Construction Manager] noting discrepancies or anticipated problems in use of product.
8. Contractor is responsible for receiving, unloading, and handling Owner-furnished items at Project site.
9. Contractor is responsible for protecting Owner-furnished items from damage during storage and handling, including damage from exposure to the elements.
10. If Owner-furnished items are damaged as a result of Contractor's operations, Contractor shall repair or replace them.
11. Contractor shall install and otherwise incorporate Owner-furnished items into the Work.

B. Owner-Furnished Products:

1. Fixed spectator seating
2. Athlete lockers.
3. Furniture at Players' Lounge.
4. Room identification signage manufactured by NC State Sign Shop.

1.8 ACCESS TO SITE

- A. General: Contractor shall have limited use of premises for construction operations as indicated on Drawings by the Project Area Line.
- B. Use of Site: Limit use of premises to work in areas indicated. Do not disturb portions of Project site beyond areas in which the Work is indicated.
1. Owner Occupancy: Allow for Owner occupancy of Project site.
 2. Driveways and Entrances: Keep driveways loading areas, and entrances serving premises clear and available to Owner, Owner's employees, and emergency vehicles at all times. Do not use these areas for parking or storage of materials.
 - a. Schedule deliveries to minimize use of driveways and entrances.
 - b. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.
- C. Condition of Existing Building: Maintain portions of existing building affected by construction operations in a weathertight condition throughout construction period. Repair damage caused by construction operations.

- D. Condition of Existing Grounds: Maintain portions of existing grounds, landscaping, and hardscaping affected by construction operations throughout construction period. Repair damage caused by construction operations.

1.9 OWNER'S OCCUPANCY REQUIREMENTS

- A. Partial Owner Occupancy: Owner will occupy the premises during entire construction period, with the exception of areas under construction. Cooperate with Owner during construction operations to minimize conflicts and facilitate Owner usage. Perform the Work so as not to interfere with Owner's operations. Maintain existing exits, unless otherwise indicated.
 - 1. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities. Do not close or obstruct walkways, corridors, or other occupied or used facilities without written permission from Owner and authorities having jurisdiction.
 - 2. Provide not less than 72 hours' notice to Owner of activities that will affect Owner's operations.

1.10 WORK RESTRICTIONS

- A. Work Restrictions, General: Comply with restrictions on construction operations.
 - 1. Comply with limitations on use of public streets and with other requirements of authorities having jurisdiction.
 - 2. Comply with requirements and limitations described in NC State University Design and Construction Guidelines, Division 01 NC State's Requirements.
- B. Noise, Vibration, and Odors: Coordinate operations that may result in high levels of noise and vibration, odors, or other disruption to Owner occupancy with Owner. Comply with NC State University Design Guidelines, Division 01 Contractor Safety Guidelines.
- C. Controlled Substances: Use of tobacco products and other controlled substances on Project site is not permitted.
- D. Nonsmoking Building: Smoking is not permitted within the building or within 25 feet (8 m) of entrances, operable windows, or outdoor-air intakes. Comply with campus regulation 04.20.03 Smoking Regulation for University Facilities.
- E. Employee Identification: Provide identification tags for Contractor personnel working on Project site. Require personnel to use identification tags at all times.
 - 1. For personnel requiring access to facilities secured by campus infrastructure, coordinate with Owner to provide NC State University standard contractor badge ("All Campus Card").
- F. Employee Screening: Comply with Owner's requirements for drug and background screening of Contractor personnel working on Project site.
 - 1. Maintain list of approved screened personnel with Owner's representative.

1.11 SPECIFICATION FORMATS AND DRAWING CONVENTIONS

- A. Specification Format: The Specifications are organized into Divisions and Sections using the 50-division format and CSI/CSC's "MasterFormat" numbering system.
 - 1. Section Identification: The Specifications use Section numbers and titles to help cross-referencing in the Contract Documents. Sections in the Project Manual are in numeric sequence; however, the sequence is incomplete because all available Section numbers are not used. Consult the table of contents at the beginning of the Project Manual to determine numbers and names of Sections in the Contract Documents.
 - 2. Division 01: Sections in Division 01 govern the execution of the Work of all Sections in the Specifications.
- B. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
 - 1. Abbreviated Language: Language used in the Specifications and other Contract Documents is abbreviated. Words and meanings shall be interpreted as appropriate. Words implied, but not stated, shall be inferred as the sense requires. Singular words shall be interpreted as plural, and plural words shall be interpreted as singular where applicable as the context of the Contract Documents indicates.
 - 2. Imperative mood and streamlined language are generally used in the Specifications. Requirements expressed in the imperative mood are to be performed by Contractor. Occasionally, the indicative or subjunctive mood may be used in the Section Text for clarity to describe responsibilities that must be fulfilled indirectly by Contractor or by others when so noted.
 - a. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
- C. Specification requirements are to be performed by Contractor unless specifically stated otherwise.
- D. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:
 - 1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
 - 2. Abbreviations: Materials and products are identified by abbreviations scheduled on Drawings.
 - 3. Keynoting: Materials and products are identified by reference keynotes referencing Specification Section numbers found in this Project Manual.

1.12 SEISMIC REQUIREMENT

- A. All architectural, mechanical, electrical, structural and nonstructural systems, components and elements shall be designed and installed to meet the code requirements of the AHJ, (AUTHORITY HAVING JURISDICTION).

- B. The seismic criteria to be used for these requirements are indicated on Drawing No. S1.2.
- C. The Contractor shall employ a Professional Engineer registered in the jurisdiction for which the project is located to design all restraints necessary to meet the seismic requirements of Specification Divisions 21, 22, 23, 25, 26, 27 and 28. Said Engineer shall sign and seal all drawings and calculations prepared for this purpose.
- D. Where manufactured or pre-engineered items are provided, the manufacturer or fabricator shall provide calculations or certification that the furnished and installed item, including its components and attachments, complies with the requirements of the projects specifications in addition to all code prescribed loadings and criteria, including wind and seismic loading conditions.
- E. Coordinate the installation of all seismic requirements to allow for performance of Special Inspections as indicated in Section 01 41 00 of this specification.

1.13 SUBSTRATE FOR FLOORING MATERIALS

- A. It is the responsibility of the Contractor to provide appropriate substrate, acceptable in writing from the flooring manufacturer, meeting vapor transmission and pH values and flatness required by flooring manufacturer for installation of their product.

1.14 MISCELLANEOUS PROVISIONS

- A. Project Identification and Temporary Signs
 - a. Project Signs – Project signs are not allowed. Directional signs for material deliveries are allowed within the construction area, if required, and shall be 4' wide x 2' high maximum, black and white only. The NCSU Project Manager shall approve the design of the sign and the sign text.
- B. Compliance with Industry Standards
 - 1. Review specified means, methods, techniques, sequences and procedures, including those recommended by manufacturers and referenced standards. Advise the Architect of any specified means, methods, techniques, sequences and procedures which deviate from good construction practice, affect warranties, including the Contractor's general warranty or are objectionable to the Contractor. If any of these conditions exist, the Contractor shall propose in writing to the Architect alternate means, methods, techniques, sequences and procedures for performing the Work.
- C. Electrical Ratings
 - 1. The motor horsepower and apparatus full load amperage ratings shown or specified are Basis of Design values and the corresponding sizes of feeders and other electrical equipment indicated to serve them are minimum sizes required to meet the Basis of Design requirements. When motors of greater horsepower and apparatus with larger full load amperage ratings are furnished as necessary to meet the design intent of the various sections within the specification, the associated changes to the electrical system (i.e. increase in capacity of the feeders and other electrical equipment serving them) shall be

submitted for approval and be completed by the Contractor at no additional cost to the Owner.

D. References

1. All references refer to the latest published edition or revision as of the date of the Contract Documents.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 10 00

SECTION 01 13 32 – GEOTECHNICAL DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Reports and information made available to the Architect by the Owner in the preparation of design documents.

1.2 SUMMARY

- A. Existing Reports and Surveys: The Contract Documents do not include soils, geotechnical, hazardous materials or other reports, which may be printed, bound or assembled with the Contract Documents, or otherwise made available to the Contractor(s) for review and information only under this contract, unless specifically enumerated and directly incorporated by reference in the Owner-Contractor Agreement.
- B. Subsurface Investigation Report: A copy of a geotechnical report with respect to the building site is not included with this document. This has been undertaken by the client and is supplied under separate cover.
- C. These reports identify properties of below grade conditions and offers recommendations for the design of foundations, prepared primarily for the use of EwingCole and their consultants.
- D. The recommendations described shall not be construed as a requirement of this Contract, unless specifically referenced in the Contract Documents.
- E. These reports, by their nature, cannot reveal all conditions that exist on the site.
- F. The designer does not have knowledge of any hazardous materials underground.

Re: **Geotechnical Report of Subsurface Investigation**

Doak Field Renovations

NC State University

Raleigh, North Carolina

Falcon Project No.: G23011.00

Dear Mr. Cwikla:

As authorized, Falcon Engineering, Inc. (Falcon) has completed a subsurface investigation for the above referenced project. This subsurface investigation was conducted in March 2023. The opinions and observations rendered in this report are based solely on our review of subsurface data collected by others, site reconnaissance, performance of seven (7) soil test borings, laboratory testing, engineering evaluation of the data obtained, and generally accepted geotechnical engineering practices and principles. Falcon appreciates the opportunity to have provided geotechnical engineering services to North Carolina State University for this project. If you have any questions concerning the contents of this report or need additional information, please do not hesitate to contact our office.

Sincerely,

FALCON ENGINEERING, INC.

Allan Paul, PE

Senior Project Manager / Engineer

SECTION 1: PROJECT INFORMATION

This report presents the field and laboratory test procedures and their results and geotechnical recommendations for design and considerations for construction. Our investigation was performed in general accordance with the scope of services outlined in our proposal F2023-002 dated January 17, 2023.

1.1 PROJECT DESCRIPTION

Based on our correspondence and the CAD files provided, it is our understanding the following apply to the project:

- North Carolina State University (NCSU) is underway in design of renovations for Doak Field on Main Campus.
- Ewing Cole is the Project Architect and SKA Consulting Engineers is the Project Structural Engineer.
- The proposed renovations include:
 - Extension of concourse down left field line. Retaining walls are required to achieve concourse level in this area. Current grades have the existing concourse above field level with a slope down to the field beyond.
 - Extension of concourse down right field line. Concourse extension will be approximately 18 feet above a 2-story air-conditioned space.
 - Double-height indoor hitting facility at field level down the right field line near existing batting cages.

Should any of the above information or assumptions made by Falcon be inconsistent with the planned project, we request that you contact us immediately to allow us to make any necessary modifications to this report.

1.2 SITE DESCRIPTION

As depicted on the Site Vicinity Map in Appendix A of this report, the Project Site is located in Raleigh, North Carolina on the main campus of NCSU. The Project Site, Doak Field at Dail Park, originally opened in 1966 and has been used by NCSU since that time. The ballfield has existing stadium seating, press box, ticket building, concessions and bathrooms, batting/pitching cages, and perimeter mast lighting.

1.3 SITE GEOLOGIC DESCRIPTION

The Site is located within the Crabtree Terrane of the Piedmont Physiographic Province of North Carolina. The Piedmont Province lies between the Coastal Plain and the Blue Ridge Mountains and occupies about 45 percent of the area of the state. It is characterized by gently rolling, well-rounded hills and long low ridges with a few hundred feet of elevation difference between the hills and valleys. The terrane consists mostly of metamorphosed igneous, volcanic, and sedimentary rocks. A unique rock of the terrane includes the graphitic schist in the Raleigh area. These rocks were part of a large chain of ancient volcanic islands that formed off the coast of the ancient continent called Gondwana.

According to the *Geologic Map of North Carolina* (1985), bedrock at the Site consists of Felsic mica gneiss (**CZfg**) which is interlayered with graphitic mica schist and mica-garnet schist as well as some minor hornblende gneiss. According to the *Geologic Map of the Raleigh West 7.5-Minute Quadrangle, Wake County, North Carolina* (2008), the Site is located the Horse Creek Schist (**CZhcs**) mapped bedrock unit which is described as silver-gray to tan-gray-white, medium to coarse grained, foliated, lineated, and compositionally layered pelitic metasedimentary rock. In summary, the original fine and coarse grain layers of the parent sedimentary rock have had their minerals foliated (i.e., minerals have been layered) and lineated through metamorphic processes.

SECTION 2: PURPOSE AND SCOPE

Falcon has performed a geotechnical subsurface investigation for the proposed project. The purpose of this investigation is to provide a general characterization of existing onsite soils, rock, and groundwater conditions, as well as design recommendations for earthmoving, groundwater, fill and backfill, lateral earth stress, foundations, and slabs-on-grade.

The project was accomplished through completion of the following tasks:

- Site reconnaissance by Falcon's Geotechnical Engineering personnel.
- Performance of seven (7) Standard Penetration Test (SPT) soil borings.
- Visual-manual classification and stratification of the soil samples according to the Unified Soil Classification System (USCS).
- Laboratory testing of select soil samples collected from the borings.
- Analysis of field and laboratory test data and collected soil samples.
- Preparation of this formal engineering report summarizing the field and laboratory test results and our geotechnical recommendations for design and considerations for construction.

SECTION 3: FIELD INVESTIGATION

3.1 SITE RECONNAISSANCE AND PROJECT SET-UP

Boring locations were selected by others and reviewed by Falcon without any exception. Boring locations were staked in the field by approximating from existing site features. Some minor offsets were made to avoid conflicts with unstable ground conditions, difficult terrain, overhead obstructions, underground utilities, structures, active construction, hardscapes, and vegetation.

Falcon personnel contacted the North Carolina One-Call Center to request subscriber utilities be located and marked in and around the marked boring locations. Utilities were either marked in the field or noted to be specifically not in conflict with the boring locations prior to the beginning of our field investigation.

3.2 SOIL TEST BORINGS

On March 6th, 2023, seven (7) Standard Penetration Test (SPT) soil borings were performed at the Site using a CME 45 rubber-track mounted drill rig equipped with hollow stem augers. SPT borings were performed in general accordance with ASTM D1586 “Penetration Test and Split-Barrel Sampling of Soils”. Soil samples were obtained from test borings at regular intervals using a split-barrel sampler. An automatic hammer was used to advance the sampler at each test interval. All split-spoon soil samples were visually classified in accordance with the Unified Soil Classification System (USCS) by our geotechnical field staff. Soil samples were sealed in moisture retarding containers, labeled, and transported to our laboratory for further analysis. One (1) bulk soil sample consisting of auger cuttings was also collected.

As-drilled boring coordinates were collected with a Trimble GEO7X hand-held GPS unit capable of sub-meter accuracy. The location data was processed through a differential correction procedure and boring locations/coordinates were updated within our file system and CAD drawings.

SECTION 4: LABORATORY TESTING

All split-spoon soil samples were reviewed and visually-manually classified in accordance with ASTM D2488 “Standard Practice for Description and Identification of Soils (Visual-Manual Procedure)” and the Unified Soil Classification System (USCS) by our geotechnical staff. During review of the collected soil samples, a number of representative samples were selected for further analysis in Falcon’s soils laboratory.

- One (1) bulk sample (BS-#) was tested for natural moisture content (ASTM D2216), Atterberg limits (ASTM D4318), mechanical sieve analyses (ASTM D6913), and standard Proctor compaction (ASTM D698).
- Two (2) split-spoon (SS-#) samples were tested for natural moisture content, Atterberg limits, and mechanical sieve analyses.
- Four (4) additional split-spoon samples were tested for natural moisture content only.

Moisture content testing results are shown on the individual Test Boring Logs in Appendix B of this report. A summary of classification test results and bulk sample test results are shown in the tables below. Detailed soil laboratory testing results can be found in Appendix C of this report.

TABLE 4.1: SUMMARY OF LABORATORY INDEX TESTING

SAMPLE ID	BORING ID	DEPTH (FT)	NATURAL MOISTURE CONTENT (%)	PERCENT PASSING			ATTERBERG LIMITS			USCS SYMBOL
				#10	#40	#200	LL	PL	PI	
BS-01	B-01	1.0-18.5	44.7	100	98	89.5	87	57	30	MH
SS-05	B-06	8.5-10.0	39.8	98	94	78.7	41	23	18	CL
SS-06	B-07	6.0-7.5	19.4	85	75	49.8	76	50	26	SM

TABLE 4.2: SUMMARY OF BULK SAMPLE TESTING

SAMPLE ID	BORING ID	DEPTH (FT)	NATURAL MOISTURE CONTENT (%)	OPTIMUM MOISTURE CONTENT (%)	MAXIMUM DRY UNIT WEIGHT (PCF)	USCS SYMBOL
BS-01	B-01	1.0-18.5	44.7	32.6	86.4	MH

SECTION 5: SUBSURFACE CONDITIONS

5.1 SURFACE MATERIALS, SOIL, AND ROCK

Surface materials encountered in the borings consist of topsoil, mulch, sod, and gravel (washed stone). Topsoil measured 3 inches thick at boring B-01 and 3 inches thick at boring B-03. Washed stone measured 12 inches thick at boring B-02 and 36 inches thick at boring B-07. Mulch measured 3 inches thick at boring B-04 and sod measured 3 inches thick at boring B-05. topsoil was encountered at two (2) locations and sod which was encountered at one (1) location. Mulch/sod thickness measured 3 inches where present.

Fill soils are best described as man-placed deposits of materials used to raise or restore grades that typically include soil and rock but can sometimes consist of trash and debris. Fill was identified in all seven (7) soil test borings either at the ground surface or beneath surface materials, extending to approximate depths ranging from 3.0 feet to 14.5 feet below the current ground surface. The fill encountered in the borings was likely placed during construction of the existing ballfield and stadium. Recovered samples of fill were either visually-manually or laboratory classified as poorly-graded gravel (GP), silty sand (SM), clayey sand (SC), silt (ML), lean clay (CL), and elastic silt (MH) with various amounts of gravel, glass fragments, asphalt, roots, and organic debris. Relative moisture of fill samples recovered indicates moist to wet conditions.

Residual soils are formed from the in-place weathering of the parent bedrock. Residual soils were identified below fill soils in all seven (7) borings. Recovered samples of residuum were either laboratory or visually-manually classified as silty sand (SM), silt (ML), lean clay (CL), and elastic silt (MH) with varying amounts of sand, rock fragments, and mica. Relative moisture contents of samples recovered indicates moist to saturated conditions.

5.2 GROUNDWATER MEASUREMENTS

After each boring was drilled, individual boreholes were inspected for the presence of immediate, 0-hour groundwater and cave-in depths were measured. Groundwater was not observed in any borings immediately following drilling. Borings B-03, B-05, and B-07 were backfilled after drilling for safety reasons. The remaining boreholes were left open for at least 24 hours to allow groundwater to stabilize before taking static groundwater measurements and final borehole cave-in depths. Static groundwater was observed in borings B-01 and B-02 at depths of 25.1 and 14.6 feet below the current ground surface, respectively. Static groundwater was not observed in borings B-04 or B-06. Groundwater and borehole cave-in depths are shown on the individual Test Boring Logs. Cave-in depths without observed groundwater may indicate the presence of trapped or static groundwater at or just below the level of cave-in, especially where sandy/saturated soils are present. Boreholes were backfilled with soil cuttings to approximately the same elevation as the surrounding area, mulch-gravel was restored, and excess cuttings were swept up and hauled to a designated area on the grounds for disposal.

TABLE 5.1: SUMMARY OF GROUNDWATER READINGS

BORING ID	CAVE-IN DEPTH	0-HR GROUNDWATER DEPTH (FT)	24-HR GROUNDWATER DEPTH (FT)
B-01	N/M ¹	Dry ²	25.1
B-02	N/M	Dry	14.6
B-03	N/M	Dry	FIAD ³
B-04	15.3	Dry	Dry
B-05	N/M	Dry	FIAD
B-06	15.7	Dry	Dry
B-07	N/M	Dry	FIAD

¹N/M=Not Measured ²Dry=No groundwater observed ³FIAD=Filled Immediately After Drilling

5.3 SUBSURFACE DATA PRESENTATIONS

The Legend to Soil and Rock Classification and Symbols can be used as a reference for symbols, common definitions, or other terminology used in textual/graphical representation of subsurface data. Subsurface conditions at each boring were compiled on to individual Test Boring Logs. A Boring Location Plan was created by overlaying as-drilled boring locations and the CAD files provided to us onto geo-referenced aerial imagery. These documents can all be found in Appendix B of this report.

SECTION 6: GEOTECHNICAL RECOMMENDATIONS AND CONSIDERATIONS

A summary of geotechnical issues with the potential to impact earthmoving and foundations are provided below. Detailed discussions of the geotechnical issues below are provided in the sections which follow.

- **Lightweight, micaceous, moisture-sensitive, elastic silty soils** are present on site in both fill and residual strata. For constructability, limiting their use as structural fill will likely accelerate construction but structural fill may need to be imported to the site at additional cost. These soils may remain in place beneath building pads and foundations.
 - Micaceous, elastic silts are sensitive to damage from exposure to water. Earthmoving operations performed during the wet winter months (generally November to March) or during periods of inclement weather will be difficult and time consuming.
 - Lightweight soils are sensitive to heavy wheel loads. These soils will yield and deform beneath typical proofrolling equipment even if they are well compacted.
 - Micaceous soils perform better when compacted in thinner lifts with compaction effort applied as shearing or kneading action.
- **Shallow Foundations** are able to support the proposed structures. However, due to the somewhat variable fill materials with various debris, a contingency of undercut, geogrid, and engineered fill should be carried to address any organic or deleterious materials encountered at foundation subgrade.

6.1 EARTHMOVING

6.1.1 DEMOLITION, CLEARING, STRIPPING, AND GRUBBING

Stripping and grubbing should be performed at the outset of construction in all planned building areas. Surface materials such as mulch, topsoil, vegetation, concrete, asphalt, and brick are located within the proposed project area. Removal of vegetation should include rootballs as well. These materials should be removed from the site and disposed of in accordance with local, state, and federal regulations.

6.1.2 ENGINEERING BEHAVIOR OF SOILS

After site clearing and demolition, the onsite soils will be exposed to weather events. Extended periods of rain or intrusion of runoff may damage otherwise suitable site subgrades necessitating repair or remediation. Excessive degradation of fill soils can be mitigated by compacting near-surface lifts at, or wet of, optimum moisture and achieving at least 98 percent compaction.

Earthmoving operations performed during wet, winter months (November to March) will be difficult and time consuming (i.e., expensive) as it will require maintaining dry and stable excavations and drying of backfill soils. Traditional drying operations will be minimally effective during this time. Trench excavation spoils should be protected from rain events by covering in plastic sheeting or tarps.

6.1.3 INSPECTION OF SITE SUBGRADES

Once the building pads are established, they should be evaluated by one of Falcon's Geotechnical Engineers or a representative thereof. Any unstable areas and/or highly elastic/plastic soils should be repaired as recommended following filed evaluations. The outcome of subgrade evaluations may vary depending on recent precipitation events and time of year due to the moisture sensitivity of the site soils. Grading activities conducted during wet periods will damage and disturb prepared subgrades and are likely to require more repair than during drier periods.

6.2 SITE EXCAVATION

6.2.1 GENERAL EXCAVATION

Based on the subsurface data obtained, we anticipate site excavations may be completed using small-to-medium sized track mounted hydraulic excavators and rubber tire backhoes.

6.2.2 ROCK EXCAVATION

We do not anticipate rock excavation will be necessary for this project. However, the contract documents should define mass rock, trench rock, and rock payment determination criteria.

6.2.3 EXCAVATION SAFETY

All excavations deeper than 4 feet must conform to applicable sections of the Construction Industry Occupational Safety and Health Administration (OSHA) Standards (29CFR1926). In general, compliance will require either sloping back excavations or the use of trench boxes or temporary shoring systems, or some combination of both. The referenced (OSHA) standard should be reviewed for requirements regarding use of sloping and/or trench boxes. The shoring system(s) should be designed to resist lateral earth stresses from existing soils and any nearby structures, account for any adjacent roadways or other infrastructure, and include any surcharge loading for construction equipment or public traffic. Designs should include an appropriate hydrostatic pressure to account for rises in groundwater levels and/or water infiltrating the retained soils. The selected system should consider this condition and the design should address feasible penetration depth. Subsurface conditions, depth of excavations, and horizontal and vertical space constraints will dictate the design of the shoring system along with other considerations such as local availability of materials and equipment. It is the contractor's responsibility to design and construct stable, temporary excavations as part of their safety procedure in accordance with local, state, and federal safety regulations. Falcon does not assume responsibility for construction safety or the contractor's or other party's compliance with applicable safety or other regulations. In addition to the OSHA standards, the Contractor's excavation safety plans should comply with any encroachment or other landowner agreements.

6.3 FILL SELECTION, PLACEMENT, AND BACKFILL

6.3.1 MATERIAL SELECTION

Select granular material is a quarried stone product such as crushed stone screenings, concrete sand, aggregate base course, engineered fill, or processed fill. This material should be used to construct load transfer platforms as discussed elsewhere in this report and to raise grades immediately beneath foundations.

Structural fill is soil material used to raise or restore grades beneath the floor slabs of structures, pavements, and behind retaining walls. Structural fill and backfill shall have a plasticity index of 26 or less, a maximum dry unit weight of at least 90 pounds per square foot, be free of debris, waste, hazardous materials, and particles larger than 3 inches in any dimension, and contain less than 3 percent organic material by weight. Little of the existing fill soil and residual soil on site may be suitable for use as structural fill or backfill. The Project Team should include budgetary allowances for importing structural fill to the site.

Note: Any existing fill or residual soil meeting the requirements for Structural Fill above and having a maximum dry unit of less than 90 pounds per cubic foot may be used as retaining wall backfill provided that those walls are designed with the appropriate Lateral Earth Stress parameters in Table 6.3, adequate drainage is deleted behind the wall, and the wall is not a mechanically stabilized earth (MSE) system for which the wall designer will specify backfill material.

We recommend reaching out to the contractor working on the NCSU ISB project to check if the soil to be excavated from their site could be used at this Project. Alternatively, crushed/recycled concrete from the I-440 project may be a viable source of structural fill.

General fill shall meet the same material requirements described herein with the exception that a maximum particle size of 6 inches should be allowed and the restriction on plasticity index is waived.

6.3.2 PLACEMENT AND COMPACTION

Fill and backfill operations should be continuously monitored and documented. Fill and backfill should be placed in 8 to 10-inch loose lifts when compacted with large, ride-on style compaction equipment. Fill and backfill should be placed in 4 to 6-inch loose lifts when compacted with hand-guided compaction equipment. We recommend fill and backfill be placed and compacted to a uniform, maximum dry unit weight as noted in accordance with the following:

TABLE 6.1: FILL AND BACKFILL REQUIREMENTS

LOCATION	MATERIAL	COMPACTION REQUIREMENTS	MOISTURE REQUIREMENTS
Fill placed beneath pavements or structures	Structural Fill	95% per ASTM D698	2% dry to 2% wet
Fill/backfill in non-structural or non-paved areas	General Fill	90% per ASTM D698	3% dry to 3% wet
Aggregate Base Course beneath pavements	NCDOT Standard ABC Stone	98% per ASTM D1557	2% dry to 2% wet

Soil compaction should be tested in accordance with the sand cone or nuclear density gauge methods at the following minimum frequencies:

TABLE 6.2: MINIMUM COMPACTION TESTING FREQUENCIES

LOCATION	MASS FILL TESTING FREQUENCY	TRENCH BACKFILL TESTING FREQUENCY
Beneath non-structural areas	One (1) test per lift, per 10,000 square feet of fill placed, per fill area, per day	One (1) test per lift, per trench, per day
Beneath pavements or structures	One (1) test per lift, per 2,500 square feet of fill placed, per fill area, per day	One (1) test per lift, per 250 linear feet of backfill placed, per trench, per day

6.4 GROUNDWATER, DEWATERING, DRAINAGE

6.4.1 GROUNDWATER MECHANICS

We do not anticipate the proposed excavations will encounter the groundwater table during construction. Groundwater typically flows in the direction of surface water. Groundwater levels will vary with environmental variations and seasonal conditions, such as the frequency and magnitude of rainfall. Consequently, excavations performed during the drier months of the year may yield more favorable groundwater conditions.

6.4.2 SITE DRAINAGE AND DIVERSION

Site drainage within construction areas should be maintained to direct stormwater runoff away from excavations and construction areas. Surface water can generally be controlled or mitigated by constructing drainage ditches, berms, and/or by grading the site to sheet flow toward natural drainage features and away from excavations. The Contractor should sequence operations to provide surface drainage and/or control groundwater by digging gravel pits and placing submersible pumps to

intercept groundwater percolating into excavations. Excavations should be sloped toward one corner to facilitate removal of any collected rainwater, groundwater, or surface runoff.

6.5 LATERAL EARTH STRESS

6.5.1 CANTILEVER AND GRAVITY STYLE WALLS

Walls that are free to deflect at the top (e.g., retaining walls) should be designed for an active earth condition and walls that are not free to deflect at the top (e.g., basement, foundation walls, and internally braced walls) should be designed for at-rest conditions. Passive resistance of soils in front of walls may be considered if they are not subjected to erosion or change in density. We recommend using a factor of safety of 1.5 on the passive condition side to accommodate the necessary movement to mobilize passive resistance.

6.5.2 LATERAL EARTH STRESS

Permanent retaining walls and temporary shoring may be designed using the following lateral earth stress parameters:

TABLE 6.3: LATERAL EARTH STRESS PARAMETERS

PARAMETER	BASEMENT AND RETAINING WALLS WITH STRUCTURAL BACKFILL (ON SITE SOIL)	BASEMENT AND RETAINING WALLS WITH STRUCTURAL BACKFILL (IMPORTED)
Moist Unit Weight (pcf)	105	120
Friction Angle (degrees)	26	30
Undrained Shear Strength (tsf)	---	---
At-Rest Earth Stress Coefficient	0.56	0.50
Active Earth Stress Coefficient	0.39	0.33
Passive Earth Stress Coefficient	2.50	3.00
Coefficient of Sliding Friction	0.35	0.35
Equivalent At-Rest Fluid Pressure (psf)	60	60
Equivalent Active Fluid Pressure (psf)	45	40
Equivalent Passive Fluid Pressure (psf)	280	360

These design soil parameters are based on horizontal backfill and no surcharge loading.

6.5.3 DRAINAGE CONSIDERATIONS

Below grade walls (e.g., basement/stem walls) should be designed with waterproofing and a permanent drainage system. Above grade retaining walls (if any) should be designed with dampproofing and a drainage system as well. A typical drainage system consists of a drainage course behind the entire wall and a means to provide grade and outfall for draining water. The drainage course typically consists of a 6 to 24-inch-wide layer of washed stone (#78M, #67, or #57 stone), wrapped in filtration geotextile (such as Mirafi 180N or similar), and a perforated pipe located at the bottom of wall. As an alternative, the washed stone and fabric can be substituted for a minimum 18-inch-wide layer of select granular fill meeting the gradation of concrete sand (ASTM C33) and a prefabricated vertical drainage mat placed immediately against the waterproofing membrane. The perforated pipe is still required for this alternative.

6.6 FOUNDATIONS

6.6.1 SHALLOW FOUNDATIONS

Anticipated maximum column and wall loads have not been provided to us. However, we assume maximum column loads to be on the order of 120 kip and maximum wall loads to be on the order of 10 kip per foot. If actual maximum anticipated loads are provided to us, we can revise our report or issue an addendum accordingly.

We recommend the proposed load bearing columns and walls be supported on single, combined, or continuous shallow foundations bearing on new, controlled structural fill, approved existing fill, or firm or better ($N > 4$) residual soil and be designed for a net allowable bearing capacity of 2,000 psf. We recommend using a coefficient of sliding friction equal to 0.35 may be used for foundations cast directly upon soil.

Based on the subsurface conditions encountered, the total settlement is estimated to be 1 inch or less and the amount of differential settlement across individual structures is expected to be ½ inch or less provided the recommendations/requirements described in Section 6.3 and elsewhere herein are adhered to. The magnitude of settlement for the structure will depend on actual structural loads, variations in the subsurface soil profile, and the quality of earthwork and foundation construction.

6.6.2 ADDITIONAL CONSIDERATIONS

The availability of the allowable bearing pressure is predicated upon Falcon's ability to review grading and foundation drawings, to inspect site subgrades prior to new fill placement, to inspect and test fill compaction during foundation and building pad construction, and to inspect and/or test all foundation subgrades to verify subsurface conditions prior placement of stone, reinforcements, and concrete. Offending soils encountered at and below footing subgrades will require repair under the direction of Falcon's Geotechnical Engineer.

Undercut will be required if soft soils or fill laden with organic debris are encountered. Undercut foundations should be backfilled with structural fill and geosynthetics if necessary. Washed stone of any gradation (#78M, #67, or #57) should not be used as foundation undercut backfill. We recommend the Contract Documents include an allowance for undercutting 16 inches throughout one-third of the total buildings' perimeters or 75 cubic yards, whichever is greater. Undercut areas should be backfilled with engineered fill, ABC stone, or crushed stone screenings imported to the site. We recommend a contingency allowance of 200 square yards of biaxial geogrid should also be included in the contract.

Expansion joints should be provided at building breaks and on exterior walls at regular intervals in accordance with ACI guidelines. Exterior foundations and foundations in unheated areas should be designed to bear at least 18 inches below finished grades for frost protection. Footings should be designed such that no utility lines, utility line excavation, or any other footings are located within a 1:1 zone of influence of the subject footing edge.

6.6.3 PROTECTION OF FOUNDATION SUBGRADES

Foundation subgrade soils are sensitive to moisture intrusion and should be protected from surface water flows and infiltration. Positive drainage should be provided to direct surface water flows away from the building areas. Foundation excavations should be covered or otherwise protected during rainfall events. If construction occurs during inclement weather and concreting of the foundation is not possible at the time it is excavated, basement foundations should be slightly over-excavated, and an approximately 2-inch-thick layer of lean (750 psi $< f_c < 2,000$ psi) concrete also known as a "mud mat"

should be placed on the bearing surface for protection from water intrusion. Previously approved foundation excavations that are subsequently exposed to excess moisture shall be re-observed and repaired as determined by Falcon's Geotechnical Engineer, prior to foundation concrete placement.

6.7 SLABS-ON-GRADE

6.7.1 BUILDING PADS

Prior to placement of aggregate base for slabs-on-grade, building pads should be proofrolled with a fully-loaded, tandem-axle dump truck in the presence of Falcon's Geotechnical Engineer or otherwise evaluated. Areas of underperforming soils should be repaired. We anticipate some deterioration of pad subgrade will occur when exposed to the elements especially during the winter months. Building pads will also deteriorate under repeated construction traffic and prolonged weather events. The building pad should be graded with a crown to promote positive drainage and water should not be allowed to sit on the building pad for extended periods of time.

Based on our experience, erection of elevated levels prior to placement of the slab-on-grade concrete will make drying of the building pad difficult. Therefore, after the building pad has been established, evaluated, and approved, we recommend placing 5 inch thick layer of NCDOT ABC stone to cap and protect the building pad from moisture intrusion. This aggregate will also serve as a working platform for crews and capillary break for moisture.

Provisions should be made for the installation of vapor retarder to minimize moisture-vapor transmission per ACI beneath occupied structures.

6.7.2 SLAB-ON-GRADE DESIGN CONSIDERATIONS

Liberal jointing patterns should be employed throughout the slab areas per ACI guidelines for crack control purposes. Design of the floor slab may be based on a modulus of subgrade reaction of 150 pci as related to a standard 12-inch diameter plate load test.

SECTION 7 CLOSURE

Recommendations and evaluations provided by Falcon are based on the project description as outlined herein. Modifications of our recommendations and evaluations may be required as design progresses. Recommendations in this report are based on data obtained from our subsurface field exploration and laboratory testing programs. The nature and extent of variations between borings may not become evident until construction, although more insight may be provided by additional field testing data.

Our professional services for this project have been performed in accordance with generally accepted geotechnical engineering practices. No other warranty, expressed or implied, is made. Falcon appreciates this opportunity to have provided you with geotechnical engineering services for this project. If you have any questions regarding this report, please contact our office at 919.871.0800.

WEATHERING

FRESH	Rock fresh, crystals bright, few joints may show slight staining. Rock rings under hammer if crystalline.
VERY SLIGHT (V. SL.)	Rock generally fresh, joints stained, some joints may show thin clay coatings if open, crystals on a broken specimens face shine brightly. Rock rings under hammer blows if of a crystalline nature.
SLIGHT (SLI.)	Rock generally fresh, joints stained and discoloration extends into rock up to 1 inch. Open joints may contain may contain clay. In granitoid rocks some occasional feldspar crystals are dull and discolored. Crystalline rock rings under hammer blows.
MODERATE (MOD.)	Significant portions of rock shows discoloration and weathering effects. In granitoid rocks, most feldspars are dull and discolored, some show clay. Rock has dull sound under hammer blows and show significant loss of strength as compared with fresh rock.
MODERATE SEVERE (MOD. SEV.)	All rocks except quartz discolored or stained. In granitoid rocks, all feldspars and discolored and a majority show kaolinitization. Rocks shows severe loss of strength and can be excavated with a geologist's pick. Rock gives "clunk" sound when struck. If tested would yield spt refusal.
SEVERE (SEV.)	All rocks except quartz discolored or stained. Rock fabric clear and evident but reduced in strength to strong soil. In granitoid rocks all feldspars are kaolinitized to some extent. Some fragments of strong rock usually remain. If tested, yields spt n-values > 100 bpf.
VERY SEVERE (V. SEV.)	All rocks except quartz discolored or stained. Rock fabric elements are discernible but the mass is effectively reduced to soil status, with only fragments of strong rock remaining. Saprolite is an example of rock weathered to a degree such that only minor vestiges of the original rock fabric remain. If tested, yields spt n-values < 100 bpf.
COMPLETE	Rock reduced to soil. Rock fabric not discernible or discernible only in small and scattered concentrations. Quartz may be present as dikes or stringers. Saprolite is also an example.

ROCK HARDNESS

VERY HARD	Cannot be scratched by knife or sharp pick. Breaking of hand specimens requires several hard blows of the geologist's pick.
HARD	Can be scratched by knife or pick only with difficulty. Hard hammer blows required to detach hand specimens.
MODERATELY HARD	Can be scratched by knife or pick. Gouges or grooves to 0.25 inches deep can be excavated by hard blow of a geologist's pick. Hand specimens can be detached with moderate blows.
MEDIUM HARD	Can be grooved or gouged 0.5 inches deep by firm pressure of knife or pick point. Can be excavated in small chips to pieces 1 inch maximum size by hard blows of the point of a geologist's pick.
SOFT	Can be grooved or gouged readily by knife or pick. Can be excavated in fragments from chips to several inches in size by moderate blows of a pick point. Small, thin pieces can be broken by finger pressure.
VERY SOFT	Can be carved with knife. Can be excavated readily with point of pick. Pieces 1 inch or more in thickness can be broken by finger pressure. Can be scratched readily by fingernail.

ROCK DEFINITION

Hard rock is non-coastal plain material that when tested, would yield spt refusal. An inferred rock line indicates the level at which non-coastal plain material would yield SPT refusal. SPT refusal is penetration by a split-spoon sampler equal to or less than 0.1 foot per 50 blows. In non-coastal plain material, the transition between soil and rock materials are typically divided as follows:

PARTIALLY WEATHERED ROCK (PWR)		Non-coastal plain material that yields SPT N-values > 100 blows per foot.
CRYSTALLINE ROCK (CR)		Fine to coarse grained, igneous and metamorphic rock that would yield SPT refusal if tested. Rock type includes granite, gneiss, gabbro, schist, etc.
NON-CRYSTALLINE ROCK (NCR)		Fine to coarse grained, metamorphic and non-coastal plain sedimentary rock that would yield SPT refusal if tested. Rock type includes phyllite, slate, sandstone, etc.
COASTAL PLAIN SEDIMENTARY ROCK (CP)		Coastal plain sediments cemented tinto rock but may not yield SPT refusal. Rocky type includes limestone, sandstone, cemented shell beds, etc.

TERMS AND DEFINITIONS

- ALLUVIUM: soils which have been transported and deposited by water.
- AQUIFER: a water bearing formation or strata.
- ARENACEOUS: applied to rocks that have been derived from sand or that contain sand. Argillaceous: applied to all rocks or substances composed of clay minerals, or having a notable proportion of clay in their composition, as shale/slate/etc.
- ARTESIAN: groundwater that is under sufficient pressure to rise above the level at which it is encountered, but which does not necessarily rise to or above the ground surface
- CALCAREOUS: soils which contain appreciable amounts of calcium carbonate.
- COLLUVIUM: rock fragments mixed with soil deposited by gravity on a slope or bottom of a slope.
- CORE RECOVERY: total length of all material recovered in the core barrel divided by total length of core run and expressed as a percentage.
- DIKE: a tabular body of igneous rock that cuts across the structure of adjacent rocks or cuts massive rock.
- DIP: the angle at which a stratum or any planar feature is inclined from the horizontal.
- DIP DIRECTION: the direction or bearing of the horizontal trace of the line of dip, measured clockwise from north.
- FAULT: a fracture or fracture zone along which there has been displacement of the sides relative to one another parallel to the fracture.
- FILL: man-made deposits of natural soils or rock products and waste materials.
- FISSLE: a property of splitting along closely spaced parallel planes.
- FLOAT: rock fragments on surface near their original position and dislodged from parent material.
- FLOOD PLAIN: land bordering a stream, built of sediments deposited by the stream.
- FORMATION: a mappable geologic unit that can be recognized and traced in the field.
- JOINT: fracture in rock along which no appreciable movement has occurred.
- LEDGE: a shelf-like ridge or projection of rock whose thickness is small compared to its lateral extent.
- LENS: a body of soil or rock that thins out in one or more directions.
- MOTTLED: irregularly marked with spots of different colors. Mottling in soils usually indicates poor aeration and lack of good drainage.
- PERCHED WATER: water maintained above the normal groundwater level by the presence of an intervening impervious stratum.
- RESIDUUM: soil formed in place by weathering of the parent rock.
- ROCK QUALITY DESIGNATION (ROD): a measure of rock quality described by: total length of rock segments equal to or greater than 4 inches divided by the total length of core run and expressed as a percentage.
- SAPROLITE: residual soil which retains the relic structure or fabric of the parent rock.
- SILL: an intrusive body of igneous rock of approximately uniform thickness and relatively thin compared with its lateral extent, which has been emplaced parallel to the bedding or schistosity of the intruded rocks.
- SLICKENSIDE: polished and striated surface that results from friction along a fault or slip plane.
- STANDARD PENETRATION TEST (SPT): number of blows of a 140 pound hammer falling 30 inches required to produce a penetration of 1 foot (N-value or blows per foot) into soil with a 2 in outside diameter split spoon sampler. SPT refusal is less than 0.1 foot penetration with 50 blows.
- STRATA CORE RECOVERY: total length of strata material recovered divided by total length of stratum and expressed as a percentage.
- STRATA ROCK QUALITY DESIGNATION: a measure of rock quality described by total length of rock segments within a stratum equal to or greater than 4 inches divided by the total length of strata and expressed as a percentage.
- STRATUM: a section of a formation consisting of the same kind of material throughout.
- TOPSOIL: surface soils usually containing organic material.

Percent Passing #200:	89.5 %
Liquid Limit:	87
Plastic Limit:	57
Plasticity Index:	30

TEST RESULTS	
Test Method:	ASTM D698 Method A
Maximum Dry Unit Weight:	86.4 pcf
Optimum Water Content:	32.6 %

SECTION 01 23 00 - ALTERNATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes administrative and procedural requirements for alternates.

1.3 DEFINITIONS

- A. Alternate: An amount proposed by bidders and stated on the Bid Form for certain work defined in the Bidding Requirements that may be added to or deducted from the Base Bid amount if Owner decides to accept a corresponding change either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.

1. Alternates described in this Section are part of the Work only if accepted by the Owner and enumerated in the Agreement.
2. The cost for each alternate is the net addition to the Contract Sum to incorporate alternate into the Work. No other adjustments are made to the Contract Sum.

- B. Preferred Brand Alternate: An amount proposed by bidders and stated on the Bid Form for use of products and materials in the Work that are preferred or required by the Owner as allowed under NCGS 133-3. Specifications to carry competitive items; substitution of materials.

1. Preferred Brand Alternates described in this Section are part of the Work only if accepted by the Owner and enumerated in the Agreement.
2. The cost for each Preferred Brand Alternate is the net addition to the Contract Sum to incorporate alternate into the Work. No other adjustments are made to the Contract Sum.

1.4 PROCEDURES

- A. Coordination: Modify or adjust affected adjacent work as necessary to completely integrate work of the alternate into Project.

1. Include as part of each alternate, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation whether or not indicated as part of alternate.

- B. Execute accepted alternates under the same conditions as other work of the Contract.

- C. Schedule: A Schedule of Alternates is included at the end of this Section. Specification Sections referenced in schedule contain requirements for materials necessary to achieve the work described under each alternate.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SCHEDULE OF PREFERRED BRAND ALTERNATES

- A. Alternate No. PBA-C1: Campus standards for Utilities
1. Base Bid: Provide Fire Hydrants from acceptable manufacturer as specified in Section 33 11 00 "Water Utility Distribution Systems."
 2. Alternate: Provide Fire Hydrants by Mueller.
- B. Alternate No. PBA-L1: Campus standards for Brick Pavers
1. Base Bid: Provide paver brick meeting requirements of Section 04 20 00 "Unit Masonry."
 2. Alternate: Provide paver brick by Pine Hall Brick (Winston Salem, NC) as follows:
 - a. Pedestrian Walks: Pathway Full Range
 - 1) Traditional Edge
 - 2) 4" x 8" x 2 1/4"
 - b. Heavy Vehicular Traffic: English Edge Full Range
 - 1) 4" x 8" x 2 3/4"
 - c. Accessible Curb Ramps: Brick Inset
 - 1) Dark Accent
 - 2) English Edge
 - 3) 4" x 8" x 2 1/4"
- C. Alternate No. PBA-L2: Campus standards for Irrigation Controllers
1. Base Bid: Provide irrigation controller meeting Owner's requirements.
 2. Alternate: Provide irrigation controller from Rain Bird, model ESP-MC.
- D. Alternate No. PBA-A1: Campus standards for Electrified Door Hardware
1. Base Bid: Provide electrified door hardware meeting the requirements of Section 08 71 00 "Door Hardware."
 2. Alternate: Provide electrified door hardware as follows:
 - a. Card Access Control and Video Systems and Equipment
 - 1) Access Control System and Equipment: Software House 9000
 - 2) Video Platform: Genetec
 - 3) CCTV Cameras: Axis Communications
 - b. Electrified Mortise Locksets: Schlage L9092EU with LX/RX/DPS.
 - 1) Finish: US26D
 - c. Electrified Access Control Exit Device: Von Duprin 98/99/33 Series QEL with LX/RX switch
 - 1) Finish: US26D

- d. Wireless Access Control Locksets: Schlage LE Greenwich with DPS
 - 1) Finish: US26D
- e. Door Hardware Power Supplies:
 - 1) Field Application: Altronix AL600ULACMCB with Access Module
 - 2) Security Headend Application: Altronix Maximal 33
 - 3) Security Headend Application: LifeSafety Power NetLink Integration with C-CURE 9000
 - 4) Onboard battery backup is required.
- f. Electro-mech Transfer Plate Hinge: 8-conductor transfer with minimum 18ga power pair from one of the following manufacturers:
 - 1) Stanley
 - 2) Command Access
 - 3) Hager

E. Alternate No. PBA-A2: Campus standards for Mechanical Door Hardware

- 1. Base Bid: Provide mechanical door hardware meeting the requirements of Section 08 71 00 "Door Hardware."
- 2. Alternate: Provide mechanical door hardware as follows:
 - a. Mortise Locks, Key in Levers, Cylindrical deadbolts:
 - 1) Acceptable manufacturers: Best, Schlage
 - 2) Finish: US26D
 - 3) Core: small format
 - b. Panic Hardware and Strikes:
 - 1) Acceptable manufacturer: Von Duprin
 - 2) Latching: Rim, vertical rod, mortise
 - c. Fire-rated Exit Devices:
 - 1) Acceptable manufacturer: Von Duprin
 - 2) Model: 626, 628
 - 3) Latching: Rim, vertical rod, mortise
 - d. Key blanks: 7-pin small format capable of interfacing with Best A2 and A4 systems
 - 1) Acceptable manufacturers: Schlage, Best

F. Alternate No. PBA-A3: Campus standards for Elevators and Conveyances

- 1. Base Bid: Provide conveyance elements meeting the requirements of Division 14.
- 2. Alternate: Provide conveyance elements as follows:
 - a. Controls: Smartrise Controller
 - 1) Traction Applications: C4
 - 2) Hydraulic Applications: SRH
 - b. Elevator Telephone: Gaitronics model 297
 - c. Digitized Floor Annunciator: CE Electronics, Inc.

G. Alternate No. PBA-A4: Campus standards for Toilet Accessories

- 1. Base Bid: Provide toilet accessories as specified in Section 10 28 00 "Toilet and Bath Accessories" and as shown on the Drawings.
 - a. Install owner-provided toilet accessories where indicated.
- 2. Alternate: Provide toilet accessories as follows:
 - a. Sanitary Napkin Disposal: Bobrick Contura Series

- 1) Surface mount
- 2) Model: B-270
- b. Sanitary Napkin Dispenser: Bobrick Trim Line Series
 - 1) Surface mount
 - 2) Model: B2800
 - 3) Finish: Stainless Steel, satin
- c. Install owner-provided toilet accessories where indicated.

H. Alternate No. PBA-I1: Campus standards for Floor Sealer and Finish

- 1. Base Bid: Provide sealers as required for durable flooring finishes from acceptable manufacturers specified in Division 09.
- 2. Alternate: Provide flooring finish and sealer as follows:
 - a. Flooring Sealer: Plaza Plus Floor Sealer
 - b. Flooring Finish: Finishes by Diversey Global selected from the following:
 - 1) Vectra High Performance Floor Finish
 - 2) Aquaria Floor Finish

I. Alternate No. PBA-M1: Campus standards for Metering of Mechanical Utilities

- 1. Base Bid: Provide utility meters meeting the requirements of Division 22 and Division 23.
- 2. Alternate: Provide specified meters as follows:
 - a. Condensate: Cadillac CMAG magnetic flowmeter
 - b. Steam: Accelabar
 - c. Chilled Water: Flexim Flexus F721 Energy Ultrasonic Flowmeter
 - d. City Water: Neptune Truflo

J. Alternate No. PBA-M2: Campus standards for HVAC Controls – Johnson Controls, Inc

- 1. Base Bid: Provide controls meeting the requirements of Division 23.
- 2. Alternate: Provide controls from Johnson Controls, Inc.

K. Alternate No. PBA-M3: Campus standards for HVAC Controls – Schneider Electric

- 1. Base Bid: Provide controls meeting the requirements of Division 23.
- 2. Alternate: Provide controls from Schneider Electric.

L. Alternate No. PBA-E1: Campus standards for Pedestrian Area Lighting

- 1. Base Bid: Provide pedestrian area lighting meeting the requirements of Section 26 56 00 “Exterior Lighting.”
- 2. Alternate: Provide KIM Archetype LED Series
 - a. Fixture: 1SA/SAR3E35/60L4K/VOLTAGE/DB
 - b. Photocell Receptacle: A-33 (voltage)
 - c. 12’ Pole: KRS12/4120/SAR/SA/DB/US LABEL
 - d. Finish: Anodized aluminum, Dark Bronze
 - e. Pole: Round, steel, non-tapered 7”-8.5” slotted bolt circle

M. Alternate No. PBA-E2: Campus standards for Street and Parking Lot Area Lighting

1. Base Bid: Provide pedestrian area lighting meeting the requirements of Section 26 56 00 "Exterior Lighting."
2. Alternate: Provide KIM Archetype LED Series as follows for single-sided fixtures:
 - a. Fixture: 1A/AR3E35/120L4K/VOLTAGE/DB
 - b. Photocell Receptacle: A-25 (VOLTAGE)
 - c. 30' Standard Pole: LTRA30-8156/AR/A/DB/UL LABEL
 - 1) Shape: Round, Tapered
 - 2) Finish: Anodized aluminum, Dark Bronze.
 - 3) 11" Bolt Circle
 - d. 30' Banner Pole: PTRS30-81120/AR/A/DB/UL LABEL
 - 1) Shape: Round, Steel, Tapered
 - 2) Finish: Dark Bronze.
 - 3) 10.5" Bolt Circle
3. Alternate: Provide KIM Archetype LED Series as follows for double-sided fixtures:
 - a. Fixture: 2B/AR3E35/120L4K/VOLTAGE/DB
 - b. Photocell Receptacle: A-25 (1 required per double assembly)
 - c. 30' Standard Pole : LTRA30-8156/AR/B/DB/UL LABEL
 - 1) Shape: Round, Aluminum, Tapered
 - 2) Finish : Dark Bronze
 - 3) 11" Bolt Circle
 - d. 30' Banner Pole : PTRS30-81120/AR/B/DB/UL LABEL
 - 1) Finish : Dark Bronze
 - 2) Pole : Round, Steel, Tapered
 - 3) 10.5" Bolt Circle

N. Alternate No. PBA-E3: Campus standards for Parking Lot Area Lighting

1. Base Bid: Provide pedestrian area lighting meeting the requirements of Section 26 56 00 "Exterior Lighting."
2. Alternate: Provide KIM Archetype LED Series as follows for single-sided fixtures:
 - 1) Fixture: 1A/AR3E35/120L4K/VOLTAGE/DB
 - 2) Photocell Receptacle: A-25 (VOLTAGE)
 - 3) 35' Standard Pole : LTRA35-8156/AR/A/DB/UL LABEL
 - a) Finish : Dark Bronze
 - b) Pole : Round, Aluminum, Tapered
 - c) 11.5" Bolt Circle
 - 4) 35' Banner Pole : PTRS35-85120/AR/A/DB/UL LABEL
 - a) Finish : Dark Bronze
 - b) Pole : Round, Steel, Tapered
 - c) 11.5" Bolt Circle
3. Alternate: Provide KIM Archetype LED Series as follows for double-sided fixtures:
 - 1) Fixture: 1A/AR3E35/120L4K/VOLTAGE/DB
 - 2) Photocell Receptacle: A-25 (VOLTAGE)
 - 3) 35' Standard Pole : LTRA35-8156/AR/A/DB/UL LABEL
 - a) Finish : Dark Bronze
 - b) Pole : Round, Aluminum, Tapered
 - c) 11.5" Bolt Circle
 - 4) 35' Banner Pole : PTRS35-85120/AR/A/DB/UL LABEL
 - a) Finish : Dark Bronze

- b) Pole : Round, Steel, Tapered
- c) 11.5" Bolt Circle

O. Alternate No. PBA-E4: Campus standards for Metering of Electricity

- 1. Base Bid: Provide utility meters meeting the requirements of Division 26.
- 2. Alternate: Provide Nexus 1262.

P. Alternate No. PBA-FA1: Campus standards for Fire Alarm Systems

- 1. Base Bid: Provide alarm system dialer meeting requirements of Section 28 31 11 "Digital, Addressable Fire-Detection and Alarm System."
- 2. Alternate: Provide alarm system dialer by Firelite; model MS-10UD.

END OF SECTION 01 23 00

SECTION 01 25 00 - SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for substitutions.
- B. Related Requirements:
 - 1. Division 01 Section "Product Requirements" for requirements for submitting comparable product submittals for products by listed manufacturers.

1.3 DEFINITIONS

- A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.
 - 1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
 - 2. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.

1.4 ACTION SUBMITTALS

- A. Substitution Requests: Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
 - 1. Substitution Request Form: Use CSI Form 13.1A. Submit both pages of form, fully executed. Subcontractor may fill-out form but it must be signed by the Construction Manager.
 - 2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
 - a. Statement indicating why specified product or fabrication or installation cannot be provided, if applicable.
 - b. Coordination information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and separate contractors that will be necessary to accommodate proposed substitution.

- c. Detailed, side-by-side comparison of significant qualities of proposed substitution with those of the Work specified. Include a matrix chart comparing salient physical features, including ASTM standards, etc. Include annotated copy of applicable Specification Section. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
 - 1) Do NOT submit unmarked copies of manufacturers literature. All submitted documents should contain Contractor's highlights of included options and commentary specific to the Work.
 - d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
 - e. Samples, where applicable or requested.
 - f. Certificates and qualification data, where applicable or requested.
 - g. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.
 - h. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
 - i. Research reports evidencing compliance with building code in effect for Project, from ICC-ES, Intertek, FM, UL, or other qualified agency approved by the Owner.
 - j. Detailed comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
 - k. Cost information, including a proposal of change, if any, in the Contract Sum.
 - l. Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.
 - m. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.
3. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within seven days of receipt of a request for substitution. Architect will notify Contractor through Construction Manager of acceptance or rejection of proposed substitution within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.
- a. Forms of Acceptance: Change Order, Construction Change Directive, or Architect's Supplemental Instructions for minor changes in the Work.
 - b. Use product specified if Architect does not issue a decision on use of a proposed substitution within time allocated.

1.5 QUALITY ASSURANCE

- A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

1.6 PROCEDURES

- A. Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

1.7 SUBSTITUTIONS

- A. General: Contractor is advised to consider long-lead items and supply chain issues to eliminate Substitution Requests due to availability.

- B. Substitutions for Cause: Submit requests for substitution immediately on discovery of need for change, but not later than 15 days prior to time required for preparation and review of related submittals.

- 1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

- a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
- b. Requested substitution provides sustainable design characteristics that specified product provided for compliance with project goals.
- c. Substitution request is fully documented and properly submitted.
- d. Requested substitution will not adversely affect Contractor's construction schedule.
- e. Requested substitution has received necessary approvals of authorities having jurisdiction.
- f. Requested substitution is compatible with other portions of the Work.
- g. Requested substitution has been coordinated with other portions of the Work.
- h. Requested substitution provides specified warranty.
- i. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

- C. Substitutions for Convenience: Architect will consider requests for substitution if received within 45 days after the Notice of Award. Requests received after that time may be considered or rejected at discretion of Architect.

- 1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

- a. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation services, increased cost of other construction by Owner, and similar considerations.
- b. Requested substitution does not require extensive revisions to the Contract Documents.
- c. Requested substitution is consistent with the Contract Documents and will produce indicated results.
- d. Substitution request is fully documented and properly submitted.
- e. Requested substitution will not adversely affect Contractor's construction schedule.
- f. Requested substitution has received necessary approvals of authorities having jurisdiction.
- g. Requested substitution is compatible with other portions of the Work.
- h. Requested substitution has been coordinated with other portions of the Work.
- i. Requested substitution provides specified warranty.
- j. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 25 00

SECTION 01 26 00 - CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for handling and processing Contract modifications.
- B. Related Requirements:
 - 1. Division 01 Section "Product Requirements" for administrative procedures for handling requests for substitutions made after the Contract award.

1.3 MINOR CHANGES IN THE WORK

- A. Architect will issue supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, on AIA Document G710, "Architect's Supplemental Instructions" or Architect's ASI form.

1.4 PROPOSAL REQUESTS

- A. Owner-Initiated Proposal Requests: Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.
 - 1. Work Change Proposal Requests issued by Architect are not instructions either to stop work in progress or to execute the proposed change.
 - 2. Within time specified in Proposal Request or 20 days, when not otherwise specified, after receipt of Proposal Request, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.
 - a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
 - b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
 - c. Include costs of labor and supervision directly attributable to the change, including fringe benefits. Include wage rate breakdowns for each trade involved.

- d. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
 - e. Quotation Form: Use forms acceptable to Owner and Architect.
- B. Contractor-Initiated Proposals: If latent or changed conditions require modifications to the Contract, Contractor may initiate a claim by submitting a request for a change to Architect.
 - 1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
 - 2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
 - 3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
 - 4. Include costs of labor and supervision directly attributable to the change, including fringe benefits. Include wage rate breakdowns for each trade involved.
 - 5. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
 - 6. Comply with requirements in Division 01 Section "Product Requirements" if the proposed change requires substitution of one product or system for product or system specified.
 - 7. Proposal Request Form: Use form acceptable to Owner and Architect.

1.5 CHANGE ORDER PROCEDURES

- A. On Owner's approval of a Work Changes Proposal Request, Architect will issue a Change Order for signatures of Owner and Contractor on a form acceptable to Owner and Architect.

1.6 CONSTRUCTION CHANGE DIRECTIVE

- A. Construction Change Directive: Architect may issue a Construction Change Directive on AIA Document G714-2017. Construction Change Directive instructs Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.
 - 1. Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.
- B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.
 - 1. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 26 00

SECTION 01 29 00 - PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section specifies administrative and procedural requirements necessary to prepare and process Applications for Payment.
- B. Related Sections include the following:
 - 1. Division 01 Section "Contract Modification Procedures" for administrative procedures for handling changes to the Contract.
 - 2. Division 01 Section "Construction Progress Documentation" for administrative requirements governing preparation and submittal of Contractor's Construction Schedule and Submittals Schedule.

1.3 DEFINITIONS

- A. Schedule of Values: A statement furnished by Contractor allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

1.4 SCHEDULE OF VALUES

- A. Coordination: Coordinate preparation of the Schedule of Values with preparation of Contractor's Construction Schedule.
 - 1. Correlate line items in the Schedule of Values with other required administrative forms and schedules.
 - 2. Include the following:
 - a. Application for Payment forms with Continuation Sheets
 - b. Submittals Schedule
 - c. Items required to be indicated as separate activities in Contractor's construction schedule.
 - 3. Submit the Schedule of Values to Architect through Construction Manager at earliest possible date but no later than 15 days after award of contract and before the submission of the initial Application for Payment.

4. Subschedules for Phased Work: Where the Work is separated into phases requiring separately phased payments, provide subschedules showing values coordinated with each phase of payment.
 5. Subschedules for Separate Elements of Work: Where the Contractor's construction schedule defines separate elements of the Work, provide subschedules showing values coordinated with each element.
- B. Format and Content: Use the Project Manual table of contents as a guide to establish line items for the Schedule of Values. Provide at least one line item for each Specification Section.
1. Identification: Include the following Project identification on the Schedule of Values:
 - a. Project name and location
 - b. Name of Architect
 - c. Architect's project number
 - d. Contractor's name and address
 - e. Date of submittal
 2. Arrange schedule of values consistent with format of AIA Document G702, Application and Certificate for Payment and Document G703 Continuation Sheets.
 3. Arrange the Schedule of Values in tabular form with separate columns to indicate the following for each item listed:
 - a. Related Specification Section or Division
 - b. Description of the Work
 - c. Name of subcontractor
 - d. Name of manufacturer or fabricator
 - e. Name of supplier
 - f. Change Orders (numbers) that affect value
 - g. Dollar value of the following, as a percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent.
 - 1) Labor.
 - 2) Materials.
 - 3) Equipment.
 4. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with the Project Manual table of contents. Provide multiple line items for principal subcontract amounts in excess of five percent of the Contract Sum.
 - a. Include separate line items under principal subcontracts for Project closeout requirements in an amount totaling five percent of the Contract Sum and subcontract amount.
 5. Round amounts to nearest whole dollar; total shall equal the Contract Sum.
 6. Provide a separate line item in the Schedule of Values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.

- a. Differentiate between items stored on-site and items stored off-site. If specified, include evidence of insurance or bonded warehousing.
7. Provide separate line items in the Schedule of Values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.
 8. Allowances: Provide a separate line item in the Schedule of Values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities.
 9. Purchase Contracts: Provide a separate line item in the schedule of values for each purchase contract. Show line-item value of purchase contract. Indicate owner payments or deposits, if any, and balance to be paid by Contractor.
 10. Each item in the Schedule of Values and Applications for Payment shall be complete. Include total cost and proportionate share of general overhead and profit for each item.
 - a. Temporary facilities and other major cost items that are not direct cost of actual work-in-place may be shown either as separate line items in the Schedule of Values or distributed as general overhead expense, at Contractor's option.
 11. Overhead Costs: Include total cost and proportionate share of general overhead and profit for each line item.
 12. Closeout Costs. Include separate line items under Contractor and principal subcontracts for Project closeout requirements in an amount totaling five percent of the Contract Sum and subcontract amount.
 13. Schedule of Values Revisions: Revise the schedule of values when Change Orders or Construction Change Directives result in a change in the Contract Sum. Include at least one separate line item for each Change Order and Construction Change Directive.
 14. Schedule Updating: Update and resubmit the Schedule of Values before the next Applications for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum.

1.5 APPLICATIONS FOR PAYMENT

- A. Each Application for Payment shall be consistent with previous applications and payments as certified by Architect and Construction Manager and paid for by Owner.
 1. Initial Application for Payment, Application for Payment at time of Final Acceptance, and final Application for Payment involve additional requirements.
- B. Payment Application Times: The date for each progress payment is indicated in the Agreement between Owner and Contractor. The period of construction Work covered by each Application for Payment is the period indicated in the Agreement.
 1. Submit draft copy of Application for Payment seven days prior to due date for review by Architect.
- C. Additional information required prior to reviewing monthly pay application.
 1. An updated project construction schedule coordinated with pay application
 2. An updated submittals schedule coordinated with pay application

- D. Application for Payment Forms: Use forms acceptable to Architect and Owner for Applications for Payment. Submit forms for approval with initial submittal of schedule of values.
- E. Application Preparation: Complete every entry on form. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Architect will return incomplete applications without action.
1. Entries shall match data on the Schedule of Values and Contractor's Construction Schedule. Use updated schedules if revisions were made.
 2. Include amounts for work completed following previous Application for Payment, whether or not payment has been received. Include only amounts for work completed at time of Application for Payment.
 3. Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.
 4. Indicate separate amounts for work being carried out under Owner-requested project acceleration.
- F. Stored Materials: Include in Application for Payment amounts applied for materials or equipment purchased or fabricated and stored, but not yet installed.
1. Differentiate between items stored on-site and items stored off-site. Only materials stored on-site or in a bonded facility shall be eligible for payment.
 2. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment, for stored materials.
 3. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
 4. Provide summary documentation for stored materials indicating the following:
 - a. Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
 - b. Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
 - c. Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.
- G. Transmittal: Submit 1 original and 4 signed and notarized original copies of each Application for Payment to Architect by a method ensuring receipt within 24 hours. One copy shall include waivers of lien and similar attachments if required.
1. Transmit each copy with a transmittal form listing attachments and recording appropriate information about application.
- H. Waivers of Mechanic's Lien: With each Application for Payment, submit waivers of mechanic's lien from every entity who is lawfully entitled to file a mechanic's lien arising out of the Contract and related to the Work covered by the payment.
1. Submit partial waivers on each item for amount requested in previous application, after deduction for retainage, on each item.
 2. When an application shows completion of an item, submit final or full waivers.

3. Owner reserves the right to designate which entities involved in the Work must submit waivers.
 4. Waiver Forms: Submit waivers of lien on forms, executed in a manner acceptable to Owner.
- I. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:
1. List of subcontractors
 2. Schedule of Values
 3. Contractor's Construction Schedule (preliminary if not final)
 4. Products list
 5. **Sustainable Design** action plans; including project materials cost data.
 6. Schedule of unit prices
 7. Submittals Schedule
 8. List of Contractor's staff assignments
 9. List of Contractor's principal consultants
 10. Copies of building permits
 11. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work
 12. Initial progress report
 13. Report of preconstruction conference
 14. Certificates of insurance and insurance policies
 15. Performance and payment bonds
 16. Data needed to acquire Owner's insurance
- J. Application for Payment at Final Acceptance: After issuing the Certificate of Final Acceptance, submit an Application for Payment showing 100 percent completion for portion of the Work claimed as substantially complete.
1. Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum.
 2. This application shall reflect Certificates of Partial Final Acceptance issued previously for Owner occupancy of designated portions of the Work.
- K. Final Payment Application: After completing Project closeout requirements, submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:
1. Evidence of completion of Project closeout requirements
 2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
 3. Updated final statement, accounting for final changes to the Contract Sum
 4. AIA Document G706, "Contractor's Affidavit of Payment of Debts and Claims"
 5. AIA Document G706A, "Contractor's Affidavit of Release of Liens"
 6. AIA Document G707, "Consent of Surety to Final Payment"
 7. Evidence that claims have been settled.
 8. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Final Acceptance or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
 9. Final, liquidated damages settlement statement

10. Final Change Order Adjustments

- a. Final Allowance Adjustments
- b. Deductions for uncorrected Work
- c. Deductions for reinspection payments.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 29 00

SECTION 01 31 00 - PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:
 - 1. General coordination procedures.
 - 2. Coordination Drawings
 - 3. Administrative and supervisory personnel
 - 4. Requests for Interpretation (RFIs)
 - 5. Digital project management procedures.
 - 6. Project meetings
- B. Each contractor shall participate in coordination requirements. Certain areas of responsibility will be assigned to a specific contractor.
- C. Related Sections include the following:
 - 1. Division 01 Section "Construction Progress Documentation" for preparing and submitting Contractor's Construction Schedule.
 - 2. Division 01 Section "Execution" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.
 - 3. Division 01 Section "Closeout Procedures" for coordinating closeout of the Contract.
 - 4. Division 01 Section "Commissioning" for coordinating the Work with Owner's Commissioning Authority.

1.3 DEFINITIONS

- A. BIM: Building Information Modeling.
- B. RFI: Request from Contractor seeking interpretation or clarification of the Contract Documents.
- C. Weathertight: Erected with the specified air/vapor barrier intact and encircling the building without gaps, holes or missing transitions between building elements which may cause the finished building to perform at less than specified levels.

1.4 INFORMATIONAL SUBMITTALS

- A. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:
1. Name, address, telephone number, and email address of entity performing subcontract or supplying products.
 2. Number and title of related Specification Section(s) covered by subcontract.
 3. Drawing number and detail references, as appropriate, covered by subcontract.
- B. Key Personnel Names: Within 15 days of starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses and cellular telephone numbers and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.
1. Post copies of list in project meeting room, in temporary field office, in web-based Project software directory, and in prominent location in each built facility. Keep list current at all times.

1.5 GENERAL COORDINATION PROCEDURES

- A. Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections that depend on each other for proper installation, connection, and operation.
- B. Additional Procedures:
1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
 2. Coordinate installation of different components with other contractors:
 - a. To ensure maximum accessibility for required maintenance, service, and repair, including mechanical and electrical access.
 - b. To ensure components are assembled in the order intended and in a weathertight manner.
 3. Make adequate provisions to accommodate items scheduled for later installation.
 4. Where availability of space is limited, coordinate installation of different components to ensure maximum performance and accessibility.
- C. Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.
1. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.

- D. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities and activities of other contractors to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
1. Preparation of Contractor's Construction Schedule
 2. Preparation of the Schedule of Values
 3. Installation and removal of temporary facilities and controls
 4. Delivery and processing of submittals
 5. Progress meetings
 6. Preinstallation conferences
 7. Startup and adjustment of systems
 8. Project closeout activities
- E. Conservation: Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials.
1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. Refer to other Sections for disposition of salvaged materials that are designated as Owner's property.

1.6 COORDINATION DRAWINGS

- A. Coordination Drawings, General: Prepare coordination drawings according to requirements in individual Sections, and additionally where installation is not completely indicated on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.
1. It is the intent of the coordination drawings to identify coordination problems and interferences prior to installation and to establish the layout of this work where exposed in finished spaces for the Architect's review. Drawings shall show the work of all trades covered and shall show clearly that all work can be installed without interference. This effort shall be led by the Contractor.
 2. Time of Coordination of Drawing Preparation: The coordination drawings shall be prepared, submitted and accepted before any sleeves or inserts are set, any floor openings are core drilled, or any mechanical or electrical equipment or bases or related work is fabricated or installed. The completion of the coordination drawings by each trade will be a prerequisite for any progress payment for any material or equipment delivered or for any work by these trades. The preparation of coordination drawings acceptable to the Architect is a contract requirement, the cost of which is included in the contract price. The cost of coordination drawings shall be included as a separate line item in the Schedule of Values.
 3. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:
 - a. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe relationship of various systems and components.

- b. Coordinate the addition of trade-specific information to coordination drawings by multiple contractors in a sequence that best provides for coordination of the information and resolution of conflicts between installed components before submitting for review.
- c. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
- d. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
- e. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
- f. Indicate required installation sequences.
- g. Indicate dimensions shown on Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternative sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

B. Coordination Drawing Organization: Organize coordination drawings as follows:

- 1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical Work. Show locations of visible ceiling-mounted devices relative to acoustical ceiling grid. Supplement plan drawings with section drawings where required to adequately represent the Work.
- 2. Plenum Space: Indicate subframing for support of ceiling and wall systems, mechanical and electrical equipment, and related Work. Locate components within plenums to accommodate layout of light fixtures and other components indicated on Drawings. Indicate areas of conflict between light fixtures and other components.
- 3. Mechanical Rooms: Provide coordination drawings for mechanical rooms showing plans and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
- 4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
- 5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
- 6. Mechanical and Plumbing Work: Show the following:
 - a. Sizes and bottom elevations of ductwork, piping, and conduit runs, including insulation, bracing, flanges, and support systems.
 - b. Dimensions of major components, such as dampers, valves, diffusers, access doors, cleanouts and electrical distribution equipment.
 - c. Fire-rated enclosures around ductwork.
- 7. Electrical Work: Show the following:
 - a. Runs of vertical and horizontal conduit **1-1/4 inches (32 mm)** in diameter and larger.
 - b. Light fixture, exit light, emergency battery pack, smoke detector, and other fire-alarm locations.
 - c. Panel board, switch board, switchgear, transformer, busway, generator, and motor-control center locations.
 - d. Location of pull boxes and junction boxes, dimensioned from column center lines.

8. Fire-Protection System: Show the following:
 - a. Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.
 9. Review: Architect will review coordination drawings to confirm that in general the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility. If Architect determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Architect will so inform Contractor, who shall make suitable modifications and resubmit.
 10. Coordination Drawing Prints: Prepare coordination drawing prints according to requirements in Section 013300 "Submittal Procedures."
- C. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:
1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.
 2. File Submittal Format: Submit or post coordination drawing files using PDF format.
 3. BIM File Incorporation: Develop and incorporate coordination drawing files into BIM established for Project.
 - a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Architect.
 4. Architect will, upon request, furnish Contractor with digital data files of Drawings for use in preparing coordination digital data files.
 - a. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
 - b. Digital Data Software Program: Drawings are available in <Insert name and version of digital data software program and operating system>.
 - c. Contractor and Subcontractors shall execute a data licensing agreement in the form of Architect's "Agreement For Delivery Of Instruments Of Service In Electronic Form".

1.7 BUILDING ENCLOSURE COORDINATION DRAWINGS

- A. Content: Project-specific information, drawn accurately to scale. Do not base Coordination Drawings on reproductions of the Contract Documents or standard printed data. Include the following information, as applicable:
1. Indicate functional and spatial relationships of components of building enclosure systems.
 2. Indicate required installation sequences.
- B. Development of Building Enclosure Coordination Drawings
1. The Contractor and the Roofing, Fenestration, Expansion Joint, Building Facade, Insulation, Air/Vapor Barrier, Sheathing and any other involved subcontractors are each required to participate in the creation and updating of building enclosure coordination

drawings. The purpose of the coordination drawings is to preplan the installation of air/vapor barrier, flashings, expansion/control joints, penetrations, ETAs and any other involved subcontractors in relation to the existing and new facility and its structure, framing, sheathing, fenestration, skin, etc. It is the intent of these coordination drawings to identify coordination problems and proper installation sequences prior to erection and to establish the layout of this work for the Architect's and Owner's Commissioning Agent's review. Drawings shall show the work of all trades covered (including both existing and new), shall show clearly in both plan and section that all work can be installed in a weathertight manner without exception. This effort shall be led by the Contractor.

2. Time of Coordination of Drawing Preparation: The coordination drawings shall be prepared, submitted and accepted before any sheathing or roofing materials are installed. The completion of the coordination drawings will be a prerequisite for any progress payment for any material or equipment delivered or for any work by these trades. The preparation of coordination drawings acceptable to the Architect is a contract requirement, the cost of which is included in the contract price. The cost of building enclosure coordination drawings shall be included as a separate line item in the Schedule of Values.
3. Procedure
 - a. The Contractor shall produce drawings at a scale which is acceptable to the Architect, showing constraints such as structural, substrate information, adjacent materials, flashings, sealants, and sequencing requirements that are coordinated between the affected trades and ready for execution in the field. These shall be used as the coordination drawing base.
 - b. The Contractor will then hold a meeting with all involved subcontractors in attendance to resolve any conflicts or problems. After the coordination drawings are reviewed and any conflicts resolved, the originals shall be signed by the Contractor and each of the involved subcontractors. Any non-resolvable conflicts shall be brought to the attention of the Architect.
 - c. The Contractor shall then make copies and submit the coordination drawings to the Architect and Owner's Commissioning Agent, as record drawings. He shall also transmit copies to the above subcontractors.
 - d. The Contractor shall retain the drawings to be used in preparing the field mockup, the sequenced construction of the building, the third party field testing and the preparation of record documents.

C. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:

1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.
2. File Submittal Format: Submit or post coordination drawing files using PDF format.
3. BIM File Incorporation: Develop and incorporate coordination drawing files into BIM established for Project.
 - a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Architect.
4. Architect will, upon request, furnish Contractor digital data files of Drawings for use in preparing coordination digital data files.

- a. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
- b. Digital Data Software Program: Drawings are available in <Insert name and version of digital data software program and operating system>.
- c. Contractor shall execute a data licensing agreement in the form of Architect's "Agreement For Delivery Of Instruments Of Service In Electronic Form".

1.8 WORK INSTALLED WITHOUT PRIOR APPROVAL

- A. Any work fabricated or installed prior to the signing of coordination drawings shall be at the subcontractor's risk. Subsequent relocations or reinstallation required to avoid interferences or to correct non-weathertight conditions shall be made without additional expense to the Owner.
 1. If interference develops, the Contractor shall recommend (subject to Architect's review and acceptance) which work shall be relocated, regardless of which was installed first.
 2. Building Envelope issues shall be resolved by the Contractor, Owners Commissioning Agent and Architect.

1.9 ADMINISTRATIVE AND SUPERVISORY PERSONNEL

- A. General: In addition to Project superintendent, provide other administrative and supervisory personnel as required for proper performance of the Work.
- B. Supervision: The Contractor shall employ a competent superintendent and necessary assistants, acceptable to the Owner, who shall be in attendance at the Project site during performance of the Work. The superintendent shall represent the Contractor, and communications given to the superintendent shall be as binding as if given to the Contractor.
- C. This Project will require the use of full time supervision for the performance of the Work.
 1. The Contractor is required to have a superintendent present at the site of the Project at all times when performance of the Work is actively underway regardless of the day or shift. During these times the superintendent will not be assigned to any other project and will not perform any trade work on the Project. Consistent with the foregoing as well as for superintendent's personal reasons, at those times when the superintendent is taken away from the site of the Project, a replacement superintendent suitable to the Owner shall be assigned to the Project.

1.10 REQUESTS FOR INTERPRETATION (RFIs)

- A. General: Immediately on discovery of the need for additional information, clarification, or interpretation of the Contract Documents, the Contractor shall prepare and submit an RFI in the form specified.
 1. Architect will return without response those RFIs submitted to Architect by other entities controlled by Contractor.
 2. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.

- B. Content of the RFI: Include a detailed, legible description of item needing interpretation and the following:
1. Project name
 2. Project number.
 3. Date
 4. Name of Contractor
 5. Name of Architect
 6. RFI number, numbered sequentially
 7. RFI subject.
 8. Specification Section number and title and related paragraphs, as appropriate
 9. Drawing number and detail references, as appropriate
 10. Field dimensions and conditions, as appropriate
 11. Contractor's suggested solution(s). If Contractor's solution(s) impact the Contract Time or the Contract Sum, Contractor shall state impact in the RFI
 12. Contractor's signature
 13. Attachments: Include drawings, descriptions, measurements, photos, Product Data, Shop Drawings, and other information necessary to fully describe items needing interpretation
 - a. Supplementary drawings prepared by Contractor shall include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments.
- C. RFI Form: Software-generated form with substantially the same content as indicated above.
1. Attachments shall be electronic files in Adobe Acrobat PDF format
- D. Architect's Action: Architect will review each RFI, determine action required, and respond. Allow seven working days for Architect's response for each RFI. RFIs received by the Architect after 1:00 p.m. will be considered as received the following working day.
1. The following RFIs will be returned without action:
 - a. Requests for approval of submittals
 - b. Requests for approval of substitutions
 - c. Requests for approval of Contractor's means and methods.
 - d. Requests for coordination information already indicated in the Contract Documents
 - e. Requests for adjustments in the Contract Time or the Contract Sum
 - f. Requests for interpretation of Architect's actions on submittals
 - g. Incomplete RFIs or inaccurately prepared RFIs.
 2. Architect's action may include a request for additional information, in which case Architect's time for response will date from time of receipt by Architect of additional information.
 3. Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Division 01 Section "Contract Modification Procedures."
 - a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect in writing within 10 days of receipt of the RFI response.

- E. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Submit log weekly. Software log with not less than the following:
1. Project name
 2. Name and address of Contractor
 3. Name and address of Architect
 4. RFI number including RFIs that were returned without action or withdrawn
 5. RFI description
 6. Date the RFI was submitted
 7. Date Architect's response was received
 8. Identification of related Minor Change in the Work, Construction Change Directive, and Proposal Request, as appropriate
 9. Identification of related Field Order, Work Change Directive, and Proposal Request, as appropriate.
- F. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within seven days if Contractor disagrees with response.

1.11 DIGITAL PROJECT MANAGEMENT PROCEDURES

- A. Use of Architect's Digital Data Files: Upon request, digital data files of Architect's BIM model will be provided by Architect for Contractor's use during construction.
1. Digital data files may be used by Contractor in preparing coordination drawings, Shop Drawings, and Project record Drawings.
 2. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Contract Drawings.
 3. Digital Drawing Software Program: Contract Drawings are available in <Insert name and version of digital drawing software program and operating system>.
 4. Contractor shall execute a data licensing agreement in the form of Architect's "Agreement For Delivery Of Instruments Of Service In Electronic Form".
 - a. Subcontractors, and other parties granted access by Contractor to Architect's digital data files shall execute a data licensing agreement in the form of Architect's "Agreement For Delivery Of Instruments Of Service In Electronic Form".
- B. Web-Based Project Software: Use Construction Manager's web-based Project software site for purposes of hosting and managing Project communication and documentation until Final Completion.
1. Web-based Project software site includes, at a minimum, the following features:
 - a. Compilation of Project data, including Contractor, subcontractors, Architect, architect's consultants, Owner, and other entities involved in Project. Include names of individuals and contact information.
 - b. Access control for each entity for each workflow process, to determine entity's digital rights to create, modify, view, and print documents.
 - c. Document workflow planning, allowing customization of workflow between project entities.

- d. Creation, logging, tracking, and notification for Project communications required in other Specification Sections, including, but not limited to, RFIs, submittals, Minor Changes in the Work, Construction Change Directives, and Change Orders.
 - e. Track status of each Project communication in real time, and log time and date when responses are provided.
 - f. Procedures for handling PDFs or similar file formats, allowing markups by each entity. Provide security features to lock markups against changes once submitted.
 - g. Processing and tracking of payment applications.
 - h. Processing and tracking of contract modifications.
 - i. Creating and distributing meeting minutes.
 - j. Document management for Drawings, Specifications, and coordination drawings, including revision control.
 - k. Management of construction progress photographs.
 - l. Mobile device compatibility, including smartphones and tablets.
- 2. Provide up to seven web-based Project software user licenses for use of Owner, Owner's Commissioning Authority, Construction Manager, Architect, and Architect's consultants. Provide eight hours of software training at Owner's office for web-based Project software users.
 - 3. At completion of Project, provide digital archive in format that is readable by common desktop software applications in format acceptable to Architect. Provide data in locked format to prevent further changes.
 - 4. Provide **[one of]**the following web-based Project software packages under their current published licensing agreements:
 - a. Autodesk; Construction Cloud (ACC).
 - b. Corecon Technologies, Inc.
 - c. Meridian Systems; Prolog.
 - d. Newforma, Inc.
 - e. Procore Technologies, Inc.
 - f. Viewpoint, Inc.; Viewpoint for Project Collaboration.
- C. PDF Document Preparation: Where PDFs are required to be submitted to Architect, prepare as follows:
- 1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
 - 2. Name file with submittal number or other unique identifier, including revision identifier.
 - 3. Certifications: Where digitally submitted certificates and certifications are required, provide a digital signature with digital certificate on where indicated.

1.12 PROJECT MEETINGS

- A. General: Construction Manager shall be responsible to preside at meetings and conferences at Project site unless otherwise indicated.
 - 1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Architect of scheduled meeting dates and times a minimum of 10 working days prior to meeting.

2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
3. Minutes: Entity responsible for conducting meeting will record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner, Construction Manager, and Architect, within three days of the meeting.
4. Contractor shall make physical arrangements for meetings.
5. Representatives of contractors, subcontractors and suppliers invited to attend meetings shall be qualified and authorized to act on behalf of the entity each represents.

B. Preconstruction “Kickoff” Meeting

1. Architect will schedule and administer preconstruction meeting in conjunction with the Owner and Contractor. The Architect will prepare the meeting agenda and distribute. The Architect will preside at the meeting and shall record and distribute the minutes.
2. Preconstruction Meeting Agenda:
 - a. Discuss items of significance that could affect progress, including the following:
 - 1) Review of projected Construction Schedule.
 - 2) Review project Phasing Requirements.
 - 3) Review critical work sequencing and long-lead items
 - 4) Requirements for Receipt of the Submittal Schedule
 - 5) Procedures for receipt and review of Submittals
 - 6) Procedures for receipt and review of RFIs
 - b. Discuss procedures for the processing of the following:
 - 1) Distribution of the Contract Documents.
 - 2) Procedures for processing Applications for Payment
 - 3) Procedures for processing field decisions and Change Orders
 - 4) Procedures for processing Sustainable Design requirements
 - 5) Procedures for disruptions and shutdowns.
 - 6) Maintenance and Preparation of Record Documents
 - 7) Procedures for moisture and mold control.
 - 8) Procedures for testing and inspecting
 - 9) Designation of key decision making personnel and their responsibilities.
 - 10) Lines of communications.
 - 11) List of major subcontractors and suppliers
 - 12) Submission of insurance certificates to Owner.
 - 13) Procedures for Photographic Records and Distribution.
 - 14) Submittal procedures.
 - c. Discuss Construction Facilities and Operations
 - 1) Use of the premises and existing building
 - 2) Owner's occupancy requirements
 - 3) Responsibility for temporary facilities and controls
 - 4) Use of web-based Project software.
 - 5) Work restrictions
 - 6) Working hours.
 - 7) Temporary utilities
 - 8) Security

- 9) Contractor office, laydown and storage areas
 - 10) Equipment deliveries and priorities
 - 11) Construction waste management and recycling
 - 12) Safety and first aid procedures
 - 13) Contractor parking availability
 - 14) Progress cleaning and housekeeping procedures
3. Attendees: Authorized representatives of Owner, Owner's Commissioning Authority, Construction Manager, Architect, and their consultants; assigned SCO Monitor; Contractor and its superintendent and sustainable design coordinator; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
 4. Agenda: Discuss items of significance that could affect meeting sustainable design requirements, including the following:
 - a. General requirements for sustainable design-related procurement and documentation.
 - b. Project closeout requirements and sustainable design certification procedures.
 - c. Role of sustainable design coordinator.
 - d. Construction waste management.
 - e. Construction operations and sustainable design requirements and restrictions.
 5. Minutes: Entity responsible for conducting meeting will record and distribute meeting minutes.
- C. Preinstallation Conferences: Contractor shall conduct a preinstallation conference at Project site before each construction activity that requires coordination with other construction.
1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect of scheduled meeting dates.
 2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:
 - a. The Contract Documents
 - b. Options
 - c. Related RFIs
 - d. Related Change Orders
 - e. Purchases
 - f. Deliveries
 - g. Submittals
 - h. Sustainable design requirements.
 - i. Review of mockups
 - j. Possible conflicts
 - k. Compatibility problems
 - l. Time schedules
 - m. Weather limitations
 - n. Manufacturer's written recommendations
 - o. Warranty requirements
 - p. Compatibility of materials

- q. Acceptability of substrates
 - r. Temporary facilities and controls
 - s. Space and access limitations
 - t. Regulations of authorities having jurisdiction
 - u. Testing and inspecting requirements
 - v. Installation procedures
 - w. Coordination with other work
 - x. Required performance results
 - y. Protection of adjacent work
 - z. Protection of construction and personnel
3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
 4. Reporting: Distribute minutes of the meeting to each party present and to parties who should have been present.
 5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.
- D. Progress (OAC) Meetings: Contractor will conduct progress meetings at weekly intervals. Coordinate dates of meetings with preparation of payment requests.
1. Attendees: In addition to representatives of Owner and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
 - a. SCO Monitor: At least one Progress Meeting per month shall be attended by the assigned SCO Monitor.
 2. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
 - a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's Construction Schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
 - 1) Review schedule for next period
 - b. Review present and future needs of each entity present, including the following:
 - 1) Review, approve of minutes of previous meeting
 - 2) Review of unsettled matters
 - 3) Problems which impede Construction Schedule
 - 4) Pending changes and substitutions
 - 5) Review proposed changes for

- a) Effect on Construction Schedule and on completion date
 - b) Effect on other contracts of the Project
- 6) Field observations, problems, conflicts
 - 7) Sustainable design requirements.
 - 8) Review of work progress since previous meeting
 - 9) Contractor's statement of corrective measures and procedures to regain projected schedule
 - 10) Revisions to Construction Schedule
 - 11) Progress, schedule, during succeeding work period
 - 12) Coordination of schedules
 - 13) Maintenance of quality standards
 - 14) Other business
 - 15) Interface requirements
 - 16) Sequence of operations
 - 17) Status of submittals
 - 18) Deliveries
 - 19) Off-site fabrication
 - 20) Access
 - 21) Site utilization
 - 22) Temporary facilities and controls
 - 23) Work hours
 - 24) Hazards and risks
 - 25) Progress cleaning
 - 26) Quality and work standards
 - 27) Status of correction of deficient items
 - 28) Field observations
 - 29) RFIs
 - 30) Status of proposal requests
 - 31) Pending changes
 - 32) Status of Change Orders
 - 33) Pending claims and disputes
 - 34) Documentation of information for payment requests
3. Minutes: Contractor will record and distribute the meeting minutes to the Owner, Architect, all additional designates and all attendees.
 - a. Record and distribute meeting minutes within 48 hours of each meeting.
 - b. Schedule Updating: Revise Contractor's Construction Schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.
- E. Project Closeout Conference: Construction Manager will schedule and conduct a project closeout conference, at a time convenient to Owner and Architect, but no later than 90 days prior to the scheduled date of Final Acceptance.
1. Conduct the conference to review requirements and responsibilities related to Project closeout.
 2. Attendees: Authorized representatives of Owner, Owner's Commissioning Authority, Construction Manager, Architect, and their consultants; assigned SCO Monitor; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall

- attend the meeting. Participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Discuss items of significance that could affect or delay Project closeout, including the following:
 - a. Preparation of Record Documents.
 - b. Procedures required prior to inspection for Final Acceptance and for final inspection for acceptance.
 - c. Procedures for completing and archiving web-based Project software site data files.
 - d. Submittal of written warranties.
 - e. Requirements for completing sustainable design documentation.
 - f. Requirements for preparing operations and maintenance data.
 - g. Requirements for delivery of material samples, attic stock, and spare parts.
 - h. Requirements for demonstration and training.
 - i. Preparation of Contractor's punch list.
 - j. Procedures for processing Applications for Payment at Final Acceptance and for final payment.
 - k. Submittal procedures.
 - l. Owner's partial occupancy requirements.
 - m. Installation of Owner's furniture, fixtures, and equipment.
 - n. Responsibility for removing temporary facilities and controls.
 4. Minutes: Entity conducting meeting will record and distribute meeting minutes.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 31 00

SECTION 01 32 00 - CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:

1. Preliminary (Start-up) Construction Schedule
2. Contractor's Construction Schedule
3. Submittals Schedule
4. Daily construction reports
5. Material location reports
6. Field condition reports
7. Special reports

- B. Related Sections include the following:

1. Division 01 Section "Payment Procedures" for submitting the Schedule of Values
2. Division 01 Section "Project Management and Coordination" for submitting and distributing meeting and conference minutes
3. Division 01 Section "Photographic Documentation" for submitting construction photographs
4. Division 01 Section "Submittal Procedures" for submitting schedules and reports
5. Division 01 Section "Quality Requirements" for submitting a schedule of tests and inspections

1.3 DEFINITIONS

- A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.

1. Critical activities are activities on the critical path. They must start and finish on the planned early start and finish times.
2. Predecessor Activity: An activity that precedes another activity in the network.
3. Successor Activity: An activity that follows another activity in the network.

- B. Cost Loading: The allocation of the Schedule of Values for the completion of an activity as scheduled. The sum of costs for all activities must equal the total Contract Sum, unless otherwise approved by Architect.

- C. CPM: Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine when activities can be performed and the critical path of Project.
- D. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.
- E. Event: The starting or ending point of an activity.
- F. Float: The measure of leeway in starting and completing an activity.
 - 1. Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
 - 2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
 - 3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.
- G. Fagnets: A partial or fragmentary network that breaks down activities into smaller activities for greater detail.
- H. Major Area: A story of construction, a separate building, or a similar significant construction element.
- I. Milestone: A key or critical point in time for reference or measurement.
- J. Network Diagram: A graphic diagram of a network schedule, showing activities and activity relationships.
- K. Resource Loading: The allocation of manpower and equipment necessary for the completion of an activity as scheduled.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For scheduling consultant.
- B. Format for Submittals: Submit required submittals in the following format:
 - 1. Working electronic copy of schedule file, where indicated.
 - 2. PDF file.
- C. Submittals Schedule: Submit three copies of schedule. Arrange the following information in a tabular format:
 - 1. Scheduled date for first submittal
 - 2. Specification Section number and title
 - 3. Submittal category (action or informational)
 - 4. Name of subcontractor
 - 5. Description of the Work covered

6. Scheduled date for Architect's final release or approval
- D. Preliminary Construction Schedule: Submit two opaque copies.
 1. Submittal of cost-loaded preliminary construction schedule will not constitute approval of Schedule of Values for cost-loaded activities.
 - E. Preliminary Network Diagram: Submit two opaque copies, large enough to show entire network for entire construction period. Show logic ties for activities.
 - F. Contractor's Construction Schedule: Submit two opaque copies of initial schedule, large enough to show entire schedule for entire construction period.
 1. Submit an electronic copy of schedule, using software indicated, and labeled to comply with requirements for submittals. Include type of schedule (Initial or Updated) and date on label.
 - G. CPM Reports: Concurrent with CPM schedule, submit three copies of each of the following computer-generated reports. Format for each activity in reports shall contain activity number, activity description, cost and resource loading, original duration, remaining duration, early start date, early finish date, late start date, late finish date, and total float in calendar days.
 1. Activity Report: List of all activities sorted by activity number and then early start date, or actual start date if known.
 2. Logic Report: List of preceding and succeeding activities for all activities, sorted in ascending order by activity number and then early start date, or actual start date if known.
 3. Total Float Report: List of all activities sorted in ascending order of total float.
 4. Earnings Report: Compilation of Contractor's total earnings from commencement of the Work or the Notice to Proceed, whichever occurs first, until most recent Application for Payment.
 - H. Construction Schedule Updating Reports: Submit with Applications for Payment.
 - I. Daily Construction Reports: Submit two copies at weekly intervals.
 - J. Material Location Reports: Submit two copies at weekly intervals.
 - K. Field Condition Reports: Submit two copies at time of discovery of differing conditions.
 - L. Special Reports: Submit two Insert number copies at time of unusual event.

1.5 QUALITY ASSURANCE

- A. Prescheduling Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to the Preliminary Construction Schedule and Contractor's Construction Schedule, including, but not limited to, the following:
 1. Review software limitations and content and format for reports.
 2. Verify availability of qualified personnel needed to develop and update schedule.

3. Discuss constraints, including phasing, work stages, area separations, interim milestones and partial Owner occupancy.
4. Review delivery dates for Owner-furnished products.
5. Review schedule for work of Owner's separate contracts.
6. Review time required for review of submittals and resubmittals.
7. Review requirements for tests and inspections by independent testing and inspecting agencies.
8. Review time required for completion and startup procedures.
9. Review and finalize list of construction activities to be included in schedule.
10. Review submittal requirements and procedures.
11. Review procedures for updating schedule.

1.6 COORDINATION

- A. Coordinate preparation and processing of schedules and reports with performance of construction activities and with scheduling and reporting of separate contractors.
- B. Coordinate Contractor's Construction Schedule with the Schedule of Values, list of subcontracts, Submittals Schedule, progress reports, payment requests, and other required schedules and reports.
 1. Secure time commitments for performing critical elements of the Work from parties involved.
 2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

PART 2 - PRODUCTS

2.1 SUBMITTALS SCHEDULE

- A. Preparation: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, resubmittal, ordering, manufacturing, fabrication, and delivery when establishing dates.
 1. Coordinate Submittals Schedule with list of subcontracts, the Schedule of Values, and Contractor's Construction Schedule.
 2. Initial Submittal: Submit concurrently with preliminary network diagram. Include submittals required during the first 60 days of construction. List those required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
 - a. At Contractor's option, show submittals on the Preliminary Construction Schedule, instead of tabulating them separately.
 3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's Construction Schedule.

2.2 SUBMITTAL REGISTER

- A. Preparation: Submit a Submittal Register listing all submittals required by the Contract Documents, arranged in CSI specification section order, in matrix format similar to the following example:

SECTION 013300.01 - SUBMITTAL REGISTER

SECTION	ACTION SUBMITTALS										INFORMATION SUBMITTALS																				
	Product Data	LEED Submittals	Shop Drawings	Samples	Vendor Anchor Analysis	Product Schedule	Delegated-Design Submittal	Warranty	Material List	Qualification Data	Source Quality Control Reports	Proposed Protection Measures	Inventory	Photos or Video	Statement of Refrigerant Recover	Product/Material Certificates	Mix Designs / Design Data	Welding Certificates	Product/Material Test Reports	Quality Control Test Reports	Field Test Reports	Statement of Compressive Strength	Cold/Hot Weather Procedures	Certification Letter	Operation and Maintenance Data	Energy Performance Certificate	Coordination Drawings	Inspection and Operating Permits	Keys	Research/Evaluation Reports	Slip-Resistance
015639 - Temporary Tree Protection	✓																														
024116 - Structure Demolition	✓	✓																													
033000 - Cast-In-Place Concrete	✓	✓	✓	✓	✓																										
042000 - Unit Masonry	✓	✓	✓	✓	✓																										
044700 - Exterior Stone Cladding	✓	✓	✓	✓	✓																										

2.3 CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL

- A. Computer Scheduling Software: Prepare schedules using current version of a program that has been developed specifically to manage construction schedules.
- B. Scheduling Consultant: Engage a consultant to provide planning, evaluation, and reporting using CPM scheduling.
1. Meetings: Scheduling consultant shall attend all meetings related to Project progress, alleged delays, and time impact.
- C. Time Frame: Extend schedule from date established for commencement of the Work or the Notice to Proceed, whichever occurs first to date of Final Acceptance.
1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.
- D. Activities: Treat each story (floor) or separate area as a separate numbered activity for each principal element of the Work. Comply with the following:
1. Activity Duration: Define activities so no activity is longer than 20 days, unless specifically allowed by Architect.
 2. Procurement Activities: Include procurement process activities for the following long lead items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
 - a. Mechanical equipment
 - b. Electrical equipment

3. Submittal Review Time: Include review and resubmittal times indicated in Division 01 Section "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's Construction Schedule with Submittals Schedule.
 4. Startup and Testing Time: Include not less than 15 days for startup and testing.
 5. Commissioning Time: Include no fewer than 15 days for commissioning.
 6. Final Acceptance: Indicate completion in advance of date established for Final Acceptance, and allow time for Architect's administrative procedures necessary for certification of Final Acceptance.
- E. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule, and show how the sequence of the Work is affected.
1. Phasing: Arrange list of activities on schedule by phase.
 2. Work under More Than One Contract: Include a separate activity for each contract.
 3. Work by Owner: Include a separate activity for each portion of the Work performed by Owner.
 4. Products Ordered in Advance: Include a separate activity for each product. Include delivery date indicated in Division 01 Section "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
 5. Owner-Furnished Products: Include a separate activity for each product. Include delivery date indicated in Division 01 Section "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
 6. Work Restrictions: Show the effect of the following items on the schedule:
 - a. Coordination with existing construction
 - b. Limitations of continued occupancies
 - c. Uninterruptible services
 - d. Partial occupancy before Final Acceptance
 - e. Use of premises restrictions
 - f. Provisions for future construction
 - g. Seasonal variations
 - h. Environmental control
 7. Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:
 - a. Subcontract awards
 - b. Submittals
 - c. Purchases
 - d. Mockups
 - e. Fabrication
 - f. Sample testing
 - g. Deliveries
 - h. Installation
 - i. Tests and inspections
 - j. Adjusting
 - k. Curing
 - l. Building flush-out.
 - m. Startup and placement into final use and operation
 - n. Commissioning.

1. Construction Areas: Identify each major area of construction for each major portion of the Work. Indicate where each construction activity within a major area must be sequenced or integrated with other construction activities to provide for the following:
 - a. Structural completion
 - b. Temporary enclosure and space conditioning.
 - c. Permanent space enclosure
 - d. Completion of mechanical installation
 - e. Completion of electrical installation
 - f. Final Acceptance

- F. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Final Acceptance, and Final Completion.
 1. Temporary enclosure and space conditioning.

- G. Cost Correlation: At the head of schedule, provide a cost correlation line, indicating planned and actual costs. On the line, show dollar volume of the Work performed as of dates used for preparation of payment requests.
 1. Refer to Division 01 Section "Payment Procedures" for cost reporting and payment procedures.
 2. Contractor shall assign cost to construction activities on the CPM schedule. Costs shall not be assigned to submittal activities unless specified otherwise but may, with Architect's approval, be assigned to fabrication and delivery activities. Costs shall be under required principal subcontracts for testing and commissioning activities, operation and maintenance manuals, punch list activities, Project Record Documents, and demonstration and training (if applicable), in the amount of 5 percent of the Contract Sum.
 3. Each activity cost shall reflect an accurate value subject to approval by Architect.
 4. Total cost assigned to activities shall equal the total Contract Sum.

- H. Upcoming Work Summary: Prepare summary report indicating activities scheduled to occur or commence prior to submittal of next schedule update. Summarize the following issues:
 1. Unresolved issues.
 2. Unanswered Requests for Information.
 3. Rejected or unreturned submittals.
 4. Notations on returned submittals.
 5. Pending modifications affecting the Work and the Contract Time.

- I. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.
 1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
 2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
 3. As the Work progresses, indicate final completion percentage for each activity.

- J. Recovery Schedule: When periodic update indicates the Work is 14 or more calendar days behind the current approved schedule, submit a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule. Indicate changes to working hours, working days, crew sizes, equipment required to achieve compliance, and date by which recovery will be accomplished.
- K. Distribution: Distribute copies of approved schedule to Architect, Construction Manager, Owner, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.
 - 1. Post copies in Project meeting rooms and temporary field offices.
 - 2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

2.4 PRELIMINARY CONSTRUCTION SCHEDULE

- A. Gantt (Bar)-Chart Schedule: Submit preliminary horizontal Gantt-chart-type construction schedule within seven days of date established for commencement of the Work or the Notice to Proceed, whichever occurs first.
- B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line. Outline significant construction activities for first 60 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.

2.5 CPM SCHEDULE REQUIREMENTS

- A. General: Prepare network diagrams using AON (activity-on-node) format.
- B. Preliminary Network Diagram: Submit diagram within 14 days of date established for commencement of the Work or the Notice to Proceed, whichever occurs first. Outline significant construction activities for the first 60 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.
- C. CPM Schedule: Prepare Contractor's Construction Schedule using a computerized, time-scaled CPM network analysis diagram for the Work.
 - 1. Develop network diagram in sufficient time to submit CPM schedule so it can be accepted for use no later than 30 days after date established for commencement of the Work or the Notice to Proceed, whichever occurs first.
 - a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all work within applicable completion dates, regardless of Architect's approval of the schedule.
 - 2. Conduct educational workshops to train and inform key Project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.

3. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
 4. Use "one workday" as the unit of time for individual activities. Indicate nonworking days and holidays incorporated into the schedule to coordinate with the Contract Time.
- D. CPM Schedule Preparation: Prepare a list of all activities required to complete the Work. Using the preliminary network diagram, prepare a skeleton network to identify probable critical paths.
1. Activities: Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the following activities:
 - a. Preparation and processing of submittals
 - b. Mobilization and demobilization
 - c. Purchase of materials
 - d. Delivery
 - e. Fabrication
 - f. Utility interruptions
 - g. Installation
 - h. Work by Owner that may affect or be affected by Contractor's activities
 - i. Testing and commissioning
 - j. Commissioning.
 - k. Punch list and final completion.
 - l. Activities occurring following final completion.
 2. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
 3. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
 4. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.
 - a. Subnetworks on separate sheets are permissible for activities clearly off the critical path.
 5. Cost- and Resource-Loading of CPM Schedule: Assign cost to construction activities on the CPM schedule. Do not assign costs to submittal activities. Obtain Architect's approval prior to assigning costs to fabrication and delivery activities. Assign costs under main subcontracts for testing and commissioning activities, operation and maintenance manuals, punch list activities, Project record documents, **sustainable design documentation**, and demonstration and training (if applicable), in the amount of 5 percent of the Contract Sum.
 - a. Each activity cost shall reflect an appropriate value subject to approval by Architect.

- E. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using a network fragment to demonstrate the effect of the proposed change on the overall Project schedule.
- F. Initial Issue of Schedule: Prepare initial network diagram from a list of straight "early start-total float" sort. Identify critical activities. Prepare tabulated reports showing the following:
 - 1. Contractor or subcontractor and the Work or activity
 - 2. Description of activity
 - 3. Principal events of activity
 - 4. Immediate preceding and succeeding activities
 - 5. Early and late start dates
 - 6. Early and late finish dates
 - 7. Activity duration in workdays
 - 8. Total float or slack time
 - 9. Average size of workforce
 - 10. Dollar value of activity (coordinated with the Schedule of Values)
- G. Schedule Updating: Concurrent with making revisions to schedule, prepare tabulated reports showing the following:
 - 1. Identification of activities that have changed
 - 2. Changes in early and late start dates
 - 3. Changes in early and late finish dates
 - 4. Changes in activity durations in workdays
 - 5. Changes in the critical path
 - 6. Changes in total float or slack time
 - 7. Changes in the Contract Time
- H. Value Summaries: Prepare two cumulative value lists, sorted by finish dates.
 - 1. In first list, tabulate activity number, early finish date, dollar value, and cumulative dollar value.
 - 2. In second list, tabulate activity number, late finish date, dollar value, and cumulative dollar value.
 - 3. In subsequent issues of both lists, substitute actual finish dates for activities completed as of list date.
 - 4. Prepare list for ease of comparison with payment requests; coordinate timing with progress meetings.
 - a. Submit value summary printouts one week before each regularly scheduled progress meeting.

2.6 REPORTS

- A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:
 - 1. List of subcontractors at Project site
 - 2. List of separate contractors at Project site
 - 3. Approximate count of personnel at Project site

4. Equipment at Project site
5. Material deliveries
6. High and low temperatures and general weather conditions, including presence of rain or snow.
7. Testing and inspection.
8. Accidents
9. Meetings and significant decisions
10. Unusual events (refer to special reports)
11. Stoppages, delays, shortages, and losses
12. Meter readings and similar recordings
13. Emergency procedures
14. Orders and requests of authorities having jurisdiction
15. Change Orders received and implemented
16. Construction Change Directives received and implemented
17. Services connected and disconnected
18. Equipment or system tests and startups
19. Partial Completions and occupancies
20. Final Acceptances authorized

- B. Field Condition Reports: Immediately on discovery of a difference between field conditions and the Contract Documents, prepare and submit a detailed report. Submit with a request for interpretation. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

2.7 SPECIAL REPORTS

- A. Reporting Unusual Events: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, response by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.
1. Submit unusual event reports directly to Owner within one day(s) of an occurrence. Distribute copies of report to parties affected by the occurrence.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 32 00

SECTION 01 32 33 - PHOTOGRAPHIC DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for the following services:

1. Preconstruction photographs.
2. Periodic construction photographs.
3. Final completion construction photographs.
4. Preconstruction video recordings.
5. Periodic construction video recordings.
6. Construction webcam.

- B. Related Requirements:

1. Division 01 Section "Submittal Procedures" for submitting photographic documentation.
2. Division 01 Section "Closeout Procedures" for submitting photographic documentation as project record documents at Project closeout.
3. Division 01 Section "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of Owner's personnel.
4. Division 02 Section "Structure Demolition" for photographic documentation before building demolition operations commence.
5. Division 02 Section "Selective Demolition" for photographic documentation before selective demolition operations commence.
6. Division 31 Section "Site Clearing" for photographic documentation before site clearing operations commence.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For photographer and Construction Webcam Service Provider.
- B. Key Plan: Submit key plan of Project site and building with notation of vantage points marked for location and direction of each photograph and video recording. Indicate elevation or story of construction. Include same information as corresponding photographic documentation.
- C. Digital Photographs: Submit image files within three days of taking photographs.
 1. Submit photos by uploading to web-based project software site. Include copy of key plan indicating each photograph's location and direction.

2. Identification: Provide the following information with each image description in file metadata tag:
 - a. Name of Project.
 - b. Name and contact information for photographer.
 - c. Name of Architect.
 - d. Name of Contractor.
 - e. Date photograph was taken.
 - f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
 - g. Unique sequential identifier keyed to accompanying key plan.

D. Video Recordings: Submit video recordings within seven days of recording.

1. Submit video recordings by uploading to web-based project software site. Include copy of key plan indicating each video's location and direction.
2. Identification: With each submittal, provide the following information:
 - a. Name of Project.
 - b. Name and address of photographer.
 - c. Name of Architect.
 - d. Name of Contractor.
 - e. Date video recording was recorded.
 - f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.

3. Transcript: Prepared on 8-1/2-by-11-inch paper, punched and bound in heavy-duty, three-ring, vinyl-covered binders. Mark appropriate identification on front and spine of each binder. Include a cover sheet with same label information as corresponding video recording. Include name of Project and date of video recording on each page.

E. Time-Lapse Video: Submit time-lapse sequence video recordings simultaneously with recording.

1. Submit time-lapse sequence video recordings monthly by uploading to web-based project software site.
2. Identification: For each recording, provide the following information on web-based project software site:
 - a. Name of Project.
 - b. Name and contact information for photographer.
 - c. Name of Architect and Construction Manager.
 - d. Name of Contractor.
 - e. Date(s) and time(s) video recording was recorded.
 - f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.

1.4 QUALITY ASSURANCE

- A. Photographer Qualifications: An individual who has been regularly engaged as a professional photographer of construction projects for not less than three years.

- B. Construction Webcam Service Provider: A firm specializing in providing photographic equipment, Web-based software, and related services for construction projects, with record of providing satisfactory services similar to those required for Project.

1.5 USAGE RIGHTS

- A. Obtain and transfer copyright usage rights from photographer to Owner for unlimited reproduction of photographic documentation.

1.6 FORMATS AND MEDIA

- A. Digital Photographs: Provide color images in JPG format, produced by a digital camera with minimum sensor size of 12 megapixels, and at an image resolution of not less than 3200 by 2400 pixels, and with vibration-reduction technology. Use flash in low light levels or backlit conditions.
- B. Digital Video Recordings: Provide high-resolution, digital video in MPEG format, produced by a digital camera with minimum sensor resolution of 12 megapixels and capable of recording in full high-definition mode with vibration-reduction technology. Provide supplemental lighting in low light levels or backlit conditions.
- C. Digital Images: Submit digital media as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.
- D. Metadata: Record accurate date and time and GPS location data from camera.
- E. File Names: Name media files with date, Project area and sequential numbering suffix.

1.7 CONSTRUCTION PHOTOGRAPHS

- A. Photographer: Engage a qualified photographer to take construction photographs.
- B. General: Take photographs using the maximum range of depth of field, and that are in focus, to clearly show the Work. Photographs with blurry or out-of-focus areas will not be accepted.
 - 1. Maintain key plan with each set of construction photographs that identifies each photographic location.
- C. Field Office Images: Maintain one set of images accessible in the field office at Project site, available at all times for reference. Identify images in the same manner as those submitted to Architect.
- D. Preconstruction Photographs: Before commencement of demolition, take photographs of Project site and surrounding properties, including existing items to remain during construction, from different vantage points, as directed by Architect.
 - 1. Flag construction limits before taking construction photographs.

2. Take a sufficient number of photographs (20 minimum) to show existing conditions adjacent to property before starting the Work.
 3. Take a sufficient number of photographs (20 minimum) of existing buildings either on or adjoining property to accurately record physical conditions at start of construction.
 4. Take additional photographs as required (20 minimum) to record settlement or cracking of adjacent structures, pavements, and improvements.
- E. Time-Lapse Sequence Construction Photographs: Take 20 photographs as indicated, to show status of construction and progress since last photographs were taken.
1. Frequency: Take photographs weekly and submit monthly, coinciding with the cutoff date associated with each Application for Payment.
 2. Vantage Points: Following suggestions by Architect, and Contractor, photographer to select vantage points. During each of the following construction phases, take not less than two of the required shots from same vantage point each time to create a time-lapse sequence as follows:
 - a. Commencement of the Work, through completion of subgrade construction.
 - b. Utility work, including excavation, connections, and backfill.
 - c. Above-grade structural framing.
 - d. Exterior building enclosure.
 - e. Interior Work, through date of Final Acceptance.
- F. Final Completion Construction Photographs: Take 20 color photographs after date of Final Acceptance for submission as project record documents. Architect will inform photographer of desired vantage points.
- G. Additional Photographs: Architect and Owner may request photographs in addition to periodic photographs specified. Additional photographs will be paid for by Change Order and are not included in the Contract Sum.
1. Three days' notice will be given, where feasible.
 2. In emergency situations, take additional photographs within 24 hours of request.
 3. Circumstances that could require additional photographs include, but are not limited to, the following:
 - a. Special events planned at Project site.
 - b. Immediate follow-up when on-site events result in construction damage or losses.
 - c. Photographs to be taken at fabrication locations away from Project site. These photographs are not subject to unit prices or unit-cost allowances.
 - d. Final Acceptance of a major phase or component of the Work.
 - e. Extra record photographs at time of final acceptance.
 - f. Owner's request for special publicity photographs.

1.8 CONSTRUCTION VIDEO RECORDINGS

- A. Video Recording Photographer: Engage a qualified videographer to record construction video recordings.

- B. Narration: Describe scenes on video recording by audio narration by microphone while or dubbing audio narration off-site after video recording is recorded. Include description of items being viewed, recent events, and planned activities. At each change in location, describe vantage point, location, direction (by compass point), and elevation or story of construction.
 - 1. Confirm date and time at beginning and end of recording.
 - 2. Begin each video recording with name of Project, Contractor's name, videographer's name, and Project location.
- C. Transcript: Provide a typewritten transcript of the narration. Display images and running time captured from video recording opposite the corresponding narration segment.
- D. Preconstruction Video Recording: Before starting demolition and excavation, record video recording of Project site and surrounding properties from different vantage points, as directed by Architect.
 - 1. Flag construction limits before recording construction video recordings.
 - 2. Show existing conditions adjacent to Project site before starting the Work.
 - 3. Show existing buildings either on or adjoining Project site to accurately record physical conditions at the start of demolition.
 - 4. Show protection efforts by Contractor.
- E. Time-Lapse Sequence Construction Video Recordings: Record video recording to show status of construction and progress.
 - 1. Frequency: During each of the following construction phases, set up video recorder to automatically record one frame of video recording every five minutes, from same vantage point each time, to create a time-lapse sequence of 30 minutes in length as follows:
 - a. Commencement of the Work, through completion of subgrade construction.
 - b. Utility work, including excavation, connections, and backfill.
 - c. Above-grade structural framing.
 - d. Exterior building enclosure.
 - 2. Timer: Provide timer to automatically start and stop video recorder so recording occurs only during daylight construction work hours.
 - 3. Vantage Points: Following suggestions by Architect and Contractor, photographer shall select vantage points.

1.9 CONSTRUCTION WEBCAM

- A. Webcam: Provide four fixed-location camera(s) with weatherproof housing, mounted to provide unobstructed view of construction site from location approved by Architect, with the following characteristics:
 - 1. Static view or remotely controllable view with mouse-click user navigation for horizontal pan, vertical tilt, and optical zoom of 500 percent minimum].
 - 2. Capable of producing minimum 12 megapixel images.
 - 3. Provide power supply, active high-speed data connection to service provider's network, and static public IP address for each camera.

- B. Web-Based Interface: Provide online interface to allow viewing of each high-definition digital still image captured and stored during construction, from the Internet.
1. Access Control: Provide password-protected access for Project team administered by Contractor, providing current image access and archival image access by date and time, with images downloadable to viewer's device.
 2. Storage: Maintain images on the website for reference during entire construction period, and for not less than 30 days after final completion. Provide sufficient memory on remote server to store all Project images.
 3. Online Interface: Provide website interface with Project and client information and logos; calendar-based navigation interface for selecting images; pan and zoom capability within high-definition images.
 4. Forward and Reverse: Provide capability to browse through images, moving forward and backward in time by individual image and by day.
 5. Slideshow: Provide capability to automatically display current images from sites when there are three or more cameras used.
 6. Time-Lapse: Provide capability for online display of project time-lapse.
 7. Dashboard: Provide capability to view thumbnails of all cameras on one screen.
 8. Weather: Provide corresponding weather data for each image captured.
- C. Maintain cameras and Web-based access in good working order according to Web-based construction photographic documentation service provider's written instructions until final completion. Provide for service of cameras and related networking devices and software.]

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 32 33

SECTION 01 33 00 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes requirements for the submittal schedule and administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals.
- B. Related Requirements:
 - 1. Division 01 Section "Payment Procedures" for submitting Applications for Payment and the schedule of values.
 - 2. Division 01 Section "Project Management and Coordination" for submitting coordination drawings and subcontract list and for requirements for web-based Project software.
 - 3. Division 01 Section "Construction Progress Documentation" for submitting schedules and reports, including Contractor's construction schedule.
 - 4. Division 01 Section "Photographic Documentation" for submitting preconstruction photographs, periodic construction photographs, and final completion construction photographs.
 - 5. Division 01 Section "Quality Requirements" for submitting test and inspection reports, and schedule of tests and inspections.
 - 6. Division 01 Section "Closeout Procedures" for submitting closeout submittals and maintenance material submittals.
 - 7. Division 01 Section "Operation and Maintenance Data" for submitting operation and maintenance manuals.
 - 8. Division 01 Section "Project Record Documents" for submitting record documents and record submittals.
 - 9. Division 01 Section "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of Owner's personnel.

1.3 DEFINITIONS

- A. Action Submittals: Written and graphic information and physical samples that require Architect's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."
- B. Informational Submittals: Written and graphic information and physical samples that do not require Architect's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

- C. Record Submittals: Written and graphic information and physical samples, that do not require Architect's responsive action, provided for record purposes.
- D. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.
- E. Days: For the purpose of this Section, days are defined as working days based on a 5-day normal work week, excluding Holidays.
- F. CAD: Computer Aided Design.
- G. BIM: Building Information Modeling.

1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

- A. Submittal Schedule: Submit, as an action submittal, a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and Construction Manager and additional time for handling and reviewing submittals required by those corrections. Comply with list of submittals and time requirements for scheduled performance of related construction activities.
 - 1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
 - 2. Initial Submittal: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
 - 3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's construction schedule.
 - a. Submit revised submittal schedule to reflect changes in current status and timing for submittals.
 - 4. Format: Arrange the following information in a tabular format:
 - a. Scheduled date for first submittal.
 - b. Specification Section number and title.
 - c. Submittal category: Action or Informational.
 - d. Name of subcontractor.
 - e. Description of the Work covered.
 - f. Scheduled date for Architect's final release or approval.
 - g. Scheduled date of fabrication.
 - h. Scheduled dates for purchasing.
 - i. Scheduled date of fabrication.
 - j. Scheduled dates for installation.
 - k. Activity or event number.

5. Submit schedule a minimum of 10 days before initial submittal is required.
- B. Architect's Digital Data Files: Electronic copies of CAD Drawings or BIM files of the Contract Drawings will not be provided by Architect for Contractor's use in preparing submittals unless specifically agreed to in the Architect's contract with the Owner. Where provisions for file sharing are contractually stipulated, all procedures, protocols and responsibilities shall be agreed to in writing in advance of distribution of any electronic files.
- C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
 2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
 3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
 4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
 - a. Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received and shall return the submittal "Not Reviewed".
 5. Each separate section of the Specification Divisions 1 through 48 lists the submittals that are requested and will be accepted for review by the Architect. Submittals not requested specifically will be returned to Contractor without review, or accepted for information only.
- D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. The start time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
1. Initial Review: Allow 15 days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Architect will advise Contractor when a submittal being processed must be delayed for coordination.
 2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
 3. Resubmittal Review: Allow 15 days for review of each resubmittal.
 4. Sequential Review: Where sequential review of submittals by Architect's consultants, Owner, or other parties is indicated, allow 20 days for initial review of each submittal.
 - a. Submittals specified in Division 09 and Divisions 13 through 33 shall be subject to sequential review.
 5. Concurrent Consultant Review: Where the Contract Documents indicate that submittals may be transmitted simultaneously to Architect and to Architect's consultants, allow 15 days for review of each submittal. Submittal will be returned to Architect before being returned to Contractor.

- E. Submittal Media (Paper or Electronic): The submittal media shall be determined and approved prior to the receipt of the first submittal and shall remain consistent through the entire project duration.
- F. Electronic Submittals: When approved by the Owner, the Architect will accept submittals electronically. When electronic submittals are chosen as the preferred method of transmission, all submittals must be transmitted electronically (with the exception of physical samples).
1. Submit electronic submittals via email as PDF electronic files.
 - a. PDF resolution shall be a minimum of 100 dpi but no larger than 300 dpi.
 - b. All aforementioned procedures shall apply including transmittal criteria.
 - c. No submittals shall be accepted directly from any subcontractor.
 - d. Submittals of different trades, subcontractors, specification sections, or non-relevant items shall not be submitted within the same submittal transmittal or electronic submission.
 - e. The Contractor shall transmit all electronic submittals to ESubmittals@EwingCole.com. Other project team members may be copied as appropriate, but primary recipient shall be "ESubmittals"
 - f. Electronic submittals sent to "ESubmittals" shall have the Project name and number clearly identified in the subject line. A transmittal shall be included.
 - g. Drawing numbering system must be strictly adhered to in both the file name and within the PDF title block.
 - h. File sizes exceeding 20MB shall be transmitted using a large file transfer mechanism compatible with email. EwingCole can provide access to Newforma info exchange for this purpose, if the Contractor does not have a suitable means to do this. EwingCole will not search and download files from project sites. The only exception to this is if the Owner maintains a project site and this requirement is made known to EwingCole contractually at the time of project award. The Contractor must proactively transmit the files to ESubmittals@EwingCole.com. EwingCole will return the reviewed files either marked up electronically (or redlined and scanned) back to the designated address provided by the Contractor through Newforma.
 - i. Submittals/samples requiring finish, color and texture review may be scanned (in color) and sent to "ESubmittals" but one physical sample must be mailed to EwingCole for review.
 - j. Include the following EwingCole review stamp on each individual pdf of all electronic submittals:

SUBMITTAL ACTION	
SUBMISSION	<input type="checkbox"/> FIRST <input type="checkbox"/> SECOND <input type="checkbox"/> THIRD
<input type="checkbox"/>	REVIEWED
<input type="checkbox"/>	REVIEWED AS NOTED
<input type="checkbox"/>	REVIEWED AS NOTED RESUBMIT
<input type="checkbox"/>	REJECTED
<input type="checkbox"/>	RESUBMIT
<input type="checkbox"/>	SEE TRANSMITTAL FOR INSTRUCTIONS
<p>This submittal has been reviewed only for conformance with the design concept of the Project and compliance with the information given in the Contract Documents.</p> <p>It is the Contractor's contractual duty to review and act upon submittals, prior to their submission to verify that all requirements of the Contract Documents have been met or if they have not been met, to notify the Architect in writing. By the submission of this submittal to the Architect, it is assumed the Contractor has fulfilled these contractual duties. Review of this submittal by Architect does not relieve the Contractor of the duty to meet the requirements of the Contract Documents and the applicable building codes.</p> <p>Any comments noted or corrections requested are for clarification of the general character of the work. Correctness of details, measurements, quantities, conformity with Contract Documents, techniques of construction and coordination with other trades shall remain the complete responsibility of the General/Prime Contractor.</p>	
BY: _____	DATE: _____
<p>EwingCole Philadelphia * Charlotte * Irvine New York * Pittsburgh * Raleigh Architects Engineers Interior Designers Planners</p>	

2. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
3. Name file with submittal number and unique identifier as follows:

FORMAT:

- **042000_001.1_Face Brick_Product Data**
- “**042000**” shall be the appropriate specification section for the submittal.
- “**001**” shall be the submission tracking number (not related to a specific category ie. Product data, Warranty, etc.)
- “**.1**” shall indicate the initial submittal.
- “**Face Brick**” shall be the item submitted.
- “**Product Data**” shall be the type of submittal.

Examples:

042000_001.1_Face Brick_Product Data
042000_002.1_Mortar and Grout_Product Data
042000_003.1_Embedded Flashing_Warranty
042000_004.1_Embedded Flashing_Shop Drawings
042000_005.1_Concrete Masonry Units_Calculations

- Subsequent Submissions of the same item (.2), (.3), etc.:
042000_002.2_Mortar and Grout_Product Data

FORMAT:

- **265100_001.1_Emergency Lighting Units_Product Data**
- “**265100**” shall be the appropriate specification section for the submittal.
- “**001**” shall be the submission tracking number (not related to a specific category ie. Product data, Warranty, etc.)
- “**.1**” shall indicate the initial submittal.
- “**Emergency Lighting Units**” shall be the item submitted.
- “**Product Data**” shall be the type of submittal.

Examples:

265100_001.1_Interior Lighting Fixture L1_Product Data
 265100_002.1_Emergency Lighting Units_Product Data
 265100_003.1_Emergency Lighting Units_Warranty
 265100_004.1_Lighting Fixture Supports_Shop Drawings
 265100_005.1_Emergency Lighting Units_Calculations

- Subsequent Submissions of the same item (.2), (.3), etc.:
265100_002.2_Emergency Lighting Units_Product Data

4. Include file name on cover sheet of submittal.

G. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.

1. Note date and content of previous submittal.
2. Note date and content of revision in label or title block and clearly indicate extent of revision.
3. Cloud, bubble, or otherwise highlight and identify all revisions on the drawings. Submittals which do not identify changes and revisions will be returned as “Not Reviewed”. Do not renumber submittal documents which have been previously submitted for review except to modify the revision number. Drawings that have been renumbered will be rejected and returned. Resubmit submittals until they are marked with approval notation from Architect's action stamp.

H. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.

I. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Architect's and Construction Manager's action stamp.

PART 2 - PRODUCTS

2.1 SUBMITTAL PROCEDURES

- A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual Specification Sections. Types of submittals (Action, Informational or Record) are indicated in individual trade Specification Sections.
- B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.
1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
 2. Mark each copy of each submittal to show which products and options are applicable.
 3. Include the following information, as applicable:
 - a. Manufacturer's catalog cuts.
 - b. Manufacturer's product specifications.
 - c. Standard color charts.
 - d. Statement of compliance with specified referenced standards.
 - e. Testing by recognized testing agency.
 - f. Application of testing agency labels and seals.
 - g. Notation of coordination requirements.
 - h. Availability and delivery time information.
 4. For equipment, include the following in addition to the above, as applicable:
 - a. Wiring diagrams showing factory-installed wiring.
 - b. Printed performance curves.
 - c. Operational range diagrams.
 - d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
 5. Submit Product Data before or concurrent with Samples.
- C. Design Data for Delegated Design Elements: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers. Design Data submittal shall be signed and sealed by a qualified professional engineer licensed in the state or district in which the project is located. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect. Design Data submission must be concurrent with the submission of corresponding Fabrication drawings. Fabrication drawings submitted without corresponding Design Data will be returned "Not Reviewed".
- D. Initial Certification Letter from Delegated-Design Professional: Prior to the submission of Shop Drawings, Product Data, Calculations and other required submittals, submit digitally signed PDF

electronic file and 3 paper copies of a Certification Letter from the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional. No shop drawings will be reviewed by the Architect prior to the submission and acceptance of this Certification Letter. The Certification Letter shall include the following:

1. Signature and seal of the registered Professional Engineer (registered in the state or district in which the project is located).
 2. Statement that the Professional Engineer is fully experienced in the type of design being performed.
 3. Statement that all calculations and shop drawings are in accordance with the Contract Documents and applicable building codes and have been prepared under the direction of the Professional Engineer.
 4. Statement that the Professional Engineer's signature and seal shall appear on all design calculations and on all shop drawings.
 5. Statement that the Professional Engineer will submit an additional signed and sealed letter after construction of the delegated design element is complete, stating that the fabrication and installation of the delegated design elements have been performed in accordance with the Professional Engineer's design.
- E. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data
1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:
 - a. Identification of products.
 - b. Schedules.
 - c. Compliance with specified standards.
 - d. Notation of coordination requirements.
 - e. Notation of dimensions established by field measurement.
 - f. Relationship and attachment to adjoining construction clearly indicated.
 - g. Seal and signature of professional engineer if specified.
 2. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches, but no larger than 30 by 42 inches.
 3. BIM File Incorporation: Develop and incorporate Shop Drawing files into Building Information Model established for Project.
 - a. Prepare Shop Drawings in the following format: digital data software program, version, and operating system approved by Construction Manager.
 - b. Refer to Section 01 31 00 "Project Management and Coordination" for requirements for coordination drawings.
- F. Field Work Shop Drawings: Prepare location specific information illustrating the proposed field modification of an element. Submit proposed modification and received written approval prior to performing the field modification. Field work shop drawings shall clearly reference the latest related shop drawings. For additional requirements, refer to "Shop Drawings" above.

- G. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.
1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
 2. Identification: Attach label on unexposed side of Samples that includes the following:
 - a. Generic description of Sample.
 - b. Product name and name of manufacturer.
 - c. Product name and name of manufacturer.
 - d. Sample source.
 - e. Number and title of applicable Specification Section.
 - f. Specification paragraph number and generic name of each item.
 3. For projects where electronic submittals are required, provide corresponding electronic submittal of Sample transmittal, digital image file illustrating Sample characteristics, and identification information for record.
 4. Web-Based Project Software: Prepare submittals in PDF form, and upload to web-based Project software website. Enter required data in web-based software site to fully identify submittal.
 5. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
 - a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
 - b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.
 6. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
 - a. Number of Samples: Submit one full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected. Final approval to be authorized with samples submitted with Samples for Verification.
 7. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.
 - a. Number of Samples: Submit three sets of samples, unless otherwise noted in the individual technical sections. Architect will retain two Sample sets; remainder will be returned.

- 1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
 - 2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.
- H. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:
1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
 2. Manufacturer and product name, and model number if applicable.
 3. Number and name of room or space.
 4. Location within room or space.
- I. Coordination Drawing Submittals: Comply with requirements specified in Section 01 31 00 "Project Management and Coordination."
- J. Contractor's Construction Schedule: Comply with requirements specified in Section 01 32 00 "Construction Progress Documentation."
- K. Application for Payment and Schedule of Values: Comply with requirements specified in Section 01 29 00 "Payment Procedures."
- L. Maintenance Data: Comply with requirements specified in Section 01 78 23 "Operation and Maintenance Data."
- M. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.
- N. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.
- O. Installer Certificates: Submit written statements on manufacturer's letterhead, signed by an officer or other individual authorized to sign documents on behalf of the Installer, certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
- P. Manufacturer Certificates: Submit written statements on manufacturer's letterhead, signed by an officer or other individual authorized to sign documents on behalf of the manufacturer, certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.

- Q. Product Certificates: Submit written statements on manufacturer's letterhead, signed by an officer or other individual authorized to sign documents on behalf of the manufacturer, certifying that product complies with requirements in the Contract Documents. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
- R. Material Certificates: Submit written statements on manufacturer's letterhead, signed by an officer or other individual authorized to sign documents on behalf of the manufacturer, certifying that material complies with requirements in the Contract Documents. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
- S. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
- T. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
- U. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:
1. Name of evaluation organization.
 2. Date of evaluation.
 3. Time period when report is in effect.
 4. Product and manufacturers' names.
 5. Description of product.
 6. Test procedures and results.
 7. Limitations of use.
- V. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.
- W. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.
- X. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents. Field tests include all tests that are performed by the contractor in conjunction with systems installations. Unless noted in the individual specification section, these field tests do not include testing and inspection reports provided by the Owner's independent testing and inspection agency.
- Y. Final Certification Letter from Delegated-Design Professional: After construction of the delegated design element is complete, submit digitally signed PDF electronic file and three paper

copies of a Certification Letter from the responsible design professional stating that the fabrication and installation of the delegated design elements have been performed in accordance with the Professional Engineer's design.

- Z. Record Submittals: Refer to Division 01 Section "Project Record Documents" for requirements.
- AA. Closeout Documents and Maintenance Material Documents: Comply with requirements specified in Section 01 77 00 "Closeout Procedures."

2.2 DELEGATED-DESIGN SERVICES

- A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - 1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.
- B. BIM Incorporation: Incorporate delegated-design drawing and data files into BIM established for Project.
 - 1. Prepare delegated-design drawings in the following format: Digital software as approved by Construction Manager.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

- A. Action and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect.
- B. Project Closeout and Maintenance Material Documents: See requirements in Division 01 Section "Closeout Procedures."
- C. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, [Architect's Project No.](#), submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.
 - 1. [Regardless of language on Contractor's stamp \(reviewed, checked, etc.\), submittals by Contractor for Architect's review will be considered "Approved" by Contractor.](#)
- D. Determine and verify:
 - 1. Field measurements.
 - 2. Field construction criteria.
 - 3. Catalog numbers and similar data.

- E. Coordinate each submittal with other submittals as well as with requirements of the Work and Contract Documents.
- F. Advise priority requirements, if any, for review of submittals.
 - 1. If submittals are made in large quantities from any one subcontractor or a large quantity of drawings from several subcontractors all at one time, the normal time required by the Architect for review cannot be expected to suffice; Contractor shall, in such instances, indicate the priority and/or sequence of review desired.
 - 2. If no priority requirement is indicated, Architect will review submittals in the order received.
- G. Identify all material list items and submittals by the title of the specification section, paragraph, and page from which they are specified.
- H. Contractor and/or manufacturer Shall Not use the color red when marking their notations on the submittal. Green shall be used to distinguish the Contractor's comments.

3.2 ARCHITECT'S RESPONSE

- A. General: Architect will not review submittals that do not bear Construction Manager's or Contractor's approval stamp and **may** return them without action.
- B. Action Submittals: Architect will review each submittal, make marks to indicate corrections or revisions required, and return it. Architect will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action, as follows:

Submittal Code Letter	Description
A	Reviewed: Indicates the submission conforms generally to the design concept and the information given in the Contract Documents. Architect will not include any comments. Fabrication can proceed. No further submissions are required prior to the record submission (when applicable).
B	Reviewed As Noted: Indicates the submission conforms generally to the design concept and the information given in the Contract Documents, except for corrections indicated. Fabrication can proceed on the basis that Contractor is fully responsible for incorporating indicated corrections into the work. No further submissions are required prior to the record submission (when applicable).
C	Reviewed as Noted and Resubmit: Indicates the submission conforms generally to the design concept and the information given in the Contract Documents, except for corrections indicated. Shop fabrication can proceed on the basis that Contractor is fully responsible for incorporating indicated corrections into the work. Resubmission is required prior to commencement of erection, installation or placement for confirmation of corrections noted.
D	Rejected: Procedural or technical nonconformity with the design concept and the information given in the Contract Documents. Fabrication should NOT proceed pending further review.
E	Resubmit: Indicates that corrections of a major nature are required, should be incorporated in the submittal, and the submittals shall be resubmitted for

Architect's further review. Fabrication should NOT proceed pending further review.

- F See Transmittal for Instructions: Refer to the Response Transmittal for specific direction.
- C. Informational Submittals: Architect will receive Informational Submittals and respond “Accepted for Information” or “Not Accepted for Information”. Transmittals only will be returned to the Contractor indicating status of acceptance and will include any comments or reasons for not accepting. Architect will forward each submittal to appropriate party.
- D. Record Submittals: Only where specifically required in the individual trade Specification Sections, Architect will receive Record Submittals and respond “Accepted for Record” or “Not Accepted for Record”. Transmittals only will be returned to the Contractor indicating status of acceptance and will include any comments or reasons for not accepting.
- E. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.
- F. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.
- G. Submittals not required by the Contract Documents may be returned by the Architect without action or accepted for information only.

END OF SECTION 01 33 00

SECTION 01 40 00 - QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes administrative and procedural requirements for quality assurance and quality control.
- B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.
 - 1. Specific quality-assurance and -control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
 - 2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and -control procedures that facilitate compliance with the Contract Document requirements.
 - 3. Requirements for Contractor to provide quality-assurance and -control services required by Architect or Owner, Commissioning Authority, or authorities having jurisdiction are not limited by provisions of this Section.
 - 4. Specific test and inspection requirements are not specified in this Section.
- C. Related Sections include the following:
 - 1. Division 01 Sections "Special Inspections" and "Statement of Special Inspections" for Code-Required Test and Inspection Requirements and Statement of Special Inspections Forms.
 - 2. Division 01 Section "Construction Progress Documentation" for developing a schedule of required tests and inspections.
 - 3. Division 01 Section "Execution" for repair and restoration of construction disturbed by testing and inspecting activities.

1.3 DEFINITIONS

- A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.
- B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed

construction comply with requirements. Services do not include contract enforcement activities performed by Architect.

- C. Field Quality-Control Tests: Tests and inspections that are performed on-site for installation of the Work and for completed Work.
- D. Preconstruction Testing: Tests and inspections that are performed specifically for the Project before products and materials are incorporated into the Work to verify performance or compliance with specified criteria.
- E. Product Testing: Tests and inspections that are performed by an NRTL, an NVLAP, or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with industry standards.
- F. Source Quality-Control Testing: Tests and inspections that are performed at the source, i.e., plant, mill, factory, or shop.
- G. Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.
- H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.
- I. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.
 - 1. Use of trade-specific terminology in referring to a trade or entity does not require that certain construction activities be performed by accredited or unionized individuals, or that requirements specified apply exclusively to specific trade(s).
- J. Experienced: When used with an entity or individual, "experienced" unless otherwise further described, means having successfully completed a minimum of five previous projects similar in nature, size and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction. If individual sections specify more than 5 years, the specified number of years shall take precedence.

1.4 DELEGATED-DESIGN SERVICES

- A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - 1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.

1.5 CONFLICTING REQUIREMENTS

- A. Conflicting Standards and Other Requirements: If compliance with two or more standards or requirements are specified and the standards or requirements establish different or conflicting

requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements that are different, but apparently equal, to Architect for direction before proceeding.

- B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. **Where two or more quantities or quality levels of the same Work are indicated, provide the most stringent.** The actual installation **must** comply with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits **as determined by the Architect.** To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

1.6 ACTION SUBMITTALS

- A. Delegated-Design Services Submittal: In addition to Shop Drawings, Product Data, and other required submittals, submit a statement signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional, indicating that the products and systems are in compliance with performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.

1.7 INFORMATIONAL SUBMITTALS

- A. Contractor's Quality-Control Plan: For quality-assurance and quality-control activities and responsibilities.
- B. Qualification Data: For Contractor's quality-control personnel.
- C. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.
- D. Schedule of Tests and Inspections: Prepare in tabular form and include the following:
 - 1. Specification Section number and title.
 - 2. Description of test and inspection.
 - 3. Identification of applicable standards.
 - 4. Identification of test and inspection methods.
 - 5. Number of tests and inspections required.
 - 6. Time schedule or time span for tests and inspections.
 - 7. Entity responsible for performing tests and inspections.
 - 8. Requirements for obtaining samples.
 - 9. Unique characteristics of each quality-control service.
- E. Reports: Prepare and submit certified written reports and documents as specified.
- F. Permits, Licenses, and Certificates: For Owner's record, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents established for compliance with standards and regulations bearing on performance of the Work.

1.8 REPORTS AND DOCUMENTS

- A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:
1. Date of issue.
 2. Project title and number.
 3. Name, address, and telephone number of testing agency.
 4. Dates and locations of samples and tests or inspections.
 5. Names of individuals making tests and inspections.
 6. Description of the Work and test and inspection method.
 7. Identification of product and Specification Section.
 8. Complete test or inspection data.
 9. Test and inspection results and an interpretation of test results.
 10. Record of temperature and weather conditions at time of sample taking and testing and inspecting.
 11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
 12. Name and signature of laboratory inspector.
 13. Recommendations on retesting and reinspecting.
- B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:
1. Name, address, and telephone number of technical representative making report.
 2. Statement on condition of substrates and their acceptability for installation of product.
 3. Statement that products at Project site comply with requirements.
 4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
 5. Results of operational and other tests and a statement of whether observed performance complies with requirements.
 6. Statement of whether conditions, products, or installation will affect warranty.
 7. Other required items indicated in individual Specification Sections.
- C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:
1. Name, address, and telephone number of factory-authorized service representative making report.
 2. Statement that equipment complies with requirements.
 3. Results of operational and other tests and a statement of whether observed performance complies with requirements.
 4. Statement whether conditions, products, and installation will affect warranty.
 5. Other required items indicated in individual Specification Sections.
- D. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.9 QUALITY ASSURANCE

- A. General: Qualifications paragraphs in this Article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.
- B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- D. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.
 - 1. Authorized Installer: A firm which has been authorized by a manufacturer to appropriately install their product.
- E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar to those indicated for this Project in material, design, and extent.
- F. Specialists: Certain sections of the Specifications require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.
 - 1. Requirement for specialists shall not supersede building codes and regulations governing the Work.
- G. Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to ASTM E548; and with additional qualifications specified in individual Sections; and where required by authorities having jurisdiction, that is acceptable to authorities.
 - 1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.
 - 2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.
- H. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- I. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

- J. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:
1. Contractor responsibilities include the following:
 - a. Provide test specimens representative of proposed products and construction.
 - b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
 - c. Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with performance requirements.
 - d. Build site-assembled test assemblies and mockups using installers who will perform same tasks for Project.
 - e. Build laboratory mockups at testing facility using personnel, products, and methods of construction indicated for the completed Work.
 - f. When testing is complete, remove test specimens, assemblies, mockups, and laboratory mockups; do not reuse products on Project unless specifically noted otherwise.
 2. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect, with copy to Contractor. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.
- K. Mockups General: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:
1. Build mockups in location and of size indicated or, if not indicated, as directed by Architect.
 2. Notify Architect seven days in advance of dates and times when mockups will be constructed.
 3. Employ supervisory personnel who will oversee mockup construction. Employ workers that will be employed to perform same tasks during the construction at Project.
 4. Demonstrate the proposed range of aesthetic effects and workmanship.
 5. Mockups shall be erected in stages in sufficient steps as required to clearly demonstrate construction techniques and sequence from initial materials to finishes. All constructability issues shall be resolved to the satisfaction of the Architect and Contractor during mockup erection.
 6. The Contractor shall not release materials for purchase or fabrication until the mockup has been reviewed and approved by the Owner and Architect. Materials released prior to approval by both are done so at the Contractors own risk.
 7. Obtain Architect's approval of mockups before starting corresponding work, fabrication, or construction.
 - a. Allow seven days for initial review and each re-review of each mockup.
 8. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 9. Demolish and remove mockups when directed, unless otherwise indicated.

- L. Integrated Exterior Mockups: Construct integrated exterior mockup according to approved Shop Drawings. Coordinate installation of exterior envelope materials and products for which mockups are required in individual Specification Sections, along with supporting materials.

1.10 QUALITY CONTROL

- A. Owner Responsibilities: Where quality-control services are indicated as Owner's responsibility in Division 01 Section "Testing Laboratory Services", Owner will engage a qualified testing agency to perform these services.
 - 1. Owner will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspecting they are engaged to perform.
 - 2. Payment for these services will be made from testing and inspecting allowances, as authorized by Change Orders.
 - 3. Costs for retesting and reinspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Contractor and the contract sum will be adjusted by Change Order.
- B. Contractor Responsibilities: Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
 - 1. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
 - 2. Engage a qualified testing agency to perform quality-control services.
 - a. Contractor shall not employ same entity engaged by Owner, unless agreed to in writing by Owner.
 - 3. Notify testing agencies at least 24 hours in advance of time when Work that requires testing or inspecting will be performed.
 - 4. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
 - 5. Testing and inspecting requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
 - 6. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.
- C. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Division 01 Section "Submittal Procedures."
- D. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.

- E. Retesting/Reinspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.
- F. Testing Agency Responsibilities: Cooperate with Architect, Commissioning Authority and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.
1. Notify Architect, Commissioning Authority, and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
 2. Determine the location from which test samples will be taken and in which in-situ tests are conducted.
 3. Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
 4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
 5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
 6. Do not perform any duties of Contractor.
- G. Associated Contractor Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:
1. Access to the Work.
 2. Incidental labor and facilities necessary to facilitate tests and inspections.
 3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
 4. Facilities for storage and field curing of test samples.
 5. Delivery of samples to testing agencies.
 6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
 7. Security and protection for samples and for testing and inspecting equipment at Project site.
- H. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
1. Schedule times for tests, inspections, obtaining samples, and similar activities.
- I. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents. Submit schedule within 15 days of date established for commencement of the Work/the Notice to Proceed.
1. Distribution: Distribute schedule to Owner, Architect, Commissioning Authority, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.11 SPECIAL TESTS AND INSPECTIONS

- A. Special Tests and Inspections: Owner will engage a qualified testing agency to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner, as indicated in Statement of Special Inspections attached to Division 01 Section "Testing Laboratory Services", and as follows:
1. Verifying that manufacturer maintains detailed fabrication and quality-control procedures and reviewing the completeness and adequacy of those procedures to perform the Work.
 2. Notifying Architect and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
 3. Submitting a certified written report of each test, inspection, and similar quality-control service to Architect with copy to Contractor and to authorities having jurisdiction.
 4. Submitting a final report of special tests and inspections at Final Acceptance, which includes a list of unresolved deficiencies.
 5. Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
 6. Retesting and reinspecting corrected work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TEST AND INSPECTION LOG

- A. Prepare a record of tests and inspections. Include the following:
1. Date test or inspection was conducted.
 2. Description of the Work tested or inspected.
 3. Date test or inspection results were transmitted to Architect.
 4. Identification of testing agency or special inspector conducting test or inspection.
- B. Maintain log at Project site. Post changes and modifications as they occur. Provide access to test and inspection log for Architect's, Commissioning Authority's, reference during normal working hours.
1. Submit log at Project closeout as part of Project Record Documents.

3.2 REPAIR AND PROTECTION

- A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.
1. Provide materials and comply with installation requirements specified in other Specification Sections. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible.
 2. Comply with the Contract Document requirements for Division 01 Section "Execution".

- B. Protect construction exposed by or for quality-control service activities.
- C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

END OF SECTION 01 40 00

SECTION 01 41 00 - SPECIAL INSPECTIONS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

1.2 SUMMARY

- A. Special Inspections and Structural Testing shall be in accordance with Chapter 17 of the North Carolina State Building Code, 2018 Edition.
- B. Special Inspections are a quality assurance program intended to ensure that the work is performed in accordance with the Contract Documents.
- C. This Section is intended to inform the Contractor of the Owner’s quality assurance program and the extent of the Contractor’s responsibilities. This Section is also intended to notify the Special Inspector, Testing Laboratory, and other Agents of the Special Inspector of their requirements and responsibilities.

1.3 SCHEDULE OF INSPECTIONS AND TESTS

- A. Required inspections and tests are described in the “Statement of Special Inspections” attached at the end of this Section.

1.4 QUALIFICATIONS

- A. The Special Inspector shall be a licensed Professional Engineer or licensed Registered Architect who is approved by the Owner.
- B. The Testing Laboratory and individual technicians shall be approved by the Owner.
- C. The Testing Laboratory shall maintain a full-time licensed Professional Engineer on staff who shall certify the test reports. The Engineer shall be responsible for the training of the testing technicians and shall be responsible for the field and laboratory testing operations.
- D. Special Inspections shall be performed by inspectors who are a licensed Professional Engineer, licensed Registered Architect, Engineer-in-Training or Engineering Intern with an education and background applicable to the work being inspected, except as indicated below:
 - 1. Technicians performing standard tests described by specific ASTM Standards shall have training in the performance of such tests and must be able to demonstrate either by oral or written examination competence for the test to be conducted. They shall be under the supervision of a licensed Professional Engineer or licensed Registered Architect and shall not be permitted to independently evaluate test results.

2. Technicians performing construction field observations shall have training in the review and observation of specific construction materials and must be able to demonstrate either by oral or written examination competence for the test to be conducted. Technicians shall have certifications provided by accredited Professional Organizations within the industry for satisfactory completion of courses or tests demonstrating a thorough understanding of the work. They shall be under the supervision of a licensed Professional Engineer or licensed Registered Architect and shall not be permitted to independently evaluate test results.

1.5 SUBMITTALS

- A. The Special Inspector and Testing Laboratory shall submit to the Architect and Owner, for review, a copy of their qualifications, which shall include the names and qualifications of each of the individual inspections and technicians who will be performing inspections or tests.
- B. The Special Inspector and Testing Laboratory shall disclose any past or present business relationship or potential conflict of interest with the Contractor or any of the Subcontractors whose work will be inspected or tested.

1.6 PAYMENT

- A. The Owner shall engage and pay for the services of the Special Inspector, Agents of the Special Inspector and the Testing Laboratory.
- B. If any materials which require Special Inspections are fabricated in a plant which is not located within 100 miles of the Project, the Contractor shall be responsible for the travel expenses of the Special Inspector or Testing Laboratory.
 1. Expenses shall be adequate to provide same-day round-trip transportation to remote plant.
 2. Expenses shall include travel, lodging and meals.
- C. The Contractor shall be responsible for the cost of any retesting or re-inspections of work which fails to comply with the requirements of the Contract Documents.

1.7 CONTRACTOR'S RESPONSIBILITIES

- A. The Contractor shall cooperate with the Special Inspector and his agents so that the special inspections and testing may be performed without hindrance.
- B. The Contractor shall review the "Statement of Special Inspections" and shall be responsible for coordinating and scheduling inspections and tests. The Contractor shall notify the Special Inspector or Testing Laboratory at least 24 hours in advance of a required inspection or test. Un-inspected work that required inspection may be rejected solely on that basis.
- C. The Contractor shall provide incidental labor and facilities to provide access to the work to be inspected or tested, to obtain and handle samples at the site or at the source of products to be tested and to facilitate tests and inspection, storage and curing of test samples.

Energy costs related to the testing of the smoke removal system shall be responsibility of the Contractor.

- D. The Contractor shall keep at the Project site, the latest set of construction drawings, field sketches, approved and field use shop and erection drawings and specifications for use by the inspectors and testing technicians.
- E. The special inspection program shall in no way relieve the Contractor of his obligation to perform the work in accordance with the requirements of the Contract Documents or form implementing an effective quality control program. All work that is to be subjected to Special Inspections shall first be reviewed by the Contractor's quality control personnel.
- F. The Contractor shall be solely responsible for construction site safety.

1.8 LIMITS ON AUTHORITY

- A. The Special Inspector or Testing Laboratory must not release, revoke, alter, or enlarge on the requirements of the Contract Documents.
- B. The Special Inspector or Testing Laboratory will not have control over the Contractor's means and methods of construction.
- C. The Special Inspector or Testing Laboratory shall not be responsible for construction site safety.
- D. The Special Inspector or Testing Laboratory has no authority to stop the work.

1.9 RECORDS AND REPORTS

- A. Detailed daily reports shall be prepared of each inspection and test and submitted to all interested parties. Reports shall include:
 - 1. Date of test or inspection.
 - 2. Name of inspector or technician.
 - 3. Location of specific areas tested or inspected.
 - 4. Description of test or inspection and results.
 - 5. Applicable ASTM Standard.
 - 6. Weather conditions.
 - 7. Engineer's seal and signature.
- B. The Special Inspector shall submit interim reports to the Owner at the monthly meetings, which includes all inspections and test reports received that week. Copies shall be sent to the Architect, Engineer, SCO and Contractor.
- C. Any discrepancies from the Contract Documents found during a Special Inspection shall be immediately reported to the Contractor. If the discrepancies are not corrected, the Special Inspector shall notify the Owner. Reports shall document all discrepancies identified and the corrective action taken.

SECTION 01 41 01 - STATEMENT OF SPECIAL INSPECTIONS

Project: SKA Project number 220445
Location: 1081 Varsity Drive, Raleigh, NC 27606
Owner's Representative: Bob Cwikla
Owner's Address: NC State University
Facilities
Administrative Services III, 369 C
2701 Sullivan Drive
Raleigh, NC 27607

Architect of Record: EwingCole
Structural EOR: SKA Consulting Engineers, Inc.

This Statement of Special Inspections is submitted as a condition for permit issuance in accordance with the Special Inspection requirements of the 2018 North Carolina State Building Code. It includes a Schedule of Special Inspection Services applicable to this project as well as the name of the Special Inspector and the identity of other approved agencies intended to be retained for conducting these inspections.

The Special Inspector shall keep records of all inspections and shall furnish inspection reports to the State Construction Office, Structural Engineer and Architect of Record. Discovered discrepancies shall be brought to the immediate attention of the Contractor for correction. If such discrepancies are not corrected, the discrepancies shall be brought to the attention of the registered design professional in responsible charge, Structural Engineer and Architect of Record. The Special Inspections program does not relieve the Contractor of his or her responsibilities.

Interim reports shall be submitted to the Owner, Structural Engineer and Architect of Record. Interim Report Frequency: Monthly

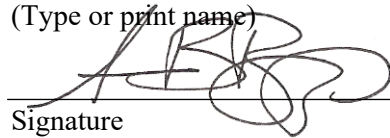

A Final Report of Special Inspections documenting completion of all required Special Inspections and correction of any discrepancies should be submitted prior to issuance of a Certificate of Use and Occupancy.

Job Site safety and means and methods of construction are solely the responsibility of the Contractor.

Statement of Special Inspections Prepared by (Structural Engineer of Record):

Aaron B. Bopp, PE

Inspection Agents	Qualifications	Address
1. Special Inspector	SI	
1. Structural Engineer of Record	SER	Aaron B. Bopp, PE 7900 Triad Center Drive Suite 200 Greensboro, NC 27409
2. Testing Laboratory	ITL	
4. Other	See Qualifications	

Note: The inspection and testing agent shall be engaged by the Owner's Agent, and not by the Contractor or Subcontractor whose work is to be inspected or tested. Any conflict of interest must be disclosed to the owner, prior to commencing work.

Seismic Design Category: B

Basic Wind Speed: 115 mph

Wind Exposure Category: C

The inspection agent shall submit a report of special inspection to the Special Inspector within four (4) days of performing an inspection or test.

QUALIFICATIONS OF INSPECTORS AND AGENTS OF SPECIAL INSPECTORS

The qualifications of all personnel performing Special Inspection activities are subject to the approval of the Building Official. The credentials of all inspectors shall be provided if requested. The individuals performing a stipulated test or inspection shall have certification or license as indicated below and/or equivalent ICC Certification for the materials, procedures or testing being observed or performed respectively.

The Special Inspector (SI) shall be a licensed Professional Engineer (PE or SE) with a minimum of 3 years of experience as a Special Inspector. The SI shall have experience in the design of structures.

1. SE Structural Engineer: A licensed PE or SE specializing in the design of building structures.
2. Geotechnical Engineer: A licensed PE specializing in soil mechanics and foundations.
3. Structural Engineering Intern: A graduate engineer who has passed the Fundamentals of Engineering examination, with experience in the design of building structures and working under the supervision of a licensed structural PE or SE.
4. Geotechnical Engineering Intern: A graduate engineer who has passed the Fundamentals of Engineering examination, with experience in soil mechanics and foundations and working under the supervision of a licensed geotechnical PE or SE.
5. Geotechnical Technician 1: An experienced technician with National Institute for Certification in Engineering Technologies: Level 2 – Soils certification.
6. Geotechnical Technician 2: An experienced technician with National Institute for Certification in Engineering Technologies: Level 2 – Geotechnical Engineering certification.
7. Concrete Technician 1: An experienced technician with American Concrete Institute – Grade I Concrete Field Testing Technician or Grade I Concrete Laboratory Testing Technician certification.
8. Concrete Technician 2: An experienced technician with American Concrete Institute – Grade II Concrete Laboratory Testing Technician or ICBO Reinforced Concrete Special Inspector certification.
9. SCSI Inspection/Testing Company with fire protection engineering experience, mechanical engineering experience, and certification as air balancers.

Schedule of Special Inspection Services
Structural Steel

Item	Qualifications	Scope
1. Fabricator Certification/Quality Control Procedures	SI SER/SI	<ul style="list-style-type: none"> • Ensure fabricator meets requirements of NCSBC 1704.2.2 • Collect Certificate of Compliance from fabricator at completion of fabrication
1. Material Verification of high strength bolts and washers	SER/SI SER/SI	<ul style="list-style-type: none"> • Periodic verification of markings to conform to ASTM standards specified in the approved construction documents. • Collect manufacturer's certificate of compliance.
2. Inspection of high-strength bolting	SER/SI SER/SI SER/SI	<ul style="list-style-type: none"> • Periodic verification of snug tight joints. • Periodic verification of pretensioned and slip-critical joints using turn-of-nut with matchmarking, twist-off bolts or direct tension indicator methods of installation. • <u>Continuous</u> verification of pretensioned and slip-critical joints using turn-of-nut without matchmarking or calibrated wrench methods of installation.
3. Material verification of structural steel and cold-formed steel deck	SI SI SER/SI	<ul style="list-style-type: none"> • Periodic verification for structural steel. Identifications of markings to conform to AISC 360. • Periodic verification for other steel. Identifications of markings to conform to ASTM standards specified in the approved construction documents. • Collect manufacturer's certified test reports.
4. Material verification of weld filer materials	SI SER/SI	<ul style="list-style-type: none"> • Periodic verification of materials. Identification markings to conform to AWS specifications in the approved construction documents. • Collect manufacturer's certificate of compliance.
6. Inspection of Welding	SI SI	<ul style="list-style-type: none"> • <u>Continuous</u> or periodic Inspection of welding of structural steel members in accordance with NCSBC Table 1704.3 <ul style="list-style-type: none"> • <u>Continuous</u> monitoring of complete or partial penetration groove welds. • <u>Continuous</u> monitoring of multipass fillet welds. • <u>Continuous</u> monitoring of single pass fillet welds in excess of 5/16". • <u>Continuous</u> monitoring of plug or slot welds. • Periodic monitoring of single pass fillet welds 5/16" or less. • Periodic monitoring of floor or roof deck welds. • <u>Continuous</u> or periodic Inspection of welding of reinforcing steel in accordance with NCSBC Table 1704.3 <ul style="list-style-type: none"> • Periodic verification of weldability of reinforcing steel other than ASTM A 706.

	SER/SI	<ul style="list-style-type: none"> • <u>Continuous</u> monitoring of reinforcing steel resisting flexural and axial forces in intermediate and special moment frames, and boundary elements of special structural walls of concrete and shear reinforcement. • <u>Continuous</u> monitoring of welding of shear reinforcement. • Periodic monitoring of welding of other reinforcement. • Identify use of approved filler material and in accordance with AWS D1.1
--	--------	--

Retaining Walls In Excess of 5' of Retained Fill

Item	Qualifications	Scope
1. Foundation	SI / ITL	<ul style="list-style-type: none"> • Foundation system, including all materials and installation, is adequate for the intended site conditions.
2. Construction Material	SER / SI / ITL	<ul style="list-style-type: none"> • Measurement of the quality of construction materials for conformance with specifications
3. Soil Conditions	SI / ITL	<ul style="list-style-type: none"> • Determination of similarity of actual soil conditions to those anticipated and assumed in design.
4. Backfill	SI / ITL SI / ITL	<ul style="list-style-type: none"> • Examination of the backfill materials for compliance with the plans and specifications. • Examination of drainage systems behind the wall for compliance with the plans and specifications.

Cast-in-Place Concrete

Item	Qualifications	Scope
1. Mix Design/Material Certifications	SER / SI	<ul style="list-style-type: none"> Collect mix designs and verify appropriate mix use during specific installation
2. Reinforcement Installation	SER / SI SI ITL ITL	<ul style="list-style-type: none"> Periodic inspection of reinforcing steel and welded wire fabric Collection of certified mill test reports Inspection of anchor bolts to be installed in concrete prior to and during placement of concrete where allowable loads have been increased per IBC section 1911.5 or where strength design is used Inspection of anchors and reinforcing steel installed in hardened concrete: verify anchor type, anchor dimensions, hole dimensions, hole cleaning procedures, anchor spacing, edge distances, concrete minimum thickness, anchor embedment and tightening torque
3. Concrete Placement/Monitoring Fresh Concrete, Sampling & prep of test samples	SI / ITL SI / ITL SI / ITL SI / ITL SI / ITL SI / ITL	<ul style="list-style-type: none"> Continuous inspection of cast-in-place concrete placement Continuous monitoring of sampling of fresh concrete, slump test, air content test, temperature of concrete and creation of strength test specimens Continuous inspection of bolts to be installed in concrete prior to and during placement Concrete strength testing and verification of compliance with construction documents Verify use of approved design mix Inspection of concrete placement for proper application techniques
4. Curing & Protection	SI / ITL	<ul style="list-style-type: none"> Periodic inspections of curing techniques
5. Post-Installed Anchors	SI/ITL	<ul style="list-style-type: none"> Verify materials and anchor preparation prior to installation Continuous Observation of installation Periodic Proof testing Verify installing Personnel have been trained for adhesive installation Verify Materials, spacing and location Verify Installation Conditions Verify installation depth and hole preparation. Continuous Inspection of Adhesive and Anchor/Reinforcement installation Verify/Observe Post-installed Torque Continuous monitoring of proof load tests Proof test 5% of adhesive anchors

Soils

Item	Qualifications	Scope
1. Site Preparation	SI	<ul style="list-style-type: none"> Determine that site has been prepared in accordance with the approved soils report
2. Fill Placement	SI	<ul style="list-style-type: none"> Determine that material used and maximum lift thickness comply with approved soils report
3. Density Evaluation	SI / ITL	<ul style="list-style-type: none"> Determine that in-place dry density of the compacted fill complies with approved soils report
4. Retaining Walls over 5 Ft.	SI / ITL SI / ITL SI / ITL SI / ITL SI / ITL	<ul style="list-style-type: none"> Periodically verify materials below foundations are adequate to achieve the design bearing capacity. Verify excavations are extended to proper depth and have reached proper material. Periodically perform classification and testing of controlled fill materials. Continuously verify use of proper materials, densities, and lift thicknesses during placement and compaction of controlled fill Periodically prior to placement of controlled fill, observe subgrade and verify that site has been prepared properly

Schedule of Special Inspection Services
Masonry

Item	Qualifications	Scope
1. Material Certification	SI SI SI	<ul style="list-style-type: none"> Collect mix design for mortar Collect mix design for grout Certificates of Compliance for masonry constituents
2. Mixing of Mortar & Grout	SI	<ul style="list-style-type: none"> Periodic inspection of site prepared mortar Periodic verification of f'm prior to construction except where specifically exempted by the North Carolina State Building Code.
3. Installation of Masonry	SI SER / SI	<ul style="list-style-type: none"> Inspection of construction of mortar joints, prior to beginning masonry construction and during construction Verify size and location of structural elements
4. Reinforcement Installation	SER / SI SER / SI SER / SI	<ul style="list-style-type: none"> Verify location of reinforcement and connections to structure prior to construction Prior to grouting verify size, grade, and placement of reinforcement and connection of masonry to structural frame Verify size and location of structural masonry elements.
5. Grouting Operations	SI	<ul style="list-style-type: none"> Continuous observation of the placement of all grout, conforming cleanliness of grout space placement of the reinforcing connectors.
6. Weather Protection	SI	<ul style="list-style-type: none"> Periodically verify protection techniques for construction of masonry below 40°F and above 90°F
7. Observation of the Evaluation of Masonry Strength	SI / ITL	<ul style="list-style-type: none"> Continuous observation of the preparation of grout specimens, mortar specimens and or prisms.
8. Post-Installed Anchors	SI/ITL	<ul style="list-style-type: none"> Verify materials and anchor preparation prior to installation Continuous Observation of installation Periodic Proof testing Verify installing Personnel have been trained for adhesive installation Verify Materials, spacing and location Verify Installation Conditions Verify installation depth and hole preparation. Continuous Inspection of Adhesive and Anchor/Reinforcement installation Verify/Observe Post-installed Torque Continuous monitoring of proof load tests Proof test 5% of adhesive anchors
9. Self-consolidating Grout	SI	<ul style="list-style-type: none"> Continuous verification of slump flow and VSI as delivered to the site for self-consolidating grout.

AGENT'S FINAL REPORT OF SPECIAL INSPECTIONS

Project Name: NCSU Doak Field Enhancement
SKA Project number 220445

Owner: Bob Cwikla
Owner's Address: NC State University
Facilities
Administrative Services III, 369 C
2701 Sullivan Drive
Raleigh, NC 27607

Building Official: NC State Construction Office

Special Inspector:

Inspection Agent: _____
(Agent Title as listed in Statement of Special Inspections)

(Company Name)

(Company Address)

To the best of my information, knowledge, and belief, the special inspections or testing required for this project and itemized for this Agent in the STATEMENT OF SPECIAL INSPECTIONS submitted for permit have been performed and all discovered discrepancies have been reported and resolved other than the following:

Interim reports submitted prior to this final report form a basis for and are to be considered an integral part of this final report.

Respectfully Submitted,

SECTION 01 42 00 - REFERENCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 DEFINITIONS

- A. General: Basic Contract definitions are included in the Conditions of the Contract.
- B. "Approved": When used to convey Architect's action on Contractor's submittals, applications, and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.
- C. "Directed": A command or instruction by Architect. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."
- D. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."
- E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.
- F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.
- G. "Install": Operations at Project site including unloading, temporarily storing, unpacking, assembling, erecting, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations, **complete, functioning, and ready for the intended use.**
- H. "Provide": Furnish and install, complete and ready for the intended use.
- I. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.
- J. "RFI" – "Request for Interpretation": Contractor's request for clarification of Architect's design intent.

1.3 INDUSTRY STANDARDS

- A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.
- B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.
- C. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.
 - 1. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

1.4 ABBREVIATIONS AND ACRONYMS

- A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Thomson Gale's "Encyclopedia of Associations" or in Columbia Books' "National Trade & Professional Associations of the U.S."
- B. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. The information in this list is subject to change and is believed to be accurate and up-to-date as of the date of the Contract Documents.
 - 1. AABC - Associated Air Balance Council; www.aabc.com.
 - 2. AAMA - American Architectural Manufacturers Association; www.aamanet.org.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 42 00

SECTION 01 50 00 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes requirements for temporary utilities, support facilities, and security and protection facilities.
- B. Related Requirements:
 - 1. Division 01 Section "Summary" for work restrictions and limitations on utility interruptions.
 - 2. Divisions 02 through 49 Sections for temporary heat, ventilation, and humidity requirements for products in those Sections.
 - 3. Division 31 Section "Dewatering" for disposal of ground water at Project site.

1.3 USE CHARGES

- A. General: Installation and removal of and use charges for temporary facilities shall be included in the Contract Sum unless otherwise indicated. Allow other entities to use temporary services and facilities without cost, including, but not limited to, Owner's construction forces, Architect, testing agencies, and authorities having jurisdiction.
- B. Sewer Service: Contractor will pay sewer-service use charges for sewer usage by all entities for construction operations.
- C. Water Service: Contractor will pay water-service use charges for water used by all entities for construction operations.
- D. Electric Power Service: Contractor will pay electric-power-service use charges for electricity used by all entities for construction operations.

1.4 INFORMATIONAL SUBMITTALS

- A. Site Utilization Plan: Show temporary facilities, temporary utility lines and connections, staging areas, construction site entrances, vehicle circulation, and parking areas for construction personnel.

- B. Implementation and Termination Schedule: Within 15 days of date established for commencement of the Work, submit schedule indicating implementation and termination dates of each temporary utility.
- C. Project Identification and Temporary Signs: Show fabrication and installation details, including plans, elevations, details, layouts, typestyles, graphic elements, and message content.
- D. Erosion- and Sedimentation-Control Plan: Show compliance with requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent.
- E. Fire-Safety Program: Show compliance with requirements of NFPA 241 and authorities having jurisdiction. Show compliance with NC State University Design and Construction Guidelines, Division 01 Contractor Safety Requirements. Indicate Contractor personnel responsible for management of fire-prevention program.
- F. Moisture-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage.
 - 1. Describe delivery, handling, and storage provisions for materials subject to water absorption or water damage.
 - 2. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and replacing water-damaged Work.
 - 3. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and terrazzo grinding, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.

1.5 QUALITY ASSURANCE

- A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.
- B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

1.6 PROJECT CONDITIONS

- A. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.
- B. The Contractor's request for use of docks, corridors, elevators, stairs and other spaces outside of the project limit shall be limited to use on an as-needed basis and such use shall be approved in advance by the Owner.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Chain-Link Fencing: Minimum 2-inch, 0.148-inch-thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8-inch-OD line posts and 2-7/8-inch-OD corner and pull posts, with 1-5/8-inch-OD top rails.
- B. Portable Chain-Link Fencing: Minimum 2-inch, 0.148-inch-thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8-inch-OD line posts and 2-7/8-inch-OD corner and pull posts, with 1-5/8-inch-OD top and bottom rails. Provide galvanized-steel bases for supporting posts.
- C. Fencing Windscreen Privacy Screen: Polyester fabric scrim with grommets for attachment to chain link fence, sized to height of fence, in color selected by Architect from manufacturer's standard colors.
- D. Polyethylene Sheet: Reinforced, fire-resistive sheet, 10-mil minimum thickness, with flame-spread rating of 15 or less per ASTM E84 and passing NFPA 701 Test Method 2.
- E. Insulation: Unfaced mineral-fiber blanket, manufactured from glass, slag wool, or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.

2.2 TEMPORARY FACILITIES

- A. Field Offices, General: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.
- B. Common-Use Field Office: Of sufficient size to accommodate needs of Owner, Architect, and construction personnel office activities and to accommodate Project meetings specified in other Division 01 Sections. Keep office clean and orderly. Furnish and equip offices as follows:
 - 1. Furniture required for Project-site documents including file cabinets, plan tables, plan racks, and bookcases.
 - 2. Conference room of sufficient size to accommodate meetings of 10 individuals. Provide electrical power service and 120-V ac duplex receptacles, with no less than one receptacle on each wall. Furnish room with conference table, chairs, and 4-foot-square tack and marker boards.
 - 3. Drinking water and private toilet.
 - 4. Coffee machine and supplies.
 - 5. Heating and cooling equipment necessary to maintain a uniform indoor temperature of 68 to 72 deg F.
 - 6. Lighting fixtures capable of maintaining average illumination of 20 fc at desk height.
 - 7. High-speed Internet Service: compatible with Architect's, Owner's and Contractor's systems.
- C. Storage and Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate materials and equipment for construction operations.
 - 1. Store combustible materials apart from building.

2.3 EQUIPMENT

- A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.
- B. HVAC Equipment: Unless Owner authorizes use of permanent HVAC system, provide vented, self-contained, electric coil unit heaters with individual space thermostatic control.
 - 1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
 - 2. Heating Units: Listed and labeled for power source, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
 - 3. Permanent HVAC System: If Owner authorizes use of permanent HVAC system for temporary use during construction, provide filter with MERV of 8 at each return-air grille in system and remove at end of construction and clean HVAC system as required in Division 01 Section "Closeout Procedures".

PART 3 - EXECUTION

3.1 TEMPORARY FACILITIES, GENERAL

- A. Conservation: Coordinate construction and use of temporary facilities with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.
 - 1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. See other Sections for disposition of salvaged materials that are designated as Owner's property.

3.2 INSTALLATION, GENERAL

- A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.
 - 1. Locate facilities to limit site disturbance as specified in Section 011000 "Summary."
- B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.3 TEMPORARY UTILITY INSTALLATION

- A. General: Install temporary service or connect to existing service.
 - 1. Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.
- B. Sewers and Drainage: Provide temporary utilities to remove effluent lawfully.

- C. Water Service: Install water service and distribution piping in sizes and pressures adequate for construction.
- D. Sanitary Facilities: Provide temporary toilets, wash facilities, and drinking water for use of construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.
- E. Heating and Cooling: Provide temporary heating and cooling required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed.
- F. Isolation of Work Areas in Occupied Facilities: Prevent dust, fumes, and odors from entering occupied areas.
 - 1. Prior to commencing work, isolate the HVAC system in area where work is to be performed according to coordination drawings.
 - a. Disconnect supply and return ductwork in work area from HVAC systems servicing occupied areas.
 - b. Maintain negative air pressure within work area using HEPA-equipped air-filtration units, starting with commencement of temporary partition construction, and continuing until removal of temporary partitions is complete.
 - 2. Maintain dust partitions during the Work. Use vacuum collection attachments on dust-producing equipment. Isolate limited work within occupied areas using portable dust-containment devices.
 - 3. Perform daily construction cleanup and final cleanup using approved, HEPA-filter-equipped vacuum equipment.
- G. Ventilation and Humidity Control: Provide temporary ventilation required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce ambient condition required and minimize energy consumption.
 - 1. Provide dehumidification systems when required to reduce substrate moisture levels to level required to allow installation or application of finishes.
- H. Electric Power Service: Connect to Owner's existing electric power service. Maintain equipment in a condition acceptable to Owner.
- I. Lighting: Provide temporary lighting with local switching that provides adequate illumination for construction operations, observations, inspections, and traffic conditions.
 - 1. Install and operate temporary lighting that fulfills security and protection requirements without operating entire system.
 - 2. Install lighting for Project identification sign.
- J. Telephone Service: Provide temporary telephone service in common-use facilities for use by all construction personnel. Install one telephone line(s) for each field office.

1. Provide additional telephone lines for the following:
 - a. Provide a dedicated telephone line for each facsimile machine in each field office.
 2. At each telephone, post a list of important telephone numbers.
 - a. Police and fire departments.
 - b. Ambulance service.
 - c. Contractor's home office.
 - d. Contractor's emergency after-hours telephone number.
 - e. Architect's office.
 - f. Construction Manager's home office.
 - g. Engineers' offices.
 - h. Owner's office.
 - i. Principal subcontractors' field and home offices.
 3. Provide superintendent with cellular telephone or portable two-way radio for use when away from field office.
- K. Electronic Communication Service: Provide internet and printing services in the primary field office adequate for use by Architect and Owner to access Project electronic documents and maintain electronic communications.
1. Network Connectivity: Gigabit.
 2. Printer: "All-in-one" unit equipped with printer server, combining color printing, photocopying, scanning, and faxing, or separate units for each of these three functions.
 3. Internet Service: Broadband modem, router and ISP, equipped with hardware firewall, providing minimum 100 Mbps upload and 100 Mbps download speeds at each computer.
 4. Internet Security: Integrated software, providing software firewall, virus, spyware, phishing, and spam protection in a combined application.

3.4 SUPPORT FACILITIES INSTALLATION

- A. General: Comply with the following:
1. Maintain support facilities until Architect schedules Final Acceptance inspection. Remove before Final Acceptance. Personnel remaining after Final Acceptance will be permitted to use permanent facilities, under conditions acceptable to Owner.
- B. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate for construction operations. Locate temporary roads and paved areas within construction limits indicated on Drawings.
1. Provide dust-control treatment that is nonpolluting and nontracking. Reapply treatment as required to minimize dust.
- C. Traffic Controls: Comply with requirements of University Transportation and City of Raleigh Department of Transportation.
1. Protect existing site improvements to remain including curbs, pavement, and utilities.
 2. Maintain access for fire-fighting equipment and access to fire hydrants.
 3. Traffic Signals and Signs

- a. Provide and operate traffic control and directional signals required to direct and maintain an orderly flow of traffic in all areas under Contractor's control, or affected by contractor's operations.
 - b. Provide traffic control and directional signs, mounted on barricades or standard posts:
 - 1) At each change of direction of a roadway and at each crossroads.
 - 2) At detours.
 - 3) At parking areas.
4. Flagmen
- a. Provide qualified and suitably equipped flagmen when construction operations encroach on traffic lanes, as required for regulation of traffic.
5. Construction Parking Control
- a. Control vehicular parking to preclude interference with public traffic or parking, access by emergency vehicles, Owner's operations, or construction operations.
 - b. Monitor parking of construction personnel's private vehicles:
 - 1) Maintain free vehicular access to and through parking areas.
 - 2) Prohibit parking on or adjacent to access roads, or in nondesignated areas.
- D. Parking: Provide temporary parking areas for construction personnel.
- 1. Parking shall be coordinated with NC State University Transportation as prescribed in its Contractor Parking Policies. See transportation.ncsu.edu for current policies.
- E. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.
- 1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
 - 2. Remove snow and ice as required to minimize accumulations.
- F. Project Signs: Project signs are not allowed.
- 1. Directional Signs: Directional signs for material deliveries are allowed within the construction area, if required, and shall be 4' wide x 2' high maximum, black and white only. The NCSU Project Manager shall approve the design of the sign and the sign text.
 - 2. Maintain and touchup signs so they are legible at all times.
- G. Waste Disposal Facilities: Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."
- H. Temporary Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate.
- I. Temporary Use of Permanent Stairs: Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Final Acceptance.

3.5 SECURITY AND PROTECTION FACILITIES INSTALLATION

- A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.
 - 1. Where access to adjacent properties is required in order to affect protection of existing facilities, obtain written permission from adjacent property owner to access property for that purpose.
- B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.
 - 1. Comply with work restrictions specified in Division 01 Section "Summary."
- C. Temporary Erosion and Sedimentation Control: Comply with requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent and requirements specified in Section 311000 "Site Clearing."
- D. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.
- E. Tree and Plant Protection: Install temporary fencing located as indicated or outside the drip line of trees to protect vegetation from damage from construction operations. Protect tree root systems from damage, flooding, and erosion.
 - 1. All pruning of existing plant materials, including roots and limbs, for construction clearances shall be done by a trained, licensed, insured arborist and according to standards set forth in the National Arborist Association publication "Standards for the Pruning for Shade Trees". All pruning shall be coordinated with and inspected by NC State Grounds Management.
 - 2. Walks, Root Zones, and Lawn Protection: A permit, issued by NC State Grounds Management, is required for vehicular access to brick and landscape areas. For single loads up to 9000 lbs, a ¾" minimum plywood base shall be placed over brick paving, root zones of trees, and lawn areas to be protected from vehicular work traffic. For single loads over 9000 lbs, two layers of ¾" plywood are required. Root zones and lawn areas shall not be covered with plywood for more than 3 consecutive days.
 - 3. For Work requiring multiple heavy loads into a construction landscape protection zone, or requiring protection for more than 3 consecutive days, a construction entry road shall be established. Construction entry shall consist of 10' by 16' oak logging mats on 6" coarse chipped, hardwood placed on a permeable structural filter fabric, top-dressed with an additional 10" of hardwood mulch. Mulch and logging mats shall be supplemented throughout the project to keep the access area structurally functional. At the end of the project, the logging mats shall be offered to Facilities Operations for salvage or disposed of off site at the discretion of the Owner.
- F. Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals so Project will be free of pests and their residues at Final Acceptance. Perform control operations lawfully, using environmentally safe materials.

- G. Site Enclosure Fence: Before construction operations begin, furnish and install site enclosure fence in a manner that will prevent people and animals from easily entering site except by entrance gates.
1. Extent of Fence: As required to enclose entire Project site or portion determined sufficient to accommodate construction operations.
 2. Construction of Fence: heavy-duty chain link material, having a minimum height of six feet and a continuous top tubular rail
 - a. Swing gates shall be included at every access to the enclosed area and shall be lockable.
 - b. The fence shall have an integral visual barrier or shall have shading type material applied and maintained for the duration of the project.
 - c. Locks for the gates shall be interlocked with a padlock provided by NCSU in order to allow access by NCSU or other emergency personnel in case of emergency.
- H. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each work day.
- I. Keys: When necessary to perform the Work, the Contractor may be issued keys to existing mechanical and electrical spaces by the Owner. These keys shall be returned at the end of the project prior to Final Completion.
1. These keys shall not be duplicated without the consent of the Owner.
- J. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.
- K. Temporary Egress: Maintain temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction.
- L. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.
1. Where heating or cooling is needed and permanent enclosure is incomplete, insulate temporary enclosures.
- M. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; manage fire-prevention program.
1. Prohibit smoking in construction areas.
 2. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition according to requirements of authorities having jurisdiction.
 3. Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with NC State Fire Marshal and local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
- N. Provide a project security program, to:

1. Protect Work, stored products and construction equipment from theft and vandalism.
2. Protect premises from entry by unauthorized persons.
3. Protect Owner's operations at site from theft, vandalism or damage from Contractor's work or employees.
4. Initiate security program in compliance with Owner's system, prior to job mobilization.
5. Maintain security program throughout construction period, until Owner occupancy or Owner acceptance precludes the need for Contractor security.
6. Identification
 - a. Provide identification to each person authorized to enter the Project premises, showing:
 - 1) Personal photograph
 - 2) Name of the individual and assigned number
 - 3) Name of employer
 - b. Maintain a current list of accredited persons; submit a copy of the list to Owner on request.
 - c. Require that identification be displayed by all persons entering, and on, the premises.
7. Exclude from site personnel not properly identified.
8. Entrance Control
 - a. Provide control of all persons and vehicles entering and leaving Project site.
 - 1) Require display of proper identification by each person.
 - 2) Allow no visitors except with issuance of temporary identification.
 - 3) Maintain log of visitors.
 - b. Owner will control deliveries and vehicles related to his own operations.
9. Patrol/Guard Service
 - a. Contractor has the option of placing or not placing a watchman at the site at all times when the buildings are not in the charge of his superintendent. Contractor shall be responsible at all times for all work and materials.
 - b. However, Contractor shall employ and pay for a watchman at all times, except normal working hours, that temporary heat is being used and as deemed necessary to meet provisions of the Contract.

3.6 MUD CONTROL

- A. Provide methods, means and facilities to prevent the depositing of mud, etc., on public thoroughfares or Owner-used roads. Provide periodic inspection of traffic areas to enforce requirements.

3.7 MOISTURE AND MOLD CONTROL

- A. Contractor's Moisture-Protection Plan: Describe delivery, handling, storage, installation, and protection provisions for materials subject to water absorption or water damage.

1. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and replacing water-damaged Work.
 2. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and terrazzo grinding, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.
 3. Indicate methods to be used to avoid trapping water in finished work.
- B. Exposed Construction Period: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:
1. Protect porous materials from water damage.
 2. Protect stored and installed material from flowing or standing water.
 3. Keep porous and organic materials from coming into prolonged contact with concrete.
 4. Remove standing water from decks.
 5. Keep deck openings covered or dammed.
- C. Partially Enclosed Construction Period: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:
1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
 2. Keep interior spaces reasonably clean and protected from water damage.
 3. Periodically collect and remove waste containing cellulose or other organic matter.
 4. Discard or replace water-damaged material.
 5. Do not install material that is wet.
 6. Discard, replace, or clean stored or installed material that begins to grow mold.
 7. Perform work in a sequence that allows any wet materials adequate time to dry before enclosing the material in drywall or other interior finishes.
- D. Controlled Construction Period: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:
1. Control moisture and humidity inside building by maintaining effective dry-in conditions.
 2. Use permanent HVAC system to control humidity.
 3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.
 - a. Hygroscopic materials that may support mold growth, including wood and gypsum-based products, that become wet during the course of construction and remain wet for 48 hours are considered defective.
 - b. Measure moisture content of materials that have been exposed to moisture during construction operations or after installation. Record readings beginning at time of exposure and continuing daily for 48 hours. Identify materials containing moisture levels higher than allowed. Report findings in writing to Architect.
 - c. Remove materials that cannot be completely restored to their manufactured moisture level within 48 hours.

3.8 MOISTURE AND MOLD FIELD QUALITY CONTROL INSPECTIONS

- A. The Owner may elect to engage a Certified Industrial Hygienist to perform the following inspections during the installation of insulation and drywall products. The investigation and report preparation shall be completed under the direction of the Certified Industrial Hygienist.
1. Perform a visual inspection of the new construction areas monthly, from the beginning of insulation and drywall installation until inspections are terminated by the owner, to identify possible areas of mold or mildew growth due to the presence of moisture. Attention will be paid to areas where growth is likely, such as dust and dirt accumulation, areas with excessive moisture from rain, leaks and condensation.
 2. Perform a visual inspection of the air handling units as each unit becomes accessible. Particular attention will be paid to conditions that may be conducive to mold or mildew growth such as system cleanliness, filter conditions, condensate drainage, and signs of visible growth.
 3. Measurements shall be taken to assess airborne levels of mold in the construction area. Sampling for airborne and surface mold will be performed using instrumentation and sampling methods described herein. One (1) plate shall be used for each sample containing Malt Extract Agar. An Anderson N6 impactor sampler will be used to collect the airborne samples.
 - a. Surface samples will be collected using either sterile transport swabs or transparent tape lift methods.
 - b. Bio-aerosol samples will be sent to the microbiological laboratory for incubation and identification.
 - c. Moisture meters and infrared thermographs will be used to identify areas and building components with high moisture content.
 4. If deemed necessary by the Owner, the Contractor and affected Sub-Contractors and their on-site staff shall attend instructional programs designed to demonstrate awareness and the proper handling of materials to avoid moisture and mold issues.
 5. A written report shall be prepared listing all findings with recommendations for corrective action, if applicable, after each inspection. The report will include:
 - a. A list of problem areas and recommendations for corrective action.
 - b. Status of previous action.
 - c. List of items corrected.
- B. Insulation and drywall products will be considered defective if they do not pass tests and inspections.
1. The Contractor shall repair or remove work where test results and inspections indicate that it has been deemed to contain unsatisfactory amounts of moisture or mold.
 2. Defective products shall be repaired or removed and replaced at no additional expense to the Owner.
 3. Testing and inspections will continue until the work is deemed to be free of moisture and mold.

3.9 POLLUTION CONTROL

- A. Provide methods, means and facilities required to prevent contamination of soil, water or atmosphere by the discharge of noxious substances from construction operations.
- B. Provide equipment and personnel, perform emergency measures required to contain any spillages, and to remove contaminated soils or liquids. Excavate and dispose of any contaminated earth off-site in a safe legal manner, and replace with suitable compacted fill and topsoil.
- C. Take special measures to prevent harmful substances from entering public waters. Prevent disposal of wastes, effluents, chemicals, or other such substances adjacent to streams, or in sanitary or storm sewers.
- D. Provide systems for control of atmospheric pollutants.
 - 1. Prevent toxic concentrations of chemicals
 - 2. Prevent harmful dispersal of pollutants into the atmosphere

3.10 OPERATION, TERMINATION, AND REMOVAL

- A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.
- B. Maintenance: Maintain facilities in good operating condition until removal.
 - 1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
- C. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Final Acceptance.
- D. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Final Acceptance. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.
 - 1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.
 - 2. Remove temporary roads and paved areas not intended for or acceptable for integration into permanent construction. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.
 - 3. At Final Acceptance, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Section 017700 "Closeout Procedures."

END OF SECTION 01 50 00

SECTION 01 60 00 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; and comparable products.
- B. Related Requirements:
 - 1. Division 01 Section "Substitution Procedures" for requests for substitutions.
 - 2. Division 01 Section "References" for applicable industry standards for products specified.

1.3 DEFINITIONS

- A. Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.
 - 1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature, which is current as of date of the Contract Documents.
 - 2. New Products: Items that have not previously been incorporated into another project or facility. Products salvaged or recycled from other projects are not considered new products.
 - 3. Comparable (Equivalent) Product: Product that is demonstrated and approved through submittal process to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.
- B. Basis-of-Design Product Specification: A specification in which a specific manufacturer's product is named and accompanied by the words "basis-of-design product," including make or model number or other designation. In addition to the basis-of-design product description, product attributes and characteristics may be listed to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, weight, dimension, durability, visual characteristics, and other special features and requirements for purposes of evaluating comparable products of additional manufacturers named in the specification.
- C. Subject to Compliance with Requirements: Where the phrase "Subject to compliance with requirements" introduces a product selection procedure in an individual Specification Section,

provide products qualified under the specified product procedure. In the event that a named product or product by a named manufacturer does not meet the other requirements of the specifications, select another named product or product from another named manufacturer that does meet the requirements of the specifications. Submit a comparable product request, if applicable.

1.4 ACTION SUBMITTALS

- A. Comparable Product Request Submittal: Submit request for consideration of each comparable product. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
 - 1. Include data to indicate compliance with the requirements specified in "Comparable Products" Article.
 - 2. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within 7 days of receipt of a comparable product request. Architect will notify Contractor through Construction Manager of approval or rejection of proposed comparable product request within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.
 - a. Form of Approval: As specified in Division 01 Section "Submittal Procedures."
 - b. Use product specified if Architect does not issue a decision on use of a comparable product request within time allocated.
- B. Basis-of-Design Product Specification Submittal: Comply with requirements in Division 01 Section "Submittal Procedures." Show compliance with requirements.

1.5 QUALITY ASSURANCE

- A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.
- B. Identification of Products: Except for required labels and operating data, do not attach or imprint manufacturer or product names or trademarks on exposed surfaces of products or equipment that will be exposed to view in occupied spaces or on the exterior.
 - 1. Labels: Locate required product labels and stamps on a concealed surface, or, where required for observation following installation, on a visually accessible surface that is not conspicuous.
 - 2. Equipment Nameplates: Provide a permanent nameplate on each item of service-connected or power-operated equipment. Locate on a visually accessible but inconspicuous surface. Include information essential for operation, including the following:
 - a. Name of product and manufacturer.
 - b. Model and serial number.
 - c. Capacity.
 - d. Speed.
 - e. Ratings.

3. See individual identification sections in Divisions 21, 22, 23, and 26 for additional identification requirements.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.
- B. Delivery and Handling:
 1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
 2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
 3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
 4. Inspect products on delivery to determine compliance with the Contract Documents and to determine that products are undamaged and properly protected.
- C. Storage:
 1. Store products to allow for inspection and measurement of quantity or counting of units.
 2. Store materials in a manner that will not endanger Project structure.
 3. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation.
 4. Protect foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.
 5. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
 6. Protect stored products from damage and liquids from freezing.

1.7 PRODUCT WARRANTIES

- A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.
 1. Manufacturer's Warranty: Written warranty furnished by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.
 2. Special Warranty: Written warranty required by the Contract Documents to provide specific rights for Owner.
- B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution.

1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
2. Specified Form: When specified forms are included with the Specifications, prepare a written document using indicated form properly executed.
3. See other Sections for specific content requirements and particular requirements for submitting special warranties.

C. Submittal Time: Comply with requirements in Division 01 Section "Closeout Procedures."

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

A. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.

1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
3. Owner reserves the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.
4. Where products are accompanied by the term "as selected," Architect will make selection.
5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
6. Or Equal: For products specified by name and accompanied by the term "or equal," or "or approved equal," or "or approved," comply with requirements in "Comparable Products" Article to obtain approval for use of an unnamed product.
 - a. Submit additional documentation required by Architect through Construction Manager in order to establish equivalency of proposed products. Evaluation of "or equal" product status is by the Architect; whose determination is final.

B. Product Selection Procedures:

1. Sole Product: Where Specifications name a single manufacturer and product, provide the named product that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
 - a. Sole product may be indicated by the phrase: "Subject to compliance with requirements, provide the following: ..."
2. Sole Manufacturer/Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
 - a. Sole manufacturer/source may be indicated by the phrase: "Subject to compliance with requirements, provide products by the following: ..."

3. Non-Limited List of Products: Where Specifications include a list of names of both available manufacturers and products, provide one of the products listed, or an unnamed product, which complies with requirements.
 - a. Non-limited list of products is indicated by the phrase: "Subject to compliance with requirements, available products that may be incorporated in the Work include, but are not limited to, the following: ..."
 4. Non-Limited List of Manufacturers: Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed, or a product by an unnamed manufacturer, which complies with requirements.
 - a. Non-limited list of manufacturers is indicated by the phrase: "Subject to compliance with requirements, available manufacturers whose products may be incorporated in the Work include, but are not limited to, the following: ..."
 5. Basis-of-Design Product: Where Specifications name a product, or refer to a product indicated on Drawings, and include a list of manufacturers, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by one of the other named manufacturers.
 - a. For approval of products by unnamed manufacturers, comply with requirements in Section 012500 "Substitution Procedures" for substitutions for convenience.
- C. Visual Matching Specification: Where Specifications require "match Architect's sample", provide a product that complies with requirements and matches Architect's sample. Architect's decision will be final on whether a proposed product matches.
1. If no product available within specified category matches and complies with other specified requirements, comply with requirements in Division 01 Section "Substitution Procedures" for proposal of product.
- D. Visual Selection Specification: Where Specifications include the phrase "as selected by Architect from manufacturer's full range" or similar phrase, select a product that complies with requirements. Architect will select color, gloss, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

2.2 COMPARABLE PRODUCTS

- A. Conditions for Consideration: Architect will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, Architect may return requests without action, except to record noncompliance with these requirements:
1. Evidence that the proposed product does not require revisions to the Contract Documents that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.

2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, if requested.
5. Samples, if requested.

2.3 BANNED MATERIALS

- A. The Owner and Architect have not knowingly included any product which includes lead-based paint, PCBs or asbestos fiber.
- B. The Contractor shall not purchase or install any product which, to his knowledge, knowingly incorporates lead based paint, PCBs or asbestos fiber in its manufacture or packaging whether a named product, a basis of design product, a comparable product or any product otherwise included on the drawings or in the project manual.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 60 00

SECTION 01 73 00 – EXECUTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes general administrative and procedural requirements governing execution of the Work including, but not limited to, the following:

1. Construction layout.
2. Field engineering and surveying.
3. Installation of the Work.
4. Cutting and patching.
5. Coordination of Owner-installed products.
6. Progress cleaning.
7. Starting and adjusting.
8. Protection of installed construction.
9. Correction of the Work.

- B. Related Requirements:

1. Division 01 Section "Summary" for limits on use of Project site.
2. Division 01 Section "Submittal Procedures" for submitting surveys.
3. Division 01 Section "Closeout Procedures" for submitting final property survey with Project Record Documents, recording of Owner-accepted deviations from indicated lines and levels, and final cleaning.
4. Division 02 Section "Selective Demolition" for demolition and removal of selected portions of the building.

1.3 DEFINITIONS

- A. Cutting: Removal of in-place construction necessary to permit installation or performance of other work.
- B. Patching: Fitting and repair work required to restore construction to original conditions after installation of other work.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For land surveyor.

- B. Certificates: Submit certificate signed by land surveyor certifying that location and elevation of improvements comply with requirements.
- C. Certified Surveys: Submit two copies signed by land surveyor.
- D. Final Property Survey: Submit 10 copies showing the Work performed and record survey data.

1.5 QUALITY ASSURANCE

- A. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.
- B. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.
 - 1. Structural Elements: When cutting and patching structural elements, notify Architect of locations and details of cutting and await directions from Architect before proceeding. Shore, brace, and support structural elements during cutting and patching. Provide lintels in masonry where required. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection. Coring of concrete and masonry shall not be permitted without the prior approval of the Architect.
 - 2. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety. Operational elements include the following:
 - a. Primary operational systems and equipment.
 - b. Fire separation assemblies.
 - c. Air or smoke barriers.
 - d. Fire-suppression systems.
 - e. Plumbing piping systems.
 - f. Mechanical systems piping and ducts.
 - g. Control systems.
 - h. Communication systems.
 - i. Fire-detection and -alarm systems.
 - j. Conveying systems.
 - k. Electrical wiring systems.
 - l. Operating systems of special construction.
 - m. Sports facility internal and external broadcast systems.
 - 3. Other Construction Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety. Other construction elements include but are not limited to the following:
 - a. Water, moisture, or vapor barriers.
 - b. Membranes and flashings.

- c. Roofing systems
 - 1) Employ manufacturer or manufacturer's approved installer to perform cutting and patching on roofing systems as required to maintain existing warranty.
 - d. Exterior curtain-wall construction.
 - e. Sprayed fire-resistive material.
 - f. Equipment supports.
 - g. Piping, ductwork, vessels, and equipment.
 - h. Noise- and vibration-control elements and systems.
4. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.
- a. Employ manufacturer or manufacturer's approved installer to perform cutting and patching on weather-exposed or moisture resistant building envelope elements.
- C. Cutting and Patching Conference: Before proceeding, meet at Project site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.
- D. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of products and equipment.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. General: Comply with requirements specified in other Sections.
- B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.
 - 1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Architect for the visual and functional performance of in-place materials.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, mechanical and electrical systems, and other construction affecting the Work.

1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, and water-service piping; underground electrical services, and other utilities.
 2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.
- B. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
1. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
 2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
 3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- C. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:
1. Description of the Work.
 2. List of detrimental conditions, including substrates.
 3. List of unacceptable installation tolerances.
 4. Recommended corrections.
- D. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Existing Utility Information: Furnish information to local utility and Owner that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.
- B. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- C. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.
- D. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of Contractor, submit a request for information to Architect according to requirements in Division 01 Section "Project Management and Coordination."

3.3 CONSTRUCTION LAYOUT

- A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify Architect promptly.
- B. General: Engage a land surveyor to lay out the Work using accepted surveying practices.
 - 1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
 - 2. Establish limits on use of Project site.
 - 3. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
 - 4. Inform installers of lines and levels to which they must comply.
 - 5. Check the location, level and plumb, of every major element as the Work progresses.
 - 6. Notify Architect when deviations from required lines and levels exceed allowable tolerances.
 - 7. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.
- C. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and rim and invert elevations.
- D. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.
- E. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Architect.

3.4 FIELD ENGINEERING

- A. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.
 - 1. Do not change or relocate existing benchmarks or control points without prior written approval of Architect. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Architect before proceeding.
 - 2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.
- B. Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.

1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
 2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
 3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.
- C. Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.
- D. Final Property Survey: Engage a land surveyor to prepare a final property survey showing significant features (real property) for Project. Include on the survey a certification, signed by land surveyor, that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.
1. Show boundary lines, monuments, streets, site improvements and utilities, existing improvements and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.

3.5 INSTALLATION

- A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.
1. Make vertical work plumb and make horizontal work level.
 2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
 3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
 4. Maintain minimum headroom clearance of **96 inches (2440 mm)** in occupied spaces and **90 inches (2300 mm)** in unoccupied spaces.
- B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.
- C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Final Acceptance.
- D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.
- E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on site and placement in permanent locations.
- F. Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.
- G. Templates: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

- H. Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions.
 - 1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.
 - 2. Allow for building movement, including thermal expansion and contraction.
 - 3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
 - a. Where sleeves have not been provided, holes in masonry walls and concrete slabs and walls shall be core drilled
- I. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.
- J. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.
- K. Repair or remove and replace damaged, defective, or nonconforming Work.
 - 1. Comply with Section 017700 "Closeout Procedures" for repairing or removing and replacing defective Work.

3.6 CUTTING AND PATCHING

- A. Cutting and Patching, General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.
 - 1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.
 - 2. Where cutting results in the unintended removal of or damage to operational, structural or other construction elements, the Contractor shall stop work, report the condition to the Architect and proceed again only after an emergency plan of action has been approved for implementation.
- B. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during installation or cutting and patching operations, by methods and with materials so as not to void existing warranties.
- C. Temporary Support: Provide temporary support of work to be cut.
- D. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.

- E. Adjacent Occupied Areas: Where interference with use of adjoining areas or interruption of free passage to adjoining areas is unavoidable, coordinate cutting and patching according to requirements in Division 01 Section "Summary."
- F. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to prevent interruption to occupied areas.
- G. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.
1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
 2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
 3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill. Coring of concrete and masonry shall not be permitted without the prior approval of the Architect.
 4. Excavating and Backfilling: Comply with requirements in applicable Sections where required by cutting and patching operations.
 5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
 6. Proceed with patching after construction operations requiring cutting are complete.
- H. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other work. Patch with durable seams that are as invisible as practicable. Provide materials and comply with installation requirements specified in other Sections, where applicable.
1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
 2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will minimize evidence of patching and refinishing.
 - a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
 - b. Restore damaged pipe covering to its original condition.
 3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.
 - a. Where patching occurs in a painted surface, prepare substrate and apply primer and intermediate paint coats appropriate for substrate over the patch, and apply final

paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.

4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
 5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition and ensures thermal and moisture integrity of building enclosure.
 6. Where underground services are installed below existing site paving, curbing, grass, etc., damaged and disturbed areas shall be restored to their original condition.
- I. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

3.7 OWNER-INSTALLED PRODUCTS

- A. Site Access: Provide access to Project site for Owner's construction personnel.
- B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction personnel.
1. Construction Schedule: Inform Owner of Contractor's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.
 2. Preinstallation Conferences: Include Owner's construction personnel at preinstallation conferences covering portions of the Work that are to receive Owner's work. Attend preinstallation conferences conducted by Owner's construction personnel if portions of the Work depend on Owner's construction.

3.8 PROGRESS CLEANING

- A. General: Clean Project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.
1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
 2. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F (27 deg C).
 3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.
 - a. Use containers intended for holding waste materials of type to be stored.
- B. Site: Maintain Project site free of waste materials and debris.
- C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.
1. Remove liquid spills promptly.

2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.
- D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.
- E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.
- F. Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Final Acceptance.
- G. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways. Comply with waste disposal requirements in Division 01 Section "Temporary Facilities and Controls" and Division 01 Section "Construction Waste Management and Disposal."
- H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Final Acceptance.
- I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.
- J. Limiting Exposures: Supervise construction operations to assure that no part of the construction completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.9 STARTING AND ADJUSTING

- A. Coordinate startup and adjusting of equipment and operating components with requirements in Division 01 Section "Commissioning."
- B. Permanent equipment used for temporary services:
 1. Any permanent equipment used for temporary service must undergo (before being used) manufacturer's supervision and startup services as specified in the technical sections of the specifications.
 2. Upon completion of such use of permanent equipment, equipment must again undergo manufacturer's supervision and startup services no earlier than one month prior to Final Acceptance.
- C. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.
- D. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.

- E. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- F. Manufacturer's Field Service: Comply with qualification requirements in Division 01 Section "Quality Requirements."

3.10 PROTECTION OF INSTALLED CONSTRUCTION

- A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Final Acceptance.
- B. Protection of Existing Items: Provide protection and ensure that existing items to remain undisturbed by construction are maintained in condition that existed at commencement of the Work.
- C. Comply with manufacturer's written instructions for temperature and relative humidity.

3.11 CORRECTION OF THE WORK

- A. Repair or remove and replace damaged, defective, or nonconforming Work, at the Owner's option.. Restore damaged substrates and finishes.
 - 1. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.
 - 2. Nonconforming Work includes any Work that deviates from the Contract Documents ("*Drawings and Specifications*"), that was furnished, installed and/or provided, without prior written approval of the deviation.
 - 3. The Contractor shall promptly correct Work rejected by the Architect or failing to conform to the requirements of the Contract Documents, whether or not fabricated, installed or completed. Costs of correcting such rejected Work, including additional testing and inspections, the cost of uncovering and replacement, and compensation for the Architect's services and expenses made necessary thereby, shall be at the Contractor's expense.
- B. Repair Work previously completed and subsequently damaged during construction period. Repair to like-new condition.
- C. Restore permanent facilities used during construction to their specified condition.
- D. Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.
- E. Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.
- F. Remove and replace chipped, scratched, and broken glass or reflective surfaces.

END OF SECTION 01 73 00

SECTION 01 74 19 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes administrative and procedural requirements for the following:
 - 1. Salvaging nonhazardous demolition and construction waste.
 - 2. Recycling nonhazardous demolition and construction waste.
 - 3. Disposing of nonhazardous demolition and construction waste.
- B. Related Sections include the following:
 - 1. Division 01 Section "Temporary Facilities and Controls" for environmental-protection measures during construction.
 - 2. Division 02 Section "Structure Demolition" for disposition of waste resulting from demolition of buildings, structures, and site improvements, and for disposition of hazardous waste.
 - 3. Division 31 Section "Site Clearing" for disposition of waste resulting from site clearing and removal of above- and below-grade improvements.

1.3 DEFINITIONS

- A. Construction Waste: Building and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.
- B. Demolition Waste: Building and site improvement materials resulting from demolition or selective demolition operations.
- C. Disposal: Removal off-site of demolition and construction waste and subsequent sale, recycling, reuse, or deposit in landfill or incinerator acceptable to authorities having jurisdiction.
- D. Hazardous Waste: Any solid waste that is ignitable, corrosive, reactive, or toxic; a listed hazardous material or containing a listed hazardous material per Title 40 Code of Federal Regulations Parts 260-270.
- E. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.
- F. Salvage: Recovery of demolition or construction waste and subsequent sale or reuse in another facility.

- G. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Work.
- H. Universal Waste: Hazardous wastes that have been provided specific exemptions (40CFR 273) to encourage recycling. Universal wastes are limited to recalled or cancelled pesticides and intact batteries, lamps, and mercury containing devices.
- I. Yard Waste: A solid waste consisting solely of vegetative matter resulting from landscaping maintenance.

1.4 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition and construction waste remains the property of the Owner.
- B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.
 - 1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.5 ACTION SUBMITTALS

- A. Waste Management Plan: Submit 3 copies of plan within 7 days of date established for the Notice to Proceed.

1.6 INFORMATIONAL SUBMITTALS

- A. General: Contractor to provide all forms required by this section.
- B. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit report. Use Owner's standard forms administered by Office of Waste Reduction & Recycling (<http://recycling.ncsu.edu>).
- C. Waste Reduction Calculations: Before request for Final Acceptance, submit three copies of calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the Work.
- D. Records of Donations: Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.
- E. Records of Sales: Indicate receipt and acceptance of salvageable waste sold to individuals and organizations. Indicate whether organization is tax exempt.
- F. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

- G. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
- H. Qualification Data: For Waste Management Coordinator and refrigerant recovery technician.
- I. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.
- J. Refrigerant Recovery: Comply with requirements in Division 02 Section "Structure Demolition" for refrigerant recovery submittals.

1.7 QUALITY ASSURANCE

- A. Waste Management Coordinator Qualifications: Experienced firm, or individual employed and assigned by General Contractor, with a record of successful waste management coordination of projects with similar requirements. Superintendent may serve as Waste Management Coordinator.
- B. Refrigerant Recovery Technician Qualifications: Universal certified by EPA-approved certification program.
- C. Refrigerant Recovery Technician Qualifications: Comply with requirements in Division 02 Section "Structure Demolition."
- D. Regulatory Requirements: Comply with transportation and disposal regulations of authorities having jurisdiction.
- E. Waste Management Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to waste management including, but not limited to, the following:
 - 1. Review and discuss waste management plan including responsibilities of Waste Management Coordinator.
 - 2. Review requirements for documenting quantities of each type of waste and its disposition.
 - 3. Review and finalize procedures for materials separation and verify availability of containers and bins needed to avoid delays.
 - 4. Review procedures for periodic waste collection and transportation to recycling and disposal facilities.
 - 5. Review waste management requirements for each trade.

1.8 WASTE MANAGEMENT PLAN

- A. General: Develop a waste management plan according to requirements in this Section. Plan shall consist of waste identification, waste reduction work plan, and cost/revenue analysis. Distinguish between demolition and construction waste. Indicate quantities by weight or volume but use same units of measure throughout waste management plan.

- B. Waste Identification: Indicate anticipated types and quantities of demolition site-clearing and construction waste generated by the Work. Use Form CWM-1 for construction waste and Form CWM-2 for demolition waste. Include estimated quantities and assumptions for estimates.
- C. Waste Reduction Work Plan: List each type of waste and whether it will be salvaged, recycled, or disposed of in landfill or incinerator. Include points of waste generation, total quantity of each type of waste, quantity for each means of recovery, and handling and transportation procedures.
1. Salvaged Materials for Reuse: For materials that will be salvaged and reused in this Project, describe methods for preparing salvaged materials before incorporation into the Work in compliance with Division 02 Section "Structure Demolition."
 2. Salvaged Materials for Sale: For materials that will be sold to individuals and organizations, include list of their names, addresses, and telephone numbers.
 3. Salvaged Materials for Donation: For materials that will be donated to individuals and organizations, include list of their names, addresses, and telephone numbers.
 4. Recycled Materials: Include list of local receivers and processors and type of recycled materials each will accept. Include names, addresses, and telephone numbers.
 5. Disposed Materials: Indicate how and where materials will be disposed of. Include name, address, and telephone number of each landfill and incinerator facility.
 6. Handling and Transportation Procedures: Include method that will be used for separating recyclable waste including sizes of containers, container labeling, and designated location on Project site where materials separation will be located.
- D. Cost/Revenue Analysis: Indicate total cost of waste disposal as if there were no waste management plan and net additional cost or net savings resulting from implementing waste management plan. Use Form CWM-5 for construction waste and Form CWM-6 for demolition waste. Include the following:
1. Total quantity of waste
 2. Estimated cost of disposal (cost per unit). Include hauling and tipping fees and cost of collection containers for each type of waste
 3. Total cost of disposal (with no waste management)
 4. Revenue from salvaged materials
 5. Revenue from recycled materials
 6. Savings in hauling and tipping fees by donating materials
 7. Savings in hauling and tipping fees that are avoided
 8. Handling and transportation costs. Include cost of collection containers for each type of waste
 9. Net additional cost or net savings from waste management plan

1.9 UNIVERSITY WASTE RESOURCES

1. At the contractor's option and when available, the contractor may utilize University contract pricing for related facility tip costs or recycling rebates.
 - a. Contractor shall coordinate with Owner and University Waste Reduction and Recycling to utilize contract pricing.
2. At the contractor's option, the contractor may contract with University Waste Reduction and Recycling for Rolloff Dumpster use.
 - a. Contractor shall coordinate with Owner and University Waste Reduction and Recycling for rolloffs.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Achieve end-of-Project rates for salvage/recycling of 75 percent by weight of total nonhazardous solid waste generated by the Work. Practice efficient waste management in the use of materials in the course of the Work. Use all reasonable means to divert construction and demolition waste from landfills and incinerators. Facilitate recycling and salvage of materials, including the following:

1. Demolition Waste:
 - a. Asphalt paving.
 - b. Concrete.
 - c. Concrete reinforcing steel.
 - d. Brick.
 - e. Concrete masonry units.
 - f. Wood studs.
 - g. Wood joists.
 - h. Plywood and oriented strand board.
 - i. Wood paneling.
 - j. Wood trim.
 - k. Structural and miscellaneous steel.
 - l. Rough hardware.
 - m. Roofing.
 - n. Insulation.
 - o. Doors and frames.
 - p. Door hardware.
 - q. Windows.
 - r. Glazing.
 - s. Metal studs.
 - t. Gypsum board.
 - u. Acoustical tile and panels.
 - v. Carpet.
 - w. Carpet pad.
 - x. Demountable partitions.
 - y. Equipment.
 - z. Cabinets.
 - aa. Plumbing fixtures.
 - bb. Piping.
 - cc. Supports and hangers.
 - dd. Valves.
 - ee. Sprinklers.
 - ff. Mechanical equipment.
 - gg. Refrigerants.
 - hh. Electrical conduit.
 - ii. Copper wiring.
 - jj. Lighting fixtures.
 - kk. Lamps.
 - ll. Ballasts.
 - mm. Electrical devices.

- nn. Switchgear and panelboards.
- oo. Transformers.

2. Construction Waste:

- a. Masonry and CMU.
- b. Lumber.
- c. Wood sheet materials.
- d. Wood trim.
- e. Metals.
- f. Roofing.
- g. Insulation.
- h. Carpet and pad.
- i. Gypsum board.
- j. Piping.
- k. Electrical conduit.
- l. Packaging: Regardless of salvage/recycle goal indicated in "General" Paragraph above, salvage or recycle 100 percent of the following uncontaminated packaging materials:
 - 1) Paper.
 - 2) Cardboard.
 - 3) Boxes.
 - 4) Plastic sheet and film.
 - 5) Polystyrene packaging.
 - 6) Wood crates.
 - 7) Wood pallets.
 - 8) Plastic pails.
- m. Construction Office Waste: Regardless of salvage/recycle goal indicated in "General" Paragraph above, salvage or recycle 100 percent of the following construction office waste materials:
 - 1) Paper.
 - 2) Aluminum cans.
 - 3) Glass containers.

3. Owner-directed Recyclables: Regardless of salvage/recycle goal indicated in "General" Paragraph above, 100 percent of the following materials shall be recycled:

- a. Cardboard
- b. Bottles and cans
- c. Scrap metal and wire
- d. Concrete
- e. Asphalt (paving and shingles)
- f. Aggregate
- g. Brick and CMU

B. Yard Waste: Achieve end-of-Project rates for landfill diversion of 100 percent of total yard waste generated by the Work.

2.2 CONTAINERS FOR HAZARDOUS, UNIVERSAL, AND SPECIAL WASTES

- A. Containers used for waste storage shall be approved by US Department of Transportation for transport.
 - 1. Containers shall be resealable to allow enclosed storage of waste and reopening for depositing of new waste.
 - 2. Containers shall be provided by Owner for items collected by Owner.
- B. Hazardous waste containers shall have labels to clearly identify waste stream.
 - 1. Include date of initial accumulation on label.
 - 2. Separate containers shall be used for each waste stream. Containers shall not contain waste for multiple streams.

PART 3 - EXECUTION

3.1 PLAN IMPLEMENTATION

- A. General: Implement waste management plan as approved by Architect and Owner. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.
 - 1. Comply with Division 01 Section "Temporary Facilities and Controls" for operation, termination, and removal requirements.
- B. Waste Management Coordinator: Engage a waste management coordinator to be responsible for implementing, monitoring, and reporting status of waste management work plan. Coordinator shall be present at Project site full time for duration of Project.
- C. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work occurring at Project site.
 - 1. Distribute waste management plan to everyone concerned within three days of submittal return.
 - 2. Distribute waste management plan to entities when they first begin work on-site. Review plan procedures and locations established for salvage, recycling, and disposal.
- D. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - 1. Designate and label specific areas on Project site necessary for separating materials that are to be salvaged, recycled, reused, donated, and sold.
 - 2. Comply with Division 01 Section "Temporary Facilities and Controls" for controlling dust and dirt, environmental protection, and noise control.

3.2 SALVAGING DEMOLITION WASTE

- A. General: Salvage of Construction and Demolition Waste for Reuse shall be the preferred method of disposal.

- B. Evaluate salvaged materials for use in University construction projects.
 - 1. Where use in construction is not feasible but items may have resale value, contact NC State Surplus Property Services. Contact Waste Reduction and Recycling for assistance with disposition.
 - 2. Where a vendor can be identified, coordinate recycling through available take-back programs.
- C. Salvaged Items for Owner's Use:
 - 1. Clean salvaged items
 - 2. Pack or crate items after cleaning. Identify contents of containers
 - 3. Store items in a secure area until delivery to Owner
 - 4. Transport items to Owner's storage area designated by Owner
 - 5. Protect items from damage during transport and storage
- D. Doors and Hardware: Brace open end of door frames. Except for removing door closers, leave door hardware attached to doors.
- E. Equipment: Drain tanks, piping, and fixtures. Seal openings with caps or plugs. Protect equipment from exposure to weather.
- F. Plumbing Fixtures: Separate by type and size.
- G. Lighting Fixtures: Separate lamps by type and protect from breakage.
- H. Electrical Devices: Separate switches, receptacles, switchgear, transformers, meters, panelboards, circuit breakers, and other devices by type.

3.3 RECYCLING DEMOLITION AND CONSTRUCTION WASTE, GENERAL

- A. General: Where salvage of Construction and Demolition Waste is not feasible, recycling shall be the preferred method of disposal.
- B. On-site Paper and Beverage Containers: Recycle paper and beverage containers used by on-site workers.
- C. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall be shared equally by Owner and Contractor.
- D. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.
- E. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical.
 - 1. Provide appropriately marked containers or bins for controlling recyclable waste until they are removed from Project site. Include list of acceptable and unacceptable materials at each container and bin.

- a. Inspect containers and bins for contamination and remove contaminated materials if found.
2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
3. Stockpile materials away from construction area. Do not store within drip line of remaining trees.
4. Store components off the ground and protect from the weather.
5. Remove recyclable waste off Owner's property and transport to recycling receiver or processor.

3.4 RECYCLING DEMOLITION WASTE

- A. Asphaltic Concrete Paving: Grind asphalt to maximum **1-1/2-inch (38-mm)** size.
 1. Crush asphaltic concrete paving and screen to comply with requirements in Division 31 Section "Earth Moving" for use as general fill.
- B. Asphaltic Paving: Break up and transport paving to asphalt-recycling facility.
- C. Concrete: Remove reinforcement and other metals from concrete and sort with other metals.
 1. Pulverize concrete to maximum **1-1/2-inch (38-mm)** size
 2. Crush concrete and screen to comply with requirements in Division 31 Section "Earth Moving" for use as satisfactory soil for fill or subbase
- D. Masonry: Remove metal reinforcement, anchors, and ties from masonry and sort with other metals.
 1. Pulverize masonry to maximum **3/4-inch (19-mm)** size.
 - a. Crush masonry and screen to comply with requirements in Division 31 Section "Earth Moving" for use as general fill.
 - b. Crush masonry and screen to comply with requirements in Division 32 Section "Plants" for use as mineral mulch.
 2. Clean and stack undamaged, whole masonry units on wood pallets.
- E. Wood Materials: Sort and stack members according to size, type, and length. Separate lumber, engineered wood products, panel products, and treated wood materials.
- F. Metals: Separate metals by type.
 1. Structural Steel: Stack members according to size, type of member, and length.
 2. Remove and dispose of bolts, nuts, washers, and other rough hardware.
- G. Asphalt Shingle Roofing: Separate organic and glass-fiber asphalt shingles and felts. Remove and dispose of nails, staples, and accessories.
- H. Gypsum Board: Stack large clean pieces on wood pallets and store in a dry location. Remove edge trim and sort with other metals. Remove and dispose of fasteners.

- I. Acoustical Ceiling Panels and Tile: Stack large clean pieces on wood pallets and store in a dry location.
 - 1. Separate suspension system, trim, and other metals from panels and tile and sort with other metals.
- J. Carpet and Pad: Roll large pieces tightly after removing debris, trash, adhesive, and tack strips.
 - 1. Store clean, dry carpet and pad in a closed container or trailer provided by Carpet Reclamation Agency or carpet recycler.
- K. Carpet Tile: Remove debris, trash, and adhesive.
 - 1. Stack tile on pallet and store clean, dry carpet in a closed container or trailer provided by carpet reclamation agency or carpet recycler.
- L. Equipment: Drain tanks, piping, and fixtures. Seal openings with caps or plugs. Protect equipment from exposure to weather.
- M. Plumbing Fixtures: Separate by type and size.
- N. Piping: Reduce piping to straight lengths and store by type and size. Separate supports, hangers, valves, sprinklers, and other components by type and size.
- O. Lighting Fixtures: Separate lamps by type and protect from breakage.
- P. Electrical Devices: Separate switches, receptacles, switchgear, transformers, meters, panelboards, circuit breakers, and other devices by type.
- Q. Conduit: Reduce conduit to straight lengths and store by type and size.

3.5 RECYCLING CONSTRUCTION WASTE

- A. Packaging:
 - 1. Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.
 - 2. Polystyrene Packaging: Separate and bag materials.
 - 3. Pallets: As much as possible, require deliveries using pallets to remove pallets from Project site. For pallets that remain on-site, break down pallets into component wood pieces and comply with requirements for recycling wood.
 - 4. Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.
- B. Site-Clearing Wastes: Chip brush, branches, and trees at landfill facility.
- C. Wood Materials:
 - 1. Clean Cut-Offs of Lumber: Grind or chip into small pieces.
 - 2. Clean Sawdust: Bag sawdust that does not contain painted or treated wood.

- a. Comply with requirements in Division 32 Section "Plants" for use of clean sawdust as organic mulch.
- D. Gypsum Board: Stack large clean pieces on wood pallets and store in a dry location.
 - 1. Clean Gypsum Board: Grind scraps of clean gypsum board using small mobile chipper or hammer mill. Screen out paper after grinding.
 - a. Comply with requirements in Division 32 Section "Plants" for use of clean ground gypsum board as inorganic soil amendment.
- E. Paint: Seal containers and store by type.

3.6 DISPOSAL OF WASTE

- A. General: Except for items or materials to be salvaged or recycled, remove waste materials from Project site and deliver to a Construction and Demolition recycling and reclamation facility with current NC Department of Environmental Quality permit for sorting.
 - 1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.
 - 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- B. Burning: Do not burn waste materials.
- C. Disposal: Transport waste materials off Owner's property and legally dispose of them.

3.7 HAZARDOUS, UNIVERSAL, AND SPECIAL WASTES

- A. Manage hazardous, universal, and special wastes separately from other Construction & Demolition waste.
- B. Coordinate disposal with NC State Environmental Health & Safety.
- C. Store waste containers in a secured, covered, and well identified area of the site.
 - 1. Waste shall not be stored on site for more than 90 days.
 - 2. Inspect waste stored on site for more than six days. Inspections shall be conducted and documented no less than weekly.
- D. Provide spill response supplies adequate to contain 110% of any accumulated waste.
 - 1. If a spill occurs, notify Owner and proceed with spill containment and cleanup.
- E. Provide Owner with copies of all hazardous, universal, and special waste disposal certificates and/or manifests for all waste shipped.

END OF SECTION 01 74 19

SECTION 01 77 00 - CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:

1. Final Acceptance procedures.
2. Final completion procedures.
3. Warranties.
4. Final cleaning.
5. Repair of the Work.

- B. Related Requirements:

1. Division 01 Section "Payment Procedures" for instructions for the preparation of the final payment application.
2. Division 01 Section "Photographic Documentation" for providing final completion construction photographic documentation.
3. Division 01 Section "Execution" for progress cleaning of Project site.
4. Division 01 Section "Operation and Maintenance Data" for operation and maintenance manual requirements.
5. Division 01 Section "Project Record Documents" for submitting record documents and record submittals.
6. Division 01 Section "Demonstration and Training" for requirements for instructing Owner's personnel.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of cleaning agent.
- B. Contractor's List of Incomplete Items: Initial submittal at Final Acceptance.
- C. Certified List of Incomplete Items: Final submittal at final completion.

1.4 CLOSEOUT DOCUMENTS

- A. Certificates of Release: From authorities having jurisdiction.

1. Certificate of Occupancy
2. Certificates of Inspection
 - a. Elevators
 - b. Mechanical
 - c. Electrical
 - d. Fire Protection

B. Certificate of Insurance: For continuing coverage.

C. Field Report: For pest control inspection.

D. Miscellaneous Closeout Documents: As specified in individual trade Specification Sections.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Schedule of Maintenance Material Items: For maintenance material items specified in other Sections.

1.6 FINAL ACCEPTANCE PROCEDURES

A. Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's punch list), indicating the value of each item on the list and reasons why the Work is incomplete.

B. Submit a list of all Closeout Documents, including the location of document delivery, format and number of copies, for review by the Architect and Owner.

C. Submission Prior to Final Acceptance: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Final Acceptance. List items below that are incomplete at time of request.

1. Certificates of Release: Obtain and submit releases from authorities having jurisdiction permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
2. Submit closeout submittals specified in other Division 01 Sections, including project record documents, operation and maintenance manuals, final completion construction photographic documentation, property surveys and similar final record information.
3. Submit closeout submittals specified in individual trade Specification Sections, including specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
4. Submit maintenance material submittals specified in individual trade Specification Sections, including tools, spare parts, extra materials. Label with manufacturer's name and model number where applicable.
 - a. Schedule of Maintenance Material Items: Prepare and submit schedule of maintenance material submittal items, including name and quantity of each item and name and number of related Specification Section. Obtain Owner's signature for receipt of submittals.

5. Submit testing, adjusting, and balancing records.
 6. Submit sustainable design submittals not previously submitted.
 7. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.
- D. Procedures Prior to Final Acceptance: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Final Acceptance. List items below that are incomplete at time of request.
1. Advise Owner of pending insurance changeover requirements.
 2. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
 3. Complete startup and testing of systems and equipment.
 4. Perform preventive maintenance on equipment used prior to Final Acceptance.
 5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems as specified in individual trade Specification Sections.
 6. Submit demonstration and training video recordings as specified in individual trade Specification Sections.
 7. Advise Owner of changeover in heat and other utilities.
 8. Participate with Owner in conducting inspection and walkthrough with local emergency responders.
 9. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
 10. Complete final cleaning requirements, including touchup painting.
 11. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.
- E. Inspection: Submit a written request for inspection to determine Final Acceptance a minimum of 10 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Architect and Construction Manager will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare the Certificate of Final Acceptance after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Architect, that must be completed or corrected before certificate will be issued.
1. Should Architect determine that Work is not substantially complete, he will promptly notify Contractor in writing, giving the reasons therefor.
 2. Contractor shall remedy deficiencies, and send a second written notice of Final Acceptance, and Architect will reinspect the Work.
 3. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
 4. Results of completed inspection will form the basis of requirements for final completion.
 5. Reinspection Fees: Should Architect perform reinspections due to failure of Work to comply with claims made by the Contractor, Owner will compensate Architect for such additional services, and deduct the amount of such compensation from final payment of the Contractor.

1.7 FINAL COMPLETION PROCEDURES

- A. Submissions Prior to Final Completion: Before requesting final inspection for determining final completion, complete the following:
1. Submit a final Application for Payment according to Division 01 Section "Payment Procedures."
 2. Certified List of Incomplete Items: Submit certified copy of Architect's Final Acceptance inspection list of items to be completed or corrected (punch list), endorsed and dated by Architect. Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
 3. Certificate of Insurance: Submit evidence of final, continuing insurance coverage complying with insurance requirements.
 4. Submit pest-control final inspection report.
 5. Submit final completion photographic documentation.
- B. Inspection: Submit a written request for final inspection to determine acceptance a minimum of 10 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Architect and Construction Manager will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.
1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.8 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

- A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction.
1. Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor.
 2. Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
 3. Include the following information at the top of each page:
 - a. Project name.
 - b. Date.
 - c. Name of Architect and Construction Manager.
 - d. Name of Contractor.
 - e. Page number.
 4. Submit list of incomplete items in the following format:
 - a. MS Excel electronic file. Architect, through Construction Manager, will return annotated file.
 - b. PDF electronic file. Architect, through Construction Manager, will return annotated file.

- c. Web-based project software upload. Utilize software feature for creating and updating list of incomplete items (punch list).
- d. Three paper copies. Architect, through Construction Manager, will return two copies.

1.9 SUBMISSION OF PROJECT WARRANTIES

- A. Time of Submission: Submit written warranties on request of Architect for designated portions of the Work where commencement of warranties other than date of Final Acceptance is indicated, or when delay in submission of warranties might limit Owner's rights under warranty.
 1. Compile specified warranties and bonds
 2. Compile specified service and maintenance contracts
 3. Compile specified product and Contractor's certifications and certificates
 4. Review documents to verify compliance with Contract Documents
 5. Co-execute documents when so specified
- B. Partial Occupancy: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.
- C. Organize warranty documents into an orderly sequence based on the table of contents of Project Manual.
 1. Bind warranties and bonds in heavy-duty, three-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive **8-1/2-by-11-inch (215-by-280-mm)** paper.
 2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
 3. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Contractor.
 4. Warranty Electronic File: Scan warranties and bonds and assemble complete warranty and bond documents package into a single indexed electronic PDF file with links enabling navigation to each item. Provide bookmarked table of contents at beginning of document.
- D. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

PART 3 - EXECUTION

3.1 FINAL CLEANING

- A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.
- B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.
 1. Complete the following cleaning operations before requesting inspection for certification of Final Acceptance for entire Project or for a designated portion of Project:
 - a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
 - b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
 - c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
 - d. Remove tools, construction equipment, machinery, and surplus material from Project site.
 - e. Remove snow and ice to provide safe access to building.
 - f. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
 - g. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
 - h. Sweep concrete floors broom clean in unoccupied spaces.
 - i. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean according to manufacturer's recommendations if visible soil or stains remain.
 - j. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.
 - k. Remove labels that are not permanent.
 - l. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
 - m. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
 - n. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.

- o. Clean ducts, blowers, and coils if units were operated without filters during construction or that display contamination with particulate matter on inspection.
 - 1) Clean HVAC system in compliance with NADCA Standard 1992-01. Provide written report on completion of cleaning.
 - p. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency.
 - q. Leave Project clean and ready for occupancy.
- C. Pest Control: Comply with pest control requirements in Section 015000 "Temporary Facilities and Controls." Prepare written report.
- D. Construction Waste Disposal: Comply with waste disposal requirements in Division 01 Section "Construction Waste Management and Disposal."

3.2 REPAIR OF THE WORK

- A. Complete repair and restoration operations before requesting inspection for determination of Final Acceptance.
- B. Repair or remove and replace defective construction. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment. Where damaged or worn items cannot be repaired or restored, provide replacements. Remove and replace operating components that cannot be repaired. Restore damaged construction and permanent facilities used during construction to specified condition.
- 1. Remove and replace chipped, scratched, and broken glass, reflective surfaces, and other damaged transparent materials.
 - 2. Touch up and otherwise repair and restore marred or exposed finishes and surfaces. Replace finishes and surfaces that already show evidence of repair or restoration.
 - a. Do not paint over "UL" and other required labels and identification, including mechanical and electrical nameplates. Remove paint applied to required labels and identification.
 - 3. Replace parts subject to operating conditions during construction that may impede operation or reduce longevity.
 - 4. Replace burned-out bulbs, bulbs noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.

END OF SECTION 01 77 00

SECTION 01 78 23 - OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:
 - 1. Operation and maintenance documentation directory
 - 2. Emergency manuals
 - 3. Systems and equipment operation manuals.
 - 4. Systems and equipment maintenance manuals.
 - 5. Product maintenance manuals.
- B. Related Sections include the following:
 - 1. Division 01 Section "Submittal Procedures" for submitting copies of submittals for operation and maintenance manuals.
 - 2. Division 01 Section "Closeout Procedures" for submitting operation and maintenance manuals.
 - 3. Division 01 Section "Project Record Documents" for preparing Record Drawings for operation and maintenance manuals.
 - 4. Divisions 02 through 49 Sections for specific operation and maintenance manual requirements for the Work in those Sections.

1.3 DEFINITIONS

- A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.
- B. Subsystem: A portion of a system with characteristics similar to a system.

1.4 CLOSEOUT SUBMITTALS

- A. Submit operation and maintenance manuals indicated. Provide content for each manual as specified in individual Specification Sections, and as reviewed and approved at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.

1. Architect and Commissioning Authority will comment on whether content of operation and maintenance submittals is acceptable.
 2. Where applicable, clarify and update reviewed manual content to correspond to revisions and field conditions.
- B. Format: Submit operation and maintenance manuals in the following format:
1. Submit by uploading to web-based project software site. Enable reviewer comments on draft submittals.
 2. Submit three Insert number paper copies. Architect, through Construction Manager, will return two Insert number copies.
- C. Initial Manual Submittal: Submit 2 draft copies of each manual at least 30 days before requesting inspection for Final Acceptance. Include a complete operation and maintenance directory. Architect will return one copy of draft and mark whether general scope and content of manual are acceptable.
- D. Final Manual Submittal: Submit one copy of each manual in final form at least 15 days before final inspection. Architect will return copy with comments within 15 days after final inspection.
1. Correct or modify each manual to comply with Architect's and Commissioning Authority's comments. Submit 3 copies of each corrected manual within 15 days of receipt of comments and prior to commencing demonstration and training.
- E. Comply with Division 01 Section "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

1.5 COORDINATION

- A. Where operation and maintenance documentation includes information on installations by more than one factory-authorized service representative, assemble and coordinate information furnished by representatives and prepare manuals.

1.6 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY

- A. Organization: Include a section in the directory for each of the following:
1. List of documents
 2. List of systems
 3. List of equipment
 4. Table of contents
- B. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
- C. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.

- D. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.
- E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

1.7 FORMAT OF OPERATION AND MAINTENANCE MANUALS

- A. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.
 - 1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
 - 2. File Names and Bookmarks: Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.
- B. Manuals, Paper Copy: Submit manuals in the form of hard-copy, bound and labeled volumes.
 - 1. Binders: Heavy-duty, three-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, sized to hold 8-1/2-by-11-inch (215-by-280-mm) paper; with clear plastic sleeve on spine to hold label describing contents and with pockets inside covers to hold folded oversize sheets.
 - a. If two or more binders are necessary to accommodate data of a system, organize data in each binder into groupings by subsystem and related components. Cross-reference other binders if necessary to provide essential information for proper operation or maintenance of equipment or system.
 - b. Identify each binder on front and spine, with printed title "OPERATION AND MAINTENANCE MANUAL," Project title or name, and subject matter of contents. Indicate volume number for multiple-volume sets.
 - 2. Dividers: Heavy-paper dividers with plastic-covered tabs for each section of the manual. Mark each tab to indicate contents. Include typed list of products and major components of equipment included in the section on each divider, cross-referenced to Specification Section number and title of Project Manual.
 - 3. Protective Plastic Sleeves: Transparent plastic sleeves designed to enclose diagnostic software storage media for computerized electronic equipment. Enclose title pages and directories in clear plastic sleeves.
 - 4. Supplementary Text: Prepared on 8-1/2-by-11-inch (215-by-280-mm) white bond paper.
 - 5. Drawings: Attach reinforced, punched binder tabs on drawings and bind with text.

- a. If oversized drawings are necessary, fold drawings to same size as text pages and use as foldouts.
- b. If drawings are too large to be used as foldouts, fold and place drawings in labeled envelopes and bind envelopes in rear of manual. At appropriate locations in manual, insert typewritten pages indicating drawing titles, descriptions of contents, and drawing locations.

1.8 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

- A. Organization: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:
 1. Title page
 2. Table of contents
 3. Manual contents
- B. Title Page: Enclose title page in transparent plastic sleeve. Include the following information:
 1. Subject matter included in manual
 2. Name and address of Project
 3. Name and address of Owner
 4. Date of submittal
 5. Name, address, and telephone number of Contractor, including responsible principal and their telephone number
 6. Name and address of Architect
 7. Cross-reference to related systems in other operation and maintenance manuals
- C. Quality Assurance
 1. Preparation of data shall be done by personnel:
 - a. Trained and experienced in maintenance and operation of described products
 - b. Familiar with requirements of this Section
 - c. Skilled as technical writer to the extent required to communicate essential data
 - d. Skilled as draftsman competent to prepare required Drawings
- D. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.
 1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.
 2. List, with each product, name, address and telephone number of:
 - a. Subcontractor or installer
 - b. Maintenance contractor, as appropriate
 - c. Identify area of responsibility of each
 - d. Local source of supply for parts and replacement

3. Identify each product by product name and other identifying symbols as set forth in Contract Documents.
- E. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.
1. Coordinate Drawings with information in Project Record Documents to assure correct illustration of completed installation. Do not use Project Record Documents as Maintenance Drawings.
 2. Written text, as required to supplement product data for the particular installation:
 - a. Organize in consistent format under separate headings for different procedures
 - b. Provide logical sequence of instructions for each procedure
 3. Copy of each warranty, bond and service contract issued.
 - a. Provide information sheet for Owner's personnel, give:
 - 1) Proper procedures in event of failure
 - 2) Instances which might affect validity of warranties or bonds
 4. Copy of operating permits from the appropriate authority having jurisdiction. Original permits shall be delivered directly to the Owner with a copy of the transmittal submitted to Architect for record.
- F. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

1.9 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY MANUAL

- A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals. List items and their location to facilitate ready access to desired information. Include the following:
1. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
 2. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.
 3. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.

1.10 EMERGENCY MANUALS

- A. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.
- B. Content: Organize manual into a separate section for each of the following:
 - 1. Type of emergency
 - 2. Emergency instructions
 - 3. Emergency procedures
- C. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:
 - 1. Fire
 - 2. Flood
 - 3. Gas leak
 - 4. Water leak
 - 5. Power failure
 - 6. Water outage
 - 7. System, subsystem, or equipment failure
 - 8. Chemical release or spill
- D. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.
- E. Emergency Procedures: Include the following, as applicable:
 - 1. Instructions on stopping
 - 2. Shutdown instructions for each type of emergency
 - 3. Operating instructions for conditions outside normal operating limits
 - 4. Required sequences for electric or electronic systems
 - 5. Special operating instructions and procedures

1.11 SYSTEMS AND EQUIPMENT OPERATION MANUALS

- A. Systems and Equipment Operation Manual: Assemble a complete set of data indicating operation of each system, subsystem, and piece of equipment not part of a system. Include information required for daily operation and management, operating standards, and routine and special operating procedures.
 - 1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
 - 2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.
- B. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:

1. System, subsystem, and equipment descriptions
2. Performance and design criteria if Contractor are delegated design responsibility
3. Operating standards
4. Operating procedures
5. Operating logs
6. Wiring diagrams
7. Control diagrams
8. Piped system diagrams
9. Precautions against improper use
10. License requirements including inspection and renewal dates

C. Descriptions: Include the following:

1. Product name and model number
2. Manufacturer's name
3. Equipment identification with serial number of each component
4. Equipment function
5. Operating characteristics
6. Limiting conditions
7. Performance curves
8. Engineering data and tests
9. Complete nomenclature and number of replacement parts

D. Operating Procedures: Include the following, as applicable:

1. Startup procedures
2. Equipment or system break-in procedures
3. Routine and normal operating instructions
4. Regulation and control procedures
5. Instructions on stopping
6. Normal shutdown instructions
7. Seasonal and weekend operating instructions
8. Required sequences for electric or electronic systems
9. Special operating instructions and procedures

E. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.

F. Piped Systems: Diagram piping as installed, and identify color-coding where required for identification.

1.12 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

A. Systems and Equipment Maintenance Manuals: Assemble a complete set of data indicating maintenance of each system, subsystem, and piece of equipment not part of a system. Include manufacturers' maintenance documentation, preventive maintenance procedures and frequency, repair procedures, wiring and systems diagrams, lists of spare parts, and warranty information.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.

2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.
- B. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranties and bonds as described below.
- C. Source Information: List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.
- D. Manufacturers' Maintenance Documentation: Include the following information for each component part or piece of equipment:
1. Standard maintenance instructions and bulletins; include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.
 - a. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.
 2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
 3. Identification and nomenclature of parts and components.
 4. List of items recommended to be stocked as spare parts.
- E. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:
1. Test and inspection instructions.
 2. Troubleshooting guide.
 3. Precautions against improper maintenance.
 4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
 5. Aligning, adjusting, and checking instructions.
 6. Demonstration and training video recording, if available.
- F. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.
1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
 2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.

- G. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.
- H. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.
- I. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
 - 1. Include procedures to follow and required notifications for warranty claims.
- J. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.
 - 1. Do not use original project record documents as part of maintenance manuals.

1.13 PRODUCT MAINTENANCE MANUAL

- A. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.
- B. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.
- C. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual.
- D. Product Information: Include the following, as applicable:
 - 1. Product name and model number
 - 2. Manufacturer's name
 - 3. Color, pattern, and texture
 - 4. Material and chemical composition
 - 5. Reordering information for specially manufactured products
- E. Maintenance Procedures: Include manufacturer's written recommendations and the following:
 - 1. Inspection procedures
 - 2. Types of cleaning agents to be used and methods of cleaning
 - 3. List of cleaning agents and methods of cleaning detrimental to product
 - 4. Schedule for routine cleaning and maintenance
 - 5. Repair instructions.

- F. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.
- G. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
 - 1. Include procedures to follow and required notifications for warranty claims.

PART 2 - (Not Used)

PART 3 - EXECUTION

3.1 MANUAL PREPARATION

- A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals.
- B. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.
- C. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.
- D. Operation and Maintenance Manuals: Assemble a complete set of operation and maintenance data indicating operation and maintenance of each system, subsystem, and piece of equipment not part of a system.
 - 1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
 - 2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.
- E. Manufacturers' Data: Where manuals contain manufacturers' standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.
 - 1. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.
- F. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in Record Drawings to ensure correct illustration of completed installation.

1. Do not use original Project Record Documents as part of operation and maintenance manuals.
 2. Comply with requirements of newly prepared Record Drawings in Division 01 Section "Project Record Documents."
- G. Comply with Division 01 Section "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

END OF SECTION 01 78 23

SECTION 01 78 39 - PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes administrative and procedural requirements for project record documents, including the following:

1. Record Documents.
2. Record Submittals.
3. Signature of Contractor or his authorized representative, certifying the correctness and completeness of the Record Documents

- B. Related Requirements:

1. Division 01 Section "Project Management and Coordination" for coordination drawings for record.
2. Division 01 Section "Submittal Procedures" for general submittal procedures.
3. Division 01 Section "Execution" for final property survey.
4. Division 01 Section "Closeout Procedures" for providing closeout documents.
5. Division 01 Section "Operation and Maintenance Data" for operation and maintenance manual requirements.
6. Divisions 02 through 49 Sections for specific requirements for Project Record Documents of the Work in those Sections.

1.3 CLOSEOUT SUBMITTALS

- A. Record Specifications: Submit one paper copy and annotated PDF electronic files of Project's Specifications, including addenda and contract modifications.
- B. Record Product Data: Submit one paper copy and annotated PDF electronic files and directories of each submittal.
 1. Where record Product Data are required as part of operation and maintenance manuals, submit duplicate marked-up Product Data as a component of manual.
- C. Miscellaneous Record Submittals: See other Specification Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Submit one paper copy and annotated PDF electronic files and directories of each submittal.

- D. Reports: Submit written report weekly indicating items incorporated into project record documents concurrent with progress of the Work, including revisions, concealed conditions, field changes, product selections, and other notations incorporated.
- E. Coordination Drawings: Refer to Specification Section 01 31 00 for requirements.

1.4 RECORD SUBMITTALS

- A. Record Product Data: Submit one paper copy and annotated PDF electronic files and directories of each submittal. Include the “as fabricated/manufactured” condition of the product that is described. Additionally, include any modifications that were made in the field, showing the “as installed/erected” condition of the product that is described. Record Product Data is only required where specifically noted in the individual trade Specification Sections.
 - 1. Where record Product Data are required as part of operation and maintenance manuals, submit duplicate marked-up Product Data as a component of manual.
- B. Record Shop Drawings: Include the “as fabricated/manufactured” condition of the element that is detailed on the shop drawing. Additionally, include any modifications that were made in the field, showing the “as installed/erected” condition of the element that is detailed on the shop drawing. Record Shop Drawings are only required where specifically noted in the individual trade Specification Sections.
- C. Miscellaneous Record Submittals: See other Specification Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Immediately before Final Acceptance, complete miscellaneous records and place in good order, properly identified and bound or filed, ready for use and reference. Submit one paper copy and annotated PDF electronic files and directories of each submittal. Miscellaneous records include, but are not limited to, the following:
 - 1. Field records on excavations and foundations.
 - 2. Field records on underground construction and similar work.
 - 3. Surveys showing locations and elevations of underground lines.
 - 4. Invert elevations of drainage piping.
 - 5. Surveys establishing building lines and levels.
 - 6. Authorized measurements using unit prices or allowances.
 - 7. Records of plant treatment.
 - 8. Ambient and substrate condition tests.
 - 9. Certifications received in lieu of labels on bulk products.
 - 10. Batch mixing and bulk delivery records.
 - 11. Testing and qualification of trade's persons.
 - 12. Documented qualification of installation firms.
 - 13. Load and performance testing.
 - 14. Inspections and certifications by governing authorities.
 - 15. Leakage and water-penetration tests.
 - 16. Fire-resistance and flame-spread test results.
 - 17. Final inspection and correction procedures.

1.5 RECORD DRAWINGS AND SHOP DRAWINGS

- A. Record Prints: Maintain one set of marked-up paper copies of the Contract Drawings and Shop Drawings, incorporating new and revised drawings as modifications are issued.
1. Preparation: Mark record prints to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.
 - a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
 - b. Accurately record information in an acceptable drawing technique.
 - c. Record data as soon as possible after obtaining it.
 - d. Record and check the markup before enclosing concealed installations.
 - e. Cross-reference record prints to corresponding archive photographic documentation.
 2. Content: Types of items requiring marking include, but are not limited to, the following:
 - a. Dimensional changes to Drawings.
 - b. Revisions to details shown on Drawings.
 - c. Depths of foundations below first floor.
 - d. Locations and depths of underground utilities.
 - e. Revisions to routing of piping and conduits.
 - f. Revisions to electrical circuitry.
 - g. Actual equipment locations.
 - h. Duct size and routing.
 - i. Locations of concealed internal utilities.
 - j. Changes made by Change Order or Construction Change Directive.
 - k. Changes made following Architect's written orders.
 - l. Details not on the original Contract Drawings.
 - m. Field records for variable and concealed conditions.
 - n. Record information on the Work that is shown only schematically.
 - o. Field changes of dimension or data
 3. Mark the Contract Drawings and Shop Drawings completely and accurately. Use personnel proficient at recording graphic information in production of marked-up record prints.
 4. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
 5. Mark important additional information that was either shown schematically or omitted from original Drawings.
 6. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.
- B. Record Digital Data Files: Immediately before inspection for Certificate of Final Acceptance, review marked-up record prints with Architect. When authorized, prepare a full set of corrected digital data files of the Contract Drawings, as follows:
1. Format: Annotated PDF electronic file with comment function enabled.

2. Incorporate changes and additional information previously marked on record prints. Delete, redraw, and add details and notations where applicable.
 3. Refer instances of uncertainty to Architect for resolution.
- C. Format: Identify and date each record Drawing; include the designation "PROJECT RECORD DRAWING" or "PROJECT RECORD SHOP DRAWING," as appropriate, in a prominent location.
1. Record Prints: Organize record prints and newly prepared record Drawings into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.
 2. Format: Annotated PDF electronic file with comment function enabled.
 3. Record Digital Data Files: Organize digital data information into separate electronic files that correspond to each sheet of the Contract Drawings. Name each file with the sheet identification. Include identification in each digital data file.
 4. Identification: As follows:
 - a. Project name.
 - b. Date.
 - c. Designation "PROJECT RECORD DRAWINGS"
 - d. Name of Architect.
 - e. Name of Contractor.

1.6 RECORD SPECIFICATIONS

- A. Preparation: Mark Specifications to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.
1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
 2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
 3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.
 4. Note related Change Orders, record Product Data, and record Drawings where applicable.
- B. Format: Submit record Specifications as annotated PDF electronic file.

1.7 RECORD PRODUCT DATA

- A. Recording: Maintain one copy of each submittal during the construction period for project record document purposes. Post changes and revisions to project record documents as they occur; do not wait until end of Project.
- B. Preparation: Mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.
1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.

2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
 3. Note related Change Orders, record Specifications, and record Drawings where applicable.
- C. Format: Submit record Product Data as annotated PDF electronic file.
1. Include record Product Data directory organized by Specification Section number and title, electronically linked to each item of record Product Data.
- D. RECORD SAMPLES
1. Immediately before date of Final Acceptance, meet with Architect and Owner's personnel at Project site to determine which Samples maintained during the construction period shall be transmitted to Owner for record purposes.
 2. Comply with Architect's instructions for packaging, identification marking, and delivery to Owner's Sample storage space. Dispose of other Samples in the manner specified for disposing surplus and waste materials.

1.8 MISCELLANEOUS RECORD SUBMITTALS

- A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

1.9 MISCELLANEOUS RECORD SUBMITTALS

- A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.
- B. Format: Submit miscellaneous record submittals as PDF electronic file.
 1. Include miscellaneous record submittals directory organized by Specification Section number and title, electronically linked to each item of miscellaneous record submittals.

PART 2 - (Not Used)

PART 3 - EXECUTION

3.1 RECORDING AND MAINTENANCE

- A. Recording: Maintain one copy of each submittal during the construction period for project record document purposes. Post changes and revisions to project record documents as they occur; do not wait until end of Project.

- B. Maintenance of Record Documents and Samples: Store record documents and Samples in the field office apart from the Contract Documents used for construction. Do not use project record documents for construction purposes. Maintain record documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to project record documents for Architect's reference during normal working hours.

END OF SECTION 01 78 39

SECTION 01 79 00 - DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:
 - 1. Demonstration of operation of systems, subsystems, and equipment
 - 2. Training in operation and maintenance of systems, subsystems, and equipment
 - 3. Demonstration and training videos
- B. Related Sections include the following:
 - 1. Division 01 Section "Project Management and Coordination" for requirements for preconstruction conferences
 - 2. Divisions 02 through 49 Sections for specific requirements for demonstration and training for products in those Sections

1.3 INFORMATIONAL SUBMITTALS

- A. Instruction Program: Submit two copies of outline of instructional program for demonstration and training, including a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.
 - 1. At completion of training, submit one complete training manual(s) for Owner's use.
- B. Qualification Data: For facilitator, instructor and photographer.
- C. Attendance Record: For each training module, submit list of participants and length of instruction time.
- D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

1.4 CLOSEOUT SUBMITTALS

- A. Demonstration and Training Video Recordings: Submit two copies within seven days of end of each training module.

1. Identification: On each copy, provide an applied label with the following information:
 - a. Name of Project
 - b. Name and address of photographer
 - c. Name of Architect
 - d. Name of Contractor
 - e. Date video was recorded
 - f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction
2. Transcript: Prepared and bound in format matching operation and maintenance manuals. Mark appropriate identification on front and spine of each binder. Include a cover sheet with same label information as the corresponding video recording. Include name of Project and date of video recording on each page.
3. Transcript: Prepared in PDF electronic format. Include a cover sheet with same label information as the corresponding video recording and a table of contents with links to corresponding training components. Include name of Project and date of video recording on each page.
4. At completion of training, submit complete training manual(s) for Owner's use prepared in same paper and PDF file format required for operation and maintenance manuals specified in Section 017823 "Operation and Maintenance Data."

1.5 QUALITY ASSURANCE

- A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.
- B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Division 01 Section "Quality Requirements," experienced in operation and maintenance procedures and training.
- C. Photographer Qualifications: A professional photographer who is experienced photographing construction projects.
- D. Preinstruction Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to demonstration and training including, but not limited to, the following:
 1. Inspect and discuss locations and other facilities required for instruction.
 2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
 3. Review required content of instruction.
 4. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

1.6 COORDINATION

- A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations.
- B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.
- C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data has been reviewed and approved by Architect.

PART 2 - PRODUCTS

2.1 INSTRUCTION PROGRAM

- A. Program Structure: Develop an instruction program that includes individual training modules for each system and equipment not part of a system, as required by individual Specification Sections, and as follows:
 - 1. Motorized doors, including overhead coiling grilles and automatic entrance doors.
 - 2. Equipment, including food-service equipment, and residential appliances.
 - 3. Fire-protection systems, including fire alarm, fire pumps and fire-extinguishing systems.
 - 4. Intrusion detection systems.
 - 5. Conveying systems, including wheelchair lifts.
 - 6. Medical equipment, including medical gas equipment and piping.
 - 7. Heat generation, including boilers, feedwater equipment, pumps, steam distribution piping and water distribution piping.
 - 8. Refrigeration systems, including chillers, cooling towers, condensers, pumps and distribution piping.
 - 9. HVAC systems, including air-handling equipment, air distribution systems and terminal equipment and devices.
 - 10. HVAC instrumentation and controls.
 - 11. Electrical service and distribution, including transformers, switchboards, panelboards, uninterruptible power supplies and motor controls.
 - 12. Packaged engine generators, including transfer switches.
 - 13. Lighting equipment and controls.
 - 14. Communication systems, including intercommunication, surveillance, voice and data and television equipment.
- B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following:
 - 1. Basis of System Design, Operational Requirements, and Criteria: Include the following:
 - a. System, subsystem, and equipment descriptions
 - b. Performance and design criteria if Contractor is delegated design responsibility
 - c. Operating standards
 - d. Regulatory requirements

- e. Equipment function
 - f. Operating characteristics
 - g. Limiting conditions
 - h. Performance curves
2. Documentation: Review the following items in detail:
- a. Emergency manuals
 - b. Operations manuals
 - c. Maintenance manuals
 - d. Project Record Documents
 - e. Identification systems
 - f. Warranties and bonds
 - g. Maintenance service agreements and similar continuing commitments
3. Emergencies: Include the following, as applicable:
- a. Instructions on meaning of warnings, trouble indications, and error messages
 - b. Instructions on stopping
 - c. Shutdown instructions for each type of emergency
 - d. Operating instructions for conditions outside of normal operating limits
 - e. Sequences for electric or electronic systems
 - f. Special operating instructions and procedures
4. Operations: Include the following, as applicable:
- a. Startup procedures
 - b. Equipment or system break-in procedures
 - c. Routine and normal operating instructions
 - d. Regulation and control procedures
 - e. Control sequences
 - f. Safety procedures
 - g. Instructions on stopping
 - h. Normal shutdown instructions
 - i. Operating procedures for emergencies
 - j. Operating procedures for system, subsystem, or equipment failure
 - k. Seasonal and weekend operating instructions
 - l. Required sequences for electric or electronic systems
 - m. Special operating instructions and procedures
5. Adjustments: Include the following:
- a. Alignments
 - b. Checking adjustments
 - c. Noise and vibration adjustments
 - d. Economy and efficiency adjustments
6. Troubleshooting: Include the following:
- a. Diagnostic instructions
 - b. Test and inspection procedures

7. Maintenance: Include the following:
 - a. Inspection procedures
 - b. Types of cleaning agents to be used and methods of cleaning
 - c. List of cleaning agents and methods of cleaning detrimental to product
 - d. Procedures for routine cleaning
 - e. Procedures for preventive maintenance
 - f. Procedures for routine maintenance
 - g. Instruction on use of special tools

8. Repairs: Include the following:
 - a. Diagnosis instructions
 - b. Repair instructions
 - c. Disassembly; component removal, repair, and replacement; and reassembly instructions
 - d. Instructions for identifying parts and components
 - e. Review of spare parts needed for operation and maintenance

PART 3 - EXECUTION

3.1 PREPARATION

- A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a combined training manual.
- B. Set up instructional equipment at instruction location.

3.2 INSTRUCTION

- A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.
- B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.
 1. Owner will furnish Contractor with names and positions of participants.
- C. Scheduling: Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.
 1. Schedule training with Owner, through Architect, with at least seven days' advance notice.
 2. Provide multiple sessions to accommodate Owner's staff scheduling requirements.
- D. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.

- E. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a written and a demonstration performance-based test.
- F. Cleanup: Collect used and leftover educational materials and give to Owner. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

3.3 DEMONSTRATION AND TRAINING VIDEOS

- A. General: Engage a qualified commercial photographer to record demonstration and training in digital media format. Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.
 - 1. At beginning of each training module, record each chart containing learning objective and lesson outline.
- B. Digital Video Recordings: Provide high-resolution, digital video in MPEG format, produced by a digital camera with minimum sensor resolution of 12 megapixels and capable of recording in full HD mode with vibration reduction technology.
 - 1. Submit video recordings on CD-ROM or thumb drive.
 - 2. File Hierarchy: Organize folder structure and file locations according to Project Manual table of contents. Provide complete screen-based menu.
 - 3. File Names: Utilize file names based on name of equipment generally described in video segment, as identified in Project specifications.
 - 4. Contractor and Installer Contact File: Using appropriate software, create a file for inclusion on the equipment demonstration and training recording that describes the following for each Contractor involved on the Project, arranged according to Project Manual table of contents:
 - a. Name of Contractor/Installer.
 - b. Business address.
 - c. Business phone number.
 - d. Point of contact.
 - e. Email address.
- C. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to show area of demonstration and training. Display continuous running time.
 - 1. Film training session(s) in segments not to exceed 15 minutes.
 - a. Produce segments to present a single significant piece of equipment per segment.
 - b. Organize segments with multiple pieces of equipment to follow order of Project Manual table of contents.
 - c. Where a training session on a particular piece of equipment exceeds 15 minutes, stop filming and pause training session. Begin training session again upon commencement of new filming segment.
- D. Light Levels: Verify light levels are adequate to properly light equipment. Verify equipment markings are clearly visible prior to recording.

1. Furnish additional portable lighting as required.
- E. Narration: Describe scenes on digital media either by audio narration by microphone while or dubbing audio narration off-site after digital media is recorded. Include description of items being viewed. Describe vantage point, indicating location, direction (by compass point), and elevation or story of construction.
- F. Transcript: Provide a typewritten transcript of the narration. Display images and running time captured from video opposite the corresponding narration segment.
- G. Preproduced Video Recordings: Provide video recordings used as a component of training modules in same format as recordings of live training.

END OF SECTION 01 79 00

SECTION 01 91 00 – TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Applicable Sections of Division 23 Specification.

1.2 SUMMARY

- A. Employment of Testing, Adjusting and Balancing Contractor:
 - 1. Construction Manager will employ and pay for services of a qualified organization to perform specified testing, adjusting and balancing (TAB) services.
 - 2. Employment of the organization shall in no way relieve Contractor's obligation to perform Work of the Contract.
 - 3. Organization shall be completely independent of all Division 23 Contractors and Subcontractors.
- B. This Section includes TAB to produce design objectives for the following:
 - 1. Air systems.
 - 2. Hydronic Piping Systems.
 - 3. Vibration measuring.
 - 4. Verifying that automatic control devices are functioning properly.
 - 5. Reporting results of activities and procedures specified in this Section.

1.3 DEFINITIONS

- A. Adjust: To regulate fluid flow rate and air patterns at the terminal equipment, such as to reduce fan speed or adjust a damper.
- B. Balance: To proportion flows within the distribution system, including submains, branches, and terminals, according to indicated quantities.
- C. BAS: Building Automation System.
- D. Procedure: An approach to and execution of a sequence of work operations to yield repeatable results.
- E. System Effect: A phenomenon that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
- F. System Effect Factors: Allowances used to calculate a reduction of the performance ratings of a fan when installed under conditions different from those presented when the fan was performance tested.

- G. TAB: Testing, adjusting, and balancing.
- H. Testing, Adjusting, and Balancing (TAB) Firm: The entity responsible for performing and reporting TAB procedures.

1.4 SUBMITTALS

- A. Qualification Data: Within 30 days from Contractor's Notice to Proceed, submit 4 copies of evidence that TAB firm and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.
- B. Notification of Deficiencies Report: Within 45 days from Contractor's Notice to Proceed, submit 4 copies of the Contract Documents review report, notifying Architect of any deficiencies, as specified in "Examination" Article.
- C. Certified TAB Reports: Submit two copies of final TAB reports prepared, as specified in this Section, on approved forms certified by TAB firm.
- D. Warranties specified in this Section.

1.5 QUALITY ASSURANCE

- A. The organization in which performs the TAB service shall be a current member in good standing, certified to perform services required for the project, of either:
 - 1. Associated Air Balance Council (AABC).
 - 2. National Environmental Balancing Bureau (NEBB).
- B. The TAB Work performed by TAB Contractor shall be under the direct supervision of a Registered Professional Engineer, a full-time employee of TAB Contractor. Technicians performing the work must be properly trained, experienced and full-time employees of TAB Contractor.
- C. Comply with applicable procedures and standards of the certification sponsoring association unless more stringent requirements are specified in this section; either:
 - 1. Current issue of "National Standards for Testing and Balancing Heating, Ventilating and Air Conditioning Systems", by AABC.
 - 2. Current issue of "Procedural Standards for Testing, Adjusting and Balancing of Environmental Systems", by NEBB.
 - 3. Calibration and maintenance of instruments shall be in accord with requirements of the standards. Instruments used in the performance of the TAB Work must have been calibrated within six months preceding the date of usage. Calibration histories for each instrument shall be included with the TAB report.
 - 4. Accuracy of measurements shall comply with the more stringent of the requirements of the standards or the tolerances specified hereinafter.
- D. Certification of TAB Reports: Certify TAB field data reports. This certification includes the following:
 - 1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.

2. Certify that TAB team complied with approved TAB plan and the procedures specified and referenced in this Specification.
- E. TAB Report Forms: Use standard forms from AABC or NEBB. Other forms may be used upon receiving prior approval from Architect or Owner.
 - F. Instrumentation Calibration: Calibrate instruments at least every six months or more frequently if required by instrument manufacturer.
 1. Keep an updated record of instrument calibration that indicates date of calibration and the name of party performing instrument calibration.

1.6 PROJECT CONDITIONS

- A. Partial Owner Occupancy: Owner may occupy completed areas of building before Substantial Completion. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.

1.7 COORDINATION

- A. Participate and cooperate with the efforts of Installing Contractor and/or factory-authorized service representatives for systems and equipment, and BAS Contractor to operate HVAC systems and equipment to support and assist TAB activities.
- B. Notice: Provide adequate advance notice for each test. Include scheduled test dates and times.
- C. Perform TAB after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.

1.8 WARRANTY

- A. Provide a National Certification Guarantee from the AABC or the NEBB, applicable for the TAB work performed under this contract. Guarantee must include the following provisions:
 1. The certified TAB firm has tested and balanced systems according to the Contract Documents.
 2. Systems are balanced to optimum performance capabilities within design and installation limits.
- B. After completion of the work specified under this Section, provide an extended warranty encompassing one full heating season and one full cooling season, during which time any balancing device which had been adjusted earlier as part of this work shall be rechecked and reset when such additional work is deemed necessary by the Owner or the Architect.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment. Verify that quantities and locations of balancing devices are accessible and appropriate for effective balancing and for efficient system and equipment operation. Prepare a report that identifies any deficiencies and specifically note required work to be done to allow effective balancing.
- B. Examine approved submittal data of HVAC systems and equipment.
- C. Examine system and equipment installations to verify that they are complete and that testing, cleaning, adjusting, and commissioning specified in individual Sections have been performed.
- D. Examine system and equipment test reports.
- E. Examine HVAC system and equipment installations to verify that indicated balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers, are properly installed, and that their locations are accessible and appropriate for effective balancing and for efficient system and equipment operation.
- F. Examine systems for functional deficiencies that cannot be corrected by adjusting and balancing.
- G. Examine HVAC equipment to ensure that clean filters have been installed, bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.
- H. Examine terminal units, such as variable-air-volume boxes, to verify that they are accessible and their controls are connected and functioning.
- I. Examine plenum ceilings or raised floors used for supply air to verify that they are airtight. Verify that pipe and duct penetrations and other holes are sealed.
- J. Examine strainers for clean screens.
- K. Examine three-way valves for proper installation for their intended function of diverting or mixing fluid flows.
- L. Examine heat-transfer coils for correct piping connections and for clean and straight fins.
- M. Examine system pumps to ensure absence of entrained air in the suction piping.
- N. Examine equipment for installation and for properly operating safety interlocks and controls.
- O. Examine automatic temperature system components to verify the following:
 - 1. Dampers, valves, and other controlled devices are operated by the intended controller.

2. Dampers and valves are in the position indicated by the controller.
 3. Integrity of valves and dampers for free and full operation and for tightness of fully closed and fully open positions.
 4. Automatic modulating and shutoff valves, including two-way valves and three-way mixing and diverting valves, are properly connected.
 5. Thermostats and humidistats are located to avoid adverse effects of sunlight, drafts, and cold walls.
 6. Sensors are located to sense only the intended conditions.
 7. Sequence of operation for control modes is according to the Contract Documents.
 8. Controller set points are set at indicated values.
 9. Interlocked systems are operating.
 10. Changeover from heating to cooling mode occurs according to indicated values.
- P. Report deficiencies discovered before and during performance of TAB procedures. Record default set points if different from indicated values.

3.2 DUCTWORK LEAKAGE TEST VERIFICATION

- A. Installing Contractor will install ductwork as specified in Section 23 30 00 and will perform leakage tests. TAB Contractor shall witness all duct leakage tests.
- B. Verify and record that all duct sections have been tested, indicate both successful and unsuccessful tests. Verify sections where resealing and retesting resulted in successful tests. Include date of tests and initials of balancing technician who witnessed tests.

3.3 PREPARATION

- A. Complete system readiness checks and prepare system readiness reports. Include verification of the following:
 1. Permanent electrical power wiring is complete.
 2. Hydronic systems are filled, clean, and free of air.
 3. Automatic temperature-control systems are operational.
 4. Equipment and duct access doors are securely closed.
 5. Isolating and balancing valves are open and control valves are operational.
 6. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
 7. Windows and doors can be closed so indicated conditions for system operations can be met.

3.4 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system according to the procedures contained in AABC or NEBB, and otherwise as specified in this Section.
- B. Obtain approved submittals for all equipment and devices required for proper system balancing. Balance systems to achieve capacities and flow quantities indicated on drawings and approved submittals. Should there be a conflict between the drawings and submittals, the approved submittal values shall be used.

- C. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary to allow adequate performance of procedures. After testing and balancing, close probe holes and patch insulation with new materials identical to those removed. Restore vapor barrier and finish according to insulation Specifications for this Project.
- D. Mark equipment and balancing device settings with paint or other suitable, permanent identification material, including damper-control positions, valve position indicators, fan-speed- control levers, and similar controls and devices, to show final settings.
- E. Take and report testing and balancing measurements in the same units, inch-pound (IP) or metric (SI), to match what is shown on Contract Documents.

3.5 BALANCING TOLERANCES

A. Air Balancing:

- 1. All measured air quantities shall agree with design air quantities within tolerances listed herein or otherwise acceptable to the Architect. The measurements recorded in the TAB Report for the total CFM of all branches, and the grand total shall agree with the measured air volume of the fan, less an air quantity not greater than the specified maximum percentage of leakage.
- 2. Balance all equipment, air outlets and air intakes in accordance with the air quantities shown on the drawings with permissible tolerances as follows:

a. Supply, return and exhaust fans

- 1) Fan serving multiple rooms -5% to +10%
- 2) Fan serving individual room $\pm 5\%$

b. Minimum outside air

-0% to +5%

c. Terminal Units

- 1) Terminal unit serving multiple rooms -5% to +10%
- 2) Terminal unit serving individual room $\pm 5\%$

d. Air Outlets

- 1) Room with multiple outlets $\pm 10\%$
- 2) Room with individual outlet $\pm 5\%$

- B. Water Balancing: Balance all hydronic equipment, pumps, coils, etc in accordance with the capacities and flow quantities shown on the drawings within an acceptable tolerance of $\pm 5\%$.
- C. If during progress of the construction or during balancing, the TAB Contractor encounters any condition that will not allow balancing to be performed within the above balancing tolerances, the fact(s) shall be reported immediately to the Architect with recommendations for corrective action. If feasible, report such conditions and recommendations prior to submission of balancing reports. Work shall then proceed in accordance with the response provided by the Architect.

3.6 AIR SYSTEM BALANCING

- A. Prepare test reports for all air systems. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' "as-built" duct layouts.
- C. Determine the best locations in main and branch ducts for accurate duct airflow measurements.
- D. Locate start-stop and disconnect switches, electrical interlocks, motor starters, variable frequency motor speed controllers and DDC panels.
- E. Verify that motor starters are equipped with properly sized thermal protection.
- F. Check condensate drains for proper connections and functionality. Confirm plenum pressure at trap connection and confirm trap depth and arrangement is in accordance with drawing detail.
- G. Check for proper sealing of air-handling unit components.
- H. Verify that clean filters have been provided by Installing Contractor. Simulate specified dirty filter condition when balancing.
- I. Provide pitot tube test openings with covers as required for taking pressure and velocity readings in ductwork. Install openings and covers of a type and in a manner to insure against leakage. Remove, replace and repair insulation at pitot tube test openings in a neat and workmanlike manner. Where permanent instrument test ports are specified, advise Installing Contractor as to proper location.
- J. Measure air quantities in main ducts by pitot tube traverse of the entire cross sectional area of the duct. Where air measuring stations have been installed, measure air quantities by pitot tube traverse and verify calibration of air measuring station. Do not use air measuring station for balancing purposes. Where necessary for proper balancing, make similar measurements in branch ducts. Determine outlet and inlet air quantities in accordance with outlet and inlet manufacturer's recommendations.
- K. Obtain total air quantities by adjustment of fan speeds or adjustment of belts and sheaves. Adjust branch duct air quantities by volume dampers. Permanently mark dampers after air balance is complete.
- L. Volume dampers shall be used to balance air quantities at outlets and inlets, providing final adjustments do not produce objectionable drafts or sound levels. Air quantity adjustments using outlet pattern deflectors will not be permitted.
- M. Balancing variable air volume (VAV) systems:
 - 1. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at a maximum set- point airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced airflow terminal units so they are distributed evenly among the branch ducts.
 - 2. Set outside-air dampers at minimum, and return- and exhaust-air dampers at a position that simulates full-cooling load. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Measure total system airflow. Adjust to

within indicated airflow. When total airflow is correct, balance the air outlets downstream from terminal units.

3. Measure the return airflow to the fan while operating at maximum return airflow and minimum outside airflow. Adjust the fan and balance the return-air ducts and inlets.
4. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow.
5. Balance at design (maximum) airflow and to deliver design minimum outside air at both design maximum and design minimum total airflow. Determine minimum fan speed and system static pressure that will satisfy requirements and advise BAS Contractor accordingly. Retest at simulated partial load conditions, at scheduled minimum airflow.
6. Record the final fan performance data at maximum and minimum flow conditions. Using fan curves obtained from approved submittals, plot maximum and minimum operating conditions on fan curve and include in final report.
7. Test variable frequency drives through full range of Hertz for operating points that cause excessive vibration due to harmonic frequency, and program VFD to prevent operation at those frequencies.

N. Outside Air and Relief Air (Economizer) Damper Setup Procedure:

1. All airflow station calibration should be checked prior to beginning procedure listed below.
2. These procedures should be performed during unoccupied hours, since building temperatures will not be maintained during the adjustment procedure.
3. Disassociate AHU relief air damper control signal from outside air damper and return air damper control signal. Relief air damper shall be modulated to maintain return fan discharge static pressure at setpoint (Relief air damper setpoint to be initially set to +0.20”).
4. De-energize all associated exhaust fans.
5. Index outside air damper to 100% open and return damper to 100% closed.
6. Index all associated AVB boxes to maximum scheduled airflow (This should cause supply fan VFD to index to near maximum design speed).
7. Set supply/return differential setpoint to zero. Replace or adjust the return fan sheave so that at VFD maximum speed the return fan airflow is less than or equal to the scheduled return fan airflow.
8. Set supply/return differential setpoint to scheduled minimum outside air cfm (This should slow down the return air fan VFD). Disable economizer controls and reset outside air and return air dampers to automatic control (outside air damper should be at minimum position and return air damper should be mostly open).
9. Energize all associated building general exhaust fans.
10. Adjust return damper position to maintain 0.10” positive pressure in the return fan discharge ductwork (this should establish maximum return damper and minimum outside air damper positions). Relief damper should be closed and the outside airflow sensor should now read near the supply/return differential setpoint set in 8 above (There will be a difference due to flow sensor inaccuracy at low o/a flow).
11. Complete steps 1 to 10 above for each air handling unit. After completing set-up on all units, check return fan discharge pressure at each unit. The pressure should still be +0.1” at minimum outside airflow.
12. Check building pressurization at front doors, if it seems to take excess pressure to open doors or if there seems to be an in rush of air when doors are opened, increase supply/return differential setpoints for each air handling unit by 5%. (Note: Only perform this step when there is little or no wind outside).

14. Perform step 12 until the building is at a neutral or slightly positive pressure.
 15. Index all boxes to minimum scheduled airflow and check building pressurization at front doors (it should be the same as at the end of step 13).
 16. Index unit for 100% outside air and check building pressurization at front doors (again it should not change).
 17. Return all systems to automatic control and check building pressurization at the front doors (final check that building pressurization is the same as it was after step 13).
 18. After final set-up of all units is completed, submit to the owner a report containing:
 - a. Final supply/return differential setpoint for each unit.
 - b. Description of apparent building pressurization after AHU setup is completed.
 - c. One hour trend logs for each unit listing: supply air CFM, return air CFM, outside air CFM (as measured at o/a flow station), and return fan discharge static pressure. These readings shall be taken every 5 minutes for one hour after AHU setup is complete.
- O. Air Volume Control Boxes and Air Flow Measuring Stations: Check each terminal unit and air flow measuring station for calibration and adjust as necessary.
1. For Air Volume Control Boxes and Air Flow Measuring Stations with DDC Controls
 - a. BAS Contractor will set up and calibrate the mass flow control device to the design contract values.
 - b. BAS Contractor will index the system configuration as requested by TAB Contractor.
 - c. TAB Contractor shall then test the mass flow output and shall proportionately adjust the distribution. If the mass flow results deviate from the design intent by greater than the nominal ($\pm 5\%$) amount, TAB Contractor shall provide those values to BAS Contractor for final adjustment.
 - d. BAS Contractor will modify the previously mentioned correction factor to cause the controlled value to be consistent with the field measured value.
 - e. TAB Contractor shall then retest as required to confirm that such corrections have resulted in values that conform to the specification requirements.
- P. Diffuser Pattern Adjustment: Adjust individual outlets under procedures recommended by the manufacturers of the outlets, or as otherwise approved by Architect. Set pattern deflectors at each outlet for the air pattern required. Make changes in air patterns or settings necessary to achieve correct air balance and to minimize drafts. Bring to the attention of the Installing Contractor any air outlets with noticeable rattle caused by loose dampers or pattern adjusters.

3.7 AIR BALANCING DATA

- A. Include the following data in the TAB Reports:
1. Air Moving Equipment Data
 - a. Fan or Unit No.
 - b. Location
 - c. Area Served
 - d. Manufacturer
 - e. Model No. and Serial No.
 - f. Rated and Actual Motor Data

01 91 00 - 9 of 17

- 1) HP
 - 2) Phase
 - 3) Voltage
 - 4) Amperage
- g. Design and Actual Air Flow Measurements
- 1) Total CFM
 - 2) Outside air CFM at minimum OA damper setting
 - 3) Total and external static pressures, in w.g.
 - 4) Fan suction static pressure, in w.g.
 - 5) Fan discharge static pressure, in w.g.
 - 6) Fan RPM
- h. Design and Actual Pressure Drops
- 1) Across filter bank
 - 2) Across each heat transfer coil
 - 3) Provide complete pressure drop profile across each component in air handling unit
- i. Static pressure controls' identification (by service) and final setpoint.
- j. Evaluate building and room pressure conditions to determine adequate supply and return air proportions.
- k. Fan curves with actual operating conditions indicated.
2. Controllable Speed Fan with Variable Frequency Motor Speed Controller
- a. Establish the maximum speed setpoint by determining the following at maximum design air flow requirements:
- 1) Lowest pressure reading at the most remote air controlling device that will satisfy requirements.
 - 2) Supply fan air flow measuring station readings: CFM, velocity pressure, static pressure.
 - 3) Return and/or exhaust fan airflow measuring station readings: CFM, velocity pressure, static pressure.
- b. Establish the minimum speed setpoint by determining the following at minimum design air flow requirements:
- 1) Lowest pressure reading at the most remote air controlling device that will satisfy requirements.
 - 2) Supply fan air flow measuring station readings: CFM, velocity pressure, static pressure.
 - 3) Return and/or exhaust fan airflow measuring station readings: CFM, velocity pressure, static pressure.
- c. Record the operating conditions of the controllable speed fan system(s) with variable frequency motor speed controller(s) at the time the preceding work is performed, including control settings, damper positions, filter conditions and other pertinent data, to

permit duplication of all operating conditions during final calibration of the controllable speed fan variable frequency motor speed controller(s).

- d. After final calibration of the fan controller(s) has been performed again duplicate all system operating conditions and repeat the balancing and adjusting work, specified above, to demonstrate the proper operation, control and calibration of each controllable speed fan system variable frequency motor speed controller at both minimum and maximum air flow conditions.

3. Air Flow Measuring Station

- a. Fan or unit number
- b. Station symbol and location
- c. Manufacturer and model number
- d. Design and actual velocity
- e. Design and actual cfm

4. Duct Velocity Traverse Data

- a. Fan or Unit No.
- b. Traverse location.
- c. Design and actual CFM.
- d. Duct dimensions and area.
- e. Design and actual average velocity.
- f. Duct static pressure at test holes, in. w.g.
- g. Traverse measurements in FPM (show grid pattern).

5. Air Volume Control Box Data

- a. Unit symbol and location.
- b. Manufacturer and model number.
- c. Design and actual air velocity.
- d. Design and actual CFM.

6. Air Outlet and Inlet Data

- a. Identify each outlet or inlet as to location, area and fan or unit system.
- b. Manufacturer and model number.
- c. Outlet or inlet size, effective area or Ak factor.
- d. Design and actual velocity, FPM.
- e. Design and actual CFM.

3.8 HYDRONIC SYSTEM BALANCING

- A. Prepare test reports with pertinent design data and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against approved pump flow rate.
- B. Prepare schematic diagrams of systems' "as-built" piping layouts.
- C. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:

01 91 00 - 11 of 17

1. Open all manual valves for maximum flow.
 2. Check expansion tank liquid level.
 3. Check makeup-water-station pressure gage for adequate pressure for highest vent.
 4. Check flow-control valves for specified sequence of operation and set at indicated flow.
 5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
 6. Set system controls so automatic valves are wide open to heat exchangers.
 7. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
 8. Check air vents for a forceful liquid flow exiting from vents when manually operated.
- D. Measure water flow at pumps. Use the following procedures, except for positive-displacement pumps:
1. Verify impeller size by operating the pump with the discharge valve closed. Read pressure differential across the pump. Convert pressure to head and correct for differences in gage heights. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
 2. Check system resistance. With all valves open, read pressure differential across the pump and mark pump manufacturer's head-capacity curve. Adjust pump discharge valve until indicated water flow is achieved.
 3. Verify pump-motor brake horsepower. Calculate the intended brake horsepower for the system based on pump manufacturer's performance data. Compare calculated brake horsepower with nameplate data on the pump motor. Report conditions where actual amperage exceeds motor nameplate amperage.
- E. Set calibrated balancing valves, if installed, at calculated presettings.
- F. Measure flow at all stations and adjust, where necessary, to obtain first balance.
1. System components that have Cv rating or an accurately cataloged flow-pressure-drop relationship may be used as a flow-indicating device.
- G. Measure flow at main balancing station and set main balancing device to achieve flow that is 5 percent greater than indicated flow.
- H. Adjust balancing stations to within specified tolerances of indicated flow rate as follows:
1. Determine the balancing station with the highest percentage over indicated flow.
 2. Adjust each station in turn, beginning with the station with the highest percentage over indicated flow and proceeding to the station with the lowest percentage over indicated flow.
 3. Record settings and mark balancing devices.
- I. Measure pump flow rate and make final measurements of pump amperage, voltage, rpm, pump heads, and systems' pressures and temperatures including outdoor-air temperature.
- J. Measure the differential-pressure control valve settings existing at the conclusions of balancing.
- K. For variable flow systems, open or close sufficient valves to simulate design diversity, if applicable, and coordinate with BAS Contractor for setpoint and setting of all bypass valves.

- L. For primary-secondary flow systems, first balance the primary system crossover flow, then balance the secondary system flow.

3.9 HYDRONIC BALANCING DATA

- A. Include the following data in the TAB Reports:

- 1. Pump Data

- a. Identification and location.
- b. Service.
- c. Manufacturer, model, and serial number.
- d. Type drive.
- e. RPM.
- f. Rated and Actual Motor Data
 - 1) HP
 - 2) Phase
 - 3) Voltage
 - 4) Amperage
- g. Discharge and suction pressures and differential pressures (feet).
- h. Design and actual pump head (feet) and GPM.
- i. No flow (discharge valve closed) suction and discharge pressure (feet).

- 2. Equipment Data (air handling unit, chiller, terminal unit, radiation, coils, etc.)

- a. Identification (symbol) and location.
- b. Service.
- c. Manufacturer and, except for coils and radiation and the like, model, and serial number.
- d. Entering and leaving pressures and pressure differential (feet).
- e. Pressure differential across balancing valve (feet)
- f. Design and actual GPM.
- g. Entering and leaving water temperatures.

- 3. Flow Meter Data

- a. Identification (symbol) and location.
- b. Service.
- c. Type of meter.
- d. Manufacturer, model, and serial number.
- e. Pipe size.
- f. Design GPM and meter indication.
- g. Actual GPM and meter indication.

3.10 VIBRATION MEASUREMENT OF ROTATING EQUIPMENT

- A. Measure, and submit report, vibration displacement for all fans and pumps over 3 hp.

- B. Perform vibration measurements after air and water balancing and equipment testing is complete.
- C. Measure and record equipment vibration, bearing vibration, equipment base vibration, and building structure vibration. Record velocity and displacement readings in the horizontal, vertical, and axial planes.
- D. Maximum allowable vertical vibration of rotating equipment is as follows:

<u>Equipment Speed (RPM)</u>	<u>Vibration Displacement (MILS peak to peak)</u>
Under 600	4
600 to 1,000	3
1,000 to 2,000	2
Over 2,000	1

If equipment has an inertia base, allowable vibration level is reduced by the ratio of the equipment weight alone to the equipment plus the inertia base weight.

- E. Inspect, measure, and record vibration isolation.
 1. Verify that vibration isolation is installed in the required locations.
 2. Verify that installation is level and plumb.
 3. Verify that isolators are properly anchored.
 4. For spring isolators, measure the compressed spring height, the spring OD, and the travel- to-solid distance.
 5. Measure the operating clearance between each inertia base and the floor or concrete base below. Verify that there is unobstructed clearance between the bottom of the inertia base and the floor.

3.11 VERIFICATION OF CONTROLS AND INSTRUMENTATION

- A. The BAS Contractor is responsible to demonstrate the operation of the control system to the TAB Contractor to verify system performance is in accordance with requirements of the specifications.
- B. Verify that controllers are properly calibrated.
- C. Check transmitter and controller locations and note conditions that would adversely affect control functions.
- D. Record controller settings and note variances between set points and actual measurements.
- E. Check the operation of limiting controllers (i.e., high- and low-temperature controllers).
- F. Check free travel and proper operation of control devices such as damper and valve operators.
- G. Check the sequence of operation of control devices. Note air pressures and device positions and correlate with airflow and water flow measurements. Note the speed of response to input changes.
- H. Check the interaction of electrically operated switch transducers.
- I. Check the interaction of interlock and lockout systems.

- J. For pneumatic control systems, check main control supply-air pressure and observe compressor and dryer operations.
- K. For electric control systems, record voltages of power supply and controller output. Determine whether the system operates on a grounded or non-grounded power supply.
- L. Note operation of electric actuators using spring return for proper fail-safe operations.

3.12 FINAL REPORT

- A. General: Typewritten, or computer printout in letter-quality font, on standard bond paper, in three-ring binder, tabulated and divided into sections by tested and balanced systems.
- B. Include a certification sheet in front of binder signed and sealed by the certified testing and balancing engineer.
 - 1. Include a list of instruments used for procedures, along with proof of calibration.
- C. Final Report Contents: In addition to certified field report data, include the following:
 - 1. Pump curves
 - 2. Fan curves
 - 3. Manufacturers' test data
 - 4. Field test reports prepared by system and equipment installers
 - 5. Other information relative to equipment performance, but do not include Shop Drawings and Product Data.
- D. General Report Data: In addition to form titles and entries, include the following data in the final report, as applicable:
 - 1. Title page
 - 2. Name and address of TAB firm
 - 3. Project name
 - 4. Project location
 - 5. Architect's name and address
 - 6. Engineer's name and address
 - 7. Contractor's name and address
 - 8. Report date
 - 9. Signature of TAB firm who certifies the report
 - 10. Table of Contents with the total number of pages defined for each section of the report
 - 11. Number each page in the report
 - 12. Summary of contents including the following:
 - a. Indicated versus final performance
 - b. Notable characteristics of systems
 - c. Description of system operation sequence if it varies from the Contract Documents
 - 13. Nomenclature sheets for each item of equipment.
 - 14. Data for terminal units, including manufacturer, type size, and fittings.

15. Notes to explain why certain final data in the body of reports varies from indicated values.
 16. Test conditions for fans and pump performance forms including the following:
 - a. Settings for outside-, return-, and exhaust-air dampers.
 - b. Conditions of filters.
 - c. Cooling coil, wet- and dry-bulb conditions.
 - d. Face and bypass damper settings at coils.
 - e. Fan drive settings including settings and percentage of maximum pitch diameter.
 - f. Variable speed controller settings for variable-air-volume systems.
 - g. Settings for supply-air, static-pressure controller.
 - h. Other system operating conditions that affect performance.
- E. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outside, supply, return, and exhaust airflows.
 2. Water and steam flow rates.
 3. Duct, outlet, and inlet sizes.
 4. Pipe and valve sizes and locations.
 5. Terminal units.
 6. Balancing stations.
 7. Position of balancing devices.
- F. Air System and Hydronic System Balancing Data:
1. Include all test data required for proper system balance and other test data specified elsewhere in this Section. Include all values, design and actual.
 2. Provide all duct traverse readings, including traverse locations marked on drawings.
- G. Vibration Measurement Reports:
1. Date and time of test.
 2. Vibration meter manufacturer, model number, and serial number.
 3. Equipment designation, location, equipment, speed, motor speed, and motor horsepower.
 4. Diagram of equipment showing the vibration measurement locations.
 5. Measurement readings for each measurement location.
 6. Calculate isolator efficiency using measurements taken.
 7. Description of predominant vibration source.
- H. Instrument Calibration Reports:
1. Report Data:
 - a. Instrument type and make
 - b. Serial number
 - c. Application
 - d. Dates of use
 - e. Dates of calibration

3.13 INSPECTIONS

- A. Periodically visit the site, as appropriate for size of project or as requested by Owner during the installation of the work. At a minimum, visit the site at the following times:
 - 1. After major equipment is set in place and rough-ins are completed.
 - 2. Prior to installation of shaft enclosures.
 - 3. Prior to ceiling installation.
- B. Should any potential or developing problems be discovered relating to accessibility, materials, equipment, or methods being used in the work, and where such problems may adversely affect the TAB work, immediately report these findings in writing to the Architect with recommendations for correction.
- C. After testing and balancing are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the Final Report.
 - 1. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the setpoint.
 - 2. Walk through the spaces and observe any excessive noise or vibration from the HVAC system.
- D. Final Inspection:
 - 1. After initial inspection is complete and evidence by random checks verifies that testing and balancing are complete and accurately documented in the final report, perform a final inspection to verify the following:
 - a. Verify that all balancing devices are marked with final balance position.
 - b. Verify that all holes in ductwork for pitot-tube traverse have been plugged.
 - c. Verify that all insulation removed during TAB work has been replaced.
 - d. Review requirements for follow-up seasonal checks and schedule dates with Owner.

END OF SECTION 01 91 00

SECTION 01 91 13 - COMMISSIONING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, and other applicable sections, apply to this Section.

1.2 SUMMARY

- A. Employment of Commissioning Agent:
 - 1. For the purposes of this specification, the TAB Contractor will act as the Commissioning Agent. Responsibilities identified herein to be provided by Commissioning Agent shall be understood to be responsibilities performed by the TAB Contractor, in addition to TAB requirements specified elsewhere.

1.3 DEFINITIONS

- A. BAS: Building Automation System.
- B. Commissioning: The process of ensuring that systems are designed, installed, functionally tested, and capable of being operated and maintained to perform in conformity with the design intent (2007 Guideline 1.1 - HVAC Technical Requirements for the Commissioning Process).
- C. Procedure: An approach to and execution of a sequence of work operations to yield repeatable results.
- D. TAB: Testing, adjusting, and balancing.
- E. Testing, Adjusting, and Balancing (TAB) Firm: The entity responsible for performing and reporting TAB procedures.

1.4 REFERENCES

- A. ASHRAE Guideline 1
- B. AABC Commissioning Guideline
- C. SMACNA HVAC Systems Commissioning Manual
- D. LEED Reference Guide

1.5 SUBMITTALS

- A. Qualification Data: Within 30 days from Contractor's Notice to Proceed, submit 4 copies of evidence that Commissioning Agent meets the qualifications specified in "Quality Assurance" Article.
- B. Document Reviews: Within 45 days of award of contract, submit report of having reviewed all project documents as specified in "Document Reviews" Article.
- C. Commissioning Plan: Within 90 days of award of contract, submit Commissioning Plan and procedures. Include system verification checklists and data sheets to be used for each system and each piece of equipment.
- D. Verification Checklists: Submit completed commissioning system verification checklists and functional performance test checklists organized and indexed by system and subsystem as one package. The results of failed tests shall be included along with a description of the corrective action taken and subsequent successful retest.
- E. Final Report: Provide final Commissioning Report.

1.6 QUALITY ASSURANCE

- A. The Commissioning Agent shall submit evidence of having commissioned at least five projects of similar size and scope within the past five years.
- B. Forms of checklists shall be similar to sample forms published in either the AABC Commissioning Guideline, SMACNA HVAC Systems Commissioning Manual, or other form approved by Owner and/or Architect.

1.7 RELATED WORK

- A. Commissioning is the primary responsibility of the Commissioning Agent, with secondary and support responsibility of the various Contractors as outlined elsewhere in this Section. The commissioning process does not relieve the Contractors from participation in the process or diminish their role and obligations to complete all portions of work in satisfactory and fully operational manner.

1.8 COORDINATION

- A. The commissioning process, in order to be successful, requires the cooperation and coordination of all members of the Commissioning Team. The Commissioning Agent will coordinate directly with each Contractor on the project specific to their responsibilities and contractual obligations relative to the commissioning process.
- B. Installing Contractor responsible for their Work will provide services described in their respective sections of the specifications.

- C. Enlist the aid of Installing Contractor or equipment suppliers, at no cost to Owner, whenever such aid is necessary for the timely and proper performance of the Commissioning work.
- D. Cooperate with Installing Contractor to effect smooth coordination of the commissioning activities with the project schedule.

1.9 PARTICIPANTS AND RESPONSIBILITIES

A. Commissioning Team

1. At a minimum, the commissioning team shall consist of representatives of the following:
 - a. Owner
 - b. Architect/Engineer
 - c. Construction Manager
 - d. Commissioning Agent
 - e. TAB Contractor
 - f. Mechanical Contractor
 - g. Plumbing Contractor
 - h. BAS Contractor
 - i. Electrical Contractor
2. The Commissioning Agent shall lead the commissioning team and shall be responsible for the overall completion of the commissioning as outlined elsewhere in this section.

B. Commissioning Roles and Responsibilities

1. Owner
 - a. Develop and commit to the Owner's Program for the facility and its use.
 - b. Provide written approval, or "sign-off" of basis of design prepared by Architect/Engineer.
 - c. Assign operations and maintenance personnel and schedule them to participate in the various meetings, training sessions, and observation/inspections as follows:
 - 1) Construction phase coordination meeting.
 - 2) Initial owner training session at initial placement of major equipment.
 - 3) Maintenance orientation and inspection.
 - 4) Piping and ductwork test and flushing verification.
 - 5) Procedures meeting for testing, adjusting and balancing.
 - 6) Owner's training session.
 - 7) Verification demonstrations.
 - 8) Functional performance tests.
 - 9) Final review and acceptance meeting.
 - d. Review and approve any changes made to design intent after original sign-off.
 - e. Review and approve Construction Documents prepared by Architect/Engineer.
 - f. Provide qualified personnel for videotaping and editing of training sessions.
 - g. Videotape or photograph construction progress.
 - h. Review and comment on the Commissioning Agent's verification report.

- i. Review and accept the Commissioning Agent's Final Commissioning Report.
2. Architect/Engineer
 - a. Provide documentation of basis of design (Design Intent Document) from the information received from Owner's requirements.
 - b. Provide Contract Documents outlining system design parameters and revisions to the initial basis of design as necessary, after obtaining approval from owner.
 - c. Prepare Contract Documents, including Commissioning Specification.
 - d. Attend construction phase coordination meetings and perform site observations of installation for compliance with the contract documents at periodic intervals during the construction.
 - e. Review Contractor submittals for compliance with the contract documents.
 - f. Review TAB procedures submitted by the TAB Contractor.
 - g. Review system verification checklists and functional performance test procedures submitted by the Commissioning Agent.
 - h. Review TAB report and verification data sheets by system for conformance to the contract documents.
 - i. Review and accept final TAB report.
 3. Construction Manager
 - a. Include costs for commissioning requirements in the contract price.
 - b. After reviewing commissioning activities with Commissioning Agent, prepare commissioning schedule in conjunction with Construction Schedule.
 - c. Coordinate construction of systems and equipment.
 - d. Ensure that installing contractor's performing all commissioning responsibilities.
 - e. Process the following to the Commissioning Agent:
 - 1) Shop Drawings
 - 2) As-Built drawings
 - 3) ASME certificates
 - 4) Certification of installation
 - 5) Manufacturer's operating and maintenance instructions
 - 6) Manufacturer's service contracts and warranties
 - f. Coordinate the installing contractor's participation in the commissioning process.
 - g. Instruct installing contractor's to maintain record as-built conditions.
 - h. Update Commissioning Agent as to progress of construction. Provide notice when systems and/or subsystems are complete and ready for commissioning.
 - i. As system or major equipment is checked, ensure that proper tagging is affixed to equipment, indicating acceptance or corrective action required. Do not make any changes to systems and/or equipment after acceptance, without prior approval from Commissioning Agent.
 - j. Any deviations due to construction or for any other reason should be recorded on the affected data sheet for that system or piece of equipment.
 4. Commissioning Agent
 - a. With the assistance of the Construction Manager, organize and lead the Commissioning Team.

- b. Review the Owner's Program.
 - c. Review the basis of design (Design Intent Document) prepared by Architect/Engineer.
 - d. Review the Contract Documents prepared by the Architect/Engineer.
 - e. Prepare a Commissioning Plan, for each type of system/subsystem, for demonstrating, verifying and documenting that the equipment and systems/subsystems installation, operation and functional performance are in accordance with the requirements of Contract Documents.
 - f. Update Commissioning Plan as project progresses through its various phases.
 - g. Schedule commissioning coordination meetings.
 - h. Prepare system verification and functional performance test data sheets for each equipment/system to be commissioned.
 - i. Review contractor submittals.
 - j. Witness equipment and systems start-up and testing. Ensure that results are documented, including a summary of deficiencies, and included in the Operation and Maintenance Manuals.
 - k. Schedule the Operation and Maintenance training sessions with the Contractors and Owner representatives.
 - l. Submit system verification checklists and functional performance test procedures for review and acceptance by Owner and/or Architect/Engineer.
 - m. Schedule and witness system demonstration of sequence of operation performed by BAS Contractor.
 - n. Provide services of an experienced testing technician.
 - o. Provide detailed checklists data sheets to document verification tests.
 - p. Submit detailed list of test instrumentation with appropriate calibration records to be utilized for verification and functional performance tests. Record data as necessary.
 - q. Conduct verification tests.
 - r. Conduct functional performance tests, including seasonal variation tests, as required.
 - s. Retest as necessary if performance deficiencies are found and corrected.
 - t. Prepare Final Commissioning Report. Include Re-commissioning Manual in Final Report.
 - u. Recommend acceptance of the equipment and systems to the Owner.
5. TAB Contractor
- a. Include costs for commissioning requirements in the contract price.
 - b. Submit TAB procedures for review and acceptance by the Architect/Engineer and Commissioning Agent.
 - c. Perform TAB work specified in Section 01 91 00.
 - d. Attend commissioning coordination meetings scheduled by the Commissioning Agent.
 - e. Participate in training sessions as scheduled by the Commissioning Agent.
 - f. Provide notice of the completion of TAB work and submit final TAB report.
 - g. Participate in verification tests, which will consist of repeating any selected measurement contained in the TAB report where required by Commissioning Agent.
6. Mechanical Contractor

- a. Include the costs of commissioning requirements in the contract price.
- b. Shall support the Commissioning Agent in the completion of data on system verification checklists.
- c. Process the following to the Construction Manager:
 - 1) Shop drawings
 - 2) As-built drawings
 - 3) ASME certificates
 - 4) Certificate of installation
 - 5) Manufacturer's operating and maintenance instructions
 - 6) Manufacturer's service contracts and warranties
- d. Provide instruction and demonstrations for the Owner's designated operating staff, in conjunction with the commissioning agency, and with the participation of qualified technicians from major equipment suppliers and the BAS Contractor.
- e. Provide notification a minimum of two weeks in advance of scheduled equipment and system startups, so that all parties can be prepare to witness system verifications, and equipment and system startups.
- f. Provide sufficient personnel to assist the commissioning as required during system verification and functional performance testing.
- g. Prior to startup, inspect, check and confirm the correct and complete installation of all equipment and systems for which system verification checklists are included in the Commissioning Plan. Document the results of all inspections and checks on the checklists and sign them. If deficient or incomplete work is discovered, ensure corrective action is taken and recheck until the results are satisfactory and the system is ready for safe startup.
- h. Provide notification a minimum of two weeks in advance of the time for start of the TAB work. Attend the initial TAB meeting for review of the TAB procedures.
- i. Provide equipment and systems startup resources as specified and required. If during an attempted equipment or system startup, deficient or incomplete work is discovered that would preclude safe operation, the startup shall be aborted until corrective action has been taken. Ensure such action is taken and verified before rescheduling a new startup.
- j. Carry out performance checks to ensure that all equipment and systems fully functional and ready for the commissioning team to witness formal functional performance tests.
- k. Prepare preliminary schedule for mechanical system orientation and inspections. O&M manual submission, training sessions, pipe and duct system testing, flushing and cleaning, equipment startup TAB, and task completion for use by the Commissioning Agent. Update schedule as appropriate throughout the construction period.
- l. Attend initial O&M staff training session.
- m. Conduct mechanical system orientation and inspection at the equipment placement completion stage.
- n. Update drawings for as-built condition and review with the commissioning team.
- o. Gather O&M data on all equipment and assemble in binders as required by the commissioning specification.
- p. Participate in, and schedule vendors and contractors to participate in the O&M staff training sessions as set up by the Commissioning Agent.

- q. Provide written notification that the following work has been completed in accordance with the Contract Documents and the equipment, systems and subsystems are operating as required.
 - 1) HVAC equipment including all fans, air handling units, ductwork, dampers, terminals and all Division 23 equipment.
 - 2) Refrigeration equipment, pumping systems and heat rejection equipment.
 - 3) Fire-stopping in the fire rated construction, including fire and smoke damper installation, caulking, gasketing and sealing of smoke barriers.
 - 4) Seismic restraints installed to specification; a certification from the seismic restraint engineer meets this requirement.

7. Plumbing Contractor and Fire Protection Contractor

- a. Include the costs of commissioning requirements in the contract price.
- b. Shall support the Commissioning Agent in the completion of data on system verification checklists.
- c. Process the following to the Construction Manager:
 - 1) Shop drawings
 - 2) As-built drawings
 - 3) ASME certificates
 - 4) Certificate of installation
 - 5) Manufacturer's operating and maintenance instructions
 - 6) Manufacturer's service contracts and warranties
- d. Provide instruction and demonstrations for the Owner's designated operating staff, in conjunction with the commissioning agency, and with the participation of qualified technicians from major equipment suppliers.
- e. Provide notification a minimum of two weeks in advance of scheduled equipment and system startups, so that all parties can be prepare to witness system verifications, and equipment and system startups.
- f. Provide sufficient personnel to assist the commissioning as required during system verification and functional performance testing.
- g. Prior to startup, inspect, check and confirm the correct and complete installation of all equipment and systems for which system verification checklists are included in the Commissioning Plan. Document the results of all inspections and checks on the checklists and sign them. If deficient or incomplete work is discovered, ensure corrective action is taken and recheck until the results are satisfactory and the system is ready for safe startup.
- h. Provide equipment and systems startup resources as specified and required. If during an attempted equipment or system startup, deficient or incomplete work is discovered that would preclude safe operation, the startup shall be aborted until corrective action has been taken. Ensure such action is taken and verified before rescheduling a new startup.
- i. Carry out performance checks to ensure that all equipment and systems fully functional and ready for the commissioning team to witness formal functional performance tests.
- j. Prepare preliminary schedule for mechanical system orientation and inspections. O&M manual submission, training sessions, pipe system testing, flushing and

cleaning, and task completion for use by the Commissioning Agent. Update schedule as appropriate throughout the construction period.

- k. Attend initial O&M staff training session.
- l. Conduct mechanical system orientation and inspection at the equipment placement completion stage.
- m. Update drawings for as-built condition and review with the commissioning team.
- n. Gather O&M data on all equipment and assemble in binders as required by the commissioning specification.
- o. Participate in, and schedule vendors and contractors to participate in the O&M staff training sessions as set up by the Commissioning Agent.

8. BAS Contractor

- a. Include costs for commissioning requirements in contract price.
- b. Support Construction Manager to complete data on checklists.
- c. Process the following to the Construction Manager:
 - 1) Shop drawings
 - 2) As-built drawings
 - 3) Any approval letters from authorities
 - 4) Provide paid-in-full service contract with cost for second year
- d. Training and instruction of Owner's personnel.
- e. Review and confirm in writing that a proper hardware specification exists to permit functional performance testing as required by specification and sequence of operation.
- f. Review and confirm in writing that proper safeties and interlocks are included in design.
- g. Ensure the proper sizing of control valves and actuators, based on design pressure drops. Ensure that control valve authority will result in capacity control as specified. Include valve sizing and authority information in submittal to mechanical engineer.
- h. Ensure the proper sizing of control dampers. Ensure damper authority to control air flows as specified. Review and confirm in writing proper damper positioning for mixing to prevent stratification. Ensure correct actuator vs. damper movement for smooth operation. Include damper sizing, control authority and actuator selection data in submittal to mechanical engineer.
- i. Ensure the proper selection of sensor ranges, and include data with submittal to mechanical engineer.
- j. Attend commissioning meetings scheduled by the commissioning team or Commissioning Agent.
- k. Inspect, check and confirm the proper installation and performance of controls/BAS hardware and software provided by others.
- l. Integrate installation and programming scheduling with construction and commissioning schedules.
- m. Inspect, check and confirm the correct installation and operation of input and output field points and devices through documented and signed off point-to-point checkouts.
- n. In conjunction with the mechanical contractor, demonstrate system performance to the commissioning team including all modes of system operation (e.g., occupied, unoccupied, emergency) during the functional performance tests. If improper

functionality, incomplete work, or other deficiencies affecting system performance are discovered, the commissioning team will stop the functional performance tests.

- o. Provide control system technician to assist during system verification and functional performance testing.
- p. Provide support and coordination with TAB contractor on all interfaces between controls and TAB scopes of work. Make available, at no additional cost to the TAB and commissioning agencies, all devices, such as portable operator's terminals and all software for the TAB agency to use in completing TAB and commissioning procedures.

9. Electrical Contractor and Fire Alarm Contractor

- a. Include the costs of commissioning requirements in the contract price.
- b. Shall support the Commissioning Agent in the completion of data on system verification checklists.
- c. Process the following to the Construction Manager:
 - 1) Shop drawings
 - 2) As-built drawings
 - 3) Electrical certificates from electrical inspection agency
 - 4) Manufacturer's certification and warranties of system operation
 - 5) Test reports as required by specifications
 - 6) UL meter label certificates
 - 7) Manufacturer's operating and maintenance instructions
- d. Provide instruction and demonstrations for the Owner's designated operating staff, in conjunction with the commissioning agency, and with the participation of qualified technicians from major equipment suppliers.
- e. Provide notification a minimum of two weeks in advance of scheduled equipment and system startups, so that all parties can be prepare to witness system verifications, and equipment and system startups.
- f. Provide sufficient personnel to assist the commissioning as required during system verification and functional performance testing.
- g. Prior to startup, inspect, check and confirm the correct and complete installation of all equipment and systems for which system verification checklists are included in the Commissioning Plan. Document the results of all inspections and checks on the checklists and sign them. If deficient or incomplete work is discovered, ensure corrective action is taken and recheck until the results are satisfactory and the system is ready for safe startup.
- h. Provide equipment and systems startup resources as specified and required. If during an attempted equipment or system startup, deficient or incomplete work is discovered that would preclude safe operation, the startup shall be aborted until corrective action has been taken. Ensure such action is taken and verified before rescheduling a new startup.
- i. Carry out performance checks to ensure that all equipment and systems fully functional and ready for the commissioning team to witness formal functional performance tests.
- j. Prepare preliminary schedule for electrical system orientation and inspections. O&M manual submission, training sessions, and task completion for use by the

Commissioning Agent. Update schedule as appropriate throughout the construction period.

- k. Attend initial O&M staff training session.
- l. Conduct electrical system orientation and inspection at the equipment placement completion stage.
- m. Update drawings for as-built condition and review with the commissioning team.
- n. Gather O&M data on all equipment and assemble in binders as required by the commissioning specification.
- o. Participate in, and schedule vendors and contractors to participate in the O&M staff training sessions as set up by the Commissioning Agent.

1.10 SYSTEMS TO BE COMMISSIONED

A. The following Mechanical/HVAC systems are to be commissioned:

- 1. Air handling units and associated return fans
- 2. Terminal VAV boxes
- 3. Exhaust fans
- 4. Computer Room A/C units
- 5. Chiller equipment and pumps
- 6. Boiler equipment and pumps
- 7. Building Automation System

B. The following Mechanical/Plumbing systems are to be commissioned:

- 1. Domestic water supply pumps
- 2. Domestic hot water heaters
- 3. Sump pumps

C. The following Electrical systems are to be commissioned:

- 1. Lighting control systems including daylight dimming controls
- 2. Emergency Generator
- 3. Uninterruptible Power Supply (UPS) systems
- 4. Manual and automatic transfer switches
- 5. Lightning protection system

D. The following Fire/Life Safety systems are to be commissioned:

- 1. Fire alarm system
- 2. Fire sprinkler system
- 3. Fire pump
- 4.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 DOCUMENT REVIEWS

A. Owner's Program

1. Obtain and review the Owner's program requirements document.

B. Basis of Design (Design Intent Document)

1. Obtain and review the basis of design document prepared by the Architect/Engineer.
2. Compare scope of work identified in the basis of design to Owner's program requirements. Prepare written statement whether basis of design meets the intent of the Owner's program. Clearly note any significant deviations.

C. Contract Documents

1. Obtain and review latest submission of all Contract Documents including Addenda and Bulletins.
2. Compare scope of work identified on Contract Documents to basis of design. Prepare written statement whether the Contract Documents meet the intent of the basis of design. Clearly note any significant deviations.
3. Review documents for any specific condition or layout that will prevent commissioning from being completed, such as equipment accessibility and maintainability, installation clearances and available space, and coordination of other trades. Notify Architect/Engineer of such instances in a timely manner.
4. When Commissioning Agent is retained prior to issuance of final Contract Documents, review preliminary Contract Documents issued for progress review as outlined above.

D. Contractor Submittals

1. Obtain and review all submittal drawings, specifications and equipment vendor submittals for any deviations from design intent, either as shown on Contract Documents and/or basis of design documents. Notify Architect/Engineer of any potential deviations from design intent.
2. Review all drawings, specifications and equipment vendor submittals for any conflicts or design details that will hinder or prevent the systems from being balanced, commissioned and maintained. Notify Architect/Engineer of any problem areas of concern.

3.2 COMMISSIONING PLAN

A. Prepare a Commissioning Plan (or Agenda) that details the entire commissioning process. The plan shall include as a minimum:

1. Project Overview, Goals and Objectives
2. Systems to be commissioned

3. Definitions
4. A roster of the Commissioning Team with contact information
5. Roles and Responsibilities
6. Procedures for project communication
7. Commissioning process
8. Preliminary commissioning schedule

3.3 SYSTEM VERIFICATION CHECKLISTS

- A. Prepare detailed installation and functional performance criteria checklists for each type of equipment and for each type of system/subsystem. Provide individual data sheet for each piece of tagged equipment.
- B. Data sheets and checklists shall be in tabular format with columns and rows to be filled in by the Commissioning Agent for: Project identification, equipment or system/subsystem identification, installation checklist and functional performance test checklist. Form of data sheets and checklists to be similar to sample forms included in the AABC Commissioning Guideline, SMACNA HVAC Systems Commissioning Manual, or other as approved by Owner and/or Architect/Engineer.

3.4 PRE-COMMISSIONING ACTIVITIES

- A. After final review of the Commissioning Plan and system verification checklists, schedule a pre-commissioning meeting not less than 90 days prior to scheduled start of commissioning work for a detailed review of the Commissioning Plan with all participants in the commissioning process.
- B. Equipment and systems are expected to be in full compliance with the design intent by the start of the commissioning phase. Do not proceed with the commissioning work for any specific piece of equipment/system/subsystem until notified by the installing contractor that such piece of equipment/system/subsystem is ready for commissioning.
- C. Presence of obviously incomplete work shall be reported to the installing contractor and commissioning shall not proceed until the installation is complete. Equipment exhibiting problems during functional performance testing relating to lack of completion or noncompliance with the design intent shall require re-commissioning at the expense of the installing contractor.
- D. Complete operational readiness of the heating, ventilating and air-conditioning system also requires that the following be accomplished:
 1. Cleaning, flushing and chemical treatment of piping, ductwork and all system equipment has been carried out in accordance with the requirements of the specifications. Reports shall be submitted, and reviewed and accepted before this process is considered complete.
 2. Pressure testing of piping and all supply, return and exhaust ductwork has been carried out. Reports shall be submitted, and reviewed and accepted before this process is considered complete. Complete test reports prior to initial start-up.

- E. Testing, adjusting and balancing work must be performed prior to commissioning. Operational tests should also be conducted on equipment, duct, piping and control systems to verify that pressures and flow rates meet design requirements.
- F. Building Automation System controls testing and calibration should begin concurrent with, and completed subsequent to, the testing, adjusting and balancing work. Commissioning Agent shall observe and verify all start-up and calibration activities as part of the ongoing commissioning process.

3.5 COMMISSIONING ACTIVITIES

- A. Implement Commissioning Plan in conjunction with the installing contractors, and in the presence of an authorized representative of the Owner. Conduct system verification checks and functional performance tests by filling out the data requested using the approved checklists.
- B. As a minimum, perform the following for each piece of equipment and each system/subsystem:
 - 1. Document and verify that each piece of equipment and that each system has been properly installed in accordance with the Contract Documents and manufacturer's written installation instructions.
 - 2. Document and verify that piping systems have been properly connected to each piece of equipment and have been properly tested and cleaned in accordance with the requirements of the Contract Documents.
 - 3. Document and verify that duct systems have been properly connected to each piece of equipment and air delivery/exhaust/return device and have been properly tested and cleaned in accordance with the requirements of the Contract Documents.
 - 4. Document and verify that Electrical work for equipment and systems to be commissioned has been properly installed and tested in accordance with the requirements of the Contract Documents.
 - 5. Document and verify that each piece of equipment has been placed into operation in accordance with manufacturer's written installation instructions.
 - 6. Document and verify that adjusting, balancing and system testing has been properly done in accordance with requirements of this section prior to functional performance testing. Make on-the-spot checks as deemed appropriate during functional performance testing.
 - 7. Document that operation and maintenance instructions and submittal data have been provided in accordance with the requirements of the Contract Documents.
 - 8. Document and verify that applicable code authority inspections and approvals and all construction certificates have been provided in accordance with the requirements of the Contract Documents.
 - 9. Document and verify the functional performance testing of each piece of equipment and each system and subsystem. Document controls and instrumentation as specified hereinafter.
 - 10. Document warranty start and end dates.
- C. Documentation of Controls and Instrumentation
 - 1. Document and verify that the controls and instrumentation work has been properly installed and tested and is performing in accordance with the requirements of the Contract Documents.

2. Functional performance testing shall be accomplished for each control device. Actuators shall be stroked for complete length of travel. All relays and adapters shall be checked for proper operation. Controllers shall be checked for proper action. All system interlocks, interconnections, smoke damper and safety devices shall be checked for proper function.
3. All control settings shall be verified by comparing actual input and output measured values to calculated values.

D. Owner Training Sessions

1. The Commissioning Agent shall facilitate all owner-training sessions. These sessions shall cover the operation and maintenance of each piece of equipment and system. Each contractor shall provide the training for his or her area of responsibility. The entire program shall be videotaped for future use by owner.

E. Seasonal Functional Performance Tests

1. The Commissioning Team shall provide an off-season functional performance tests for all HVAC systems. The intent of this test shall cover the ability of the system to maintain performance during the opposite season from the original commissioning season. The Commissioning Agent shall prepare a seasonal commissioning test report.

3.6 FINAL COMMISSIONING REPORT

- A. A Commissioning Report must be prepared and presented to the Owner after all testing and system demonstration is complete.
- B. The Commissioning Report must include the following, as a minimum:
 1. Certification that building systems meet the design intent.
 2. Certification that building systems meet the Contract Documents.
 3. Completed system verification checklists ensuring proper installation.
 4. Completed functional performance tests checklists ensuring proper operation.
 5. Operation and maintenance (O&M) documentation.
 6. Verification that Owner has received proper operator training.
- C. The Final Commissioning Report shall be 8 ½ by 11 formats; contained in a hard cover, three ring binder(s), separated into sub-divided sections each tabbed and indexed in a table of contents. Drawings larger than 8 ½ by 11 shall be folded and inserted into clear plastic protective folders with drawing content clearly visible, single protective folder for each drawing. Drawing label shall be affixed to protective folder in order to reserve proper placement in the binder. Include the following:
 1. Cover sheet
 2. Table of Contents
 3. Project Description
 4. Project Team Contact Information
 5. Basis of Design document
 6. Copy of Commissioning Specification
 7. Commissioning Plan

8. Copy of Building Automation System Sequences of Operation
9. Latest approved BAS shop drawings
10. Listing of all approvals, inspections, certification required by local authorities having jurisdiction including copies of all letters, affidavits, certificates, etc.
11. Meeting minutes from commissioning meetings
12. Commissioning Schedule
13. Specification and calibration certificates for all equipment being used during commissioning
14. Relevant certificates relating to work items such as pressure testing, system flushing, etc.
15. All equipment start-up and test certificates
16. Shop drawing submittal cut sheets for each item in the system
17. Startup Plan
18. Record of system deficiencies and record of correction and acceptance of noted deficiencies
19. Final version of functional performance test procedures
20. Completed commissioning checklists
21. Letters of certification from all members of the Commissioning Team that all systems have been properly commissioned otherwise giving clear definition of any deferred commissioning and deviation from Final Commissioning Plan
22. Re-commissioning Plan
23. O&M Manuals (Can be an appendix to the Final Commissioning Report)

END OF SECTION 01 91 13

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

[Designer shall incorporate this document into the specification in its entirety.]

1.0 Purpose

- A. The following guidelines apply to North Carolina State University's ("NC State") requirements specific to the needs of NC State. It is the goal of NC State to identify specific needs relevant to working on a public university campus that will help the Contractor gain more knowledge and be fully aware of NC State's expectations while working on campus.
- B. References include the following:
 - 1. NC State University Design and Construction Guidelines – [Division 01 Contractor Safety Guidelines](#)
 - 2. NC State Transportation's Contractor Parking Policies: <http://www2.acs.ncsu.edu/trans/parking/specialty.html>
 - 3. NC State University, Environmental Health and Public Safety, Fire Protection Department Hot Work Permit Procedures. Contractor shall access the following website to obtain hot work permits: http://www.ncsu.edu/ehs/fire/hot_work.htm

2.0 General Requirements

- A. The Owner's Representative - NC State will designate a Project Manager to act as the Owner's Representative in all matters pertaining to construction contracts. All official contacts, decisions, directions, problem resolution, coordination and other liaison activities required from NC State will be through the Project Manager. This requirement does not modify the responsibilities of the Designer as stated in the General Conditions of the Contract.
- B. Contractor, at its expense, shall conduct a background check for each of its employees, as well as for the employees of its subcontractors, who will perform any function or activity under this Agreement. NC State may withhold consent for any of Contractor's employees to be placed on a NC State assignment at its sole discretion.
- C. Behavior policy - All construction personnel shall be respectful of all members of the NC State community. Any incidents of disrespect, verbal abuse, threatening statements, unwelcome comments, unwelcome interaction or any form of harassment from any construction personnel toward any member of NC State community is strictly prohibited. Any such act shall constitute sufficient cause for NC State to remove any individual permanently from the project and all NC State property. In addition, any of the Contractor(s) project personnel who ignore or refuse to take action on any requirements of the contract documents or ignore or refuse to take immediate action to correct any endangerment to the health and safety of the public (as solely determined by NC State)

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

shall be permanently removed from the project and NC State property. If in the sole determination of NC State it is in the best interest of the project and NC State to have any of the Contractor(s) personnel removed from the project, then the Contractor shall do so upon request by NC State. Such actions taken by NC State shall not constitute grounds for a delay claim. NC State will not be responsible for any delays caused to the project due to any individual being removed from the project by NC State.

- D. Contractor Safety expectations while on this NC State project:
1. Reference **Division 01 – Contractor Safety Requirements** for items identified in this section.
 2. Designation of Competent Persons as noted in Section 4.0/C shall be included in the jobsite contact list.
 3. Submit a Contractor Site-Specific Safety Plan (SSSP) to the NC State Project Manager (reference Contractor Safety Guidelines 4.0/I).
 4. The Safety Representative, as defined by Section 4.0/D must complete, at a minimum, the OSHA Construction Safety Course as defined in Section 4.0/D/1/b.
- E. Protection of Work, Property, and Public:
1. The single prime Contractor, Construction Manager at Risk or Project Expediter (on a multi prime project), henceforth referred to as “the Contractor,” shall ensure that campus streets connecting to the project are protected from mud, sand, and stones/gravel. Streets and adjacent property sites shall be kept free from run-off, litter and/or debris in any form from the project site. Mud, litter and/or debris from the construction site that appears on adjacent property sites shall be removed immediately. All mud collected on vehicle tires shall be removed before leaving the construction area. Should any mud or debris from the project site collect on the streets, it shall be removed immediately to prevent any hazards to vehicular or pedestrian traffic as well as from entering the storm sewer system. In any event, all streets and property sites adjacent to the project site shall be cleaned of construction related debris, dust, litter and mud daily. The Contractor, in the preparation of bids, shall account for the daily cleaning of adjacent streets and property sites. The Contractor(s) is prohibited from discharging any waste products from concrete trucks or from concrete coring work, or any other unsuitable materials, fluids or other products on the site or into the storm sewer system. Should the Contractor fail to comply with these requirements, NC State reserves the right, with twenty-four (24) hours prior notice to the Contractor, to clean and or remove mud, trash, litter, debris or any unauthorized discharge from the project site and/or the adjacent streets or properties. In such case, the cost of the cleaning and/or removal or mobilization for cleaning and/or removal shall be deducted from the Contractor's contract.

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

2. The Contractor shall repair any damage (including but not limited to: scratches, cuts, dings, holes, track marks, etc.) of any kind made to existing hardscapes (asphalt/concrete roadway and drives, curb and gutter, brick sidewalks, etc.) by heavy equipment or other causes. Repairs shall consist of a complete, full depth removal and replacement of the affected asphalt, concrete or brick hardscapes at the Contractor's expense, or as otherwise determined by the Owner, to include the full width of the road, parking lot, walk or curb that is affected. The Contractor is strongly encouraged to be mindful of this while working around and off-loading equipment in areas of new construction adjacent to existing areas, which are not in the original scope of work to be renovated or repaved. In general, equipment shall be off-loaded inside of assigned staging areas, and the Contractor shall take protective measures as needed, including protective plywood or other means to prevent damage of the hardscape surface. The slightest damage will result in full hardscape replacement at the Contractor's expense.
 3. Blasting on NC State property is prohibited.
 4. Each Contractor doing excavation work is responsible for locating all existing underground utilities prior to commencing excavation. The Contractor shall be responsible for the associated cost of any utility interruption and repair due to his excavation if utility location was not requested, location procedures performed and followed prior to commencing excavation. The Contractor shall immediately notify NC State and restore the service of any utility disrupted due to excavation or any Contractor action whatever the circumstance. NC State reserves the right to immediately restore the service of any utility disrupted due to actions of the Contractor and deduct the cost of such restoration from the Contractor's contract.
 5. For emergency situations during construction, the Contractor shall furnish NC State with the names, pager numbers, and telephone numbers (day and night) of the Contractor's project manager and superintendent prior to beginning work. The numbers shall remain current or be updated as required for the duration of the project. The Contractor shall contact NC State via cell phone immediately in the event of an emergency. NC State will only provide security, as it deems prudent and necessary for its own protection. The Contractor shall be responsible for the security and safety of the project within the project limits. NC State must approve any "watchman" service instituted by the Contractor.
 6. NC State will conduct normal operations during the duration of the project. The Contractor shall coordinate with NC State to minimize any disruptions to the functions of NC State.
- F. Working Hours - The Contractor may establish a work schedule of his own choosing. The Contractor shall submit to NC State and to the Designer his regular daily work

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

schedule and shall notify NC State in writing one week in advance of any deviations from the schedule. There are no restrictions regarding work hours. NC State reserves the right to limit the Contractor's activities when they conflict with NC State operations. These operations include but are not limited to the following: examination periods (typically for two weeks in December and two weeks in May), graduation (typically for one weekend in December and May), athletic events, and student move in/move out days. During these times, the Contractor may be required to cease all construction activities, limit activities to on-site only, modify working hours or restrict noise-making activities as determined by NC State.

- G. Contractor Daily Reports - The Contractor shall keep construction daily reports and provide, at NC State's request or on a minimum weekly basis, copies of these daily reports. The Contractor shall either use the company's standard daily report or use a template provided by NC State. The daily report shall at a minimum include the following information:
1. Project name, SCO Project ID#, NC State Project #
 2. Report #
 3. Date and time report was generated
 4. Weather data: overhead conditions, precipitation (if so, how much), temperature (high and low), impact on progress
 5. Document Daily Safety Briefing (refer to Contractor Safety Guidelines 4.0/E)
 6. Report Daily Safety Inspections (refer to Contractor Safety Guidelines 4.0/F)
 7. Sediment and erosion control
 8. Work performed (include all major trades)
 9. Number of workers on site
 10. Major equipment deliveries
 11. Major equipment working on site
 12. Difficulties encountered that may cause delay
 13. Days of no work and reason
- H. Meetings - The contractor shall at a minimum conduct weekly coordination meeting to review construction progress and any issues that need to be resolved. Contractor shall invite NC State and Designer as well as any required subcontractors.
- I. Inspection of the work - NC State will conduct the following inspections, as applicable, which shall be included in the construction schedule: in-wall inspections, above ceiling inspections, generator test, fire pump test, fire sprinkler main drain tests, pre-final inspections, 100% test of the fire detection and alarm system, third-party materials testing/special inspections/commissioning and a final inspection for project acceptance. Any inspections that are not satisfactory shall be repeated at no cost to NC State and shall

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

not be cause for a time extension. All inspections will be conducted by NC State at the same time as the Designer's inspection and a punch list generated. The Contractor shall give the Designer and NC State a minimum of fourteen (14) calendar days prior notice that the systems have been verified by the Contractor to be complete, fully functional and ready for inspection. The following general guidelines apply to the above ceiling inspections:

1. The systems must be complete, including but not limited to controls, insulation, labeling, tagging, fireproofing, fire stopping, wiring, light fixtures installed, and all piping in place.
2. Ceiling grid may be installed as required, framing for hard ceilings shall be in place, and access door locations shall be framed and noted.

Under no circumstance shall any ceiling or wall area be covered prior to the above ceiling inspection. All punch list items generated from the inspections shall be completed by the Contractor and verified by the Designer and NC State. Any re-inspection costs, including but not limited to Designer, NC State, State Construction Office (SCO) or third party personnel, that result from punch list items not being 100% complete shall be at the expense of the Contractor.

- J. Use of the Premises - Parking is extremely limited at NC State. Parking for personal vehicles on campus is not provided. Contractors must limit parking of company vehicles and storage of materials to within the limits of the construction site and staging area. The Contractor is required to follow NC State Transportation's Contractor Parking Policies (see web link on page one of this document).
- K. Utilities - It is imperative that all campus utilities and all other campus services are maintained at all times except for scheduled interruptions. Required utility interruptions shall be scheduled with and requested through NC State at least fourteen (14) days in advance for minor outages and thirty (30) days in advance for major outages. NC State is the sole determiner of the utility outage being major or minor. Major outages include but are not limited to those that affect an entire floor of a building, all of a building, all or parts of several buildings, all or parts of an area, and any high voltage outage. No utility interruption, regardless of the advance notice given, shall be undertaken without expressed, specific approval from NC State. If requested by NC State, utility outages shall be performed after hours and/or at night, or over the weekend, or during holidays. No extra payment will be made for such work. NC State personnel will perform certain activities in connection with utility outages such as operating existing electrical switches, turning existing water and steam valves, placing existing building systems back in operation, operating existing fire alarm systems, etc. NC State will bear the expense of the work of their personnel. When the Contractor requires an additional or extra outage to complete their work because of a shortage of or improper materials, shortage of labor, poor coordination, failure to finish the work during the outage scheduled length of time, the Contractor will pay all expenses incurred for NC State's services for an additional

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

outage(s). No service disruptions shall take place until barricades (if applicable) and signs are in place to notify and/or protect the public. Barricades must be maintained at all times and signs shall be neat and legible, hand-made signs are not acceptable. Signs for utility outage notice shall be written and placed as directed by NC State seven (7) workdays prior to the outage. NC State may determine the utility service cannot be interrupted for the length of time or frequency requested by the Contractor. In such case the Contractor shall include in his bid provisions for temporary utility services for the duration of the outage at no cost to NC State.

- L. Survey of New and Existing Sub-surface Utilities - Perform field location surveys of new utilities installed as well as existing utilities uncovered during the construction phase. Conventional survey standards are to be utilized during the collection of field data. All work shall be performed by qualified personnel under the supervision of a Professional Land Surveyor. Accuracy Standards: horizontal and vertical location shall be +/- 0.25'. Survey (NAD83-North Carolina State Plane Coordinates) shall tie to NC State's horizontal & vertical control monuments.
1. Utility Drawing Set (Hard Copy)
 - a) Cover Sheet - All projects require a cover sheet with the following information -
 - (1) NC State Project Name
 - (2) NC State Project Number
 - (3) NC State Building Name (s)
 - (4) NC State Building Number or Utility Zone Number (s)
 - (5) Project Phase (i.e. Schematic Design, Design Development, 100% Bid Documents, or Record Set)
 - (6) Sheet Name with discipline letter preceding sheet number (i.e. A100 for an Architectural Plan).
 - (7) Drawing Index
 - (8) Site Map
 - (9) For interior renovations, a hatched key plan indicating the extent of work
 - b) Drawing Sizes – sheet sizes shall not exceed 36" x 48" and shall not be less than 24" x 36" in size.
 - c) Include licensing seal and certification on 100% bid documents and record set documents.
 2. Utility Drawing Set (Electronic Copy)
 - a) Format shall be .pdf.
 - b) Submission is required at each project phase.
 - c) File naming shall be as follows:

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

- (1) Typical file naming shall be as follows -
bldg #_ncsu project number_date_phase.pdf or
utility zone #_ncsu project number_date_phase.pdf
 - (2) Example: 799Z_201300001_10-31-12_sd.pdf
 - (3) For projects with multiple buildings or utility zones, the lowest number shall be used in file name.
3. Electronic Source CADD Files (Record Set and first Construction Document Submittal)
 - a) Electronic files of all drawings shall include source drawings, font libraries, custom line styles/codes, plot style tables and other digital CADD related information.
 - b) The files shall be in AutoCAD .dwg format; the AutoCAD version shall be within the last 2 years of the current release.
 - c) Drawings shall be drawn at a scale of 1 to 1 in model space. Interior spaces shall be in Architectural inches. Exterior space shall be in US survey foot.
 - d) For exterior projects use NAD 83 North Carolina State plane coordinates.
 - e) All external references shall be bound as inserts or inserted directly as a block into the drawing. X-refs of any kind are not acceptable.
 - f) Remove licensing seals from drawing files.
 - g) Drawings shall be purged and audited.
 - h) Submission shall not include backup .bak files or .zip files.
 - i) Site, Civil, and Survey drawings shall use the NC State mapping drawing template, which includes NC State standard layers, linetypes and block symbols. The current version can be downloaded at www.ncsu.edu/facilities/con_guidelines/NCSU_CIV-SRV_TEMPLATE.dwg
4. Utility Submission
 - a) Hard Copy - The Drawing Set shall be submitted on bond paper.
 - b) Electronic Files for the Record Drawing Set and Source CADD Files shall be accompanied by a transmittal with a listing of the included documents and the following information:
 - (1) NC State Project Number
 - (2) NC State Project Name
 - (3) NC State Building Number(s)
 - (4) NC State Building Name (s)
 - (5) NC State Project Manager's Name and Phone Number

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

- (6) Submitting Professional's Name and Address
- c) Electronic Files shall be submitted on a CD or DVD
 - (1) A .pdf file of the transmittal shall be included on each disk.

- M. The following outline lists the utilities to be located and the data to be collected. Photographs shall be at a minimum resolution of 2200 x 1700. Digital photographs can be submitted in TIFF, JPG, or RAW file formats. File naming shall be all lower case text. File naming shall be as follows: bldg#_ncsu project number_util_photo#.file extension. For example: 135_201300001_util_1.jpg
 - 1. Steam Tunnel and Lines
 - a) Location and elevations of the tunnel slab and top of tunnel centerlines.
 - b) Location and size of steam and condensation pipes in the tunnel, including changes in directions, expansion loops and anchors.
 - c) Top of pipe of any direct buried steam and condensation pipes, including changes in directions, expansion loops and anchors.
 - d) List the construction material for the tunnels.
 - e) Provide digital photographs of the tunnel, piping and expansions areas.
 - 2. Water Lines - (Domestic, Fire Main, Chilled, Hot Water, & Reuse Waterlines)
 - a) Locations, size and elevations at the top of installed water lines, including changes in direction.
 - b) Locations of valves and a valve type designation, meters, fire department connections, post indicator valves, hydrants, reducers, manholes, and backflow device.
 - c) Provide digital photographs of bends and valves.
 - 3. Electric and Communication Duct Banks and Direct Buried Conduit
 - a) Location and elevations of the duct bank top and bottom.
 - b) Location and elevations of conduit runs in the duct bank.
 - c) Location and elevations of any direct buried conduit or concrete duct bank.
 - d) Location and elevations of manhole rims, transformers, pedestals, switches, poles, overhead lines, junction boxes, panels, generators, and meter boxes.
 - e) Provide digital photographs of the tunnel and conduit configuration.
 - 4. Gas
 - a) Location and elevations of top of pipe and any change in direction.
 - b) Location and elevations of meters, pressure reducing stations, test stations, generators, and valves.

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

5. Storm and Sanitary Sewer
 - a) Provide invert elevations for incoming and outgoing piping at manholes.
 - b) Provide top elevation of manhole cover.
 - c) Note if manhole rims are in the center of the structure or not. Measure the offset, pipe sizes, material types and the direction of the flow.
 - d) Provide digital photographs of structures.
 6. Existing Utilities
 - a) Locate and provide elevations consistent with new utility requirements of any existing utilities exposed during excavation of trenches for new utilities.
 - b) Provide digital photographs of the crossing or conflict.
 7. Deliverables for Surveys
 - a) The subsurface location data and platting shall be continuous throughout the project.
 - b) All data and plats are due to NC State within two-weeks of the backfilling of utilities or completion of the associated construction task.
- N. Traffic Movement and Interruptions - Road and sidewalk blockages shall be scheduled fourteen (14) days in advance and made only after NC State has approved them. Appropriate detours shall be planned, subject to approval by NC State, giving consideration to the handicapped access. No excavations shall take place prior to placing proper barricades, lighting, and other devices as shall be required. The Contractor shall install warning signs, barricades and detour information signs to maintain traffic flow as directed by NC State. If required, flagmen shall direct traffic around the construction area or detour area. Contractors are reminded of the presence on campus of handicapped students, staff and faculty. All barricades, temporary walkways, excavations, and stockpiled materials shall be placed and/or constructed in such a manner as to accommodate, adequately warn, and protect this segment of the campus population. The Contractor shall make requests for approval for any street, alley, driveway or any access way to be closed at least fourteen (14) work days prior to the date for the desired closing. The Contractor shall close no street, alley, driveway or access-way without prior approval by NC State. Pedestrian and vehicle traffic way-finding around the construction limits must be maintained in a clean and safe condition at all times.
- O. Fire Alarm Shutdowns - When requesting fire alarm shutdowns to support construction activities, the contractor shall provide advanced notice as determined by the NC State Project Manager. The contractor shall also be required to reimburse NC State for all costs associated with the fire alarm shutdown as follows:
1. During normal business hours (Monday – Friday, 7:00 AM – 5:00 PM): \$75.00 per disconnect and \$75.00 per reconnect for a total of \$150.00.

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

2. After normal working hours (Monday – Friday, 5:01 PM – 6:59 AM; Saturday – Sunday): \$150.00 per disconnect and \$150.00 per reconnect for a total of \$300.00.
 3. If at any time the fire alarm system is not in operation after normal working hours then the contractor shall be required to employ a Fire Watch for the unprotected portion of the building, using NC State Fire Marshal's approved Fire Watch company (hourly rates vary but should not exceed \$35.00 per hour.)
- P. Hot Work Permits - When the Contractor is performing work that produces heat, flame, or sparks on or in an existing building or other structure the Contractor is required to obtain a "hot work" permit from NC State Environmental Health and Public Safety, Fire Protection Department. The department's requirements for the hot work program and permit can be found at the web link on the first page of this document.
- Q. Cleanliness and Site Maintenance - The Contractor(s) shall be responsible for keeping the project limits area, the project site, and the project itself clean and free of accumulated construction debris and trash. To that extent, the Contractor(s) shall be responsible for cleaning their work areas weekly at a minimum and the proper disposal of their construction debris and trash. The construction site and staging areas shall be cleaned as previously noted; however, should trash, litter or debris from the project site migrate to any adjacent campus areas it shall be removed immediately. Grass in the construction site shall be mowed as often as required to maintain a neat appearance or as requested by NC State but in no case less than once per month. Should the Contractor(s), in the sole judgment of NC State fail to comply with these requirements, then NC State reserves the right to proceed with cleaning within the project limits area, immediate project site, the interior of the project or, if applicable, the adjacent areas to the project as it deems necessary. The cost of the cleaning and/or the mobilization cost of cleaning will be deducted from the Contractor(s) contract.
- R. Storage of construction materials and equipment - Storage of construction materials and equipment shall be limited to the staging area. Should the Contractor fail to remove any material stored or equipment outside the staging area within twenty-four (24) hours of notification received from NC State, NC State shall have the right to remove and dispose of such materials from the campus. NC State will deduct the cost of such removal and disposal from the Contractor(s) contract. The offending Contractor(s) shall be responsible for any delay to the project resulting from NC State having to remove and dispose of such materials or equipment.
- S. Construction site - A construction fence shall be installed around the perimeter of the project limits. The fence shall be constructed of heavy-duty chain link material, have a minimum height of six feet and shall have a continuous top tubular rail. Swing gates shall be included at every access to the enclosed area. The fence shall have an integral visual barrier or shall have shading type material applied and maintained for the duration of the

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

project. Locks for the gates shall be interlocked with a padlock provided by NC State in order to allow access by NC State or other emergency personnel in case of an emergency.

- T. Inspection and Audit - Contractor's "records" shall upon reasonable notice be open to inspection and subject to audit and/or reproduction during normal business working hours. An NC State representative or an outside representative engaged by NC State may perform such audits. NC State or its designee may conduct such audits or inspections throughout the term of this contract and for a period of three years after final payment or longer if required by law.
1. Contractor's records as referred to in this contract shall include any and all information, materials and data of every kind and character, including without limitation, records, books, documents, subscriptions, recordings, agreements, purchase orders, leases, contracts, commitments, arrangements, notes, daily diaries, superintendent reports, drawings, receipts, vouchers and memoranda, and any and all other agreements, sources of information and matters that may in NC State's judgment have any bearing on or pertain to any matters, rights, duties or obligations under or covered by any Contract Document. Such records shall include (hard copy, as well as computer readable data if it can be made available): written policies and procedures; time sheets; payroll registers; payroll records; cancelled payroll checks; subcontract files (including proposals of successful and unsuccessful bidders, bid recaps, etc.); original estimates; estimating work sheets; correspondence; change order files (including documentation covering negotiated settlements); back charge logs and supporting documentation; invoices and related payment documentation; general ledger entries detailing cash and trade discounts earned; insurance rebates and dividends; and any other Contractor records which may have a bearing on matters of interest to NC State in connection with the Contractor's dealings with NC State (all foregoing hereinafter referred to as "records") to the extent necessary to adequately permit evaluation and verification of:
 - a) Contractor compliance with contract requirements,
 - b) Compliance with NC State's business ethics policies, and
 - c) Compliance with provisions for pricing change orders, invoices or claims submitted by the Contractor or any of his payees.
- U. Changes in the Work - Overhead shall also include all general conditions of the contract and all general requirements such as project management, scheduling, home office expense, engineering and layout, reproduction expenses, shop drawing processing and coordination, supervision, coordination, small tools, all vehicle expenses, temporary facilities, safety provisions, as built drawings, estimating, and general overhead.
1. The change order cost break down shall include: labor (number of hours and \$/hr) and material (quantity and \$/unit), including such breakdowns for work

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

performed by the general contractor and all subcontractors. Unit prices shall only be allowed as stipulated in Article 19 of the contract General Conditions. Cost extensions shall be clearly shown for the labor and material prior to any mark-ups. The cost extensions shall be added into a labor and material subtotal. The labor shall then show a percentage for labor burden, while the materials shall show the applicable sales tax. These subtotals shall then be shown as a total for labor and material costs. The labor and material cost shall then show the allowed mark-up, and a final total. Subcontractor quotes shall be presented in the same format on the subcontractor's letterhead. Each item totaled on the Contractor's summary sheet shall be separated in the back up documentation by a colored sheet of paper. For change orders that delete any part of the work within the change order and/or contain deductive costs, the back up shall show the original material and labor for the deleted work or costs. If the change order contains both adds and deducts for the same type of work then the material unit and labor unit costs shown on the back up for the deleted work and the added work shall be the same and the net difference shown. Deductive change orders shall show the proper reduction in OH&P and the bond. The Contractor shall also provide HUB utilization information on NC State's Hub Utilization form. Failure by the Contractor to provide the information requested in this paragraph shall result in rejection of the change order by the designer and a request for re-submittal. Delay in the processing of the change order due to lack of proper submittal by the Contractor in accordance with this paragraph, or due to errors in the change order calculations shall not constitute grounds for a time extension or basis for a claim.

2. For all proposed change orders, the procedure will be for the designer to request proposals for the change order work in writing. The Contractor will provide such proposal and supporting data in suitable format and as required in General Condition Article 19 – Changes in the Work, paragraph “c”, “d”, and “e”. The designer shall verify correctness and determine that the Contractor's proposed costs are equitable. After receipt of the Contractor's proposal and if the proposal is correct and it is agreed to by the designer and NC State that the cost is equitable then NC State shall prepare a change order and forward it to the Contractor for his signature. If the change order proposal is incorrect, or the cost has not been agreed upon by the designer and NC State then the designer shall notify the Contractor that the proposal is rejected and the proposal shall be re-submitted. If the proposal is rejected because the cost are deemed not to be equitable then the contracting parties shall negotiate and agree upon the equitable value of the change and the proposal shall be resubmitted with costs determined under General Condition Article 19 – Changes in the Work Paragraph “e”.
3. Once proposed change orders have been reviewed and approved by the Contractor, Designer and NC State, the change order shall be processed for

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

- signatures electronically through the State Construction Office (SCO) web-based Interscope program. Directions for using Interscope shall be provided at the Pre-construction Conference.
4. If for whatever reason Interscope cannot be used for processing change orders, change orders shall be processed in hard copy format in accordance with General Condition Article 19 – Changes in the Work. The change order shall contain a brief description of the work on the 1st page of the SCO form and again on the second sheet of the form under “DESCRIPTION OF CHANGE”. On the second sheet there shall also be a brief description of the reason for the change along with a cause code listed. Each item totaled on the Contractor’s summary sheet shall be separated in the back up documentation by a colored sheet of paper. After receipt of the change order executed by the Contractor, the designer shall, certify the change order by his signature and forward the change order and all supporting data to NC State for signature. NC State shall execute the change order and forward to the State Construction Office for final approval. The State Construction Office shall review and upon approval execute the change order and keep one copy. The remaining copies are sent to the designer for distribution to NC State (two copies with original signatures) and to the Contractor (two copies). The Contractor shall forward a copy to his Surety. In the case of an emergency or extenuating circumstances, the approval of the changes may be obtained verbally by telephone or field order approved by all parties.
 5. The Contractor shall also provide HUB utilization information on NC State’s Hub Utilization form.
 6. Failure by the Contractor to provide the information requested in this paragraph shall result in rejection of the change order by the designer and a request for re-submittal. Delay in the processing of the change order due to lack of proper submittal by the Contractor in accordance with this paragraph or due to errors in the change order calculations shall not constitute grounds for a time extension or basis for a claim.
- V. A time extension due to Weather - A rain day is defined as any day that rain exceeds one tenth of one inch (0.1"). The Contractor may only be entitled to extension of the contract period for the number of rain days that exceed the normal number of rain days for any given month. For the purpose of determining extent of delay attributable to unusual weather, a determination shall be made by comparing the weather for the contract period with the preceding five (5) year climatic range average during the same time interval based on statistics kept at NC State's Marine, Earth and Atmospheric Sciences department located on NC State's campus and on daily weather logs kept on the jobsite by the Contractor, reflecting the effect of the weather on progress of the work and initialed by the designer's representative. Time extensions for weather delays do not entitle the Contractor to “extended overhead” recovery and are in all other ways non-compensable.

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

Notwithstanding the immediately preceding paragraph, not all rain days above the normal number of rain days will warrant a contract time extension. Justification for the request for rain related contract time extensions must also be based on the effect of the rain on critical path work activity in progress during the period of the request and additionally be predicated on the Contractor's diligent prosecution of the work. No additional rain days shall be granted for building projects after the building has been "dried-in" as determined by the designer. The contract time extension request must incorporate work logs kept at the jobsite by the project superintendent showing the effect of the weather on the progress of the critical path work and the critical path schedule, both initialed by the designer's project representative.

Requests for contract time extensions based on rain days must be received by the designer on or before the 20th day of the month immediately following the month in which the rain occurred. The request must include all required documentation. All parties to this contract agree that the Contractor has no right to claim a contract time extension if the request is not received by the designer in strict accordance with the procedure set forth in this paragraph.

For other types of weather delays, the Contractor is granted one (1) day of contract extension for each day NC State is closed due to weather.

W. Final Inspection and Acceptance

1. In addition to all other contract inspection requirements, the following items shall be completed prior to scheduling a final inspection:
 - a) Training of NC State's Facilities Operations personnel shall be conducted with approved Operation and Maintenance Manuals (O&M's) provided at the training sessions.
 - b) Deliver to NC State one copy of all approved shop drawings (submittals) for the project.
 - c) Stairs: prior to final inspection, the Contractor shall submit to the Designer and NC State for review and approval as-built survey drawings of each set of stairs (exterior and interior) constructed as part of this contract. As-built survey drawings shall include dimensions of each riser and each tread and shall bear the seal of a licensed surveyor registered in the State of North Carolina. The Designer shall determine that the stairs are in full compliance with the current State of North Carolina Building Code, and if not in compliance, the Contractor, at his expense, shall make all required corrections, resurvey and resubmit as-builts for re-review and approval by the Designer and NC State.
2. The Contractor shall complete the following list, indicating the date of completion, prior to scheduling a final inspection and recommending acceptance of the project to NCSU. Items 1 and 2 must be completed prior to "substantial

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

completion” as defined in Supplementary General Conditions 3.0 Article 23
“Time of completion - the Contractor shall coordinate with NC State the
completion of some items on the list as required:

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

Project Acceptance Checklist (also to be used for Beneficial Occupancy when applicable)

Project Name:

Code: **Item:**

Note: All items must be checked off with dates & initialed

accordingly

	Initial & Date
I. Pre-final Inspections	
A. Critical Items Check List:	
1. NCSU Environmental Health Safety Department certification of fume hoods	
2. NCSU Fire Marshall's inspection of life safety systems (FAS, Sprinkler System, Emergency Generator, Fire Pumps etc)	
3. Fire Extinguishers installed or delivered to NC State	
4. Roof & window water tests (when required)	
5. Date to coordinate NCSU Fac Ops Lock Shop to install locks and test in conjunction with Life Safety	
6. State Construction Office electrical inspection(s) complete	
7. Fire alarm inspection and certification by installer and design engineer complete	
8. Fire alarm inspected & approved by NCSU Electronics Shop & Fire Marshall	
9. Elevator inspection by Dept. of Labor, approval to operate the elevator obtained	
10. Demonstration of operation of fire pumps to NCSU Fire Marshall	
11. Operation of emergency and stand by power circuits verified	
12. Operation of emergency generator verified	
13. Dept. of Health water test results and approvals delivered to designer	
14. Dept. of Labor pressure vessel inspections and certificates issued and displayed.	
15. Endorsement of surety for beneficial occupancy (if applicable)	
16. Endorsement of Contractor's insurance company for beneficial occupancy (if applicable)	
17. Approval of SCO for beneficial occupancy (if applicable)	
18. Date for insurance transfers established	
II. Training and instruction of Facility Operations Personnel on Equipment	
A. Record of Instruction Sessions:	
Plumbing	
HVAC/ Controls	
Electrical	
Fire Alarm	
B. NC State O & M Manuals and pressure vessels info delivered to NC State

NC State University Design and Construction Guidelines

Division 01 NC State's Requirements

- X. Request for Payment – In addition to General Conditions Article 31 – Requests for Payments, Contractor payment applications shall have the following information clearly shown on the front page: NC State project number, Code & Item, State Construction Office Project Identification Number. No payment may be made for stored materials that are not stored within the project limits or on property owned by the State of North Carolina. Exception may be considered for material stored in a third-party, bonded warehouse with all appropriate documentation provided to NC State. Designer must verify that material is stored in a bonded warehouse and that the stored material is identified as NC State property. No payment shall be certified/approved by the Designer and forwarded to NC State for payment if not accompanied by the following:
1. A letter from the surety company consenting to the progress payment in the amount requested. The amount of the payment shall be shown on the letter.
 2. A completed sales tax statement and form.
 3. An updated CPM schedule.
 4. MBE Appendix "E" Form with accurate subcontract amounts and amounts paid.
 5. NC State project code, item number, project number and the State Construction Office ID number on the 1st sheet.
 6. Pay applications without the information listed shown shall be considered incomplete and cannot be approved.
 7. "Schedule of values" shall include payment line items for various commissioning activities.

No final payment shall be approved by the Designer and/or forwarded to NC State if not accompanied by the following:

8. Certificate of Compliance signed by the Designer of Record.
9. Certificate of Completion signed by the Designer of Record.
10. Completed Tax Statement and Form.
11. Consent of Surety for Final Payment.
12. Contractor's Affidavit of Payment of Debts and Claims.
13. Contractor's Affidavit for Release of Liens.
14. Contractor's General Guarantee.
15. Contractor's statement of any special or extended warranties.
16. MBE Appendix "E" Form with accurate subcontract amounts and amounts paid.

* NC State shall have 30 days from the time that correct and complete payment requests are received to pay the Contractor.

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

[Designer shall incorporate this document into the specification in its entirety.]

Safety Measures pertaining to COVID-19 Transmission

North Carolina State University is committed to preventing transmission of COVID-19 in our community. Safety protocols have been implemented throughout the university for faculty, staff, and students to prevent the spread of COVID-19. These protocols were developed based on guidance from the Centers for Disease Control and Prevention, the Occupational Safety and Health Administration, and the State of North Carolina. Contractors shall comply with any NC State, federal, state, or local mandates relative to the pandemic. The most stringent requirement shall be enforced, including those established by any contractor's corporate policy in place.

Face Coverings – Student Health Services and CVM Areas

Face coverings must be worn, tightly covering the mouth and nose, inside all buildings (even those under construction). Until further notice, NC State Student Health Services and the College of Veterinary Medicine (CVM) will require face coverings to be worn by contractors while indoors in any facility until further notice. Minimum expectation is that face coverings must be properly worn at all times while indoors; face coverings may be removed only while eating and/or drinking.

1.0 Purpose

- A. The purpose of this guideline is to define NC State contractor safety requirements. This guideline is intended to be a supplement to the General Conditions of the contract.
- B. The Designer shall incorporate this document into the Project Manual in its entirety.
- C. Contractors and subcontractors are responsible for the safety of their employees and all persons on and around a work site. Contractors are solely responsible for the development and implementation of their safety programs. This document does not relieve the duty and responsibility of contractors, subcontractors, their agents, employees, and other persons performing portions of the work on a project to comply with federal, state, and/or local laws or regulations that relate to work site safety.

2.0 Scope

- A. This document provides contractors with the University's specific requirements that must be incorporated into the contractor's Site-Specific Safety Plan. This document is not designed or intended to replace the contractor's safety program, nor to address every possible safety, environmental, or health hazard associated with the contractor's work. In the event that the contractor's safety program includes a requirement or practice that is more stringent than set forth herein, the more stringent shall be followed. This document does not relieve the contractor of this obligation to: (1) control the means and methods by which its employees, and any subcontractors perform work, and (2) independently ascertain what health and safety practices are necessary for the performance of the work.

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

- B. No specific requirements herein shall be construed to limit, replace or supersede applicable provisions of federal, state, or local laws or regulations. [Occupational Safety and Health Administration \(OSHA\) Regulations; Standard Number 29 CFR 1926](#) are the foundation of these Guidelines.
- C. Deliverables
 - 1. Competent Person Designation (see attached form) (4.0/C)
 - 2. Verification of OSHA 30 or OSHA 10 compliance, based on project requirements. (4.0/D/1/b)
 - 3. Contractor Site Specific Safety Plan (SSSP). (4.0/I)
 - 4. Summary of the Daily Safety Inspections documented as part of regular project meeting minutes. (4.0/F/1)
 - 5. Monthly Safety Reports. (4.0/F/2)

3.0 Reference Materials

- A. The following reference materials are required to be available upon request at every job site:
 - 1. OSHA Regulations published by NC Department of Labor (DOL) (Available at: (800) NC-LABOR, <http://www.nclabor.com/pubs.htm>).
 - 2. Safety Data Sheets (SDS) for all chemical products the contractor has brought to the worksite.
 - 3. The written Safety Plan of the Contractor or Subcontractor.
 - 4. Site inspection documentation.
 - 5. Worksite employee training records.
 - 6. Mishap reports and investigations.

4.0 General Responsibilities

- A. The contractor must notify the NC State Project Manager in writing at least 10 days prior to:
 - 1. Utilizing powder-actuated tools
 - 2. Starting operations that will produce excessive odor, dust, noise affecting occupied buildings or work near air intakes
 - 3. Using a combustion engine indoors
 - 4. Using a mobile crane or tower crane (50-day notice is required)
 - 5. Breaking ground for an excavation or trench
 - 6. Using a laser
 - 7. Using any source of radioactive material
 - 8. Working with lead or asbestos containing materials
 - 9. Performing energized electrical work
 - 10. Working on or near active underground utility infrastructure (steam, chilled water, natural gas, water, etc.)
 - 11. Entering electrical distribution assets

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

Violation of any safety, security, or environmental requirement may result in the permanent removal of the contractor or their employees from the NC State premises.

B. Construction Management

1. Contractor is responsible for compliance with all federal, state, and local laws, regulations, standards, executive orders, etc. applicable in part or whole pertaining to the scope of work.
2. Contractors are responsible for compliance with all applicable NC State safety practices, procedures, policies, standards, and requirements.
3. Contractors are responsible for providing qualified and competent personnel to perform activities under the scope of work. Contractors must provide documentation of training prior to beginning work on-site.
4. Contractors are responsible for ensuring that subcontractors, their agents, employees, visitors, and other persons performing portions of the work on a project comply with federal, state, and/or local laws or regulations that relate to work site safety.
5. Contractors are responsible for ensuring that subcontractors are informed of and comply with all applicable requirements within the scope of work.

C. Competent Person Designation

1. Contractors shall designate a competent person for activities as specified in OSHA 29 CFR 1926. Such activities include, but are not limited to, the following activities, as applicable to the job:
 - a) general provisions
 - b) ionizing/non-ionizing radiation
 - c) gases, vapors, fumes, mists, dusts
 - d) ventilation
 - e) hazard communication
 - f) lead
 - g) asbestos
 - h) personal protective equipment
 - i) hearing conservation
 - j) respiratory protection
 - k) rigging and material handling equipment
 - l) welding, cutting, brazing
 - m) electrical
 - n) scaffold
 - o) fall protection
 - p) cranes (overhead and mobile)
 - q) motor vehicles and equipment
 - r) excavations
 - s) concrete and masonry
 - t) steel erection
 - u) demolition

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

- v) stairways and ladders
- w) toxic and hazardous substances.
- 2. OSHA 29 CFR 1926.32(f) "Competent person" means one who is capable of identifying existing and predictable hazards in the surroundings or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.
- D. Contractor Safety Personnel
 - 1. Safety Representative
 - a) For all projects contractors must designate a Safety Representative prior to the start of the project. The Safety Representative may be the Project Superintendent, and as such, must be onsite during any and all construction operations.
 - b) **For projects bid through Capital Project Management, the Safety Representative must have completed, at a minimum, an OSHA 30-hour Construction Safety Course. For projects bid through Construction Services, the safety representative must have completed, at a minimum, an OSHA 10-hour Construction Safety Course.**
 - c) The Safety Representative must actively monitor the jobsite for safety issues on a daily basis. The safety representative may have additional site duties outside the scope of safety; when the safety representative is not on the project site, a competent designee must be assigned to monitor safety on the site.
 - 2. Safety Professional
 - a) When appropriate, the contractor shall provide a full-time safety professional assigned to the project. The duties of the full-time safety professional must be strictly limited to safety-related activities, with no additional job site duties.
 - b) Safety professionals must have one or more of the following credentials: a professional certification (beyond an OSHA 30-hour course), a college or professional degree related to safety and health, or significant previous experience and skills necessary to thoroughly understand the health and safety hazard and controls relevant to the project. The designation and adequacy of qualifications of the full-time safety professional shall be reviewed and accepted by the University prior to commencement of the work.
 - c) Project-specific requirements for a full-time safety professional will be addressed in the contract documents and discussed during the Pre-Bid Meeting.
- E. Daily Pre-Job Meetings.
 - 1. A pre-job meeting (i.e. "Tailgate" or "toolbox" meeting) shall be held at the beginning of each work period (normally in the morning before leaving the yard or work staging area). The pre-job meeting should include a discussion of the scope of work to be completed, associated hazards, and means and methods to mitigate the hazards. The pre-job meeting must be led by the supervisor or other competent person.
- F. Safety Inspections.
 - 1. Daily Inspections: The Contractor shall perform daily job inspections and correct any unsafe conditions or actions. A summary of these inspections will be reviewed as a

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

- portion of and captured in the minutes of the weekly Owner, Designer, Contractor job meetings.
2. Monthly Inspections: For projects with a duration of more than one calendar month (4 weeks), the safety inspection must be documented and include, at a minimum, the name of the person performing the inspection, the date, a checklist of items observed, any identified safety concerns, and actions taken to address identified concerns.
 3. University Project Visits: The NC State Project Manager, or other owner representative, may perform unscheduled visits to project sites to address adherence to the Contractor Safety Requirements or Site-Specific Safety Plans. Any safety concerns identified will be reported to the responsible contractor for prompt mitigation.
- G. Mishap Reporting: All mishaps occurring on the project site must be investigated to determine causes and actions must be taken to prevent recurrence. Mishaps resulting in injury requiring medical treatment or damage to NC State property must be reported in writing to the NC State Project Manager as soon as possible but no later than 24 hours from occurrence; the Project Manager shall be notified immediately of mishaps resulting in life-threatening injury.
- H. The Contractor shall address safety concerns at regularly scheduled meetings with subcontractors.
- I. Contractor Site-Specific Safety Plan - The Contractor must develop and implement a Site-Specific Safety Plan (SSSP) The SSSP is a comprehensive safety plan for his or her employees, which covers all aspects of onsite construction operations and activities associated with the contract. This plan must comply with all applicable health and safety regulations and any project-specific requirements. The Safety Plan must be submitted to, reviewed and accepted by NC State prior to beginning any on-site work activities.
1. As applicable to the project, these items must be included in the Safety Plan:
 - a) Scope of Work
 - b) Emergency Procedures
 - c) 24-hour emergency points of contact
 - d) Identification of Designated Competent On-Site Personnel (per OSHA requirements)
 - e) Designated On-Site Safety Personnel
 - f) Safety orientation program
 - g) Site logistics Plan: address public (student, faculty, staff, visitor) safety, traffic plan, equipment and lay-down areas, site security, dust containment, etc.
 - h) Minimum PPE requirements
 - i) Hazard Assessment (for defined project tasks) - include hazard identification and mitigation
 - j) Mishap reporting and investigation procedures
 - k) Safety inspection/audit procedures
 - l) Sub-contractor requirements

5.0 General Requirements

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

- A. Asbestos - If asbestos-containing materials are uncovered during construction, NC State must be notified *immediately*. Do *not* attempt to remove the material. Contractors shall comply with provision of the [State Construction Office Asbestos Abatement Guidelines and Policies](#) and the [NC State Asbestos Management Plan](#).
 - 1. If asbestos containing material is present in any building material and is in good condition (i.e. non-friable) and will not be disturbed during construction, the material may be left in place. If asbestos containing material is disturbed during construction activities, then it shall be removed; removal shall be performed by appropriately qualified and accredited personnel and in accordance with federal, state and local regulations.
- B. Compressed Gas Cylinders
 - 1. Compressed gas cylinders shall be properly used, stored, and maintained as per federal, state, and local requirements.
 - 2. Cylinders shall not be stored in a location in which they are subject to mobile equipment traffic (including vehicles) unless adequately protected.
- C. Confined Space Entry
 - 1. Contractors required to enter a confined space at NC State must have and implement a written confined space entry program in accordance with OSHA 1926 Subpart AA Confined Spaces in Construction or OSHA 1910.146 permit required confined spaces, as applicable.
 - 2. Controlling contractors (those with overall responsibility for construction at the work site) must ensure space entry coordination when more than one entity will enter the space.
 - 3. Each contractor must have a competent person that will identify confined spaces associated with the scope of their work. Before entry into a permit required confined space, contractors must obtain the following information from the controlling contractor (when there is no controlling contractor, the contractor will obtain the information from the NC State Project Manager):
 - a) The location of each known permit space associated with the project scope;
 - b) The known hazards or potential hazards that make it a permit space;
 - c) Any precautions needed to be taken based on the known hazards or potential hazards.
 - 4. Each contractor performing work in a permit space must perform a hazard assessment specific to the work to be performed and establish corresponding hazard controls.
 - 5. A competent person from each contractor performing work in a permit space must complete and sign [Appendix F](#) to the [NC State Confined Space Entry Program](#).
- D. Contaminated Soil - If soil or any materials appear to be contaminated, the NC State Project Manager must be notified immediately. The NC State Project Manager will contact NC State EHS for assistance (919) 515-7915.
- E. Electrical Power Lines (Overhead) - The contractor shall have a trained and knowledgeable observer (signal person) within sight of the operator and the overhead lines that will effectively provide guidance and clearance information to the operator as the equipment

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

may approach the minimum approach distances. Advising the operator shall be the signal person's one and only task. When conducting any work with a crane, derrick or hoist in the vicinity of any overhead electric power transmission or distribution line, the contractor shall observe all clearance requirements dictated by all applicable OSHA rules, as specifically contained within 29 CFR 1910 - Standards for General Industry, CFR 1926 - Standards for Construction, IEEE C2 - NEC, NFPA 70 - NEC, the NCSBC, ANSI standards and other applicable NC State safety guidelines and requirements. Further, no crane, derrick or hoist operator or contractor shall conduct any operation at any distance closer than 20 feet to any electric power line lower than 200 kV or closer than 35 feet to any electric power transmission line at voltages higher than 200 kV and lower than 250 kV, unless the requirements of OSHA 1926 Sub CC for preventing encroachment/electrocution are strictly followed.

- F. Elevators/Material Hoists
 1. Any persons operating elevators/hoists must be trained to do so. Documentation shall be kept onsite.
 2. No elevator/hoist with a defect shall be used.
 3. Elevator/hoist safety devices shall not be overridden or made inoperable.
- G. Emergency Equipment- The following shall not be moved, blocked, disabled or rendered inaccessible unless authorized by NC State:
 1. Fire equipment
 2. First aid equipment, fire blankets, stretchers, eyewash fountains and safety showers
 3. Fire protection, hydrants, and detection systems
- H. Emergency Medical Treatment - To receive immediate assistance for emergency medical treatment call 911.
- I. Environmental and Chemical Requirements
 1. Contractors must provide NC State with a list of all chemicals to be used on NC State property and maintain a copy on site of the SDS for each chemical prior to being brought on site. Each chemical container must be labeled clearly with the identity of the chemical and any associated hazards in accordance with the OSHA Hazard Communication Standard (1910.1200).
 2. Contractors must follow the safety procedures recommended by the manufacturer or seller of any chemicals, tools, equipment, or other materials. Contractors are to remove all empty containers, excess chemicals and chemical waste from NC State property.
 3. For all chemical incidents, contractors shall call 911 and also notify the NC State Project Manager.
- J. Excavation and Trenches - Before doing any excavation work, the Contractor must locate all utilities by calling the local utility locator service and NC State.
- K. Excavations
 1. Underground Facilities Locate. Contractors shall ensure underground installations and facilities are identified by calling 811 (Call Before You Dig) before performing any excavating activity. Note: excavation includes movement or removal of earth, rock, or other materials in or on the ground by use of manual or mechanized equipment. This is

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

required for any project with earth-moving activities before you dig so that underground facilities can be identified and avoided. Detailed instructions and requirements can be found at nc811.org.

2. Competent Person. Trench and excavation work must be performed under the direction of a competent person. Responsibilities include: classifying soil, inspecting protective systems, monitoring water removal and conducting site inspections.
 3. Cave-In Protective Systems. A protective system is required by OSHA-1926 Subpart P for trenches and excavations that are 5 feet or more in-depth OR if the competent person has examined the ground and finds indication of a potential cave-in. Protective systems typically include: sloping/benching, shoring or shielding. In order to determine what protective systems are appropriate, the competent person must first determine the soil type: Stable Rock, Type A, Type B or Type C soil. Type C soil is the least cohesive and therefore, the least stable. No work shall be permitted in excavations where water has accumulated unless the integrity of the excavation has been protected.
 4. Excavations >20 feet in depth or which cannot comply with OSHA requirements require written approval by a Registered Professional Engineer (RPE).
 5. A ladder, stairway, ramp or other means of access must be provided within the excavation, when excavations are >4 feet in depth.
 6. Barricades (stop-logs) shall be provided where vehicles or mobile equipment are used near or adjacent to excavations.
 7. Spoil piles must be placed a minimum of 2 feet from the edge of the excavation.
 8. Air monitoring must be performed if the excavation is >4 feet in depth and there is a potential for a hazardous atmosphere to exist.
- L. Exit Routes
1. Exit routes must be maintained at all times during construction.
 2. Lighting and marking must be adequate and appropriate.
 3. Exit routes must be kept free of explosive or highly flammable furnishings.
 4. Exit routes must be free and unobstructed. No materials or equipment may be placed, either permanently or temporarily, within the exit route. The exit access must not go through a room that can be locked, such as a bathroom, to reach an exit or exit discharge, nor may it lead into a dead-end corridor. Stairs or a ramp must be provided where the exit route is not substantially level. No materials shall be stored in a stairwell.
- M. Explosives: Blasting on university property is prohibited.
- N. Fall Prevention. A fall hazard is any condition on a walking-working surface that exposes an employee to a risk of fall on the same level or to a lower level. Examples of fall hazards include, but are not limited to: floor openings, hoist area, roofs, leading edge, scaffolding, ramps, etc.
1. Preventing or protecting falls from height may be necessary at any height given the circumstances, but is required when an employee is at a height of 6 feet or more above a lower level.
 2. Contractor work generally falls within construction industry applications, where acceptable methods depend on the type of work being performed: unprotected sides or

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

edges, roof work, leading edge, etc. In all cases, contractors shall comply with the respective OSHA standards.

3. Contractors shall ensure that every employee required to work at unprotected heights (greater than 6 feet) are trained in fall hazard recognition and prevention.
4. **Guardrail System.** A guardrail system provides the highest level of protection and is always preferred. The system must be capable of supporting 200 lbs. in any direction and still maintain its integrity. The individual heights of the components must conform to the following minimum standards:
 - a) The top rail of the system must be at a height of 42" (+ or - 3");
 - b) the mid rail must be at a height of 21" with a 3" variation possible;
 - c) the toe board must have a minimum vertical height of 3.5".

Note: building code has more stringent requirements for permanent installations.

5. **Personal Fall Protection Systems.** At times, it is necessary to work in areas where guardrails cannot be constructed; in these instances, a personal fall protection system must be used. Personal Fall Protection Systems are systems (including all components) that provide protection from falling or that safely arrest a fall. Examples include travel restraint and personal fall arrest. All components of this system shall meet the applicable design requirements as specified in OSHA 1910, 1926, or ANSI Z359. All components shall be inspected by the wearer prior to each use and at least annually by a competent person. No employee may use a personal fall protection system without proper training and an understanding of proper use and safe application of the system.
 - a) **Travel Restraint System.** A travel restraint system is a combination of an anchorage, anchorage connector, lanyard (or other means of connection) and body support that the wearer uses to eliminate the possibility of going over the edge of a walking-working surface. Anchorages for travel restraint systems shall have a strength capable of sustaining static loads of at least 1,000 lbs. (per person) or two times the foreseeable forces for certified anchorages. Anchorage connectors, lanyards (or other means of connection) and body support devices shall be used in accordance with the manufacturer's requirements. The system shall be installed so that a fall cannot occur; therefore, a rescue plan is not required.
 - b) **Personal Fall Arrest System.** A personal fall arrest system is a system used to safely arrest a user in a fall from a walking-working surface. It includes an anchorage, anchorage connector and a full body harness. The means of connection may include a lanyard, deceleration device, lifeline or a suitable combination of these. Equipment must be worn and used in accordance with the manufacturer's requirements. Anchorages for personal fall arrest systems shall have a strength capable of sustaining static loads of at least 5,000 lbs. (per person) or two times the maximum arresting force for certified anchorages. The system shall be installed so that should a fall occur, the wearer will not contact the lower level or any other obstruction. Since there is a potential for a fall to occur, a rescue plan written by a qualified person is required.

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

- c) **Warning Line System.** A warning line may be used for construction roofing work when closer to the fall hazard than 15ft, but no closer than 6ft and in conjunction with one of the following: a guardrail system, a safety net system, a personal fall protection system, or a safety monitoring system. A warning line system shall conform to regulatory requirements and enclose all authorized employees conducting work protected by the Warning Line System. Refer to OSHA 1926.502(f).
- O. Fire Protection and Prevention
 1. The contractor shall be responsible for the development and maintenance of an effective fire protection and prevention program at the job site throughout all phases of the construction. Contractors shall perform inspections on fire extinguishers monthly. Contractors shall immediately replace fire extinguishers that do not pass inspection.
 2. Fire cutoffs shall be retained in buildings undergoing alterations or demolition until operations necessitate their removal.
 3. If work requires the disabling of Fire Protection Devices, then the Contractor must request a Fire Alarm Disconnect; through the appropriate NC State process; beginning with the Project Manager. No alarm shall be disabled at any time by the Contractor.
- P. Hand and Power Tools
 1. All hand and power tools and similar equipment, whether furnished by the employer or the employee, shall be maintained in a safe condition. Any tool found not in proper working order, or that develops a defect during use, shall be immediately removed from service and not used until properly repaired.
 2. All tools shall be used, operated and maintained in accordance with OSHA and manufacturer requirements.
- Q. Hot Work Permits - A Hot Work Permit is required when any indoor or outdoor work will involve hot work, defined as operations including cutting, welding, thermite welding, brazing, soldering, grinding, thermal spraying, thawing pipe, installation of torch-applied roof systems or other similar activities. Requirements for Contractors performing this work are contained in the NC State Hot Work Permit Program that is a part of the specifications package and can also be found at [Hot Work Permit Form](#).
- R. Housekeeping
 1. The Contractor must maintain a clean and orderly project job site. The Contractor shall maintain NC State's pathways free of rocks, mud, and other miscellaneous construction debris. The Contractor shall prevent the accumulation of dirt, dust, and/or other debris on NC State's roadways. The Contractor shall clean the travel ways on a daily basis. (Refer to project specifications for requirements.)
 2. Waste material and debris must be removed from the work and access areas at least once a day. Waste material and debris should not be thrown from one level to another but should be carried down, lowered in containers or deposited in a disposal chute.
 3. Materials must be neatly piled, stacked or otherwise stored to prevent tipping or collapsing. Materials must be carefully stacked and located so they do not block aisles,

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

- doors, fire extinguishers, safety showers and eyewash stations, fixed ladders or stairways.
4. Material to be lifted by crane or other hoisting devices must not be stored under overhead power lines.
 5. No materials may be stored on penthouses, roofs, or other areas until a specific area is assigned by NC State for a specific project.
 6. Adverse Weather: If NC State becomes aware of an adverse weather event, the NC State Project Manager shall notify the construction superintendent, and the contractor shall perform a job site review to ensure any debris or construction materials are secured and protected from the elements.
- S. Illumination - Construction areas, ramps, runways, corridors, offices, shops, and storage areas shall be lit to not less than the minimum illumination intensities required by OSHA.
- T. Ladders - All ladders must meet OSHA requirements.
- U. Lasers
1. Lasers must comply with the OSHA Construction Industry Standards.
 2. Lasers must be low power (<5mw) devices with visible beams. Lasers to be used must bear a label indicating this maximum power output. Lasers that do not bear this label shall not be used.
 3. "Laser in use" signs shall be posted according to OSHA requirements.
 4. Lasers must be used in a manner that will not risk exposure to others.
- V. Lead
1. Lead may be found in certain painted surfaces. A check for lead presence should be conducted prior to certain activities such as grinding, sanding, or burning over painted surfaces. If lead containing paint is disturbed or a material is questionable the NC State Project Manager must be notified *immediately*. Do *not* attempt to remove the material.
 2. Hot Work over lead painted surfaces is generally not permitted.
- W. Lock Out/Tag Out
1. All contractors that work on energized equipment with any hazardous energy source are required to have a hazardous energy control (i.e. lockout tagout) program. The program shall specify policy and procedures for deenergizing, verifying deenergized, and secure the source potential using energy isolating devices and applying locks/tags or implement other forms of hazardous energy control as specified in OSHA standards. Types of potential energy sources include, but are not limited to:
 - a) Electrical (refer to section of these requirements titled "Electrical") Pneumatic
 - b) Hydraulic,
 - c) Thermal
 - d) Kinetic (motion)
 - e) Hazardous gas, liquid, air
 - f) Radiation
 - g) Lasers

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

2. When multiple contractors are performing work on the same project, hazardous energy control procedures shall be coordinated by the controlling entity which includes establishing device standardization.
 3. Contractors shall ensure site personnel are trained on the hazardous energy control program.
 4. Central [Utility Plant \(CUP\) - Lockout Tagout Procedure](#).
 - a) Contractors with the need to perform LOTO operations within the operating CUP shall be trained in accordance with the procedure and comply with applicable sections of the procedure. The contractor is responsible for providing this training; a copy of this procedure will be provided to the contractor.
 - b) Contractor management shall ensure that authorized personnel are assigned to perform work in which they are qualified.
 - c) Contractor management shall comply with applicable sections of the procedure.
- X. Mobile Cranes, Tower Cranes, etc. (Reference OSHA 1926 Subpart CC).
1. Prior to the set up or operation of any crane on university property, the NC State Project Manager (or other point of contact) shall be notified; notification must be made with as much lead time as possible, but no fewer than fifty (50) working days
 2. Cranes shall be set up and operated in compliance with the manufacturer and applicable OSHA requirements.
 3. Contractors are responsible for ensuring ground conditions are capable of supporting the equipment and load, which will include performing underground facilities/utilities location (i.e. 811 call) as well as factual confirmation of necessary compaction capacities. This confirmation is to be by third party inspection services, at the expense of the contractor.
 4. No lifts may occur over occupied spaces unless a registered structural engineer evaluates and certifies that the building can withstand the impact of load being dropped on the building as a worst-case scenario. If it is determined that the building cannot withstand the impact without compromising the structure, areas of the building within the load fall zone must be evacuated during the duration of the lift. This evacuation process must be a part of the lift plan and managed by the contractor.
 5. The crane contractor shall provide equipment documentation, including the annual inspection and last monthly inspection. Documentation must be signed.
 6. Crane operators shall be certified by an Accredited Crane Operator Certification Agency for the type of equipment operated. Examples of such agencies, include, but are not limited to:
 - a) National Commission for the Certification of Crane Operators (NCCCO)
 - b) National Center for Construction Education and Research (NCCER)
 - c) Operating Engineers Certification Program (OECF)
 - d) Electrical Industry Certifications Association (EICA)

Additionally, the crane operator's employer must attest that the operator was evaluated to verify the operator demonstrates skills and knowledge to safely

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

operate the equipment as well as the ability to recognize and avert risk, as required under 29CFR1926.1427(f).

7. All rigging personnel and signal persons shall be qualified in accordance with OSHA 1926 Subpart CC.
8. Crane Lift Plan. A lift plan is required for any lift in a location not under the exclusive control of the contractor, including lifts affecting NC State property, structures, employees, students, or visitors. Each lift plan must be developed by a qualified person and include at least the following:
 - a) The identity of the controlling entity, meaning the employer with the overall responsibility for construction operations associated with the crane lift.
 - b) Identify a lift director (i.e. primary signal person) and method of communication (hand signals, radio, etc.).
 - c) Contractors conducting crane operations are required to obtain required FAA permits according to 14CFR Part 77; to be submitted with the lift plan.
 - d) Equipment positioning locations, including load staging and movement and paths to and from the working position
 - e) Equipment specifications including load and reach capacities
 - f) Current qualifications, certifications, and licenses of operators and riggers
 - g) For lifts involving more than one crane, the lift plan shall encompass all cranes.
 - h) Fall Zone: The contractor shall identify the Fall Zone. The Fall Zone is the area (including but not limited to the area directly beneath the load) in which it is reasonably foreseeable that partially or completely suspended materials could fall. Spaces within the Fall Zone (including buildings, foot traffic, vehicle traffic, etc.) shall be barricaded to control access. The Fall Zone shall be cleared of personnel not participating in the lift.
 - i) Wind limitations
 - j) Ground and subsurface stability at crane and load placement locations. The contractor must ensure a qualified person evaluates the crane set-up location to ensure ground conditions are sufficient. (See X., 3. above)
 - k) Other conditions or factors that may affect the safety of the lift
 - l) A pre-lift meeting must be completed immediately before the lift and shall include all personnel involved with the lift and a thorough review of the elements and specifics of the lift plan and personnel assignments.
 - m) Specify distance to closest energized lines and applicable minimum approach distance of any lift component.
 - n) Where items positioned by a crane lift are rigged at heights above easy reach height, the lift plan shall include safe attachment and de-attachment procedures and the control of exposure to fall hazards.
 - o) The contractor must provide documentation of annual and monthly inspections for the previous 3 months. 1926.1412(f) & .1412(e)

Y. Electrical

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

1. Electrical Contractor shall ensure that their personnel using electrically powered equipment are trained to recognize electrical hazards, inspect and maintain electrically powered equipment, and on safe work procedures to prevent exposure to electric shock.
 2. Premises Electrical Equipment. All electrical installations must comply with the National Electrical Code® (NEC®). Work associated with electrical equipment installed in accordance with the NEC® will be conducted in accordance with NFPA 70E® Standard for Electrical Safety in the Workplace. NC State's goal is to minimize exposure to shock and arc flash hazards during the installation, repair, maintenance, and operation of electrical equipment, components, and systems.
 - a) Electrical power sources shall be deenergized, verified, and locked out prior to working on electrical equipment except when de-energization creates a greater hazard and a properly executed Energized Electrical Work Permit (EWP) has been completed.
 - b) Contractors performing electrical work must have their own energized electrical work program that includes a permit process.
 3. Power Generation & Distribution: Work by Qualified Persons and Unqualified Persons working on or near power generation or distribution equipment is addressed in OSHA 29CFR1910.269. It includes work on or directly associated with installations used for the generation, control, transformation, transmission, and distribution of electricity. Any work involving the NC State distribution system shall be coordinated by the NC State Project Manager (or other university contact person) in collaboration with the Facilities Division Power Systems group.
 - a) Work involving the NC State electrical distribution system shall only be performed after authorization by the Facilities Division Power Systems group in accordance with the Power Systems Switching Procedure.
 - b) System Check In/Out: Prior to entering any primary enclosure (substation, transformer, manhole, switch, switching station, etc.) of the NC State Power System the NC State Project Manager or other designated person shall send a text or email to group-powersystementry@ncsu.edu with the work location and brief description of the tasks to be performed (photos are welcomed). When exiting the enclosure, check out with NC State Power Systems using the same method. This is only for unescorted access. For example, if you're with a member of the Power Systems team there's no need to check-in/out, but if that team member has to leave your work site, you're expected to check-in and check-out.
 4. Contractor will follow all requirements as noted in NFPA 70E.
- Z. Mobile Elevating Work Platforms (MEWPs)
1. General Requirements.
 - a) MEWPs shall be operated in accordance with the manufacturer's requirements and specifications.
 - b) Employees must always stand firmly on the floor of the MEWP and must not sit or climb on the edge of guardrails, or use planks, ladders or other devices for a work

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

- position. The guardrail system of the platform must not be used to support materials, other work platforms, or employees.
- c) A personal fall arrest/restraint system shall be used in accordance with the manufacturer's requirements. A scissor lift with approved guardrails may be used without a personal fall arrest system when specified by the manufacturer, however, if there are designated anchor points, the use of a fall arrest/restraint system is required.
 - d) The MEWP must be used only in accordance with the manufacturer's operating instructions and safety rules.
 - e) The designed rated capacity for a given angle of elevation must not be exceeded.
 - f) At least 10 ft distance must be maintained away from overhead power lines with a nominal voltage of 50kV or less; 20 ft for power lines over 50kV (or if voltage is unknown). Note: qualified workers using appropriately insulated MEWPs may approach closer than 10 ft when following provisions specified in OSHA 1910.268, 1910.269, and 1926 Subpart V, as applicable.
 - g) The manufacturer's rated load capacity must not be exceeded. The load and its distribution on the platform must be in accordance with the manufacturer's specifications. The rated load capacity must not be exceeded when loads are transferred to the platform at elevated heights. Only employees, their tools, and necessary materials must be on or in the platform.
 - h) A trained spotter with no other job duties is required when a MEWP is driven; the spotter will assess conditions that could pose a hazard to the operation (for example, drop-offs, holes, slopes, inadequate surface and support, obstructions, pedestrians, vehicles, debris, electric lines, etc.) and stop operations and alert the operator. The operator shall halt operations until hazards are adequately controlled.
2. Training
- a) Only personnel who have received training to operate the specific type(s) of MEWPs are authorized to operate them on NC State property.
 - b) Training must include inspection, application, and operation of MEWPs (including recognition and avoiding hazards associated with their operation). Operators are only authorized to use MEWPs of the specific model for which they are trained and evaluated.
 - c) Training must be provided by a person who has knowledge regarding the laws, regulations, safe use practices, manufacturer's requirements, and recognition and avoidance of hazards, and is familiar with the specific type(s) of MEWPs. Note: Personnel may not operate rented equipment unless qualified to operate the specific equipment; the rental provider or other authorized evaluator must provide familiarization training to satisfy this requirement.
3. Inspection, Maintenance, and Testing
- a) Each MEWP must be inspected, maintained, repaired, and kept in proper working condition in accordance with the manufacturer's operating or maintenance and

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

repair manual or manuals. Maintenance inspections shall be completed at intervals no less frequent than annual.

- b) Before use, visual equipment inspections and a functional check must be performed before each shift in accordance with the manufacturer's operating manual. Any MEWP found not to be in a safe operating condition must be removed from service until repaired. All repairs must be made by an authorized person in accordance with the manufacturer's operating or maintenance and repair manual or manuals.
- c) Before and during use, visual worksite inspections must be performed and include workplace risk assessment. The workplace risk assessment includes identifying and evaluating hazards (for example, drop-offs, holes, slopes, inadequate surface and support, obstructions, pedestrians, vehicles, debris, electric lines, etc.) and establishing effective control measures. Uncontrolled hazardous situations must be corrected prior to initial or continued use of the MEWP.

AA. Noise/Vibration

1. Noise producing equipment, such as power drills, jackhammers, welders, etc., can create sound levels of 80dB(A) or greater in and around a construction area. Notify the NC State Project Manager in advance to determine the appropriate times to operate high noise/vibration equipment for that project's location.
2. Appropriate personal protective equipment shall be used when working around high noise/vibration equipment.

BB. Overhead Work

1. Work must not be performed above other personnel, including other contractor employees. Affected areas must be roped off or barricaded and marked to prohibit traffic.
2. Contractors must not climb on the heating and air-conditioning ductwork, plumbing steam piping, sprinkler piping, electrical cable trays, fixtures, or furniture or use as work platforms.
3. Contractors are expected to comply with OSHA fall protection requirements.

CC. Paints and Solvents - Contractors must provide the following safeguards:

1. Adequate ventilation must be maintained at all times when paints or solvents are being used. Refer to NC State Odor Prevention and Dust Control in Occupied Buildings for additional information.
2. Contractor personnel must use proper respiratory protection and protective clothing when toxicity of the material requires such protection.
3. Flammable solvents and materials must be used with extreme caution when possible sources of ignition exist.
4. Flammable paints and solvents must be stored in an approved flammable liquid storage cabinet when storage is required inside buildings. Acids and flammables must never be stored together. If an approved flammable liquid storage cabinet is not available, flammable paints and solvents must be removed from the building.
5. Flammable liquids must be dispensed in a safety can with a flash screen bearing a Factory Mutual or Underwriters Laboratory (UL) approval.

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

- DD. Personal Protective Clothing and Equipment - Contractor shall determine this minimum level of protective equipment to be worn on the jobsite (example: hard hat, eye protection, safety vest, gloves and safety shoes); NC State expects contractors to conform to industry accepted minimum PPE standards, for example, hard hats, safety glasses, and protective toe footwear. Any additional safety equipment required by a specific activity shall also be worn and shall meet or exceed OSHA standards. (Refer to NC State Community Standards for specific COVID-19 related PPE).
- EE. Powder-Actuated Tools
1. Powder-actuated tools are not to be used on NC State property unless specific approval is obtained from NC State prior to usage.
 2. If approved, powder-actuated tools must be used in accordance with OSHA and manufacturer regulations.
- FF. Power Vehicle Equipment
1. Only trained operators are allowed to use power vehicles on NC State property. Contractor management will be expected to provide proof of training if requested.
 2. Generally, LP gas powered trucks are not to be used inside NC State buildings. Prior approval from NC State is required.
 3. The design of the LP gas fueled industrial truck for use within NC State buildings must comply with the following:
 - a) LP gas fueled industrial trucks must comply with NFPA 505-1982.
 - b) If trucks are in continuous use in a populated area, they must be equipped with a catalytic converter.
 - c) LP gas containers must not exceed the nominal 45 pounds LP gas.
 4. The following conditions and requirements will govern the use of LP gas fueled vehicles inside the confines of NC State buildings and structures:
 - a) LP gas fueled trucks must be removed from the building and parked at the end of each workday and not left unattended while in use. When the job requiring the truck is complete, the truck must be removed from the job site.
 - b) Trucks and tanks must not be refueled inside buildings.
 - c) All areas where LP gas fueled trucks are used must be well ventilated.
 5. All LP cylinders must be stored outside and secured by a chain in an upright position.
- GG. Roof Safety
1. The contractor shall request authorization from NC State prior to accessing a roof.
 2. During all rooftop operations, the contractor must provide fall protection measures in accordance with OSHA.
 3. A Hot Work Permit and at least two appropriate fire extinguishers of the correct ABC type are required when performing hot work on roofs. Other persons acting as a Fire Watch shall be in place on the roof and on the floor(s) directly below operation.
- HH. Sanitation
1. Drinking Water - An adequate supply of water, meeting the U.S. Public Health Service Drinking Water Standards, shall be provided.
 2. Washing Facilities

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

- a) The contractor shall provide adequate washing facilities for employees engaged in the application of paints, coating, herbicides, or insecticides, or in other operations where contaminants may be harmful to the employees. Such facilities shall be in near proximity to the worksite and shall be so equipped as to enable employees to remove such substances. (Refer to NC State Community Standards for specific COVID-19 related washing requirements).
 - b) Hand soap or similar cleansing agents shall be provided.
 - c) Individual hand towels, cloth or paper, warm air blowers or clean individual sections of continuous cloth toweling, shall be provided.
 3. Toilet facilities shall be provided for employees according to the OSHA requirements.
- II. Scaffolding
1. Contractor shall erect, use and dismantle scaffolding in accordance with OSHA and manufacturer regulations.
 2. Competent Person. Scaffolds must be erected and dismantled under the direction of a competent person. Responsibilities include, but are not limited to:
 - a) supervise and direct scaffold erection, moving, dismantling, or alteration.
 - b) determine the feasibility and safety of providing fall protection for employees erecting or dismantling supported scaffolds. Employers are required to provide fall protection for employees erecting or dismantling supported scaffolds where the installation and use of such protection is feasible and does not create a greater hazard.
 - c) inspect scaffold and scaffold components for visible defects before each work shift and after any occurrence which could affect a scaffolds structural integrity and ensure identified deficiencies are corrected,
 - d) determine if it is safe for employees to work on scaffolds during storms or high winds.
 3. Access. When scaffold platforms are more than 2 feet (0.6 m) above or below a point of access, portable ladders, hook-on ladders, attachable ladders, stair towers (scaffold stairways/towers), stairway-type ladders (such as ladder stands), ramps, walkways, integral prefabricated scaffold access, or direct access from another scaffold, structure, personnel hoist, or similar surface shall be used. Crossbraces shall not be used as a means of access.
 4. Fall Protection. Each employee on a scaffold more than 10 feet (3.1 m) above a lower level shall be protected from falling to that lower level; each employee on a suspended scaffold shall be protected by a personal fall arrest system attached to an independent anchorage.
 5. Falling Object Protection. Where potential for tools, materials, or other equipment could fall from a scaffold, the area below must be barricaded, and personnel not permitted to enter the area OR effective means shall be implemented to prevent objects from falling.
- JJ. Signs, Tags, and Barricades (references 1926 Sub G and ANSI Z535)
1. Signs and Tags: Each sign and tag must include a signal word, symbol, and text.

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

- a) Signal words:
 - (1) DANGER = the hazard will most likely result in serious injury or death;
 - (2) WARNING = the hazard could possibly result in serious injury or death;
 - (3) CAUTION = the hazard would not likely result in serious injury or death;
 - (4) NOTICE = indicates important information, but not directly hazard-related.
 - b) Symbols or graphics are used to bridge language barriers and draw attention to the message.
 - c) Text is used to convey the safety message in a clear, concise manner.
2. Barricades. Barricades must be installed for situations where a physical obstruction is necessary to deter the passage of people, vehicles, or equipment. When used, barricades must be installed at all points of access.
- a) Barricades associated with traffic control in a public roadway must comply with the Federal Manual of Uniform Traffic Control Devices and the North Carolina Supplement. Coordinate with the NC State Transportation Office.
 - b) Barricades may take many forms on construction sites, but when used, they must clearly indicate the intent of the barricade. All barricades are required to include a sign that includes the name of the person responsible for the barricaded area, method for contacting the responsible person (ex. phone number), and clear and concise text describing the purpose of the barricade.
 - (1) CAUTION Tape Barricades should be used when the hazardous condition is not likely to cause serious physical harm but could result in injury. Standard CAUTION Tape must be used, which includes yellow tape with the word “CAUTION” in black letters. Personnel may enter the barricaded area only when implementing precautions to address the identified hazard.
 - (2) DANGER Tape Barricades are used when a serious or imminent danger may exist. Standard DANGER Tape must be used, which includes red tape with the word “DANGER” in black letters. Only personnel specifically authorized by the person responsible for the barricaded area may enter the barricaded area.
- KK. Silica (Respirable Crystalline Silica) – The following requirements apply to all operations involving exposure to respirable crystalline silica. Examples of such operations include: cutting, grinding, drilling, or crushing brick, block, concrete, stone, rock, mortar, and other materials that contain crystalline silica.
1. Contractors shall comply with OSHA standard 29 CFR 1926.1153 including taking all necessary steps to comply with the established exposure limits.
 2. Contractors must have a written Exposure Control Plan specific to their operations in accordance with 29 CFR 1926.1153 that includes specific detail for controlling exposure to NC State personnel and the public. A copy of this plan shall be made available to NC State EHS and/or the university Project Manager upon request.
 3. Tasks performed indoors or in an enclosed area, shall have effective exhaust ventilation to minimize the accumulation of visible airborne dust. In situations where ventilation is exhausted in an area with potential to expose people to dust must incorporate effective

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

HEPA filtration; such areas include but are not limited to, inside a building or outside where people may be present.

4. When a building ventilation system services an area where work with the potential for generating respirable crystalline silica exists, the building air returns shall be blanked or closed while such work is in progress. Contractors must coordinate this with the university project manager.
5. Contractors must establish a “Temporary Restricted Area” for tasks that require the use of respiratory protection in accordance with 29 CFR 1926.1153.
 - a) *Temporary Restricted Area* means an area demarcated by the employer where an employee is required to wear respiratory protection.
 - b) *Temporary Restricted Areas* must be designated with signs, barriers, or other effective means that will ensure unauthorized persons do not enter.

If such work is performed in *occupied* buildings, dust barriers shall be installed as necessary to isolate the restricted area. Refer to [NC State Odor Prevention and Dust Control in Occupied Buildings](#) for additional information.

LL. Smoking and Open Flames

1. Smoking is not allowed in any NC State buildings, including roofs, penthouses, electrical/mechanical rooms and basements.
2. The use of open flames is strictly prohibited in areas where flammable liquids, gases, or highly combustible materials are stored, handled or processed.
3. The use of open flames, where allowed, requires a Hot Work Permit.

MM. Tarpaulins - When tarpaulins are required for the deflection of hot slag, dust, paint drippings, etc., or as a security barrier, they must be flame resistant and in good condition, free of holes and worn edges.

NN. Tar Pots (tar kettles) - Tar Pots are not allowed on roofs. The contractor must notify the NC State Project Manager prior to using tar pots and obtain a Hot Work permit.

OO. Temporary Heating - When heaters are used in confined spaces, special care shall be taken to provide sufficient ventilation in order to ensure proper combustion, maintain the health and safety of workmen, and limit temperature rise in the area.

PP. Temporary Lighting - Contractor shall submit a lighting plan for night work, underground work, and any other worksites without adequate lighting.

QQ. Temporary Traffic Control

1. All traffic control shall be approved by NC State and meet the Institute for Transportation Research and Education (ITRE) Work Zone Safety Guidelines for Construction, Maintenance and Utility Operations. Should this be referencing the federal [Manual on Uniform Traffic Control Devices](#) and the [North Carolina Supplement to the Manual on Uniform Traffic Control Devices](#)?
2. The contractor shall provide warning signs, barriers, barricades, etc., in accordance with the construction plans and specifications or whenever such protection is needed.
3. Where signs and barricades do not provide adequate protection, particularly along a road, walkway, or main aisle, flagmen shall be used.

NC State University Design and Construction Guidelines

Division 01 Contractor Safety Requirements

4. Review with the crew, each person's responsibility regarding the traffic control set-up (e.g. sign installation, lane closure setup, etc.).
 5. Review traffic control devices to be used at the site. Assure that traffic control set-up is properly installed. Installer shall document what traffic control set-up was used (including the sign types and sign locations) and how it was installed.
- RR. Vehicle Operation
1. All equipment shall have operational backup alarms. Equipment shall not be utilized until such device is functioning properly.
 2. All vehicles shall be operated in accordance with OSHA and manufacturer regulations.
- SS. Vertical Lifts - All contractors' platforms or vertical lifts must meet OSHA and manufacturer requirements.

SECTION 02 41 13 – SELECTIVE SITE REMOVAL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. This section covers the labor and materials necessary for the Work associated with the demolition of existing concrete sidewalks, asphalt paving, and curb and gutter, etc. on the Drawings and specified herein while maintaining continuous operation of the Owner's facilities.
2. The information contained on Drawings showing demolition is based on the available record drawings and information from previous construction projects within the project area. The supplementary information and reference drawings are provided solely for the convenience of the Contractor. Neither the Engineer nor the Owner assumes any responsibility for the accuracy or completeness of these drawings or for the Contractor's interpretation of this supplementary information. The Contractor shall perform all demolition required regardless of type or amount. The Contractor shall inspect the facilities to be demolished as specified in Specifications, to satisfy itself as to the nature and location of the Work. Differences between the Contract Documents and the actual facilities shall not constitute grounds for time extension or contract modifications.
3. Any utility to be relocated in order to facilitate construction should first be coordinated with the Owner and/or owning utility company before the utility is to be interrupted.

1.2 GENERAL

- A. Some obstructions may not be shown. This Contract shall include, as incidental to the Work, removal and replacement of obstructions such as water lines, electric lines, and similar items deemed by the Engineer to be required to meet the design intent shown in these Contract Documents, even though not shown or specifically mentioned.

1.3 DEFINITIONS

- A. Remove: Demolish complete as specified herein including offsite disposal except for those specific portions of removed items specified to be salvaged.
- B. Salvage: Detach and turn over to Owner removed portions of the Work in good working condition or credit the owner the price of the material or item.
- C. Standard Specifications: When referenced in this section, shall mean North Carolina Department of Transportation Standard Specifications For Roads And Structures (Latest Revision). Parts of these Standard Specifications that are specifically referenced shall become part of this section as though stated herein in full. In case of a discrepancy between the requirements of the Standard Specifications and the requirements stated herein, the requirements herein shall prevail.

1.4 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition waste becomes property of Contractor.

1.5 SUBMITTALS

- A. Submittals shall be made in accordance with the Division 01 Section "Submittal Procedures". In addition, the following specific information shall apply:
1. The Contractor shall submit to the Engineer for approval, schedules of demolition, including:

- a. Detailed methods and phasing of demolition to be used within the project area including any interruption of existing utility services or access.
 - b. Copies of authorization, and permits, including any excavation permits, to remove the existing utility infrastructure as indicated on the Drawings.
 - c. Inventory of items to be removed and salvaged.
 - d. Pre-demolition photographs showing the existing conditions of adjoining construction and site improvements that might be misconstrued as damage cause by demolition operations.
 - e. Temporary protection measures
2. The Contractor shall make all alterations in the schedule or methods required by the Engineer at the Contractor's sole expense.
 3. No demolition activities shall commence until schedules for demolition have been approved by the Engineer for the affected areas or activities.

1.6 COORDINATION

- A. Prior to beginning demolition work, clearly field-identify all items that are scheduled to be demolished and salvaged.
- B. Conduct a walk-through with the Owner to:
 1. Verify and agree to the items identified for demolition and salvage.
 2. Identify and resolve problems with the existing utility infrastructure that will be a result of the demolition Work.
- C. Do not interrupt any service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
 1. Notify Owner's Representative no fewer than (72) hours in advance of proposed interruption of service.
 2. Do not proceed with interruption of service without Owner's Representative's written permission.

PART 2 - PRODUCTS - Not applicable to this Section

PART 3 - EXECUTION

3.1 GENERAL

- A. The Contractor shall set up construction facilities in a neat and orderly manner in accordance with Specifications. Contractor shall accomplish all Work in accordance with the applicable portions of these Specifications and as approved. All operations shall be confined to the Work area.

3.2 PERFORMANCE REQUIREMENTS

- A. All Work shall be performed in conformance with local, State, and federal rules and regulations pertaining to safety and as specified elsewhere in these Specifications.
- B. Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- C. Comply with ANSI A10.6 and NFPA 241.
- D. Contractor shall obtain all necessary local, State, and federal permits (at no additional cost to the Owner) required for the demolition of the elements on site and complete all Work in conformance with local, State, and federal rules. In addition, contractor shall perform (at no

additional cost to the Owner), any required inspections for lead, asbestos, or other hazardous materials prior to demolition and / or as part of obtaining any required demolition permits. The costs for disposing of these materials (if found) shall be part of the base bid.

3.3 DISPOSAL AND SALVAGE OF MATERIAL

- A. Contractor shall remove and properly dispose of all rubble and material from the Site unless otherwise specified or shown on the Drawings. This shall include, but not be limited to, the following: concrete rubble, underdrain piping, storm drainage piping, unsuitable backfill material, fences, brush, wood, and other debris. Contractor shall accomplish disposal offsite in accordance with local, State, and federal laws.

3.4 DEMOLITION ACTIVITIES AND PROTECTION

- A. The Contractor shall be responsible for having all appropriate services located and turned off before demolition is started. The Contractor shall excavate all utility lines to be demolished and shall provide a permanent leak-proof closure for all abandoned water, gas lines, and electrical conduits. Closures shall be made with caps or plugs specifically designed for the applicable piping system.
- B. Where abandoned utility lines are exposed by demolition excavation, they shall be removed. Likewise, all manholes shall be removed.
- C. Pipelines shall be sealed with plugs or caps of the same material as the line, with thrust restraint where applicable. Where plugs or caps are not available, abandoned lines shall be plugged with concrete to prevent groundwater infiltrating the abandoned lines. Work to be in accordance with Standard Specifications, see Construction Drawings for detail.
- D. Existing structures, boxes, pipes, and other items are to be removed, altered, re-located, salvaged, and / or disposed of as indicated on the Drawings or designated by the Engineer. All portions of these items that interfere with Work shall be removed and properly disposed.
- E. Under no circumstances is there to be discharge of any sewage into storm waters.
- F. Existing pavement, curb, walks, and associated items shall be removed and disposed of as indicated on the Drawings or designated by the Engineer. When partially removing pavement or curb, Contractor shall neatly saw cut at right angle to surface. All portions of these items that interfere with Work shall be removed and properly disposed.
- G. All portions of items designated to be removed shall be removed in the entirety and any resulting void shall be filled with compacted material, in accordance with Standard Specifications. The ends of abandoned pipes that are designated to be left in place shall be plugged, capped, or filled with concrete to provide a watertight seal as specified hereinbefore.
- H. The Contractor shall perform all Work in a manner that will not damage parts of the existing infrastructure not intended to be removed. If, in the opinion of the Engineer, the methods of removal, demolition, or cutting used may endanger or damage parts of the infrastructure or affect the satisfactory operation of the remaining infrastructure, the Contractor shall promptly change the method when notified by the Engineer. The Contractor shall examine the existing infrastructure and make a determination of required demolition and other conditions to be encountered in order to accomplish the Work. No blasting will be permitted for demolition activities.
- I. Repair and replacement of existing elements required due to Contractor activities shall be made at the Contractor's sole expense.

3.5 TEMPORARY PROTECTION MEASURES

- A. The Contractor shall perform all Work to prevent damage to all existing facilities and make all provisions necessary to protect the Owner's facilities from damage due the activities of the Contractor, including but not limited to, protection from dust, debris, water, humidity, and fumes.

3.6 SHUTDOWN OF EXISTING OPERATIONS AND UTILITIES

- A. Existing utilities including, but not limited to, water, gas, telecom, and other subsurface utilities, are required to remain in services during construction and modification of the new and existing infrastructure.
- B. All pedestrian, vehicular, and mobile equipment access shall be maintained during construction.
- C. Existing site lighting and security shall be maintained at equal or better conditions during construction.

END OF SECTION 02 41 13

SECTION 02 41 16 - STRUCTURE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Demolition and removal of buildings and site improvements.
2. Removing below-grade construction.
3. Disconnecting, capping or sealing, and abandoning in-place site utilities.
4. Salvaging items for reuse by Owner.

- B. Related Sections include the following:

1. Division 01 Section "Summary" for use of the premises and phasing requirements.
2. Division 01 Section "Photographic Documentation" for preconstruction photographs taken before building demolition.
3. Division 01 Section "Temporary Facilities and Controls" for temporary construction, protection facilities, and environmental-protection measures for building demolition operations.
4. Division 01 Section "Execution" for cutting and patching procedures.
5. Division 01 Section "Temporary Facilities and Controls" for disposal of non-hazardous demolition wastes.
6. Division 01 Section "Construction Waste Management and Disposal" for recycling and disposal of non-hazardous demolition wastes and for removal and storage of refrigerant.
7. Division 02 Section "Selective Structure Demolition" for partial demolition of buildings, structures, and site improvements.
8. Division 22 Sections for demolishing or relocating site plumbing items.
9. Division 26 Sections for demolishing or relocating site electrical items.
10. Division 31 Section "Site Clearing" for site clearing and removal of above- and below-grade site improvements not part of building demolition.

1.3 DEFINITIONS

- A. Remove: Detach items from existing construction and legally dispose of them off-site unless indicated to be removed and salvaged or removed and reinstalled.
- B. Remove and Salvage: Detach items from existing construction, in a manner to prevent damage, and deliver them to Owner ready for reuse. Include fasteners or brackets needed for reattachment elsewhere.

- C. Construction & Demolition Waste: Building and site improvement materials, and other solid waste resulting from construction, demolition, renovation, or repair operations. Material stream also includes brick, concrete, asphalt, and aggregate.
- D. Special Waste: Solid wastes that require special handling and management.
- E. Hazardous Waste: Any solid waste that is ignitable, corrosive, reactive, or toxic; a listed hazardous material or containing a listed hazardous material per Title 40 Code of Federal Regulations Parts 260-270.
- F. Universal Waste: Hazardous wastes that have been provided specific exemptions (40 CFR 273) to encourage recycling. Universal wastes are limited to recalled or cancelled pesticides and intact batteries, lamps, and mercury containing devices. State regulations prohibit the crushing of fluorescent lamps.
- G. Salvage: Recovery of waste for reuse in the existing facility, a different facility, subsequent sale as State Surplus property, or other reuse efforts.
- H. Recycle: Recovery of waste for processing and preparation into products or raw materials.
- I. Yard waste: A solid waste consisting solely of vegetative matter resulting from landscaping maintenance.

1.4 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition waste remains property of Owner.
- B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.
 - 1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.5 PRE-DEMOLITION MEETINGS

- A. Pre-demolition Conference: Conduct conference at Project site 1081 Varsity Dr, Raleigh, NC 27606.
 - 1. Inspect and discuss condition of construction to be demolished.
 - 2. Review structural load limitations of existing structures.
 - 3. Review and finalize building demolition schedule and verify availability of demolition personnel, equipment, and facilities needed to make progress and avoid delays.
 - 4. Review and finalize protection requirements.
 - 5. Review procedures for noise control and dust control.
 - 6. Review procedures for protection of adjacent buildings.
 - 7. Review items to be salvaged and returned to Owner.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For refrigerant recovery technician.
- B. Engineering Survey: Submit engineering survey of condition of building.
- C. Waste Management Plan: The Contractor must provide a Waste Management Plan (<http://go.ncsu.edu/wastemanagementplan>) to NC State for approval prior to implementing work. The plan shall include details on how the hazardous and non-hazardous generated waste will be managed in accordance with local, state, and federal regulations. Contractor must also provide all materials, personnel, and protective equipment necessary to remove and store wastes in accordance with the plan. The Contractor must coordinate salvage or reuse efforts identified on the Designer Waste Information Form with NC State and/or the non-profit entity.
- D. Proposed Protection Measures: Submit informational report, including drawings, that indicates the measures proposed for protecting individuals and property, for environmental protection, for dust control and for noise control. Indicate proposed locations and construction of barriers.
 - 1. Adjacent Buildings: Detail special measures proposed to protect adjacent buildings to remain including means of egress from those buildings.
- E. Schedule of Building Demolition Activities: Indicate the following:
 - 1. Detailed sequence of demolition work, with starting and ending dates for each activity.
 - 2. Temporary interruption of utility services.
 - 3. Shutoff and capping or re-routing of utility services.
- F. Building Demolition Plans: Drawings indicating the following:
 - 1. Locations of temporary protection and means of egress for adjacent occupied buildings.
- G. Certificates
 - 1. Permits and notices authorizing demolition.
 - 2. Certificates of severance of utility services.
 - 3. Permit for transport and disposal of debris.
- H. Predemolition Photographs or Video: Show existing conditions of adjoining construction and site improvements, including finish surfaces that might be misconstrued as damage caused by building demolition operations. Comply with Division 01 Section "Photographic Documentation." Submit before the Work begins.
- I. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

1.7 CLOSEOUT DOCUMENTS

- A. Inventory: Submit a list of items that have been removed and salvaged.
 - 1. Hazardous Waste : provide Owner with a copy of all hazardous, universal, and special waste disposal certifications and/or manifests for all waste shipped.
 - 2. Non-Hazardous C&D Waste: All reuse, recycling, and landfilled materials shall be tracked and compiled on NC State's tracking forms (<https://recycling.ncsu.edu/wp-content/uploads/sites/3/2018/04/CD-Tracking-forms-for-upload.pdf>).

1.8 QUALITY ASSURANCE

- A. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.
- B. Demolition Firm Qualifications: An experienced firm that has specialized in demolition work similar in material and extent to that indicated for this Project.

1.9 FIELD CONDITIONS

- A. Buildings to be demolished will be vacated and their use discontinued before start of the Work.
- B. Buildings immediately adjacent to demolition area will be occupied. Conduct building demolition so operations of occupied buildings will not be disrupted.
 - 1. Provide not less than 72 hours' notice of activities that will affect operations of adjacent occupied buildings.
 - 2. Maintain access to existing walkways, exits, and other facilities used by occupants of adjacent buildings.
 - a. Do not close or obstruct walkways, exits, or other facilities used by occupants of adjacent buildings without written permission from authorities having jurisdiction.
- C. Owner assumes no responsibility for buildings and structures to be demolished.
- D. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.
 - 1. Before building demolition, Owner will remove the following items:
 - a. Athletic equipment for reuse
- E. Hazardous Materials: The contractor shall be responsible for removal of construction demolitions containing hazardous materials. Refer to Division 01 section "Construction Waste Management & Disposal".
- F. On-site storage or sale of removed items or materials is not permitted.

1.10 COORDINATION

- A. Arrange demolition schedule so as not to interfere with Owner's on-site operations or operations of adjacent occupied buildings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- B. Standards: Comply with ASSE A10.6 and NFPA 241.

2.2 SOIL MATERIALS

- A. Satisfactory Soils: Comply with requirements in Division 31 Section "Earth Moving."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that utilities have been disconnected and capped before starting demolition operations.
- B. Review Project Record Documents of existing construction or other existing condition and hazardous material information provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.
- C. Inventory and record the condition of items to be removed and salvaged. Provide photographs or video of conditions that might be misconstrued as damage caused by salvage operations.
- D. Engage a professional engineer to perform an engineering survey of condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during building demolition operations.
- E. Verify that hazardous materials have been remediated before proceeding with building demolition operations.

3.2 PREPARATION

- A. Refrigerant: Before starting demolition, remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction.
- B. Salvaged Items: Comply with the following:
 - 1. Clean salvaged items of dirt and demolition debris.
 - 2. Pack or crate items after cleaning. Identify contents of containers.

02 41 16 -5 of 9

3. Store items in a secure area until delivery to Owner.
4. Transport items to storage area designated by Owner.
5. Protect items from damage during transport and storage.

3.3 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

- A. Existing Utilities to be Disconnected: Locate, identify, disconnect, and seal or cap off indicated utilities serving buildings and structures to be demolished.
1. Owner will arrange to shut off indicated utilities when requested by Contractor.
 2. Arrange to shut off indicated utilities with utility companies.
 3. If removal, relocation, or abandonment of utility services will affect adjacent occupied buildings, then provide temporary utilities that bypass buildings and structures to be demolished and that maintain continuity of service to other buildings and structures.
 4. Cut off pipe or conduit a minimum of 24 inches (610 mm) below grade. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing according to requirements of authorities having jurisdiction.
 5. Do not start demolition work until utility disconnecting and sealing have been completed and verified.
 6. Coordinate utility disconnecting and sealing with additional requirements in Divisions 22 and 26 Sections for shutting off, disconnecting, removing, and sealing or capping utilities.

3.4 PROTECTION

- A. Existing Facilities: Protect adjacent walkways, loading docks, building entries, and other building facilities during demolition operations. Maintain exits from existing buildings.
- B. Temporary Shoring: Provide and maintain interior and exterior shoring, bracing, or structural support to preserve stability and prevent unexpected movement or collapse of construction being demolished.
1. Strengthen or add new supports when required during progress of demolition.
- C. Existing Utilities to Remain: Maintain utility services to remain and protect from damage during demolition operations.
1. Do not interrupt existing utilities serving adjacent occupied or operating facilities unless authorized in writing by Owner and authorities having jurisdiction.
 2. Provide temporary services during interruptions to existing utilities, as acceptable to Owner and authorities having jurisdiction.
 - a. Provide at least 72 hours' notice to occupants of affected buildings if shutdown of service is required during changeover.
- D. Temporary Protection: Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction and as indicated. Comply with requirements in Division 01 Section "Temporary Facilities and Controls."
1. Protect adjacent buildings and facilities from damage due to demolition activities.
 2. Protect existing site improvements, appurtenances, and landscaping to remain.

3. Erect a plainly visible fence around drip line of individual trees or around perimeter drip line of groups of trees to remain.
 4. Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
 5. Provide protection to ensure safe passage of people around building demolition area and to and from occupied portions of adjacent buildings and structures.
 6. Protect walls, windows, roofs, and other adjacent exterior construction that are to remain and that are exposed to building demolition operations.
 7. Erect and maintain dustproof partitions and temporary enclosures to limit dust, noise, and dirt migration to occupied portions of adjacent buildings.
- E. Remove temporary barriers and protections where hazards no longer exist. Where open excavations or other hazardous conditions remain, leave temporary barriers and protections in place.

3.5 DEMOLITION, GENERAL

- A. General: Demolish indicated existing buildings and site improvements completely. Use methods required to complete the Work within limitations of governing regulations and as follows:
1. Do not use cutting torches until work area is cleared of flammable materials. Maintain portable fire-suppression devices during flame-cutting operations.
 2. Maintain fire watch during and after flame cutting operations per the requirements of the Owner, of NFPA 51B and NFPA 241, of the authority having jurisdiction or as established by local ordinance, whichever is more restrictive.
 3. Maintain adequate ventilation when using cutting torches.
 4. Locate building demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
- B. Site Access and Temporary Controls: Conduct building demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
1. Do not close or obstruct streets, walks, walkways, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.
 2. Use water mist and other suitable methods to limit spread of dust and dirt. Comply with governing environmental-protection regulations. Do not use water when it may damage adjacent construction or create hazardous or objectionable conditions, such as ice, flooding, and pollution.
- C. Explosives: Use of explosives is not permitted.

3.6 DEMOLITION BY MECHANICAL MEANS

- A. Proceed with demolition of structural framing members systematically, from higher to lower level. Complete building demolition operations above each floor or tier before disturbing supporting members on the next lower level.

- B. Remove debris from elevated portions of the building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
 - 1. Remove structural framing members and lower to ground by method suitable to minimize ground impact and dust generation.
- C. Salvage: Items to be salvaged are indicated below:
 - 1. Athletic equipment
- D. Below-Grade Construction: Demolish foundation walls and other below-grade construction that are within footprint of new construction and extending **5 feet (1.5 m)** outside footprint indicated for new construction. Abandon below-grade construction outside this area.
 - 1. Remove below-grade construction, including basements, foundation walls, and footings, completely.
- E. Existing Utilities: Demolish existing utilities and below-grade utility structures that are within **5 feet (1.5 m)** outside footprint indicated for new construction. Abandon utilities outside this area.
 - 1. Fill abandoned utility structures with satisfactory soil materials according to backfill requirements in Division 31 Section "Earth Moving."
- F. Hydraulic Elevator Systems: Demolish and remove elevator system, including cylinder, plunger, well assembly, steel well casing and liner, oil supply lines, and tanks.

3.7 SITE RESTORATION

- A. Below-Grade Areas: Rough grade below-grade areas ready for further excavation or new construction.
- B. Site Grading: Uniformly rough grade area of demolished construction to a smooth surface, free from irregular surface changes. Provide a smooth transition between adjacent existing grades and new grades.

3.8 REPAIRS

- A. Promptly repair damage to adjacent buildings caused by demolition operations.

3.9 DISPOSAL OF DEMOLISHED MATERIALS

- A. Remove demolition waste materials from Project site and recycle or dispose of them according to Division 01 Section "Construction Waste Management and Disposal."
 - 1. Do not allow demolished materials to accumulate on-site.
 - 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- B. Do not burn demolished materials.

3.10 CLEANING

- A. Clean adjacent structures and improvements of dust, dirt, and debris caused by building demolition operations. Return adjacent areas to condition existing before building demolition operations began.
 - 1. Clean roadways of debris caused by debris transport.

END OF SECTION 02 41 16

SECTION 02 41 19 - SELECTIVE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Demolition and removal of selected portions of building or structure
2. Demolition and removal of selected site elements
3. Salvage of existing items to be reused or recycled

- B. Related Sections include the following:

1. Division 01 Section "Summary" for use of premises and Owner-occupancy requirements.
2. Division 01 Section "Photographic Documentation" for preconstruction photographs taken before selective demolition operations.
3. Division 01 Section "Temporary Facilities and Controls" for temporary construction and environmental-protection measures for selective demolition operations.
4. Division 01 Section "Execution" for cutting and patching procedures.
5. Division 01 Section "Temporary Facilities and Controls" for disposal of non-hazardous demolition wastes.
6. Division 01 Section "Construction Waste Management and Disposal" for recycling and disposal of non-hazardous demolition wastes and for removal and storage of refrigerant.
7. Division 02 Section "Structure Demolition" for demolition of entire buildings, structures, and site improvements.
8. Division 22 Sections for demolishing or relocating site plumbing items.
9. Division 26 Sections for demolishing or relocating site electrical items.
10. Division 31 Section "Site Clearing" for site clearing and removal of above- and below-grade improvements.

1.3 DEFINITIONS

- A. Remove: Detach items from existing construction and legally dispose of them off-site unless indicated to be removed and salvaged or removed and reinstalled.
- B. Remove and Salvage: Detach items from existing construction, in a manner to prevent damage, and deliver them to Owner ready for reuse. Include fasteners or brackets needed for reattachment elsewhere.
- C. Remove and Reinstall: Detach items from existing construction, in a manner to prevent damage, prepare them for reuse, and reinstall them where indicated.

- D. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.
- E. Dismantle: To remove by disassembling or detaching an item from a surface, using gentle methods and equipment to prevent damage to the item and surfaces; disposing of items unless indicated to be salvaged or reinstalled.
- F. Recycle: Recovery of demolition waste for subsequent processing in preparation for reuse.

1.4 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition waste becomes property of Contractor.
- B. Historic items, relics, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets and other items of interest or value to Owner that may be encountered during selective demolition remain Owner's property.
 - 1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.5 PRE-DEMOLITION MEETINGS

- A. Pre-demolition Conference: Conduct conference at Project site.
 - 1. Inspect and discuss condition of construction to be selectively demolished.
 - 2. Review structural load limitations of existing structure.
 - 3. Review and finalize selective demolition schedule and verify availability of materials, demolition personnel, equipment, and facilities needed to make progress and avoid delays.
 - 4. Review requirements of work performed by other trades that rely on substrates exposed by selective demolition operations.
 - 5. Review areas where existing construction is to remain and requires protection.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For demolition firm, professional engineer, and refrigerant recovery technician.
- B. Engineering Survey: Submit engineering survey of condition of building.
- C. Proposed Protection Measures: Submit report, including Drawings, that indicates the measures proposed for protecting individuals and property, for environmental protection, for dust control and for noise control. Indicate proposed locations and construction of barriers.
- D. Schedule of Selective Demolition Activities: Indicate the following:
 - 1. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity. Ensure Owner's on-site operations are uninterrupted.
 - 2. Interruption of utility services. Indicate how long utility services will be interrupted.
 - 3. Coordination for shutoff, capping, and continuation of utility services.
 - 4. Use of elevator and stairs.

5. Locations of proposed dust- and noise-control temporary partitions and means of egress, including for other tenants affected by selective demolition operations.
6. Coordination of Owner's continuing occupancy of portions of existing building and of Owner's partial occupancy of completed Work.
7. Means of protection for items to remain and items in path of waste removal from building.

E. Certificates

1. Permits and notices authorizing demolition.
2. Certificates of severance of utility services.
3. Permit for transport and disposal of debris.

F. Predemolition Photographs or Video: Show existing conditions of adjoining construction and site improvements, including finish surfaces that might be misconstrued as damage caused by selective demolition operations. Comply with Division 01 Section "Photographic Documentation." Submit before Work begins.

G. Landfill Records: Indicate receipt and acceptance of hazardous wastes by a landfill facility licensed to accept hazardous wastes.

1. Comply with submittal requirements in Division 01 Section "Construction Waste Management and Disposal."

H. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

I. Warranties: Documentation indicating that existing warranties are still in effect after completion of selective demolition.

1.7 CLOSEOUT DOCUMENTS

- A. Inventory: Submit a list of items that have been removed and salvaged.
- B. Existing Warranties: Provide documentation at project closeout that existing warranties have been inspected as required and the warranty is still in effect.

1.8 QUALITY ASSURANCE

- A. Demolition Firm Qualifications: An experienced firm that has specialized in demolition work similar in material and extent to that indicated for this Project.
- B. Refrigerant Recovery Technician Qualifications: Certified by an EPA-approved certification program.

1.9 FIELD CONDITIONS

- A. Owner will occupy portions of building immediately adjacent to selective demolition area. Conduct selective demolition so Owner's operations will not be disrupted.
- B. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.
 - 1. Before selective demolition, Owner will remove the following items:
 - a. Athletic equipment
- C. Notify Architect of discrepancies between existing conditions and Drawings before proceeding with selective demolition.
- D. Hazardous Materials: It is unknown whether hazardous materials will be encountered in the Work.
 - 1. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Architect and Owner. Owner will remove hazardous materials under a separate contract.
- E. Hazardous Material Removal: The responsibility to remove construction demolitions containing hazmats is defined as follows:
 - 1. Materials to be removed by the Owner include:
 - a. PCBs
 - b. Mold growth in existing structures.
 - c. Asbestos and crystalline silica
 - d. Radioactive materials and radon gas.
 - e. Explosives and existing containerized combustible materials, including paints.
 - 2. Materials to be removed by the Contractor include:
 - a. Lead paint, where identified as such by the Owner during bid, even if painted over.
 - b. Lead shielding
 - c. Lead flashing
 - d. Lead masonry plugs
 - e. Leaded glazes and ceramics.
 - f. Lead pipes and solder
 - g. Lead batteries
 - h. Mercury switches and thermostats.
 - i. Fluorescent tubes.
 - j. Halide lamps.
 - k. Mold growth in new construction.
- F. Historic Areas: Demolition and hauling equipment and other materials shall be of sizes that clear surfaces within historic spaces, areas, rooms, and openings, including temporary protection, by **12 inches (300 mm)** or more.
- G. Storage or sale of removed items or materials on-site is not permitted.

- H. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.
 - 1. Maintain fire-protection facilities in service during selective demolition operations.
- I. Protection of Existing Utilities: "Call Before You Dig." Contractor shall call 811 at least three days prior to any excavation work.

1.10 COORDINATION

- A. Arrange selective demolition schedule so as not to interfere with Owner's operations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- B. Standards: Comply with ASSP A10.6 and NFPA 241.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that utilities have been disconnected and capped before starting selective demolition operations.
- B. Review Project Record Documents of existing construction or other existing condition and hazardous material information provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.
- C. Perform, or engage a professional engineer to perform an engineering survey of condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during selective building demolition operations.
- D. Verify that hazardous materials have been remediated before proceeding with building demolition operations.
- E. Survey of Existing Conditions: Record existing conditions by use of measured drawings, preconstruction photographs, preconstruction video and templates.
 - 1. Comply with requirements specified in Division 01 Section "Photographic Documentation."

2. Before selective demolition or removal of existing building elements that will be reproduced or duplicated in final Work, make permanent record of measurements, materials, and construction details required to make exact reproduction.
- F. Perform surveys as the Work progresses to detect hazards resulting from selective demolition activities.
- G. Steel Tendons: Locate tensioned steel tendons and include recommendations for de-tensioning.

3.2 PREPARATION

- A. Refrigerant: Before starting demolition, remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction.

3.3 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

- A. Existing Services/Systems to Remain: Maintain services/systems indicated to remain and protect them against damage during selective demolition operations.
 1. Comply with requirements for existing services/systems interruptions specified in Division 01 Section "Summary."
- B. Existing Services/Systems to Be Removed, Relocated, or Abandoned: Locate, identify, disconnect, and seal or cap off indicated utility services and mechanical/electrical systems serving areas to be selectively demolished.
 1. Owner will arrange to shut off indicated services/systems when requested by Contractor.
 2. Arrange to shut off indicated utilities with utility companies.
 3. If services/systems are required to be removed, relocated, or abandoned, before proceeding with selective demolition provide temporary services/systems that bypass area of selective demolition and that maintain continuity of services/systems to other parts of building.
 4. Disconnect, demolish, and remove fire-suppression systems, plumbing, and HVAC systems, equipment, and components indicated on Drawings to be removed.
 - a. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 - b. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material and leave in place.
 - c. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 - d. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 - e. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
 - f. Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
 - g. Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material and leave in place.

3.4 PROTECTION

- A. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - 1. Comply with requirements for access and protection specified in Division 01 Section "Temporary Facilities and Controls."
- B. Temporary Protection: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
 - 1. Provide protection to ensure safe passage of people around selective demolition area and to and from occupied portions of building.
 - 2. Provide temporary weather protection, during interval between selective demolition of existing construction on exterior surfaces and new construction, to prevent water leakage and damage to structure and interior areas.
 - 3. Protect walls, ceilings, floors, and other existing finish work that are to remain or that are exposed during selective demolition operations.
 - 4. Cover and protect furniture, furnishings, and equipment that have not been removed.
 - 5. Comply with requirements for temporary enclosures, dust control, heating, and cooling specified in Division 01 Section "Temporary Facilities and Controls."
- C. Temporary Shoring: Design, provide, and maintain shoring, bracing, and structural supports as required to preserve stability and prevent movement, settlement, or collapse of construction and finishes to remain, and to prevent unexpected or uncontrolled movement or collapse of construction being demolished.
 - 1. Strengthen or add new supports when required during progress of selective demolition.
- D. Remove temporary barricades and protections where hazards no longer exist.
- E. Erect weatherproof closures for exterior openings. Maintain exit requirements.
- F. Erect and maintain dustproof partitions as required to prevent spread of dust, fumes and smoke to other parts of the building. On completion, remove partitions and repair damaged surfaces to match adjacent surfaces.
- G. During the removal of the existing parapets and roofing, provide proper protection from falling objects over entrances which are to be kept open during normal working hours.
- H. Locate guardrails in stairwells and around open shafts to protect workers. Post clearly visible warning signs.
- I. Remove temporary barricades and protections where hazards no longer exist.
- J. Protection of Existing Utilities: "Call Before You Dig." Contractor shall call 811 at least three days prior to any excavation work.

3.5 SELECTIVE DEMOLITION, GENERAL

- A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:
1. Proceed with selective demolition systematically, from higher to lower level. Complete selective demolition operations above each floor or tier before disturbing supporting members on the next lower level.
 2. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping, to minimize disturbance of adjacent surfaces. Temporarily cover openings to remain.
 3. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.
 4. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, such as duct and pipe interiors, verify condition and contents of hidden space before starting flame-cutting operations.
 5. Maintain fire watch during and after flame cutting operations per the requirements of the Owner, of NFPA 51B and NFPA 241, of the authority having jurisdiction or as established by local ordinance, whichever is more restrictive.
 6. Maintain adequate ventilation when using cutting torches.
 7. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.
 8. Remove structural framing members and lower to ground by method suitable to avoid free fall and to prevent ground impact or dust generation.
 9. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
 10. Dispose of demolished items and materials promptly. Comply with requirements in Division 01 Section "Construction Waste Management and Disposal."
- B. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
- C. Removed and Salvaged Items:
1. Clean salvaged items.
 2. Pack or crate items after cleaning. Identify contents of containers.
 3. Store items in a secure area until delivery to Owner.
 4. Transport items to Owner's storage area designated by Owner.
 5. Protect items from damage during transport and storage.
- D. Removed and Reinstalled Items:
1. Clean and repair items to functional condition adequate for intended reuse. Paint equipment to match new equipment.
 2. Pack or crate items after cleaning and repairing. Identify contents of containers.
 3. Protect items from damage during transport and storage.
 4. Reinstall items in locations indicated. Comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make item functional for use indicated.

- E. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during selective demolition. When permitted by Architect, items may be removed to a suitable, protected storage location during selective demolition **[and cleaned]** and reinstalled in their original locations after selective demolition operations are complete.

3.6 SELECTIVE DEMOLITION PROCEDURES FOR SPECIFIC MATERIALS

- A. Concrete: Demolish in small sections. Cut concrete to a depth of at least **3/4 inch (19 mm)** at junctures with construction to remain, using power-driven saw. Dislodge concrete from reinforcement at perimeter of areas being demolished, cut reinforcement, and then remove remainder of concrete indicated for selective demolition. Neatly trim openings to dimensions indicated.
- B. Concrete: Demolish in sections. Cut concrete full depth at junctures with construction to remain and at regular intervals, using power-driven saw, then remove concrete between saw cuts.
- C. Masonry: Demolish in small sections. Cut masonry at junctures with construction to remain, using power-driven saw, then remove masonry between saw cuts.
- D. Concrete Slabs-on-Grade: Saw-cut perimeter of area to be demolished, then break up and remove.
- E. Resilient Floor Coverings: Remove floor coverings and adhesive according to recommendations in RFCI's "Recommended Work Practices for the Removal of Resilient Floor Coverings." Do not use methods requiring solvent-based adhesive strippers. Remove all underlayments and leveling materials to structural slab. Scarify concrete as required to remove all adhesive residue and prepare concrete for new underlayments, leveling materials or adhesive as may be required.
- F. Roofing: Remove no more existing roofing than can be covered in one day by new roofing and so that building interior remains watertight and weathertight. Refer to Division 07 Roofing Sections for new roofing requirements.
 - 1. Remove existing roof membrane, flashings, copings, and roof accessories.
 - 2. Remove existing roofing system down to substrate.

3.7 DISPOSAL OF DEMOLISHED MATERIALS

- A. Remove demolition waste materials from Project site and recycle or dispose of them according to Division 01 Section "Construction Waste Management and Disposal."
 - 1. Do not allow demolished materials to accumulate on-site.
 - 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
 - 3. Remove debris from elevated portions of building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
 - 4. Comply with requirements specified in Division 01 Section "Construction Waste Management and Disposal."
- B. Burning: Burning of demolished materials on site will not be permitted.

3.8 CLEANING

- A. Clean adjacent structures and improvements of dust, dirt, and debris caused by selective demolition operations. Return adjacent areas to condition existing before selective demolition operations began.

3.9 SELECTIVE DEMOLITION SCHEDULE

- A. Remove: None.
- B. Remove and Salvage: Historic scoreboard frieze and clock stored beyond center field.
- C. Remove and Reinstall: Athletic field lighting to be relocated at first base line.
- D. Existing Items to Remain: None.
- E. Dismantle: None.

END OF SECTION 02 41 19

SECTION 03 10 00 - CONCRETE FORMWORK

PART 1 – GENERAL

1.1 RELATED DOCUMENTS: Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

1.2 SCOPE:

A. Related Work Specified Elsewhere:

1. Concrete Reinforcement and Accessories (Section 03 20 00).
2. Cast-In-Place Concrete (Section 03 30 00).

B. Work Included In This Section:

1. Extent of formwork is indicated by the concrete structures shown on the contract drawings and as required to place concrete.
2. Work shall include (except as specified elsewhere in the contract documents) providing formwork and shoring for all cast-in-place concrete and installation into the formwork items furnished by others, such as anchors, plates, inserts, and any other items embedded in concrete.

1.3 INDUSTRY STANDARDS:

A. Reference: Some products and execution are specified in this section by reference to published specifications of standards of the following (latest edition, with respective abbreviations used):

American Concrete Institute (ACI)
The American Society for Testing and Materials (ASTM)
U. S. Product Standards (PS)

B. Standard Specifications and Codes: The following specifications and codes form a part of this specification:

Publications of the American Concrete Institute:

ACI 347	"Recommended Practice for Concrete Formwork"
ACI 117	"Standard Tolerances for Concrete Construction and Materials"

1.4 SUBMITTALS:

A. Manufacturer's Data: Submit (for information only) manufacturer's specifications for proprietary materials and items as required, including form coatings, formwork facing material, jointing, reveals, etc., ties, and accessories.

- B. Shop drawings for formwork structure, including the location of shoring and reshoring, are the responsibility of the Contractor and shall be submitted to the Engineer for information only.
- C. Product Data: For each of the following:
 - 1. Exposed surface form-facing material.
 - 2. Concealed surface form-facing material.
 - 3. Form liners.
 - 4. Form ties.
 - 5. Form-release agent.
- D. Sustainable Design Submittals
- E. Shop Drawings: Prepared by, and signed and sealed by, a qualified professional engineer responsible for their preparation, detailing fabrication, assembly, and support of forms.
 - 1. For exposed vertical concrete walls, indicate dimensions and form tie locations.
 - 2. Indicate dimension and locations of construction and movement joints required to construct the structure in accordance with ACI 301 (ACI 301M).
 - a. Location of construction joints is subject to approval of the Architect.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference.
 - 1. Review the following:
 - a. Special inspection and testing procedures for field quality control.
 - b. Construction, movement, contraction, and isolation joints
 - c. Forms and form-removal limitations.
 - d. Shoring and reshoring procedures.
 - e. Anchor rod and anchorage device installation tolerances.

PART 2 – PRODUCTS

2.1 FORM MATERIALS AND ACCESSORIES:

- A. Smooth-Formed Finished Concrete: Form-facing panels that will provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.
 - 1. Plywood, metal, or other approved panel materials.
 - 2. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:
 - a. High-density overlay, Class 1 or better.
 - b. Medium-density overlay, Class 1 or better; mill-release agent treated and edge sealed.
 - c. Structural 1, B-B or better; mill oiled and edge sealed.

- d. B-B (Concrete Form), Class 1 or better; mill oiled and edge sealed.
- B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.
- C. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that will produce surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.
- D. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.
- E. Form Ties: Factory-fabricated, removable or snap-off metal or glass-fiber-reinforced plastic form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.
 - 1. Furnish units that will leave no corrodible metal closer than 1 1/2 inches to the plane of exposed concrete surface.
 - 2. Furnish ties that, when removed, will leave holes no larger than 1 inch in diameter in concrete surface.
 - 3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.
- F. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch minimum.
- G. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.
- H. Form-Release Agent: Commercially formulated form-release agent that does not bond with, stain, or adversely affect concrete surfaces and does not impair subsequent treatments of concrete surfaces.
 - 1. Formulate form-release agent with rust inhibitor for steel form-facing materials.
- I. Form Ties: Factory-fabricated, removable or snap-off, glass-fiber-reinforced plastic or metal form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.
 - 1. Furnish units that leave no corrodible metal closer than 1 inch (25 mm) to the plane of exposed concrete surface.
 - 2. Furnish ties that, when removed, leave holes no larger than 1 inch (25 mm) in diameter in concrete surface.
 - 3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

PART 3 – EXECUTION

3.1 DESIGN OF FORMWORK:

- A. The Contractor shall be responsible for the design of all concrete formwork. Formwork shall be designed in accordance with ACI 347 unless noted.
- B. Design, erect, support, brace, and maintain formwork so that it will safely support vertical and lateral loads that might be applied until such loads can be supported by the concrete structure. Construct formwork so that concrete members and structures are of correct size, shape, alignment, elevation, and position.
- C. Design forms and falsework to include assumed values of live load, dead load, weight of moving equipment operated on formwork, concrete mix, height of concrete drop, vibrator frequency, ambient temperature, stresses, lateral stability, and other factors pertinent to safety of structure during construction.
- D. Support form facing materials by structural members spaced sufficiently close to prevent deflection. Fit forms placed in successive units for continuous surfaces to accurate alignment, free from irregularities, and within allowable tolerances.
- E. Provide formwork sufficiently tight to prevent leakage of cement paste during concrete placement. Solidly butt joints and provide backup material at joints as required to prevent leakage and fins.
- F. Provide openings, offsets, keyways, recesses, moldings, rustications, reglets, chamfers, blocking, screeds, bulkheads, anchorages and inserts, and other features required in work.
- G. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush plates or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces where slope is too steep to place concrete with bottom forms only. Kerf wood inserts for forming keyways, reglets, recesses, and the like, for easy removal.
- H. Provide temporary openings where interior area of formwork is inaccessible for cleanout, for inspection before concrete placement, and for placement of concrete. Securely brace temporary openings and set tightly to forms to prevent loss of concrete mortar. Locate temporary openings on forms at inconspicuous locations.
- I. Chamfer exposed corners and edges unless otherwise indicated, or specified, using wood, metal, PVC or rubber strips fabricated to produce uniform lines and tight edge joints.
- J. Provisions for Other Trades: Provide openings in concrete formwork to accommodate work of other trades. Determine size and location of openings, recesses and chases from trades providing such items. Accurately place and securely support items built into forms.
- K. Limit deflection of form-facing panels to not exceed ACI 303.1 requirements.

1. In addition to ACI 303.1 limits on form-facing panel deflection, limit cast-in-place architectural concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:
 2. Concrete Exposed to view: Class A, 1/8 inch
 3. Unexposed Surfaces: Class B, 1/4 inch
 - L. Construct forms to result in cast-in-place architectural concrete that complies with ACI 117.
 - M. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.
 - N. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.
- 3.2 TOLERANCES: Formwork shall be constructed so as to ensure that the concrete surfaces will conform to the tolerances of Section 203.1 "Recommended Practice for Concrete Formwork" (ACI 347).
- 3.3 REUSE OF FORMS:
- A. Clean and repair surfaces of forms to be reused in the work. Split, frayed, delaminated, or otherwise damaged form facing material will not be acceptable. Apply new form coating compound material to concrete contact surfaces as specified for new formwork.
 - B. When forms are extended for successive concrete placement, thoroughly clean surfaces, remove fins and laitance, and tighten forms to close all joints. Align and secure joints to avoid offsets. Do not use "patched" forms for exposed concrete surfaces.
 - C. Leave formwork for beam soffits, joists, slabs, and other structural elements that supports weight of concrete in place until concrete has achieved at least 75 percent of its 28-day design compressive strength.
 - D. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.
 - E. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material will not be acceptable for exposed surfaces. Apply new form-release agent.
- 3.4 CLEANING AND TIGHTENING: Thoroughly clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before concrete is to be placed. Tighten forms immediately after concrete placement as required to eliminate mortar leaks.
- 3.5 FORM COATINGS:
- A. Coat form contact surfaces with form-coating compound before reinforcement is placed. Provide commercial formulation form-coating compounds that will not bond with, stain, nor adversely affect concrete surfaces, and will not impair subsequent treatment of concrete

surfaces requiring bond of adhesion, nor impede the wetting of surfaces to be cured with water or curing compounds.

- B. Do not allow excess form coating material to accumulate in the forms or to come into contact with concrete surfaces against which fresh concrete will be placed. Apply in compliance with manufacturer's instructions.
- 3.6 EMBEDDED ITEMS: Set and build into the work anchorage devices and other embedded items required for other work that is attached to, or supported by, cast-in-place concrete. Use setting drawings or instructions, and directions provided by suppliers of the items to be attached.
- A. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC's "Code of Standard Practice for Steel Buildings and Bridges."
 - B. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
- 3.7 FORM REMOVAL: Formwork, not supporting concrete, may be removed 24 hours after placing concrete, provided concrete is sufficiently hard to not be damaged by form removal operations, and provided that curing and protection operations are maintained. Formwork for surfaces specified to be "rubbed" is to be removed within 24 hours after placement. Immediately after rubbing, curing is to be reinstated.
- A. Leave formwork for beam soffits, joists, slabs, and other structural elements that supports weight of concrete in place until concrete has achieved at least 75 percent of its 28-day design compressive strength.
- 3.8 CONCRETE IN EARTH: Where trench excavation is used, and where sides of excavations are cut neatly in good, firm soil, side-forms may be omitted.

END OF SECTION 03 10 00

SECTION 03 20 00 - CONCRETE REINFORCEMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS: Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

1.2 SCOPE:

A. Related Work Specified Elsewhere:

1. Concrete Formwork (Section 03 10 00)
2. Adhesive Concrete Anchors (Section 03 25 00)
3. Cast-In-Place Concrete (Section 03 30 00)

B. Work Included in this Section: Reinforcement for cast-in-place concrete (including bars, welded wire fabric, ties, and supports) as shown on drawings, and as specified herein.

1.3 QUALITY ASSURANCE:

A. References: Some products and execution are specified in this section by reference to published specifications or standards of the following (latest edition, with respective abbreviations used):

American Concrete Institute (ACI)

The American Society for Testing and Materials (ASTM)

American Welding Society (AWS)

Concrete Reinforcing Steel Institute (CRSI)

B. Standard References:

1. The current edition of the following standard references shall apply to the work of this section. Suffixes indicating date of issue are omitted from reference numbers used in the text of this section.

2. Publications of the American Concrete Institute:

ACI-301 "Specification for Structural Concrete for Buildings."

ACI 315 "Manual of Standard Practice for Detailing Reinforced Concrete Structures."

ACI 318 "Building Code Requirements for Reinforced Concrete."

3. Publications of the AWS:

AWS D1.4 "Recommended Practice for Welding, Reinforcing Steel, Metal Inserts, and Connections in Reinforced Concrete Construction."

4. Publications of the CRSI:

"Manual of Standard Practice"

5. Publications of the ASTM:

ASTM A-82 "Specification for Cold Drawn Steel Wire for Concrete Reinforcement."

ASTM A184 "Specification for Steel Bar Mats for Concrete Reinforcements."

ASTM A185 "Specification for Welded Steel Wire Fabric for Concrete Reinforcement."

ASTM A615 "Specification for Deformed Billet-Steel Bars for Concrete Reinforcement."

ASTM A706 "Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement."

C. Building Code: North Carolina State Building Code, current edition with all amendments.

1.4 SUBMITTALS:

A. LEED Submittals:

1. Product Data: For products having recycled content, documentation including percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data: For products being extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site. Include statement indicating cost for each product considered as a regional material.

B. Shop Drawings:

1. Shop drawings shall be in accordance with ACI 315.
2. Only shop drawings checked and stamped "Approved by Contractor" will be accepted for review.
3. Show details, bar clearances, notes, and necessary information for placing of reinforcing steel.
4. Show wall and pier reinforcing in elevation. Include all pertinent details and schedules required to specify the reinforcing. Show welding requirements for welded bars.
5. Submit reinforcing shop drawings for review. Shop drawings shall include, but not be limited to, reinforcing layout, size location, quantities, lap lengths,

required bends and other pertinent information related to the installation of the reinforcing steel.

C. Welding Certificates.

1.5 DELIVERY, STORAGE, HANDLING:

- A. Reinforcing steel shall be delivered to the project site properly tagged, bundled, and ready to place.
- B. Reinforcing steel and welded wire mesh delivered to project site (and not immediately placed in forms), shall be protected from mud, excessive rust-producing conditions, oil, grease, or distortion.

PART 2 - PRODUCTS

2.1 MATERIALS:

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 90 percent.
- B. Regional Materials: Products to be used in the creation of the concrete mixes for the project shall be extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site. Provide a minimum of 20 percent of the products that qualify as Regional Materials.
- C. Reinforcing Bars: New, deformed bars, conforming to ASTM A615- S1, Grade 60 as required on drawings. ASTM A706 for bars in welded applications.
- D. Welded Wire Fabric: Welded wire fabric shall be electrically-welded, wire fabric of cold-drawn wire, of gauge and mesh as shown on drawings, or as required. Fabric shall conform to ASTM A185, Grade 60 or Grade 70. Provide in mat form.
- E. Plain Smooth Dowels: Plain smooth dowels shall conform to ASTM A306 with a minimum yield stress of 40,000 psi.
- F. Tie Wire: Shall be 16 gage, or heavier, black annealed, steel wire.
- G. Accessories: Fabricate accessories from concrete, metal, plastic, or other materials accepted by the Engineer. Include spacers, ties, chairs, bolsters, and other devices required to properly support, space, and secure the reinforcing steel in its proper position in accordance with the Drawings and recommendations of the CRSI "Manual of Standard Practice". Chairs and other accessories shall be Class I or Class II in accordance with CRSI. Parts in contact with exposed concrete surfaces shall be either stainless steel (AISI 302 or 304) or have plastic coated legs. Locations and types of accessories shall be shown on the shop drawings. Chairs for all concrete reinforcing steel to be supported on soil shall be continuous high chairs with continuous longitudinal wires, or individual square plates, welded to the bottom of the chair legs. Use "Z" spacer bars between adjacent vertical reinforcing mats in walls. Use standees between top and bottom mats of reinforcing in footings.

2.2 FABRICATION:

- A. Reinforcing steel shall be fabricated to shapes and dimensions indicated on drawings, and in compliance with applicable provisions of ACI 315 and ACI 318.
- B. Bars shall be bent cold in shop. No bars shall be bent in field, unless specifically indicated on drawings.
- C. Tolerances: Bars used for concrete reinforcement shall meet the following requirements for fabricating tolerances:
 - 1. Sheared length: + one inch.
 - 2. Stirrups and ties: + one-quarter inch.
 - 3. All other bends: + one inch
- D. Fabrication of reinforcing steel prior to review and approval of shop drawings by Project Engineer shall be solely the responsibility of the Contractor.

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS FOR REINFORCING:

- A. Reinforcing shall be free from scale, loose rust, mud, or coatings which will reduce bond to concrete.
- B. Bars with kinks or bends not shown on drawings shall not be placed. Heating of reinforcement for bending or straightening will not be permitted.
- C. Minimum concrete cover for reinforcing shall be as shown on drawings and per ACI 318 standards, but otherwise shall comply with the following:
 - 1. 3" for concrete poured directly against the earth.
 - 2. 2" for formed surfaces exposed to earth or weather.
 - 3. 1" for formed slab or wall surfaces not exposed to weather.

3.2 PLACING OF REINFORCEMENT:

- A. Tolerances: Bars shall be placed to the following tolerance: + one-quarter inch.
- B. Dowels: Place steel dowels as required on drawings by means of plywood templates. Place and anchor dowels securely before placing concrete.
- C. Accessories:
 - 1. Nails shall not be driven into formwork to support reinforcement. Turn tie wires into concrete, not toward exposed surfaces.
 - 2. Space bar supports in accordance with ACI 315, ACI 301, and CRSI Manual of Standard Practice. Chairs for reinforcing steel to be supported on soil shall be

spaced as necessary to prevent the legs from pressing into the soil, but no more than 5'-0" on center.

3. In walls, provide continuous slab bolsters spaced at 4'-0" o.c. maximum to support reinforcing off formwork. Use #4 "Z" spacer bars at 4'-0" o.c. each way between wall mats.

D. Securing Reinforcement:

1. Reinforcing bars shall be supported and wired together to prevent displacement by construction loads, or by placing of concrete, beyond tolerances as set forth hereinbefore.
2. Maintain metal reinforcement securely and accurately in place until concrete is placed.
3. Any and all disturbances of reinforcement from any cause whatsoever shall be corrected fully prior to placing of concrete. Damaged bar-supports and spacers shall be repaired or shall be removed and replaced.
4. Bars shall not be bent after being embedded in hardened concrete, unless indicated so on drawings.
5. When approved, welding of reinforcing steel shall conform to AWS D1.4. Do not weld at bend in a bar. Welding of cross bars shall not be permitted unless authorized by Project Engineer.

3.3 SPLICES OF REINFORCEMENT:

- A. Splices and offsets in reinforcements shall not be made at points of maximum stress.
- B. Splices shall be approved by Engineer. Splices shall provide sufficient lap to transfer required stress.
- C. Character and design of each splice shall conform to requirements of ACI 318, Class B Tension laps, unless otherwise specifically noted on the drawings.

3.4 FIELD QUALITY CONTROL:

- A. Inspection of Placement of Reinforcing Steel:
 1. Project Engineer shall be given advanced notice of not less than 24 hours prior to placing concrete to allow inspection of reinforcing steel.
 2. Inspection of placement of reinforcement in a section will be made only after placement is complete for that section to be poured.
 3. Such inspections shall not relieve Contractor of his responsibility to provide work in accordance with requirements of contract documents. Such inspections are for purpose of minimizing errors in field work.

END OF SECTION 03 20 00

SECTION 03 25 00 - ADHESIVE ANCHORS

PART 1 - GENERAL

1.1 SECTION INCLUDES:

- A. Furnishing and installing adhesive anchors as dowels or with washers and nuts into holes drilled into the existing cast-in-place concrete members as indicated on the drawings and as specified herein.
- B. Equipment required for drilling the holes and for locating the existing embedded reinforcing steel.
- C. Equipment required for mixing, proportioning and dispensing the adhesive into holes drilled for adhesive anchors.
- D. Identifying and locating existing reinforcing steel with magnetic equipment, pilot holes, or other means prior to drilling holes for anchors.
- E. Items of testing, quality control, and evaluation of in-place adhesive anchors.

1.2 RELATED SECTIONS SPECIFIED ELSEWHERE:

- A. Cast In Place Concrete (Section 03 30 00)
- B. Structural Steel (Section 05 12 00)

1.3 QUALITY ASSURANCE:

- A. References: Some products and execution are specified in this section by reference to published specifications or standards of the following (latest edition, with respective abbreviations used):
 - American Society for Testing and Materials (ASTM)
 - American Institute of Steel Construction (AISC)
 - American Concrete Institute (ACI)
- B. Standard Specifications and Codes: The following latest edition of the specification and codes form a part of this specifications where reference is made to a specific paragraph or section of the specific standard or code:

- ACI 503.1 "Standard Specification for Bonding Hardened Concrete, Steel, Wood, Brick, and Other Materials to Hardened Concrete with a Multi-Component Epoxy Adhesive"
- ACI 318 Building Code Requirements for Reinforced Concrete
- ACI 349 Appendix 'B' "Steel Embedments"
- ASTM E488 "Standard Test Methods for Strengths of Anchors in Concrete and Masonry"

C. Building Code: North Carolina State Building Code

1.4 SUBMITTALS:

A. LEED Submittals:

1. Product Data: For epoxy and other adhesive anchoring systems, documentation including printed statement of VOC content.

B. Submit test results performed by an Independent Testing Laboratory certifying tensile, bond, and shear strength of anchors specified herein or shown on the contract drawings. Tests of anchors shall be made on nearly identical materials, embedment lengths, and conditions indicated on the drawings. Tests shall be made in accordance with ASTM E488 "Standard Test Methods for Strength of Anchors in Concrete and Masonry".

C. Anchors acceptable for use on this project shall meet or exceed the load test data as required by the Contract Drawings.

D. Submit copies of the manufacturer's written instructions for installation of the adhesive anchors specified.

E. Submit type of equipment to be used for drilling the holes in the concrete for the adhesive anchors, and procedures for drilling and preparation of the holes for receiving the adhesive anchors.

F. Submit type of equipment to be used for proportioning, mixing, and dispensing the adhesive.

G. Certification that the adhesive will not be affected by the alkalinity of the cement and that there is no shrinkage of the adhesive, and that the creep coefficients are insignificant.

1.5 QUALIFICATIONS:

A. Manufacturer:

Source: Adhesive for bonding the anchors into the existing concrete shall be of one manufacturer unless specifically noted otherwise herein.

- B. Installer Training: Conduct thorough on-site training with the manufacturer or the manufacturer's representative for the contract on the project. Anchors installed prior to completion of the training will be rejected and subject to load testing at contractor's expense or removal and replacement. Training to consist of a review of the complete installation process for each type of epoxy embedded anchor types, to include but not limited to:
 - 1. Hole drilling procedure
 - 2. Hole preparation & cleaning technique
 - 3. Adhesive injection technique & dispenser training / maintenance
 - 4. Anchor preparation and installation
 - 5. Proof loading/torquing

- C. Certifications: Unless otherwise authorized by the Engineer, anchors shall have one of the following certifications:
 - 1. ICBO ES Evaluation Report indicating conformance with current applicable ICBO ES Acceptance Criteria.
 - 2.. ICC ES Evaluation Report

1.6 PRODUCT HANDLING:

- A. Delivery and Storage: Deliver all materials of this section to the job site in original unopened containers with all labels intact. Store only under conditions recommended by the manufacturer. Do not retain on the job site any material that has exceeded the shelf life recommended by the manufacturer.

- B. Replacement: In the event of damage, replace as necessary to the approval of the Engineer at no additional cost to the Owner.

PART 2 - PRODUCTS

- 2.1 ACCEPTABLE MANUFACTURERS: Only products of the following manufacturer will be acceptable for use on this project when approved by the Engineer and the results of all tests on products proposed by the manufacturer meets all the requirements of these specifications:
 - A. DeWalt – Formally Powers Fasteners of New Rochelle, NY

 - B. Hilti of Tulsa, OK

 - C. Simpson Strong-Tie of Pleasanton, CA

2.2 MATERIALS:

A. Anchor Rods and Dowels:

1. Anchor rods shall be stainless steel manufactured from steel conforming to ASTM F593 (AISI 304), unless otherwise noted on the drawings. Anchor rods shall have minimum depth of embedment as indicated on details. Anchor rods shall have threads for their full length.
2. Dowels shall be the same material as anchor rods or reinforcing steel as specified on the Contract Drawings.

B. Nuts and Washers: Nuts shall be manufactured from steel conforming to ASTM F594. All washers and nuts shall conform to ANSI B18.22.1 (1965) Type A plain.

C. Adhesive Injection Gel: shall be a two-component solvent-free, moisture-insensitive, creep resistant paste epoxy bonding agent for bonding rigid materials exposed to sustained loads and/or high ambient temperatures.

1. Quality Control: Quality control tests are required on each lot of adhesive supplied under this specification.
 - a. Testing: All tests shall be conducted using the test methods prescribed in Sections 2.0 and 3.0.
 - b. Tests: The actual quality control tests to be performed in accordance with ASTM standards and the manufacturer's written instruction.
 - c. Certification and Test Report: Manufacturer shall certify that every batch of material supplied to this specification meets all of the requirements of Sections 2.0 and 3.0.
2. Labeling, Packaging, Storage:
 - a. Labeling Information: The label shall include, in a clear and distinct manner, the following information:
 - (1) Product name and lot number
 - (2) Health hazard warnings, precautions or handling and recommended first aid procedures in cast of contact
 - (3) Mix ratio by volume
 - (4) Directions for use
 - b. Packaging: The adhesive material shall be packaged in new, sealed containers. Each container will be clearly labeled.

- c. Storage: The material shall be stored in its original sealed containers at a temperature not below 32°F or above 90°F for a period not to exceed 1 year. If these limits are exceeded, the material shall be retested prior to use to determine conformance to this specification. The expense of any retest shall be borne by the purchaser.
- D. Drilling Equipment: Per manufacturer written instructions specific to the type of anchoring and adhesive system being used for the appropriate conditions.
- E. Equipment for Dispensing:
 - 1. Bulk Mix and Dispensing:
 - a. Type: The equipment used to meter and mix the two injection adhesive components and inject the mixed adhesive into the hole or void shall be portable, positive displacement type pumps with interlock to provide positive ratio control of exact proportions of the two components at the nozzle. The pumps shall be electrically powered to supply the logic controller and air powered to drive the individual pumps, and shall provide in-line mixing.
 - b. Operating Pressure: Air input pressure from compressor is limited to 100 psi maximum. Pump shall have a 50 to 1 mechanical advantage ratio, thus giving up to 5000 psi discharge pressure when input pressure reaches 100 psi. Face shields and gloves are mandatory for operator of pump during operation of pump. 40 psi is standard operating pressure of compressor. At higher temperatures, line pressure can be reduced.
 - c. Ratio Tolerance: The equipment shall have the capability of maintaining the volume ratio for the injection adhesive prescribed by the manufacturer of the adhesive within a tolerance of + 5% by weight at any volume delivery and discharge pressure. Pump shall be adjustable ratio from 1:1 to 3:1 within 5% accuracy by weight.
 - 2. Hand Mix and Dispensing:
 - a. Mixing: Measuring and mixing for small quantity dispensing may be accomplished by measuring correct amounts of adhesive components into a container and mixing as directed by the adhesive manufacturer.
 - b. Dispensing: Properly mixed adhesive shall be loaded into a bulk caulking gun and dispensed into the holes. The nozzle of the caulking gun shall be long enough to begin dispensing the adhesive into the hole beginning at the bottom or rear of the hole.

PART 3 - EXECUTION

3.1 PROJECT EXAMINATION:

- A. Prior to the installation of any adhesive anchors, the Contractor shall examine the site and all concrete surfaces and members to receive the anchors and identify conditions which adversely affect the execution of the work. Prior to beginning this work, the manufacturer of the epoxy shall provide instructions and technical assistance to the personnel installing the anchors on the procedures for drilling and installing the anchors. Unless waived by the Engineer based upon demonstrated past experience in epoxy anchor installation, this instruction shall be on site. **Only a contractor or subcontractor who has been trained and approved by the epoxy manufacturer will be permitted to install the adhesive anchors on this project.**
- B. Do not proceed with work until all unsatisfactory conditions have been corrected and the personnel have been properly trained on drilling and installing the anchors.

3.2 HOLES FOR ANCHORS:

Locating Holes: All holes shall be accurately located and as near as possible to the location shown on the contract drawings to miss the existing reinforcing steel. Where holes have to be shifted due to job conditions more than 1" from the location shown or closer than 1" from the edge of the steel plate connection or angle, notify the Engineer.

3.3 EXECUTION OF THE WORK:

- A. Drilling of Holes: All holes shall be drilled using only the manufacturer recommended and approved equipment to the specified depth and diameter recommended by the manufacturer for the size of anchor specified. Use a depth gage to drill hole to the specified depth. Holes shall be clean with minimal side wall residue. All holes shall be thoroughly clean of all dust, debris, and other bond inhibiting contaminants using methods and procedures recommended by the manufacturer. Holes shall be cleaned using oil-free compressed air and nylon brushes. Holes shall be approved prior to installing the adhesive gel.
- B. Unless waived by the Engineer, all holes shall be inspected and approved by the Engineer or a representative of the testing laboratory/Special Inspector prior to the installation of the anchor. Acids shall not be permitted for cleaning.
- C. After cleaning, adhesive and anchor bolts shall be placed immediately to prevent contamination of the concrete and metal.
- D. Holes that are drilled and abandoned shall be filled with a moisture insensitive epoxy mortar. Where exposed, tint the epoxy mortar to match the mortar color of the adjacent surfaces.
- E. Dispensing of adhesive shall begin at bottom or back of hole or void. Upon filling the hole with adhesive, the adhesive shall displace the fitting and pipe nozzle from the hole, without travel of adhesive past the fitting.

- F. Anchor rod holes shall be filled to half to three-quarters the depth of the hole to ensure full depth contact of adhesive and anchor rod.
- G. Placing of the anchor rod should be done with one continuous stroke. Rotate the anchor or dowel as it is placed to ensure that all surfaces will be in intimate contact with the adhesive. The anchor or dowel shall not be moved back and forth, as this will entrap air, as does excessive turning of the anchor.
- H. Once the anchor rod is installed, wooden shims or bent wire shims shall be placed below the bolt to keep it centered in the hole. In addition to shimming, use other approved means to keep it centered in the back of the hole.

3.4 FIELD QUALITY CONTROL:

- A. Testing: 5% of each type and size of drilled-in anchor shall be proof loaded by an independent testing laboratory. Testing of the anchors shall be performed prior to installation of other work attaching to or around the anchors. Adhesive anchors shall not be torque tested unless otherwise directed by the Engineer. If any of the tested anchors fail to achieve the specified torque or proof load within the limits as defined on the Drawings, all anchors of the same diameter and type as the failed anchor shall be tested, unless otherwise instructed by the Engineer. The cost of these additional tests shall be borne by the Contractor.
 - 1. Torque shall be applied with a calibrated torque wrench.
 - 2. Proof loads shall be applied with a calibrated hydraulic ram. Displacement of adhesive and capsule anchors at proof load shall not exceed $D/10$, where D is the nominal anchor diameter.

3.5 CURING: Curing for all anchors shall be as recommended by the manufacturer for the environmental condition at the time the anchor is installed.

3.6 WORKMANSHIP: Remove and replace any anchor that does not meet all the requirements of these specifications at no additional cost to the Owner.

END OF SECTION 03 25 00

SECTION 03 30 00 - CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SCOPE:

Section includes cast-in-place concrete as shown on drawings, as specified herein and as required to complete this work, including formwork, reinforcement, concrete materials, mixture design, mixing, transporting, placing, finishing, curing, quality control, quality assurance and property evaluation for the following.

1. Slabs on grade.
2. Foundations.
3. Building walls and piers
4. Slab on steel decking

B. Related Work Specified Elsewhere:

1. Concrete Formwork (Section 03 10 00)
2. Concrete Reinforcement (Section 03 20 00)
3. Adhesive Anchors (Section 03 25 00)
4. Steel Decking (Section 05 31 00)

1.3 DEFINITIONS:

- A. Cementitious Materials: Materials conforming to this specification and have cementing value when used in concrete either by themselves, such as portland cement, other hydraulic cements or blended hydraulic cements, or such materials in combination with fly ash, other raw or calcined natural pozzolans, silica fume and/or slag cement.
- B. Concrete: Mixture of cementitious materials, aggregates and water, with or without fibers or chemical admixtures, as required by this specification.

1.4 INDUSTRY STANDARDS:

- A. Some products and execution are specified in this section by reference to published standards of the following:

American Concrete Institute (ACI)

American Society for Testing and Materials (ASTM)

American Welding Society (AWS)

Concrete Reinforcing Steel Institute (CRSI)

National Ready-Mix Concrete Association (NRMCA)

1.5 MANDATORY REFERENCED STANDARDS:

- A. When referenced in text, standards and codes applying to this work shall conform to the latest version. Suffixes indicating date of issue are omitted in text.
- B. Work on this project shall conform to all requirements of the following documents, published by the American Concrete Institute, Farmington Hills, except as specifically modified by these Contract Documents. Where conflicts arise between mandatory references, the more stringent requirement shall apply. Suffixes indicating date of issue are omitted elsewhere in text.

ACI 117-06 Specifications for Tolerances for Concrete Construction and Materials

ACI 301-05 Specification for Structural Concrete – Sections 1-5

ACI 305.1-06 Specification for Hot-Weather Concreting

ACI 306.1 -90 Standard Specification for Cold-Weather Concreting

ACI 308.1 -98 Standard Specification for Curing Concrete

1.6 SUBMITTALS:

- A. Submittals are to include information required by MANDATORY REFERENCE STANDARDS in addition to information below.
- B. Product Data and MSDS: For each type of product indicated.
- C. Design Mixtures:
 - 1. For each concrete mixture, submit the proposed mixture design with information necessary to support conformance to these specifications. Submit alternate design mixtures at no additional cost to the owner, when characteristics of materials, Project conditions, weather, test results, material availability, design expiration per these documents or other circumstances warrant adjustments or re-design.
 - 2. Submit third party fresh and hardened concrete testing results demonstrating conformance of the mixture to this specification.
 - 3. Submit material certificates, material quality control information and samples per this specification.
 - 4. Indicate ranges of admixtures for production concrete and amounts of mixing water to be withheld for later addition at Project site (if approved by Engineer)

D. LEED Submittals:

1. Product Data: For products having recycled content, documentation including percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data: For products being extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site. Include statement indicating cost for each product considered as a regional material.
3. Product Data: For liquid floor treatments and curing and sealing compounds, documentation including printed statement of VOC content.
4. Design Mixtures: For each concrete mixture containing fly ash as a replacement for Portland cement or other potential cement replacements, and for equivalent concrete mixtures that do not contain Portland cement replacements.

E. Concrete Production Field Quality Control Reports (Submitted monthly to Engineer):

1. Submit material certificates, field quality control information and samples per this specification.

F. Steel Reinforcement Shop Drawings: Refer to Section 03 20 00.

G. Construction Joint Layout: Indicate proposed construction joints required to construct the structure, if not otherwise indicated on the drawings.

1. Location of construction joints is subject to approval of the Engineer.

H. Samples: For concrete materials, collected in accordance with ASTM C 183 and ASTM D 75, if requested by the Engineer.

I. Qualification Data: For installers, manufacturers, producers and testing agencies.

J. Material Certificates: For each of the following, signed by manufacturers demonstrating conformance to applicable standards and this specification:

1. Cementitious materials.
 - a. Report alkali contents for supplementary cementitious materials.
2. Admixtures
 - a. To include compatibility statements for each admixture to document appropriateness for use with other constituents.
3. Aggregates
4. Waterstops.
5. Curing compounds.
6. Floor and slab treatments.
7. Bonding agents.
8. Adhesives.
9. Vapor retarders.
10. Semirigid joint filler.
11. Joint-filler strips.
12. Repair materials.

- K. Material Test Reports: For the following, from a qualified testing agency, indicating compliance with requirements (as necessary to satisfy requirements for each individual mixture design proposed for the work):
 - 1. Historical and current quality control test records for cementitious materials and aggregates.
 - 2. Aggregate testing data and indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity for all mixtures.
- L. Quality Control Plan, Plan of Action And Quality Control Records
- M. Minutes of pre-installation conference
- N. Repair procedures
- O. Floor surface flatness and levelness measurements to determine compliance with specified tolerances, if requested.
- P. Indicate proposed construction joints required to construct the structure.
- Q. Samples of concrete materials collected in accordance with ASTM C 183 and ASTM D 75, if requested.

1.7 QUALITY ASSURANCE:

- A. Superintendent: Qualified superintendent with at least 5 years experience with similar types of concrete placements.
- B. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.
- C. Cementitious Materials Testing Agencies: Testing for cementitious materials as part of the quality control plan and for material certification must be conducted by agencies that have participated in the reference sample and laboratory inspection programs of Cement and Concrete Reference Laboratory (CCRL). Proof of participation and current involvement is required.
- D. Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.
 - 1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."
- E. Testing Agency Qualifications: An independent agency, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
 - 1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

2. Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I. Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician - Grade II.
 3. Laboratory testing for hardened concrete other than compressive strength testing shall be a firm specializing in the specific test(s).
- F. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.
- G. Comply with the Mandatory Reference Standards Above unless modified by requirements in the Contract Documents:
- H. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.
- I. Pre-installation Conference:
1. At least 15 days before submitting design mixtures, hold a pre-construction conference to review the design mixture and detailed procedures for ensuring quality of concrete material and proper concrete construction. Provide a detailed quality control plan for procedures and testing meeting the requirements of these specifications. Record detailed minutes of the meeting and distribute to all parties in attendance within five (5) days. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:
 - a. Contractor's superintendents.
 - b. Independent testing agency responsible for concrete design mixtures.
 - c. Independent testing agency responsible for field quality assurance testing.
 - d. Ready-mix concrete manufacturer.
 - e. Concrete subcontractor.
 - f. Special concrete finish subcontractor
 - g. Reinforcing installers
 - h. Designer
 - i. Special Inspector
 - j. Other involved parties
 2. Review Quality Control Plan

1.8 CONTRACTOR QUALITY CONTROL

- A. The Contractor must implement a quality control plan:
1. Contractor shall designate persons or third party to perform quality control. Testing shall be done by persons qualified per these specifications.
 2. Procedures
 - a. Special inspection and testing and inspecting agency procedures for field quality assurance, contractor quality control, concrete finishes and finishing procedures, curing procedures, construction contraction and isolation joints, and joint-filler

strips, semirigid joint fillers, forms and form removal limitations, shoring and reshoring procedures, anchor rod and anchorage device installation tolerances, steel reinforcement installation, concrete repair procedures, concrete protection, workforce, placement logistics and contingencies for equipment failures or inclement weather, material transportation to site, verification of subcontractor and producer work and/or materials.

3. Production Testing
 - a. Frequency for testing to verify fresh concrete property conformance in production shall be included in the Quality Control Plan. Quality control records shall be submitted.
4. Concrete Production Facilities
 - a. Provide plan and records for demonstrating conformance to ASTM C 94 and must have current NRMCA “Certification of Ready Mixed Concrete Production Facilities” for the batch plant and fleet.
5. Cementitious Materials
 - a. Mill certifications must be current and contain all standard and optional compositional and physical data (per associated ASTM standard) demonstrating conformance. Cementitious Materials Producer quality control testing frequency must be daily (maximum) unless otherwise approved by the Engineer and shall demonstrate compliance with specifications. The general procedures for testing and reporting shall follow ASTM C 1451 or other approved method.
 - b. Historical mill certifications and producer quality control/uniformity records for specified properties (per the applicable ASTM standard) of all cementitious materials for a period dating from the time of design to six months prior to design.
 - c. Mill certifications and producer quality control/uniformity records for all cementitious materials.
6. Aggregates
 - a. Quality control testing must be at a frequency no greater than daily for coarse and fine aggregate cleanliness (ASTM C 117) and coarse aggregate grading (ASTM C 136) and twice per day for fine aggregate gradation (ASTM C 136). The general procedures for testing and reporting shall follow ASTM C 1451 or other approved method. Sampling locations shall be detailed in the quality control plan and shall represent conditions in the mixture.
 - b. Method and frequency of moisture content testing shall be detailed in the quality control plan. In-line moisture meters for fine aggregate, if used, must be calibrated at least once per shift, minimum. Moisture content of coarse aggregates must be tested at least once per day or when conditions change. Fine aggregates must be tested once every four (4) hours minimum, or when conditions change.
 - c. Include contingency procedures for adverse weather conditions at stockpiles and methods to maintain consistency in materials.
 - d. Historical aggregate quality control data demonstrating conformance to specifications for a period dating from the time of design to six months prior to design.
 - e. Quality control data for coarse and fine aggregates during construction.
 - f. Quality control plan for use of non-standard aggregate gradations if appropriate.
7. Concrete Design Trial Mixtures and Production Mixtures
 - a. Records of all concrete trials and placements showing exact location of placement, date and time of placement, site-specific environmental conditions during placement, including relative humidity, air temperature and wind speed as required in these specifications, quantity of placement, class of concrete placed, curing temperatures, verification of moist curing measures and other quality control

records. Submit mandatory and optional batch ticket information listed in ASTM C 94 Section 13 for each concrete batch. Provide clear indication of materials added to the concrete mixture.

- b. Indicate ranges of admixtures for production concrete and amounts of mixing water to be withheld for later addition at Project site (if approved by Engineer)

1.9 DELIVERY, STORAGE, AND HANDLING:

- A. All materials to be stored per manufacturer's written requirements and in a manner to prevent contamination, damage, or degradation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS:

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, products specified.
 2. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.

2.2 CONCRETE MATERIALS:

- A. Regional Materials: Products to be used in the creation of the concrete mixes for the project shall be extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site. Provide a minimum of 20 percent of the products that qualify as Regional Materials.
- B. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project unless approved in writing by the Engineer:
 1. Portland Cement: ASTM C 150, Type II or Type I/II, gray, low Alkalai. Use Type V gray, if indicated or directed when concrete is in contact with sulfate in soil or water. The following supplemental cementitious materials are permitted for use:
 - a. Supplementary Cementitious Materials (SCM's):
 - 1) Fly Ash: ASTM C 618, Class F. Loss on ignitions (LOI) shall not be greater than 3% and shall not vary by more than +/- 1%. Fly ash shall meet the optional physical requirements of ASTM C 618. Historical ASTM C 1451 uniformity records for a period of at least six months prior to design and throughout construction from the producer must demonstrate conformance.
 - 2) Slag Cement: ASTM C 989, Grade 80 or Grade 100. Slag cement shall not qualify as Grade 120 unless permitted by the Engineer in writing.

- 3) Silica Fume: ASTM C 1240, including optional physical uniformity requirement.
 - 4) Other SCM's conforming to ASTM C 618 may be submitted for evaluation.
2. Blended Hydraulic Cement: When permitted, ASTM C 1157 Cement Type GU, MS, MH, or ASTM C 595, Type IS, portland blast-furnace slag, Type IP, portland-pozzolan cement, or Type IL, Portland-limestone cement. Conform to maximum supplementary cementitious materials content in the blended cement provided in ACI 301 if exposed to deicing salts.
- C. Aggregates: Provide individual aggregates from a single source throughout the project. Each source shall be individually stockpiled and handled in a manner to minimize segregation. Provide service record data of at least 10 year's satisfactory service in similar application and service conditions using similar aggregates and cementitious materials. Aggregate sources that exhibit potential for alkali-silica reactivity with proposed cementitious materials shall not be used. Provide documentation that one of the two following criteria are met, as tested by a qualified third party laboratory on a representative sample of each aggregate source:
1. ASTM C 1260 mortar bar expansion is less than 0.13 percent at 28 days
 2. ASTM C 1567 mortar bar expansion with job cementitious materials is less than 0.13 percent at 28 days. ASTM C 1567 to be used only if the sodium oxide equivalent alkalis are less than 4 percent in supplementary cementitious materials. Alternative approved methods to be used if requirement not met.
- D. Normal-Weight Aggregates: ASTM C 33 coarse and fine aggregates, Class 4M coarse aggregate or better, graded, unless otherwise permitted. Use Class 5M coarse aggregate for architectural concrete, as specified, unless otherwise permitted by the Engineer. Aggregate certification is valid for 90 days from the date of testing. Quality control records for gradation and cleanliness shall not exceed ASTM C 33 limits more than once in five consecutive tests prepared for quality control, except that the fine aggregate fineness modulus shall not deviate more than 0.2 from the base fineness modulus per ASTM C 33 for any test.
1. Nominal maximum size of coarse aggregate. Nominal maximum sizes indicated in mixture design requirements shall be used, provided that requirements of ACI 301 are met:
 2. Fine Aggregate shall conform to the specific sieve analysis limits of ASTM C 33 Section 6 unless otherwise permitted. Fine aggregates shall be clean, sharp, natural and free from loam, clay, lumps or other deleterious substances.
 3. The gradation limits of ASTM C 33 may be waived at the discretion of the Engineer provided that it can be demonstrated that a more optimal gradation is achieved and gradation control can be maintained. Intermediate sized aggregates may be used. Documentation of optimization should include Individual Percent Retained Chart, Coarseness Factor Chart, 0.45 Power Curve, and dry-rodded unit weight testing. Submit information to show method used and plan for quality control if alternate gradations are used.
- E. Water: ASTM C 94 and potable, or ASTM C 1602.
- F. Fly ash shall be obtained from one source for the concrete delivered to the project. Fly ash may be allowed to replace up to 40% of the cement by weight. If Fly ash is used, a minimum of 20% percent of fly ash, by weight of cement, shall be used to replace cement.

1. Fly ash is not permitted in concrete placed subject to cold weather placement procedures (ASTM C306).
2. Fly ash will not be permitted for concrete exposed to the weather or the exterior, or concrete mixes with entrained air. Except where air content is measured and verified (by the appropriate ASTM Standard Test Method) to be within specified tolerances for each truck immediately prior to placement and as approved by architect. The coordination and cost of such testing shall be the contractor's responsibility except as approved by the owner. Concrete not conforming to the requirements of the specifications shall be rejected.

2.3 ADMIXTURES:

- A. All admixtures shall be used in strict conformance with manufacturer's written requirements. Manufacturer(s) must certify that admixtures are compatible with other constituents in mixture. Admixtures shall be used as indicated in drawings, permitted by the Engineer, or necessary for design, as applicable. All admixtures are subject to approval by the Engineer.
- B. Air-Entraining Admixture: Air entraining admixture shall conform to ASTM C 260. The Contractor shall submit an alternative if appropriate due to compatibility issues with other admixtures.
- C. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride. All admixtures shall be non-corrosive and contain only trace amounts of deleterious halides. All admixtures shall be from a single source unless otherwise permitted by the Engineer.
 1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 2. Retarding Admixture: ASTM C 494/C 494M, Type B.
 3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.
 7. Accelerating or Water-Reducing and Accelerating Admixtures: ASTM C 494 Type C or E, respectively, shall be non-chloride, non-corrosive, and only used if permitted by the Engineer in writing.
- D. Set-Accelerating Corrosion-Inhibiting Admixture: Commercially formulated, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete and complying with ASTM C 494/C 494M, Type C. Use only if permitted by the Engineer in writing.
 1. Products: Subject to compliance with requirements:
 - a. BASF Construction Chemicals - Building Systems; Rheocrete CNI.
 - b. Grace Construction Products, W. R. Grace & Co.; DCI.
 - c. Sika Corporation; Sika CNI.

- E. Non-Set-Accelerating Corrosion-Inhibiting Admixture: Commercially formulated, non-set-accelerating, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete. Use only if permitted by the Engineer in writing. Available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Products: Subject to compliance with requirements:
 - a. BASF Construction Chemicals - Building Systems; Rheocrete 222+.
 - b. Grace Construction Products, W. R. Grace & Co.; DCI-S.
 - c. Sika Corporation; FerroGard 901.
- F. Specialty admixtures including shrinkage-reducing admixtures (SRA), alkali-silica reaction inhibiting admixtures (ASRIA), viscosity-modifying admixtures (VMA) and durability Enhancing Admixtures (DEA) must have data documenting their effectiveness and compatibility with other admixtures, have a proven field history with similar job materials and be approved by the Engineer.
 - 1. Self-Consolidating concrete (SCC): High-range water reducing admixture shall conform to ASTM C 494 Type F (or ASTM C 1017 Type I), be polycarboxylate-based, and appropriate for use in SCC, as indicated by the manufacturer.

2.4 CURING MATERIALS:

- A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry, clean and free of materials injurious to cement or concrete or that will mar the surface. Burlap shall be stored dry and rinsed with clean water prior to application.
- B. Moisture-Retaining Cover: ASTM C 171, 10- mil polyethylene film or white burlap-polyethylene sheet. Use black when required per ACI 308.1
- C. Water: Clean, potable and non-chloride bearing.
- D. Curing Compounds shall not be used unless permitted in writing by the Engineer. If permitted, the type with supporting documentation and proposed area shall be submitted to the Engineer for review. If used at an area to receive coating or adhered membrane, compound must be certified by manufacturer to not interfere with bonding of floor covering.
 - 1. Clear, Waterborne, Non-staining, Membrane-Forming Curing Compound with Fugitive Dye: ASTM C 309, Type 1-D, Class B
 - 2. Clear, Waterborne, Non-staining, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type II, Class A.
 - 3. White, Waterborne, Non-staining, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type II, Class A.

2.5 RELATED MATERIALS:

- A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber or ASTM D 1752, cork or self-expanding cork. Do not place asphaltic materials in contact with PVC, separate with EPDM.
- B. Semirigid Joint Filler: Two-component, semirigid, 100 percent solids, epoxy resin with a Type A shore durometer hardness of 80, or aromatic polyurea with a Type A shore durometer hardness range of 90 to 95 per ASTM D 2240.
- C. Bonding Agent: ASTM C 1059, Type II, non-redispersible, acrylic emulsion or styrene butadiene.
- D. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:
 - 1. Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.
- E. Reglets: Fabricate reglets of not less than 0.0217-inch- thick, galvanized steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.
- F. Dovetail Anchor Slots: Hot-dip galvanized steel sheet, not less than 0.0336 inch thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.
- G. Waterstops:
 - 1. Flexible Rubber Waterstops: CE CRD-C 513, with factory-installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.
 - a. Profile: Flat dumbbell with center bulb
 - b. Dimensions: 6 inches by 3/8 inch thick nontapered.
 - 2. Chemically Resistant Flexible Waterstops: Thermoplastic elastomer rubber waterstops with factory-installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints; resistant to oils, solvents, and chemicals. Factory fabricate corners, intersections, and directional changes.
 - a. Profile: Flat dumbbell with center bulb
 - b. Dimensions: 6 inches by 3/8 inch thick nontapered.
 - 3. Flexible PVC Waterstops: CE CRD-C 572, with factory-installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.
 - a. Profile: Flat dumbbell with center bulb
 - b. Dimensions: 6 inches by 3/8 inch thick nontapered.
- H. Vapor Retarders
 - 1. Sheet Vapor Retarder: ASTM E 1745, Class A, 10 Mil minimum thickness, unless otherwise noted on the drawings. Include manufacturer's recommended adhesive or pressure-sensitive tape.

2.6 REPAIR MATERIALS:

- A. Repair Materials shall have documentation to show compatibility with substrate materials, shall be specially formulated and proportioned for the specific use, and shall provide a durable repair. Conform with ACI 301.

2.7 CONCRETE MIXTURES, GENERAL:

- A. Prepare design mixtures for each type of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301. Submit written reports of each proposed mix for each class of concrete prior to start of work to document that requirements have been met. Include up to date sieve analyses and concrete strength tests. Do not begin concrete production until mixes have been reviewed and approved by the Engineer.
 - 1. Concrete mixture designs shall be considered valid for 183 days from the date of trial batching. Mixtures shall be re-certified through testing prior to concrete placement after the expiration date.
 - 2. Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.
 - 3. Unless otherwise noted or permitted by the Engineer, strength requirements shall be based on 28-day compressive strength tests in accordance with ACI 301.
 - 4. Required compressive strength of the design mixture shall be based on statistical methods or laboratory trial requirements to exceed the specified concrete compressive strength. All other required hardened concrete properties specified for design shall be based on actual test values.
 - 5. Design mixes shall be proportioned using the maximum specified slump and within 3 °F of the maximum temperature to be used during production. Trials used to prepare specimens for mixture qualification shall be completed with full scale trucks with at least 5 cubic yards of concrete and in a manner similar to that expected during production. Material proportions for the trial shall be used as the basis for tolerances in production. Method of placement shall be considered and accounted for in developing the mixture design.
 - 6. If a self-consolidating concrete mixture is proposed for use, the Contractor must submit the mixture design, appropriate documentation for fresh concrete properties and stability and hardened concrete stability for review. An on-site program must be proposed for quality control.
- B. Cementitious Materials: Conform to ACI 301. Use fly ash, pozzolan, ground granulated blast-furnace slag, silica fume or other supplementary cementitious materials as needed to achieve required properties.
 - 1. Limit percentage, by weight, of cementitious materials other than Portland cement in concrete as follows:
 - a. Fly Ash: 20 percent minimum (if using), 40 percent maximum.

- C. Limit acid-soluble, chloride-ion content in hardened concrete to 0.08 percent by weight of cement.
- D. Admixtures: Use admixtures according to manufacturer's written instructions. Do not use admixtures that have not been incorporated and tested in the accepted mixtures, unless otherwise authorized by the Engineer in writing.
 - 1. Use water-reducing, high-range water-reducing or plasticizing admixtures in concrete, as required, for placement and workability.
 - 2. Use water-reducing and retarding admixture when required by high temperatures or other adverse placement conditions.
 - 3. Use corrosion-inhibiting admixture in concrete mixtures where indicated.
 - 4. Do not use accelerating admixtures unless permitted by the Engineer in writing.
 - 5. Use of admixture is subject to approval by the Engineer.
- E. Air entraining admixtures shall be used for all concrete potentially exposed to freezing and thawing or subjected to hydraulic pressure.
 - 1. Entrained air shall be 6% +/- 1.5%. The water cement ratio for all concrete exposed to freezing and thawing shall not exceed 0.45.

2.8 SLUMP:

- A. Concrete shall be proportioned to have a specified slump of 4" at point of placement (with applicable tolerances) unless otherwise permitted. Requests shall be submitted to the engineer. Lower or higher values may be used if indicated by the Contractor and the Contractor can demonstrate the mixture can be well placed and consolidated during the mock-up without segregation.
- B. Concrete containing high range water reducers shall have at least 2" of initial slump prior to addition of high range water reducing admixture. Slump shall not at any time exceed 8" after addition of admixtures, unless otherwise approved. All admixtures shall be added at the plant unless otherwise permitted in writing by the Engineer. Only if permitted, the addition of the high range water reducer shall be by a truck mounted mechanical dispenser or by a qualified certified concrete technician of the concrete supplier. The admixture shall not be manually dispensed by the concrete truck driver. After the addition of the high range water reducer, the concrete shall be rotated at maximum speed for a minimum of three minutes (45 revolutions minimum). The contractor must demonstrate that concrete properties are not adversely affected by on-site addition. Specific quality control measures must be proposed by the Contractor.
- C. Concrete containing water reducers, other than high range water reducers, shall have a maximum slump of 6 inches and a minimum slump of 3".

2.9 CONCRETE MIXTURES FOR SITE ELEMENTS:

- A. Foundations for Building (Spread Footings and Wall Footings): Proportion structural normal weight concrete as follows:
 - 1. Nominal Maximum Size Coarse Aggregate: 3/4-inches.

2. Minimum Design Compressive Strength, f'_c (ASTM C 39): 3000 psi at 28 days (provide applicable data to substantiate the chosen required f'_{cr})
 3. Maximum Water-Cementitious Materials Ratio: 0.50
 4. Air Content at Point of Placement (ASTM C 173): 3 percent max
 5. Maximum Allowable Slump at Point of Placement (ASTM C 143): 4" min, 6" max
 - a. Exception: see requirements for addition of high range water reducer for concrete to be pumped into place.
- B. Interior Slab-on-Grade: Proportion structural normal-weight concrete as follows:
1. Nominal Maximum Size Coarse Aggregate: 3/4-inches.
 2. Minimum Design Compressive Strength, f'_c (ASTM C 39): 4000 psi at 28 days (provide applicable data to substantiate the chosen required f'_{cr})
 3. Maximum Water-Cementitious Materials Ratio: 0.50
 4. Air Content at Point of Placement (ASTM C 173): 3 percent max
 5. Maximum Allowable Slump at Point of Placement (ASTM C 143): 4" min, 6" max
 - a. Exception: see requirements for addition of high range water reducer for concrete to be pumped into place.
- C. Slab on steel decking, including composite slabs: Proportion structural normal-weight concrete as follows:
1. Nominal Maximum Size Coarse Aggregate: 3/4-inches.
 2. Concrete Unit Weight: Maximum 120 pounds per cubic foot
 3. Minimum Design Compressive Strength, f'_c (ASTM C 39): 4500 psi at 28 days (provide applicable data to substantiate the chosen required f'_{cr})
 4. Maximum Water-Cementitious Materials Ratio: 0.45
 5. Air Content at Point of Placement (ASTM C 173): 3 percent max
 6. Maximum Allowable Slump at Point of Placement (ASTM C 143): 4" min, 6" max
 - a. Exception: see requirements for addition of high range water reducer for concrete to be pumped into place.
- D. Exterior Exposed Concrete: Proportion structural normal-weight concrete as follows:
1. Nominal Maximum Size Coarse Aggregate: 3/4-inches.
 2. Minimum Design Compressive Strength, f'_c (ASTM C 39): 4000 psi at 28 days (provide applicable data to substantiate the chosen required f'_{cr})
 3. Maximum Water-Cementitious Materials Ratio: 0.45
 4. Air Content at Point of Placement (ASTM C 173): 6 percent +/- 1.5%
 5. Maximum Allowable Slump at Point of Placement (ASTM C 143): 4" min, 6" max
 - a. Exception: see requirements for addition of high range water reducer for concrete to be pumped into place.
- E. Interior Walls and Piers: Proportion structural normal-weight concrete as follows:
1. Nominal Maximum Size Coarse Aggregate: 3/4-inches.
 2. Minimum Design Compressive Strength, f'_c (ASTM C 39): 5000 psi at 28 days (provide applicable data to substantiate the chosen required f'_{cr})
 3. Maximum Water-Cementitious Materials Ratio: 0.45
 4. Air Content at Point of Placement (ASTM C 173): 3 percent max
 5. Maximum Allowable Slump at Point of Placement (ASTM C 143): 6" min, 8" max

- a. Exception: see requirements for addition of high range water reducer for concrete to be pumped into place.
- F. Exterior Walls and Piers: Proportion structural normal-weight concrete as follows:
1. Nominal Maximum Size Coarse Aggregate: 3/4-inches.
 2. Minimum Design Compressive Strength, f'_c (ASTM C 39): 5000 psi at 28 days (provide applicable data to substantiate the chosen required f'_cr)
 3. Maximum Water-Cementitious Materials Ratio: 0.45
 4. Air Content at Point of Placement (ASTM C 173): 6 percent +/- 1.5%
 5. Maximum Allowable Slump at Point of Placement (ASTM C 143): 6" min, 8" max
 - a. Exception: see requirements for addition of high range water reducer for concrete to be pumped into place.
- G. All other structural concrete, including equipment pads:
1. Nominal Maximum Size Coarse Aggregate: 3/4-inches.
 2. Minimum Design Compressive Strength, f'_c (ASTM C 39): 4000 psi at 28 days (provide applicable data to substantiate the chosen required f'_cr)
 3. Maximum Water-Cementitious Materials Ratio: 0.5
 4. Air Content at Point of Placement (ASTM C 173): 3 percent max (non-air entrained)
 5. Maximum Allowable Slump at Point of Placement (ASTM C 143): 4" min, 6" max
 - a. Exception: see requirements for addition of high range water reducer for concrete to be pumped into place.

2.10 CONCRETE MIXING:

- A. Batching: Concrete shall be mixed at central batch plants or truck-mixed at central batch plants and transported to the site as specified herein, unless otherwise permitted. Concrete production facilities and delivery fleet must comply with the requirements of ACI 301 and must have current NRMCA batch plant and fleet certification. Plants must have sufficient capacity to produce concrete of the quantity and quality as specified herein. All plant facilities are subject to inspection by the Engineer or his Agent. Plants must be routinely inspected by the ready-mix producer to verify that the plant is in conformance with ASTM C 94 and that scales and measures are accurate. The batchman shall have clear view of material addition and admixture measures during batching. Trucks shall be routinely inspected for hardened concrete on fins and worn fins. Information shall be submitted as part of the quality control records.
- B. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94 and ASTM C 1116 (if applicable), and furnish batch ticket information, including non-standard information in ASTM C 94 Section 13. During hot weather or under conditions contributing to rapid setting of concrete, a shorter mixing time than specified in ASTM C 94 will be required as follows, unless otherwise permitted:
1. When air temperature is between 81 and 89.9 deg F, reduce mixing, delivery and placement time from 1-1/2 hours to 1 hour.
 2. When air temperature is 90 deg F or above, reduce mixing, delivery and placement time to 45 minutes.
- C. Concrete batches shall be 3 yds³ minimum. Tolerances for scale.

- D. Concrete delivered to the project with slump greater than the maximum specified shall be rejected. Slumps that are less than the specified may be increased by adding water to the mix to bring the mix to the specified slump, provided the following conditions are met:
1. The specified water to cementitious materials ratio is not exceeded.
 2. The batch ticket indicates the amount of water withheld from the mix so that the design water-cement ratio is not exceeded.
 3. No high-range water reducing admixtures have been added at the job-site.
 4. Any water that is added to mix is done in the presence of the Engineer or the owner's testing agent.
 5. The amount of water added is documented and provided to the architect.
 6. The amount of water added does not exceed 3 gallons of water per yard of concrete.
 7. Slump and air content tests are made after the water is added.
 8. Written approval is provided by the concrete supplier.
- E. Ice, if used, shall be potable, subject to the same requirements of water and accurately measured for addition into the mixer within the tolerances of ASTM C 94.
- F. Water shall not be added to structural concrete at the jobsite unless permitted by the Engineer.
- G. Maintain equipment in proper operating condition, with drums cleaned before charging of each batch. Wash water shall be fully discharged prior to beginning a new batch unless permitted by the Engineer and optional tests per ASTM C 94 are performed at a frequency of at least once per week. Schedule delivery of trucks in order to prevent delay of placing after mixing.
- H. Maximum concrete temperature at point of placement is 90 °F or 3 °F greater than that used in design unless otherwise permitted.

PART 3 - EXECUTION

3.1 EMBEDDED ITEMS:

- A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
1. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC's "Code of Standard Practice for Steel Buildings and Bridges."
 2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
 3. Install dovetail anchor slots in concrete structures as indicated.
 4. Do not embed any foreign items in concrete. Do not embed aluminum unless indicated. Do not embed conduit unless indicated.

3.2 JOINTS:

- A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.
- B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Engineer.
 - 1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints, unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
 - 2. Except where indicated to be unbonded, roughen surfaces of hardened concrete at all vertical construction joints. Clean surface of laitance, coatings, loose particles, and foreign matter to expose aggregate.
 - 3. Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete. Provide keyways in all construction joints in footings in walls and at junctions of walls and footings.
 - 4. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
 - 5. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
 - 6. Space vertical joints in walls as shown and no more than 36 times the wall thickness. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
 - 7. At joints between foundation systems and walls, and elsewhere, unless otherwise specified herein, dampen, but do not saturate, the roughened and cleaned surface of set concrete immediately before placing fresh concrete. Use an approved bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces in accordance with manufacturers requirements only if directed or indicated.
- C. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.

3.3 PREPARATION OF EQUIPMENT AND PREPARATION OF PLACE OF DEPOSIT:

- A. Before placing concrete, all equipment for mixing and transporting and placing concrete shall be cleaned, all debris and ice removed from spaces to be occupied by the concrete, forms thoroughly cleaned of soil, ice, or other coatings which will prevent proper bond, reinforcement shall be securely tied in place and expansion joint material, anchors, and other embedded items shall be securely positioned.
- B. Semi porous subgrade shall be sealed in an approved manner.
- C. Hardened concrete and foreign materials shall be removed from the conveying equipment. All equipment shall be checked for potential areas of contamination to the concrete during placement from abrasion or breaches in liquid conduits.
- D. Before placing concrete, the formwork installation, reinforcing steel, and items to be embedded or cast in must be complete. Notify other crafts involved in ample time to permit the

installation of their work; cooperate with other trades in setting such work, as required. Notify Engineer upon completion of installation of all reinforcing in ample time to permit inspection of the work.

- E. At slabs on grade, restore any damaged subgrade areas to specified density immediately prior to installation of slab subbase. Lab verify specified compaction. Install underslab membrane over compacted stone. Provide another layer of membrane over any punctures or tears, lapping sealing edges as prescribed for sheet joints. Turn up membrane at edges of all slabs, unless otherwise detailed.
- F. Soil at bottom of all foundation systems shall be inspected by a testing laboratory. Place concrete immediately after approval of foundation excavations and installation of reinforcing, etc.

3.4 CONCRETE PLACEMENT:

- A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed.
- B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by the Engineer.
- C. Concrete shall be handled from the mixer to the place of final deposit as rapidly as practical by methods which will prevent separation or loss of ingredients and in a manner which will assure that quality concrete is installed.
- D. Conveying equipment shall be of size and design to insure a continuous flow of concrete at the delivery end.
- E. Use approved tremies for vertical placements unless otherwise permitted. Do not allow concrete to freefall distances that may cause segregation.
- F. Screed concrete which is to receive other construction to the proper level to avoid excessive skimming or grouting.
- G. Do not use concrete which has become non plastic and unworkable or does not meet the required quality control limits, or which has become contaminated by foreign material. Do not use concrete that is non-uniform or contains lumps or balled material. Remove rejected concrete from the project site and dispose of in an acceptable location.
- H. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete will be placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit in a manner to avoid inclined construction joints. Deposit concrete as nearly as possible to its final location to avoid segregation. Do not subject concrete to any procedure that will cause segregation.
 - 1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.

2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301. Consolidate in a manner to avoid segregation.
 3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have set. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.
 4. For mass concrete, as indicated by the Engineer, deposit concrete in forms in horizontal layers not deeper than 24”.
- I. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.
1. Consolidate concrete during placement operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
 2. Maintain reinforcement in position on chairs during concrete placement.
 3. Screed slab surfaces with a straightedge and strike off to correct elevations.
 4. Slope surfaces uniformly to drains where required.
 5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.
- J. Remove temporary spreaders in forms when concrete placing has reached the elevation of such spreaders.
- K. Bring surface of slabs to the correct elevations with a straight edge and strike off. Use bull floats or darbies to smooth the surface, leaving it free of humps and hollows. Do not sprinkle water on the plastic surface. Do not work bleed water or sprinkled water into the surface. Do not disturb the surface prior to beginning the finish operation.
- L. Pumped concrete shall be appropriately proportioned so that concrete properties do not drastically change through the pump. The pumping operations shall not create segregation or otherwise negatively affect the concrete. Comply with the following:
1. Concrete pumps shall be positive piston type pumps. No squeeze pumps will be permitted.
 2. Concrete contaminated with pumping aids shall be discarded. Priming mixtures not in conformance with these specifications shall be discarded.
 3. Fresh concrete testing shall be conducted at the point of placement when the concrete is pumped.
 4. The submitted concrete mix design shall indicate that the mix is designed to be pumped. Once mix designs are approved, changes in the mix to accommodate pumping shall be prohibited unless new mix designs are submitted for approval.
- M. Surface moisture evaporation rate of exposed concrete surfaces during placement and prior to implementation of moist curing measures shall be maintained below levels described herein. Use equipment and determine evaporation rate of exposed concrete surfaces in accordance with ACI 305.1.

3.5 COLD WEATHER PLACEMENT:

- A. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
1. When average high and low temperature is expected to fall below 40 deg F (4.4 deg C) for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
 2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.
 4. Do not place concrete when temperature is 40°F and falling, and when freezing weather is predicted within 24 hours unless protective measures are in place to provide adequate curing environment as outlined below
 5. High early strength (Type III) cement shall not be used.
- B. Thaw subgrades to six inches prior to placement. Demonstrate that subgrade is thawed with calibrated thermometer. All materials in contact with fresh concrete shall be above freezing at the time of placement unless otherwise permitted.
- C. In addition to laboratory cured test specimens, additional concrete test specimens shall be cured under field conditions as required and directed by the Engineer to check the adequacy of curing and protection of the concrete.
- D. Adequate equipment shall be provided for heating the concrete material and protecting the concrete during the cold weather length of protection shall be that time specified for curing. Maintain a minimum placement temperature and protection temperature surrounding the concrete during the entire curing period as specified in ACI 306.1. Record temperature once every 6 hours to demonstrate compliance.
- E. Slabs and other members are to be covered with insulated blankets or other suitable protection method per ACI 308.1. Supplement with external heating as required. Provide tented, heated areas surrounding concrete walls. Heaters which exhaust gases that contain carbons are not allowed except that indirect-fired heaters (that exhaust outside the enclosure) shall be permitted. Ensure that heat is spread evenly. Do not overheat individual areas or create excessive thermal gradients.

3.6 HOT WEATHER PLACEMENT:

- A. Hot-Weather Placement: Comply with ACI 301 and protect all concrete work from physical damage or reduced strength which could be caused by high ambient temperature, solar radiation, low humidity, or wind in compliance.
1. Maintain concrete temperature below 80 °F at time of placement unless otherwise permitted. Chilled mixing water or chipped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.

2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas. Keep forms and areas in contact with concrete continuously moist during curing.
- B. Cool reinforcing by wetting sufficiently so that the steel temperature will not exceed the ambient air temperature immediately before placing concrete. Use an approved admixture designed to retard the rate of set as necessary. Admixtures shall be tested in the design mix prior to use. Admixtures shall not contain any chlorides.
- C. Prompt curing shall be exercised. The use of evaporation retarders is prohibited unless otherwise permitted by the Engineer. Fogging used prior to application of final moist curing measures shall be done with an atomizing fogger; all exposed surfaces must be continuously fogged and surfaces must not be allowed to dry.
- D. The concrete supplier shall make provision for cooling concrete materials as necessary to meet specifications. Aggregates shall be uniformly moistened in stockpiles.

3.7 MISCELLANEOUS CONCRETE ITEMS:

- A. Filling In: Fill in holes and openings left in concrete structures, unless otherwise indicated, after work of other trades is in place. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.
- B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.
- C. Equipment Bases and Foundations: Provide machine and equipment bases as shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, complying with diagrams or templates from manufacturer furnishing machines and equipment.
- D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel-finish concrete surfaces.
- E. Concrete in earth: Where trench excavation is used, and where sides of excavations are cut neatly in good, firm soil, side-forms may be omitted.

3.8 FINISHING FORMED SURFACES:

- A. Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed class B limits for formed-surface irregularities.
 1. Apply to concrete surfaces only where not exposed to public view.
- B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and

defects. Remove fins and other projections that exceed class A limits on formed-surface irregularities.

1. Apply to concrete surfaces to receive a rubbed finish, or to be covered with a coating or covering material applied directly to concrete, such as waterproofing, dampproofing, painting or other similar system.
- C. Rubbed Finish: Apply the following to smooth-formed finished as-cast concrete where concrete surface is exposed to public view:
1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces, perform necessary patching and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.
- D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces, unless otherwise indicated.

3.9 FINISHING FLOORS AND SLABS:

- A. General: Use industry accepted techniques for screeding, restraightening and finishing operations to comply with the requirements of these ACI 301 and these specifications. Guidance can be found in ACI 302.1R. Do not wet concrete surfaces. Do not overwork surfaces. Do not segregate concrete from overworking. Coordinate all concrete finishes with the Engineer and final finished surface manufacturer prior to implementation.
- B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4 inch in 1 direction.
1. Apply scratch finish to surfaces indicated and to receive concrete floor toppings and/or to receive mortar setting beds for bonded cementitious floor finish, as required by the manufacturer or as indicated.
- C. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power driven floats. Floating shall begin when the water sheen has disappeared and when the surface has stiffened sufficiently to permit the operation. During or after the first floating, the plane of surfaces shall be checked with a left straight edge applied at not less than two different angles. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture.
1. Apply float finish to surfaces indicated to receive trowel finish and/or to be covered with fluid-applied or sheet waterproofing, built up ort membrane roofing, or sand bed terrazzo, or as indicated.
- D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that

would telegraph through applied coatings or floor coverings and finish replaced areas to blend with adjacent concrete.

1. Apply a trowel finish to surfaces exposed to view, to be covered with resilient flooring, linoleum, carpet, ceramic or quarry tile set over cleavage membrane, paint or another thin-film finish coating system, as required by the manufacturer, or as indicated.
 2. For floor installations greater than 10,000 ft², finish surfaces to the following tolerances, according to ACI 117 and ASTM E 1155 (ASTM E 1155M), for a randomly trafficked floor surface except as noted herein:
 - a. Specified overall flatness FF (SOF)F and levelness FL (SOF)L with minimum values equal to 2/3 of the specified values, required for application of the specific coating or overlay to be coordinated with the specific trade.
 - b. Moderately Flat as described in ACI 117 for exposed areas with minimum values equal to 2/3 of the specified values.
 - c. Contractor shall be responsible for meeting or exceeding flatness and levelness requirements. Any slabs which do not meet these requirements are subject to removal and replacement at the Owner's discretion at no additional cost to the Owner.
 3. For floor installations 10,000 ft² or less and incidental areas, finish and measure surface so gap at any point between concrete surface and an unlevelled, freestanding, 10-ft.- (3.05-m-) long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/4 inch (6 mm).
- E. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces indicated where ceramic or quarry tile is to be installed by either thickset or thin-set method or where indicated. While concrete is still plastic, slightly scarify surface with a fine broom.
1. Comply with flatness and levelness tolerances and methods for trowel finished floor surfaces.
- F. Broom Finish: Apply a non-slip broom finish as indicated.
1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Engineer before application.
- G. Slip-Resistive Finish: Apply Slip-Resistive Finish to exterior concrete platforms, steps, and ramps, and elsewhere as indicated. Before final floating, apply slip-resistive aggregate or aluminum granule finish where indicated and to concrete stair treads, platforms, and ramps. Apply according to manufacturer's written instructions as indicated or directed and as follows:
1. Uniformly spread as indicated and not less than 25 lb/100 sq. ft. of dampened slip-resistive aggregate granules over surface in 1 or 2 applications. Tamp aggregate flush with surface, but do not force below surface.
 2. After broadcasting and tamping, apply float finish.
 3. After curing, lightly work surface with a steel wire brush or an abrasive stone and water to expose slip-resistive aggregate granules.
 4. Curing: Wet cure for a period of seven days, minimum. Refer to other sections of specs.
- H. Control Joints: Saw-cut slabs as soon as possible after finishing using a saw blade that has a triangular arbor configuration to reduce edge raveling or dislodging aggregates at the following

spacing to minimize slab curling and cracking. Refer to plans for control joint layout. Fill joints in accordance with Architectural drawings.

- I. The floor flatness and levelness should be tested within 8 hours after completion of the final troweling operation according to ASTM E1155 - 96(2008) Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers by an independent testing agency experienced with the testing procedure and possessing the necessary equipment.
 1. Flatness and Levelness Requirements:
 2. Specified Overall Value Minimum Local Value
 - a. FF Floor Flatness 25 20
 - b. FL Floor Levelness 17 15
- J. Finishing: Refer to the Architectural drawings and specifications for finishes. The finished concrete shall slab comply with the damage and stain prevention provisions specified in the diamond polishing concrete floors specification.

3.10 MISCELLANEOUS CONCRETE ITEMS:

- A. Filling In: Fill in holes and openings left in concrete structures, unless otherwise indicated, after work of other trades is in place. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.
- B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.
- C. Equipment Bases and Foundations: Provide machine and equipment bases as shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, complying with diagrams or templates from manufacturer furnishing machines and equipment.
- D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel-finish concrete surfaces.
- E. Concrete in earth: Where trench excavation is used, and where sides of excavations are cut neatly in good, firm soil, side-forms may be omitted.

3.11 CONCRETE PROTECTING AND CURING:

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection, and ACI 301 and ACI 305.1 for hot-weather or high evaporation protection during curing.
- B. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period.

- C. Unformed Surfaces: Begin curing immediately (within 10 minutes) after finishing concrete or when the surface is firm enough to resist marring. Implement fogging between finishing and application of final moist curing if final moist curing is delayed or evaporative conditions exist. Do not allow concrete to dry at any period after placement and during the curing period. Cure unformed surfaces including floors and slabs, concrete floor toppings, and other surfaces. Carefully apply curing measures so that surfaces are not marred.
- D. Moist cure concrete according to ACI 308.1, unless otherwise permitted or required. Record daily high and low temperatures adjacent to the concrete. Standard curing shall be seven-day moist cure except as approved otherwise:
1. Moist Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
 - a. Water.
 - b. Clean absorptive cover, water saturated, and kept continuously wet. Cover shall be clean and premoistened with clean water for a period of at least 24 hours prior to placement, but shall be kept dry when not in use. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers. A moisture retaining cover (as described below), fogger, soaker hoses and/or sprinkler shall be used to maintain moist conditions. Method must be approved and demonstrated to provide continuously moist conditions. Practice cold and hot-weather concrete procedures per ACI 306.1, ACI 305.1 and ACI 301, as necessary. Water shall not be more than 20 °F cooler or warmer than the concrete. At slabs on grade prevent curing water from entering construction and control joints.
 2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Immediately repair any holes or tears during curing period using cover material and waterproof tape. Moisture-retaining cover is to be used with absorptive cover above, unless permitted by the Engineer.
 3. Curing and Sealing Compounds: Use of curing compounds is prohibited unless permitted by the Engineer and approved by coating or floor covering manufacturer and installer in writing if applicable. Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Maintain continuity of coating and repair damage during curing period.
 - a. After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound will not interfere with bonding of floor covering used on Project.
 4. During the curing period, protect concrete from damaging mechanical disturbances including load stresses, shocks, excessive vibration, excessive thermal gradients, and from change caused by subsequent construction operations. Sequence placements such that influence from loading of adjacent spans does not create excessive bendings stresses and cracking.

3.12 JOINT FILLING:

- A. Prepare, clean, and install joint filler according to manufacturer's written instructions.
 - 1. Defer joint filling with semi-rigid sealants until concrete has aged at least six month(s), and preferably one year. Do not fill joints until construction traffic has permanently ceased.
 - 2. Defer joint filling with flexible sealants for 60 days or as late as possible prior to installing floor finishes.
- B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.
- C. Install semi-rigid joint filler full depth in saw-cut joints and at least 1 inches deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening.
- D. Install flexible joint filler at least 1/2 inches deep in saw-cut joints and full depth in formed joints. Tool surface to provide full contact of sealant on sides of joint.

3.13 ARCHITECTURAL AND EXPOSED CONCRETE

- A. Repair and cure damaged finished surfaces of cast-in-place architectural concrete when approved by Architect. Match repairs to color, texture, and uniformity of surrounding surfaces and to repairs on approved mockups.
- B. Remove and replace cast-in-place architectural concrete that cannot be repaired and cured to Architect's approval.
- C. Protect corners, edges, and surfaces of cast-in-place architectural concrete from damage; use guards and barricades.
- D. Protect cast-in-place architectural concrete from staining, laitance, and contamination during remainder of construction period.
- E. Clean cast-in-place architectural concrete surfaces after finish treatment to remove stains, markings, dust, and debris.
- F. Wash and rinse surfaces according to concrete finish applicator's written instructions. Protect other Work from staining or damage due to cleaning operations.
- G. Do not use cleaning materials or processes that could change the appearance of cast-in-place architectural concrete finishes.

3.14 CONCRETE SURFACE REPAIRS:

- A. Complete repairs at defective areas as described herein unless otherwise directed. Inform Engineer of all patching and repairs. Submit material data sheets and procedures for repair for approval prior to implementing repairs.

- B. Defective Concrete: Repair and patch defective areas as directed by and with approval of the Engineer. Remove and replace concrete that cannot be repaired and patched to Engineer's approval. If repair is not acceptable to the Architect, remove and replace defective concrete. Replace stained concrete that cannot be cleaned.
- C. Patching Mortar: Mix dry-pack patching mortar, consisting of one part portland cement to two and one-half parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing, or use compatible prepackaged material, as required or approved. Patching materials shall be compatible with adjacent concrete and meet strength and durability requirements of this specification. Bonding agents shall be as indicated in ACI 301 or as approved by the Engineer. Use materials appropriate for specific type of repair. If commercial bonding agents and/or pre-packaged materials are approved, bonding agent and repair must be applied in strict accordance with manufacturer's requirements. All repair materials are subject to approval by the Engineer and Architect.
- D. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning. Repairs and materials shall be per ACI 301 and shall be completed immediately upon form removal, except that minimum repair depth is 1 inch.
1. Patch test areas at inconspicuous locations to verify mixture and color match before proceeding with patching.
 2. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Engineer.
- E. Repairing Unformed Surfaces: Repair surfaces in accordance with ACI 301. Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.
1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions. Finish repaired areas to blend into adjacent concrete.
 2. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete except without coarse aggregate or use approved compatible pre-packaged materials, as required. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
 3. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

- F. Perform structural repairs of concrete, subject to Engineer's approval, using epoxy adhesive and patching mortar.
- G. Repair materials and installation not specified above may be used, subject to Engineer's approval.
- H. Fill in holes and openings left in concrete structures for the passage work by other trades, unless otherwise shown or directed, after the work of other trades is in place. Mix, place, and cure concrete as herein specified, to blend with in place construction. Provide all other miscellaneous concrete filling shown or required to complete work.
- I. Concrete work which does not conform to the specified requirements, including strength, tolerances, and finishes, shall be corrected as directed by the Engineer, at the Contractor's expense, without extension of time therefore. The Contractor shall also be responsible for the cost of corrections to any other work affected by, or resulting from, correction to the concrete work.

3.15 TESTING AND FIELD QUALITY ASSURANCE:

- A. Testing and Inspecting: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Testing and Inspecting: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.
- C. Inspections:
 - 1. Steel reinforcement placement.
 - 2. Steel reinforcement welding.
 - 3. Headed bolts and studs.
 - 4. Verification of use of required design mixture.
 - 5. Concrete placement, including conveying and depositing.
 - 6. Curing procedures and maintenance of curing temperature.
 - 7. Verification of concrete strength before removal of shores and forms from beams and slabs.
- D. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:
 - 1. Testing Frequency: Obtain one composite sample for each day's placement of each concrete mixture exceeding 5 cu. yd. (4 cu. m), but less than 25 cu. yd. (19 cu. m), plus one set for each additional 50 cu. yd. (38 cu. m) or fraction thereof.
 - 2. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. (76 cu. m) or fraction thereof of each concrete mixture placed each day.
 - a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

3. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
4. Air Content: ASTM C 231, pressure method, for normal-weight concrete; ASTM C 173/C 173M, volumetric method, for structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
5. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F (4.4 deg C) and below and when 80 deg F (27 deg C) and above, and one test for each composite sample.
6. Unit Weight: ASTM C 567, fresh unit weight of structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
7. Compression Test Specimens: ASTM C 31/C 31M.
 - a. Cast and laboratory cure two sets of two standard cylinder specimens for each composite sample.
 - b. Cast and field cure two sets of two standard cylinder specimens for each composite sample.
8. Compressive-Strength Tests: ASTM C 39/C 39M; test one set of two laboratory-cured specimens at 7 days and one set of two specimens at 28 days.
 - a. Test one set of two field-cured specimens at 7 days and one set of two specimens at 28 days.
 - b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.
9. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
10. Cost for additional sets of lab or field cured compressive strength cylinders required by the contractor as back-up to demonstrate conformance or for form removal or other construction operations shall be incurred by the contractor.
11. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi (3.4 MPa).
12. Test results shall be reported in writing to Architect, concrete manufacturer, Engineer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
13. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
14. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Architect.
15. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

- 16. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.
- E. Measure floor and slab flatness and levelness according to ASTM E 1155 within 48 hours of finishing.

3.16 PROTECTION OF LIQUID FLOOR TREATMENTS

- A. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.

3.17 WORKMANSHIP

- A. Concrete work which does not conform to the specified requirements, including strength, tolerances, and finishes, shall be corrected as directed by the Engineer, at the Contractor's expense, without extension of time therefore. The Contractor shall also be responsible for the cost of corrections to any other work affected by, or resulting from, correction to the concrete work.

END OF SECTION 03 30 00

SECTION 03 45 00 - PRECAST ARCHITECTURAL CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

- 1. Architectural precast concrete cladding units.
- 2. Insulated, architectural precast concrete units.

- B. Related Sections include the following:

- 1. Division 03 Section "Cast-in-Place Concrete" for installing connection anchors in concrete.
- 2. Division 04 Section "Unit Masonry" for thin brick setting materials and installation after precast concrete panel production.
- 3. Division 05 Section "Structural Steel Framing" for furnishing and installing connections attached to structural-steel framing.
- 4. Division 05 Section "Metal Fabrications" for kickers and other miscellaneous steel shapes.
- 5. Division 08 Section "Aluminum Windows" for windows set into architectural precast concrete units.
- 6. Division 09 Section "Tiling" for ceramic tile setting materials and installation.

1.3 DEFINITION

- A. Design Reference Sample: Sample of approved architectural precast concrete color, finish and texture, preapproved by Architect.

1.4 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide architectural precast concrete units and connections capable of withstanding the following design loads within limits and under conditions indicated:
 - 1. Loads: As indicated on Drawing SG.1.
 - 2. Dead Loads: Account for weight of storefront window system at conditions where system[s] bears on precast panels.
 - 3. Wind Loads: As indicated on Drawing SG.1. Account for wind loads where connections are made to precast panels.

4. Design framing system and connections to maintain clearances at openings, to allow for fabrication and construction tolerances, to accommodate live-load deflection, shrinkage and creep of primary building structure, and other building movements as follows:
 - a. Upward and downward movement of 1/2 inch.
5. Design components and connections to accommodate movement of structural frame due to story drift of adjacent stories equal to 1/400 of span between supports.
6. Thermal Movements: Provide for in-plane thermal movements resulting from annual ambient temperature changes of 80 deg F to 120 deg F.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Design Mixtures: For each precast concrete mixture. Include compressive strength and water-absorption tests.
- C. Shop Drawings: Detail fabrication and installation of architectural precast concrete units. Indicate locations, plans, elevations, dimensions, shapes, and cross sections of each unit. Indicate joints, reveals, and extent and location of each surface finish. Indicate details at building corners.
 1. Indicate separate face and backup mixture locations and thicknesses when used.
 2. Indicate welded connections by AWS standard symbols. Detail loose and cast-in hardware and connections.
 3. Indicate locations, tolerances, and details of anchorage devices to be embedded in or attached to structure or other construction.
 4. Indicate locations, extent, and treatment of dry joints if two-stage casting is proposed.
 5. Include plans and elevations showing unit location and sequence of erection for special conditions.
 6. Indicate location of each architectural precast concrete unit by same identification mark placed on panel.
 7. Indicate relationship of architectural precast concrete units to adjacent materials.
 8. Indicate locations and details of brick units, including corner units and special shapes, and joint treatment.
 9. Indicate locations and details of stone facings, anchors, and joint widths.
 10. Design Modifications: If design modifications are proposed to meet performance requirements and field conditions, submit design calculations and Shop Drawings. Do not adversely affect the appearance, durability, or strength of units when modifying details or materials and maintain the general design concept.
- D. Samples: For each type of finish indicated on exposed surfaces of architectural precast concrete units, in sets of 3, illustrating full range of finish, color, and texture variations expected; approximately 12 by 12 by 2 inches.
 1. When other faces of precast concrete unit are exposed, include Samples illustrating workmanship, color, and texture of backup concrete as well as facing concrete.
 2. Samples for each brick unit required, showing full range of color and texture expected. Include Sample showing color and texture of joint treatment.

- a. Grout Samples for Initial Selection: Color charts consisting of actual sections of grout showing manufacturer's full range of colors.
- b. Grout Samples for Verification: Showing color and texture of joint treatment.

1.6 INFORMATIONAL SUBMITTALS

A. Certification Letters

1. The Manufacturer's Professional Structural Engineer shall submit a certification letter to the Architect and Owner prior to the submission of the Shop Drawings for architectural precast. No shop drawings will be reviewed by the Architect prior to the submission and acceptance of this certification letter. The certification letter shall include the following:
 2. Signature and seal of the registered Professional Structural Engineer (registered in the State in which the work is being performed).
 3. Statement that the Professional Structural Engineer is fully experienced in the design of architectural precast systems.
 4. Statement that all metal architectural precast shop drawings (including all supports, connections and components) have been prepared in accordance with the Contract Document requirements and applicable building codes and under the direction of the Professional Structural Engineer.
 5. Statement that the Professional Structural Engineer's signature and seal shall appear on all architectural precast shop drawings (including all supports, connections and components).
 6. The Manufacturer's Professional Structural Engineer shall submit a letter to the Architect stating that the fabrication and installation of the architectural precast system has been performed in accordance with his design. This letter shall be signed and sealed by the Manufacturer's Engineer as part of "Project Closeout".

B. Calculations: All design calculations (which shall bear the seal and signature of the Contractor's Professional Structural Engineer), indicating compliance with the requirements of the design criteria and appropriate codes shall be provided to the Architect concurrent with the submission of shop drawings for record purposes. The Architect will not approve shop drawings for fabrication without receiving design calculations. Show governing panel types, connections and types of reinforcement, including special reinforcement. Indicate location, type, magnitude and direction of loads imposed on the building structural frame from architectural precast.

C. Welding certificates.

D. Qualification Data: For fabricator.

E. Material Test Reports: For aggregates.

F. Material Certificates: For the following items, signed by manufacturers:

1. Cementitious materials.
2. Reinforcing materials and prestressing tendons.
3. Admixtures.
4. Bearing pads.
5. Structural-steel shapes and hollow structural sections.

- G. Preconstruction test reports.
- H. Source quality-control test reports.
- I. Field quality-control test reports.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A precast concrete erector qualified and designated by PCI's Certificate of Compliance to erect Category A (Architectural Systems) for non-load bearing members.
- B. Installer Qualifications: A precast concrete erector who has retained a "PCI-Certified Field Auditor" to conduct a field audit of a project in same category as this Project before erection of precast concrete and who can produce an Erectors' Post-Audit Declaration.
- C. Fabricator Qualifications: A firm that assumes responsibility for engineering architectural precast concrete units to comply with performance requirements. This responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
 - 1. Participates in PCI's plant certification program and is designated a PCI-certified plant for Group A, Category A1 - Architectural Cladding and Load Bearing Units[or participates in APA's "Plant Certification Program for Production of Architectural Precast Concrete Products" and is designated an APA-certified plant].
- D. Testing Agency Qualifications: An independent testing agency[, acceptable to authorities having jurisdiction,] qualified according to ASTM C1077 and ASTM E329 for testing indicated.
- E. Design Standards: Comply with ACI 318 (ACI 318M) and design recommendations of PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete," applicable to types of architectural precast concrete units indicated.
- F. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 117, "Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products."
- G. Welding: Qualify procedures and personnel according to AWS D1.1/D.1.1M, "Structural Welding Code - Steel"; and AWS D1.4, "Structural Welding Code - Reinforcing Steel."
- H. Calculated Fire-Test-Response Characteristics: Where indicated, provide architectural precast concrete units whose fire resistance has been calculated according to ACI 216.1/TMS 0216.1, "Standard Method for Determining Fire Resistance of Concrete and Masonry Construction Assemblies" and is acceptable to authorities having jurisdiction.
- I. Mockups: After sample panel approval but before production of architectural precast concrete units, construct full-sized mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockup as indicated on Drawings including aluminum framing, glass, sealants, and architectural precast concrete complete with anchors, connections, flashings, and joint fillers.
 2. Approved mockups may become part of the completed Work if undamaged at time of Substantial Completion.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents unless such deviations are specifically approved by Architect in writing.
- J. Preconstruction Testing Mockup: Provide a full-size mockup of architectural precast concrete indicated on Drawings for preconstruction testing.
1. Build preconstruction testing mockup as indicated on Drawings including aluminum framing, glass, sealants, and architectural precast concrete complete with anchors, connections, flashings, and joint fillers.
 2. Build preconstruction testing mockup at testing agency facility.
- K. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."

1.8 PRECONSTRUCTION TESTING

- A. Preconstruction Stone Anchor Testing: Engage a qualified testing agency to perform preconstruction testing according to ASTM C1354/C1354M or ASTM E488, modified as follows:
1. Furnish test specimens, including stone anchors, that are representative of materials proposed for incorporation into the Work.
 2. Anchorage Tests: Test 12 inches square samples for[each combination of stone variety, orientation of cut, finish, and anchor type proposed for use on Project. Test for shear and tensile strength of anchorage system.

1.9 COORDINATION

- A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver architectural precast concrete units in such quantities and at such times to limit unloading units temporarily on the ground.
- B. Support units during shipment on nonstaining shock-absorbing material.
- C. Store units with adequate dunnage and bracing and protect units to prevent contact with soil, to prevent staining, and to prevent cracking, distortion, warping or other physical damage.
- D. Place stored units so identification marks are clearly visible, and units can be inspected.

- E. Handle and transport units in a position consistent with their shape and design in order to avoid excessive stresses which would cause cracking or damage.
- F. Lift and support units only at designated points shown on Shop Drawings.

1.11 SEQUENCING

- A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Fabricators: Subject to compliance with requirements, fabricators offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Gate Precast Company, 3800 Oxford Loop Rd, Oxford, NC 27565; (919) 603-1633; www.gateprecast.com.
 2. Spring Precast LLC, 3782 US Highway 280 E, Cobb, GA 31735; (229) 591-7009; www.springprecast.com.
 3. Tindall Corporation, 3076 N Blackstock Rd, Spartanburg, SC 29301; (864) 576-3230; tindallcorp.com.

2.2 MOLD MATERIALS

- A. Molds: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that will provide continuous and true precast concrete surfaces within fabrication tolerances indicated; nonreactive with concrete and suitable for producing required finishes.
 1. Mold-Release Agent: Commercially produced liquid-release agent that will not bond with, stain or adversely affect precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.
- B. Form Liners: Units of face design, texture, arrangement, and configuration. Furnish with manufacturer's recommended liquid-release agent that will not bond with, stain, or adversely affect precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.
- C. Surface Retarder: Chemical set retarder, capable of temporarily delaying final hardening of newly placed concrete mixture to depth of reveal specified.

2.3 REINFORCING MATERIALS

- A. Reinforcing Bars: ASTM A615/A615M, Grade 60, deformed.

- B. Low-Alloy-Steel Reinforcing Bars: ASTM A706/A 706M, deformed.
- C. Galvanized Reinforcing Bars: [ASTM A615/A615M, Grade 60 (Grade 420)] [ASTM A706/A706M], deformed bars, ASTM A767/A767M, Class II zinc coated, hot-dip galvanized[, and chromate wash treated after fabrication and bending].
- D. Epoxy-Coated Reinforcing Bars: [ASTM A615/A615M, Grade 60 (Grade 420)] [ASTM A706/A706M], deformed bars, [ASTM A775/A775M] [or] [ASTM A934/A934M] epoxy coated.
- E. Steel Bar Mats: ASTM A184/A184M, fabricated from [ASTM A615/A 615M, Grade 60 (Grade 420)] [ASTM A706/A706M], deformed bars, assembled with clips.
- F. Plain-Steel Welded Wire Reinforcement: ASTM A185, fabricated from [as-drawn] [galvanized] steel wire into flat sheets.
- G. Deformed-Steel Welded Wire Reinforcement: ASTM A497/A497M, flat sheet.
- H. Epoxy-Coated-Steel Wire: ASTM A884/A884M, Class A coated, [plain] [deformed], flat sheet, Type [1 bendable] [2 nonbendable] coating.
- I. Supports: Suspend reinforcement from back of mold or use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 117.

2.4 PRESTRESSING TENDONS

- A. Prestressing Strand: ASTM A416/A416M, Grade 270 uncoated, 7-wire, low-relaxation strand.
 - 1. Coat unbonded post-tensioning strand with corrosion inhibitor passing ASTM D1743 and sheath with polypropylene tendon sheathing. Include anchorage devices and coupler assemblies.

2.5 CONCRETE MATERIALS

- A. Portland Cement: ASTM C150, Type I or Type III, gray, unless otherwise indicated.
 - 1. For surfaces exposed to view in finished structure, mix gray with white cement, of same type, brand, and mill source.
- B. Supplementary Cementitious Materials:
 - 1. Fly Ash: ASTM C618, Class C or F, with maximum loss on ignition of 3 percent.
 - 2. Ground Granulated Blast-Furnace Slag: ASTM C989, Grade 100 or 120.
- C. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C33, with coarse aggregates complying with Class 5S. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.

1. Face-Mixture-Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining; to match selected finish sample.
 - a. Gradation: To match design reference sample.
 2. Face-Mixture-Fine Aggregates: Selected, natural or manufactured sand of same material as coarse aggregate, unless otherwise approved by Architect.
- D. Lightweight Aggregates: Except as modified by PCI MNL 117, ASTM C330, with absorption less than 11 percent.
- E. Coloring Admixture: ASTM C979, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading.
- F. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117.
- G. Air-Entraining Admixture: ASTM C260, certified by manufacturer to be compatible with other required admixtures.
- H. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.
1. Water-Reducing Admixtures: ASTM C494/C494M, Type A.
 2. Retarding Admixture: ASTM C494/C494M, Type B.
 3. Water-Reducing and Retarding Admixture: ASTM C494/C 494M, Type D.
 4. Water-Reducing and Accelerating Admixture: ASTM C494/C494M, Type E.
 5. High-Range, Water-Reducing Admixture: ASTM C494/C494M, Type F.
 6. High-Range, Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type G.
 7. Plasticizing and Retarding Admixture: ASTM C1017/C 1017 M.

2.6 STEEL CONNECTION MATERIALS

- A. Carbon-Steel Shapes and Plates: ASTM A36/A36M.
- B. Carbon-Steel-Headed Studs: ASTM A108, AISI 1018 through AISI 1020, cold finished, AWS D1.1/D1.1M, Type A or B, with arc shields and with minimum mechanical properties of PCI MNL 117, Table 3.2.3.
- C. Carbon-Steel Plate: ASTM A283/A283M.
- D. Malleable Iron Castings: ASTM A47/A47M.
- E. Carbon-Steel Castings: ASTM A27/A27M, Grade 60-30.
- F. High-Strength, Low-Alloy Structural Steel: ASTM A572/A572M.
- G. Carbon-Steel Structural Tubing: ASTM A500, Grade B.

- H. Wrought Carbon-Steel Bars: ASTM A675/A675M, Grade 65.
- I. Deformed-Steel Wire or Bar Anchors: ASTM A496 or ASTM A706/A706M.
- J. Carbon-Steel Bolts and Studs: ASTM A307, Grade A; carbon-steel, hex-head bolts and studs; carbon-steel nuts, ASTM A563; and flat, unhardened steel washers, ASTM F844.
- K. High-Strength Bolts and Nuts: ASTM A325, Type 1, heavy hex steel structural bolts; heavy hex carbon-steel nuts, ASTM A563; and hardened carbon-steel washers, ASTM F436.
- L. Zinc-Coated Finish: For exterior steel items[, steel in exterior walls,] and items indicated for galvanizing, apply zinc coating by [hot-dip process according to ASTM A 123/A 123M or ASTM A 153/A 153M] [electrodeposition according to ASTM B 633, SC 3, Types 1 and 2].
 - 1. For steel shapes, plates, and tubing to be galvanized, limit silicon content of steel to less than 0.03 percent or to between 0.15 and 0.25 percent or limit sum of silicon and 2.5 times phosphorous content to 0.09 percent.
 - 2. Galvanizing Repair Paint: High-zinc-dust-content paint with dry film containing not less than 94 percent zinc dust by weight, and complying with DOD-P-21035A or SSPC-Paint 20.
- M. Shop-Primed Finish: Prepare surfaces of nongalvanized steel items, except those surfaces to be embedded in concrete, according to requirements in SSPC-SP 3 and shop-apply [lead- and chromate-free, rust-inhibitive primer, complying with performance requirements in MPI 79] [SSPC-Paint 25] according to SSPC-PA 1.
- N. Welding Electrodes: Comply with AWS standards.

2.7 ACCESSORIES

- A. Reglets: Specified in Division 07 Section "Sheet Metal Flashing and Trim."
- B. Reglets: PVC extrusions felt or fiber filled, or with face opening of slots covered.
- C. Precast Accessories: Provide clips, hangers, plastic or steel shims, and other accessories required to install architectural precast concrete units.

2.8 GROUT MATERIALS

- A. Sand-Cement Grout: Portland cement, ASTM C150, Type I, and clean, natural sand, ASTM C144, or ASTM C404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.
- B. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C1107, Grade A for drypack and Grades B and C for flowable grout and of consistency suitable for application within a 30-minute working time.

- C. Epoxy-Resin Grout: Two-component, mineral-filled epoxy resin; ASTM C881/C881M, of type, grade, and class to suit requirements.

2.9 INSULATED PANEL ACCESSORIES

- A. Extruded-Polystyrene Board Insulation: ASTM C578, Type IV, 1.60 lb/cu. ft.; square edges; with R-value of 5 per inch and thickness as indicated on the drawings.

2.10 CONCRETE MIXTURES

- A. Prepare design mixtures for each type of precast concrete required.
 - 1. Limit use of fly ash to 20 percent of portland cement by weight.
- B. Design mixtures may be prepared by a qualified independent testing agency or by qualified precast plant personnel at architectural precast concrete fabricator's option.
- C. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by ACI 318 or PCI MNL 117 when tested according to ASTM C1218/C1218M.
- D. Normal-Weight Concrete Mixtures: Proportion face and backup mixtures or full-depth mixtures, at fabricator's option by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:
 - 1. Compressive Strength (28 Days): 5000 psi minimum.
 - 2. Maximum Water-Cementitious Materials Ratio: 0.45.
- E. Water Absorption: 6 percent by weight or 14 percent by volume, tested according to PCI MNL 117.
- F. Lightweight Concrete Backup Mixtures: Proportion mixtures by either laboratory trial batch or field test data methods according to ACI 211.2, with materials to be used on Project, to provide lightweight concrete with the following properties:
 - 1. Compressive Strength (28 Days): 5000 psi.
 - 2. Unit Weight: Calculated equilibrium unit weight of 115 lb/cu. ft., plus or minus 3 lb/cu. ft., according to ASTM C567.
- G. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.
- H. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

2.11 MOLD FABRICATION

- A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete-placement operations and temperature changes and for prestressing and detensioning operations. Coat contact surfaces of molds with release agent before reinforcement is placed. Avoid contamination of reinforcement and prestressing tendons by release agent.
 - 1. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and supports to maintain stability of liners during concrete placement. Coat form liner with form-release agent.
- B. Maintain molds to provide completed architectural precast concrete units of shapes, lines, and dimensions indicated, within fabrication tolerances specified.
 - 1. Form joints are not permitted on faces exposed to view in the finished work.
 - 2. Edge and Corner Treatment: Uniformly radiused.

2.12 FABRICATION

- A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.
 - 1. Weld-headed studs and deformed bar anchors used for anchorage according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."
- B. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing architectural precast concrete units to supporting and adjacent construction.
- C. Cast-in reglets, slots, holes, and other accessories in architectural precast concrete units as indicated on the Contract Drawings.
- D. Cast-in openings larger than 10 inches in any dimension. Do not drill or cut openings or prestressing strand without Architect's approval.
- E. Reinforcement: Comply with recommendations in PCI MNL 117 for fabricating, placing, and supporting reinforcement.
 - 1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete. When damage to epoxy-coated reinforcing exceeds limits specified in ASTM A775/A 775M, repair with patching material compatible with coating material and epoxy coat bar ends after cutting.
 - 2. Accurately position, support, and secure reinforcement against displacement during concrete-placement and consolidation operations. Completely conceal support devices to prevent exposure on finished surfaces.

3. Place reinforcement to maintain at least 3/4-inch minimum coverage. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
 4. Place reinforcing steel and prestressing strand to maintain at least 3/4-inch minimum concrete cover. Increase cover requirements for reinforcing steel to 1-1/2 inches when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
 5. Install welded wire fabric in lengths as long as practicable. Lap adjoining pieces at least one full mesh spacing and wire tie laps, where required by design. Offset laps of adjoining widths to prevent continuous laps in either direction.
- F. Reinforce architectural precast concrete units to resist handling, transportation, and erection stresses.
- G. Prestress tendons for architectural precast concrete units by either pretensioning or post-tensioning methods. Comply with PCI MNL 117.
1. Delay detensioning or post-tensioning of precast, prestressed architectural concrete units until concrete has reached its indicated minimum design release compressive strength as established by test cylinders cured under same conditions as concrete.
 2. Detension pretensioned tendons either by gradually releasing tensioning jacks or by heat-cutting tendons, using a sequence and pattern to prevent shock or unbalanced loading.
 3. If concrete has been heat cured, detension while concrete is still warm and moist to avoid dimensional changes that may cause cracking or undesirable stresses.
 4. Protect strand ends and anchorages with bituminous, zinc-rich, or epoxy paint to avoid corrosion and possible rust spots.
- H. Comply with requirements in PCI MNL 117 and requirements in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.
- I. Place face mixture to a minimum thickness after consolidation of the greater of 1 inch (25 mm) or 1.5 times the maximum aggregate size, but not less than the minimum reinforcing cover specified.
- J. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in precast concrete units.
1. Place backup concrete mixture to ensure bond with face-mixture concrete.
- K. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air on surfaces. Use equipment and procedures complying with PCI MNL 117.
1. Place self-consolidating concrete without vibration according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants."
- L. Comply with PCI MNL 117 for hot- and cold-weather concrete placement.

- M. Identify pickup points of architectural precast concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each architectural precast concrete unit on a surface that will not show in finished structure.
- N. Cure concrete, according to requirements in PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.
- O. Discard and replace architectural precast concrete units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless repairs meet requirements in PCI MNL 117 and Architect's approval.

2.13 INSULATED PANEL CASTING

- A. Cast and screed supported wythe over mold.
- B. Place insulation boards abutting edges and ends of adjacent boards. Insert wythe connectors through insulation, and consolidate concrete around connectors according to connector manufacturer's written instructions.
- C. Cast and screed top wythe to meet required finish.

2.14 FABRICATION TOLERANCES

- A. Fabricate architectural precast concrete units straight and true to size and shape with exposed edges and corners precise and true so each finished panel complies with PCI MNL 117 product tolerances as well as position tolerances for cast-in items.
- B. Fabricate architectural precast concrete units straight and true to size and shape with exposed edges and corners precise and true so each finished panel complies with the following product tolerances:
 - 1. Overall Height and Width of Units, Measured at the Face Exposed to View: As follows:
 - a. 10 feet or under, plus or minus 1/8 inch.
 - 2. Overall Height and Width of Units, Measured at the Face Not Exposed to View: As follows:
 - a. 10 feet or under, plus or minus 1/4 inch.
 - 3. Bowing: Plus or minus L/360, maximum 1 inch.
 - 4. Local Smoothness: 1/4 inch per 10 feet.
 - 5. Warping: 1/16 inch per 12 inches of distance from nearest adjacent corner.
 - 6. Dimensions of Architectural Features and Rustications: Plus or minus 1/8 inch.
- C. Position Tolerances: For cast-in items measured from datum line location, as indicated on Shop Drawings.

1. Weld Plates: Plus or minus 1 inch.
 2. Inserts: Plus or minus 1/2 inch.
 3. Handling Devices: Plus or minus 3 inches.
 4. Reinforcing Steel and Welded Wire Fabric: Plus or minus 1/4 inch where position has structural implications or affects concrete cover; otherwise, plus or minus 1/2 inch.
 5. Reinforcing Steel Extending out of Member: Plus or minus 1/2 inch of plan dimensions.
 6. Tendons: Plus or minus 1/4 inch, vertical; plus or minus 1 inch, horizontal.
 7. Location of Rustication Joints: Plus or minus 1/8 inch.
 8. Location of Opening within Panel: Plus or minus 1/4 inch.
 9. Location of Flashing Reglets: Plus or minus 1/4 inch.
 10. Location of Flashing Reglets at Edge of Panel: Plus or minus 1/8 inch.
 11. Reglets for Glazing Gaskets: Plus or minus 1/8 inch.
 12. Electrical Outlets, Hose Bibs: Plus or minus 1/2 inch.
 13. Location of Bearing Surface from End of Member: Plus or minus 1/4 inch.
 14. Allowable Rotation of Plate, Channel Inserts, and Electrical Boxes: 2-degree rotation or 1/4 inch maximum over the full dimension of unit.
 15. Position of Sleeve: Plus or minus 1/2 inch.
 16. Location of Window Washer Track or Buttons: Plus or minus 1/8 inch.
- D. Panel faces shall be free of joint marks, grain, and other obvious defects. Corners, including false joints shall be uniform, straight, and sharp. Finish exposed-face surfaces of architectural precast concrete units to match approved design reference sample and as follows:
1. PCI's "Architectural Precast Concrete - Color and Texture Selection Guide," of plate numbers indicated.
 2. As-Cast Surface Finish: Provide surfaces free of pockets, sand streaks, and honeycombs.
 3. Textured-Surface Finish: Impart by form liners or inserts to provide surfaces free of pockets, streaks, and honeycombs, with uniform color and texture.
 4. Bushhammer Finish: Use power or hand tools to remove matrix and fracture coarse aggregates.
 5. Exposed-Aggregate Finish: Use chemical retarding agents applied to concrete forms and washing and brushing procedures to expose aggregate and surrounding matrix surfaces after form removal.
 6. Abrasive-Blast Finish: Use abrasive grit, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces.
 7. Acid-Etched Finish: Use acid and hot-water solution, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces. Protect hardware, connections, and insulation from acid attack.
 8. Honed Finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
 9. Polished Finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
 10. Sand-Embedment Finish: Use selected stones placed in a sand bed in bottom of mold, with sand removed after curing.
- E. Finish exposed surfaces of architectural precast concrete units to match face-surface finish.
- F. Finish exposed surfaces of architectural precast concrete units by smooth, steel-trowel finish.
- G. Finish unexposed surfaces of architectural precast concrete units by float finish.

2.15 SOURCE QUALITY CONTROL

- A. Quality-Control Testing: Test and inspect precast concrete according to PCI MNL 117 requirements. If using self-consolidating concrete, also test and inspect according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants."
- B. Owner will employ an independent testing agency to evaluate architectural precast concrete fabricator's quality-control and testing methods.
 - 1. Allow Owner's testing agency access to material storage areas, concrete production equipment, concrete placement, and curing facilities. Cooperate with Owner's testing agency and provide samples of materials and concrete mixtures as may be requested for additional testing and evaluation.
- C. Strength of precast concrete units will be considered deficient if units fail to comply with ACI 318 requirements for concrete strength.
- D. Testing: If there is evidence that strength of precast concrete units may be deficient or may not comply with ACI 318 requirements, precaster will employ an independent testing agency to obtain, prepare, and test cores drilled from hardened concrete to determine compressive strength according to ASTM C42/C42M.
 - 1. A minimum of three representative cores will be taken from units of suspect strength, from locations directed by Architect.
 - 2. Cores will be tested in an air-dry condition.
 - 3. Strength of concrete for each series of 3 cores will be considered satisfactory if average compressive strength is equal to at least 85 percent of 28-day design compressive strength and no single core is less than 75 percent of 28-day design compressive strength.
 - 4. Test results will be made in writing on same day that tests are performed, with copies to Architect, Contractor, and precast concrete fabricator. Test reports will include the following:
 - a. Project identification name and number.
 - b. Date when tests were performed.
 - c. Name of precast concrete fabricator.
 - d. Name of concrete testing agency.
 - e. Identification letter, name, and type of precast concrete unit(s) represented by core tests; design compressive strength; type of break; compressive strength at breaks, corrected for length-diameter ratio; and direction of applied load to core in relation to horizontal plane of concrete as placed.
- E. Patching: If core test results are satisfactory and precast concrete units comply with requirements, clean and dampen core holes and solidly fill with precast concrete mixture that has no coarse aggregate, and finish to match adjacent precast concrete surfaces.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting structural frame or foundation and conditions for compliance with requirements for installation tolerances, true and level bearing surfaces, and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. Do not install precast concrete units until supporting cast-in-place building structural framing has attained minimum allowable design compressive strength or supporting steel or other structure is complete.

3.2 INSTALLATION

- A. Install clips, hangers, bearing pads, and other accessories required for connecting architectural precast concrete units to supporting members and backup materials.
- B. Erect architectural precast concrete level, plumb, and square within specified allowable tolerances. Provide temporary supports and bracing as required to maintain position, stability, and alignment as units are being permanently connected.
 - 1. Install temporary steel or plastic spacing shims or bearing pads as precast concrete units are being erected. Tack weld steel shims to each other to prevent shims from separating.
 - 2. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
 - 3. Remove projecting lifting devices and grout fill voids within recessed lifting devices flush with surface of adjacent precast surfaces when recess is exposed.
 - 4. Unless otherwise indicated, maintain uniform joint widths of 3/4 inch.
- C. Connect architectural precast concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.
 - 1. Do not permit connections to disrupt continuity of roof flashing.
- D. Welding: Comply with applicable AWS D1.1/D1.1M and AWS D1.4 for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.
 - 1. Protect architectural precast concrete units and bearing pads from damage by field welding or cutting operations, and provide noncombustible shields as required.
 - 2. Welds not specified shall be continuous fillet welds, using no less than the minimum fillet as specified by AWS.
 - 3. Clean weld-affected metal surfaces with chipping hammer followed by brushing, and apply a minimum 4.0-mil thick coat of galvanized repair paint to galvanized surfaces according to ASTM A780.
 - 4. Clean weld-affected metal surfaces with chipping hammer followed by brushing, and reprime damaged painted surfaces.

5. Remove, reweld, or repair incomplete and defective welds.
- E. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.
 1. Where slotted connections are used, verify bolt position and tightness. For sliding connections, properly secure bolt but allow bolt to move within connection slot. For friction connections, apply specified bolt torque and check 25 percent of bolts at random by calibrated torque wrench.
- F. Grouting Connections: Grout connections where required or indicated. Retain grout in place until hard enough to support itself. Pack spaces with stiff grout material, tamping until voids are completely filled. Place grout to finish smooth, level, and plumb with adjacent concrete surfaces. Keep grouted joints damp for not less than 24 hours after initial set. Promptly remove grout material from exposed surfaces before it affects finishes or hardens.

3.3 ERECTION TOLERANCES

- A. Erect architectural precast concrete units level, plumb, square, true, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 117, Appendix I.
- B. Erect architectural precast concrete units level, plumb, square, and true, without exceeding the following noncumulative erection tolerances:
 1. Plan Location from Building Grid Datum: Plus or minus 1/2 inch.
 2. Plan Location from Centerline of Steel: Plus or minus 1/2 inch.
 3. Top Elevation from Nominal Top Elevation: As follows:
 - a. Exposed Individual Panel: Plus or minus 1/4 inch.
 - b. Non-Exposed Individual Panel: Plus or minus 1/2 inch.
 - c. Exposed Panel Relative to Adjacent Panel: 1/4 inch.
 - d. Non-Exposed Panel Relative to Adjacent Panel: 1/2 inch.
 4. Support Elevation from Nominal Support Elevation: As follows:
 - a. Maximum Low: 1/2 inch.
 - b. Maximum High: 1/4 inch.
 5. Maximum Plumb Variation over the Lesser of Height of Structure or 100 Feet (30 m): 1 inch.
 6. Plumb in Any 10 Feet of Element Height: 1/4 inch.
 7. Maximum Jog in Alignment of Matching Edges: 1/4 inch.
 8. Joint Width (Governs over Joint Taper): Plus or minus 1/4 inch.
 9. Maximum Joint Taper: 3/8 inch.
 10. Joint Taper in 10 Feet: 1/4 inch.
 11. Maximum Jog in Alignment of Matching Faces: 1/4 inch.
 12. Differential Bowing or Camber, as Erected, between Adjacent Members of Same Design: 1/4 inch.
 13. Opening Height between Spandrels: Plus or minus 1/4 inch.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage Engage a qualified special inspector to perform the following special inspections and prepare reports:
 - 1. Erection of precast concrete members.
- B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports.
- C. Field welds will be subject to visual inspections and nondestructive testing according to ASTM E 165 or ASTM E 709. High-strength bolted connections will be subject to inspections.
- D. Testing agency will report test results promptly and in writing to Contractor and Architect.
- E. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
- F. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.5 REPAIRS

- A. Repair architectural precast concrete units if permitted by Architect. The Architect reserves the right to reject repaired units that do not comply with requirements.
- B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired work, when viewed in typical daylight illumination from a distance of 20 feet.
- C. Prepare and repair damaged galvanized coatings with galvanizing repair paint according to ASTM A 780.
- D. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.
- E. Remove and replace damaged architectural precast concrete units when repairs do not comply with requirements.

3.6 CLEANING

- A. Clean surfaces of precast concrete units exposed to view.
- B. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.
- C. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.

1. Perform cleaning procedures, if necessary, according to precast concrete fabricator's recommendations. Clean soiled precast concrete surfaces with detergent and water, using stiff fiber brushes and sponges, and rinse with clean water. Protect other work from staining or damage due to cleaning operations.
2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

END OF SECTION 03 45 00

SECTION 04 20 00 - UNIT MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Concrete masonry units.
2. Face brick.
3. Mortar and grout.
4. Concrete and masonry lintels
5. Masonry joint reinforcement.
6. Ties and anchors.
7. Embedded flashing.
8. Miscellaneous masonry accessories.
9. Masonry-cell insulation.
10. Cavity-wall insulation.
11. Masonry cleaners

- B. Products Installed but not Furnished under This Section:

1. Precast concrete trim in unit masonry.
2. Steel lintels in unit masonry.
3. Steel shelf angles for supporting unit masonry.

- C. Related Sections:

1. Division 05 Section "Cold Formed Metal Framing" for structural studs and sheathing used in masonry veneer construction.
2. Division 05 Section "Metal Fabrications" for furnishing steel lintels and shelf angles for unit masonry.
3. Division 07 Section "Thermal Insulation" for insulation installed other than in masonry cavities
4. Division 07 Section "Nonbituminous Self-Adhering Sheet Vapor-Permeable Air Barrier (AIB)" for air/vapor barriers applied in masonry cavities.
5. Division 07 Section "Sheet Metal Flashing and Trim" for exposed sheet metal flashing and for furnishing manufactured reglets installed in masonry joints.
6. Division 07 Section "Joint Sealants" for waterproof sealants applied to masonry construction.

- D. Products furnished, but not installed, under this Section include the following:

1. Anchor sections of adjustable masonry anchors for connecting to structural frame, installed under Division 05 Section "Structural Steel Framing."

1.3 DEFINITIONS

- A. CMU(s): Concrete masonry unit(s).
- B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.1 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: For the following:
 - 1. Masonry Units: Show sizes, profiles, coursing, control joint locations, and locations of special shapes.
 - 2. Reinforcing Steel: Detail bending and placement of unit masonry reinforcing bars. Comply with ACI 315, "Details and Detailing of Concrete Reinforcement." Show elevations of reinforced walls.
 - 3. Fabricated Flashing: Detail all embedded masonry flashing showing location in wall section and plan view, including corner units, end-dam units, and other special applications.
 - 4. Submit shop drawings for lintels including reinforcement details, span and bearing conditions. Include span and load calculations for all lintel conditions.
- C. Samples for Initial Selection:
 - 1. Clay face brick, in the form of straps of five or more bricks.
 - 2. Colored mortar.
 - 3. Weep holes/cavity vents.
- D. Samples for Verification: For each type and color of the following:
 - 1. Face-brick brick, in the form of straps of five or more bricks.
 - 2. Special brick shapes.
 - 3. Pigmented and colored-aggregate mortar. Make Samples using same mortar mix to be used on Project.
 - 4. Weep holes and vents.
 - 5. Insulation
 - 6. Accessories embedded in masonry.

1.3 INFORMATIONAL SUBMITTALS

- A. List of Materials Used in Constructing Mockups: List generic product names together with manufacturers, manufacturers' product names, model numbers, lot numbers, batch numbers, source of supply, and other information as required to identify materials used. Include mix proportions for mortar and grout and source of aggregates.

1. Submittal is for information only. Neither receipt of list nor approval of mockup constitutes approval of deviations from the Contract Documents unless such deviations are specifically brought to the attention of Architect and approved in writing.
- B. Qualification Data: For testing agency.
- C. Material Certificates: For each type and size of the following:
1. Masonry Units
 - a. Include material test reports substantiating compliance with requirements.
 - b. For brick, include size-variation data verifying that actual range of sizes falls within specified tolerances.
 - c. For exposed brick, include test report for efflorescence according to ASTM C67.
 - d. For masonry units used in structural masonry, include data and calculations establishing average net-area compressive strength of units.
 2. Cementitious materials. Include brand, type, and name of manufacturer.
 3. Cementitious materials. Include name of manufacturer, brand name, and type.
 4. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
 5. Grout mixes. Include description of type and proportions of ingredients.
 6. Provide certification that flexible flashing materials are compatible with air and vapor barrier materials.
 7. Reinforcing bars.
 8. Mortar Admixtures
 9. Joint reinforcement.
 10. Anchors, ties, and metal accessories.
- D. Veneer Anchor Engineering Analysis: Provide analysis performed by the anchor manufacturer's professional structural engineer indicating that veneer anchors are in compliance with the structural design criteria and applicable codes. Analysis will bear the seal and signature of the manufacturer's professional structural engineer.
- E. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.
1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C109/C109M for compressive strength, ASTM C1506 for water retention, and ASTM C91 for air content.
 2. Include test reports, according to ASTM C1019, for grout mixes required to comply with compressive strength requirement.
- F. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.4 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Qualified according to ASTM C1093 for testing indicated.
- B. Masonry Standard: Comply with most recent edition of ACI 530.1/ASCE 6/TMS 602 unless modified by requirements in the Contract Documents.

- C. Fire-Resistance Ratings: Where indicated, provide materials and construction identical to those of assemblies with fire-resistance ratings determined per ASTM E119 by a testing and inspecting agency, by equivalent concrete masonry thickness, or by other means, as acceptable to authorities having jurisdiction.
- D. Sample Panels: Build sample panels to verify selections made under sample submittals and to demonstrate aesthetic effects. Comply with requirements in Section 01 40 00 "Quality Requirements" for mockups.
 - 1. Build sample panels for each type of exposed unit masonry construction in sizes approximately 48 inches long by 48 inches high by full thickness.
 - 2. Build sample panels facing south.
 - 3. Build sample panels on wood pallets for relocation.
 - 4. Include the following elements:
 - a. One (1) right angle outside corner.
 - b. One (1) course containing cellular weeps/vents as specified in Part 2 of this section
 - c. One (1) vertical joint sealed with the intended sealant for control and expansion joints
 - 5. Where masonry is to match existing, erect panels adjacent and parallel to existing surface.
 - 6. Clean exposed faces of panels with masonry cleaner indicated.
 - 7. Protect approved sample panels from the elements with weather-resistant membrane.
 - 8. Approval of sample panels is for color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; aesthetic qualities of workmanship; and other material and construction qualities specifically approved by Architect in writing.
 - a. Approval of sample panels does not constitute approval of deviations from the Contract Documents contained in sample panels unless such deviations are specifically approved by Architect in writing.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
- B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
- D. Deliver preblended, dry mortar mix in moisture-resistant containers designed for use with dispensing silos. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in covered weatherproof dispensing silos.
- E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.6 FIELD CONDITIONS

- A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
1. Extend cover a minimum of 24 inches down both sides of walls and hold cover securely in place.
 2. Where one wythe of multi-wythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe and hold cover in place.
 3. Maintain materials and surrounding air temperature to minimum 50°F prior to, during and 48 hours after completion of masonry work unless otherwise permitted by Architect. See paragraph titled "Cold Weather Construction".
 4. During freezing or near freezing weather, if Architect permits construction to proceed, follow the detailed requirements in paragraph titled "Cold Weather Construction".
 5. Maintain protective boards at exposed external corners which may be damaged by construction activities. Provide such protection without damaging completed work.
 6. Keep cavities, expansion joint and control joint voids clear of mortar.
 7. Provide temporary bracing during masonry erection. Maintain in place until building structure provides permanent bracing.
- B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.
- C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
 2. Protect sills, ledges, and projections from mortar droppings.
 3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
 4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.
- D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in Standard TMS 602/ACI 530.1-/ASCE 6.
1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40°F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.
 - a. Protect masonry units, cementitious materials and sand so that they are not wetted by rain, snow or ground water.
 - b. Cover tops of masonry at all times when work is not in progress. Cover shall extend a minimum of 2 feet down both sides, and shall be securely held in place.
 - c. Heat masonry units to at least 40°F.

- d. In no case shall calcium chloride be used, nor shall any admixture intended to lower the freezing point be used.
 - e. Units with suctions in excess of 20 g. per 30 sq. in. shall be sprinkled with heated water just prior to laying. Water temperature shall be above 70°F when units are above 32°F. Water temperature shall be above 120°F when temperature of units is 32°F or below.
 - f. High-early-strength Portland Cement may be used in mortar. If used, decrease protection period from 48 hr. to 24 hr. Keep mortar temperatures less than 120° F to avoid flash set.
2. Construction Requirements (masonry being worked on)
- a. Air Temperature 40°F to 32°F: Heat sand or mixing water to minimum of 70°F and maximum of 160°F.
 - b. Air Temperature 32°F to 25°F: Heat sand and mixing water to minimum of 70°F and maximum of 160°F.
 - c. Air Temperature 25°F to 20°F.
 - 1) Heat sand and mixing water to minimum of 70°F and maximum of 160°F.
 - 2) Use salamanders or other sources of heat on both sides of walls under construction.
 - 3) Employ windbreaks when wind is in excess of 15 mph.
3. Air Temperature 20°F and Below
- a. Heat sand and mixing water to minimum of 70°F and maximum of 160°F.
 - 1) Provide enclosure and auxiliary heat to maintain air temperature above 32°F.
 - 2) Temperature of units when laid shall be not less than 20°F.
4. Protection Requirements (completed masonry or sections not being worked on)
- a. Mean Daily Air Temperature 40°F to 32°F: Protect masonry from rain or snow for 48 hours.
 - b. Mean Daily Air Temperature 32°F to 25°F: Completely cover masonry for 48 hours.
 - c. Mean Daily Air Temperature 25°F to 20°F: Completely cover masonry with insulating blankets for 48 hours.
 - d. Mean Daily Air Temperature 20°F and Below: Maintain masonry temperature above 32°F for 48 hours by enclosure and supplementary heat, by electric heating blankets, infrared heat lamps or other approved method.
- E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in Standard TMS 602/ACI 530.1-/ASCE 6.
1. Implement approved hot weather procedures and comply with the following provisions:
- a. When the ambient air temperature exceeds 100°F or exceeds 90°F with a wind velocity greater than 8 mph:
 - 1) Maintain sand piles in a damp, loose condition.
 - 2) Provide necessary conditions and equipment to produce mortar having a temperature below 120°F.

- b. When the ambient temperature exceeds 115°F or exceeds 105°F with a wind velocity greater than 8 mph, comply with the requirements above and shade materials and mixing equipment from direct sunlight.
2. Construction Requirements: These requirements apply to work in progress and are based on the following weather conditions:
- a. When the ambient air temperature exceeds 100°F or exceeds 90°F with a wind velocity greater than 8 mph:
 - 1) Maintain temperature of mortar and grout below 120°F.
 - 2) Flush mixer, mortar transport container, and mortar boards with cool water before they come into contact with mortar ingredients or mortar.
 - 3) Maintain mortar consistency by re-tempering with cool water.
 - 4) Use mortar within 2 hours of initial mixing.
 - 5) Spread thin-bed mortar no more than four feet ahead of AAC masonry units.
 - 6) Set AAC masonry units within one minute after spreading thin-bed mortar.
 - b. When the ambient temperature exceeds 115°F or exceeds 105° with a wind velocity greater than 8 mph, implement the above requirements and use cool mixing water for mortar and grout. Ice is permitted in the mixing water prior to use. Do not permit ice in the mixing water when added to the other mortar or grout materials.
3. Protection After Erection:
- a. When the mean daily temperature exceeds 100°F or exceeds 90°F with a wind velocity greater than 8 mph, fog spray newly constructed masonry until damp at least three times a day until the masonry is three (3) days old.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.
- B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

2.2 PERFORMANCE REQUIREMENTS

- A. Provide unit masonry that develops indicated net-area compressive strengths at 28 days.
 - 1. Determine net-area compressive strength of masonry by testing masonry prisms according to ASTM C1314.

2.3 MASONRY UNITS, GENERAL

- A. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6, except as modified by requirements in the Contract Documents.
- B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.
- C. Fire-Resistance Ratings: Comply with requirements for fire-resistance-rated assembly designs indicated.
 - 1. Where fire-resistance-rated construction is indicated, units shall be listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction.

2.4 CONCRETE MASONRY UNITS

- A. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.
 - 1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
 - 2. Provide bullnosed units for outside corners unless otherwise indicated.
- B. Integral Water Repellent: Provide units made with integral water repellent for exposed units.
 - 1. Integral Water Repellent: Liquid polymeric, integral water-repellent admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested according to ASTM E514 as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive, with test period extended to 24 hours, shall show no visible water or leaks on the back of test specimen.
 - a. Basis-of-Design Product: Grace Construction Products, W. R. Grace & Co. - Conn.; Dry-Block
 - b. Other Acceptable Products: Subject to compliance with requirements, the following comparable products may be provided:
 - 1) ACM Chemistries; RainBloc.
 - 2) BASF Corporation; MasterPel 240.
 - 3) Euclid Chemical Company (The); an RPM company; Blocktite.
 - 4) GCP Applied Technologies Inc; Dry-Block.
 - 5) Moxie International; Moxie Shield 1800.

2.5 BRICK

- A. General: Provide shapes indicated and as follows, with exposed surfaces matching finish and color of exposed faces of adjacent units:
 - 1. For ends of sills and caps and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.

2. Provide special shapes for applications where stretcher units cannot accommodate special conditions, including those at corners, movement joints, bond beams, sashes, and lintels.
3. Provide special shapes for applications requiring brick of size, form, color, and texture on exposed surfaces that cannot be produced by sawing.
4. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.

B. Face Brick: Facing brick complying with ASTM C216.

1. Basis-of-Design Product: full-range red wirecut face brick with flash, as selected by Owner's Office of the University Architect
2. Acceptable Manufacturers: Subject to compliance with requirements, products from the following manufacturers may be provided:
 - a. Triangle Brick, #1630
 - b. General Shale, #6024001587
 - c. Pine Hall Brick, Wirecut F/R Modular
 - d. Palmetto Brick, Flashed Wirecut
3. Grade: SW.
4. Type: FBS.
5. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 3350 psi.
6. Efflorescence: Provide brick that has been tested according to ASTM C67 and is rated "not effloresced."
7. Application: Use where brick is exposed unless otherwise indicated.
8. Where shown to "match existing," provide face brick matching color range, texture, and size of existing adjacent brickwork.

C. Architectural Linear Brick: Facing calcium silicate brick complying with ASTM C73.

1. Basis-of-Design Product: Arriscraft Architectural Linear Brick, Fort Valley, GA
 - a. Color: White Pearl
2. Acceptable Manufacturers: Subject to compliance with requirements for Face Brick above, products from the following manufacturers may be provided:
 - a. Belden Brick
 - 1) Color: Blanco Smooth
 - 2) Size: Ambassador
3. Grade: SW.
4. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 3350 psi.
5. Application: Use at architectural feature wall, and other areas where indicated.

2.6 MORTAR AND GROUT MATERIALS

- A. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
- B. Masonry Cement: Not acceptable for use in mortar.

- C. Colored Cement Product: Packaged blend made from portland cement and hydrated lime and mortar pigments, all complying with specified requirements, and containing no other ingredients.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Colored Portland Cement-Lime Mix:
 - 1) Essroc
 - 2) Holcim (US) Inc.
 - 3) Lafarge North America Inc.
 - 4) Lehigh Hanson; HeidelbergCement Group
 2. Formulate blend as required to produce color indicated or, if not indicated, as selected from manufacturer's standard colors.
 3. Pigments shall not exceed 10 percent of portland cement by weight.
- D. Aggregate for Mortar: ASTM C144.
1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
 2. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.
 3. White-Mortar Aggregates: Natural white sand or crushed white stone.
 4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.
- E. Aggregate for Grout: ASTM C404.
- F. Admixtures: As approved by mortar blend manufacturer.
1. Cold-Weather Admixture: Not permitted.
 2. Consumer Goods Admixtures: Products and substances not explicitly formulated and marketed for use as mortar admixtures are not permitted. Examples include, but are not limited to, dish detergent and soft drinks.
- G. Water: Potable.

2.7 REINFORCEMENT

- A. Uncoated Steel Reinforcing Bars: ASTM A615/A615M or ASTM A996/A996M, Grade 60.

2.8 JOINT REINFORCEMENT, TIES AND ANCHORS

- A. General:
1. Adjustable Masonry-Veneer Anchors: Provide anchors that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall, for attachment over sheathing and metal studs.
 2. Adjustable Anchors for Connecting to Concrete and Steel: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.

- B. Manufacturers:
1. Basis-of-Design Product: Hohmann & Barnard, Inc. (H&B), Hauppauge, New York.
 2. Other Acceptable Products: Subject to compliance with requirements, the following equivalent products may be provided:
 - a. Wire-Bond, Charlotte, North Carolina
 - b. Heckmann Building Products, Inc.
- C. Horizontal Joint Reinforcement - Single Wythe Interior Walls: H&B Ladder-Mesh, No. 220 EH, of width to suit wall dimension, 3/16-inch diameter deformed side rods (2), 9-gauge smooth cross rods, meeting ASTM A82, hot dipped galvanized in accordance with ASTM A153, Class B2 1.50 oz./s.f. Provide factory fabricated corners and tees of same gauge, finish and design.
- D. Horizontal Joint Reinforcement - Single Wythe Exterior Walls: H&B Ladder-Mesh, No. 220 EH, of width to suit wall dimension, 3/16-inch diameter deformed side rods (2), 9-gauge smooth cross rods meeting ASTM A82, carbon steel hot dipped galvanized in accordance with ASTM A153, Class B2 1.50 oz./s.f..
- E. Veneer Curtain Wall Anchors and Ties for Cold Formed Steel Stud/Sheathing Back-up: Provide H&B 2-SEAL Thermal Wing Nut Anchor, of total dimension to suit wall cavity and insulation. Provide anchor back plate (ASTM A366; 12 gauge) and 2X-hook masonry pintle with Mighty Loc (ASTM A82; 1/4 diameter flattened and serrated). All components shall be hot dipped galvanized in accordance with ASTM A153, Class B2 (1.5 oz/ft² min.). H&B 200 HS back plate shall be sized to support cavity wall insulation. Masonry tie pintle shall lock insulation into place without compressing and be sized to achieve minimum 1-7/8 inches embedment into veneer.
1. Concrete Masonry Veneer Reinforcing: H&B No. 220 Reinforcement. Provide with 9 ga. side and cross rods by 1-5/8 inch wide. All components shall be hot dipped galvanized in accordance with ASTM A153, Class B2 (1.5 oz/ft² min.).
- F. Veneer Curtain Wall Anchors and Ties for New Cast in Place Concrete Construction Back-Up: Provide H&B 2-SEAL Thermal Concrete Wing Nut Anchor, of total dimension to suit wall cavity and insulation. Provide anchor back plate (ASTM A366; 12 gauge) and 2X-hook masonry pintle with Mighty Loc (ASTM A82; 1/4 diameter flattened and serrated). All components shall be hot dipped galvanized in accordance with ASTM A153, Class B2 (1.5 oz/ft² min.). H&B 200 HS back plate shall be sized to support cavity wall insulation. Masonry tie pintle shall lock insulation into place without compressing and be sized to achieve minimum 1-7/8 inches embedment into veneer.

2.9 EMBEDDED FLASHING MATERIALS

- A. Metal Flashing: Provide metal flashing, where flashing is exposed or partly exposed and where indicated, complying with SMACNA's "Architectural Sheet Metal Manual" as follows:
1. Stainless Steel: ASTM A240/A240M, Type 304, 0.016 inch thick or;
 2. Copper: ASTM B370, Temper H00, cold-rolled copper sheet, 16-oz./sq. ft. weight or 0.0216 inch thick.
 3. Fabricate continuous flashings in sections 96 inches long minimum, but not exceeding 12 feet. Provide splice plates at joints of formed, smooth metal flashing.
 4. Fabricate through-wall metal flashing embedded in masonry from smooth stainless steel.

- a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Cheney Flashing Company.
 - 2) Keystone Flashing Company, Inc.
 - 3) Hohmann & Barnard, Inc.
 - 4) Mastercraft Metals, Inc.
 - 5. Fabricate through-wall flashing with snaplock receiver on exterior face where indicated to receive counterflashing.
 - 6. Fabricate through-wall flashing with drip edge unless otherwise indicated. Fabricate by extending flashing 1/2 inch out from wall, with outer edge bent down 30 degrees and hemmed.
 - 7. Fabricate flashings with sealed end dams where discontinuous over expansion joints, lintels, sills, step flashing, shelf angles, and any other breaks in the construction.
- B. Flexible Membrane Flashing:
- 1. Flexible Flashing General
 - a. Flexible Membrane Flashing is not permitted to be installed in lieu of stainless steel.
 - b. Flexible transitions between air vapor barrier and embedded masonry flashing are included in Division 07 Section Fluid-Applied Membrane Air and Vapor Barrier (AVB).
 - c. Flexible flashing products shall be compatible with Air and Vapor Barrier products.
 - d. All flexible flashing installed within the cavity shall be supported by metal flashing.
- C. Application: Unless otherwise indicated, use the following:
- 1. Where flashing is indicated to receive counterflashing, use stainless steel flashing.
 - 2. Where flashing is indicated to be turned down at or beyond the wall face, use stainless steel flashing.
 - 3. Where flashing is partly exposed and is indicated to terminate at the wall face, use stainless steel flashing with a drip edge unless noted otherwise.
- D. Solder and Sealants for Stainless Steel Flashings:
- 1. Solder for Stainless Steel: ASTM B32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.
 - 2. Solder for Copper: ASTM B32, with maximum lead content of 0.2 percent.
 - 3. Elastomeric Sealant: ASTM C1311, Flashing manufacturer's recommended single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied, as required to seal joints in sheet metal flashing and trim and remain watertight.
- E. Adhesives and Primers for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates. Seam tapes are not acceptable.
- F. Termination Bars: Stainless steel bars 1/8 inch by 1 inch (3 mm by 25 mm).

2.10 MISCELLANEOUS MASONRY ACCESSORIES

- A. Compressible Filler: Premolded filler strips complying with ASTM D1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene. Product: Hohmann and Barnard, Inc.; NS – Closed Cell Neoprene Sponge.
- B. Preformed Control-Joint Gaskets: Made from PVC, complying with ASTM D2287, Type PVC-65406 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated. Product: Hohmann and Barnard, Inc.; VS Series - PVC Control Joint.
- C. Bond-Breaker Strips: Asphalt-saturated, organic roofing felt complying with ASTM D226, Type I (No. 15 asphalt felt).
- D. Weep/Vent Products: Use one of the following unless otherwise indicated:
 - 1. Cellular Plastic Weep/Vent: One-piece, flexible extrusion made from UV-resistant polypropylene copolymer, full height and width of head joint and depth 1/8 inch less than depth of outer wythe in color selected from manufacturer's standard. Product: Hohmann & Barnard, Inc.; Quadro-Vent.
 - a. Color: As selected in Sample Panel.
- E. Cavity Drainage Mesh: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity with minimum 7-inch-tall dovetail shaped notches designed to prevent clogging from mortar droppings.
 - 1. Products: Subject to compliance with requirements, provide one of the following :
 - a. Mortar Net USA, Ltd.; Mortar Net
 - b. Holmann & Barnard; Mortar Trap
 - 2. Size: Strips, full-depth of cavity and 10 inches high.
 - 3. Provide above all cavity interruptions where weeps are installed and at the bottom of cavity:

2.11 MASONRY CLEANERS

- A. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Diedrich Technologies, Inc.
 - b. EaCo Chem, Inc.
 - c. ProSoCo, Inc.

2.12 MORTAR AND GROUT MIXES

- A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.
1. Do not use calcium chloride in mortar or grout.
 2. Use portland cement-lime mortar.
 3. Masonry cement will not be acceptable for use in mortar
- B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site. Products shall comply with ASTM C1714 and C270.
- C. Mortar for Unit Masonry: Comply with ASTM C270, Proportion Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.
1. For masonry below grade or in contact with earth, use Type M.
 2. For reinforced masonry, use Type S.
 3. For mortar parge coats, use Type S or Type N.
 4. For exterior, above-grade, load-bearing and non-load-bearing walls and parapet walls; for interior load-bearing walls; for interior non-load-bearing partitions; and for other applications where another type is not indicated, use Type S.
 5. For interior non-load-bearing partitions, Use Type N or Type S.
- D. Pigmented Mortar: Select and proportion pigments with other ingredients to produce color required. Do not add pigments to colored cement products.
1. Pigments shall not exceed 10 percent of portland cement by weight.
 2. Carbon black shall not exceed 2 percent by weight of mortar.
 3. Mix to match Architect's sample.
 4. Application: Use pigmented mortar for exposed mortar joints with the following units:
 - a. As reviewed by Owner.
- E. Grout for Unit Masonry: Comply with ASTM C476.
1. Portland Cement: ASTM C150 Type I, gray color; waterproof, low soluble salt content type.
 2. Hydrated Lime: Type S of ASTM C207.
 3. Quicklime: Nonhydraulic type per ASTM C5.
 4. Aggregates: Course and fine type(s) per ASTM C404.
 5. Water: Clean and free from injurious amounts of oil, alkali, organic matter or other deleterious material.
 6. Proportions by volume:
 - a. Fine Grout: 1 part Portland cement; 0-1/10 part hydrated lime quicklime; fine aggregate, 2-1/4 - 3 times the sum of the volumes of the cementitious materials.
 - b. Coarse Grout: 1 part Portland cement; 0-1/10 part hydrated lime quicklime; fine aggregate, 2-1/4 - 3 times the sum of the volumes of the cementitious materials; coarse aggregate 1-2 times the sum of the volumes of the cementitious materials.

7. Admixtures: No additives will be permitted.
8. Strength of grout, tested in accordance with ASTM C1019 shall be equal to compressive strength of unit masonry, but in no case less than 2,000 psi.
9. Thoroughly machine mix grout ingredients, in quantities needed for immediate use. Hand mixing will not be permitted.
10. Mixed grout slump shall be between 8 inches and 11 inches.
11. Place grout within 1-1/2 hours from time of introducing water in the mixture and prior to initial set.
12. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with Table 1.15.1 in ACI 530.1-/ASCE 6-/TMS 602 for dimensions of grout spaces and pour height.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
 2. Verify that foundations are within tolerances specified.
 3. Verify that reinforcing dowels are properly placed.
 4. Verify that substrates are free of substances that impair mortar bond.
- B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Thickness: Build cavity and composite walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.
- B. Build chases and recesses to accommodate items specified in this and other Sections.
- C. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to opening.
- D. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.
- E. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures.
 1. Mix units from several pallets or cubes as they are placed.

- F. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested per ASTM C67. Allow units to absorb water so they are damp but not wet at time of laying.

3.3 TOLERANCES

A. Dimensions and Locations of Elements:

1. For dimensions in cross section or elevation do not vary by more than plus 1/2 inch or minus 1/4 inch.
2. For location of elements in plan do not vary from that indicated by more than plus or minus 1/2 inch.
3. For location of elements in elevation do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.

B. Lines and Levels:

1. For bed joints and top surfaces of bearing walls do not vary from level by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
3. For vertical lines and surfaces do not vary from plumb by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.
4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
5. For lines and surfaces do not vary from straight by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.
6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch except due to warpage of masonry units within tolerances specified for warpage of units.

C. Joints:

1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.
2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.
3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.
4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch.
5. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16 inch from one masonry unit to the next.

3.4 LAYING MASONRY WALLS

- A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.
- B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond; do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.
- C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 4-inches Bond and interlock each course of each wythe at corners. Do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.
- D. Stopping and Resuming Work: Stop work by racking back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.
- E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.
- F. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.
- G. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below and rod mortar or grout into core.
- H. Build non-load-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.
 - 1. Install compressible filler in joint between top of partition and underside of structure above.

3.5 MORTAR BEDDING AND JOINTING

- A. Lay hollow brick as follows:
 - 1. With face shells fully bedded in mortar and with head joints of depth equal to bed joints.
 - 2. With webs fully bedded in mortar in all courses of piers, columns, and pilasters.
 - 3. With webs fully bedded in mortar in grouted masonry, including starting course on footings.
 - 4. With entire units, including areas under cells, fully bedded in mortar at starting course on footings where cells are not grouted.
 - 5. Fully bed units and fill cells with mortar at anchors and ties as needed to fully embed anchors and ties in mortar.
- B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.
- C. Tool exposed joints slightly concave or weather struck where indicated when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

- D. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

3.6 CAVITY WALLS

- A. Bond wythes of cavity walls together using one of the following methods:
 - 1. Individual Metal Ties: Provide ties as shown installed in horizontal joints, but not less than one metal tie for 1.77 sq. ft. of wall area spaced not to exceed 16 inches o.c. horizontally and 16 inches o.c. vertically. Stagger ties in alternate courses. Provide additional ties within 12 inches of openings and space not more than 36 inches apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than 24 inches o.c. vertically.
 - 2. Masonry Veneer Anchors: Comply with requirements for anchoring masonry veneers.
- B. Keep cavities clean of mortar droppings and other materials during construction. Bevel beds away from cavity, to minimize mortar protrusions into cavity. Do not attempt to trowel or remove mortar fins protruding into cavity.
- C. Apply air barrier to face of backup wythe to comply with Division 07 Section " Nonbituminous Self-Adhering Sheet Vapor-Permeable Air Barrier (AIB)."
- D. Installing Cavity-Wall Insulation: Install insulation to comply with Division 07 Section "Thermal Insulation."

3.7 INSTALLING MASONRY JOINT REINFORCEMENT

- A. General: Perform reinforcement work in accordance with Article 3.4 of ACI 530.1-/ASCE 6-/TMS 602- and as follows. Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches.
 - 1. Provide cavity and single wythe walls with horizontal masonry reinforcing at 16 inches o.c. maximum. Embed free end of cavity wall reinforcing in every sixth mortar joint of brick veneer.
 - 2. For masonry walls with vertical reinforcement and grout, provide horizontal reinforcing in every mortar joint.
 - 3. Place horizontal masonry reinforcing in first and second joints above and below openings. Place continuous in first joint below top of walls.
 - 4. Lap horizontal masonry reinforcing splices minimum 6 inches.
 - 5. Embed wall ties for face brick at maximum 16 inches on center vertically and 16 inches on center horizontally. Place at maximum 8 inches away from perimeter of openings or edge.
- B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.
- C. Provide continuity at wall intersections by using prefabricated T-shaped units.
- D. Provide continuity at corners by using prefabricated L-shaped units.

3.8 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

- A. Anchor masonry to structural steel and concrete where masonry abuts or faces structural steel or concrete to comply with the following:
1. Provide an open space not less than 1/2 inch wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials. Allow additional space for fire proofing materials where required.
 2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
 3. Space anchors as indicated, but not more than 16 inches o.c. vertically and 16 inches o.c. horizontally.

3.9 ANCHORING MASONRY VENEERS

- A. Anchor masonry veneers to wall framing and concrete and masonry backup with masonry-veneer anchors to comply with the following requirements:
1. Fasten screw-attached anchors through sheathing to wall framing and to concrete and masonry backup with metal fasteners of type indicated. Use two fasteners per anchor.
 2. All anchors shall be gasketed to reduce heat transfer to the metal studs.
 3. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
 4. Space anchors as indicated, 16 inches o.c. vertically and 16 inches o.c. horizontally, with not less than 1 anchor for each 1.77 sq. ft. of wall area, unless noted otherwise. Install additional anchors within 12 inches of openings and at intervals, not exceeding 8 inches, around perimeter.

3.10 CONTROL AND EXPANSION JOINTS

- A. General: Install control and expansion joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.
- B. Form control joints in concrete masonry as follows:
1. Construct joint with sash blocks spaced 3/8 inch apart, utilizing PVC shear key inserted in sash slots and 5/16 inch thickness hardboard strips to maintain spacing and to keep joint free of mortar. Remove hardboard strips after wall is laid up. Backer rod and caulking shall be provided under Division 07 Section "Joint Sealants".
 2. Locate joints as indicated on drawings but no greater than as indicated below:
 - a. Nominal 8 inches high by 16-24 inches long by 4 inches deep concrete masonry veneer at 20 feet on center maximum with (2) 0.114 (AWG) inch (9 ga.) stainless steel bars horizontal at 16 inches vertical.
 - b. Nominal 4 inches high by 12-24 inches long by 4 inches deep concrete masonry veneer at 10 feet on center maximum with (2) 0.114 (AWG) inch (9 ga.) stainless steel bars horizontal at 8 inches vertical.
 - c. Nominal 8 inch by 16 inch interior concrete masonry walls and concrete masonry installed as veneer backup on the exterior at 24 feet maximum on center. Reinforce walls as indicated.

3. Install bond breaker between courses of brick and concrete masonry veneer in wall where brick and concrete block are banded.

C. Form interior and exterior control joint (C.J.) in face brick as follows:

1. Construct joint with brick spaced 3/8 inch apart, utilizing 5/16 inch thickness hardboard strip to maintain spacing and to keep joint free of mortar. Remove hardboard strip after wall is laid up and insert compressible filler. Backer rod, and sealant shall be provided under Division 07; Section "Joint Sealants".
2. Locate joints as indicated on drawings or at 24 feet on center maximum distance.
3. Interior: Construct as detailed and dimensioned on drawings by laying in a strip of compressible filler compressed 50%. Compressible filler shall be full width of the interior wythe, but held back from the interior wall face a sufficient depth to allow for backer rod and sealant provided under Division 07 Section "Joint Sealants".
4. Exterior: Construct interior wythe with corner blocks spaced as indicated on drawings. Fill joint with compressible filler compressed 50%. Compressible filler shall be held back from interior face of wall a sufficient depth to allow for backer rod and sealant provided under Division 07 Section "Joint Sealants".

D. Expansion Joints

1. Refer to Division 07 Section "Expansion Control" for product and installation information related to expansion joints in masonry walls.

E. Provide horizontal, pressure-relieving joints by inserting a compressible filler of width required for installing sealant and backer rod specified in Section 079200 "Joint Sealants," but not less than 3/4 inch (19.05 mm).

1. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.

3.11 LINTELS

- A. Install steel lintels where indicated.
- B. Provide masonry lintels where shown and where openings of more than 8 inches for brick-size units and 16 inches for block-size units are shown without structural steel or other supporting lintels.
- C. Provide minimum bearing of 8 inches at each jamb unless otherwise indicated.
- D. The edge of lintels shall be a minimum 12 inches from nearest control joint.

3.12 FLASHING, WEEP HOLES, CAVITY DRAINAGE, AND VENTS

- A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated.
- B. Install flashing as follows unless otherwise indicated:
 1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed

- of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or as recommended by flashing manufacturer.
2. At masonry-veneer walls, extend stainless steel flashing through veneer, across air space behind veneer, and up face of sheathing at least 8 inches; with upper edge secured with fasteners to structural substrate and tucked under air and vapor barrier (AVB) self-adhering transition, lapping the full 8 inches. Fasten upper edge of flexible flashing to sheathing through termination bar.
 3. At lintels and shelf angles, extend flashing a minimum of 6 inches into masonry at each end. At heads and sills, extend flashing 6 inches at ends and turn up not less than 2 inches to form end dams.
 - a. Install backer rod and butyl sealant beneath stainless steel flashing.
 4. Install stainless steel flashing termination at exterior face of wall. Stop flexible flashing 1/2 inch back from outside face of wall and adhere flexible flashing to top of stainless steel flashing termination.
 - a. Install two (2) rows of butyl sealant beneath stainless steel flashing.
 5. Flashings shall be turned up and dammed at expansion joints and sealed to joint material to assure a watertight installation.
 6. Flashing splices: Splice stainless steel flashing over minimum 6 inch wide splice plate below. Splice plate shall have a minimum of two 1/2 inch beads each side of joint. Joint shall be tight. Use non-curing butyl sealant; refer to Division 07 Section "Joint Sealants" for acceptable products.
- C. Install reglets and nailers for flashing and other related construction where they are shown to be built into masonry.
- D. Install weep holes in head joints in exterior wythes of first course of masonry immediately above embedded flashing and as follows:
1. Use specified weep/vent products to form weep holes.
 2. Space weep holes 24 inches o.c. unless otherwise indicated.
 3. Offset weep holes from vents below, where applicable.
- E. Place cavity drainage material in cavities to comply with configuration requirements for cavity drainage material in "Miscellaneous Masonry Accessories" Article.
- F. Install vents in head joints in exterior wythes at spacing indicated. Use specified weep/vent products to form vents.
1. Close cavities off vertically and horizontally with blocking in manner indicated. Install through-wall flashing and weep holes above horizontal blocking.

3.13 FIELD QUALITY CONTROL

- A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas, as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

- B. Inspections Special inspections according to Level B in TMS 402/ACI 530/ASCE 5.
 - 1. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
 - 2. Place grout only after inspectors have verified proportions of grout.
- C. Testing Prior to Construction: One set of tests.
- D. Testing Frequency: One set of tests for each 5000 sq. ft. of wall area or portion thereof with a minimum of three tests.
- E. Clay Masonry Unit Test: For each type of unit provided, according to ASTM C67 for compressive strength.
- F. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C140 for compressive strength.
- G. Mortar Test (Property Specification): For each mix provided, according to ASTM C780. Test mortar for mortar air content and compressive strength.
- H. Grout Test (Compressive Strength): For each mix provided, according to ASTM C1019.

3.14 REPAIRING, POINTING, AND CLEANING

- A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.
- B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.
- C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.
- D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
 - 1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
 - 2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
 - 3. Protect adjacent stone and non-masonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
 - 4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
 - 5. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.
 - 6. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.

3.15 MASONRY WASTE DISPOSAL

- A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.
- B. Excess Masonry Waste: Remove excess clean masonry waste that cannot be recycled, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION 04 20 00

SECTION 05 12 00 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

1.2 WORK INCLUDED IN THIS SECTION

- A. Work of this section consists of furnishing, fabricating, delivering, and erecting structural steel complete as required by drawings.
- B. Material furnished under this section shall include, but not be limited to the following:
 - 1. Steel superstructure including column anchor bolts, column base plates, columns, beams, girders, bearing plates, connection plates, shear studs, angles, bracing, permanent field bolts, welding, and detail material required to complete the job.
 - 2. Cleaning, preparation, priming, and field touch-up painting is included.
 - 3. Anchors and other anchorage devices embedded in concrete and masonry as shown on the structural drawings and as specified herein.
 - 4. Grout for column base plates and beam bearing plates.

1.3 RELATED WORK SPECIFIED ELSEWHERE

- A. Adhesive Anchors (Section 03 25 00)
- B. Steel Decking (Section 05 31 00)

1.4 QUALITY ASSURANCE

- A. Reference Standards:
 - 1. Some products and execution are specified in this section by reference to published specifications or standards of the following (with respective abbreviations used):

American Institute of Steel Construction (AISC)
The American Society for Testing and Materials (ASTM)
American Welding Society (AWS)
Steel Structures Painting Council (SSPC)
 - 2. Standard References:
 - a. The current edition of the following references shall apply to work of this section. Suffixes indicating date of issue are omitted from reference numbers used in the text of this section.
 - b. Publications of AISC:
 - (1) "Code of Standard Practice for Steel Buildings and Bridges".

- (2) "Specifications for Design, Fabrication and Erection of Structural Steel for Buildings", including "Commentary", and supplements thereto.
 - (3) "Specifications for Structural Joints using ASTM A325 or A490 Bolts" approved by Research Council on Riveted and Bolted Structural Joints of the Engineering Foundation (except high strength A490 bolts are to be tightened to a tension value of 28,000 pounds and A498 bolts to a tension value of 49,000 pounds in any connections other than bearing type connections.).
- c. Publications of ASTM: ASTM A6 - "General Requirements for Delivery of Rolled Steel Plates, Shapes, Sheet Piling and Bars for Structural Use".
 - d. Publications of AWS: AWS D1.1 - "Structural Welding Code".
3. Manufacturer's Specifications: Any material or operation specified by reference to published specification of a manufacturer shall comply with requirements of latest edition of standards listed herein. In case of conflict between reference specification and contract document, the contract documents shall govern.

B. Source Quality Control:

1. Materials and fabrication procedures shall be subject to inspection and tests in mill, shop, and at project. Test shall be conducted by a qualified inspection agency provided by Owner.
2. Such inspections and tests shall not relieve Contractor of responsibility for providing materials and fabrication procedures in compliance with specified requirements.
3. Promptly remove and replace materials or fabricated components which do not comply with requirements of contract documents.
4. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated as AISC-Certified Erector, Category ACSE, CSE.

C. QUALIFICATIONS OF THE FABRICATOR: The Fabricator of all structural steel shall have the following qualifications:

1. The Fabricator shall have been in the steel fabrication business no less than 10 years and have successful prior experience as the principal structural steel fabricator on projects of similar design and complexity as this project.
2. The Fabricator shall submit upon request a list of at least three (3) projects which demonstrate sufficient prior experience. The list shall include project name, location, date, Owner's name, name and phone number of the Owner's Representative, and a description of the steel framing system.

3. The Fabricator shall have sufficient production capacity and quality control programs in place to meet the proposed project schedule with work which meets the requirements of the Contract Documents.
4. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD.

D. Qualification for Welding Work:

1. Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedure".
2. At Contractor's expense, provide certification to the Engineer that welders to be employed in the work have satisfactorily passed AWS qualification tests within the previous 12 months prior to the start of work.
3. If recertification of welders is required, retesting shall also be Contractor's responsibility.
4. Welders shall be able to produce certification cards at jobsite on demand.

E. Design Criteria for Members and Connections:

1. Details shown on drawings are generally typical. Similar details shall apply to similar conditions, unless indicated otherwise. Verify dimensions at the site without causing delay in work.
2. Promptly notify Engineer whenever design of members and connections for any portion of the structure are not indicated clearly.
3. Fabricator is to design any connections not specifically detailed on drawings. Submit design for Engineer's approval. Design shall be in accordance with latest AISC Specifications and the North Carolina State Building Code and shall support the design load. Connection designs shall include specifics including weld length, size, location, etc. and shall be clearly indicated on the shop drawings. Calculations for the design of connections shall be provided for standard connections for reference, for all atypical connections and at the request of the Engineer.

1.5 SUBMITTALS

A. LEED Submittals:

1. Product Data: For products having recycled content, documentation including percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data: For products being extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site. Include statement indicating cost for each product considered as a regional material.

B. Shop Drawings:

1. Submit shop drawings of all fabricated materials to be furnished and delivered to the site. Erection drawings to locate and identify members shall accompany shop drawings. Do not use copies of contract drawings to produce shop drawings.
2. Submit copies of each shop and erection drawing sheet of the shop drawings.
3. Show details and schedules for fabrication and shop assembly of members. Show details, schedules, procedures, and diagrams indicating sequence of erection. The sequence of erection must be coordinated with and take into consideration the event schedule of the facility as provided in the specifications.
4. Wherever possible, details and sections shown on shop drawings shall be identified by use of same marks used on contract drawings.
5. Show details of cuts, connections, camber, holes, and other pertinent data. Indicate welds by standard AWS symbols; show size, length, and type of each weld.
6. Provide setting drawings, templates, and directions for the installation of anchor bolts and other anchorages to be installed by others.
7. Only complete shop drawings which are checked and stamped "Approved by Contractor" will be accepted for review.

C. Product Data and Manufacturer's Printed Installation Instructions: Submit (in triplicate) the following for review by Project Engineer:

1. Laboratory test reports or other data as required to show compliance with contract documents of the following:
 - a. Structural steel (each type), including certified copies of mill reports covering the chemical and physical properties for record only.
 - b. High-strength bolts (each type), including nuts and washers.
 - c. Unfinished bolts and nuts.
 - d. Welding electrodes
 - e. Grout for column base plates
2. Submit manufacturer's specifications and installation instructions of the following:
Shop paint for structural steel.
3. Indicate by transmittal form that a copy of each applicable instruction has been distributed to fabricators, installers, and erectors.

- D. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1/D1.1M, "Structural Welding Code - Steel", for each welded joint whether prequalified or qualified for testing, including the following:
 - 1. Power source (constant current or constant voltage).
 - 2. Electrode manufacturer and trade name, for demand critical welds.
- E. Qualification Data: For qualified installer fabricator.
- F. Welding Certificates.
- G. Sustainable Design Submittals:
 - 1. Product Data for Sustainable Design Credit: For products having recycled content, documentation indicating percentages by weight of postconsumer and pre-consumer recycled content. Include statement indicating costs for each product having recycled content.

1.6 DELIVERY, HANDLING, AND STORAGE

- A. Deliver materials to site at such intervals as to ensure uninterrupted progress of work.
- B. Store materials in an arrangement and manner that will permit easy access for inspection and identification. Keep steel members off ground, using pallets, platforms, or other supports. Protect steel members and packaged materials from mud, corrosion, and deterioration.
- C. Protect steel members stored on the job site from extended periods of exposure that might result in corrosion or deterioration. Dunnage, skids, etc. are to be used in shipping, storage, etc. Members are not to be placed in direct contact with the ground or moisture during any phase of storing and handling.
- D. Store members on skids to prevent contact with the ground.
- E. Store and handle steel members to prevent distortions that would result in damage to the members. Nylon slings for handling are required.

1.7 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturer's recommendations to ensure that shop primers and topcoats are compatible with one another. Coordinate steel surfaces to receive spray on fireproofing with spray on fireproofing manufacturer.
- B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 90 percent.
- B. Regional Materials: Products to be used in the creation of the concrete mixes for the project shall be extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site. Provide a minimum of 20 percent of the products that qualify as Regional Materials.
- C. Rolled Steel Plates, Shapes, and Bars: W-shapes and WT-shapes, ASTM A992 or A572, $F_y=50$ ksi. All other ASTM A36, $F_y=36$ ksi.
- D. Rectangular and Square Cold-Formed Steel Tubing: ASTM A500, Grade B; $F_y = 46$ ksi.
- E. Round Cold-Formed Steel Tubing: ASTM A500, Grade C; $F_y = 46$ ksi.
- F. Steel Pipe: ASTM A53, Type E, Non Tested, Grade B; $F_y = 35$ ksi.
 - a. Weight Class: Standard, Extra Strong, Double-Extra strong as indicated in drawings.
 - b. Finish: Black except where indicated to be galvanized
- G. Anchor Bolts/rods: ASTM F1554, GR 55.
- H. High-Strength Threaded Fasteners: Heavy hexagon bolts, nuts, and hardened washers complying with ASTM A325 unless otherwise noted.
- I. Electrodes for Welding: Comply with AWS Code, ASTM A233-E70 Series electrodes.
- J. Unfinished Threaded Fasteners: ASTM A-307, Grade A, regular low carbon steel bolts and nuts.
- K. Headed Stud Type Shear Connectors: ASTM A-108 Grade 1015 or 1020, cold finished carbon steel with dimensions complying with AISC Specifications.
- L. Corrosion-Resisting Cold-Formed Hollow Structural Sections: ASTM A 847, structural tubing
- M. Steel Castings: ASTM A 216, Grade WCB with supplementary requirement S11.
- N. Steel Forgings: ASTM A668

O. Shop Coating System:

Shop Primer:

1. All unexposed steel shall receive a SSPC Paint 25, Type II, zinc oxide, alkyd, linseed oil primer. All other exposed steel (Including Lintels): Hot dip galvanized or equivalent zinc-rich primer, if approved.
 2. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:
 3. SSPC-SP 2, "Hand Tool Cleaning."
 4. SSPC-SP 3, "Power Tool Cleaning."
 3. Total dry film thickness shall be not less than 3.0 mils. Allow final coat to dry to thumbnail hardness before transporting. Paint within 10 hours of cleaning and before there is visible rust.
- P. Nonmetallic: Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, non-corrosive and non-staining, mixed with water to consistency suitable for application and a 30-minute working time.
- Q. Asphaltic type paint for application as noted herein (Field Painting, Section 3.03).

2.2 FABRICATION

A. Shop Fabrication and Assembly:

1. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC's "Code of Standard Practice for Steel Buildings and Bridges" and AISC 360.
 1. Camber structural steel members where indicated.
 2. Fabricate beams with rolling camber up.
 3. Identify high-strength structural steel according to ASTM A6 and maintain markings until structural steel has been erected.
 4. Mark and match-mark materials for field assembly.
 5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.
2. Properly mark and match-mark materials for field assembly. Fabricate for delivery in sequence which will expedite erection and which will minimize field handling of materials.
3. Exposed Structural Steel: Members that are exposed to view and highly visible shall be designated on plan as AESS in accordance with AISC standards. AESS framing shall meet or exceed the requirements and tolerances set forth by AISC and shall have radiused edges and corners and shall have finished surfaces free of defects which would impair a smooth, uniform appearance in the completed structure. Where finishing is required, complete the assembly, including welding

of units, before start of finishing operations. Provide finish surfaces of members (exposed in final structure) free of markings, burrs, non-radiused copes, and other defects.

4. Members shall be free from twists, kinks, or open joints and shall be made that when assembled the parts shall come together without shimming.

B. Connections:

1. Weld or bolt shop connections, as indicated.
2. Bolt field connections, except where welded connections or other connections are indicated. Provide high-strength, threaded fasteners for all bolted connections.

C. High-Strength Bolted Construction: Install high-strength threaded fasteners in accordance with AISC "Specifications for Structural Joints" using ASTM A325 Bolts or A490, Type "N", unless otherwise noted on drawings. Provide high strength bolts for all connections except column anchor bolts. Tighten 3/4" diameter high strength bolts to 28,000 pounds tension in "slip critical" connections and braced frame connections. Bearing type connections shall be snug tight.

D. Welded Construction: Comply with AWS Code D1.1 for procedures, appearance, and quality of welds; and for methods used in correcting welding work.

1. Assemble and weld built-up sections by methods which will produce true alignment of axis without warp.
2. All surfaces of structural steel to which welds shall be applied shall be power tool cleaned for a minimum distance of two inches around the weld, removing all dust, oil, rust, or other substances which may inhibit weld fusion, leaving a clean, shiny, metal surface. Omit painting from surfaces to be welded.
3. Welds exposed to view in the completed structure shall be ground smooth.

E. Holes in Structural Steel:

1. Holes required for securing other work to structural steel framing will not be allowed.
2. Cut, drill, or punch holes perpendicular to metal surfaces. Do not flame-cut holes or enlarge holes by burning. Drill holes in bearing plates.
3. Under no circumstances shall holes or cuts be made in structural steel members in the field, unless specifically directed by the designer.

F. Measurements:

1. The dimensions and location of all members are indicated on the drawings, sections and details, all which are believed to be correctly shown; but the fabricator and Contractor shall verify by field measurements all dimensions and elevations

for both new and existing construction prior to beginning detailing or fabrication of the structural steel.

2. The Contractor shall field verify dimensions and elevations and shall notify the Engineer and steel fabricator of any discrepancies from the plan dimensions and elevations prior to continuing with work.
- G. Embedded Shapes: Steel angles, plates, and other steel shapes which are embedded in concrete in a exposed condition, including masonry lintels, shall be hot dip galvanized in accordance with ASTM A153 with a minimum coating weight of 1.50 oz./sq.ft.
- H. Stud Connectors and Anchor Studs:
1. All studs shall be end welded with automatically timed stud welding equipment in accordance with manufacturer's recommendations.
 2. When two or more stud welding guns are operated from the same power source, they shall be interlocked so that only one gun can be operated at a time, and so that the power source has fully recovered from making one weld before another weld is started.
 3. The structural member receiving the stud shall not be painted prior to welding.
 4. Surfaces to which studs are to be welded shall be free of rust, scale, or other injurious materials as required to obtain satisfactory welds.
 5. Surfaces shall be dry.
 6. Studs, after welding, shall be free from any defect or substance that would interfere with their intended function. If after welding visual inspection reveals that a sound weld or a full 360 degree fillet has not been obtained from a particular stud, stud is to be replaced. Studs at each end of each member shall be struck with a hammer and bent 15 degrees off perpendicular to the beam. Studs failing this test shall be replaced.

2.3 SHOP PAINTING

- A. General Requirements for Shop Painting:
1. Do not paint surfaces which will be field welded, concrete encased, fireproofed, galvanized or are part of "slip critical" bolted connections.
 2. Coordinate painting requirements with manufacturer of fireproofing material on all surfaces to receive fireproofing. Steel members to be fireproofed should not be primed or painted, unless otherwise noted by the fireproofing manufacturer.
 3. Paint all other surfaces.
- B. Surface Preparation:

1. After inspection, and before shop priming, clean steelwork to be painted. Remove loose rust, oil, grease, loose mill scale, and splatter, slag, flux deposits, etc.
2. Clean unexposed steel in accordance with SSPC Specification SP-2, "Hand Tool Cleaning". Clean exposed steel in compliance with SSPC- SP6, "Commercial Blast Cleaning". Provide radius on edges and corners of exposed steel.
3. All sharp and rough edges are to be ground round. Avoid oil deposits that would require solvent cleaning, blast and prime all contact surfaces before shop bolting or welding. Blast clean all shop bolting or welding. Blast clean all shop and field bolts and bolt heads. Painting equipment is to be kept clean. Avoid contamination of the coating system. Insure that entire surface receives at least the minimum coverage.

C. Painting:

1. Immediately after surface preparations, apply shop paint in accordance with manufacturer's printed instructions, and at a rate to provide a uniform dry-film thickness specified hereinbefore.
2. Use painting methods which will result in full coverage of joints, corners, edges, and all surfaces.

2.4 GALVANIZING

- A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123.
1. Galvanize lintels, shelf angles, steel members exposed to the exterior (such as, but not limited to, mechanical equipment supports or solar array frames) or to corrosive environments, as shown on the drawings, and all other steel members attached to structural-steel frame located in exterior walls.

2.5 SOURCE QUALITY CONTROL

- A. Testing Agency: Owner will engage an independent testing and inspecting agency to perform shop tests and inspections and prepare test reports.
1. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.
- B. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.
- C. Bolted Connections: Shop-bolted connections will be inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
- D. Welded Connections: In addition to visual inspection, shop-welded connections will be tested and inspected according to AWS D1.1 and the following inspection procedures, at testing agency's option:

1. Liquid Penetrant Inspection: ASTM E 165.
 2. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
 3. Ultrasonic Inspection: ASTM E 164.
 4. Radiographic Inspection: ASTM E 94.
- E. In addition to visual inspection, shop-welded shear connectors will be tested and inspected according to requirements in AWS D1.1 for stud welding and as follows:
1. Bend tests will be performed if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
 2. Tests will be conducted on additional shear connectors if weld fracture occurs on shear connectors already tested, according to requirements in AWS D1.1.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Erector shall examine areas and conditions under which structural steel shall be installed.
- B. Erector shall notify Engineer and Contractor (in writing) of conditions detrimental to proper and timely completion of the work.
- C. Do not proceed with the work until unsatisfactory conditions have been corrected in a manner acceptable to erector.

3.2 ERECTION

- A. Surveys: The Contractor shall use qualified personnel to lay out, locate and set correct elevations on all members. A registered surveyor is required for the layout of column anchor bolt settings. Field verification of all existing conditions shall be performed by the erector prior to installation of any work for comparison with the shop drawings, contract drawings and the existing conditions. Notify the Engineer immediately of any discrepancies that exist between the final locations and plan locations.
- B. Field Assembly:
 1. Set structural members accurately to lines and elevations indicated. Align and adjust the various members forming a part of a complete frame or structure before permanently fastening. Erection is to be in compliance with AISC, Code of Standard Practice for Steel buildings and Bridges, unless otherwise noted.
 2. Clean bearing surfaces and other surfaces which will be in permanent contact before assembly.
 3. Perform necessary adjustments to compensate for discrepancies in elevations and alignment. Level and plumb individual members of the structure within specified AISC tolerances.

4. Splice members only where shown or specified. No splice or other connection welded or otherwise shall be made without having been detailed on shop drawings or permitted in writing by the Engineer.
5. On exposed welded construction, remove erection bolts, fill holes and plug welds, and grind smooth at exposed surfaces.
6. Comply with AISC Specifications for bearing, adequacy of temporary connections, alignment, and removal of paint on surfaces adjacent to field welds.
7. No permanent bolting or welding shall be done until structure has been properly aligned and plumbed.
8. Do not enlarge unfair holes in members by burning or by use of drift pins, except in secondary bracing members. Ream holes that must be enlarged to admit bolts with approval of Engineer.
9. Unless specifically identified on the Drawings, standard connections shall be designed as snug tight connections. Fasteners shall be tightened in properly aligned holes. When slip critical joints or pretensioned bolts are required, tighten bolts to the minimum tension specified. Tightening shall be by the turn of the nut procedure or other approved method. Provide hardened washers under all elements to be turned.
10. Gas Cutting:
 - a. Do not use gas cutting torches in the field for correcting fabrication errors in structural framing.
 - b. Finish gas-cut sections equal to a sheared appearance when permitted. This includes cutting with saws, grinding and touch up painting, as required to remove any rough edges, burrs, or other stress risers.
11. The erector shall establish permanent bench marks as shown and as necessary for the accurate erection of the structural steel. Check elevations of concrete and masonry bearing surfaces. The erector shall report measurement or elevation discrepancies to the Contractor. Do not proceed with erection until discrepancies have been corrected or until adjustments to the structural steel work have been agreed upon by the Engineer.
12. Temporary Shoring and Bracing: Provide temporary shoring and bracing members as required, with connections of sufficient strength to support imposed loads. Remove temporary members and connections when permanent members are in place and final connections are made. Provide temporary guy lines to achieve proper alignment of the structures as erection proceeds.
13. Anchor Bolts:
 - a. Furnish anchor bolts and other connectors required for securing structural steel to in-place work.

- b. Utilize templates and other devices as necessary for presetting bolts and other anchors to accurate locations.

14. Setting Bearing and Base Plates:

- a. Clean concrete and masonry bearing surfaces of bond-reducing materials and roughen to improve bond to surfaces. Clean the bottom surface of base and bearing plates.
- b. Set loose and attached base plates and bearing plates for structural members on wedges, or other adjustable devices where specified.
- c. Tighten the anchor bolts after the supported members have been positioned and plumbed. Do not remove wedges or shims; but if protruding, cut off flush with the edge of base or bearing plate prior to packing with mortar.
- d. Mix bedding mortar in strict accordance with the manufacturer's instructions.
- e. Pack or pour bedding mortar solidly around bearing surfaces and bases of plates to ensure that no voids remain. Finish exposed surfaces, protect installed materials, and cure in strict compliance with manufacturer's instructions, or as otherwise required.

15. Field Connections:

- a. High-strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.
- b. Weld Connections: Comply with AWS D1.1 and AWS D1.8 for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.
 - 1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
 - 2. Remove backing bars or runoff tabs, back gouge, and grind steel smooth.
 - 3. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC's "Code of Standard Practice for Steel Buildings and Bridges" for mill material.

C. Touch-up Painting:

- 1. After erection of structural steel, all dirt, grease, film or any other stains shall be thoroughly cleaned from all surfaces. All areas where the shop coat of paint has

been scratched or damaged, all bolts and all welded areas shall be thoroughly cleaned and sanded to bare metal and painted, using the same type paint as was used for the shop coat.

2. The touch-up shall be applied to the top flanges of the structure prior to the installation of the metal roof deck.

3.3 FIELD PAINTING

1. Field paint below-grade surfaces and with asphalt type paint.
2. Field paint un-galvanized steel surfaces exposed in cavity behind masonry veneer with asphaltic type paint.
3. Field paint columns below finished floor elevation with asphaltic type paint.

3.4 FIELD QUALITY CONTROL

- A. The Owner will engage an independent testing agency or engineer to inspect high-strength bolted connections and welded connections, and to perform tests and prepare test reports. Contractor shall coordinate testing.
- B. Testing Program:
 1. Testing agency shall conduct and interpret tests as subsequently required herein, shall state in each report whether test specimens comply with requirements, and shall specifically state any deviations. Visual inspection of typical bearing type bolted shear connections and single-pass fillet welds shall be performed by the engineer.
 2. Shop and Field Welding: Inspect and test during fabrication and erection of structural steel assemblies in accordance with AWS D1.1 Structural Welding Code and as follows:
 - a. Conduct inspections and tests as required. Record types and locations of all defects found in the work. Record work required and performed to correct deficiencies.
 - b. Perform visual inspection of all welds.
 - c. 100% of full penetration and partial penetration welds shall be subjected to and satisfy the requirements of ultrasonic testing in accordance with ASTM E 164, unless otherwise specified.
 - d. 10% of fillet welds shall be subjected to and satisfy the minimum requirements of magnetic particle testing and weld gauge measurement, unless otherwise specified. The welds shall be selected by the Engineer of Record and the testing agency.

- e. Perform additional tests to reconfirm any noncompliance of the original work and as may be necessary to show compliance of corrected work. Retesting of non-compliant work will be at contractor's expense.
3. Bolted Connections: The laboratory will test with a torque wrench high strength bolts for proper tightening in accordance with AISC, as follows:
- a. Visually inspect all bolts and bolted connections.
 - b. Test 10% of all bolts to be tensioned for proper tightening. All bolts that fail shall be corrected and retested.
 - c. Perform additional tests to reconfirm any non-compliance of the original work and as may be necessary to shown compliance of corrected work. Retesting of non-compliant work will be at contractor's expense.
 - d. Correct conditions in the Work that test reports and inspections do not comply with the Contract Documents.

C. Cooperation of Contractor with Testing Agency:

- 1. Provide access for testing agency to places where structural steel work is being fabricated or produced so that required inspection and testing can be accomplished as required by Designer.
- 2. Contractor shall assist testing laboratory by providing access to all bolts and welds to be inspected.

3.5 CORRECTION OF WORK

- A. Correct deficiencies in structural steel work which inspections and laboratory test reports have indicated to not be in compliance with requirements and at no additional expense to Owner.
- B. Additional testing as required for inspection of corrected work shall be at Contractor's expense.

END OF SECTION 05 12 00

SECTION 05 12 13 - ARCHITECTURALLY EXPOSED STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes

1. Architecturally exposed structural-steel (AESS).
2. Requirements in Division 05 Section "Structural Steel Framing" also apply to AESS.

- B. Related Requirements:

1. Division 05 Section "Structural Steel Framing" for additional requirements applicable to AESS.
2. Division 05 Section "Metal Fabrications" for steel lintels and shelf angles not attached to structural-steel frame, miscellaneous steel fabrications, and other metal items not defined as structural steel.
3. Division 09 Sections "Exterior Painting" and "Interior Painting" for surface preparation and priming requirements.

1.3 DEFINITIONS

- A. AESS: Structural steel designated as "architecturally exposed structural steel" or "AESS" in the Contract Documents.
- B. Category AESS 1: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 1 and may be designated AESS 1 or Category AESS 1 in the Contract Documents.
- C. Category AESS 2: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 2 and is designated as AESS 2 or Category AESS 2 in the Contract Documents.
- D. Category AESS 3: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 3 and is designated as AESS 3 or Category AESS 3 in the Contract Documents.
- E. Category AESS 4: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 4 and is designated as AESS 4 or Category AESS 4 in the Contract Documents.
- F. Category AESS C: Structural steel with custom characteristics that is categorized by ANSI/AISC 303, Section 10, as AESS C and is designated as AESS C or Category AESS C in the Contract Documents.

- G. SEAC/RMSCA Guide Specification: SEAC/RMSCA's "Sample Specification, Section 05 02 13: Architecturally Exposed Structural Steel."

1.4 COORDINATION

- A. Coordinate surface preparation requirements for shop-primed items.
- B. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

- A. Product Data:

1. Tension-control, high-strength, bolt-nut-washer assemblies.
2. Corrosion-resisting (weathering steel), tension-control, high-strength, bolt-nut-washer assemblies.
3. Filler.
4. Primer.
5. Galvanized-steel primer.
6. Etching cleaner.
7. Galvanized repair paint.

- B. Shop Drawings: Show fabrication of AESS components. Shop Drawings for structural steel may be used for AESS provided items of AESS are specifically identified and requirements below are met for AESS.

1. Identify AESS category for each steel member and connection, including transitions between AESS categories and between AESS and non-AESS.
2. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
3. Include embedment Drawings.
4. Indicate orientation of mill marks and HSS seams.
5. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain. Indicate grinding, finish, and profile of welds.
6. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections. Indicate orientation of bolt heads.
7. Indicate exposed surfaces and edges and surface preparation being used.
8. Indicate special tolerances and erection requirements.
9. Indicate weep holes for HSS and vent holes for galvanized HSS.

10. Indicate surface preparation, primer, and coating requirements, including systems specified in other Sections.

C. Samples: Submit Samples of AESS to set quality standards for exposed welds.

1. Two steel plates, 3/8 by 8 by 4 inches with long edges joined by a groove weld and with weld ground smooth.
2. Steel plate, 3/8 by 8 by 8 inches with one end of a short length of rectangular steel tube, 4 by 6 by 3/8 inches welded to plate with a continuous fillet weld and with weld ground smooth and blended.
3. Round steel tube or pipe, minimum 8 inches in diameter, with end of another round steel tube or pipe, approximately 4 inches in diameter, welded to its side at a 45-degree angle with a continuous fillet weld and with weld ground smooth and blended.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and fabricator.
- B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.8 QUALITY ASSURANCE

- A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category BU, or is accredited by the IAS Fabricator Inspection Program for Structural Steel (AC 172) and is experienced in fabricating AESS similar to that indicated on this Project.
- B. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category CSE, and is experienced in erecting AESS similar to that indicated on this Project.
- C. Shop-Painting Applicators: Qualified according to AISC's Complex Coating Endorsement P1 or SSPC-QP 3, "Standard Procedure for Evaluating Qualifications of Shop Painting Applicators."
- D. Mockups: Build mockups of AESS to set quality standards for fabrication and installation.
 1. Build mockup of typical portion of AESS as shown on Drawings.
 2. Coordinate painting requirements with Division 09 Sections "Exterior Painting" and "Interior Painting."
 3. Coordinate intumescent mastic fireproofing requirements with Division 07 Section "Intumescent Mastic Fireproofing."
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Use special care in handling AESS to prevent twisting, warping, nicking, and other damage during fabrication, delivery, and erection. Store materials to permit easy access for inspection and identification. Keep AESS members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.
 - 1. Do not store AESS materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.10 FIELD CONDITIONS

- A. Field Measurements: Where AESS is indicated to fit against other construction, verify actual dimensions by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Comply with requirements of ANSI/AISC 303, Sections 1 through 9 and as modified in Section 10, "Architecturally Exposed Structural Steel."

2.2 BOLTS, CONNECTORS, AND ANCHORS

- A. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F3125/F3125M, Grade F1852, Type 1, round-head assemblies, consisting of steel structural bolts with splined ends, ASTM A563, Grade DH, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.
 - 1. Finish: Mechanically deposited zinc coating.
- B. Corrosion-Resisting (Weathering Steel), Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F3125/F3125M, Grade F1852, Type 3, round-head assemblies, consisting of steel structural bolts with splined ends, ASTM A563, Grade DH3, (ASTM A563M, Class 10S3) heavy-hex carbon-steel nuts, and ASTM F436/F436M, Type 3, hardened carbon-steel washers.

2.3 FILLER

- A. Filler: Polyester bonding filler intended for use in repairing dents in automobile bodies.

2.4 PRIMER

- A. Primer: Comply with Division 09 Sections "Exterior Painting" and "Interior Painting."
- B. Primer: SSPC-Paint 23, latex primer.
- C. Primer: Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.
- D. Etching Cleaner for Galvanized Metal: A solution of acid (usually phosphoric) and detergents designed to remove grease and oil residue from metal surfaces and provide a clean, lightly etched surface intended to promote adhesion of subsequently applied coating(s).
 - 1. Basis of Design: Sherwin-Williams, Great Lakes, Clean'n Etch (899).
- E. Galvanizing Repair Paint: MPI#18, MPI#19, or SSPC-Paint 20.
- F. Shop Primer for Galvanized Steel: MPI#134, water-based galvanized metal primer.

2.5 FABRICATION

- A. Shop fabricate and assemble AESS to the maximum extent possible. Locate field joints at concealed locations if possible. Detail assemblies to minimize handling and to expedite erection.
 - 1. Use special care handling and fabricating AESS before and after shop painting to minimize damage to shop finish.
- A. Category AESS 1:
 - 1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 - 2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
 - 3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
 - 4. Make intermittent welds appear continuous, using filler or additional welding.
 - 5. Seal weld open ends of hollow structural sections with **3/8-inch** closure plates.
 - 6. Limit butt and plug weld projections to **1/16 inch**.
 - 7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
 - 8. Remove weld spatter, slivers, and similar surface discontinuities.
 - 9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
 - 10. Grind tack welds smooth unless incorporated into final welds.
 - 11. Remove backing and runoff tabs, and grind welds smooth.
- B. Category AESS 2:

1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
4. Make intermittent welds appear continuous, using filler or additional welding.
5. Seal weld open ends of hollow structural sections with 3/8-inch closure plates.
6. Limit butt and plug weld projections to 1/16 inch.
7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
8. Remove weld spatter, slivers, and similar surface discontinuities.
9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
10. Grind tack welds smooth unless incorporated into final welds.
11. Remove backing and runoff tabs, and grind welds smooth.
12. Limit as-fabricated straightness tolerance to one-half that permitted for structural-steel materials in ANSI/AISC 303.
13. Limit as-fabricated curved structural steel tolerance to that permitted for structural-steel materials in ANSI/AISC 303.
14. Limit as-fabricated straightness tolerance of welded built-up members to one-half that permitted by AWS D1.1/D1.1M.
15. Conceal fabrication and erection markings from view in the completed structure.
16. Make welds uniform and smooth.

C. Category AESS 3:

1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
4. Make intermittent welds appear continuous, using filler or additional welding.
5. Seal weld open ends of hollow structural sections with 3/8-inch closure plates.
6. Limit butt and plug weld projections to 1/16 inch.
7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
8. Remove weld spatter, slivers, and similar surface discontinuities.
9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
10. Grind tack welds smooth unless incorporated into final welds.
11. Remove backing and runoff tabs, and grind welds smooth.
12. Limit as-fabricated straightness tolerance to one-half that permitted for structural-steel materials in ANSI/AISC 303.
13. Limit as-fabricated curved structural steel tolerance to that permitted for structural-steel materials in ANSI/AISC 303.

14. Limit as-fabricated straightness tolerance of welded built-up members to one-half that permitted by AWS D1.1/D1.1M.
15. Conceal fabrication and erection markings from view in the completed structure.
16. Make welds uniform and smooth.
17. Cut out mill marks from mill material or hide these markings from view in the completed structure. Where neither method is possible, remove mill marks by grinding and filling surfaces as approved by Architect.
18. Grind butt and plug welds smooth or fill, removing weld splatter exposed to view.
19. Orient HSS seams as indicated or away from view.
20. Align and match abutting member cross sections.
21. At visible open joints of copes, miters, and cuts, maintain uniform clear gaps of **1/8 inch**. At closed joints, maintain uniform contact within **1/16 inch**.
22. Fabricate with exposed surfaces smooth, square, and of surface quality approved by Architect.

D. Category AESS 4:

1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
4. Make intermittent welds appear continuous, using filler or additional welding.
5. Seal weld open ends of hollow structural sections with **3/8-inch (9.5-mm)** closure plates.
6. Limit butt and plug weld projections to **1/16 inch (1.6 mm)**.
7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
8. Remove weld spatter, slivers, and similar surface discontinuities.
9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
10. Grind tack welds smooth unless incorporated into final welds.
11. Remove backing and runoff tabs, and grind welds smooth.
12. Limit as-fabricated straightness tolerance to one-half that permitted for structural-steel materials in ANSI/AISC 303.
13. Limit as-fabricated curved structural steel tolerance to that permitted for structural-steel materials in ANSI/AISC 303.
14. Limit as-fabricated straightness tolerance of welded built-up members to one-half that permitted by AWS D1.1/D1.1M.
15. Conceal fabrication and erection markings from view in the completed structure.
16. Make welds uniform and smooth.
17. Cut out mill marks from mill material or hide these markings from view in the completed structure. Where neither method is possible, remove mill marks by grinding and filling surfaces as approved by Architect.
18. Grind butt and plug welds smooth or fill, removing weld splatter exposed to view.
19. Orient HSS seams as indicated or away from view.
20. Align and match abutting member cross sections.
21. At visible open joints of copes, miters, and cuts, maintain uniform clear gaps of **1/8 inch (3.2 mm)**. At closed joints, maintain uniform contact within **1/16 inch**.

22. Fabricate with exposed surfaces smooth, square, and of surface quality approved by Architect.
 23. Treat HSS seams to appear seamless.
 24. Contour and blend welds and weld transitions between members, removing splatter exposed to view.
 25. Fill surface imperfections with filler and sand smooth to achieve surface quality approved by Architect.
 26. Minimize weld show-through and distortion on the opposite side of exposed connections by grinding to a smooth profile aligned with adjacent material.
- E. Curved Members: Fabricate indicated members to curved shape by rolling to final shape in fabrication shop.
1. Distortion of webs, stems, outstanding flanges, and legs of angles shall not be visible from a distance of 20 feet (6 m) under any lighting conditions.
 2. Tolerances for walls of hollow steel sections after rolling shall be approximately 1/2 inch (13 mm).
- F. Coping, Blocking, and Joint Gaps: Maintain uniform gaps of **1/8 inch** with a tolerance of **1/32 inch** for Category 1 AESS.
- G. Bolt Holes: Cut, drill, CNC thermal cut, or punch standard bolt holes perpendicular to metal surfaces.
- H. Erection marks, painted marks, and other marks are permitted on galvanized-steel surfaces of completed structure.
- I. Cleaning Corrosion-Resisting Structural Steel: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
- J. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.
1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
 2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
 3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.6 SHOP CONNECTIONS

- A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A325 or A490 Bolts" for type of bolt and type of joint specified.
- B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

2.7 GALVANIZING

- A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A123/A123M.
1. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 2. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
 3. Galvanize lintels attached to structural-steel frame and located in exterior walls.

2.8 SHOP PRIMING

- A. Shop prime steel surfaces except the following:
1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of **2 inches**.
 2. Surfaces to be field welded.
 3. Surfaces to be high-strength bolted with slip-critical connections.
 4. Surfaces to receive sprayed fire-resistive materials.
 5. Corrosion-resisting (weathering) steel surfaces.
 6. Galvanized surfaces, unless indicated to be painted.
- B. Surface Preparation: Clean nongalvanized surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:
1. SSPC-SP 2, "Hand Tool Cleaning."
 2. SSPC-SP 3, "Power Tool Cleaning."
 3. SSPC-SP 7/NACE WAB-4, "Brush-off Blast Cleaning."
 4. SSPC-SP 14/NACE WAB-8, "Industrial Blast Cleaning."
 5. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."
 6. SSPC-SP 6/NACE WAB-3, "Commercial Blast Cleaning."
 7. SSPC-SP 10/NACE WAB-2, "Near-White Blast Cleaning."
 8. SSPC-SP 5/NACE WAB-1, "White Metal Blast Cleaning."
 9. SSPC-SP 8, "Pickling."
- C. Preparing Galvanized Steel for Shop Priming: After galvanizing, thoroughly clean steel of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.
- D. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of **1.5 mils**. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.
1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
 2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify, with steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
 - 1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.
- B. Examine AESS for twists, kinks, warping, gouges, and other imperfections before erecting.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Provide temporary shores, guys, braces, and other supports during erection to keep AESS secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.
 - 1. If possible, locate welded tabs for attaching temporary bracing and safety cabling where they will be concealed from view in the completed Work.
 - 2. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

- A. Take special care during erection to avoid marking or distorting the AESS and to minimize damage to shop painting. Set AESS accurately in locations and to elevations indicated and according to ANSI/AISC 303 and ANSI/AISC 360.
 - 1. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Take care to avoid any blemishes, holes, or unsightly surfaces resulting from the use or removal of temporary elements.
 - 2. Grind tack welds smooth.
 - 3. Remove backing and runoff tabs, and grind welds smooth.
 - 4. Orient bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
 - 5. Remove erection bolts in Category AESS 4 AESS, fill holes with weld metal or filler, and grind or sand smooth to achieve surface quality approved by Architect.
 - 6. Fill weld access holes in Category AESS 3 or AESS 4 pieces with weld metal or filler and grind, or sand smooth to achieve surface quality as approved by Architect.
 - 7. Conceal fabrication and erection markings from view in the completed structure.
- B. In addition to ANSI/AISC 303, Section 10 requirements, comply with the following.

1. Erection of Category AESS 1 and Category AESS 2:
 - a. Erect AESS to the standard frame tolerances specified in ANSI/AISC 303 for non-AESS.
 - b. Comply with AWS D1.1/D1.1M. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 - c. Remove weld spatter, slivers, and similar surface discontinuities.
 - d. Grind off butt and plug weld projections larger than **1/16 inch**.
 - e. Continuous welds shall be of uniform size and profile.
 - f. Ream holes that must be enlarged. Use of drift pins or burning is not permitted. Replace misaligned connection plates where holes cannot be aligned with acceptable appearance.
 - g. Splice members only where indicated on Drawings.
 - h. No torch cutting or field fabrication is permitted.

2. Erection of Category AESS 3:
 - a. Erect AESS to the standard frame tolerances specified in ANSI/AISC 303 for non-AESS.
 - b. Comply with AWS D1.1/D1.1M. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 - c. Remove weld spatter, slivers, and similar surface discontinuities.
 - d. Grind off butt and plug weld projections larger than **1/16 inch**.
 - e. Continuous welds shall be of uniform size and profile.
 - f. Ream holes that must be enlarged. Use of drift pins or burning is not permitted. Replace misaligned connection plates where holes cannot be aligned with acceptable appearance.
 - g. Splice members only where indicated on Drawings.
 - h. No torch cutting or field fabrication is permitted.
 - i. Weld profiles, quality, and finish shall be as approved by Architect.
 - j. Make joint welds, including tack welds, appear continuous by filling intermittent welds.

3. Erection of Category AESS 4:
 - a. Erect AESS to the standard frame tolerances specified in ANSI/AISC 303 for non-AESS.
 - b. Comply with AWS D1.1/D1.1M. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 - c. Remove weld spatter, slivers, and similar surface discontinuities.
 - d. Grind off butt and plug weld projections larger than **1/16 inch**.
 - e. Continuous welds shall be of uniform size and profile.
 - f. Ream holes that must be enlarged. Use of drift pins or burning is not permitted. Replace misaligned connection plates where holes cannot be aligned with acceptable appearance.
 - g. Splice members only where indicated on Drawings.
 - h. No torch cutting or field fabrication is permitted.
 - i. Weld profiles, quality, and finish shall be as approved by Architect.
 - j. Make joint welds, including tack welds, appear continuous by filling intermittent welds.

- k. Grind welds smooth.
- l. Minimize weld show-through and distortion on the opposite side of exposed connections by grinding to a smooth profile aligned with adjacent material.
- m. Oversize welds where ground, contoured, or blended, and grind to provide a smooth transition, matching profile approved by Architect.

3.4 FIELD CONNECTIONS

- A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A325 or A490 Bolts" for type of bolt and type of joint specified.
 - 1. Orient bolt heads in same direction for each connection and to maximum extent possible in same direction for similar connections.
- B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect AESS as specified in Division 05 Section "Structural Steel Framing." The testing agency is not responsible for enforcing requirements relating to aesthetic effect.
- B. Architect will observe AESS in place to determine acceptability relating to aesthetic effect.

3.6 REPAIRS AND PROTECTION

- A. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Grind steel smooth.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.
- C. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.
- D. Touchup Painting: Cleaning and touchup painting are specified in Division 09 Sections "Exterior Painting" and "Interior Painting."
- E. Touchup Priming: Cleaning and touchup priming are specified in Section 099600 "High-Performance Coatings."

3.7 AESS SCHEDULE

- A. AESS requirements shall be applied in accordance with the schedule below. Where requirements are indicated, these shall be considered minimum quality standards which may be exceeded in favor of more stringent requirements.

Location	Description	AESS Category
Interior	Structural steel in concealed locations	No AESS requirements; see Division 05 section "Structural Steel Framing" for finish requirements.
Interior	Visible structural steel within 10 feet of finished floor level	4
Interior	Visible structural steel greater than 10 feet above finished floor level	3
Exterior	Furnishings and miscellaneous metal installations	3
Exterior	Foul poles, lighting poles, and similar sports fixtures for the portion within 10 feet of grade	3

END OF SECTION 05 12 13

SECTION 05 31 00 - STEEL DECKING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Roof deck
 - 2. Acoustical cellular roof deck
 - 3. Composite floor deck
 - 4. Accessories including fasteners, closures, sump pans and pourstops
- B. Related Sections include the following:
 - 1. Section 032500 "Adhesive Anchors"
 - 2. Section 033000 "Cast-in-Place Concrete"
 - 3. Section 051200 "Structural Steel Framing".

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of deck, accessory, and product indicated.
- B. Shop Drawings: Show layout and types of deck panels, anchorage details, pans, cut deck openings and associated reinforcement, special jointing, accessories, and attachments to other construction.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of steel deck, signed by product manufacturer.
- B. Initial Certification Letter from Contractor's Professional Engineer: The Contractor's Professional Engineer shall submit a certification letter to the Architect and Owner prior to the submission of the Shop Drawings for the metal deck. No shop drawings will be reviewed by the Architect prior to the submission and acceptance of this certification letter. The certification letter shall include the following:
 - 1. Signature and seal of the registered Professional Engineer (registered in the State, Commonwealth or District in which the project is located).

2. Statement that all metal deck shop drawings (including all connections, components, openings, spans and capacities) have been prepared in accordance with the Contract Document requirements and under the direction of the Professional Engineer.
 3. Statement that the Professional Engineer's signature and seal shall appear on all metal deck shop drawings (including all connections, components, openings, spans and capacities).
- C. Welding certificates.
- D. Qualification Data:
1. Provide evidence that the structural steel fabricator has a minimum of five (5) years of experience in designing, detailing and fabricating projects constructed in the USA.
 2. Provide evidence that the structural steel erector has a minimum of five (5) years of experience in the installation of structural steel for similar projects constructed in the USA.
- E. Field quality-control test and inspection reports.
- F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that each of the following complies with requirements:
1. Powder-actuated mechanical fasteners
 2. Acoustical roof deck
- G. Research/Evaluation Reports: For steel deck.

1.5 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to AWS D1.3, "Structural Welding Code - Sheet Steel."
- B. Submit letter certifying that metal deck meets UL design certification number for fire ratings.
- C. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."
- D. FMG Listing: Provide steel roof deck evaluated by FMG and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings. Provide letter certifying that metal deck complies with FM Global requirements.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.
- B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

1.7 COORDINATION

- A. Coordinate installation of sound-absorbing insulation strips in topside ribs of acoustical deck with roofing installation specified to ensure protection of insulation strips against damage from effects of weather and other causes.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."
- B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Steel Deck Basis of Design: Vulcraft 3NPA-24
 - a. ASC Profiles, Inc.
 - b. Nucor Corp.; Vulcraft Division
 - c. Roof Deck, Inc.
 - d. United Steel Deck, Inc.
 - e. Verco Manufacturing Co.

2.3 ROOF DECK

- A. Steel Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 30, and with the following:
 1. Galvanized Steel Sheet: ASTM A653, Structural Steel (SS), Grade 33 minimum zinc coating.
 2. Galvanized and Shop-Primed Steel Sheet: ASTM A653, Structural Steel (SS), Grade 33 minimum, G90 zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.

3. Roof Deck Types
 - a. 1 ½ inch galvanized metal roof deck, 20 gauge, Type B.
 - b. 3 inch galvanized metal roof deck, 20 gauge, Type N.
4. Span Condition: Triple span or more.
5. Side Laps: #10 Screw fasteners as indicated or at 12" o/c max spacing.

2.4 ACOUSTICAL ROOF DECK

- A. Acoustical Steel Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 30, and with the following:

1. Galvanized Steel Sheet: ASTM A653, Structural Steel (SS), Grade 33 minimum zinc coating.
2. Galvanized and Shop-Primed Steel Sheet: ASTM A653, Structural Steel (SS), Grade 33 minimum, G90 zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: Gray top surface with white underside.
3. Acoustic Roof Deck Types
 - a. 3 inch galvanized cellular acoustic metal roof deck with bottom plate, 20 gauge, Type N Cellular Acoustic.
4. Span Condition: Triple span or more.
5. Side Laps: #10 Screw fasteners as indicated or at 12" o/c max spacing
6. Acoustical Perforations: Cellular deck units with manufacturer's standard perforated flat-bottom plate welded to ribbed deck.
7. Sound-Absorbing Insulation: Manufacturer's standard premolded roll or strip of glass or mineral fiber.
 - a. Factory install sound-absorbing insulation into cells of cellular deck.
 - b. Installation of sound-absorbing insulation is specified.
8. Acoustical Performance: NRC 0.80, tested according to ASTM C423.

2.5 COMPOSITE FLOOR DECK

- A. Composite Steel Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 30, with the minimum section properties indicated, and with the following:

1. Galvanized Steel Sheet: ASTM A53, Structural Steel (SS), Grade 33 minimum, zinc coating.
2. Galvanized and Shop-Primed Steel Sheet: ASTM A653, Structural Steel (SS), Grade 33 minimum, G60 zinc coating; with unpainted top surface and cleaned and pretreated bottom surface primed with manufacturer's standard gray or white baked-on, rust-inhibitive primer.
3. Composite Floor Deck Types

- a. 2 inch galvanized composite metal deck, 20 gauge.
4. Span Condition: Triple span or more.

2.6 ACCESSORIES

- A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.
- B. Mechanical Fasteners: Corrosion-resistant, low-velocity, powder-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws. All fasteners shall be driven flush and at 90 degrees to the metal deck support substrate.
- C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.
- D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.
- E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, not less than 20 gauge, of same material and finish as deck; of profile indicated or required for application.
- F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi and minimum 16 gauge, of same material and finish as deck, and of thickness and profile recommended by SDI Publication No. 30 for overhang and slab depth.
- G. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck, unless otherwise indicated.
- H. Uncoated steel sheet, shaped to fit deck rib, 0.0747 inch thick, with factory-punched hole of 3/8-inch minimum diameter.
- I. Recessed Sump Pans: Single-piece steel sheet, 14 gauge minimum, of same material and finish as deck, with 3-inch wide flanges and sloped recessed pans of 1-1/2-inch minimum depth. For drains, cut holes in the field.
- J. Flat Sump Plate: Single-piece steel sheet, 14 gauge minimum, of same material and finish as deck. For drains, cut holes in the field.
- K. Bearing Plates, Angles: ASTM A36 steel.
- L. Galvanizing Repair Paint: SSPC-Paint 20 or DOD-P-21035, with dry film containing a minimum of 94 percent zinc dust by weight.
- M. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

3.2 INSTALLATION, GENERAL

- A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 30, manufacturer's written instructions, and requirements in this Section.
- B. Take total responsibility to verify that the deck will support wet concrete loads and construction loads on the decking during and after installation. Provide, at no additional cost, any and all shoring required during concrete pouring and for other purposes consistent with concrete construction methods employed.
- C. Locate deck bundles to prevent overloading of supporting members.
- D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened.
 - 1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.
- E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.
- F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.
- G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work. Reinforce openings over 12 inches in size in accordance with structural framing details indicated on the drawings. Reinforce deck openings from 6 to 12 inches in size with 2x2x1/4 inch steel angles on each side of opening. Place angles perpendicular to flutes; extend minimum two flutes each side of opening and weld to deck.
- H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.
- I. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions. Fasteners shall have equivalent or greater working capacity than 5/8 inch diameter puddle welds for floor decks and 3/4 inch diameter for roof decks.

3.3 ROOF-DECK INSTALLATION

- A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches long, or screw fasteners and as follows.

1. Weld Diameter: 5/8 inch, nominal.
 2. Weld/Screw Spacing: Weld/screw edge and interior ribs of deck units with a minimum of two welds/screws per deck unit at each support. Space welds/screws 12 inches apart in the field of roof and 6 inches apart in roof corners and perimeter, unless otherwise indicated on the Drawings.
 3. Weld Washers: Install weld washers at each weld location.
- B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of 1/2 of the span or 24 inches, and as follows:
1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.
- C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 2 inches, with end joints lapped 2 inches minimum.
- D. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and flanges to top of deck. Space mechanical fasteners not more than 12 inches apart with at least one fastener at each corner.
- E. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld or mechanically fasten to substrate to provide a complete deck installation.
1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.

3.4 FLOOR-DECK INSTALLATION

- A. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:
1. Weld Diameter: 5/8 inch, nominal.
 2. Weld Spacing: Weld edge ribs of panels at each support. Space additional welds 12 inches on center.
 3. Weld Spacing: Space and locate welds as indicated.
 4. Weld Washers: Install weld washers at each weld location at decks 22 gage or less only.
- B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or 24 inches, and as follows:
1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.
- C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:
1. End Joints: Lapped.
- D. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations unless otherwise indicated.

- E. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.
- F. Pipes over 3 inches in diameter, mechanical units, or any point load in excess of 100 pounds shall not be supported by floor deck, regardless of concrete thickness above deck. Ductwork, ceiling and lights may be supported off floor deck provided the attachment is designed and supplied by the respective contractor.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Field welds will be subject to inspection.
- C. Testing agency will report inspection results promptly and in writing to Contractor and Architect.
- D. Remove and replace work that does not comply with specified requirements. Contractor shall be responsible for errors in fabrication and/or proper fitting of members shown on shop drawings.
- E. Additional inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.
- F. Replace units damaged during construction activity.

3.6 REPAIRS AND PROTECTION

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A780 and manufacturer's written instructions.
- B. Repair Painting: Wire brush and clean rust spots, welds, and abraded areas on both surfaces prime-painted deck immediately after installation, and apply repair paint.
 - 1. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.
 - 2. Wire brushing, cleaning, and repair painting of bottom deck surfaces are included in Division 09 Section.
- C. Repair Painting: Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Division 09 Section .
- D. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.
- E. Damaged and rough or unsightly work will be rejected by the Architect.

END OF SECTION 05 31 00

SECTION 05 40 00 - COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Exterior load-bearing wall framing
2. Interior load-bearing wall framing
3. Exterior non-load-bearing wall framing
4. Floor joist framing
5. Roof trusses
6. Roof rafter framing
7. Ceiling joist framing

- B. Related Sections include the following:

1. Division 04 Section "Unit Masonry"
2. Division 05 Section "Metal Fabrications" for masonry shelf angles and connections
3. Division 07 Section "Thermal Insulation"
4. Division 07 Section "Water Damage Class PB Exterior Insulation and Finish System (EIFS)"
5. Division 07 Section "Metal Wall Panels"
6. Division 07 Section "Joint Sealants"
7. Division 09 Section "Gypsum Board Systems" for interior non-load-bearing, metal-stud-framed assemblies

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of cold-formed metal framing product and accessory indicated.

- B. Shop Drawings: Provide shop drawings prepared by the cold-formed metal manufacturer.

1. Show layout, spacings, sizes, thicknesses, and types of cold-formed metal framing, fabrication, fastening and anchorage details, including mechanical fasteners.
2. Show reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
3. Submit signed and sealed Shop Drawings in accordance with Division 01 Section "Submittal Procedures".

4. Indicate unit locations, unit identification marks, fabrication details, reinforcement, connection details, pertinent dimensions, design loads, support points and tie backs.
5. The design shall be in accordance with the aesthetic design intent of the project with the Architect having final authority in reference to aesthetic matters.

C. Design Criteria

1. Conform to local and state codes.
2. Provision for Movements in Structural Frame: Detail metal stud curtain wall and supports to provide for movement in structural frames as indicated on the Drawings.
3. Structural Criteria
 - a. Support conditions for the metal stud curtainwall system shall be as indicated on the structural drawings.
 - b. Design to withstand the secondary architectural wind loads shown on the structural drawings.
 - c. Deflection of metal framing members in a direction normal to the plane of the wall shall not exceed $L/360$ of the clear span of member or 0.75 inch (19 mm), whichever is least.
 - d. Sheathing board shall be neglected for diaphragm action. Diagonal straps and bridging shall be designed to accommodate all loading conditions.
 - e. The metal stud curtainwall system shall be designed to support all exterior wall construction that is framed to the metal stud system, including the weight of that construction and any lateral forces transmitted from that construction to the metal stud curtainwall system.
 - f. Design for most stringent structural criteria listed above.
 - g. The metal stud curtainwall system shall be designed to support the horizontal load from snowdrift build-up and parapet wind loads as applicable.

1.4 INFORMATIONAL SUBMITTALS

A. Design Data for Delegated Design Elements

1. All design calculations, which shall bear the seal and signature of the cold-formed design engineer indicating compliance with the requirements of the design criteria and appropriate codes, shall be provided to the Architect concurrent with the submittal of shop drawings. Shop drawings submitted without corresponding Design Data will be returned as "Not Reviewed".

B. Welding certificates

C. Qualification Data:

1. For professional engineer
2. For testing agency
3. For fabricator
4. For erector

D. Submit manufacturer's literature for installation of materials specified.

- E. Product Test Reports: From a qualified testing agency, unless otherwise stated, indicating that each of the following complies with requirements, based on evaluation of comprehensive tests for current products:
 - 1. Steel sheet
 - 2. Expansion anchors
 - 3. Power-actuated anchors
 - 4. Mechanical fasteners
 - 5. Vertical deflection clips
 - 6. Horizontal drift deflection clips
 - 7. Miscellaneous structural clips and accessories
- F. Research/Evaluation Reports: For cold-formed metal framing.
- G. Initial Certification Letter from Delegated Design Professional
 - 1. Submit a letter of certification prepared by a Professional Structural Engineer (registered in the state where project is located) employed by the manufacturer certifying the following.
 - a. The aforementioned Engineer is fully experienced in the design of metal stud curtain wall systems.
 - b. All metal stud curtain wall system shop drawings (including all supports, connections and components) shall be prepared under the direction of the aforementioned engineer, in compliance with the Contract Document requirements and applicable building codes. His seal and signature shall appear on all shop drawings. The aforementioned shop drawings shall include sufficient information to enable the Architect to confirm that design loads, support points and tie backs are in compliance with the Architect's design criteria.
 - 2. This certification letter must be received by the Architect and Owner prior to the submission of the Shop Drawings for the metal stud curtain wall system and shall bear the seal and signature of the aforementioned engineer.

1.5 RECORD SUBMITTALS

- A. Final Certification Letter from Delegated-Design Professional: After construction of the metal stud curtainwall system is complete, submit a signed and sealed Certification Letter from the responsible design professional stating that the fabrication and installation of the delegated design elements have been performed in accordance with the Professional Engineer's design.

1.6 QUALITY ASSURANCE

- A. Qualifications for Fabricator and Erector:
 - 1. The fabricator shall have a minimum of 5 years of experience in the fabrication of metal stud curtain wall systems and shall have successfully fabricated a minimum of 5 projects similar to this project.

2. The erector shall have a minimum of 5 years of experience in the erection of metal stud curtain wall systems and shall have erected a minimum of 5 projects similar to this project.
- B. Delegated Design Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent.
 - C. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM E329 to conduct the testing indicated.
 - D. Product Tests: Mill certificates or data from a qualified independent testing agency, or in-house testing with calibrated test equipment indicating steel sheet complies with requirements, including base-steel thickness, yield strength, tensile strength, total elongation, chemical requirements, ductility, and metallic-coating thickness.
 - E. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code--Steel," and AWS D1.3, "Structural Welding Code--Sheet Steel."
 - F. AISI Specifications and Standards: Comply with AISI's S100 "North American Specification for the Design of Cold-Formed Steel Structural Members" and its S200 "Standard for Cold-Formed Steel Framing - General Provisions."

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Material shall be delivered in original unopened packages, fully identified as to manufacturer, brand or other identifying data, and bearing the proper Underwriters Laboratories, Inc., or other approved agency, labels for fire hazard and fire-resistance classification.
- B. Material shall be stored above ground, under cover and in a dry location until ready for use. All containers that have been exposed to water before use shall be found unsuitable for use and discarded. Stock of material is to be rotated and used prior to its expiration date.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Cold Formed Metal Panels:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ClarkDietrich, West Chester, Ohio.
 - b. Marino/Ware Industries, South Plainfield, New Jersey
 - c. The Steel Network, Inc.

2.2 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide cold-formed metal framing capable of withstanding design loads within limits and under conditions indicated. Refer to the structural drawings for general notes and for the required support conditions and connection types to the primary structure.
1. Design Loads: As indicated
 2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
 - a. Exterior Load-Bearing Wall Framing: Horizontal deflection of 1/240 of the wall height.
 - b. Interior Load-Bearing Wall Framing: Horizontal deflection of 1/240 of the wall height under a horizontal load of 5 lbf/sq. ft. (239 Pa).
 - c. Exterior Non-Load-Bearing Framing: Horizontal deflection of 1/240 of the wall height.
 - d. Floor Joist Framing: Vertical deflection of 1/480 for live loads and 1/360 for total loads of the span.
 - e. Roof Trusses: Vertical deflection of 1/240 of the span.
 - f. Ceiling Joist Framing: Vertical deflection of 1/240 of the span.
 3. Design framing systems to provide for movement of framing members without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F (67 deg C).
 4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:
 - a. Upward and downward movement of 1/2 inch.
 5. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.
- B. Cold-Formed Steel Framing Standards: Design according to AISI's "Standard for Cold-Formed Steel Framing – General Provisions."
1. Headers: Design according to AISI's "Standard for Cold-Formed Steel Framing - Header Design."
 2. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.
- C. Delegated Design: Design cold-formed metal-framing, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- D. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency acceptable to authorities having jurisdiction.

2.3 MATERIALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25%.
- B. Steel Sheet: ASTM A1003/A1003M, Structural Grade, Type H, metallic coated, of grade and coating weight as follows:
 - 1. Grade: As required by structural performance.
 - 2. Coating: G90 (Z275).
- C. Steel Sheet for Drift Clips: ASTM A653/A653M, structural steel, zinc coated, of grade and coating as follows:
 - 1. Grade: As required by structural performance.
 - 2. Coating: G90 (Z275).

2.4 LOAD-BEARING WALL FRAMING

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
 - 1. Minimum Base-Steel Thickness: 0.0538 inch (1.37 mm).
 - 2. Minimum Flange Width: 1-5/8 inches.
- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with straight flanges, and as follows:
 - 1. Minimum Base- Steel Thickness: Matching steel studs.
 - 2. Minimum Flange Width: 1-1/4 inches.
- C. Steel Box or Back-to-Back Headers: Manufacturer's standard C-shapes used to form header beams, of web depths indicated, punched, with stiffened flanges, and as follows:
 - 1. Minimum Base- Steel Thickness: 0.0538 inch.
 - 2. Minimum Flange Width: 1-5/8 inches.
- D. Steel Double-L Headers: Manufacturer's standard L-shapes used to form header beams, of web depths indicated, and as follows:
 - 1. Minimum Base- Steel Thickness: 0.0428 inch.
 - 2. Minimum Top Flange Width: 1-5/8 inches.

2.5 EXTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
 - 1. Minimum Base- Steel Thickness: 0.0538 inch.
 - 2. Minimum Flange Width: 1-5/8 inches.

- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:
 - 1. Minimum Base- Steel Thickness: 0.0538 inch.
 - 2. Minimum Flange Width: 1-1/4 inches.
- C. Vertical Deflection Clips: Manufacturer's standard clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.
- D. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure.

2.6 MISCELLANEOUS MATERIALS

- A. Galvanizing Repair Paint: ASTM A780.
- B. Cement Grout: Portland cement, ASTM C150, Type I; and clean, natural sand, ASTM C404. Mix at ratio of 1-part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.
- C. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, and plasticizing and water-reducing agents, complying with ASTM C1107, with fluid consistency and 30-minute working time.
- D. Shims: Load bearing, high-density multimonomer plastic, non-leaching.
- E. Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch (6.4 mm) thick, selected from manufacturer's standard widths to match width of bottom track or rim track members.
 - 1. Basis of Design: Subject to compliance with requirements, provide H-B, Inc.; NS – Closed Cell Neoprene Sponge, or approved equal.

2.7 FABRICATION

- A. Fabricate cold-formed metal framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.
 - 1. Fabricate framing assemblies using jigs or templates.
 - 2. Cut framing members by sawing or shearing; do not torch cut.
 - 3. Fasten cold-formed metal framing members by welding, screw fastening, clinch fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.
 - a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
 - b. Locate mechanical fasteners and install according to Shop Drawings, with screw penetrating joined members by not less than three exposed screw threads.

4. Fasten other materials to cold-formed metal framing by welding, bolting, or screw fastening, according to Shop Drawings.
- B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or permanent distortion.
 - C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet (1:960) and as follows:
 1. Spacing: Space individual framing members no more than plus or minus 1/8 inch (3 mm) from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
 2. Squareness: Fabricate each cold-formed metal framing assembly to a maximum out-of-square tolerance of 1/8 inch (3 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting substrates and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Install sealer gaskets to isolate the underside of wall bottom track or rim track and the top of foundation wall or slab at stud or joist locations at exterior non-gravity load bearing walls only.

3.3 INSTALLATION, GENERAL

- A. Cold-formed metal framing may be shop or field fabricated for installation, or it may be field assembled.
- B. Install cold-formed metal framing according to ASTM C1007, AISI's S200 "Standard for Cold-Formed Steel Framing - General Provisions" and to manufacturer's written instructions unless more stringent requirements are indicated.
- C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.
 1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch (1.6 mm).
- D. Install cold-formed metal framing and accessories plumb, square, and true to line, and with connections securely fastened.

1. Cut framing members by sawing or shearing; do not torch cut.
 2. Fasten cold-formed metal framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
 - a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
 - b. Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.
- E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.
- F. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.
- G. Do not bridge building expansion and control joints with cold-formed metal framing. Independently frame both sides of joints.
- H. Install insulation, specified in Division 07 Section "Thermal Insulation," in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.
- I. Install Cold Formed Framing at 16 inches on center maximum, or closer, as required by design requirements.
- J. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's standard punched openings.
- K. Erection Tolerances: Install cold-formed metal framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet (1:960) and as follows:
1. Space individual framing members no more than plus or minus 1/8 inch (3 mm) from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
 2. Tolerance shall be maintained to comply with the requirements of the Division 07 Section "Metal Wall Panel" manufacturer.

3.4 INSTALLATION

A. Stud System

1. Install tracks at floor and structure above and secure with power driven fasteners maximum spacing of 16 inches o.c. (medium duty). At track butt joints, securely anchor abutting pieces of track to a common structural element; reinforce joint with a section of stud nested in track and screw fastened at track flanges. Studs shall be one piece (no splicing), spaced 16 inches o.c. maximum, and shall extend from floor to within 1 inch of underside of structure. Fasten bottom of studs to track, one screw in each flange; do not fasten top of studs to secured top track. Interrupt top and bottom tracks at control joints. Where bottom

- track is set on concrete, provide 1/4 inch continuous compressible filler between track and concrete.
2. Provide double slip track at heads of all metal studs with deep leg tracks (2-1/2 inch minimum) secured to structure and deep leg tracks (2-1/2 inch minimum) secured to studs to accommodate deflection at floor spandrel beams, 1/2 inch minimum. Do not fasten inner track to outer track.
 3. Provide 1-1/2 inch cold rolled channel bracing, one row at midpoint of height or maximum 6 feet above bottom track, and one row at top (first opening below top of stud) inserted in stud cutouts or as directed by the Engineer of Record. If design of cutouts is such that 1-1/2 inch channel cannot be friction-fit for rigidity, weld each flange of channel (both sides) to studs or screw attach to 1-1/2 inch x 2 inch x 16 gauge clip angle with four screws, two into each member.
 4. Provide horizontal bracing to support wall mounted fixtures, casework, guard rails, other equipment.
 5. Install members true to lines and levels to provide surface flatness with maximum variation of 1/8 inch in a 4 foot radius at any location.
 6. Attach runners, studs, bracing, or any other component of partition system only to building floors, walls or structural framing.
 7. Door Opening Framing: Install double studs at door frame jambs with minimum of three "U" shaped strap anchors to join studs together. Run the double studs from floor to underside of structure above. Install runners at frame head height between jamb studs. Perform work per recommendations of GA 219 for heavyweight doors.
 8. Control Joints: Install double (back-to-back) studs at control joints with 1-1/2 inch (38 mm) cold-rolled channel stabilizers, spaced 4 feet on center maximum. Stabilizers shall be placed through holes in studs and be securely attached to first stud on each side of control joint. Place compressible filler between control joint studs. Control joints shall be spaced 50 feet o.c. maximum.

3.5 LOAD-BEARING WALL INSTALLATION

- A. Install continuous top and bottom tracks sized to match studs. Align tracks accurately and securely anchor at corners and ends, and at spacings as follows:
 1. Anchor Spacing: As shown on Shop Drawings.
- B. Squarely seat studs against top and bottom tracks with gap not exceeding of 1/8 inch (3 mm) between the end of wall framing member and the web of track. Fasten both flanges of studs to top and bottom tracks. Space studs as follows:
 1. Stud Spacing: 16 inches.
- C. Set studs plumb, except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar configurations.
- D. Align studs vertically where floor framing interrupts wall-framing continuity. Where studs cannot be aligned, continuously reinforce track to transfer loads.
- E. Align floor and roof framing over studs. Where framing cannot be aligned, continuously reinforce track to transfer loads.

- F. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure as indicated.
- G. Install headers over wall openings wider than stud spacing. Locate headers above openings as indicated. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.
 - 1. Frame wall openings with not less than a double stud at each jamb of frame as indicated on Shop Drawings. Fasten jamb members together to uniformly distribute loads.
 - 2. Install runner tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.
- H. Install supplementary framing, blocking, and bracing in stud framing indicated to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing.
 - 1. If type of supplementary support is not indicated, comply with stud manufacturer's written recommendations and industry standards in each case, considering weight or load resulting from item supported.
- I. Install horizontal bridging in stud system, spaced as indicated on Shop Drawings. Fasten at each stud intersection.
 - 1. Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs with a minimum of 2 screws into each flange of the clip angle for framing members up to 6 inches deep.
 - 2. Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
 - 3. Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.
- J. Install steel sheet diagonal bracing straps to both stud flanges, terminate at and fasten to reinforced top and bottom tracks. Fasten clip-angle connectors to multiple studs at ends of bracing and anchor to structure.
- K. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.6 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

- A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated.
- B. Fasten both flanges of studs to top and bottom track, unless otherwise indicated. Maximum stud spacing as follows:
 - 1. Stud Spacing: 16 inches.

- C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.
- D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
 - 1. Install double deep-leg deflection tracks and anchor outer track to building structure. Fasten inner track to stud. Do not fasten inner track to outer track.
 - 2. Connect vertical deflection clips to studs and anchor to building structure.
 - 3. Connect drift clips to cold formed metal framing and anchor to building structure.
- E. Install horizontal bridging in wall studs, spaced in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection. Install bridging within 12 inches of unsecured wall studs at head of wall and engaged in deep leg /deflection track.
 - 1. Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
 - 2. Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
 - 3. Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.
- F. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, fasteners, and stud girts, to provide a complete and stable wall-framing system.

3.7 FIELD QUALITY CONTROL

- A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Field and shop welds will be subject to testing and inspecting.
- C. Testing agency will report test results promptly and in writing to Contractor and Architect.
- D. Remove and replace work where test results indicate that it does not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.8 REPAIRS AND PROTECTION

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed metal framing with galvanized repair paint according to ASTM A780 and manufacturer's written instructions.

- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensure that cold-formed metal framing is without damage or deterioration at time of Final Acceptance.

END OF SECTION 05 40 00

SECTION 05 50 00 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Steel framing and supports for ceiling-hung toilet compartments
2. Steel framing and supports for overhead doors.
3. Steel framing and supports for countertops.
4. Steel tube reinforcement for low partitions.
5. Steel framing and supports for mechanical and electrical equipment
6. Steel framing and supports for applications where framing and supports are not specified in other Sections
7. Slotted channel framing.
8. Shelf angles
9. Structural-steel door frames
10. Miscellaneous steel trim
11. Metal ladders
12. Ladder safety devices.
13. Metal ships' ladders.
14. Pipe guards
15. Metal downspout covers

- B. Products furnished, but not installed, under this Section:

1. Loose steel lintels.
2. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.

- C. Related Sections include the following:

1. Division 03 Section "Cast-in-Place Concrete" for installing anchor bolts, steel pipe sleeves, wedge-type inserts and other items indicated to be cast into concrete
2. Division 04 Section "Unit Masonry" for installing loose lintels, anchor bolts, and other items indicated to be built into unit masonry
3. Division 05 Section "Structural Steel Framing"
4. Division 05 Section "Metal Stairs and Railings"
5. Division 05 Section "Decorative Metal"
6. Division 09 sections "Interior Painting" and "Exterior Painting" for primers used on metal fabrications.
7. Division 32 Section "Plants" for tree grates.

1.3 ACTION SUBMITTALS

- A. Product Data: For the following:
 - 1. Fasteners.
 - 2. Shop applied primer and paint products.
 - 3. Shrinkage-resisting grout.
 - 4. Slotted channel framing.
 - 5. Manufactured metal ladders.
 - 6. Ladder safety devices.
 - 7. Alternating tread devices.
 - 8. Metal ships' ladders.
 - 9. Metal bollards.

- B. Shop Drawings: Show fabrication and installation details for all metal fabrications. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.
 - 1. Steel framing and supports for ceiling-hung toilet compartments.
 - 2. Steel framing and supports for operable partitions.
 - 3. Steel framing and supports for overhead doors.
 - 4. Steel framing and supports for countertops.
 - 5. Steel reinforcement for low partitions.
 - 6. Steel framing and supports for mechanical and electrical equipment.
 - 7. Steel framing and supports for applications where framing and supports are not specified in other Sections.
 - 8. Shelf angles.
 - 9. Metal ladders.
 - 10. Ladder safety devices.
 - 11. Metal ships' ladders.
 - 12. Structural-steel door frames.
 - 13. Miscellaneous steel trim.
 - 14. Loose steel lintels.
 - 15. Provide templates for anchors and bolts specified for installation under other Sections.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified professional engineer's experience with providing delegated-design engineering services of the kind indicated, including documentation that engineer is licensed in the jurisdiction in which Project is located.

- B. Mill Certificates: Signed by manufacturers of stainless-steel sheet certifying that products furnished comply with requirements.

- C. Welding certificates.

- D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

- E. Research Reports: For post-installed anchors.

- F. Design Data for Delegated Design Elements: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract

Documents, prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, calculations, and ladder and fall protection design data. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers. Design Data submittal shall be signed and sealed by a qualified professional engineer licensed in the state or district in which the project is located. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect. Design Data submission must be concurrent with the submission of corresponding Fabrication drawings. Fabrication drawings submitted without corresponding Design Data will be returned as "Not Reviewed"

- G. Initial Certification Letter from Delegated-Design Professional: Prior to the submission of Shop Drawings, Product Data, Calculations and other required submittals, submit a Certification Letter from the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional. No shop drawings will be reviewed by the Architect prior to the submission and acceptance of this Certification Letter. The Certification Letter shall include the following:
1. Signature and seal of the registered Professional Engineer (registered in the state or district in which the project is located).
 2. Statement that the Professional Engineer is fully experienced in the type of design being performed.
 3. Statement that all calculations and shop drawings are in accordance with the Contract Documents and applicable building codes and have been prepared under the direction of the Professional Engineer.
 4. Statement that the Professional Engineer's signature and seal shall appear on all design calculations and on all shop drawings.
 5. Statement that the Professional Engineer will submit an additional signed and sealed letter at the completion of work related to this section stating that the fabrication and installation of the delegated design elements have been performed in accordance with the Professional Engineer's design.

1.5 RECORD SUBMITTALS

- A. Final Certification Letter from Delegated-Design Professional: After construction of the delegated design element is complete, submit a signed and sealed Certification Letter from the responsible design professional stating that the fabrication and installation of the delegated design elements have been performed in accordance with the Professional Engineer's design.

1.6 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1, "Structural Welding Code--Steel"
 2. AWS D1.2, "Structural Welding Code--Aluminum"
 3. AWS D1.3, "Structural Welding Code--Sheet Steel"
 4. AWS D1.6, "Structural Welding Code--Stainless Steel"
- B. Ladder Safety Systems Certification: Provide reports, certifications and approvals to Owner.

1.7 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication and indicate measurements on Shop Drawings.
 - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating metal fabrications without field measurements. Coordinate wall and other contiguous construction to ensure that actual dimensions correspond to established dimensions.
- B. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM E329 to conduct the testing indicated.

1.8 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for metal fabrications. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Coordinate installation of steel weld plates and angles for casting into concrete that are specified in this Section but required for work of another Section. Deliver such items to Project site in time for installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design pipe railings, and ladders, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance of Railings: Provide railings capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Uniform load of 50 lbf/ ft. (0.73 kN/m) applied in any direction.
 - 2. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
 - 3. Uniform and concentrated loads need not be assumed to act concurrently.
- C. Thermal Movements: Provide exterior metal fabrications that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

- D. Unless member sizes are shown on the structural drawings, all elements shall be considered delegated-design elements. All member sizes shown on the architectural drawings are minimum sizes that are required to be designed by the contractor's qualified professional engineer licensed in the project state.

2.2 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces, unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

2.3 FERROUS METALS

- A. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- B. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A666, Type 304.
- C. Stainless-Steel Bars and Shapes: ASTM A276, Type 304.
- D. Steel Tubing: ASTM A500, cold-formed steel tubing.
- E. Steel Pipe: ASTM A53/A53M, standard weight (Schedule 40), unless another weight is indicated or required by structural loads.
- F. Slotted Channel Framing ("Unistrut"): Cold-formed metal channels with continuous slot complying with MFMA-3.
 1. Size of Channels: As indicated or required.
 2. Material: Galvanized steel complying with ASTM A653/A653M, Grade 33 (Grade 230), with G90 (Z275) coating; 12G 0.108-inch (2.8-mm) nominal thickness.
 3. Material: Steel complying with ASTM A1008/A1008M, Grade 33 (Grade 230); 12G 0.0966-inch (2.5-mm) minimum thickness; coated with rust-inhibitive, baked-on, acrylic enamel.
- G. Cast Iron: ASTM A48/A48M, Class 30, unless another class is indicated.

2.4 NONFERROUS METALS

- A. Aluminum Plate and Sheet: ASTM B209 (ASTM B209M), Alloy 6061-T6
- B. Aluminum Extrusions: ASTM B221 (ASTM B221M), Alloy 6063-T6
- C. Aluminum-Alloy Rolled Tread Plate: ASTM B632/B632M, Alloy 6061-T6
- D. Aluminum Castings: ASTM B26/B26M, Alloy 443.0-F

2.5 FASTENERS

- A. General: Unless otherwise indicated, provide Type 304 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633, Class Fe/Zn 5, at exterior walls. Provide stainless-steel fasteners for fastening aluminum. Select fasteners for type, grade, and class required.

2.6 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Low Emitting Materials:
 - 1. Products listed shall have a minimum VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - a. Architectural Sealants: 250 g/L.
 - b. Sealant Primers for Nonporous Substrates: 250 g/L.
 - c. Sealant Primers for Porous Substrates: 775 g/L.
- C. Shop Primers: Provide primers that comply with Division 09 painting Sections.
- D. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79.
 - 1. Use primer with a VOC content of 420 g/L (3.5 lb/gal.) or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- E. Zinc-Rich Primer: Complying with SSPC-Paint 20 or SSPC-Paint 29 and compatible with topcoat.
 - 1. Use primer with a VOC content of 420 g/L (3.5 lb/gal.) or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- F. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187.
- H. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- I. Concrete Materials and Properties: Comply with requirements in Division 03 Section "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of 3000 psi (20 MPa), unless otherwise indicated.

2.7 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)**, unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work true to line and level with accurate angles and surfaces and straight edges.
- E. Weld corners and seams continuously to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts, unless otherwise indicated. Locate joints where least conspicuous.
- G. Fabricate seams and other connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.
- I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.
- J. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, **1/8 by 1-1/2 inches (3.2 by 38 mm)**, with a minimum **6-inch (150-mm)** embedment and **2-inch (50-mm)** hook, not less than **8 inches (200 mm)** from ends and corners of units and **24 inches (600 mm)** o.c., unless otherwise indicated.

2.8 MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.
- B. Fabricate units from steel shapes, plates, and bars of welded construction, unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent

construction retained by framing and supports. Cut, drill, and tap units to receive hardware, hangers, and similar items.

1. Fabricate units from slotted channel framing where indicated.
 2. Furnish inserts for units installed after concrete is placed.
- C. Fabricate supports for coiling doors, ceiling-hung toilet compartments, glazed openings head stiffening, and masonry partition stiffening from continuous structural steel members of sizes indicated with attached bearing plates, anchors, and braces as indicated, with holes where indicated on Shop Drawings of individual products.
- D. Galvanize miscellaneous framing and supports where indicated.
- E. Prime miscellaneous framing and supports with zinc-rich primer where indicated.

2.9 LOOSE LINTELS

- A. Fabricate loose lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Weld adjoining members together to form a single unit where indicated.
- B. Size loose lintels to provide bearing length at each side of openings equal to 1/12 of clear span but not less than **8 inches (200 mm)**, unless otherwise indicated.
- C. Galvanize and prime loose steel lintels located in exterior walls.
- D. Prime loose steel lintels located in exterior walls with zinc rich primer.

2.10 SHELF ANGLES

- A. Fabricate shelf angles from steel angles of sizes indicated and for attachment to concrete framing. Provide horizontally slotted holes to receive **3/4-inch (19-mm)** bolts, spaced not more than **6 inches (150 mm)** from ends and **24 inches (600 mm)** o.c., unless otherwise indicated.
1. Provide mitered and welded units at corners.
 2. Provide open joints in shelf angles at expansion and control joints. Make open joint approximately **2 inches (50 mm)** larger than expansion or control joint.
- B. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete.
- C. Galvanize shelf angles located in exterior walls.
- D. Prime shelf angles located in exterior walls with zinc-rich primer.
- E.

2.11 INDUSTRIAL PIPE RAILINGS

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of tube, post spacings, and anchorage, but not less than that needed to withstand indicated loads.
1. Configuration:
 - a. Handrail: Schedule 40 Pipe with an outside diameter not less than **1.32 inches (33 mm)**.
 - b. Top, Bottom and Intermediate Guardrails and Posts: Schedule 40 Pipe with an outside diameter not less than **1.9 inches (48 mm)**. Space intermediate rails not more than **21 inches (533 mm)** clear between.
 - c. These pipe railings shall be included only where noted on the drawings and are not to be used in lieu of decorative rails or metal stair rails specified in other sections.

2.12 METAL LADDERS

- A. General:
1. Comply with ANSI A14.3.
- B. Steel Ladders:
1. Space siderails **18 inches (457 mm)** apart unless otherwise **indicated**.
 2. Siderails: Continuous, **3/8-by-2-1/2-inch (9.5-by-64-mm)** steel flat bars, with eased edges
 3. Space siderails of elevator pit ladders **12 inches (300 mm)** apart.
 4. Support each ladder at top and bottom and not more than **48 inches (1220 mm)** o.c. with welded brackets, made from same metal as ladder
 5. Rungs: **3/4-inch- (19-mm-)** diameter steel bars.
 6. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
 7. Provide nonslip surfaces on top of each rung by coating with abrasive material metallurgically bonded to rung.
 8. Galvanize exterior ladders and interior ladders, including brackets and fasteners.
 9. Prime interior ladders including brackets and fasteners, with zinc-rich primer, unless otherwise noted.
 10. Provide platforms as indicated fabricated from welded or pressure-locked steel bar grating, supported by steel angles. Limit openings in gratings to no more than **1/2 inch (12 mm)** in least dimension.
 11. Support each ladder at top and bottom and not more than **60 inches (1500 mm)** o.c. with welded or bolted steel brackets.
 12. Every new fixed ladder installation that extends more than 24 feet above a lower level must be equipped with a personal fall arrest system or a ladder safety system.

2.13 LADDER FALL PROTECT

- A. General: Comply with requirements of ANSI Z359.16 and OSHA 1910.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:

1. CAI Safety Systems.
2. FixFastUSA
3. Guardian Fall.
4. Simplified Safety.

C. Provide inspection approvals and certifications to Owner.

2.14 METAL SHIPS' LADDERS

A. Provide metal ships' ladders where indicated. Fabricate of open-type construction with channel stringers, pipe railings, and bar grating treads, unless otherwise indicated. Provide brackets and fittings for installation.

1. Fabricate ships' ladders, including railings from steel.
2. Fabricate treads from welded or pressure-locked steel bar grating. Limit openings in gratings to no more than **3/4 inch (19 mm)** in least dimension.
3. Fabricate treads and platforms from rolled-steel floor plate.
4. Comply with applicable requirements in Division 05 Section "Metal Stairs" for railings.

B. Galvanize exterior steel ships' ladders and interior steel ships' ladders, including treads, railings, brackets, and fasteners.

C. Prime interior steel ships' ladders, where indicated, including treads, railings, brackets, and fasteners, with zinc-rich primer.

2.15 MISCELLANEOUS STEEL TRIM

A. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.

B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.

1. Provide with integrally welded steel strap anchors for embedding in concrete or masonry construction.

C. Galvanize exterior miscellaneous steel trim.

D. Prime interior miscellaneous steel trim with zinc rich primer.

2.16 METAL DOWNSPOUT COVER

A. Source Limitations: Obtain downspout boots from single source from single manufacturer.

B. Provide downspout boots made from cast iron in heights indicated with inlets of size and shape to suit downspouts. Provide units with flanges and holes for countersunk anchor bolts.

1. Outlet: Vertical, to discharge into pipe.

- C. Prime cast-iron downspout boots with zinc-rich primer.

2.17 STEEL WELD PLATES AND ANGLES

- A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.18 GENERAL FINISH REQUIREMENTS

- A. Finish metal fabrications after assembly.
- B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.19 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with applicable standard listed below:
 - 1. ASTM A123/A123M, for galvanizing steel and iron products
 - 2. ASTM A153/A153M, for galvanizing steel and iron hardware
 - 3. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- B. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed metal fabrications:
 - 1. Exteriors (SSPC Zone 1B) and Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 2. Interiors (SSPC Zone 1A): SSPC-SP 3, "Power Tool Cleaning."
- C. Shop Priming: Apply shop primer to uncoated surfaces of metal fabrications, except those with galvanized finishes and those to be embedded in concrete, sprayed-on fireproofing, or masonry, unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
 - 1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

2.20 STAINLESS-STEEL FINISHES

- A. Remove tool and die marks and stretch lines or blend into finish.
- B. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.
- C. Bright, Directional Satin Finish: No. 4..

- D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.21 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. As-Fabricated Finish: AA-M10 (Mechanical Finish: as fabricated, unspecified).

Finish in paragraph above is usually referred to as "mill finish." For service locations finish below is heavy-anodized finish for show locations.

- C. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- C. Field Welding: Comply with the following requirements:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag bolts, wood screws, and other connectors.
- E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

- F. Corrosion Protection: Coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals with a heavy coat of bituminous paint.
 - 1. Cast Aluminum: Heavy coat of bituminous paint.
 - 2. Extruded Aluminum: Two coats of clear lacquer.

3.2 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
- B. Anchor supports for ceiling hung toilet partitions and overhead doors securely to and rigidly brace from building structure.
- C. Anchor shelf angles securely to existing construction with expansion anchors, anchor bolts, or through bolts as indicated in approved shop drawings.
- D. Support steel girders on solid grouted masonry, concrete, or steel pipe columns. Secure girders with anchor bolts embedded in grouted masonry or concrete or with bolts through top plates of pipe columns.
 - 1. Where grout space under bearing plates is indicated for girders supported on concrete or masonry, install as specified in "Installing Bearing and Leveling Plates" Article.
- E. Install pipe columns on concrete footings with grouted baseplates. Position and grout column baseplates as specified in "Installing Bearing and Leveling Plates" Article.
 - 1. Grout baseplates of columns supporting steel girders after girders are installed and leveled.

3.3 INSTALLING BEARING AND LEVELING PLATES

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials and roughen to improve bond to surfaces. Clean bottom surface of plates.
- B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
 - 1. Use nonshrink grout, either metallic or nonmetallic, in concealed locations where not exposed to moisture; use nonshrink, nonmetallic grout in exposed locations, unless otherwise indicated.
 - 2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.4 INSTALLING INDUSTRIAL PIPE RAILINGS

- A. Installation, General
 - 1. Fit exposed connections together to form tight, hairline joints.

2. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
 - a. Do not weld, cut, or abrade surfaces of railing components that are coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 - b. Set posts plumb within a tolerance of **1/16 inch in 3 feet (2 mm in 1 m)**.
 - c. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed **1/4 inch in 12 feet (6 mm in 3.5 m)**.
3. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
 - a. Coat, with a heavy coat of bituminous paint, concealed surfaces of aluminum that are in contact with grout, concrete, masonry, wood, or dissimilar metals.
4. Adjust railings before anchoring to ensure matching alignment at abutting joints.
5. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

B. Railing Connections

1. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.
2. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.

C. Anchoring Posts

1. Use metal sleeves preset and anchored into concrete for installing posts. After posts are inserted into sleeves, fill annular space between post and sleeve with nonshrink, nonmetallic grout or anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions.
2. Form or core-drill holes not less than **5 inches (125 mm)** deep and **3/4 inch (20 mm)** larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink, nonmetallic grout or anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions.
3. Leave anchorage joint exposed with **1/8-inch (3-mm)** buildup, sloped away from post.
4. Anchor posts to metal surfaces with oval flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:
 - a. For aluminum pipe railings, attach posts using fittings designed and engineered for this purpose.
 - b. For stainless-steel pipe railings, weld flanges to post and bolt to supporting surfaces.
 - c. For steel pipe railings, weld flanges to post and bolt to metal supporting surfaces.

5. Install removable railing sections, where indicated, in slip-fit metal sockets cast in concrete.

D. Attaching Railings

1. Anchor railing ends at walls with round flanges anchored to wall construction and welded to railing ends or connected to railing ends using nonwelded connections.
2. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and welded to railing ends or connected to railing ends using nonwelded connections.
3. Attach railings to wall with wall brackets, except where end flanges are used. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
4. Secure wall brackets and railing end flanges to building construction as follows:
 - a. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - b. For hollow masonry anchorage, use toggle bolts.
 - c. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
 - d. For steel-framed partitions, use hanger or lag bolts set into fire-retardant-treated wood backing between studs. Coordinate with stud installation to locate backing members.

3.5 INSTALLING LADDERS

- A. Comply with manufacturer's written instructions and performance requirements for attachment to structure.

3.6 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 1. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.
- B. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Division 09 painting Sections.
- C. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780.

END OF SECTION 05 50 00

SECTION 05 51 00 - METAL STAIRS AND RAILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Channel stringer fabricated steel stairs with precast terrazzo treads.
2. Industrial-type stairs and ship stairs with steel grating treads.
3. Pipe railings attached to metal stairs.
4. Pipe railings at grandstands.

- B. Related Sections include the following:

1. Division 03 Section "Cast-in-Place Concrete" for concrete fill for stair treads and platforms.
2. Division 05 Section "Decorative Metal Railings" for ornamental metal railings.
3. Division 06 Section "Miscellaneous Rough Carpentry" for blocking for anchoring railings.
4. Division 09 Section "Non-Structural Metal Framing" for blocking for anchoring railings and for gypsum drywall products applied to stairs.
5. Division 09 Flooring Sections for flooring materials installed on metal stairs.
6. Division 10 Section "Wire Mesh Partitions" for wire mesh security partitions and doors.

1.3 ACTION SUBMITTALS

- A. Product Data: For metal stairs and the following:

1. Prefilled metal-pan stair treads
2. Precast terrazzo treads
3. Woven-wire mesh.
4. Handrail wall brackets
5. Nonslip aggregates and nonslip-aggregate finishes
6. Shop primer products
7. Paint products
8. Grout.

- B. Shop Drawings:

1. Include plans, elevations, sections, details, and attachments to other work.
2. Provide templates for anchors and bolts specified for installation under other Sections.

3. Indicate unit locations, unit identification marks, fabrication details, reinforcement, connection details, pertinent dimensions, design loads, support points and tie backs.
4. Indicate sizes of metal sections, thickness of metals, profiles, holes, and field joints.
5. Include plan at each level.
6. Indicate locations of anchors, weld plates, and blocking for attachment of wall-mounted handrails.

C. Samples for Verification: For the following products.

1. For each type and finish of nosing.
2. Nonslip aggregates and nonslip-aggregate finishes
3. Grating treads

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified professional engineer's experience with providing delegated-design engineering services of the kind indicated, including documentation that engineer is licensed in the State in which Project is located.
- B. Design Data for Metal Stairs and Railings: Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers. Design Data submittal shall be signed and sealed by a qualified professional engineer licensed in the state or district in which the project is located. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect. Design Data submission must be concurrent with the submission of corresponding Fabrication drawings. Fabrication drawings submitted without corresponding Design Data will be returned as "Not Reviewed".
- C. Initial Certification Letter from Delegated-Design Professional: Prior to the submission of Shop Drawings, Product Data, Calculations and other required submittals, submit a Certification Letter from the responsible design professional. No shop drawings will be reviewed by the Architect prior to the submission and acceptance of this Certification Letter. The Certification Letter shall include the following:
1. Signature and seal of the registered Professional Engineer (registered in the state or district in which the project is located).
 2. Statement that the Professional Engineer is fully experienced in the design of metal stairs and railings.
 3. Statement that all calculations and shop drawings are in accordance with the Contract Documents and applicable building codes and have been prepared under the direction of the Professional Engineer.
 4. Statement that the Professional Engineer's signature and seal shall appear on all design calculations and on all metal stair and railings shop drawings.
 5. Statement that the Professional Engineer will submit an additional signed and sealed letter at the completion of work related to this Section stating that the fabrication and installation of the metal stairs and railings have been performed in accordance with the Professional Engineer's design.

- D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.
- E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for stairs and railings.
 - 1. Test railings according ASTM E894 and ASTM E935.
- F. Welding certificates

1.5 RECORD SUBMITTALS

- A. Final Certification Letter from Delegated-Design Professional: After construction of the metal stairs and railings is complete, submit a signed and sealed Certification Letter from the responsible design professional stating that the fabrication and installation of the metal stairs and railings have been performed in accordance with the Professional Engineer's design.

1.6 CLOSEOUT DOCUMENTS

- A. Maintenance and care instructions for inclusion in the Maintenance Manuals.
- B. Fully executed warranty.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
 - 1. The fabricator shall have a minimum of 5 years of experience in the fabrication of successfully completed metal stairs and railings and shall have successfully fabricated a minimum of 5 projects similar to this project.
 - 2. The erector shall have a minimum of 5 years of experience in the erection of metal stair and railings and shall have erected a minimum of 5 projects similar to this project.
- B. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," for class of stair designated, unless more stringent requirements are indicated.
 - 1. Preassembled Stairs: Commercial class.
 - 2. Industrial-Type Stairs: Industrial class.
- C. Welding: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1, "Structural Welding Code--Steel"
 - 2. AWS D1.3, "Structural Welding Code--Sheet Steel"

1.8 COORDINATION

- A. Schedule installation of railings and guards so wall attachments are made only to completed walls.
 - 1. Do not support railings and guards temporarily by any means that do not satisfy structural performance requirements.
- B. Coordinate installation of anchorages for metal stairs.
 - 1. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.
 - 2. Deliver such items to Project site in time for installation.
- C. Coordinate locations of hanger rods and struts with other work so that they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.
- D. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification.
 - 1. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers.
 - 2. Protect steel members and packaged materials from corrosion and deterioration.
 - 3. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures.
 - a. Repair or replace damaged materials or structures as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance of Stairs: Provide metal stairs capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Uniform Load: 100 lbf/sq. ft. (4.79 kN/sq. m).
 - 2. Concentrated Load: 300 lbf (1.33 kN) applied on an area of 4 sq. in. (2580 sq. mm).
 - 3. Uniform and concentrated loads need not be assumed to act concurrently.
 - 4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
 - 5. Limit deflection of treads, platforms, and framing members to L/360 or 1/4 inch (6.4 mm), whichever is less.

- B. Structural Performance of Railings: Provide railings capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Handrails:
 - a. Uniform load of 50 lbf/ ft. (0.73 kN/m) applied in any direction.
 - b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 2. Top Rails of Guards:
 - a. Uniform load of 50 lbf/ ft. (0.73 kN/m) applied in any direction.
 - b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 3. Infill of Guards:
 - a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
 - b. Infill load and other loads need not be assumed to act concurrently.
 4. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - a. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- C. Seismic Performance: Provide metal stairs capable of withstanding the effects of earthquake motions determined according to ASCE 7, "Minimum Design Loads for Buildings and Other Structures" and information provided on the Structural drawings.
- D. The design shall be in accordance with the aesthetic design intent of the project, possibly requiring structural profiles different from the minimum structural requirements. The Architect shall have final authority in reference to these aesthetic matters.
1. All proposed deviations from the specification and drawings must be so noted on the submittal drawings.
 2. Approval of the submittals does not constitute approval of changes to the design intent without proper notification of same.
- E. Delegated Design: Manufacturer's responsibilities include using a qualified professional engineer to prepare comprehensive structural calculations for metal stair and railing members and connections, using performance requirements and design criteria indicated.

2.2 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Alfab, Inc.

2. American Stair, Inc.
3. Worthington Metal Fabricators
4. Pacific Stair Corporation
5. McGregor Industries, Inc.
6. Specialized Stair Systems

2.3 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces, unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

2.4 FERROUS METALS

- A. Steel Plates, Shapes, and Bars: ASTM A36/A36M
- B. Steel Tubing: ASTM A500 (cold formed)
 1. Provide galvanized finish for exterior installations and where indicated.
- C. Steel Pipe for Railings: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
 1. Provide galvanized finish for exterior installations and where indicated.
- D. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from plate complying with ASTM A36/A36M or ASTM A283/A283M, Grade C or D
- E. Steel Bars for Grating Treads: ASTM A36/A36M.
 1. Wire Rod for Grating Crossbars: **ASTM A510 (ASTM A510M)**.
- F. Iron Castings: Either gray or malleable iron, unless otherwise indicated.
 1. Gray Iron: ASTM A48/A48M, Class 30, unless another class is indicated or required by structural loads.
 2. Malleable Iron: ASTM A47/A47M.
- G. Uncoated, Cold-Rolled Steel Sheet: ASTM A1008/A1008M, structural steel, **Grade 25 (Grade 170)**, unless another grade is required by design loads; exposed.
- H. Uncoated, Hot-Rolled Steel Sheet: ASTM A1011/A1011M, structural steel, **Grade 30 (Grade 205)**, unless another grade is required by design loads.
- I. Galvanized Steel Sheet: ASTM A653/A653M, **G90 (Z275)** coating, structural steel, **Grade 33 (Grade 230)**, unless another grade is required by design loads.
- J. Woven-Wire Mesh: Intermediate-crimp, square pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.135-inch (3.5-mm)** nominal diameter wire complying with **ASTM A510 (ASTM A510M)**.

2.5 FASTENERS

- A. General: Provide zinc-plated fasteners with coating complying with ASTM B633, Class Fe/Zn 25 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required.
- B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.
- C. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
 - 1. Provide mechanically deposited or hot-dip, zinc-coated anchor bolts for exterior stairs.
- D. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.
 - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) stainless-steel bolts, ASTM F593, and nuts, **ASTM F594 (ASTM F836M)**.
- E. Bolts and Nuts: Regular hexagon-head bolts, **ASTM A307, Grade A (ASTM F568M, Property Class 4.6)**; with hex nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
- F. Machine Screws: **ASME B18.6.3 (ASME B18.6.7M)**.
- G. Lag Bolts: **ASME B18.2.1 (ASME B18.2.3.8M)**.
- H. Plain Washers: Round, **ASME B18.22.1 (ASME B18.22M)**.
- I. Lock Washers: Helical, spring type, **ASME B18.21.1 (ASME B18.21.2M)**.
- J. Expansion Anchors: Anchor bolt and sleeve assembly with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E488, conducted by a qualified independent testing agency.
 - 1. Material for Anchors in Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633, Class Fe/Zn 5.
 - 2. Material for Anchors in Exterior Locations: Alloy Group 2 (A4) stainless-steel bolts complying with **ASTM F593 (ASTM F738M)** and nuts complying with **ASTM F594 (ASTM F836M)**.

2.6 MISCELLANEOUS MATERIALS

- A. Welding Electrodes: Comply with AWS requirements.
- B. Shop Primers: Provide primers that comply with Division 09 painting sections.
 - 1. Use primer with a VOC content of 420 g/L (3.5 lb/gal.) or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- C. Zinc-Rich Primer: Complying with SSPC-Paint 20 or SSPC-Paint 29 and compatible with topcoat.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187.
- F. For galvanized reinforcement, use galvanized wire or dielectric-polymer-coated wire bar supports.

2.7 PRECAST TERRAZZO TREADS

- A. Concrete Materials and Properties: Comply with requirements in Division 09 Section "Resinous Matrix Terrazzo Flooring". Provide minimum 28-day compressive strength of **5000 psi (35 MPa)**

2.8 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, struts, railings, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
 - 1. Join components by welding, unless otherwise indicated.
 - 2. Use connections that maintain structural value of joined pieces.
 - 3. Fabricate treads and platforms of exterior stairs so finished walking surfaces slope to drain.
- B. Assemble stairs in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)**, unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form exposed work true to line and level with accurate angles and surfaces and straight edges.

- F. Weld connections to comply with the following:
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. At exposed connections, finish exposed welds and surfaces shall be ground smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
 - a. Where flush welds are noted on the drawings, prepare balusters for complete or partial joint penetration welds as required and grind/smooth so weld is not visible after finishing
- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.
- H. Fabricate joints that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- I. Castings shall be sound and free from warp, holes and other defects that impair their strength or appearance. Exposed surfaces shall have a smooth finish and sharp, well-defined lines and arises. Machined joints where required, shall be milled to a close fit. Provide necessary rabbets, lugs and brackets so that work can be assembled in a neat and substantial manner.
- J. Supply components required for anchorage of metal fabrications. Fabricate anchorage and related components of same material and finish as metal fabrication, except where specifically noted otherwise.

2.9 FABRICATION OF STEEL-FRAMED STAIRS

- A. NAAMM Stair Standard: Comply with NAAMM AMP 510, "Metal Stairs Manual," for Service Class, unless more stringent requirements are indicated.
- B. Stair Framing:
1. Fabricate stringers of 12-inch-deep steel channels with a flange size of 3 inches.
 2. Fabricate stringers of steel channels.
 - a. Provide closures for exposed ends of channel stringers.
 - b. For flange mounted railing posts minimum channel flange width is 3".
 - c. Finish: Shop primed.
 3. Construct platforms of steel plate and channel headers, as indicated, and miscellaneous framing members as needed to comply with performance requirements indicated.
 - a. Provide closures for exposed ends of channel and rectangular tube framing.

- b. Finish: Shop primed.
 - 4. Weld stringers to headers; weld framing members to stringers and headers.
 - 5. Where stairs are enclosed by gypsum board shaft-wall assemblies, provide hanger rods or posts to support landings from floor construction above or below. Locate hanger rods and posts where they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.
 - 6. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.
- C. Metal-Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness needed to comply with performance requirements but not less than 12G .1046-inches (2.7-mm).
- 1. Fabricate treads and landing subplatforms of exterior stairs so finished walking surfaces slope to drain.
 - 2. Steel Sheet: Uncoated cold -rolled steel sheet.
 - 3. Steel Sheet: Galvanized steel sheet, where indicated.
 - 4. Directly weld metal pans to stringers; locate welds on top of subtreads where they will be concealed by concrete fill. Do not weld risers to stringers.
 - 5. Attach risers and subtreads to stringers with brackets made of steel angles or bars. Weld brackets to stringers and attach metal pans to brackets by welding, riveting, or bolting.
 - 6. Shape metal pans to include nosing integral with riser.
 - 7. Attach abrasive nosings to risers.
 - 8. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.
- D. Abrasive-Coating-Finished, Formed-Metal Stairs: Form risers, treads, and platforms to configurations shown from steel sheet of thickness needed to comply with performance requirements but not less than 12G .1063-inch (2.7-mm).
- 1. Steel Sheet: Uncoated hot-rolled steel sheet, unless otherwise indicated.
 - 2. Directly weld risers and treads to stringers; locate welds on underside of stairs.
 - 3. Provide platforms of configuration indicated or, if not indicated, the same as treads. Weld platforms to platform framing.
 - 4. Finish tread and platform surfaces with manufacturer's standard epoxy-bonded abrasive finish.
- E. Metal Bar-Grating Stairs: Form treads and platforms to configurations shown from metal bar grating; fabricate to comply with NAAMM MBG 531, "Metal Bar Grating Manual."
- 1. Fabricate treads and platforms from welded steel grating with 1-1/4-by-3/16-inch (32-by-5-mm) bearing bars at 15/16-inch (24 mm) o.c. and crossbars at 4 inches (100 mm) o.c., NAAMM designation: W-15-4 (1-1/4 x 3/16) STEEL.
 - 2. Fabricate treads and platforms from pressure-locked steel grating with 1-by-3/16-inch (25-by-5-mm) bearing bars at 11/16-inch (17 mm) o.c. and crossbars at 4 inches (100 mm) o.c., NAAMM designation: P-11-4 (1 x 3/16) STEEL.
 - 3. Surface: Serrated.
 - 4. Finish: Galvanized.
 - 5. Fabricate grating treads with cast abrasive nosing and with steel angle or steel plate carrier at each end for stringer connections. Secure treads to stringers with bolts.

6. Fabricate grating platforms with nosing matching that on grating treads. Provide toeplates at open-sided edges of grating platforms. Weld grating to platform framing.

2.10 PIPE RAILINGS

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of tube, post spacings, and anchorage, but not less than that needed to withstand indicated loads.
 1. Configuration: As indicated on the drawings.
- B. Rails shall be bent at corners, rail returns, and wall returns, instead of using prefabricated fittings.
- C. Welded Connections: Fabricate railings with welded connections.
 1. Fabricate connections that are exposed to weather in a manner that excludes water.
 - a. Provide weep holes where water may accumulate internally.
 2. Cope components at connections to provide close fit, or use fittings designed for this purpose.
 3. Weld all around at connections, including at fittings.
 4. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 5. Obtain fusion without undercut or overlap.
 6. Remove flux immediately.
 7. Finish welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish #1 - No evidence of a welded joint as shown in NAAMM AMP 521.
- D. Form changes in direction of railings as follows:
 1. As detailed, by bending.
- E. Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- F. Provide wall returns at ends of wall-mounted handrails, unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is **1/4 inch (6 mm)** or less.
- G. Connect posts to stair framing by direct welding unless otherwise indicated.
- H. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.
 1. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.
 2. For galvanized railings, provide galvanized fittings, brackets, fasteners, sleeves, and other ferrous-metal components.

3. For non-galvanized railings, provide non-galvanized prime painted ferrous-metal fittings, brackets, fasteners, and sleeves, except provide galvanize anchors embedded in exterior masonry and concrete construction.
 4. Provide type of bracket with flange tapped for concealed anchorage to threaded hanger bolt and that provides 2-1/4-inch clearance from inside face of handrail to finished wall surface.
- I. Fillers: Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.

2.11 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish metal stairs after assembly.
- C. Galvanizing: Hot-dip galvanize items as indicated to comply with applicable standard listed below:
1. ASTM A123/A123M, for galvanizing steel and iron products
 2. ASTM A153/A153M, for galvanizing steel and iron hardware
 3. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 4. Fill vent and drain holes that will be exposed in finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- D. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed products:
1. Exterior Stairs (SSPC Zone 1B): SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning"
 2. Interior Stairs (SSPC Zone 1A): SSPC-SP 3, "Power Tool Cleaning"
 3. Interior Stairs (SSPC Zone 1A): SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
- E. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
1. Stripe paint corners, crevices, bolts, welds, and sharp edges

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify elevations of floors, bearing surfaces and locations of bearing plates, and other embedments for compliance with requirements.
 - 1. For wall-mounted railings, verify locations of concealed reinforcement within gypsum board and plaster assemblies.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete, unless otherwise indicated.
 - 1. Grouted Baseplates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials and roughen surfaces prior to setting plates.
 - a. Clean bottom surface of plates.
 - b. Set plates for structural members on wedges, shims, or setting nuts.
 - c. Tighten anchor bolts after supported members have been positioned and plumbed.
 - d. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
 - e. Promptly pack grout solidly between bearing surfaces and plates so no voids remain.
 - 1) Neatly finish exposed surfaces; protect grout and allow to cure.
 - 2) Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints.
 - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
 - 2. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
 - 3. Comply with requirements for welding in "Fabrication, General" Article.

- F. Field Welding: Comply with the following requirements:
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
 - a. Where flush welds are noted on the drawings, prepare balusters as required and grind/smooth so weld is not visible after finishing
- G. Place and finish concrete fill for treads and platforms to comply with Division 03 Section "Cast-in-Place Concrete."
1. Install abrasive nosings with anchors fully embedded in concrete.
 2. Center nosings on tread width.
- H. Install precast concrete treads with adhesive supplied by manufacturer.
- I. Install precast concrete treads with adhesive supplied by manufacturer.

3.3 INSTALLING STEEL RAILINGS

- A. Adjust railing systems before anchoring to ensure matching alignment at abutting joints.
1. Space posts at spacing indicated.
 2. Plumb posts in each direction, within a tolerance of **1/16 inch in 3 feet (2 mm in 1 m)**.
 3. Align rails so variations from level for horizontal members and variations from parallel with rake of stairs for sloping members do not exceed **1/4 inch in 12 feet (6 mm in 3.5 m)**.
 4. Secure posts and rail ends to building construction as follows:
 - a. Anchor posts to steel by welding directly to steel supporting members.
 - b. Anchor handrail ends to concrete and masonry with steel round flanges welded to rail ends and anchored with post-installed anchors and bolts.
- B. Install railing gates level, plumb, and secure for full opening without interference.
1. Attach hardware using tamper-resistant or concealed means.
 2. Adjust hardware for smooth operation.
- C. Attach handrails to wall with wall brackets.
1. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
 2. Secure wall brackets to building construction as follows:
 - a. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.

- b. For hollow masonry anchorage, use toggle bolts.
 - c. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
 - d. For steel-framed gypsum board assemblies, fasten brackets directly to steel framing or concealed fire-retardant wood blocking using wood screws of size and type required to support structural loads.
- D. Install guardrails and handrails in accordance with the latest approved shop drawings. The design and detailing of all guardrails and handrails is the responsibility of the contractor's qualified licensed professional engineer. All connections must comply with the Design Criteria listed in this section and all applicable building codes.

3.4 REPAIR

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
- 1. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780.

END OF SECTION 05 51 00

SECTION 05 70 00 - DECORATIVE METAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Decorative Aluminum Metal Sheet

1.3 COORDINATION

- A. Coordinate installation of anchorages for decorative metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated, including finishing materials.
- B. Shop Drawings: Show fabrication and installation details for decorative metal.
 - 1. Include plans, elevations, component details, and attachment details.
 - 2. Indicate materials and profiles of each decorative metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items.
- C. Patterns, Models, or Plaster Castings: Made from proposed patterns for each design of custom casting required.
- D. Samples for Initial Selection: For products involving selection of color, texture, or design including mechanical finishes.
- E. Samples for Verification: For each type of exposed finish required.
 - 1. Sections of linear shapes

2. Full-size Samples of castings and forgings
 - a. For custom castings, submit finished Samples of similar previous work to show ability to reproduce detail, cast-metal color, and quality of finish.
3. Samples of welded and brazed joints showing quality of workmanship and color matching of materials.

1.6 INFORMATIONAL SUBMITTALS

- A. Mill Certificates: Signed by manufacturers of stainless-steel products certifying that products furnished comply with requirements.
- B. Welding certificates.
- C. Qualification Data: For Installer and fabricator

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Fabricator Qualifications: A firm experienced in producing ornamental metal similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store ornamental metal inside a well-ventilated area, away from uncured concrete and masonry, and protected from weather, moisture, soiling, abrasion, extreme temperatures, and humidity.
- B. Deliver and store cast-metal products in wooden crates surrounded by sufficient packing material to ensure that products will not be cracked or otherwise damaged.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with ornamental metal by field measurements before fabrication and indicate measurements on Shop Drawings.
 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating railings without field measurements. Coordinate wall and other contiguous construction to ensure that actual dimensions correspond to established dimensions.

1.10 COORDINATION

- A. Coordinate installation of anchorages for ornamental metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

PART 2 - PRODUCTS

2.1 DECORATIVE METAL MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements:

2.2 DECORATIVE METAL FABRICATORS

- A. Fabricators: Subject to compliance with requirements:

1. Basis of Design: Moz Design, Inc.

2.3 METALS, GENERAL

- A. Metal Surfaces, General: Use materials with smooth, flat surfaces unless otherwise indicated. Use materials without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

2.4 ALUMINUM

- A. Fabricate products from alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.
- B. Plate and Sheet: **ASTM B209 (ASTM B209M)**, Alloy
- C. Fabricate products from alloys indicated and temper to suit application and forming methods but with strength and stiffness not less than H01 (quarter-hard) for plate, sheet, strip, and bars and H55 (light-drawn) for tube and pipe.

2.5 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
 1. For aluminum, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.

- B. Brazing Rods: For copper alloys, provide type and alloy as recommended by producer of metal to be brazed and as required for color match, strength, and compatibility in fabricated items.

2.6 FABRICATION, GENERAL

- A. Assemble items in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- B. Make up wire-rope assemblies in the shop to field-measured dimensions with fittings machine swaged. Minimize amount of turnbuckle take-up used for dimensional adjustment so maximum amount is available for tensioning wire ropes. Tag wire-rope assemblies and fittings to identify installation locations and orientations for coordinated installation.
- C. Form ornamental metal to required shapes and sizes, true to line and level with true curves and accurate angles and surfaces. Finish exposed surfaces to smooth, sharp, well-defined lines and arris.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form simple and compound curves in bars and extruded shapes by bending members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces.
- F. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)**, unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- G. Mill joints to a tight, hairline fit. Cope or miter corner joints. Fabricate connections that will be exposed to weather in a manner to exclude water.
- H. Provide weep holes where water may accumulate.
- I. Provide necessary rebates, lugs, and brackets to assemble units and to attach to other work. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items, unless otherwise indicated.
- J. Comply with AWS for recommended practices in shop welding and brazing. Weld and braze behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed joints of flux, and dress exposed and contact surfaces.
 - 1. Where welding and brazing cannot be concealed behind finished surfaces, finish joints to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 Welds: no evidence of a welded joint.

- K. Provide castings that are sound and free of warp, cracks, blowholes, or other defects that impair strength or appearance. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks.

2.7 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.
- C. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
- D. Class II, Color Anodic Finish: AA-M12C22A32/A34 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, integrally colored or electrolytically deposited color coating 0.010 mm or thicker) complying with AAMA 611.
 - 1. mil (0.025 mm).

2.8 STAINLESS-STEEL FINISHES

- A. Remove tool and die marks and stretch lines or blend into finish.
- B. Unless otherwise indicated, grind and polish surfaces to produce uniform finish indicated, free of cross scratches.
 - 1. Run grain of directionally textured finishes with long dimension of each piece.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B finish.
- D. Directional Satin Finish: No. 4 finish.
- E. Dull Satin Finish: No. 6 finish.
- F. Reflective, Directional Polish: No. 7 finish.
- G. Mirrorlike Reflective, Nondirectional Polish: No. 8 finish.
- H. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of ornamental metal.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Provide anchorage devices and fasteners where needed to secure ornamental metal to in-place construction.
- B. Perform cutting, drilling, and fitting required to install ornamental metal. Set products accurately in location, alignment, and elevation; measured from established lines and levels. Provide temporary bracing or anchors in formwork for items to be built into concrete, masonry, or similar construction.
- C. Fit exposed connections accurately together to form tight, hairline joints or, where indicated, with uniform reveals and spaces for sealants and joint fillers. Where cutting, welding, and grinding are required for proper shop fitting and jointing of ornamental metal, restore finishes to eliminate evidence of such corrective work.
- D. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
- E. Install concealed gaskets, joint fillers, insulation, and flashings as work progresses.
- F. Restore protective coverings that have been damaged during shipment or installation. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at same location.
 - 1. Retain protective coverings intact; remove coverings simultaneously from similarly finished items to preclude nonuniform oxidation and discoloration.
- G. Field Welding: Comply with applicable AWS specification for procedures of manual shielded metal arc welding, for appearance and quality of welds, and for methods used in correcting welding work. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Grind exposed welded joints smooth and restore finish to match finish of adjacent surfaces.
- H. Field Brazing: Comply with applicable AWS specification for procedures, appearance and quality of brazing, and methods used in correcting brazing work. Braze connections that are not to be left as exposed joints but cannot be shop brazed because of shipping size limitations. Grind exposed brazed joints smooth and restore finish to match finish of adjacent surfaces.

- I. Corrosion Protection: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
 - 1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.3 CLEANING AND PROTECTION

- A. Unless otherwise indicated, clean metals by washing thoroughly with clean water and soap, rinsing with clean water, and drying with soft cloths.
- B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - 1. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.
- C. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Division 09 painting Sections.
- D. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780.
- E. Protect finishes of ornamental metal from damage during construction period with temporary protective coverings approved by ornamental metal fabricator. Remove protective covering at time of Substantial Completion.
- F. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 05 70 00

SECTION 05 73 00 - DECORATIVE METAL RAILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Stainless-steel decorative railings
 - 2. Illuminated decorative railings
- B. Related Sections include the following:
 - 1. Division 06 Section "Miscellaneous Rough Carpentry" for wood blocking for anchoring railings
 - 2. Division 06 Section "Interior Finish Carpentry" for wood railings not specified herein.
 - 3. Division 09 Section "Gypsum Board Systems" for metal backing for anchoring railings
 - 4. Division 26 Sections for electrical service and connections for illuminated railings

1.3 DEFINITIONS

- A. Railings: Guards, handrails, and similar devices used for protection of occupants at open-sided floor areas, pedestrian guidance and support, visual separation, or wall protection.

1.4 COORDINATION AND SCHEDULING

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.
- C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not meet structural performance requirements.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

- A. Product Data: For the following:
 - 1. Manufacturer's product lines of railings assembled from standard components.
 - 2. Grout, anchoring cement, and paint products.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachment details.
 - 1. For illuminated railings, include wiring diagrams and roughing-in details.
- C. Samples for Initial Selection: For products involving selection of color, texture, or design, including mechanical finishes.
- D. Samples for Verification: For each type of exposed finish required.
 - 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters
 - 2. Fittings and brackets
 - 3. Welded connections
 - 4. Brazed connections
 - 5. Assembled Samples of railing systems, made from full-size components, including top rail, post, handrail, and infill. Show method of finishing members at intersections. Samples need not be full height.

1.7 INFORMATIONAL SUBMITTALS

- A. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers. Design Data submittal shall be signed and sealed by a qualified professional engineer licensed in the state or district in which the project is located. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect. Design Data submission must be concurrent with the submission of corresponding Fabrication drawings. Fabrication drawings submitted without corresponding Design Data will be returned as "Not Reviewed".
 - 2. Initial Certification Letter from Delegated-Design Professional: Prior to the submission of Shop Drawings, Product Data, Calculations and other required submittals, submit a Certification Letter from the responsible design professional. No shop drawings will be reviewed by the Architect prior to the submission and acceptance of this Certification Letter. The Certification Letter shall include the following:
 - a. Signature and seal of the registered Professional Engineer (registered in the state or district in which the project is located).

- b. Statement that the Professional Engineer is fully experienced in the design of decorative metal railings.
- c. Statement that all calculations and shop drawings are in accordance with the Contract Documents and applicable building codes and have been prepared under the direction of the Professional Engineer.
- d. Statement that the Professional Engineer's signature and seal shall appear on all design calculations and on all decorative metal railing shop drawings.
- e. Statement that the Professional Engineer will submit an additional signed and sealed letter at the completion of work related to this section stating that the fabrication and installation of the decorative metal railings have been performed in accordance with the Professional Engineer's design.

B. Qualification Data: For professional engineer.

C. Product Test Reports: For typical product installation, based on evaluation of comprehensive tests performed by a qualified testing agency, according ASTM E894 and ASTM E935.

D. Preconstruction test reports.

E. Evaluation Reports: For post-installed anchors, from ICC-ES.

1.8 RECORD SUBMITTALS

A. Final Certification Letter from Delegated-Design Professional: After construction of the decorative metal railings is complete, submit a signed and sealed Certification Letter from the responsible design professional stating that the fabrication and installation of decorative metal railings have been performed in accordance with the Professional Engineer's design.

1.9 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build mockups for each form and finish of railing consisting of two posts, top rail, infill area, and anchorage system components that are full height and are not less than 24 inches in length.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.10 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design product:

1. Provide CIRCA Multiline as manufactured by VIVA Railings, LLC, or Architect approved product as manufactured by one of the following.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Stainless-Steel Decorative Railings:

- 1) Architectural Metal Works
- 2) Architectural Railings & Grilles, Inc.
- 3) Atlantis Rail Systems.
- 4) Blum, Julius & Co., Inc.
- 5) CraneVeyor Corp.
- 6) Hollaender Mfg. Co.
- 7) Lavi Industries.
- 8) Livers Bronze Co.
- 9) Morse Industries.
- 1) Newman, Hollaender Mfg. Co.
- 2) P & P Artec
- 3) R & B Wagner, Inc.
- 4) Tri Tech, Inc.
- 5) Ultra-tec; The Cable Connection.
- 6) VIVA Railings, LLC.
- 7) Wylie Systems
- 8) HDI Railing Systems

b. Illuminated Decorative Railings:

- 1) C. W. Cole & Company, Inc.
- 2) Livers Bronze Co.
- 3) Wagner, R & B, Inc.; a division of the Wagner Companies
- 4) VIVA Railings, LLC

B. Source Limitations: Obtain each type of railing from single source from single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of railings and are based on the specific system indicated. See Division 01 Section "Product Requirements."

1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Division 01 Section "Quality Requirements," to design railings, including attachment to building construction.
- B. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:
 - 1. Aluminum: The lesser of minimum yield strength divided by 1.65 or minimum ultimate tensile strength divided by 1.95.
 - 2. Copper Alloys: 60 percent of minimum yield strength.
 - 3. Stainless Steel: 60 percent of minimum yield strength.
 - 4. Steel: 72 percent of minimum yield strength.
- C. Structural Performance: Railings, including attachment to building construction, shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of 50 lbf/ft. applied in any direction.
 - b. Concentrated load of 200 lbf applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 - 2. Infill of Guards:
 - a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft..
 - b. Infill load and other loads need not be assumed to act concurrently.
 - 3. Glass-Supported Railings: Support each section of top rail by a minimum of three glass panels or by other means so top rail will remain in place if any one panel fails.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior railings by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
 - 1. Temperature Change: 120 deg F , ambient; 180 deg F, material surfaces.

2.3 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Same metal and finish as supported rails, unless otherwise indicated.
 - 1. Provide either formed- or cast-metal brackets with predrilled hole for exposed bolt anchorage.

2.4 STAINLESS STEEL

- A. Tubing: ASTM A554, Grade MT 304.
- B. Pipe: ASTM A312/A312M, Grade TP 304.
- C. Castings: ASTM A743/A743M, Grade CF 8 or CF 20.
- D. Plate and Sheet: ASTM A666, Type 304.
- E. Bars and Shapes: ASTM A276, Type 304.
- F. Perforated Metal: Stainless-steel sheet, ASTM A240/A 240M or ASTM A666, Type 304, 0.062 inch thick.
 - 1. Basis-of-Design Product: Provide product with perforations matching Viva Railings PP-11 Nexal Pattern

2.5 FASTENERS

- A. Fastener Materials: Unless otherwise indicated, provide the following:
 - 1. Aluminum Components: Type 304 stainless-steel fasteners
 - 2. Stainless-Steel Components: Type 304 stainless-steel fasteners
 - 3. Uncoated Steel Components: Plated-steel fasteners complying with ASTM B633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed; Type 304 stainless-steel fasteners where exposed
 - 4. Galvanized Steel Components: Plated-steel fasteners complying with ASTM B633, Class Fe/Zn 25 for electrodeposited zinc coating
 - 5. Dissimilar Metals: Type 304 stainless-steel fasteners
- B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.
- C. Provide concealed fasteners for interconnecting railing components and for attaching railings to other work, unless exposed fasteners are the standard fastening method for railings indicated.
 - 1. Provide tamper-resistant flat-head machine screws for exposed fasteners, unless otherwise indicated.
- D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 or ICC-ES AC308.
 - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 stainless-steel bolts, ASTM F593 and nuts, ASTM F594.

2.6 MISCELLANEOUS MATERIALS

- A. Electrical Components: Provide internal, fluorescent light fixtures and electrical components, required as part of illuminated railings, that comply with NFPA 70, are listed and labeled by a qualified testing agency as defined in NFPA 70, and are marked for intended location and application.
- B. Plastic Handrail Caps: Thermoplastic rail covering, color as indicated or, if not indicated, as selected by Architect from manufacturer's standard colors.
- C. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- D. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- E. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- F. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- G. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
- H. Intermediate Coats and Topcoats: Provide products that comply with Division 09 "Painting" sections
- I. Epoxy Intermediate Coat: Complying with MPI#77 and compatible with primer and topcoat.
- J. Polyurethane Topcoat: Complying with MPI#72 and compatible with undercoat.
- K. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- L. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- M. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
 - 1. Water-Resistant Product: At exterior locations provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.7 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.

- B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- C. Make up wire-rope assemblies in the shop to field-measured dimensions with fittings machine swaged. Minimize amount of turnbuckle take-up used for dimensional adjustment so maximum amount is available for tensioning wire ropes. Tag wire-rope assemblies and fittings to identify installation locations and orientations for coordinated installation.
- D. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch, unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- E. Form work true to line and level with accurate angles and surfaces.
- F. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- G. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- H. Connections: Fabricate handrails with welded connections unless otherwise indicated.
- I. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove flux immediately.
 - 4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.
- J. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
 - 1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.
- K. Form changes in direction as follows:
 - 1. By welding to form miter
 - 2. By bending to smallest radius that will not result in distortion of railing member
- L. Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- M. Close exposed ends of hollow railing members with prefabricated end fittings.

- N. Provide wall returns at ends of wall-mounted handrails, unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is 1/4 inch or less.
- O. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work, unless otherwise indicated.
 - 1. At brackets and fittings fastened to plaster or gypsum board partitions, provide fillers made from crush-resistant material, or other means to transfer wall loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.
- P. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.
- Q. For railing posts set in concrete, provide steel sleeves not less than 6 inches long with inside dimensions not less than 1/2 inch greater than outside dimensions of post, with steel plate forming bottom closure.
- R. Expanded-Metal Infill Panels:
 - 1. Fabricate infill panels from stainless-steel expanded metal, unless otherwise indicated.
 - 2. Edge panels with U-shaped channels made from same metal as infill; not less than 0.0428 inch thick.
 - 3. Orient expanded metal with long dimension of diamonds vertical.
- S. Perforated-Metal Infill Panels: Fabricate infill panels from perforated metal made from same metal as railings in which they are installed.
 - 1. Edge panels with U-shaped channels made from metal sheet, of same metal as perforated metal and not less than 0.043 inch thick.
 - 2. Orient perforated metal with pattern vertical.

2.8 ILLUMINATED RAILINGS

- A. General: Comply with requirements in this Section for aluminum railings with welded connections.
- B. Illuminated Units: Provide internal illumination using concealed, internally wired, fluorescent-strip fixture system to illuminate walking surfaces adjacent to railings without light leaks. Make provisions for servicing and for concealed connection to electric service. Coordinate electrical characteristics with those of the power supply provided.
 - 1. Fluorescent Tubes: Provide number of tubes indicated or required by railing length.
 - 2. Diffusers: UV-stabilized acrylic diffusers matching profile of railings.
 - 3. Ballasts: Energy-saving, high power factor, Class P, electromagnetic type; designed for use with high-output lamps, and with automatic-reset thermal protection. Ballasts comply with ANSI C82.1, bear Certified Ballast Manufacturer Certification labels, and are rated for 0 deg F starting temperature.

2.9 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
- C. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.10 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Mechanical Finish: AA-M3x (Mechanical Finish: as specified); sand top rails, handrails, and intermediate rails in 1 direction only, parallel to length of railing, with 120- and 320-grit abrasive. After installation, polish railings with No. 0 steel wool immersed in paste wax, then rub to a luster with a soft dry cloth.
- C. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.
- D. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
- E. Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Apply baked enamel complying with paint manufacturer's written instructions for cleaning, conversion coating, and painting.
 - 1. Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 2603 except with a minimum dry film thickness of 1.5 mils, medium gloss.
- F. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil for primer and 0.8 mil for topcoat.
 - 1. Color and Gloss: As selected by Architect from manufacturer's full range.

2.11 STAINLESS-STEEL FINISHES

- A. Remove tool and die marks and stretch lines or blend into finish.
- B. Grind and polish surfaces to produce uniform finish indicated, free of cross scratches.

C. Dull Satin Finish: ASTM A480/A480M, No. 6

2.12 STEEL AND IRON FINISHES

A. Galvanized Railings:

1. Hot-dip galvanize exterior steel and iron railings, including hardware, after fabrication.
2. Hot-dip galvanize indicated steel and iron railings, including hardware, after fabrication.
3. Comply with ASTM A123/A123M for hot-dip galvanized railings.
4. Comply with ASTM A153/A153M for hot-dip galvanized hardware.

B. Fill vent and drain holes that will be exposed in finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

C. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.

D. For nongalvanized steel railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors to be embedded in exterior concrete or masonry.

E. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with metallic-phosphate process.

F. Preparing Nongalvanized Items for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed railings:

1. Exterior Railings: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
2. Railings Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
3. Railings Indicated to Receive Primers: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
4. Other Railings: SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."

G. Primer Application: Apply shop primer to prepared surfaces of railings, unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.

1. Shop prime uncoated railings with universal shop primer unless zinc-rich primer is indicated.

H. Shop-Painted Finish: Comply with Division 09 painting Sections.

1. Color: As selected by Architect from manufacturer's full range.

I. High-Performance Coating Finish: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and

Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.

1. Color: As selected by Architect from manufacturer's full range.
- J. Powder-Coat Finish: Prepare, treat, and coat nongalvanized ferrous metal to comply with resin manufacturer's written instructions and as follows:
1. Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 2. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 1.5 mils.
 3. Color: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Fit exposed connections together to form tight, hairline joints.
- B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
 1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 2. Set posts plumb within a tolerance of 1/16 inch in 3 feet.
 3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.
- C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
 1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- D. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.2 RAILING CONNECTIONS

- A. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.

3.3 ANCHORING POSTS

- A. Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with nonshrink, anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions.
- B. Form or core-drill holes not less than 5 inches deep and 3/4 inch larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions.
- C. Cover anchorage joint with flange of same metal as post, welded to post after placing anchoring material.
- D. Leave anchorage joint exposed; wipe off surplus anchoring material; and leave 1/8-inch buildup, sloped away from post.
- E. Anchor posts to metal surfaces with flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For aluminum railings, attach posts as indicated using fittings designed and engineered for this purpose.
 - 2. For stainless-steel railings, weld flanges to posts and bolt to metal-supporting surfaces.
 - 3. For steel railings, weld flanges to posts and bolt to metal-supporting surfaces.

3.4 ATTACHING RAILINGS

- A. Attach handrails to walls with wall brackets except where end flanges are used. Provide brackets with 1-1/2-inch (38-mm) clearance from inside face of handrail and finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
 - 1. Use type of bracket with flange tapped for concealed anchorage to threaded hanger bolt.
 - 2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
- B. Secure wall brackets and railing end flanges to building construction as follows:
 - 1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - 2. For hollow masonry anchorage, use toggle bolts.
 - 3. For steel-framed partitions, use hanger or lag bolts set into fire-retardant-treated wood backing between studs. Coordinate with stud installation to locate backing members.
 - 4. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements using self-tapping screws of size and type required to support structural loads.
 - 5. For steel-framed partitions, fasten brackets with toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports. Payment for these services will be made by Owner.
- B. Extent and Testing Methodology: Testing agency will randomly select completed railing assemblies for testing that are representative of different railing designs and conditions in the completed Work. Railings will be tested according to ASTM E894 and ASTM E935 for compliance with performance requirements.
- C. Remove and replace railings where test results indicate that they do not comply with specified requirements unless they can be repaired in a manner satisfactory to Architect and will comply with specified requirements.
- D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.6 CLEANING

- A. Clean aluminum and stainless steel by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.
- B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
- C. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Division 09 painting Sections.
- D. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780.

3.7 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
- B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in field to shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 05 73 00

SECTION 05 75 00 - DECORATIVE FORMED METAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Metal base.

- B. Related Requirements:

- 1. Division 05 Section "Decorative Metal" for decorative items made primarily from plate, bars, extrusions, tubes, castings, and other forms of metal, but which may include sheet metal components.

1.3 COORDINATION

- A. Coordinate installation of anchorages for decorative formed metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.
- B. Coordinate installation of decorative formed metal with adjacent construction to ensure that wall assemblies, flashings, trim, and joint sealants, are protected against damage from the effects of weather, age, corrosion, and other causes of deterioration.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product, including finishing materials.
- B. Shop Drawings: Show fabrication and installation details for decorative formed metal.
 - 1. Include plans, elevations, component details, and attachment details.

2. Indicate materials and profiles of each decorative formed metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items.
- C. Samples for Verification: For each type of exposed finish required, prepared on 6-inch- square Samples of metal of same thickness and material indicated for the Work.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: For decorative formed metal elements that house items specified in other Sections. Show dimensions of housed items, including locations of housing penetrations and attachments, and necessary clearances.
- B. Qualification Data: For Installer and fabricator.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For finish to include in maintenance manuals.

1.8 QUALITY ASSURANCE

- A. Fabricator Qualifications: A firm experienced in producing decorative formed metal similar to that indicated for this Project and with a record of successful in-service performance as well as sufficient production capacity to produce required units.
- B. Coating Applicator Qualifications: A firm experienced in successfully applying anodic-coatings of type indicated to metals of types indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- C. Anodic Finisher Qualifications: A firm experienced in successfully applying anodic finishes of type indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- D. Installer Qualifications: Fabricator of products.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver decorative formed metal products wrapped in protective coverings and strapped together in suitable packs or in heavy-duty cartons. Remove protective coverings before they stain or bond to finished surfaces.
- B. Store products on elevated platforms in a dry location.

1.10 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls, columns, beams, and other construction contiguous with decorative formed metal by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 SHEET METAL

- A. General: Fabricate products from sheet metal without pitting, seam marks, roller marks, stains, discolorations, or other imperfections where exposed to view on finished units.
- B. Aluminum Sheet: Flat sheet complying with ASTM B209, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties of not less than Alloy 5005-H32.

2.2 MISCELLANEOUS MATERIALS

- A. Sealants, Exterior: Elastomeric sealant complying with Division 07 Section "Joint Sealants" and as recommended in writing by decorative formed metal manufacturer.
- B. Sealants, Interior: Nonsag, paintable sealant complying with Division 07 Section "Joint Sealants" and as recommended in writing by decorative formed metal manufacturer.
- C. Filler Metal and Electrodes: Provide type and alloy of filler metal and electrodes as recommended by producer of metal to be welded or brazed and as necessary for strength, corrosion resistance, and compatibility in fabricated items.
- D. Fasteners: Fabricated from same basic metal and alloy as fastened metal unless otherwise indicated. Do not use metals that are incompatible with materials joined.
 - 1. Provide concealed fasteners for interconnecting decorative formed metal items and for attaching them to other work unless otherwise indicated.
 - 2. Provide tamper-resistant square or hex socket flat-head machine screws for exposed fasteners unless otherwise indicated.
- E. Nonstructural Anchors: For applications not indicated to comply with design loads, provide fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 or ICC-ES AC308.
- F. Anchor Materials:
 - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.

2.3 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble decorative formed metal items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- B. Coordinate dimensions and attachment methods of decorative formed metal items with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.
- C. Form metal to profiles indicated, in maximum lengths to minimize joints. Produce flat, flush surfaces without cracking or grain separation at bends. Fold back exposed edges of unsupported sheet metal to form a 1/2-inch-wide hem on the concealed side, or ease edges to a radius of approximately 1/32 inch and support with concealed stiffeners.
- D. Increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as needed to provide surface flatness equivalent to stretcher-leveled standard of flatness and sufficient strength for indicated use.
 - 1. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
- E. Build in straps, plates, and brackets as needed to support and anchor fabricated items to adjoining construction. Reinforce decorative formed metal items as needed to attach and support other construction.
- F. Provide support framing, mounting and attachment clips, splice sleeves, fasteners, and accessories needed to install decorative formed metal items.
- G. Where welding or brazing is indicated, weld or braze joints and seams continuously. Grind, fill, and dress to produce smooth, flush, exposed surfaces in which joints are not visible after finishing is completed.

2.4 METAL BASE

- A. Manufacturers
 - 1. Subject to compliance with requirements, acceptable manufacturers include, but are not limited to:
 - a. Fry Reglet Corporation.
 - b. Pitcon Industries
- B. Form metal base from metal of type and thickness indicated below:
 - 1. Aluminum Sheet: 0.063 inch.
 - a. Finish: Clear anodic.

2.5 GENERAL FINISH REQUIREMENTS

- A. Complete mechanical finishes of flat sheet metal surfaces before fabrication where possible. After fabrication, finish all joints, bends, abrasions, and other surface blemishes to match sheet finish.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.
- D. Finish items indicated on Drawings after assembly.
- E. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of decorative formed metal.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Locate and place decorative formed metal items level and plumb and in alignment with adjacent construction. Perform cutting, drilling, and fitting required to install decorative formed metal.
 - 1. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
- B. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers as indicated.

- C. Install concealed gaskets, joint fillers, sealants, and insulation, as the Work progresses, to make interior decorative formed metal items soundproof or lightproof as applicable to type of fabrication indicated.
- D. Corrosion Protection: Apply bituminous paint or other permanent separation materials on concealed surfaces where metals would otherwise be in direct contact with substrate materials that are incompatible or could result in corrosion or deterioration of either material or finish.

3.3 ADJUSTING AND CLEANING

- A. Unless otherwise indicated, clean metals by washing thoroughly with water and soap, rinsing with clean water, and drying with soft cloths.
- B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.

3.4 PROTECTION

- A. Protect finishes of decorative formed metal items from damage during construction period. Remove temporary protective coverings at time of Substantial Completion.

END OF SECTION 05 75 00

SECTION 061053 - MISCELLANEOUS ROUGH CARPENTRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 1. Rooftop equipment bases and support curbs.
 2. Wood blocking, cants, and nailers.
 3. Wood furring.
 4. Wood sleepers.
 5. Plywood backing panels.
- B. Related Requirements:
 1. Division 06 Section "Sheathing" for sheathing, subflooring and underlayment.
 2. Division 06 Sections "Interior Finish Carpentry" and "Architectural Cabinets" for nonstructural carpentry items exposed to view and not specified in another Section.

1.3 DEFINITIONS

- A. Boards or Strips: Lumber of less than 2 inches nominal size in least dimension.
- B. Dimension Lumber: Lumber of 2 inches nominal or greater but less than 5 inches nominal in least dimension.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
 1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
 2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
 3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D5664.
 4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

1.5 INFORMATIONAL SUBMITTALS

- A. Sustainable Design Submittals:
 - 1. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
 - 2. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
 - 3. Chain-of-Custody Qualification Data: For manufacturer and vendor.
 - 4. Product Data: For installation adhesives, indicating VOC content.
 - 5. Laboratory Test Reports: For installation adhesives, indicating compliance with requirements for low-emitting materials.

- B. Evaluation Reports: For the following, from ICC-ES:
 - 1. Preservative-treated wood.
 - 2. Fire-retardant-treated wood.
 - 3. Power-driven fasteners.
 - 4. Post-installed anchors.
 - 5. Metal framing anchors.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

- B. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.

- C. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Stack lumber flat with spacers beneath and between each bundle to provide air circulation. Protect lumber from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS, GENERAL

- A. Certified Wood: Lumber and plywood shall be certified as "FSC Pure" or "FSC Mixed Credit" according to FSC STD-01-001 and FSC STD-40-004.

- B. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
 - 1. Factory mark each piece of lumber with grade stamp of grading agency.

2. For exposed lumber indicated to receive a stained or natural finish, mark grade stamp on end or back of each piece or omit grade stamp and provide certificates of grade compliance issued by grading agency.
- C. Maximum Moisture Content of Lumber: 19 percent for 2-inch nominal thickness or less, no limit for more than 2-inch nominal thickness unless otherwise indicated.

2.2 WOOD-PRESERVATIVE-TREATED MATERIALS

- A. Preservative Treatment by Pressure Process: AWPA U1; Use Category UC2 for interior construction not in contact with the ground, Use Category UC3b for exterior construction not in contact with the ground, and Use Category UC4a for items in contact with the ground.
1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. Inorganic boron (SBX) products shall be used only for interior construction not exposed to moisture.
 2. For exposed items indicated to receive a stained or natural finish, chemical formulations shall not require incising, contain colorants, bleed through, or otherwise adversely affect finishes.
- B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or does not comply with requirements for untreated material.
- C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.
1. For exposed lumber indicated to receive a stained or natural finish, mark end or back of each piece.
- D. Application: Treat items indicated on Drawings, and wood installed on the exterior side of the weather barrier, including but not limited to:
1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 2. Wood sills, sleepers, blocking, furring, stripping and similar concealed members in contact with masonry or concrete.
 3. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
 4. Wood framing members that are less than 18 inches above the ground in crawlspaces or unexcavated areas.
 5. Wood floor plates that are installed over concrete slabs-on-grade.

2.3 FIRE-RETARDANT-TREATED MATERIALS

- A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame spread index of 25 or less when tested according to ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame

front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.

1. Use treatment that does not promote corrosion of metal fasteners.
 2. Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering according to ASTM D2898. Use for exterior locations and where indicated.
 3. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D3201 at 92 percent relative humidity. Use where exterior type is not indicated.
 4. Design Value Adjustment Factors: Treated lumber shall be tested according to ASTM D5664, and design value adjustment factors shall be calculated according to ASTM D6841. For enclosed roof framing, framing in attic spaces, and where high-temperature fire-retardant treatment is indicated, provide material with adjustment factors of not less than 0.85 modulus of elasticity and 0.75 for extreme fiber in bending for Project's climatological zone.
- C. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Kiln-dry plywood after treatment to a maximum moisture content of 15 percent.
- D. Identify fire-retardant-treated wood with appropriate classification marking of testing and inspecting agency acceptable to authorities having jurisdiction.
1. For exposed lumber indicated to receive a stained or natural finish, mark end or back of each piece.
- E. For exposed items indicated to receive a stained or natural finish, chemical formulations shall not bleed through, contain colorants, or otherwise adversely affect finishes.
- F. Application: Treat items indicated on Drawings, and wood installed in the interior side of the weather barrier, including but not limited to:
1. Framing for raised platforms.
 2. Concealed blocking.
 3. Roof framing and blocking.
 4. Wood cants, nailers, curbs, equipment support bases, blocking, and similar members in connection with roofing.
 5. Plywood backing panels.

2.4 MISCELLANEOUS LUMBER

- A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:
1. Blocking.
 2. Nailers.
 3. Cants.
- B. For concealed board blocking, provide lumber with 19 percent maximum moisture content and any of the following species and grades:
1. Mixed southern pine, No. 2 grade; SPIB.
 2. Hem-fir or hem-fir (north), Construction or No. 2 Common grade; NLGA, WCLIB, or WWPA.

3. Spruce-pine-fir (south) or spruce-pine-fir, Construction or No. 2 Common grade; NeLMA, NLGA, WCLIB, or WWPA.
 4. Eastern softwoods, No. 2 Common grade; NELMA.
 5. Northern species, No. 2 Common grade; NLGA.
 6. Western woods, Construction or No. 2 Common grade; WCLIB or WWPA.
- C. For blocking and nailers used for attachment of other construction, select and cut lumber to eliminate knots and other defects that will interfere with attachment of other work.

2.5 PLYWOOD BACKING PANELS

- A. Equipment Backing Panels: DOC PS 2, Exposure 1, C-C Plugged, fire-retardant treated, in thickness indicated or, if not indicated, not less than 3/4-inch nominal thickness.

2.6 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
1. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners with hot-dip galvanizing coating complying with ASTM A153/A153M.
 2. Seismic Requirement: Where fasteners are required to secure ceilings, partitions and other architectural components, as indicated in the trade sections, select wood and sheet metal screws appropriate to the seismic shear and withdrawal loads indicated.
 - a. Drywall screws are not acceptable except to fasten gypsum drywall to metal studs.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Screws for Fastening to Metal Framing: ASTM C954, length as recommended by screw manufacturer for material being fastened.
- D. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- E. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC58 as appropriate for the substrate.
1. Material: Carbon-steel components, zinc plated to comply with ASTM B633, Class Fe/Zn 5.
 2. Material: Stainless steel with bolts and nuts complying with ASTM F593 and ASTM F594, Alloy Group 1 or 2.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.

- B. Set carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit carpentry to other construction; scribe and cope as needed for accurate fit. Locate nailers, blocking, and similar supports to comply with requirements for attaching other construction.
- C. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. Install fire-retardant treated plywood backing panels with classification marking of testing agency exposed to view.
- D. Provide blocking as indicated and as required to support facing materials, casework/millwork, fixtures, specialty items, and trim.
 - 1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches o.c.
- E. Comply with AWWA M4 for applying field treatment to cut surfaces of preservative-treated lumber.
 - 1. Use inorganic boron for items that are continuously protected from liquid water.
 - 2. Use copper naphthenate for items not continuously protected from liquid water.
- F. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.
- G. Securely attach carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
- H. ICC-ES evaluation report for fastener.
- I. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.

3.2 INSTALLING CONCEALED BLOCKING

- A. Provide blocking concealed in partitions at every location where a fixture or other appurtenance is supported by the partition. Blocking shall be installed horizontally from stud to stud and be positively connected to each stud in a manner so that it supports each fixture or appurtenance. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved. Install blocking for support of all fixtures and other appurtenances including but not limited to toilet partitions, wall cabinets, countertops, casework, millwork, handrails, bumper rails, shelving, toilet accessories, mirrors, wall mounted equipment, hardware including wall door stops, and other wall mounted items. Contractor shall notify the Architect before installing fixtures or other appurtenances weighing in excess of 250 lbs.
 - 1. For fixtures or other appurtenances which weigh 25 lbs. or less attach directly to a minimum 0.033-inch-thick, 3 5/8" wide steel stud section or a 16 gauge cold rolled steel plate, minimum 6" wide installed horizontally from stud to stud. Fasten with minimum two low profile pan head #8-18 screws at each stud.
 - 2. For fixtures or other appurtenances which weigh more than 25 lbs. but less than 250 lbs. or are supporting live loads of more than 25 lbs. (i.e. handrails) attach directly to one of the following:

- a. Provide 2 x 10 nominal fire-treated wood blocking; attach blocking to each stud with minimum three 1¼" long #10 wood screws; space top and bottom wood screws ½" from end of wood; do not attach screws into wood end grain; avoid wood end grain by providing a minimum 0.033 inch thick steel clip angle; install minimum three low profile pan head #8-18 sheet metal screws to connect steel clip angle to stud; kerf blocking to accommodate stud lip.
 - b. Provide ¾ inch x 24 inches minimum wide fire-treated plywood blocking; attach blocking to each stud with minimum four 1" long #10 wood screws; space top and bottom wood screws ½" from end of wood; do not attach screws into wood end grain; avoid wood end grain by providing a minimum 0.033 inch thick steel clip angle; install minimum four #8-18 sheet metal screws to connect steel clip angle to stud; kerf blocking to accommodate stud lip.
 - c. Manufactured wood plywood backing plate:
 - 1) Acceptable Product: Subject to compliance with requirements, provide the following: ClarkDietrich Building Systems; Danback Fire-Treated Wood Backing Plate.
 - 2) Install Danback Backing plate per manufacturer's written instructions and per published load data, but with a minimum of two screws per stud.
 - d. Provide 0.054-inch-thick nested steel stud and runner; secure stud to runner with 4-# 8 pan head framing screws top and bottom; connect blocking to studs with minimum 0.054-inch-thick cold rolled plates; provide minimum three #8-18 low profile pan head framing screws in each cold rolled plate connection.
3. Shower Seat: Wall mounted shower seats shall be installed as follows:
- a. Studs supporting the shower seat blocking (up to three) shall be minimum 0.033-inch-thick, 3 5/8" wide steel studs with minimum of three "U" shaped strap anchors to join studs together. Extend the double studs from floor to 1/2 inch short of underside of structure above seated into 2-1/2 to 3-inch-deep leg runner track. Maximum stud height shall be limited to 16 ft. 0 in.
 - b. Provide 2 x 10 nominal fire-treated kerfed wood blocking attached to double studs with a minimum three (3) 1¼" long #10 wood screws at each end of each piece of blocking; space top and bottom wood screws ½" from end of wood; do not attach screws into wood end grain; install minimum three #8-18 sheet metal screws at each steel stud/steel stud connection as required to secure a 20 ga. clip on the backside. Add an additional row of wood blocking as required to capture all shower seat attachment points.
 - c. Secure the shower seat to the wood blocking with the #14 x 2-1/2" stainless steel mounting screws furnished by the manufacturer.

3.3 PROTECTION

- A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.
- B. Protect miscellaneous rough carpentry from weather. If, despite protection, miscellaneous rough carpentry becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION 061053

SECTION 06 16 00 – SHEATHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Wall sheathing.
2. Parapet sheathing.
3. Sheathing joint and penetration treatment.

- B. Related Requirements:

1. Division 06 Section "Miscellaneous Rough Carpentry" for plywood backing panels.
2. Division 07 Section "Vapor Permeable Barrier (AIB)" for water-resistive barrier applied over wall sheathing and testing requirements.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
 1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Indicate type of preservative used and net amount of preservative retained.
 2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Include physical properties of treated materials.
 3. For fire-retardant treatments, include physical properties of treated plywood both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D5516.
 4. For products receiving waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
 5. For air-barrier and water-resistant glass-mat gypsum sheathing, include manufacturer's technical data and tested physical and performance properties of products.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer including list of ABAA-certified installers and supervisors employed by Installer, who work on Project.
- B. Product Certificates: From air-barrier and water-resistant glass-mat gypsum sheathing manufacturer, certifying compatibility of sheathing accessory materials with Project materials that connect to or that come in contact with the sheathing.
- C. Product Test Reports: For each air-barrier and water-resistant glass-mat gypsum sheathing assembly, indicating compliance with specified requirements, for tests performed by a qualified testing agency.
- D. Evaluation Reports: For the following, from ICC-ES:
 - 1. Wood-preservative-treated plywood.
 - 2. Fire-retardant-treated plywood.
 - 3. Foam-plastic sheathing.
 - 4. Air-barrier and water-resistant glass-mat gypsum sheathing.
- E. Field quality-control reports.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer of glass-mat gypsum sheathing.
 - 1. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.
- B. Mockups: Build mockups to set quality standards for materials and execution, and where required, for preconstruction testing.
 - 1. Build integrated mockups of exterior wall assembly, 150 sq. ft., incorporating backup wall construction, window, storefront, door frame and sill, ties and other penetrations, and flashing to demonstrate crack and joint treatment and sealing of gaps, terminations, and penetrations of air-barrier sheathing assembly.
 - a. Coordinate construction of mockups to permit inspection and testing of sheathing before external insulation and cladding are installed.
 - b. Include junction with roofing membrane, building corner condition, and foundation wall intersection.
 - c. If Architect determines mockups do not comply with requirements, reconstruct mockups until mockups are approved.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

C. Testing Agency Qualifications:

1. For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on field mockups.
- B. Mockup Testing: Glass-mat gypsum sheathing assemblies shall comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.
 1. This mockup to be tested in conjunction with requirements noted in Division 07 section "Vapor Permeable Barriers (AIB)"

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance Ratings: As tested according to ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 WOOD PANEL PRODUCTS

- A. Emissions: Products shall meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Thickness: As needed to comply with requirements specified, but not less than thickness indicated.
- C. Factory mark panels to indicate compliance with applicable standard.

2.3 PRESERVATIVE-TREATED PLYWOOD

- A. Preservative Treatment by Pressure Process: AWWPA U1; Use Category UC3b for parapet sheathing.
 - 1. Preservative Chemicals: Alkaline copper quaternary (ACQ) or copper azole (CA)
 - 2. Preservatives shall be acceptable to authorities having jurisdiction and containing no arsenic or chromium.
- B. Mark plywood with appropriate classification marking of an inspection agency acceptable to authorities having jurisdiction.
- C. Application: Treat all parapet plywood unless otherwise indicated.

2.4 FIRE-RETARDANT-TREATED PLYWOOD

- A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested according to ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.
 - 1. Use treatment that does not promote corrosion of metal fasteners.
 - 2. Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated plywood by pressure process after being subjected to accelerated weathering according to ASTM D2898. Use for exterior locations and where indicated.
 - 3. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D3201/D3201M at 92 percent relative humidity. Use where exterior type is not indicated.
 - 4. Design Value Adjustment Factors: Treated lumber plywood shall be tested according to ASTM D5516 and design value adjustment factors shall be calculated according to ASTM D6305. Span ratings after treatment shall be not less than span ratings specified.
- C. Kiln-dry material after treatment to a maximum moisture content of 15 percent. Do not use material that is warped or does not comply with requirements for untreated material.
- D. Identify fire-retardant-treated plywood with appropriate classification marking of qualified testing agency.
- E. Application: Treat plywood indicated on Drawings, and the following:
 - 1. Roof sheathing.
 - 2. Where required by selected rated assemblies, including but not limited to fire barriers.

2.5 WALL SHEATHING

- A. Glass-Mat Gypsum Sheathing Board: ASTM C1177/C1177M, with fiberglass mat laminated to both sides and with manufacturer's standard edges.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; GlasRoc Sheathing.
 - b. Georgia-Pacific Gypsum LLC; Dens-Glass Gold.
 - c. Continental; Weather Defense Platinum Sheathing Type X
 - d. National Gypsum Company; Gold Bond, e(2)XP.
 - e. USG Corporation; Securock Glass Mat Sheathing.
 2. Type and Thickness: Type X, 5/8 inch thick.
 3. Size: 48 by 96 inches for vertical installation.
- B. Cementitious Backer Units: ASTM C1325, Type A.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C-Cure.
 - b. Custom Building Products.
 - c. FinPan, Inc.
 - d. USG Corporation.
 2. Thickness: As indicated.

2.6 PARAPET SHEATHING

- A. Plywood Sheathing: , Exterior, Structural I sheathing.
1. Span Rating: Not less than 20/0.
 2. Nominal Thickness: Not less than 15/32 inch.
- B. Glass-Mat Gypsum Sheathing: ASTM C1177/C1177M.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation.
 - b. Georgia-Pacific Gypsum LLC.
 - c. National Gypsum Company.
 - d. USG Corporation.
 2. Type and Thickness: Type X, 5/8 inch thick.
 3. Size: 48 by 96 inches for vertical installation.
- C. Cementitious Backer Units: ASTM C1325, Type A.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C-Cure.
 - b. Custom Building Products.
 - c. FinPan, Inc.
 - d. USG Corporation.
2. Thickness: 5/8 inch.

2.7 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
 1. For roof parapet and wall sheathing, provide fasteners with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B117.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- D. Screws for Fastening Sheathing to Wood Framing: ASTM C1002.
- E. Screws for Fastening Wood Structural Panels to Cold-Formed Metal Framing: ASTM C954, except with wafer heads and reamer wings, length as recommended by screw manufacturer for material being fastened.
- F. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached.
 1. For steel framing less than 0.0329 inch thick, use screws that comply with ASTM C1002.
 2. For steel framing from 0.033 to 0.112 inch thick, use screws that comply with ASTM C954.
- G. Screws for Fastening Composite Nail Base Insulated Roof Sheathing to Metal Roof Deck: Steel drill screws, in type and length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B117. Provide washers or plates if recommended by sheathing manufacturer.

2.8 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

- A. Sealant for Glass-Mat Gypsum Sheathing: Silicone emulsion sealant complying with ASTM C834, compatible with sheathing tape and sheathing and recommended by tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.
 1. Sheathing Tape: Self-adhering glass-fiber tape, minimum 2 inches wide, 10 by 10 or 10 by 20 threads/inch, of type recommended by sheathing and tape manufacturers for use with

06 16 00- 6 of 9

silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing and with a history of successful in-service use.

2.9 MISCELLANEOUS MATERIALS

- A. Adhesives for Field Gluing Panels to Wood Framing: Formulation complying with ASTM D3498 that is approved for use with type of construction panel indicated by manufacturers of both adhesives and panels.
 - 1. Adhesive shall have a VOC content of 50 g/L or less.
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
 - 1. Table 2304.9.1, "Fastening Schedule," in the ICC's International Building Code.
 - 2. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in the ICC's International Residential Code for One- and Two-Family Dwellings.
 - 3. ICC-ES evaluation report for fastener.
- D. Use common wire nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.
- E. Coordinate wall and parapet sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- F. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
- G. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.2 GLASS-MAT GYPSUM SHEATHING INSTALLATION

- A. Comply with GA-253 and with manufacturer's written instructions.
 - 1. Fasten gypsum sheathing to cold-formed metal framing with screws.
- B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.
- C. Vertical Installation: Install vertical edges centered over studs. Attach at perimeter and within field of panel to each stud.
 - 1. Erect glass faced gypsum sheathing board vertically with ends and edges butted, edges occurring over firm bearing, and edge joints staggered in successive courses, in accordance with GA 253. Interrupt sheathing at control joints.
 - 2. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of panels or as directed by the CFMF Design Engineer and in accordance with ASTM C1002.
 - 3. Apply elastomeric sealant to joints and fasteners, apply tape and seal penetrations and openings as directed in Division 07 sections Air and Vapor Barrier (AVB) and Vapor Permeable Barrier (AIB).

3.3 CEMENTITIOUS BACKER UNIT INSTALLATION

- A. Install panels and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated.

3.4 WOOD PARAPET SHEATHING INSTALLATION

- A. General: Comply with applicable recommendations in APA Form No. E30, "Engineered Wood Construction Guide," for types of structural-use panels and applications indicated.
- B. Fastening Methods: Fasten panels as indicated below:
 - 1. Parapet Sheathing:
 - a. Screw to cold-formed metal framing.
 - b. Space panels 1/8 inch apart at edges and ends.

3.5 FIELD QUALITY CONTROL

- A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.
 - 1. Sheathing to be installed and tested in conjunction with air barriers per Division 07 sections Air and Vapor (AVB) and Vapor Permeable (AIB) Barriers.

- B. Testing and Inspecting Agency: Engage a qualified testing agency to perform tests and inspections.
 - 1. Inspections: Sheathing to be tested in conjunction with air barriers per Division 07 sections Air and Vapor (AVB) and Vapor Permeable (AIB) Barriers.

END OF SECTION 06 16 00

SECTION 06 42 00 - ARCHITECTURAL MILLWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Architectural wood and wood product millwork, including but not limited to custom millwork and decorative partitions.
2. Plastic laminate faced millwork
3. Solid surface material countertops
4. Millwork hardware and accessories
5. Wood shims and hanging strips for installing architectural millwork.
6. Shop finishing of architectural millwork.

- B. Related Requirements:

1. Division 06 Section "Miscellaneous Rough Carpentry" for wood blocking concealed within other construction required for installing millwork.

1.3 DEFINITIONS

- A. MDF: Medium-density fiberboard.
- B. MDO Plywood: Plywood with a medium-density overlay on the face.

1.4 PREINSTALLATION MEETINGS

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product, including panel products, high pressure decorative laminates, countertop materials and adhesives, cabinet hardware and accessories and finishing materials and processes.
- B. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.

1. Show details full size.
2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
3. Show locations and sizes of cutouts and holes for electrical switches and outlets and other items installed in architectural millwork.
4. Apply WI Certified Compliance Program or Apply AWI Quality Certification Program label to Shop Drawings.

C. Samples for Initial Selection:

1. Thermoset decorative panels.
2. Each type of high pressure laminate.
3. Each type of solid surface material.

D. Samples for Verification:

1. Thermoset decorative panels, 8 by 10 inches, for each color, pattern, and surface finish, with edge banding on one edge.
 - a. Provide edge banding on one edge.
2. Plastic laminates, 8 by 10 inches, for each type, color, pattern, and surface finish, with one sample applied to core material and specified edge material applied to one edge.
 - a. Provide one sample applied to core material with specified edge material applied to one edge.
3. Wood-grain plastic laminates, 8 by 10 inches for each type, pattern and surface finish, with one sample applied to core material and specified edge material applied to one edge.
4. Solid surface material, 8 by 10 inches, for each type, color, pattern, and surface finish, with specified edge treatment applied to one edge.
5. Exposed cabinet hardware and accessories, one unit for each type and finish.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator and installer.

B. Product Certificates: For the following:

1. Composite wood products.
2. Thermoset decorative panels.
3. Adhesives.
4. High pressure decorative laminate.
5. Each type of solid surface material.

C. Millwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates WI Certified Compliance Program certificates.

D. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Quality Standard Compliance Certificates: AWI Quality Certification Program certificates.

1.8 QUALITY ASSURANCE

- A. Fabricator Qualifications: AWI or WI Certified shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Certified participant in AWI's Quality Certification Program or Licensee of WI's Certified Compliance Program.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups of typical architectural millwork as shown on Drawings.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver millwork until painting and similar operations that could damage millwork have been completed in installation areas. If millwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 25 and 55 percent during the remainder of the construction period.
- B. Field Measurements: Where millwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support millwork by field measurements before being enclosed/concealed by construction, and indicate measurements on Shop Drawings.
- C. Established Dimensions: Where millwork is indicated to fit to other construction, establish dimensions for areas where millwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.11 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that architectural millwork can be supported and installed as indicated.

1.12 WARRANTY

- A. Architectural Millwork provided under the scope of this Section shall be of specified materials, quality workmanship and be free from defects that would render them unserviceable for the use intended, including flaws in appearance. The fabricator and installer agree, for a period of two years after date of Final Acceptance, to repair or replace without charge to the Owner, any millwork item that is defective within the meaning of this warranty.

PART 2 - PRODUCTS

2.1 ARCHITECTURAL MILLWORK FABRICATORS

- A. Fabricators: Subject to compliance with requirements, provide products by one of the following:

2.2 ARCHITECTURAL MILLWORK, GENERAL

- A. Quality Standard (Current Edition): Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of architectural millwork indicated for construction, finishes, installation, and other requirements.
 - 1. Grade: Premium.
 - 2. Provide labels and certificates from AWI or WI certification program indicating that millwork, including installation, complies with requirements of grades specified.
 - 3. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.

2.3 PLASTIC LAMINATE {L1, L2, L3, L4}

- A. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or if not indicated, as required by millwork quality standard.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Wilsonart International; Div. of Premark International, Inc.
 - b. Egger Wood Products, LLC
 - c. Formica Corporation

B. Laminate Cladding for Exposed Surfaces:

1. Horizontal Surfaces: Grade HGS.
2. Vertical Surfaces: Grade VGS.
3. Edges: Self-Edged with edges applied first, prior to faces
4. Pattern Direction: As indicated.

C. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:

1. As indicated on Finish Schedule

2.4 SOLID-SURFACE-MATERIAL {SS1, SS2}

A. Solid surface material: Mineral-filled polymer composition that is solid and nonporous, with color and pattern extending through its entire thickness.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Corian® by DuPont
 - b. Wilsonart International.
 - c. Meganite Inc.
2. Colors and Patterns: As indicated on Finish Schedule

2.5 WOOD SUBSTRATE MATERIALS

A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of millwork and quality grade specified unless otherwise indicated.

1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than 3 inches wide.
2. Wood Moisture Content: 5 to 10 percent.

B. Composite Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of millwork and quality grade specified unless otherwise indicated.

1. Medium density fiberboard (MDF): ANSI A208.2, Grade 130, made with binder containing no urea formaldehyde.
2. Particleboard: ANSI A208.1, Grade M-2, made with binder containing no urea formaldehyde.
3. Softwood Plywood: DOC PS 1, medium-density overlay.
4. Marine Plywood: Complying with APA TT-043A, Medium Density Overlay.
5. Thermoset Decorative Panels: Particleboard or medium density fiberboard (MDF) finished with thermally fused, melamine-impregnated decorative paper and complying

with requirements of NEMA LD 3, Grade VGL, for test methods 3.3, 3.4, 3.6, 3.8, and 3.10.

2.6 CABINET HARDWARE AND ACCESSORIES

- A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets.
- B. Frameless Concealed Hinges (European Type): BHMA A156.9, B01602, and B 01612, self-closing.

- 1. Basis of Design: Blum, Inc.: 71T Series hinges

- a. 170°: All doors, except as noted.
 - b. 110°: For installation on cabinet doors abutting inside corner surfaces.

<u>Door Height</u>	<u>Hinges per Door</u>
0-36 inches	2
37 – 62 inches	3
63 – 80 inches	4

- C. Continuous Hinges: BHMA A156.9, B01491, Bright nickel plated, 14-gauge steel.

- 1. Basis of Design: The Stanley Works, 314 Series.

- D. Flip Up Counterbalance:

- 1. Assembly shall provide neutral balance through 90 degrees of countertop travel, such that the counter will stay in place if released anywhere within this range.
 - 2. Modular torsion spring device.
 - 3. Finish: Black anodized.
 - 4. Basis of Design: CounterBalance; Counter-A-Syst CAS Series.
 - 5. Install per manufacturer's written instructions.

- E. Door and Drawer Pulls: BHMA A156.9, B02011, back mounted, solid stainless steel, 5-3/8 inches long, 1-3/8 inches deep, and 5/16 inch in diameter.

- 1. Basis of Design: Amerock #BP37191MB matte black, 3 inches long.

- F. Catches: Magnetic catches, BHMA A156.9, B03141. Minimum 5-pound pull (ADA compliant).

- 1. Basis of Design: Stanley CD 46.

- G. Adjustable Shelf Supports: BHMA A156.9, B04013.

- 1. Steel, nickel-plated.
 - 2. Basis of Design: Hettich International, #052096.

H. Shelf Securing Studs

1. Flexible, translucent plastic.
2. Basis of Design: Hettich International, #1005082.

I. Shelf Standards and Brackets: BHMA A156.9, B04102 and B04112.

1. Twelve gauge steel, stainless steel finish.
2. Provide matching shelf rests for anchoring the shelf to the bracket.
3. Basis of Design: Knape and Vogt Mfg. Co., #87 and #187.

J. Drawer Slides: BHMA A156.9, B05111.

1. File Drawers: Telescoping heavy duty with over-travel extension, three hundred fifty (350) lbs. load capacity, steel ball bearings and zinc-plated finish.
 - a. Basis of Design: Accuride, Model 4034
2. Box Drawers: Telescoping with full extension, one hundred fifty (150) lbs. load capacity, steel ball bearings and zinc-plated finish.
 - a. Basis of Design: Accuride, Model 3634C

K. Locks: to be coordinated with owner

1. Cabinet Locks: ANSI A156.11, Grade 1.
 - a. Pin tumbler, grooved key type, master keyed as directed by the Owner.
 - b. Manufacturer's standard finish as selected by the Architect.
 - c. Provide strike box keeper on inactive leaf at pair of doors.
 - d. Basis of Design: Olympus Lock, Inc., #500 DR, with Keeper #2SPD-KEPR.
2. Drawer Locks: ANSI A156.11, Grade 1.
 - a. Dead bolt, pin tumbler, grooved key type, master keyed as directed by the Owner.
 - b. Manufacturer's standard finish as selected by the Architect.
 - c. Basis of Design: Olympus Lock Inc., #600 DW.

L. Door and Drawer Silencers: BHMA A156.16, L03011.

1. Clear polyurethane, 8 mm diameter, self-adhesive.
2. Provide on all cabinet doors and drawers.
3. Basis of design: Häfele America Co., #356.21.428.

M. Cable Grommets

1. Injection molded plastic, two-piece, 60mm diameter, with breakaway tab in the cover cap at locations indicated.

2. Manufacturer's standard colors as selected by the Architect.
3. Cable grommets not located on the Drawings shall be field installed as directed by the Owner.
4. Basis of Design: Häfele America Co., #429.93 Series.

N. Oversized Cable Grommets

1. Injection molded plastic, 3 ½ inches by 6 inches, with flip top tab in the cover cap at locations indicated.
2. Manufacturer's standard colors as selected by the Architect.
3. Cable grommets not located on the Drawings shall be field installed as directed by the Owner.
4. Basis of Design: Doug Mockett LO Large Oval Grommet "King Kong".

O. Undercounter CPU Holder

1. Steel with black epoxy finish.
2. 360° swivel, 8-1/2" slide travel distance.
3. Adjustable width and height.
4. Basis of Design: Häfele America Co., #639.72.310.

P. Waste Bins:

1. Equal Pair: Powder coated steel frame and cover, with two 40 liter plastic bins.
 - a. Basis of Design: Häfele America Co. # 502.74.252.
2. Unequal Pair: Powder coated steel frame and cover, with one 40 liter plastic bin and one 8.5 liter bin.
 - a. Basis of Design: Häfele America Co. # 502.74.212.

Q. Door Opener: Enameled steel strike and plastic pedal; mounted to pull out door.

1. Basis of Design: Basis of Design: Häfele America Co. # 502.15.250

R. Access Panel Fasteners:

1. Black plastic concealed fasteners.
2. Basis of Design: Häfele America Co. # 260.15.300.

S. Counter Support Brackets:

1. Materials: 6063-T6 extruded aluminum, welded and ground smooth.
2. Size: 75% of counter depth, minimum.
3. Finish: Powder coat, Off-White.
4. Basis of Design: Rangine Corporation, Rakks Bracket EH Series, Flush Mount.

- T. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.
 - 1. Satin Stainless Steel: BHMA 630.
 - 2. Satin Chromium Plated: BHMA 626 for brass or bronze base; BHMA 652 for steel base.
- U. , provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

2.7 ALUMINUM TRIM

- A. Extruded accessories of profiles and dimensions indicated.
 - 1. Manufacturers:
 - a. Basis of Design: Fry Reglet Corp.
 - b. Other acceptable manufacturers subject to compliance with requirements:
 - 1) Gordon, Inc.
 - 2) Pittcon Industries
 - 2. Profiles
 - a. Reveal Molding: Model DRM
 - b. Reveal Base: Model DRMB-625-400.
 - c. Fascia Corner Molding: Model FCM-50.
 - 3. Aluminum: Alloy temper with not less than the strength and durability properties of ASTM B221, Alloy 6063-T5
 - 4. Finish: Clear anodized

2.8 MISCELLANEOUS MATERIALS

- A. Shims and Hanging Strips: Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- C. Adhesives: Do not use adhesives that contain urea formaldehyde.

2.9 FABRICATION, GENERAL

- A. Fabricate millwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:

1. Corners of Millwork: 1/16 inch unless otherwise indicated.
- B. Unless otherwise indicated, use substrate panel thicknesses that comply with referenced quality standard.
- C. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 1. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
- D. Shelf Support Holes: Provide 5 mm holes spaced 32 mm on center. Locate holes no less than 1 inch or more than 3 inches from the front and back of the cabinet. Unless noted otherwise, extend holes to within 6 inches of the cabinet top and bottom.
- E. Attach hinges per manufacturer's written instructions.
- F. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
 1. Seal edges of openings in wood substrates of countertops by saturating with varnish.

2.10 SOLID-SURFACE-MATERIAL COUNTERTOP FABRICATION

- A. Configuration: Provide countertops with the front and backsplash profiles indicated on Drawings.
- B. Countertops: 1/2-inch- thick, solid surface material laminated to 3/4-inch- thick marine plywood with exposed edges built up with solid surface material.
- C. Unless otherwise indicated build up countertop thickness to 1-1/4 inches (32 mm) at front, back, and ends with additional layers of core material laminated to top.
- D. Provide additional support cleats along the sides of each individual base cabinet.
- E. Backsplashes: 1/2-inch- thick, solid surface material fabricated and installed as indicated.
- F. Fabrication: Fabricate tops in one piece with shop-applied edges and backsplashes unless otherwise indicated. Comply with solid-surface-material manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 1. Fabricate with loose backsplashes for field assembly.
 - a. Sink shall be undermount incorporating bowls specified in Division 22.

2. Faucet, drain, plumbing, trim, etc., by Division 22.
3. Coordinate required openings with Division 22.

2.11 DRAWER BOX FABRICATION

- A. Drawer Front Interface Style: Flush overlay Reveal overlay
 1. Surfaces Other Than Drawer Bodies: Compatible species to that indicated for exposed surfaces, stained to match.
 2. Drawer Subfronts, Backs, and Sides: Solid-hardwood lumber
 3. Drawer Bottoms: Thermoset decorative panels
- B. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.
 1. Join subfronts, backs, and sides with glued rabbeted joints supplemented by mechanical fasteners or glued dovetail joints.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition millwork to average prevailing humidity conditions in installation areas.
- B. Before installing millwork, examine shop-fabricated work for completion including backpriming and complete work as required, including removal of packing.

3.2 MILLWORK INSTALLATION

- A. Architectural Woodwork Standards Grade: Install cabinets to comply with same quality standard grade as item to be installed.
- B. Assemble millwork and complete fabrication at Project site to the extent that it was not completed in the shop.
- C. Install millwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches.
- D. Scribe and cut millwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- E. Anchor millwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with millwork.

1. For shop finished items use filler matching finish of items being installed.
- F. Install millwork without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
1. Install millwork with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
 2. Scribe and cut millwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
 3. Install millwork without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
 4. Fasten wall millwork through back, near top and bottom, and at ends not more than 16 inches o.c. with No. 10 wafer-head screws sized for not less than **1-1/2-inch** penetration into wood framing, blocking, or hanging strips
- G. Touch up finishing work specified in this Section after installation of millwork. Fill nail holes with matching filler where exposed.
1. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are applied in shop.

3.3 SOLID SURFACE COUNTERTOP INSTALLATION

- A. Grade: Premium.
- B. Install countertops level to a tolerance of 1/8 inch in 8 feet.
- C. Assemble countertops and complete fabrication at Project site to the extent that it was not completed in the shop.
1. Provide cutouts for appliances, plumbing fixtures, electrical work, and similar items.
- D. Fasten countertops by screwing through corner blocks of base units into underside of countertop. Pre-drill holes for screws as recommended by manufacturer. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
1. Install backsplashes and endsplashes to comply with manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 2. Seal edges of cutouts in particleboard subtops by saturating with varnish.
- E. Scribe and cut countertops to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.

3.4 FIELD QUALITY CONTROL

3.5 ADJUSTING AND CLEANING

- A. Repair damaged and defective millwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace millwork. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware.
- C. Clean millwork on exposed and semi exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06 42 00

SECTION 06 64 00 - PLASTIC PANELING

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Plastic sheet paneling.
2. Factory-laminated plastic sheet paneling.

- B. Related sections include the following:

1. Division 06 section "Miscellaneous Rough Carpentry" for wood furring for installing plastic paneling.
2. Division 10 section "Wall and Door Protection" for corner guards installed over plastic paneling.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

- B. Selection Samples: For each finish specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

1.4 INFORMATIONAL SUBMITTALS

1.5 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install plastic paneling until spaces are enclosed and weathertight and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain plastic paneling and trim accessories from single manufacturer.

2.2 PLASTIC SHEET PANELING

- A. Glass-Fiber-Reinforced Plastic Paneling: Gelcoat-finished, glass-fiber-reinforced plastic panels complying with ASTM D5319. Panels shall be USDA accepted for incidental food contact.
 - 1. Basis of Design: Marlite FRP Panels.
 - 2. Subject to compliance with requirements, provide products by one of the following manufacturers:
 - a. Crane Composites, Inc.
 - b. Nudo Products, Inc.
 - 3. Surface-Burning Characteristics: As follows when tested by a qualified testing agency according to ASTM E84. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 25 Insert value or less.
 - b. Smoke-Developed Index: 450 or less.
 - 1. Nominal Thickness: Not less than **[0.075 inch (1.9 mm)] [0.09 inch (2.3 mm)] [0.12 inch (3.0 mm)]**.
 - 2. Surface Finish: **[Smooth] [Molded pebble texture] [Smooth surface with filled grooves at 4 inches (102 mm) o.c. to resemble tile] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]**.
 - 3. Color: **[White] [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]**.

2.3 ACCESSORIES

- A. Trim Accessories: Manufacturer's standard one-piece vinyl extrusions designed to retain and cover edges of panels. Provide division bars, inside corners, outside corners, and caps as needed to conceal edges.
 - 1. Color: Match panels.
- B. Exposed Fasteners: Nylon drive rivets recommended by panel manufacturer.
- C. Concealed Mounting Splines: Continuous, H-shaped aluminum extrusions designed to fit into grooves routed in edges of factory-laminated panels and to be fastened to substrate.
- D. Adhesive: As recommended by plastic paneling manufacturer.

- E. Sealant: Mildew-resistant, single-component, neutral-curing silicone sealant recommended by plastic paneling manufacturer and complying with requirements in Section 07 92 00 "Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove wallpaper, vinyl wall covering, loose or soluble paint, and other materials that might interfere with adhesive bond.
- B. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.
- C. Clean substrates of substances that could impair adhesive bond, including oil, grease, dirt, and dust.
- D. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.
- E. Lay out paneling before installing. Locate panel joints to provide equal panels at ends of walls not less than half the width of full panels.
 - 1. Mark plumb lines on substrate at trim accessory locations for accurate installation.
 - 2. Locate trim accessories to allow clearance at panel edges according to manufacturer's written instructions.

3.3 INSTALLATION

- A. Install plastic paneling according to manufacturer's written instructions.
- B. Install panels in a full spread of adhesive where recommended by the manufacturer, based on project conditions.
- C. Install panels with fasteners. Layout fastener locations and mark on face of panels so that fasteners are accurately aligned.
 - 1. Drill oversized fastener holes in panels and center fasteners in holes.
 - 2. Apply sealant to fastener holes before installing fasteners.

- D. Install trim accessories with adhesive. Do not fasten through panels.
- E. Fill grooves in trim accessories with sealant before installing panels, and bed inside corner trim in a bead of sealant.
- F. Maintain uniform space between panels and wall fixtures. Fill space with sealant.
- G. Maintain uniform space between adjacent panels and between panels and floors, ceilings, and fixtures. Fill space with sealant.
- H. Remove excess sealant and smears as paneling is installed. Clean with solvent recommended by sealant manufacturer and then wipe with clean dry cloths until no residue remains.

END OF SECTION 06 64 00

SECTION 07 11 13 - BITUMINOUS DAMPPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Cold-applied, cut-back asphalt dampproofing
 - 2. Cold-applied, emulsified-asphalt dampproofing
- B. Related Sections include the following:
 - 1. Division 03 Section "Cast-In-Place Concrete" for bituminous vapor retarders under slabs-on-grade.
 - 2. Division 04 Section "Unit Masonry" for mortar parge coat on masonry surfaces.
 - 3. Division 07 Sections "Self-Adhering Sheet Waterproofing" and "Hot Fluid-Applied Rubberized Asphalt Waterproofing" for waterproofing.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include recommendations for method of application, primer, number of coats, coverage or thickness, and protection course.

1.4 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit dampproofing to be performed according to manufacturers' written instructions.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain primary dampproofing materials and primers from single source from single manufacturer. Provide drainage panels and auxiliary materials recommended in writing by manufacturer of primary materials.

2.2 PERFORMANCE REQUIREMENTS

- A. VOC Content: Products shall comply with VOC content limits of authorities having jurisdiction unless otherwise indicated.

2.3 COLD-APPLIED, EMULSIFIED-ASPHALT DAMPPROOFING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. APOC, Inc; a division of Gardner Industries
 - 2. BASF Corporation
 - 3. Brewer Company (The).
 - 4. ChemMasters, Inc.
 - 5. Euclid Chemical Company (The); an RPM company.
 - 6. Henry Company
 - 7. Karnak Corporation
 - 8. Mar-flex Waterproofing & Building Products
 - 9. W.R. Meadows, Inc.
- B. Trowel Coats: ASTM D1227, Type II, Class 1.
- C. Fibered Brush and Spray Coats: ASTM D1227, Type II, Class 1.
- D. Brush and Spray Coats: ASTM D1227, Type III, Class 1.

2.4 AUXILIARY MATERIALS

- A. Furnish auxiliary materials recommended in writing by dampproofing manufacturer for intended use and compatible with bituminous dampproofing.
- B. Emulsified-Asphalt Primer: ASTM D1227, Type III, Class 1, except diluted with water as recommended by manufacturer.
- C. Asphalt-Coated Glass Fabric: ASTM D1668, Type I.
- D. Patching Compound: Manufacturer's fibered mastic of type recommended by dampproofing manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for surface smoothness, maximum surface moisture content, and other conditions affecting performance of the Work.

- B. Proceed with application only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for dampproofing application.
- B. Mask or otherwise protect adjoining exposed surfaces from being stained, spotted, or coated with dampproofing. Prevent dampproofing materials from entering and clogging weep holes and drains.
- C. Clean substrates of projections and substances detrimental to work; fill voids, seal joints, and apply bond breakers if any, as recommended by prime material manufacturer.
- D. Apply patching compound for filling and patching tie holes, honeycombs, reveals, and other imperfections; cover with asphalt-coated glass fabric.

3.3 APPLICATION, GENERAL

- A. Comply with manufacturer's written recommendations unless more stringent requirements are indicated or required by Project conditions to ensure satisfactory performance of dampproofing.
 - 1. Apply dampproofing to provide continuous plane of protection.
 - 2. Apply additional coats if recommended by manufacturer or if required to achieve coverages indicated.
 - 3. Allow each coat of dampproofing to cure time required by manufacturers before applying subsequent coats.
 - 4. Allow time required by manufacturers drying time prior to backfilling.
- B. Where dampproofing footings and foundation walls, apply from finished-grade line to top of footing; extend over top of footing and down a minimum of 6 inches (150 mm) over outside face of footing.
 - 1. Extend dampproofing 12 inches (300 mm) onto intersecting walls and footings, but do not extend onto surfaces exposed to view when Project is completed.
 - 2. Install flashings and corner protection stripping at internal and external corners, changes in plane, construction joints, cracks, and where indicated as "reinforced," by embedding an 8-inch- (200-mm-) wide strip of asphalt-coated glass fabric in a heavy coat of dampproofing. Dampproofing coat for embedding fabric is in addition to other coats required.
- C. Where dampproofing exterior face of inner wythe of exterior masonry cavity walls, lap dampproofing at least 1/4 inch (6 mm) onto flashing, masonry reinforcement, veneer ties, and other items that penetrate inner wythe.
 - 1. Extend dampproofing over outer face of structural members and concrete slabs that interrupt inner wythe.
 - 2. Lap dampproofing at least 1/4 inch (6 mm) onto shelf angles supporting veneer.

- D. Where dampproofing interior face of above-grade, exterior concrete and masonry walls, continue dampproofing through intersecting walls by keeping vertical mortar joints at intersection temporarily open or by dampproofing wall before constructing intersecting walls.

3.4 COLD-APPLIED, EMULSIFIED-ASPHALT DAMPPROOFING

- A. Concrete Foundations: Apply two brush or spray coats at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m) for first coat and 1 gal./100 sq. ft. (0.4 L/sq. m) for second coat or one trowel coat at not less than 4 gal./100 sq. ft. (1.6 L/sq. m).
- B. Unexposed Face of Concrete Retaining Walls: Apply one brush or spray coat at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m).
- C. Unexposed Face of Masonry Retaining Walls: Apply primer and one brush or spray coat at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m).
- D. Concrete Backup for Brick Veneer Assemblies: Apply one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).
- E. Masonry Backup for Brick Veneer Assemblies: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).
- F. Exterior Face of Inner Wythe of Cavity Walls: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

3.5 CLEANING

- A. Remove dampproofing materials from surfaces not intended to receive dampproofing.

END OF SECTION 07 11 13

SECTION 07 13 26 - SELF-ADHERING SHEET WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Modified bituminous sheet waterproofing system for application below grade to vertical surfaces
2. Preparation of substrate
3. Cants at all interior corners
4. Termination bar and tape
5. Various accessory materials
6. Prefabricated drainage system
7. Protection board
8. Independent inspection program

- B. Related Sections include the following:

1. Division 07 Section "Exterior Expansion Joint Cover Assemblies" for exterior-wall expansion-joint assemblies that interface with waterproofing.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1. Approximately 7 days in advance of installation of waterproofing, arrange a conference at the job site for the purpose of physically viewing all waterproofing locations, to review waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs; coordination of these activities; and satisfying any conditions which might interfere with proper application.
2. Conference shall be attended by the Contractor, Waterproofing Subcontractor, the specific waterproofing foreman for the project, the representative for the manufacturer of waterproofing materials, the independent inspection firm, the concrete subcontractor, the excavation subcontractor, and the Architect.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
 - 2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
- B. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
- C. Samples: For the following products:
 - 1. 12-by-12-inch (300-by-300-mm) square of waterproofing and flashing sheet
 - 2. 4-by-4-inch (100-by-100-mm) square of prefabricated drainage composite
 - 3. Protection board.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer
- B. Research Reports: For modified bituminous sheet waterproofing/termite barrier, showing compliance with ICC AC380.
- C. Field quality-control reports.
- D. Sample Warranties: For special warranties.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.
 - 2. Installing company shall have at least five (5) years' experience in work of the type required by this section.
- B. Manufacturer Qualifications: Waterproofing membranes and all accessory products shall be provided by a single manufacturer with a minimum of 30 years' experience in the direct production and sales of waterproofing systems. Manufacturer shall be capable of providing field service representation during and after construction, approving acceptable installers, recommending appropriate installation methods and providing backup remediation field services during the warranty period.
- C. Independent Inspection: Owner shall make all arrangements and payments for an independent inspection service to monitor waterproofing material installation in compliance with the project contract documents and manufacturer's published literature and site-specific details. Independent

Inspection Firm shall be an approved company participating with the waterproofing manufacturer's Certified Inspection Program. Inspection service shall produce reports and digital photographs documenting each inspection. Reports shall be made available to the Contractor, waterproofing installer, waterproofing material manufacturer, and Architect. Inspections shall include substrate examination, beginning of waterproofing installation, additional inspections at periodic intervals, and final inspection prior to concrete or backfill placement against the waterproofing. Independent inspection firm shall provide final sign-off prior to issuance of the warranty.

- D. Mockups: Build mockups to verify selections made under Sample submittals and to set quality standards for installation.
1. Build for each typical waterproofing installation including accessories to demonstrate surface preparation, crack and joint treatments, inside and outside corner treatments, and protection.
 - a. Size: 100 sq. ft. (9.3 sq. m) in area.
 - b. Description: Each type of wall installation.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in original packages with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, and directions for storing.
- B. Store materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by waterproofing manufacturer.
- C. Remove and replace materials that cannot be applied within their stated shelf life.
- D. Store rolls according to manufacturer's written instructions.
- E. Protect stored materials from direct sunlight.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
 1. Do not apply waterproofing in snow, rain, fog, or mist.
 2. Do not apply waterproofing to surfaces unacceptable to manufacturer.
 3. Verify that items penetrating through surfaces to receive waterproofing are rigidly installed.

4. Verify that surfaces are free of anything which may be detrimental to successful installation.
5. Starting work of this Section indicates acceptance of substrate and site conditions.

B. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.9 WARRANTY

A. Special Manufacturer's Warranty: Manufacturer's form in which manufacturer agrees to replace waterproofing material that does not comply with requirements or that fails to remain watertight within specified warranty period.

1. Failure includes, but is not limited to, failure of waterproofing due to failure of substrate prepared and treated according to requirements or formation of new joints and cracks in substrate not exceeding **1/16 inch (1.6 mm)** in width.
2. Warranty Period: Manufacturer shall provide a 5-year labor and material warranty for the installation. Any failure of the waterproofing system, including leaks, which develop during this period, shall be repaired by the waterproofing manufacturer.

B. Installer's Special Warranty: Specified form, signed by Installer, covering Work of this Section, for warranty period of two years.

1. Warranty includes removing and reinstalling protection board, drainage panels, insulation, pedestals, and pavers on plaza decks.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Waterproofing System: Obtain waterproofing materials, protection course, and molded-sheet drainage panels from single source from single manufacturer.

2.2 MODIFIED BITUMINOUS SHEET WATERPROOFING

A. Rubberized Asphalt Sheet: Self-adhering rubberized asphalt waterproofing membrane consisting of 56 mils of rubberized asphalt laminated to a 4 mil high density cross-laminated polyethylene sheet to provide a total 60 mil membrane. The membrane shall be fabricated with a silicone release paper which shall be removed prior to application of the membrane. The membrane system shall include primers, mastics, flashing and termination accessories, as provided by the system manufacturer. The membrane shall conform to the following criteria:

1. Ultimate Elongation: 300 percent minimum; ASTM D412, Die C, modified.
2. Puncture Resistance: **40 lbf (180 N)** minimum; ASTM E154/E154M.
3. Water Absorption: 0.2 percent weight-gain maximum after 48-hour immersion at **70 deg F (21 deg C)**; ASTM D570.
4. Hydrostatic-Head Resistance: **200 feet (60 m)** minimum; ASTM D5385.
5. Peel adhesion (ASTM D903) - 9 lb./in.

6. Lap adhesion (ASTM D1876) - 5 lb./in. (min.)
7. Crack Cycling: Unaffected after 100 cycles of 1/8-inch (3-mm) movement; ASTM C836/C836M
8. Water Vapor Permeance: 0.05 perm (2.9 ng/Pa x s x sq. m) maximum; ASTM E96/E96M, Water Method
9. Tensile Strength, Membrane: 250 psi (1.7 MPa) minimum; ASTM D412, Die C, modified.
10. Low-Temperature Flexibility: Pass at minus 20 deg F (minus 29 deg C); ASTM D1970/D1970M

B. Manufacturer:

1. Acceptable Products subject to compliance with requirements:
 - a. Carlisle Coatings & Waterproofing Inc.; CCW Mira DRI 860/861
 - b. CETCO Building Materials Group; Envirosheet
 - c. GCP Applied Technologies.; Bituthene 4000
 - d. Henry Company; Blueskin WP 200
 - e. Soprema, Inc.; COLPHENE 3000
2. Sheet Strips: Self-adhering, rubberized-asphalt strips of same material and thickness as sheet waterproofing.

2.3 AUXILIARY MATERIALS

- A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.
- B. Primer: Liquid waterborne primer recommended for substrate by manufacturer of sheet waterproofing material.
- C. Surface Conditioner: Liquid, waterborne surface conditioner recommended for substrate by manufacturer of sheet waterproofing material.
- D. Liquid Membrane: Elastomeric, single-component liquid, cold fluid applied, trowel grade or low viscosity.
- E. Substrate Patching Membrane: Low-viscosity, two-component, modified asphalt coating.
- F. Trowel Grade Detailing Mastic: single-component, elastomeric waterproofing mastic.
- G. Metal Termination Bars: Aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick, predrilled at 8-inch (229-mm) centers.

2.4 PREFABRICATED DRAINAGE COMPOSITE

- A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel with Polymeric Film: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding **No. 70 (0.21-mm)** sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate through the core of **9 to 21 gpm per ft. (112 to 261 L/min. per m)**.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Carlisle Coatings & Waterproofing Inc.
 - b. CETCO, a Minerals Technologies company.
 - c. GCP Applied Technologies Inc.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.
1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.
 2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method according to ASTM D4263.
 3. Verify that compacted subgrade is dry, smooth, sound, and ready to receive waterproofing sheet.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.

- E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D4258.
 - 1. Install sheet strips of width according to manufacturer's written instructions and center over treated construction and contraction joints and cracks exceeding a width of **1/16 inch (1.6 mm)**.
- F. Bridge and cover isolation joints, expansion joints, and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips of widths according to manufacturer's written instructions.
- G. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D6135 and manufacturer's instructions.
 - 1. Install membrane strips centered over vertical inside corners. Install **3/4-inch (19-mm)** fillets of liquid membrane on horizontal inside corners and as follows:
 - a. At footing-to-wall intersections, extend liquid membrane in each direction from corner or install membrane strip centered over corner.
- H. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing with the mastic per manufacturer's instructions.

3.3 SHEET WATERPROOFING APPLICATION

- A. Install modified bituminous waterproofing membrane according to waterproofing manufacturer's written instructions and according to recommendations in ASTM D6135.
- B. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.
- C. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform **2-1/2-inch- (64-mm-)** minimum lap widths and end laps. Overlap and seal seams and stagger end laps to ensure watertight installation.
 - 1. When ambient and substrate temperatures range between **25 and 40 deg F (minus 4 and plus 5 deg C)**, install self-adhering, modified bituminous sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than **60 deg F (16 deg C)**.
- D. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.
- E. Seal edges of sheets at terminations under metal counterflashings, ending in reglets or termination bars with mastic.
- F. Install sheet waterproofing and auxiliary materials to tie into adjacent waterproofing/flushing materials.

- G. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending **6 inches (150 mm)** beyond repaired areas in all directions.
- H. Correct deficiencies in or remove sheet waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
- I. Do not cover waterproofing membrane until Owner's field quality control inspections are complete.
- J. Install protection board with butted joints over waterproofing membrane, with adhesive spots.

3.4 PREFABRICATED DRAINAGE COMPOSITE INSTALLATION

- A. Place and secure prefabricated drainage composite panels, with geotextile facing away from wall substrate, according to manufacturer's written instructions. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 - 1. Install prefabricated drainage composite over insulation protection board per detail on drawings, down onto footing. Wrap ends of PDC panels with additional geotextile to prevent soil from contaminating the cores. Lap panels 4 inches and snap dimples. Install geotextile continuously over laps.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests, and to furnish reports to Architect.
- B. Testing agent will inspect substrate conditions; surface preparation; membrane application, flashings, protection, and drainage components; and to furnish daily reports to Architect.

3.6 PROTECTION, REPAIR AND CLEANING

- A. Protect waterproofing from damage and wear during remainder of construction period.
- B. Protect installed board insulation and prefabricated drainage composite from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- C. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
- D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 13 26

SECTION 07 14 13 - HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Hot Rubberized-asphalt waterproofing membrane system, fabric reinforced, including primers, flashings protection mat and tie-in/terminations for split slab.
2. Prefabricated Drainage System.
3. Insulation.

- B. Related Sections:

1. Division 07 Section "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
2. Division 07 Section "Exterior Expansion Joint Cover Assemblies" for foundation-wall expansion joints that interface with waterproofing and for plaza expansion-joint assemblies that interface with waterproofing.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1. Approximately 7 days in advance of installation of waterproofing, arrange a conference at the job site for the purpose of physically viewing all waterproofing locations, to review waterproofing requirements, including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs; coordination of these activities; and satisfying any conditions which might interfere with proper application.
2. Conference shall be attended by the Contractor, Waterproofing Subcontractor, the specific waterproofing foreman for the project, the representative for the manufacturer of waterproofing materials, the independent inspection firm, the concrete subcontractor and the Architect.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's written instructions for evaluating, preparing, and treating substrate, technical data, and tested physical and performance properties of waterproofing.

- B. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins to adjoining materials/waterproofing, and other termination conditions.
- C. Samples: For the following products in manufacturer's standard sizes unless otherwise indicated:
 - 1. Flashing sheet
 - 2. Membrane-reinforcing fabric
 - 3. Insulation
 - 4. Prefabricated drainage composite

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and testing agency.
- B. Submit evidence documenting the subcontractor is an authorized waterproofing applicator approved by the waterproofing system manufacturer and has a minimum of 5 years' experience in installation of specified products, on projects of similar scope, in the geographic area of this project.
- C. Provide certification from manufacturer stating that the waterproofing is in compliance with this specification.
- D. Certification from an approved independent testing laboratory experienced in testing rubberized asphalt material, that the material meets the CGSB-37.50-M89 standard for rubberized asphalt membranes, including applicable ASTM procedures.
- E. Evidence that the waterproofing assembly is currently Class A listed with Underwriters Laboratories.
- F. Evidence that the extruded polystyrene insulation is free from CFCs.
- G. The plant manufacturing the rubberized asphalt material must have ISO9002 approval as evidenced by a notarized copy of the official certificate.
- H. Product Test Reports: For waterproofing, based on evaluation of comprehensive tests performed by a qualified testing agency.
- I. Field inspection and quality-control reports, by waterproofing manufacturer's representative to ensure conformance with requirements.
- J. Warranties: Sample of special warranties.

1.6 QUALITY ASSURANCE

- A. The Roofing/Waterproofing Contractor shall demonstrate qualifications to perform the work of this section by submitting the following documentation:
 - 1. Certification or license by the membrane manufacturer as a locally based, authorized applicator of the product the installer intends to use, for a minimum of five (5) years.

2. List of at least (3) projects, satisfactorily completed no less than five (5) years prior to this project, of similar scope and complexity to this project. Previous experience submittal shall correspond to specific membrane system proposed for use by applicator.
- B. Membrane manufacturer shall have available an in-house technical staff to assist the Contractor, when necessary, in application of the products and final inspection of the assembly.
- C. Membrane Manufacturer Qualifications: Manufacturer shall demonstrate qualifications to supply materials of this section by certifying the following:
 1. Membrane manufacturer must show evidence that the specified rubberized asphalt has been manufactured by the same source for fifteen (15) years and successfully installed on a yearly basis for a minimum of fifteen (15) years on projects of similar scope and complexity.
 2. Membrane manufacturer must not issue warranties for terms longer than they have been manufacturing their hot fluid rubberized asphalt membrane.
- D. Installer Qualifications: A firm that is approved or licensed by or acceptable to manufacturer for installation of waterproofing required for this Project and is eligible to receive special warranties specified.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer.
- B. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- C. Protect stored materials from direct sunlight.
- D. Store all adhesives at temperatures between 60 deg F. and 80 deg F.. If exposed to lower temperatures, restore materials to 60 deg F. minimum temperature before using.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate, or when temperature is below 0 deg F..
 1. Do not apply waterproofing in snow, rain, fog, or mist.
- B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.9 WARRANTY

- A. Warranty: Total system warranty which includes labor and materials and manufacturer agrees to repair or replace waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period. The warranty shall include protection mat, prefabricated drainage composite, and insulation.

1. Warranty insulation will retain 80 percent of original published thermal value.
2. Warranty includes removing and reinstalling protection board, prefabricated drainage composite, and insulation.
3. Warranty Period: 20 years from date of Final Acceptance for all waterproofing system components and 10 years for concrete pavers.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain waterproofing materials, sheet flashings, protection course, molded-sheet drainage panels, and insulation from single source from single manufacturer.

2.2 WATERPROOFING MEMBRANE

- A. Hot Fluid-Applied, Rubberized-Asphalt Waterproofing Membrane: Single component; 100 percent solids; hot fluid-applied, rubberized asphalt, fabric reinforced.
 1. Basis of Design: American Hydrotech, Inc.; Monolithic Membrane 6125 EV-FR
 2. Other Acceptable Products subject to compliance with requirements:
 - a. Barrett Roofing; RamTOUGH 250.
 - b. Carlisle Coatings & Waterproofing Inc.; CCW-500R.
 - c. Henry Company; 790-11.
 - d. All materials and components must be obtained from a single manufacturer to ensure total system warranty and compatibility.
 3. Membrane shall be a 100% solids, hot, fluid-applied, rubberized asphalt membrane containing no PVCs and manufactured with an inert clay filler to impart acid resistance and meeting the CGSB-37.50-M89 standard and other pertinent physical properties.
 - a. American Hydrotech, Inc., Monolithic Membrane 6125EV® (minimum 25% post-consumer recycled-content).

2.3 AUXILIARY MATERIALS

- A. General: Auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with waterproofing.
- B. Elastomeric Flashing Sheet: 60-mil minimum, uncured sheet neoprene as follows:
 - 1. Tensile Strength: 1400 psi minimum; ASTM D412, Die C.
 - 2. Elongation: 300 percent minimum; ASTM D412.
 - 3. Tear Resistance: 125 psi minimum; ASTM D624, Die C.
 - 4. Brittleness: Does not break at minus 30 deg F; ASTM D2137.
- C. Reinforcing
 - 1. Spunbonded polyester fabric (standard duty) reinforcing sheet.
 - a. American Hydrotech, Inc., Flex Flash F®, or manufacturer's equivalent
 - 2. 60 mil (1.5 mm) thick, uncured neoprene (heavy-duty) reinforcing sheet.
 - a. American Hydrotech, Inc., Flex Flash UN®, or manufacturer's equivalent
- D. Surface Conditioner/Primer for Concrete Surfaces: ASTM D41, asphaltic primer.
 - 1. American Hydrotech, Inc., Surface Conditioner, or manufacturer's equivalent
- E. Metal Termination Bars: Manufacturer's standard, with predrilled holes at 8 inches on center; stainless-steel or aluminum termination bars; approximately 1 by 1/8 inch thick; with anchors.
- F. Adhesives, Sealants and Accessories: Manufacturer's recommended sealants and accessories
 - 1. Contact adhesive to bond elastomeric flashing together.
 - a. American Hydrotech, Inc., Splicing Cement, or manufacturer's equivalent
 - 2. Contact adhesive to bond elastomeric flashing to an approved substrate.
 - a. American Hydrotech, Inc., Bonding Adhesive, or manufacturer's equivalent
 - 3. Sealant to seal elastomeric flashing seam edge.
 - a. American Hydrotech, Inc., Lap Sealant, or manufacturer's equivalent
- G. Reinforcing Fabric: Manufacturer's recommended, spun-bonded polyester fabric.

- H. Protection Course: ASTM D6506, semirigid sheets of fiberglass reinforced-rubberized asphalt sheet; American Hydrotech Inc., Hydroflex 30, or manufacturer's equivalent.
1. Thickness: 1/8 inch, nominal.
- I. Separation/Root Barrier Protection Course
1. For intensive, semi-intensive or extensive conditions; 160-mil thick polyester reinforced, modified asphalt sheet with granular surface and root inhibiting additive.
 - a. American Hydrotech, Inc., Hydroflex® RB, or manufacturer's equivalent
- J. Dual-inlet Promenade Drains: As manufactured by Jay R. Smith, Josam, or Wade; cast iron, including dome. Coordinate drain connection with Plumbing Subcontractor. Provide separate adjustable extension if required due to system thickness at drain.
1. Poured-in-Place Concrete: Jay R. Smith No. 1419.
 2. Equivalent drains are as follows:

<u>Jay R. Smith</u>	<u>Josam</u>	<u>Wade</u>
1419	24200-series	3357

2.4 PREFABRICATED DRAINAGE COMPOSITE

- A. Prefabricated Drainage Course (if required)
1. A composite drainage system consisting of a three-dimensional, crush-proof, drainage core and a filter fabric meeting the following physical properties.
 - a. American Hydrotech, Inc., Hydrodrain 300 series.

Property	Test Method	Values
CORE:		
Compressive Strength	ASTM D1621	30,000 psf
Thickness	ASTM D1777	.22 in.
Flow, Q @ 3600 psf & Hydraulic gradient of 1	ASTM D4716,	7 gpm/ft. Width
FABRIC:		
Flow	ASTM D4491	205 gpm/ft ²
U.V. Resistance	ASTM D4355	Fully Stabilized
Apparent Opening Size	CW-02215	30
Grab Tensile	ASTM D4632	120 lbs.

2.5 FILTER FABRIC

- A. Filter Fabric Sheet (if required by manufacturer upon project review)
 - 1. Water permeable polymeric fabric
 - a. American Hydrotech, Inc., Filter Fabric Sheet, or manufacturer's equivalent

2.6 INSULATION

- A. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C578, VII square edged; minimum 2 inches thick.
 - 1. Manufacturers
 - a. Basis of Design: Dow Chemical Company
 - b. Other Acceptable Manufacturers subject to compliance with requirements:
 - 1) Owens Corning

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.
 - 2. Verify that substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean and prepare substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
- D. Remove grease, oil, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

- E. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.

3.3 JOINTS, CRACKS, AND TERMINATIONS

- A. Prepare and treat substrates to receive waterproofing membrane, including joints and cracks, deck drains, corners, and penetrations according to manufacturer's written instructions.
 - 1. Rout and fill joints and cracks in substrate. Before filling, remove dust and dirt according to ASTM D4258.
 - 2. Adhere strip of elastomeric sheet to substrate in a layer of hot rubberized asphalt. Extend elastomeric sheet a minimum of 6 inches on each side of moving joints and cracks or joints and cracks exceeding 1/8 inch thick, and beyond deck drains and penetrations. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.
 - 3. Embed strip of reinforcing fabric into a layer of hot rubberized asphalt. Extend reinforcing fabric a minimum of 6 inches on each side of nonmoving joints and cracks not exceeding 1/8 inch thick, and beyond roof drains and penetrations.

3.4 FLASHING INSTALLATION

- A. Install elastomeric flashing sheets at terminations of waterproofing membrane according to manufacturer's written instructions.
- B. Prime substrate with surface conditioner.
- C. Install elastomeric flashing sheet and adhere to deck and wall substrates in a layer of hot rubberized asphalt.
- D. Extend elastomeric flashing sheet up walls or parapets a minimum of 8 inches above and 6 inches onto deck to be waterproofed.
- E. Install termination bars and mechanically fasten to top of elastomeric flashing sheet at terminations and perimeter of waterproofing.

3.5 MEMBRANE APPLICATION

- A. Apply surface conditioner/primer, at manufacturer's recommended rate, over prepared substrate and allow to dry.
- B. Heat and apply rubberized asphalt according to manufacturer's written instructions.
 - 1. Heat rubberized asphalt in an oil- or air-jacketed melter with mechanical agitator specifically designed for heating rubberized asphalt.
- C. Start application with manufacturer's authorized representative present.
- D. Reinforced Membrane: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to a thickness of 90 mils; embed reinforcing fabric, overlapping sheets 2 inches

; spread another 125-mil- thick layer to provide a uniform, reinforced, seamless membrane 215 mils thick.

- E. Apply waterproofing over prepared joints and up wall terminations and vertical surfaces to heights indicated or required by manufacturer.
- F. Cover waterproofing with protection course with overlapped joints while membrane is still hot to ensure good bond.

3.6 PREFABRICATED DRAINAGE COMPOSITE INSTALLATION

A. General

- 1. Contractor shall examine the deck area to be covered with subsequent topping materials in order to ensure that all deck areas have received the membrane, the membrane is free of damage, it is properly protected, and all flashing has been properly installed, before placing the insulation.
- 2. It is recommended that the drainage course, insulation, and other subsequent topping materials be installed as each section is completed.

B. Prefabricated Drainage Course Placement

- 1. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate according to manufacturer's written instructions.
- 2. Use methods that do not penetrate waterproofing.
- 3. Layout and position drainage course and allow to lay flat. Cut and fit drainage course to perimeter and penetrations.
- 4. Bond all geotextile overlap edges to adjacent drainage course geotextile with an acceptable adhesive to insure geotextile integrity.
 - a. For vertical applications, install protection course before installing drainage panels.
- 5. Place subsequent topping materials as soon as possible.

3.7 INSULATION INSTALLATION

A. Insulation Placement

- 1. Loose lay in a staggered manner and tightly butt together all insulation boards. The maximum acceptable opening between insulation boards is 3/8 inch. Insulation must be installed within 3/4 inch of all projections, penetrations, etc.
- 2. When multi-layer insulation applications are involved the bottom layer of insulation must be the thickest layer and must be a minimum of 2 inches thick. All layers shall be installed unadhered to each other and all joints in relation to underlying layers staggered.

3.8 FIELD QUALITY CONTROL

- A. Engage a full-time site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions; surface preparation; and application of the membrane, flashings, protection, and drainage components; furnish daily reports to Architect.
 - 1. Site representative shall measure membrane thickness with pin tester or other suitable device at least once for every 100 sq. ft. and include measurements in reports.
- B. Testing Agency: Engage a qualified testing agency to inspect substrate conditions, surface preparation, waterproofing application, protection, and drainage components, and to furnish reports to Architect.
 - 1. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D5957, after completing and protecting waterproofing but before overlaying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water. Testing agency shall observe flood testing.
 - a. Flood to an average depth of 2-1/2 inches with a minimum depth of 1 inch and not exceeding a depth of 4 inches. Maintain 2 inches of clearance from top of sheet flashings.
 - b. Flood each area for 24 hours.
 - c. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.
 - 2. Electric Field Vector Mapping (EFVM): Testing agency shall survey entire waterproofing area for potential leaks using EFVM.

3.9 CLEANING AND PROTECTION

- A. Protect waterproofing from damage and wear during remainder of construction period.
- B. Protect installed board insulation from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 14 13

SECTION 07 21 00 - THERMAL INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Foam-Plastic Board Insulation
2. Mineral-Wool Board Insulation
3. Glass-Fiber Batt/Blanket Insulation
4. Mineral-Wool Batt/Blanket Insulation
5. Spray Polyurethane Foam

- B. Related Sections:

1. Division 04 Section "Unit Masonry" for insulation and drainage board installed in masonry cavity wall construction.
2. Division 07 Section "Spray Polyurethane Foam Insulation" for the spray foam insulation system applied to exterior walls.
3. Division 07 Sections Air and Vapor Barriers (AVB) and/or Vapor-Permeable Barriers (AIB) for membranes installed as part of these systems.
4. Division 07 Sections "Roofing" and "Waterproofing" for insulation installed as part of roofing and waterproofing construction.
5. Division 07 Section "Fire-Stopping" for insulation installed as part of a fire-resistive penetration or perimeter joint system.
6. Division 09 Section "Gypsum Board Systems" for sound attenuation blanket used as acoustic insulation.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 FOAM-PLASTIC BOARD INSULATION (XPS)

- A. Products: Subject to compliance with requirements, provide one of the following:

1. Dow Chemical Company (The); Styrofoam Cavitymate
 2. Owens Corning; Foamular
 3. DiversiFoam Products; CertaFoam
 4. Kingspan Insulation, LLC; GreenGuard
- B. Extruded-Polystyrene Board Insulation: ASTM C578, of type and minimum compressive strength indicated below, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84.
1. Provide Type IV, 25 psi where foundation wall insulation is indicated.
 2. Provide Type X, 15 psi where installation on the interior of the building is indicated.

2.2 MINERAL-WOOL BOARD INSULATION

- A. Products: Subject to compliance with requirements, provide one of the following:
1. Johns Manville; a Berkshire Hathaway company; CladStone Water & Fire Block
 2. Thermafiber, Inc.; an Owens Corning company; RainBarrier
 3. Rockwool International; Cavityrock
- B. Unfaced, Mineral-Wool Board Insulation: ASTM C612 Type IA and IB; with maximum flame-spread and smoke-developed indexes of 25 and zero, respectively, per ASTM E84; passing ASTM E136 for combustion characteristics.
1. Nominal density of 4 lb/cu. ft., Types IA and IB, thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F.
 2. Nominal density of 8 lb/cu. ft. Type III, thermal resistivity of 4.35 deg F x h x sq. ft./Btu x in. at 75 deg F

2.3 GLASS-FIBER BATT/BLANKET INSULATION

- A. Products: Subject to compliance with requirements, provide one of the following :
1. Johns Manville; Fiberglass Insulation.
 2. Knauf Insulation; EcoBatt Thermal/Acoustical Insulation.
 3. Owens Corning; EcoTouch Pink Fiberglass Insulation.
- B. Unfaced, Glass-Fiber Blanket Insulation: ASTM C665, Type I; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E84; passing ASTM E136 for combustion characteristics.
- C. Eave Ventilation Troughs: Preformed, rigid fiberboard or plastic sheets designed and sized to fit between roof framing members and to provide cross ventilation between insulated attic spaces and vented eaves.

2.4 MINERAL-WOOL BATT/BLANKET INSULATION

- A. Products: Subject to compliance with requirements, provide products by one of the following:

1. Johns Manville; a Berkshire Hathaway company; Mineral Wool Batts.
 2. Rockwool International; AFB
 3. Thermafiber, Inc.; an Owens Corning company; Ultra-Batt.
- B. Unfaced, Mineral-Wool Blanket Insulation: ASTM C665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 per ASTM E84; passing ASTM E136 for combustion characteristics.

2.5 LOW EXPANSION SPRAY POLYURETHANE FOAM

- A. Basis of Design Product: Dow Chemical Company; Froth Pak
- B. Other Acceptable Products: Subject to compliance with requirements, the following equivalent products may be provided:
1. OSI Products; Quad Foam
 2. Tiger Foam; Fast Rise Polyurethane Foam Formula
- C. Closed cell spray polyurethane foam sealant used in detailing small areas, for filling joints, cracks and voids, perimeter of window and door openings, and where indicated on the drawings.
1. Performance requirements
 - a. Flame Spread < 25/Smoke Developed < 450: Class A per ASTM E84
 - b. Nominal Density 1.75 lb/ft³ per ASTM D1622.
 - c. Water Vapor Permeance < 3.2 perms at 1 inch thick per ASTM E96.
 - d. Air Permeability < 0.001 at 1 inch thick, l/min at 75 Pa, per ASTM E2176.

PART 3 - EXECUTION

3.1 PREPARATION

- A. With installer present, examine substrates and conditions for compliance with the requirements of Sections in which substrates and related work are specified and for other conditions which may adversely affect performance, including temperature and humidity restrictions for the installation of foam insulation products. Do not proceed with this work until all substrates have been prepared as required.
- B. Clean substrates of substances that are harmful to insulation [or vapor barriers, including removing projections capable of puncturing vapor barriers,] or that interfere with insulation attachment.

3.2 INSTALLATION, GENERAL

- A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.

- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.3 VAPOR BARRIER INSTALLATION, GENERAL

- A. Vapor Barrier Continuity: The Contract Documents indicate a continuous vapor barrier as part of the building enclosure design.
 - 1. Maintain continuity of building vapor barrier by forming an airtight seal at the perimeter of areas indicated to receive vapor barriers, to adjacent construction and to vapor barrier products specified as the work of other sections by applying vapor barrier tape, by overlapping or as otherwise indicated.
 - 2. At openings in exterior walls, including doors, window systems and louvers, extend the vapor barrier into the rough opening and terminate with vapor barrier tape or as otherwise indicated.
 - 3. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor barriers with vapor-barrier tape to create an airtight seal between penetrating objects and vapor barriers.
 - 4. Repair tears or punctures in vapor barriers immediately before concealment by other work. Cover with vapor-barrier tape or another layer of vapor barrier.

3.4 INSTALLATION OF FOUNDATION WALL AND SLAB BOARD INSULATION

- A. On vertical surfaces, install insulation boards using manufacturer's recommended adhesive according to manufacturer's written instructions. Tightly abut insulation boards together.
 - 1. If not otherwise indicated, extend insulation a minimum of 36 inches below exterior grade line.
- B. On horizontal surfaces, loosely lay insulation boards according to manufacturer's written instructions. Stagger end joints and tightly abut insulation boards.
 - 1. If not otherwise indicated, extend insulation a minimum of 48 inches in from exterior walls.

3.5 INSTALLATION OF RAINSCREEN ASSEMBLY BOARD INSULATION

- A. Install continuous insulation boards tight to substrate with joints tightly abutted. Fit boards snugly between rainscreen subgirt supports.
- B. Insulation Attachment

1. Use insulation adhesive to bond insulation to substrate, complying with insulation manufacturer's written instructions.
2. Use insulation spindle fasteners to fasten insulation to substrate, complying with insulation manufacturer's written instructions.
3. Use rainscreen subgirt rails to hold insulation boards in place against substrate.

3.6 INSTALLATION OF INSULATION FOR FRAMED CONSTRUCTION

- A. Glass-Fiber or Mineral-Wool Batt/Blanket Insulation: Install in cavities formed by framing members according to the following requirements:
1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
 2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
 3. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
 4. Install eave ventilation troughs between roof framing members in insulated attic spaces at vented eaves.
 5. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
 6. Vapor-Barrier-Faced Batt/Blankets: Tape joints and ruptures in vapor-barrier facings and seal each continuous area of insulation to ensure airtight installation.
 - a. Exterior Walls: Set units with facing placed toward interior of construction.
 - b. Interior Walls: Set units with facing placed toward areas of high humidity.

3.7 INSULATION INSTALLED IN JOINTS, CRACKS AND VOIDS

- A. Mineral Wool Batt Insulation: Provide un-faced mineral wool compression fit into voids and spaces around window and door openings and where indicated. Completely fill joints, cracks and voids. Recess mineral wool sufficiently to allow the installation of backer rod and sealant where indicated.
1. Compact mineral wool to approximately 40 percent of normal maximum volume.
- B. Spray-Applied Polyurethane Foam: Install spray-apply insulation according to manufacturer's written instructions. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked. Completely fill joints, cracks and voids. After insulation is applied, make flush with face of void by using method recommended by insulation manufacturer.

1. Verify selected product is compatible with application substrate per manufacturer's technical data.

3.8 INSTALLATION OF BOARD INSULATION ON MASONRY AND CONCRETE SUBSTRATES

- A. Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:
 1. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer's written instructions. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application indicated.
 2. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation below indicated thickness.

3.9 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION 07 21 00

SECTION 07 27 15 - NONBITUMINOUS SELF-ADHERING SHEET VAPOR-PERMEABLE AIR BARRIER (AIB)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Nonbituminous, self-adhering sheet, vapor-permeable, air barriers (AIB).
2. Materials, systems, accessory products and installation methods to bridge and seal the following air leakage pathways and gaps:
 - a. Transition of the air barrier to the roof membrane and roof vapor barrier.
 - b. Transition of the air barrier to the foundations and foundation waterproofing.
 - c. Transition of the air barrier to expansion joints.
 - d. Transition of the air barrier to openings and penetrations such as window wall frames, door frames, store front systems, curtain wall systems and the like.
 - e. Seals to piping, conduit, duct and similar penetrations through the air barrier.
 - f. Seals to masonry ties, screws, bolts and similar penetrations through the air barrier.
 - g. All other air leakage pathways through and adjacent to the air barrier.

B. Related Requirements:

1. Division 06 Section "Sheathing" for wall sheathings.
2. Division 07 Sections "Waterproofing" for waterproofing materials which will interface with the vapor permeable barrier.
3. Division 07 Section "Thermal Insulation" for insulation which is compatible with the vapor barrier and NFPA 285.
4. Division 07 Sections "Roof and Roofing" for roof membrane and roof vapor barrier materials which will interface with the vapor permeable barrier.
5. Division 07 Section "Sheet Metal Flashing and Trim" for flashing tie-in to wall system.
6. Division 07 Section "Joint Sealants" for sealants used in conjunction with the vapor permeable barrier.
7. Division 07 Section "Exterior Expansion Joint Covers" for expansion joints which will interface with the vapor permeable barrier.
8. Division 08 Section(s) "Aluminum-Framed Entrances and Storefronts" for assemblies which will interface with the vapor permeable barrier.

1.3 DEFINITIONS

- A. ABAA: Air Barrier Association of America.
- B. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.
- C. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- D. Air-Barrier Assembly: The collection of air-barrier materials and accessory materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site a minimum of two weeks before the application of product mockups.
 - 1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.
 - 2. Conference shall be attended by the Construction Manager, Contractor, Project Foreman for AIB Subcontractor, Subcontractors for adjacent substrates, the technical representative of AIB materials, the ABAA Certification Facilitator, the Owner's Commissioning Agent and the Architect.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data for all products; manufacturer's written installation instructions; and tested physical and performance properties of products.
- B. Shop Drawings: For air-barrier assemblies; prepare project specific drawings and details.
 - 1. Show locations and extent of air barrier.
 - 2. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
 - 3. Include details of interfaces with other materials that form part of air barrier.
 - 4. Include details of mockups.
 - 5. Provide details of engineered transition assembly installation and transition to opening framing and vapor barriers.
- C. Samples: 3 inches by 4 inches of sheet barrier.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data:

1. For Installer. Include list of ABAA-certified installers and supervisors employed by the Installer, who will work on this Project.
 2. For Testing Agency per the requirements of Division 01 Section "Quality Requirements".
- B. Product Certificates: From air-barrier manufacturer, certifying:
1. Compatibility of air barriers and accessory materials with Project materials that connect to or that come into contact with the barrier.
 2. Product has passed ASTM E2357 assembly testing.
 3. Air barrier, as designed in the assemblies indicated on the Drawings, has been tested to meet the requirements of NFPA 285 and has passed.
- C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.
1. Include documentation of volatile organic compounds (VOC) content for both product and accessories.
- D. Periodic ABAA Certification Reports: Delivered to the Contractor/CM, Owner and Architect as available.
- E. Pre-Construction Testing Reports: delivered to the Owner, Architect and Owner's Commissioning Agent within 7 days of completion of testing.
- F. Quality Control Testing Reports: delivered to the Owner, Architect and Owner's Commissioning Agent within 7 days of completion of testing.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
1. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.
 - a. Should no qualified ABAA contractors be available at the time of bid, the contractor shall retain the services of a qualified independent testing agency to perform the ABAA Field Certification and report to the Owner and Architect.
 2. Installer shall demonstrate a minimum ten years of experience installing the air-barriers.
- B. ABAA Quality Assurance Program: The materials and systems included in this Section shall be installed by ABAA certified contractors in full compliance with the ABAA Quality Assurance Program which shall be administered by ABAA selected 3rd party facilitators.
- C. Mockups: Build mockups to set quality standards for materials and execution and for preconstruction testing.
1. Build integrated mockups of exterior wall assembly at west face of building at field level, 150 sf in area including one outside corner and one jamb, incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and

other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.

- a. Coordinate construction of mockups to permit inspection by Owner's testing agency of air barrier before external insulation and cladding are installed.
 - b. Include building corner condition, and foundation wall intersection.
 - c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.8 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Contractor shall engage a qualified testing agency to perform preconstruction testing on field mockups.
- B. Mockup Testing: Air-barrier assemblies shall comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.
 1. Air-Leakage Testing: Mockups will be tested for evidence of air leakage according to ASTM E1186, chamber pressurization or depressurization with smoke tracers.
 2. Quantitative Air-Leakage Volume Testing: Mockups will be tested for air leakage according to ASTM E783.
 3. Adhesion Testing: Mockups will be tested for minimum air-barrier adhesion of 30 lbf/sq. in. according to ASTM D4541.
 4. Notify Architect seven days in advance of the dates and times when mockups will be tested.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in original packages with seals unbroken, labeled with Manufacturer's name, product name, lot number and directions for storage.
- B. Store materials in their original, undamaged packages in clean, dry, protected location and within temperature range required by Manufacturer.
- C. Protect stored materials from direct sunlight. Protect Product from freezing. Do not store cylinders of Aerosol Contact Adhesive above 110 degrees F.
- D. Remove and replace liquid materials that cannot be applied within their stated shelf life.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air-barrier manufacturer.

1. Protect substrates from environmental conditions that affect air-barrier performance.
 2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist or if snow, rain, fog, or mist is expected within the 16 hours following application.
- B. Application of Spray-Grade Product Application: Ambient temperature shall be above 40° F. Maintain product and the spray equipment above 50° F during application, except where directed otherwise by manufacturer. Do not spray during rain, accumulating snow fall or in windy conditions. Protect surfaces from overspray.
- C. Application of Transition Membrane Application: Apply at ambient temperatures above 40°. Do not apply during rain or accumulating snow fall.
- D. Application of Contact Adhesives: Maintain cylinders of Aerosol Spray Contact Adhesive above 60° F during spray. Do not apply Water-Based Contact Adhesive at ambient temperatures below 40° F.
- E. Application of Primer: Ambient temperature shall be above 40° F.
- F. Application of Products in Low Temperatures: Only products submitted and approved for lower temperature application will be permitted to be applied when application temperatures drop below 40° F.
1. Low temperature products shall be applied within the temperature limits permitted by manufacturer and installed per the manufacturer's written instructions.

1.11 WARRANTIES

- A. Provide manufacturer's materials warranty from the date of Final Acceptance.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Source Limitations: Obtain primary air-barrier materials and air-barrier accessories from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. General: Air barrier shall be capable of performing as a continuous vapor-permeable air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.
- B. Adhesion to Substrate: Minimum 30 lbf/sq. in. when tested according to ASTM D4541.
- C. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

- D. UV Resistance: Can be exposed to sunlight for 90 days according to manufacturer's written instructions.

2.3 NONBITUMINOUS SHEET AIR BARRIER

- A. Self-Adhered, Vapor-Permeable Nonbituminous Sheet: Minimum 20-mil- thick, self-adhering sheet consisting of a breathable carrier film or fabric and an adhesive with release liner on adhesive side and formulated for application with primer that complies with VOC limits.
 - 1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.; Fire Resist 705 VP.
 - b. GCP Applied Technologies Inc.; Perm-A-Barrier VPL
 - c. Henry Company; BlueSkin VP160.
 - d. Soprema; Sopraseal Stick VP.
 - 2. Physical and Performance Properties:
 - a. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. pressure difference; ASTM E2178.
 - b. Puncture Resistance: Minimum 40 lbf ; ASTM E154/E154M.
 - c. Vapor Permeance: Minimum 15 perms; ASTM E96/E96M, Desiccant Method, Procedure A.
 - d. UV Resistance: Can be exposed to sunlight for 90 days maximum or according to manufacturer's written instructions.

2.4 ACCESSORY MATERIALS

- A. Requirement: Provide primers, transition strips, termination strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier manufacturer to produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.
- B. Primer: Liquid waterborne primer recommended for substrate by air-barrier material manufacturer.
- C. Stainless-Steel Sheet: ASTM A240/A240M, Type 304, 0.0250 inch thick, and Series 300 stainless-steel fasteners.
- D. Joint Sealant and Transition Mastic: ASTM C920, Type S, single-component, moisture-curing sealant; Class 35 (medium modulus), Grade NS and, as applicable to joint substrates indicated, Use O. Install sealant around all terminations.
 - 1. Per Division 07 Section "Joint Sealants" type E/NT.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 - 1. Verify that substrates are sound, dry, even and free of oil, grease, dirt, excess mortar, or other contaminants.
 - 2. Verify that substrates have cured and aged for minimum time period recommended by air-barrier manufacturer.
 - 3. Verify that substrates are visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D4263.
 - 4. Verify that masonry joints are flush and completely filled with mortar.
 - 5. Verify that concrete is free of fins, protrusions and holes larger than 1-inch.
 - 6. Verify sheathing is supported and joints are flush without voids or protrusions. Damaged sheathing corners shall be soundly anchored and filled with material approved by manufacturer.
- B. Notify Architect and General Contractor in writing of the following:
 - 1. Cracks in concrete and masonry
 - 2. Gaps or obstructions such as steel beams, angles, plates and projections which cannot be spanned or covered by product or accessories
 - 3. Anticipated problems applying product and accessories over substrate.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.
- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.
- E. Prepare, fill, prime and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D4258.
- F. Fill gaps around pipe, conduit and similar penetrations with mortar, non-shrink grout or polyurethane foam. Allow fill in gap to fully cure. Apply a minimum ½ inch tooled bead of joint sealant or mastic around pipe, duct and conduit penetrations.
- G. Remove excess mortar from masonry ties, shelf angles, and other obstructions.

- H. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.
- I. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.
- J. Exterior sheathing panels: Ensure that the boards are sufficiently stabilized with corners and edges fastened with appropriate screws in accordance with exterior sheathing manufacturers written instructions.
- K. Masonry Substrates: Apply air barrier over concrete block and brick with smooth trowel-cut mortar joints, struck full and flush. Fill all voids and holes, particularly in the mortar joints, with a lean mortar mix, non-shrinking grout or parge coat.

3.3 JOINT TREATMENT

- A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C1193 and air-barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D4258 before coating surfaces.
 - 1. Prime substrate and apply 4 inches wide transition strip over joints and cracks.
- B. Gypsum Sheathing: Tape joints with 4 inches wide joint modified bituminous transition strip. Install air-barrier material over joint transition strip.

3.4 TRANSITION STRIP INSTALLATION

- A. General: Install strips, transition strips, and accessory materials according to air-barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.
 - 1. Coordinate the selection and installation of air barrier with installation of roofing and waterproofing membrane and base flashing to ensure continuity of air barrier with roofing and waterproofing membrane.
 - 2. Install butyl strip (EPDM or TPO/PVC) or modified bituminous strip (Bituminous) on roofing and waterproofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.
 - 3. Do not allow adhesive side of transition strip to contact EPDM, TPO or PVC roof membranes. Coordinate installation so that roof membrane overlaps transition strip.
- B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.
 - 1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.
- C. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade waterproofing, insulated metal panels, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing,

and other skin elements used in the exterior wall, using transition membrane and accessory materials.

- D. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.
- E. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
 - 1. Install joint sealant along edges of all transition membranes.
- F. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply transition strip and preformed silicone-sealant extrusion so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of full contact over firm bearing to perimeter frames with not less than 1 inch of full contact.
 - 1. Transition Strip: Roll firmly to enhance adhesion.
 - 2. Preformed Silicone-Sealant Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.
- G. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.
- H. Seal top of through-wall flashings to air barrier with an additional 6-inch- wide transition strip.
 - 1. Coordinate with Division 04 Section "Unit Masonry".
- I. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.
- J. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches beyond repaired areas in strip direction.
- K. Allow Product to dry firm. Apply Transition Membrane over surface prepared with Contact Adhesive according to Manufacturer's instructions in the following areas:
 - 1. Outside corners: Minimum 6-inch width
 - 2. Openings for fenestration: Wrap opening. Extend into rough opening the full depth of fenestration and onto wall 3 inches minimum.
 - 3. Top of wall: Minimum 12-inch width
 - 4. Base of wall: Minimum 12-inch width, cover transition of base of wall to foundation. Extend minimum 8 inches onto wall.
 - 5. Transitions: Such as wall assembly junctions, columns and beams. Extend 3 inches minimum onto either side of transition
 - 6. Expansion and seismic joints exceeding 1 inch across: Cover with assembly consisting of minimum 12-inch width strip with 4-inch width strip centered along length and bonded to underside of wider strip.
 - 7. Expansion and seismic joints not more than 1 inch across: Extend 3 inches minimum onto either side of joint.

- L. Lap adjacent pieces of Transition Membrane 2 inches minimum and sequence installation to provide shingled overlaps. Roll firmly to substrate with hand roller tool. Seal end laps, non-shingled laps, corner pinholes and terminating edges with Mastic. Install self-adhering flashing membrane to seal with stainless steel flashing and AIB in accordance with manufacturer's written instructions. The AIB shall lap over the self-adhering flashing membrane in a shingle fashion. The self-adhering flashing membrane shall lap over the stainless-steel flashing in shingle fashion.
- M. Transitioning to waterproofing shall be via EPDM, sealed and installed in shingle fashion as recommended by manufacturer to exclude all air/water.

3.5 NONBITUMINOUS SHEET AIR BARRIER INSTALLATION

- A. General: Apply self-adhered air-barrier material to form a seal with strips and transition strips and to achieve a continuous air barrier according to air-barrier manufacturer's written instructions. Apply self-adhered air-barrier material within manufacturer's recommended application temperature ranges.
 - 1. Install air barrier to dry surfaces at air and surface temperatures of 40 degrees F. and above in accordance with manufacturer's recommendations, at locations indicated on Construction Documents.
 - 2. Prime substrate to receive air barrier membrane as required per manufacturer's written instructions.
 - a. Limit priming to areas that will be covered by self-adhered air-barrier material on same day. Reprime areas exposed for more than 24 hours.
 - b. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.
- B. Vapor-Permeable Membrane Air Barriers: Apply a continuous unbroken air-barrier membrane to substrates according to the following thickness. Apply air-barrier membrane in full contact around protrusions such as masonry ties.
 - 1. Precut pieces of air barrier into easily handled lengths.
 - 2. Remove release linear and position membrane carefully before placing against the surface.
 - 3. Begin installation at the base of the wall placing top edge of membrane immediately below any masonry reinforcement or ties protruding from substrate.
 - 4. When properly positioned, place against surface by pressing firmly into place.
 - a. Apply sheets in a shingled manner to shed water.
 - b. Roll membrane with extension-handled countertop roller immediately after placement.
 - 5. Coordinate the installation of air barrier with roof installer to ensure continuity of membrane with roof air barrier.
 - 6. At end of each working day seal top edge of air barrier to substrate with termination sealant.
 - 7. Do not expose air barrier membrane to sunlight for more than 90 days prior to enclosure.
- C. Apply strip and transition strip a minimum of 1 inch onto cured air-barrier material or strip and transition strip over cured air-barrier material overlapping 3 inches onto each surface according to air-barrier manufacturer's written instructions.

- D. Inspect installation prior to enclosing and repair punctures, damaged areas and inadequately lapped seams with a patch of the membrane sized to extend 150 mm (6 in.) in all directions from the perimeter of the affected area.
- E. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.
- F. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.6 ASSEMBLIES INSTALLED AFTER AIR BARRIER MEMBRANE

- A. Seal penetrations made through installed Product according to the requirements of this Section.
- B. Fenestration installed after Product:
 - 1. Seal fenestration frame to Transition Membrane in rough opening with continuous Joint Sealant over backer rod or Polyurethane Foam.
 - 2. Seal mounting flange of doors and windows along jambs and head with minimum 4-inch width Transition Membrane strip. Apply Transition Membrane according to Part 3 of this Section.
- C. Board insulation installed after Product: Attach with Aerosol Insulation Adhesive or with insulation adhesive by others which is acceptable with AIB manufacturer.
- D. Roof air barrier: Join to Product according to Manufacturer's instructions and drawings.

3.7 ABAA FIELD CERTIFICATION

- A. Testing Agency: Contractor Shall engage a qualified testing agency to perform tests and inspections.
- B. ABAA Auditor in Place Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. Inspections may include the following:
 - 1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes. Verification of required dry film thickness at selected locations on the building.
 - 2. Continuous structural support of air-barrier system has been provided.
 - 3. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
 - 4. Site conditions for application temperature and dryness of substrates have been maintained.
 - 5. Maximum exposure time of materials to UV deterioration has not been exceeded.
 - 6. Surfaces have been primed, if applicable.
 - 7. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fish mouths.
 - 8. Termination mastic has been applied on cut edges.
 - 9. Strips and transition strips have been firmly adhered to substrate.
 - 10. Compatible materials have been used.
 - 11. Transitions at changes in direction and structural support at gaps have been provided.

12. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
13. All penetrations have been sealed.

3.8 FIELD QUALITY CONTROL

- A. Tests: As determined by Owner's testing agency from among the following tests:
 1. Qualitative Air-Leakage Testing: Air-barrier assemblies will be tested for evidence of air leakage according to ASTM E1186, chamber pressurization or depressurization with smoke tracers.
 2. Quantitative Air-Leakage Testing: Air-barrier assemblies will be tested for air leakage according to ASTM E783.
 3. Adhesion Testing: Air-barrier assemblies will be tested for minimum air-barrier adhesion of 30 lbf/sq. in. according to ASTM D4541 for each 600 sq. ft. of installed air barrier or part thereof.
- B. Air barriers will be considered defective if they do not pass tests and inspections.
 1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
 2. Remove and replace deficient air-barrier components for retesting as specified above.
- C. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

3.9 REPAIR, CLEANING AND PROTECTION

- A. Inspect before covering.
 1. Repair damage by removing loosely-adhered material and re-coating damage with Product according to Article 3.6 paragraph B.
 2. Repair shall extend beyond damage 2 inches minimum.
- B. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
 1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. If exposed to these conditions for more than 90 days, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed membrane according to air-barrier manufacturer's written instructions.
 2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.
- C. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.
- D. Remove masking materials after installation.

END OF SECTION 07 27 15

SECTION 07 41 13.16 - STANDING-SEAM METAL ROOF PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Vertical rib standing seam metal roof panel.
2. Underlayments
3. Metal gutters, downspouts
4. Flashings, curbs and accessories
5. Thermal Insulation, Substrate and Cover Board and Vapor Barrier.
6. Snowguards

- B. Related Sections:

1. Division 07 Section "Soffit Panels" for metal panels used in horizontal soffit applications.

1.3 DEFINITIONS

- A. Metal Roof Panel Assembly: Metal roof panels, attachment system components, miscellaneous metal framing, thermal insulation, substrate boards, underlayment and accessories necessary for a complete weathertight roofing system.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of roof accessories and roof-mounted equipment.
2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
5. Review structural loading limitations of deck during and after roofing.
6. Review flashings, special details, drainage, penetrations, equipment curbs, and condition of other construction that affect metal panels.

7. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
8. Review temporary protection requirements for metal panel systems during and after installation.
9. Review procedures for repair of metal panels damaged after installation.
10. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of roof panel and accessory.
- B. Shop Drawings:
 1. Show fabrication and installation layouts of metal roof panels; details of edge conditions, side-seam and endlap joints, panel profiles, corners, anchorages, trim, flashings, closures, and accessories; and special details. Distinguish between factory- and field-assembled work.
 2. All shop drawings must be signed and sealed by a qualified professional engineer licensed in the state where the work will be performed.
 3. Furnish shop drawings prepared by the product manufacturer, (not the roof contractor), complete with details of all major interfaces and periphery conditions.
 4. Shop drawings shall specify and indicate all materials furnished as well as finishes to be applied.
 5. Indicate unit locations, unit identification marks, fabrication details, reinforcement, connection details, pertinent dimensions, design loads, support, support points, tie backs, and other elements pertinent to the design.
 6. These shop drawings shall also serve as field installation drawings and be complete with specific instructions for the application of the products, periphery trim, and all sealants, lapstrips, etc., to insure a weathertight installation.
 7. Accessories: Include details of the following items, at a scale of not less than **1-1/2 inches per 12 inches**:
 - a. Flashing and trim
 - b. Roof curbs
 - c. Snow guards
- C. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.
 1. Include similar Samples of trim and accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
 1. Metal Roof Panels: **12 inches** long by actual panel width. Include fasteners, clips, battens, closures, and other metal roof panel accessories.
 2. Trim and Closures: **12 inches** long. Include fasteners and other exposed accessories.

3. Accessories: ~~12-inch~~- long Samples for each type of accessory.

1.6 INFORMATIONAL SUBMITTALS

- A. Design Data for Metal Roof Panel System: Design metal roof panel system under direct supervision of the manufacturer employed Engineer. Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers. Design Data submittal shall be signed and sealed by a qualified professional engineer licensed in the state or district in which the project is located. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect. Design Data submission must be concurrent with the submission of corresponding Fabrication drawings. Fabrication drawings submitted without corresponding Design Data will be returned as “Not Reviewed”.
- B. Initial Certification Letter from Delegated-Design Professional: Prior to the submission of Shop Drawings, Product Data, Calculations and other required submittals, submit a Certification Letter from the responsible design professional. No shop drawings will be reviewed by the Architect prior to the submission and acceptance of this Certification Letter. The Certification Letter shall include the following:
 1. Signature and seal of the registered Professional Engineer (registered in the state or district in which the project is located).
 2. Statement that the Professional Engineer is fully experienced in the design of metal roof systems.
 3. Statement that all calculations and shop drawings are in accordance with the Contract Documents and applicable building codes and have been prepared under the direction of the Professional Engineer.
 4. Statement that the Professional Engineer’s signature and seal shall appear on all design calculations and on all shop drawings.
 5. Statement that the design shall be in accordance with the aesthetic design intent of the project with the Architect having final authority in reference to aesthetic matters.
 6. Statement that the Professional Engineer will submit an additional signed and sealed letter at the conclusion of the work related to this section stating that the fabrication and installation of the metal roof system has been performed in accordance with the Professional Engineer’s design.
- C. Coordination Drawings: Roof plans, drawn to scale, on which the following are shown and coordinated with each other, based on input from installers of the items involved:
 1. Roof panels and attachments.
 2. Purlins and rafters.
 3. Roof-mounted items including roof hatches, equipment supports, pipe supports and penetrations, lighting fixtures, snow guards, and items mounted on roof curbs.
- D. Qualification Data for manufacturer, erector/installer and professional engineer.
- E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.

- F. Field quality-control reports.
- G. Warranties: Samples of special warranties.

1.7 RECORD SUBMITTALS

- A. Final Certification Letter from Delegated-Design Professional: After construction of the metal roof system is complete, submit a signed and sealed Certification Letter from the responsible design professional stating that the fabrication and installation of the metal roof system has been performed in accordance with the Professional Engineer's design.

1.8 CLOSEOUT DOCUMENTS

- A. Maintenance Data: For metal roof panels to include in maintenance manuals.
- B. Warranties: Final warranties to include in operation and maintenance manuals.

1.9 QUALITY ASSURANCE

- A. Manufacturer Qualifications: The product manufacturer shall have a minimum of 10 years of experience in the manufacturer of exterior metal roof system and shall have successfully manufactured a minimum of 5 projects similar to this project.
- B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer. Metal roof system installer shall have completed a minimum of five metal roof panel projects similar in material, design and extent to that indicated for this project with a record of successful in-service performance.
- C. Professional Engineer's Qualifications: A Professional Engineer, who is legally qualified to practice in the state where the work will be performed, and who is experienced in providing engineering services of the kind indicated.
- D. System Engineering: Engineering (shop drawings) shall only be acceptable from the product manufacturer. Shop drawings from metal roof system contractor are NOT acceptable. Shop drawings for all roof panels, shall be submitted by one manufacturer at one time as a complete submittal package.
- E. Statement of Specification Compliance: Both the metal roof system contractor and manufacturer shall submit and sign a statement that all materials supplied for this project shall only be manufactured by the specified manufacturer. It is the intent of this section that the metal roof system be provided as a complete system.
- F. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.
- G. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockup of typical roof area and eave as shown on Drawings; approximately 12 feet square by full thickness, including attachments, underlayment, and accessories.
2. Build mockups for typical roof area only, including accessories.
 - a. Size: 12 feet long by 6 feet.
 - b. Each type of exposed seam and seam termination.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, sheets, metal roof panels, and other manufactured items so as not to be damaged or deformed. Package metal roof panels for protection during transportation and handling.
- B. Unload, store, and erect metal roof panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal roof panels on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal roof panels to ensure dryness. Do not store metal roof panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Protect strippable protective covering on metal roof panels from exposure to sunlight and high humidity, except to extent necessary for period of metal roof panel installation.

1.11 COORDINATION

- A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.
- B. Coordinate metal roof panels with rain drainage work, flashing, trim, and construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.12 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit metal roof panel work to be performed according to manufacturer's written instructions and warranty requirements.
- B. Field Measurements: Verify actual dimensions of construction contiguous with metal roof panels by field measurements before fabrication.

1.13 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace metal roof panel assemblies including all trim, substrate board, underlayment, insulation, gutters, etc. that fail in materials or workmanship within specified warranty period.
- Failures include, but are not limited to, the following:
 - Structural failures including rupturing, cracking, or puncturing.
 - Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - Warranty Period: 20 years from date of Final Acceptance.
- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal roof panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
- Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - Color fading more than 5 Hunter units when tested according to ASTM D2244
 - Chalking in excess of a No. 8 rating when tested according to ASTM D4214
 - Cracking, checking, peeling, or failure of paint to adhere to bare metal
 - Finish Warranty Period: 20 years from date of Final Acceptance.
- C. Special Weathertightness Warranty for Standing-Seam Metal Roof Panels: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that fail to remain weathertight, including leaks, within specified warranty period.
- Warranty Period: 20 years from date of Final Acceptance

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Energy Performance: Provide roof panels that are listed on the EPA/DOE's ENERGY STAR "Roof Product List" for **low**-slope roof products.
- B. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E1592:
- Wind Loads: As indicated on Drawings.
 - Other Design Loads: As indicated on Drawings.
 - Deflection Limits: For wind loads, no greater than **1/180** of the span.
- C. Air Infiltration: Air leakage of not more than **0.06 cfm/sq. ft.** when tested according to ASTM E1680 or ASTM E283 at the following test-pressure difference:
- Test-Pressure Difference: **6.24 lbf/sq. ft.**

- D. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E1646 at the following test-pressure difference:
 - 1. Test-Pressure Difference: **6.24 lbf/sq. ft.**
- E. Hydrostatic-Head Resistance: No water penetration when tested according to ASTM E2140.
- F. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for wind-uplift-resistance class indicated.
 - 1. Uplift Rating: **UL 60.**
- G. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): **120 deg F** ambient; **180 deg F**, material surfaces.

2.2 STANDING-SEAM METAL ROOF PANELS

- A. General: Provide factory-formed metal roof panels designed to be installed by lapping and interconnecting raised side edges of adjacent panels with joint type indicated and mechanically attaching panels to supports using concealed clips in side laps. Include clips, cleats, pressure plates, and accessories required for weathertight installation.
 - 1. Steel Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E1514.
 - 2. Aluminum Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E1637.
- B. Vertical-Rib, Seamed-Joint, Standing-Seam Metal Roof Panels: Formed with vertical ribs at panel edges and intermediate stiffening ribs symmetrically spaced between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels, engaging opposite edge of adjacent panels, and mechanically seaming panels together.
 - 1. Basis-of-Design Product: Morin, SLR-16-2
 - 2. Other Acceptable Manufacturers:
 - a. Advanced Architectural Products.
 - b. AEP Span; A BlueScope Steel Company.
 - c. Architectural Building Components.
 - d. Architectural Metal Systems.
 - e. Berridge Manufacturing Company.
 - f. CENTRIA Architectural Systems
 - g. Merchant and Evans.
 - 3. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A653/A653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated

steel sheet complying with ASTM A792/A792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A755/A755M.

- a. Nominal Thickness: 0.040 inch (1.02 mm).
 - b. Exterior Finish: Two-coat fluoropolymer containing not less than 70% PVDF resin in color and topcoat complying with AAMA 2605.
 - c. Color: As selected by Architect from manufacturer's full range.
4. Clips: One-piece fixed or two-piece floating to accommodate thermal movement.
- a. Material: 0.064-inch- (1.63-mm-) nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
 - b. Material: 0.062-inch- (1.59-mm-) thick, stainless-steel sheet.
5. Batten: Same material, finish, and color as roof panels.
6. Joint Type: As standard with manufacturer.
7. Panel Coverage: 16 inches (406 mm).
8. Panel Height: 2.5 inches (64 mm).

2.3 UNDERLAYMENT MATERIALS

- A. Self-Adhering, High-Temperature Sheet: 40 mils (1.0 mm) thick minimum, consisting of slip-resisting, polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
1. Thermal Stability: Stable after testing at 240 deg F (116 deg C); ASTM D1970.
 2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C); ASTM D1970.
 3. Products:
 - a. Basis of Design: Carlisle Coatings & Waterproofing Inc., Div. of Carlisle Companies Inc.; CCW WIP 300HT
 - b. Other Acceptable Manufacturers subject to compliance with requirements:
 - 1) Grace Construction Products; a unit of Grace, W. R. & Co.; Ultra
 - 2) Henry Company; Blueskin PE200 HT
- B. Felt Underlayment: ASTM D226/D226M, Type II (No. 30), asphalt-saturated organic felts.
- C. Slip Sheet: Manufacturer's recommended slip sheet, of type required for application.

2.4 VAPOR RETARDER

- A. Self-Adhering-Sheet Vapor Retarder: ASTM D1970, polyethylene film laminated to layer of rubberized asphalt adhesive, minimum 40-mil (1.0-mm) total thickness; maximum permeance rating of 0.1 perm (6 ng/Pa x s x sq. m); cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.

2.5 SUBSTRATE BOARD AND COVER BOARD

- A. Glass-Mat Gypsum Board: ASTM C1177/C1177M; 5/8-inch thick type X.
 - 1. Product: Subject to compliance with requirements, provide Dens-Dek by Georgia-Pacific Corporation.
- B. Substrate Board Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FMG 4470, designed for fastening substrate board to substrate.

2.6 THERMAL INSULATION

- A. Faced, Polyisocyanurate Board Insulation: ASTM C1289, Type II, Class 2 felt or glass-fiber mat, Grade 3, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, based on tests performed on unfaced core.

2.7 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C645, cold-formed metallic-coated steel sheet, ASTM A653/A653M, G90, hot-dip galvanized. Provide manufacturer's standard sections as required for support and alignment of metal panel system
- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
 - 1. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal panels.
 - 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 - 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum **1-inch- (25-mm-)** thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
- D. Gutters and Downspouts: Provide and install per Division 07 section "Sheet Metal Flashing and Trim."
- E. Roof Curbs: Fabricated from same material as roof panels, **0.048-inch (1.2-mm)** nominal thickness; with bottom of skirt profiled to match roof panel profiles and with welded top box and integral full-length cricket. Fabricate curb subframing of **0.060-inch- (1.52-mm-)** nominal

thickness, angle-, C-, or Z-shaped steel sheet. Fabricate curb and subframing to withstand indicated loads of size and height indicated. Finish roof curbs to match metal roof panels.

1. Insulate roof curb with **1-inch- (25-mm-)** thick, rigid insulation.
- F. Fasteners for Miscellaneous Metal Framing: Self-tapping screws designed to withstand design loads of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.
- G. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape **1/2 inch- (13 mm-)** wide and **1/8 inch- (3 mm-)** thick.
 2. Joint Sealant: ASTM C920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
 3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C1311.
- I. Panel Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. All fasteners shall be 300 series stainless steel. Exposed fasteners are not permitted.
- J. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for **15-mil (0.4-mm)** dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.8 SNOW GUARDS

- A. Snow Guards: Prefabricated, noncorrosive units designed to be installed without penetrating metal roof panels, and complete with predrilled holes, clamps, or hooks for anchoring.
1. Seam-Mounted, Bar-Type Snow Guards: Aluminum rods or bars held in place by stainless-steel clamps attached to vertical ribs of standing-seam metal roof panels with stainless steel set screws.
 - a. Aluminum Finish: To match roof panels.
 - b. Products: Subject to compliance with requirements, provide the following:
 - 1) Metal Roof Innovations, LTD; S-5 ColorGuard snow retention system.

2.9 FABRICATION

- A. General: Fabricate and finish metal roof panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes and as necessary to fulfill indicated performance requirements. Comply with indicated profiles and with dimensional and structural requirements.

- B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate according to equipment manufacturer's written instructions and to comply with details shown.
- C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- D. Fabricate metal roof panel joints with factory-installed captive gaskets or separator strips that provide a tight seal and prevent metal-to-metal contact, in a manner that will seal weathertight and minimize noise from movements within panel assembly.
- E. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.
 - 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - 2. Comply with membrane roofing system manufacturer's written instructions for installing roof insulation.
- F. Vapor Retarder Installation:
 - 1. Self-Adhering-Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering-sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 inches (90 mm) and 6 inches (150 mm), respectively. Seal laps by rolling.
 - 2. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.
 - 3. Tie vapor retarder to other building envelope vapor barrier systems with the appropriate transition materials.

2.10 UNDERLAYMENT INSTALLATION

- A. Breathable Synthetic Underlayment: Comply with written instructions of underlayment manufacturer for installation. Apply at locations indicated below and, on the drawings, wrinkle free, in shingle fashion to shed water.
 - 1. Apply over the entire roof surface.
 - 2. Apply on the roof not covered by self-adhering sheet underlayment. Lap over edges of self-adhering underlayment not less than 3-inches (75 mm), in shingle fashion to shed water.
- B. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated below and on Drawings, wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches (150 mm) staggered 24 inches (600 mm) between courses. Overlap side edges not less than 3-1/2 inches (90 mm). Extend underlayment into gutter trough. Roll laps with roller. Cover underlayment within 14 days.

1. Apply over the entire roof surface.
2. Apply over the roof area indicated below:
 - a. Roof perimeter for a distance up from eaves of **36 inches (914 mm)** beyond interior wall line.
 - b. Valleys, from lowest point to highest point, for a distance on each side of **18 inches (460 mm)**. Overlap ends of sheets not less than **6 inches (150 mm)**.
 - c. Rake edges for a distance of **18 inches (460 mm)**.
 - d. Hips and ridges for a distance on each side of **18 inches (300 mm)**.
 - e. Roof to wall intersections for a distance from wall of **18 inches (460 mm)**.
 - f. Around dormers, chimneys, skylights, and other penetrating elements for a distance from element of **18 inches (460 mm)**.
- C. Install flashings to cover underlayment to comply with requirements specified in Division 07 Section "Sheet Metal Flashing and Trim."

2.11 METAL ROOF PANEL INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 1. Shim or otherwise plumb substrates receiving metal panels.
 2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 3. Install screw fasteners in predrilled holes.
 4. Locate and space fastenings in uniform vertical and horizontal alignment.
 5. Install flashing and trim as metal panel work proceeds.
 6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Provide metal roof panels of full length from eave to ridge.
- C. Thermal Movement. Rigidly fasten metal roof panels to structure at one and only one location for each panel. Allow remainder of panel to move freely for thermal expansion and contraction. Predrill panels for fasteners.
 1. Point of Fixity: Fasten each panel along a single line of fixing located by the panel manufacturer's design and engineering to best suit the roof configuration.
 2. Do not attach accessories or items through roof panels in a manner that will inhibit thermal movement, unless specifically indicated by the manufacturer.
- D. Fasteners:
 1. Steel Roof Panels: Use stainless-steel fasteners.

2. Aluminum Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or stainless-steel fasteners for surfaces exposed to the interior.
 3. Copper Panels: Use copper, stainless-steel, or hardware-bronze fasteners.
- E. Anchor Clips: Anchor metal roof panels and other components of the Work securely in place, using manufacturer's approved fasteners according to manufacturers' written instructions.
- F. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal roof panel manufacturer.
1. Coat back side of roof panels with bituminous coating where roof panels will contact wood, ferrous metal, or cementitious construction.
- G. Standing-Seam Metal Roof Panel Installation: Fasten metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended in writing by manufacturer.
1. Install clips to supports with self-tapping fasteners.
 2. Install pressure plates at locations indicated in manufacturer's written installation instructions.
 3. Snap Joint: Nest standing seams and fasten together by interlocking and completely engaging factory-applied sealant.
 4. Seamed Joint: Crimp standing seams with manufacturer-approved, motorized seamer tool so clip, metal roof panel, and factory-applied sealant are completely engaged.
 5. Watertight Installation:
 - a. Apply a continuous ribbon of sealant or tape to seal joints of metal panels, using sealant or tape as recommend in writing by manufacturer as needed to make panels watertight.
 - b. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
 - c. At panel splices, nest panels with minimum **6-inch (152-mm)** end lap, sealed with sealant and fastened together by interlocking clamping plates.
- H. Joint Sealers: Install gaskets, joint fillers, and sealants within system where indicated and where required for weatherproof performance of metal roof panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal roof panel manufacturer.
1. Seal metal roof panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal roof panel manufacturer.
- I. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal roof panel manufacturers; or, if not indicated, types recommended by metal roof panel manufacturer.

- J. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof and weather-resistant performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of **10 feet (3 m)** with no joints allowed within **24 inches (610 mm)** of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than **1 inch (25 mm)** deep, filled with mastic sealant (concealed within joints).
- K. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than **36 inches (914 mm)** o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.
- L. Downspouts: Join sections with telescoping joints. Provide fasteners designed to hold downspouts securely **1-inch (25 mm)** away from walls; locate fasteners at top and bottom and at approximately **60 inches (1524 mm)** o.c. in between.
1. Provide elbows at base of downspouts to direct water away from building.
 2. Connect downspouts to underground drainage system indicated.
- M. Roof Curbs: Install flashing around bases where they meet metal roof panels.
- N. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to metal roof panels as recommended by manufacturer.

2.12 SNOW GUARD INSTALLATION

- A. Bar-Type Snow Guards: Attach bar supports to vertical ribs of standing-seam metal roof panels with set screws. Do not use fasteners that will penetrate metal roof panels.
1. Provide snow guards, at locations indicated in Shop Drawings.

2.13 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align metal roof panel units within installed tolerance of **1/4 inch in 20 feet (6 mm in 6 m)** on slope and location lines as indicated and within **1/8-inch (3-mm)** offset of adjoining faces and of alignment of matching profiles.

2.14 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect metal roof panel installation, including accessories. Report results in writing.

- B. Remove and replace applications of metal roof panels where inspections indicate that they do not comply with specified requirements.
- C. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- D. Prepare test and inspection reports.

2.15 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal roof panels are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of metal roof panel installation, clean finished surfaces as recommended by metal roof panel manufacturer. Maintain in a clean condition during construction.
- B. Replace metal roof panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 41 13.16

SECTION 07 42 00 - RAINSCREEN WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Sintered stone ventilated rainscreen wall panels

B. Related Requirements:

1. Division 07 section "Thermally Broken Rainscreen Attachment System" for subframing supporting the work of this section.

1.2 DEFINITIONS

- A. Rainscreen: an exterior wall assembly where the siding material stands off from the moisture-resistant surface of an air/water barrier to create a capillary break and to allow drainage and evaporation

- B. Sintered Stone: material formed through heating a mineral matrix to form a solid mass

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

- A. Product Data: Include manufacturer's product specifications, standard details, test results, and general recommendations, as applicable to materials and finishes for each component and for total system assemblies.

- B. Shop Drawings: Show layouts of all wall surfaces, details of corner conditions, joints, system profiles, supports, anchorages, trim, flashings, closures, and special details.

- C. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of panel.

- D. Samples for Verification: Actual sample of finished products for each type of exposed finish.
1. Size: Manufacturers' standard size.

- E. Delegated Design: Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation. Certify system meets wind load and structural loads required by Code in the jurisdiction of the project.

1.5 INFORMATIONAL SUBMITTALS

- A. Test and Evaluation Reports:
 - 1. Product Test Reports: For each panel product, for tests performed by qualified testing agency.
 - 2. Research Reports: For rainscreen panels, from ICC-ES or other agency acceptable to Authorities Having Jurisdiction showing compliance with fire resistance performance criteria.
- B. Source Quality-Control Submittals:
 - 1. Source quality-control reports.
- C. Field Quality-Control Submittals:
 - 1. Field quality-control reports.
- D. Delegated design engineer qualifications.
- E. Sample warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For panels in open-joint rainscreen system.
- B. Warranty Documentation:
 - 1. Manufacturers' special warranties.
 - 2. Installer's special warranties.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra Stock Material: Furnish extra materials, from the same production run, to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Panels: Assembled panels with dimensions matching maximum width and height on the project to be trimmed to size in case of panel failure, equal to 10 percent of quantity installed, but no fewer than 4 units.
 - 2. Clips and Fasteners: Aluminum mounting clips and concealed shallow expansion anchors for attachment to panels, no fewer than 10 of each.
 - 3. Drill Bit: Cove-cutting bit used to prepare holes for shallow expansion anchors; provide 2.
- B. Schedule of maintenance material items.

1.8 QUALITY ASSURANCE

- A. Qualifications:

1. Installers: Entity that employs installers and supervisors who are trained and approved by manufacturer.
2. Delegated Design Engineer: A professional engineer who is legally qualified to practice in North Carolina and who is experienced in providing engineering services of the type indicated.

1.9 MOCKUPS

- A. Build mockups to set quality standards for fabrication and installation.
 1. Build mockup at Feature Wall.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Comply with manufacturer's requirements for packaging, delivery, storage, and handling. Use stable, flat pallets that are at least the same dimension as the sheets. Deliver panels in undamaged condition.
- B. Exercise care in unloading, storing, and erecting wall system to prevent bending, twisting, and surface damage.

1.11 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of wall system to be performed according to manufacturers written instructions and warranty requirements.
- B. Field Measurements: Verify field measurements prior to fabrication. Coordinate fabrication schedule with construction to delays due to fabrication and delivery.

1.12 WARRANTY

- A. Special Warranty: Manufacturer and Installer agree to repair or replace panels that fail(s) in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures, including pull-out of concealed fasteners.
 - b. Faulty operation of leveling screws.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

- d. Cracking of panels at fastener points.
 - e. Cracking of panels at sintered seams.
2. Warranty Period: 25 year(s) from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Mounting System Performance: Designed by the manufacturer to withstand structural loading due to wind load and dead load of the panel.
- B. Seismic Performance: Installed rainscreen system to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- D. Fire Performance:
 - 1. ASTM E-136: Non-combustible
 - 2. ASTM E-119: No degradation

2.2 SINTERED STONE PANELS

- A. General: Provide sintered stone panels of monolithic composition and color with attached clips for concealed fastening to rainscreen supports.
- B. Basis of Design: Dekton Façade by Cosentino USA.
- C. Acceptable Manufacturers: Subject to compliance with the requirements of this section, provide products from one of the following:
 - 1. Cosentino USA; (281) 494-7277; www.cosentino.com.
 - 2. Lapitec S.p.a; www.lapitec.com.
 - 3. Neolith; www.neolith.com.
 - 4. Petrarch; <http://petrarchpanels.com>.
 - 5. Steni; www.steni.com.
- D. Thickness: 0.47 inch (12 mm)
- E. Obtain panels from single source.
- F. Finish: Manufacturer's standard matte finish
- G. Color: As selected by Architect from manufacturer's full range.

2.3 ACCESSORIES

- A. Clips and rails: Provide extruded aluminum clips and rails of the same extrusion capable of nesting to create support for panels. Provide set screw on clips for field adjustment of panels to achieve level and plumb alignment.
- B. Anchors: For attachment of clips to back side of panel. Provide concealed shallow expansion anchor.

2.4 FABRICATION OF PANELS

- A. Shop Assembly: Prepare panel for and install concealed clips at back of panel using concealed shallow expansion anchor system.

2.5 GENERAL FINISH REQUIREMENTS

- A. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for requirements indicated for conditions affecting performance of the Work.
- B. Reject assembled panels that are damaged.
- C. Examine roughing-in for {Insert system name} piping to verify actual locations of piping connections before {equipment} {fixture} installation.
- D. Examine walls, for suitable conditions where panels will be installed.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean surfaces thoroughly prior to installation using method and materials recommended by the manufacturer for project conditions.

3.3 INSTALLATION

- A. Install panels and sub-frame system in accordance with manufacturer's guidelines and approved submittals.

- B. Install panels plumb and level and accurately spaced in accordance with manufacturer's recommendations and approved submittals and drawings.
- C. Anchor panels and sub-framing securely per engineering recommendations and in accordance with approved shop drawings to allow for necessary movement and structural support.
- D. Do not install panels or component parts which are observed to be defective or damaged including, but not limited to: warped, bowed, abraded, scratched, and broken members.
- E. Do not cut or trim component parts during installation in a manner that would damage the finish, decrease the strength, or result in visual imperfection or a failure in performance. Return component parts with require alteration to the shop for re-fabrication or replacement.
- F. Install corner profiles and trim with fasteners appropriate for use with adjoining construction as indicated on the Contract Drawings and as recommended by manufacturer.

3.4 ADJUSTING

- A. Remove masking and panel protection as soon as practical after installation.
- B. Adjust final panel installation so that all joints are true and even throughout the installation. Panels out of plane shall be adjusted with the surrounding panels to minimize any imperfection.
- C. Repair panels with minor damage. Remove and replace panels damaged beyond repair as a direct result of the panel installation.

3.5 CLEANING

- A. Clean finished surfaces as recommended by the manufacturer.

END OF SECTION 074200

SECTION 07 42 13.13 - FORMED METAL WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Concealed-fastener, lap-seam metal wall panels.

- B. Related Sections:

- 1. Division 05 Section "Cold-Formed Metal Framing" for support framing, including girts, studs, and bracing.
 - 2. Division 07 Section "Soffit Panels" for metal panels used in horizontal soffit applications.
 - 3. Division 07 Section "Insulated-Core Metal Wall Backup Panel" for insulated core back-up panels with vapor barrier.
 - 4. Division 07 Section "Thermally-Broken Rainscreen Attachment System" for thermally broken sub-girt support system.
 - 5. Division 07 Section "Sheet Metal Flashing and Trim" for flashing and other sheet metal work that is not part of metal wall panel assemblies.

1.3 DEFINITION

- A. Metal Wall Panel Assembly: Metal wall panels, attachment system components, miscellaneous metal framing, thermal insulation, and accessories necessary for a complete weathertight wall system.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

- 1. Meet with Owner, Architect, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of doors, windows, and louvers.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
 - 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.

5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal panels.
6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
7. Review temporary protection requirements for metal panel assembly during and after installation.
8. Review of procedures for repair of metal panels damaged after installation.
9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

B. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
2. Distinguish between factory-, shop- and field-assembled work.
3. System Engineering: Engineering (shop drawings) shall only be acceptable from the product manufacturer for the metal wall panel and support system. Shop drawings from metal wall system contractor will not be acceptable. Shop Drawings shall be signed and sealed by a qualified professional engineer licensed in the state where the work will be performed.
 - a. Indicate unit locations, unit identification marks, fabrication details, reinforcement, connection details, pertinent dimensions, design loads, support, support points, tie backs and other pertinent structural information.
 - b. Sub-framing and attachment shall be demonstrated to have been successfully coordinated with the Division 05 Cold Formed Metal Framing submittal to avoid misalignment issues between the systems.
 - c. Coordinate with Division 01 Section "Project Management and Coordination" for building enclosure coordination drawing requirements.
4. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than **1-1/2 inches per 12 inches (1:10)**.

C. Samples for Initial Selection: For each type of metal panel indicated with factory-applied finishes.

1. Include Samples of trim and accessories involving color selection.

D. Samples for Verification: For each type of exposed finish, prepared on Samples of size indicated below:

1. Metal Panels: **12 inches (305 mm)** long by actual panel width. Include fasteners, closures, and other metal panel accessories.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and Manufacturer/Fabricator.
- B. Coordination Drawings: Exterior elevations drawn to scale and coordinating penetrations and wall-mounted items. Show the following:
 - 1. Wall panels and attachments.
 - 2. Girts, Stud framing.
 - 3. Wall-mounted items including doors, windows, louvers, and lighting fixtures.
 - 4. Penetrations of wall by pipes and utilities.
 - 5. Metal panel manufacturer shall coordinate the location of support girts and studs with Division 05 Section "Cold Formed Metal Framing" to achieve the necessary and coordinated spacing of cold formed studs required to support the plate wall panels girts.
- C. Design Data for Metal Wall Panel System: Design metal wall panel system under direct supervision of the manufacturer employed Engineer. Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers. Design Data submittal shall be signed and sealed by a qualified professional engineer licensed in the state or district in which the project is located. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect. Design Data submission must be concurrent with the submission of corresponding Fabrication drawings. Fabrication drawings submitted without corresponding Design Data will be returned as "Not Reviewed".
- D. Initial Certification Letter from Delegated-Design Professional: Prior to the submission of Shop Drawings, Product Data, Calculations and other required submittals, submit a Certification Letter from the responsible design professional. No shop drawings will be reviewed by the Architect prior to the submission and acceptance of this Certification Letter. The Certification Letter shall include the following:
 - 1. Signature and seal of the registered Professional Engineer (registered in the state or district in which the project is located).
 - 2. Statement that the Professional Engineer is fully experienced in the design of metal wall systems.
 - 3. Statement that all calculations and shop drawings are in accordance with the Contract Documents and applicable building codes and have been prepared under the direction of the Professional Engineer.
 - 4. Statement that the Professional Engineer's signature and seal shall appear on all design calculations and on all shop drawings.
 - 5. Statement that the design shall be in accordance with the aesthetic design intent of the project with the Architect having final authority in reference to aesthetic matters.
 - 6. Statement that the Professional Engineer will submit an additional signed and sealed letter at the completion of the work related to this section stating that the fabrication and installation of the metal wall system has been performed in accordance with the Professional Engineer's design.
- E. Product Test Reports: For each product, for tests performed by a qualified testing agency.

- F. Field quality-control reports.
- G. Sample Warranties: For special warranties.

1.7 RECORD SUBMITTALS

- A. Final Certification Letter from Delegated-Design Professional: After construction of the metal wall system is complete, submit a signed and sealed Certification Letter from the responsible design professional stating that the fabrication and installation of the metal wall system has been performed in accordance with the Professional Engineer's design.
- B. Record Shop Drawings: Submit Record Shop Drawings to the Architect. Record Shop Drawings shall show the as fabricated/manufactured condition of the panel assembly that is detailed on the shop drawing and any modifications that were made in the field.

1.8 CLOSEOUT DOCUMENTS

- A. Maintenance Data: For metal panels to include in maintenance manuals.
- B. Warranties: Executed warranties to include in operation and maintenance manuals.

1.9 QUALITY ASSURANCE

- A. Manufacturer/Fabricator Qualifications: A firm experienced in the manufacturing of products or systems similar to those indicated for this project and with a record of successful in-service performance, as well as sufficient production capacity to produce the required units. All formed metal panels specified in this section shall be supplied by a single manufacturer with a minimum of ten years of demonstrable experience.
- B. Installer Qualifications:
 - 1. An entity that employs installers and supervisors who are trained and approved by manufacturer.
 - 2. Metal wall system installer shall have completed a minimum of five metal wall panel projects similar in material, design and extent to that indicated for this project with a record of successful in-service performance. The metal wall system installer shall also be able to show a minimum of ten years of experience.
- C. Professional Engineer's Qualifications: A Professional Engineer, who is legally qualified and licensed to practice in the State where the project is located, who is employed by the manufacturer, and who is experienced in providing engineering services of the kind indicated.
- D. Testing Agency Qualifications: Qualified according to ASTM C1021 for testing indicated and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC Standard 17025.

- E. **Manufacturer's Field Services:** Upon Owner's request, provide manufacturer's field service consisting of product use recommendations and periodic site visits for inspection of product installation in accordance with manufacturer's instructions.
- F. **Source Limitations:** Metal wall panel system shall be obtained from a single source, from a single manufacturer, including all accessories.
- G. **UL-Certified, Portable Roll-Forming Equipment:** UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.
- H. **Mockups:** Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical metal panel assembly at southeast corner of building, including corner, supports, attachments, and accessories.
 - 2. **Water-Spray Test:** Conduct water-spray test of metal panel assembly mockup, testing for water penetration according to AAMA 501.2.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal panels during installation.

1.11 FIELD CONDITIONS

- A. **Weather Limitations:** Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.
- B. **Field Measurements:** Verify locations of structural members and wall opening dimensions by field measurements before metal wall panel fabrication and indicate measurements on Shop Drawings.

1.12 COORDINATION

- A. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.13 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.
 - c. Weather tightness, including air and water infiltration.
 - 2. Warranty Period: Five years from date of Substantial Completion.
- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide metal wall panel assemblies capable of withstanding the effects of the design loads and stresses within limits and under conditions indicated, based on testing according to ASTM E1592:
 - 1. Dead Loads: Account for weight of storefront window system at conditions where window system bears on metal wall panel assembly.
 - 2. Wind Loads: Determine loads based on the following minimum design wind pressures:
 - a. Uniform pressure as indicated on the Structural Drawings.
 - b. Account for wind loads from storefront window system where connections are made to metal wall panel assembly.
 - 3. Deflection Limits: Metal wall panel assemblies shall withstand wind loads with horizontal deflections no greater than 1/180 or 3/4 inch maximum, whichever is less, of the span.

4. Movement of Structural Frame: Design components and connections to accommodate movement of structural frame as listed below:
 - a. Story Drift
 - 1) Accommodate design displacement of adjacent stories equal to 1/400 of span between supports.
 - b. Deflection at midspan of supporting members
 - 1) Accommodate vertical downward deflection of 1/720 of the span with a maximum of 0.5 inches under live load conditions.
 5. Seismic Performance: Metal panel shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 and the information provided on the drawings.
 6. Tolerances
 - a. Connections and anchorage shall be designed to provide adjustability for final alignment.
 - b. The maximum allowable girt steel deviation from a theoretical girt plane is $\pm 1/2$ inch. In any 20 foot length horizontally or vertically, this deviation cannot vary more than 1/4 inch. Transition areas such as corners and soffits shall have girt steel $\pm 1/8$ inch of the theoretical girt plane.
- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- C. Fire-Test-Response Characteristics: Provide metal wall panels and system components with the following fire-test-response characteristics, as determined by testing identical panels and system components per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.
1. Fire-Resistance Characteristics: Provide materials and construction tested for fire resistance per ASTM E119.
 2. Intermediate-Scale Multistory Fire Test: Tested mockup, representative of completed multistory wall assembly of which wall panel is a part, complies with NFPA 285 for test method and required fire-test-response characteristics of exterior non-load-bearing wall panel assemblies.
 3. Radiant Heat Exposure: No ignition when tested according to NFPA 268.
 4. Potential Heat: Acceptable level when tested according to NFPA 259.
 5. Surface-Burning Characteristics: Provide wall panels with a flame-spread index of 25 or less and a smoke-developed index of 450 or less, per ASTM E84.

- D. Design exterior metal wall and support system and connections to accommodate, by means of expansion joints, movement in structure and between cladding elements and structure without permanent distortion, damage to components, wracking of joint connections or breakage of seals.

2.2 CONCEALED-FASTENER, LAP-SEAM METAL WALL PANELS

- A. General: Provide factory-formed metal panels designed to be field assembled by lapping and interconnecting edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in laps. Include accessories required for weathertight installation.
- B. Profiled, Concealed-Fastener Metal Wall Panels: Formed with lock joint edges installed horizontally with concealed clip and fasteners.
 - 1. Basis-of-Design Product: Morin, Integrity X-16.
 - 2. Acceptable Manufacturers: Subject to compliance with requirements, provide products and systems from one of the following:
 - a. Morin, Integrity series panels
 - b. CENTRIA, Concept series panels
 - c. Metl-span, Concept series panels
 - 3. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A653/A653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A792/A792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A755/A755M.
 - a. Nominal Thickness: **0.040 inch (1.02 mm)**.
 - b. Exterior Finish: Metallic fluoropolymer.
 - c. Color: To match Sherwin Williams Fluoropon color Silversmith (399C1887).
 - 4. Panel Coverage: **16 inches**.
 - 5. Panel Height: 7/8 inches.
 - 6. Corners shall be factory fabricated by the manufacturer with coil coated material matching wall panels, using the "microseam" process.

2.3 MISCELLANEOUS MATERIALS

- A. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
- B. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, end walls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.

- C. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
- D. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
 - 1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape **1/2 inch (13 mm)** wide and **1/8 inch (3 mm)** thick.
 - 2. Joint Sealant: ASTM C920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
 - 3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C1311.

2.4 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- C. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
- D. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 - 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 - 3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - 4. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
 - 5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 - 6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

- E. Extruded Panel Trim: Fabricate trim and accessories from extruded aluminum, for panel systems where indicated, and where required as part of manufacturer's standard system.
- F. Manufacture exterior metal wall system to ensure similarity of dimension and finish throughout.

2.5 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Steel Panels and Accessories:
 - 1. Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 2. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
 - 1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
 - 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.
 - 3. Verify that air & vapor barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

[Sub-Girt Framing and Furring Installation](#)” or [“Insulated Backup Panel Installation”](#) paragraph below and delete the other. Sub-Girt Framing and Furring Installation: Install sub-girt framing, furring, and other miscellaneous panel support members and anchorages according to ASTM C754, metal panel manufacturer's written recommendations and the requirements of Division 07 section “Thermally Broken Rain Screen Attachment System.”.

- B. Install , furring, and other miscellaneous panel support members and anchorages according to ASTM C754, metal panel manufacturer's written recommendations and the requirements of Division 07 section “Insulated-Core Metal Wall Backup Panel.”

3.3 METAL PANEL INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - 1. Shim or otherwise plumb substrates receiving metal panels.
 - 2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 - 3. Install screw fasteners in predrilled holes.
 - 4. Locate and space fastenings in uniform vertical and horizontal alignment.
 - 5. Install flashing and trim as metal panel work proceeds.
 - 6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 - 7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 - 8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners: Use stainless-steel fasteners for all panel attachment to substrate.
- C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
- D. Lap-Seam Metal Panels: Fasten metal panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
 - 1. Lap ribbed or fluted sheets one full rib. Apply panels and associated items true to line for neat and weathertight enclosure.
 - 2. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal panels.
 - 3. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
 - 4. Flash and seal panels with weather closures at perimeter of all openings.
- E. Watertight Installation:

1. Apply a continuous ribbon of sealant or tape to seal lapped joints of metal panels, using sealant or tape as recommend by manufacturer on side laps of nesting-type panels; and elsewhere as needed to make panels watertight.
 2. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
 3. At panel splices, nest panels with minimum **6-inch (152-mm)** end lap, sealed with sealant and fastened together by interlocking clamping plates.
- F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal wall panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.
- G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.
1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of **10 feet (3 m)** with no joints allowed within **24 inches (610 mm)** of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than **1 inch (25 mm)** deep, filled with mastic sealant (concealed within joints).

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Water-Spray Test: After installation, test area of assembly as directed by Architect for water penetration according to AAMA 501.2.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal wall panel installation, including accessories.
- D. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.
- E. Additional tests and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- F. Prepare test and inspection reports.

3.5 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
- B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 42 13.13

SECTION 07 42 19 – THERMALLY BROKEN RAIN SCREEN ATTACHMENT SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes:

- 1. Engineered, tested, thermally-broken, cold-formed metal rain screen framing assembly at exterior cavity walls.

- B. Related Requirements:

- 1. Division 03 Section “Cast in Place Concrete” for connections to concrete wall construction
- 2. Division 04 section “Adhered Stone Masonry Veneer” for support of stone veneer.
- 3. Division 05 Section "Cold-Formed Metal Framing" for support framing for sub-girt framing.
- 4. Division 07 Section Formed Metal Wall Panels for exterior wall panels applied to sub-girt support system.
- 5. Division 07 Section "Sheet Metal Flashing and Trim" for metal flashing components at openings and perimeter.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

- 1. Meet with Owner, Architect, Owner, metal panel installer, structural support manufacturer's representative, structural-support installer, and installers whose work interfaces with or affects structural sub-girt installation, including installers of doors, windows, and louvers.
- 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
- 3. Review methods and procedures related to panel and structural sub-girt installation, including manufacturer's written instructions.
- 4. Examine support conditions for compliance with requirements, including alignment between and attachment to cold-framed metal members.
- 5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect structural sub-girt.
- 6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.

7. Review temporary protection requirements for panel and structural sub-girt assembly during and after installation.
8. Review procedures for repair of structural sub-girt components damaged after installation.
9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.
10. Coordinate building framing in relation to structural sub-girt system.

1.4 ACTION SUBMITTALS

- A. Product Data: Submit product data, installation instructions for each component product required for complete wall system.
 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings:
 1. Installation drawings for rain screen attachment system, flashing, accessories, and anchorage systems must indicate completely dimensioned structural frame and erection layouts, openings in the wall, special framing details, and construction details at corners, building intersections and flashing, location and type of mastic and metal filler strips.
 2. Distinguish between factory-, shop- and field-assembled work.
 3. System Engineering: Engineering (shop drawings) shall only be acceptable from the product manufacturer for the rain screen attachment system. Shop drawings from metal wall system contractor will not be acceptable. Shop Drawings shall be signed and sealed by a qualified professional engineer licensed in the state where the work will be performed.
 - a. Indicate unit locations, unit identification marks, fabrication details, reinforcement, connection details, pertinent dimensions, design loads, support, support points, tie backs and other pertinent structural information.
 - b. Sub-framing and attachment shall be demonstrated to have been successfully coordinated with the Division 05 Cold Formed Metal Framing submittal to avoid misalignment issues between the systems.
 - c. Coordinate with Division 01 Section "Project Management and Coordination" for building enclosure coordination drawing requirements.
 4. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than 1-1/2 inches per 12 inches (1:10).
- C. Samples: Provide two each of components and fasteners for system assembly.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For the manufacturer, erector and professional engineer.
- B. Design Data for Structural Sub-Girt System: Design metal structural sub-girt system under direct supervision of the manufacturer employed Engineer. Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design

criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers. Design Data submittal shall be signed and sealed by a qualified professional engineer licensed in the state or district in which the project is located. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect. Design Data submission must be concurrent with the submission of corresponding Fabrication drawings. Fabrication drawings submitted without corresponding Design Data will be returned as “Not Reviewed”.

- C. Initial Certification Letter from Delegated-Design Professional: Prior to the submission of Shop Drawings, Product Data, Calculations and other required submittals, submit a Certification Letter from the responsible design professional. No shop drawings will be reviewed by the Architect prior to the submission and acceptance of this Certification Letter. The Certification Letter shall include the following:
1. Signature and seal of the registered Professional Engineer (registered in the state or district in which the project is located).
 2. Statement that the Professional Engineer is fully experienced in the design of structural sub-girt systems.
 3. Statement that all calculations and shop drawings are in accordance with the Contract Documents and applicable building codes and have been prepared under the direction of the Professional Engineer.
 4. Statement that the Professional Engineer’s signature and seal shall appear on all design calculations and on all shop drawings.
 5. Statement that the design shall be in accordance with the aesthetic design intent of the project with the Architect having final authority in reference to aesthetic matters.
 6. Statement that the Professional Engineer will submit an additional signed and sealed letter at the completion of the work related to this section stating that the fabrication and installation of the structural sub-girt system has been performed in accordance with the Professional Engineer’s design.
- D. Product Test Reports: For thermally-broken structural sub-girt system, for tests performed by a qualified testing agency.
- E. Coordination Drawings: Exterior elevations drawn to scale and coordinating penetrations and wall-mounted items. Show the following:
1. Rain screen attachment system.
 2. Girts, Stud framing.
 3. Wall-mounted items including doors, windows, louvers, and lighting fixtures.
 4. Penetrations of wall by pipes and utilities.
- F. Field quality-control reports.
- G. Sample Warranty: For special warranty.

1.6 RECORD SUBMITTALS

- A. Final Certification Letter from Delegated-Design Professional: After construction of the back-up metal wall system is complete, submit a signed and sealed Certification Letter from the

responsible design professional stating that the fabrication and installation of the back-up metal wall system has been performed in accordance with the Professional Engineer's design.

1.7 CLOSEOUT DOCUMENTS

- A. Warranties: Executed warranties to include in operation and maintenance manuals.

1.8 QUALITY ASSURANCE

- A. **Manufacturer Qualifications:** A firm experienced in the manufacturing of products or systems similar to those indicated for this project and with a record of successful in-service performance, as well as sufficient production capacity to produce the required units. The structural sub-girt system specified in this section shall be supplied by a single manufacturer with a minimum of ten years of demonstratable experience.
- B. **Installer Qualifications:**
 - 1. An entity that employs installers and supervisors who are trained and approved by manufacturer.
 - 2. Structural sub-girt system installer shall have completed a minimum of five structural sub-girt system projects similar in material, design and extent to that indicated for this project with a record of successful in-service performance. The structural sub-girt system installer shall also be able to show a minimum of ten years of experience.
- C. All work shall be compliant with the codes and regulations of the authorities having jurisdiction.
- D. **Single-Source Responsibility for Structural Sub-Girt System:** Obtain structural sub-girt system from a single fabricator, with in-house Shop Drawing capabilities, in-house assembly and finishing capabilities, and with resources to provide products of consistent quality in appearance and physical properties without delaying the project.
- E. **Mockups:** Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. **Delivery & Unloading:**
 - 1. **Delivery:** Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
 - 2. Store and handle to keep clean, dry, and protected from damage due to weather and construction activities.

1.10 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.
- B. Field Measurements: Verify locations of structural members and wall opening dimensions by field measurements before structural sub-girt assembly fabrication and indicate measurements on Shop Drawings.

1.11 MANUFACTURER'S SPECIAL WARRANTY:

- A. Manufacturer Warranties: Attachment/Support Framing System: Limited warranty
 - 1. Length: Written ten (10) years.
 - 2. Covers components of the attachment system, including structural failure of components when all the materials and component are supplied and installed per manufactures requirements.
 - 3. Includes labor and material for removal and replacement of defective material.
 - 4. Includes labor to remove and reinstall façade finish panels, finish closures and façade finish accessories necessary to access defective material.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: Knight Wall Systems, MFI-System S-Series Rain Screen System, thermally insulated and isolated between metal components and substrate.
- B. Acceptable Manufacturers: Subject to requirements, provide products and systems from one of the following:
 - 1. Knight Wall Systems; MFI-System
 - 2. Hohmann & Barnard, Inc.; HB RS FLEXbracket
 - 3. Cladiator; CL 300 system
 - 4. Northern Facades, Ltd.; ISO Clip

2.2 REGULATORY REQUIREMENTS

- A. Design and Structural Properties: Conform to provisions of the latest International Building Code (IBC) including IBC Chapter 16, regarding steel deflection and IBC Chapter 22 regarding cold-formed steel framing including applicable referenced AISI specifications and standards.

2.3 PERFORMANCE AND DESIGN CRITERIA

- A. General: Provide structural sub-girt system meeting the following performance requirements as determined by a qualified testing agency's application of specified tests on manufacturer's standard assemblies.
- B. Structural Design: Provide engineered design capable of withstanding combined effects of stresses from dead loads, wind loads, normal thermal movement, and other anticipated stresses without evidence of permanent defects or failure.
 - 1. Wind Load: Uniform pressure as indicated on Drawings, acting inward or outward.
 - 2. Dead Loads: Design for loading to accommodate support of cladding systems specified by related sections and shown on Drawings and as required by applicable building code.
 - 3. Seismic Loads: Design and size components to withstand seismic loads and sway displacement indicated on Drawings.
 - 4. Deflection Limits: Design shall withstand wind loads with horizontal deflections no greater than 1/720 or 1/4 inch maximum, of the wall height.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
- D. Fire-Test-Response Characteristics: Provide structural sub-girt system with the following fire-test-response characteristics determined by the indicated test standard as applied by UL or other testing and inspection agency acceptable to authorities having jurisdiction.
 - 1. Surface Burning Characteristics: Not greater than the following, per ASTM E84 or UL 723, for foam core and interior surface:
 - a. Flame spread index: 25 or less.
 - b. Smoke developed index: 450 or less.
 - 2. Fire Performance of Insulated Wall: Approved as a Class 1 wall panel per ANSI/FM 4880.
- E. Cladding Accommodation: Design framing supports configuration, size, spacing, and make adjustments as needed to accommodate support for each cladding type indicated.
- F. Rain Screen Design: Design ventilating system assembly to accommodate movement of air movement into the rain screen cavity and move water and vapor out.
- G. Tolerances:
 - 1. Accommodate deflection of structural members.
 - 2. Maintain clearances at adjacent construction.
 - 3. Prevent load transfer to non-structural elements.
- H. Thermal Barriers:

1. Thermally isolate metal components from each other and support wall.
 - a. Maximum contact area between isolator and sheathing: 3.15 square inches
 - b. Maximum thickness: 0.375 inches
 - c. Shims that may be used for plumb and true alignments must not increase thermal isolation contact area.
 2. Thermally isolate fasteners from metal using thermal isolation washers or other means.
 - a. Minimum thickness: 0.125 inches
- I. Thermal Insulation: As specified in Section 072100.
1. Design thickness and type of insulation into system assembly.
 2. Perform thermal analysis to determine framing systems effect on wall assembly.
- J. Effect on Wall Assemblies Thermal Resistance: Framing system must not degrade complete wall assembly's thermal resistance by more than 17% and conform to ASHRAE 90.1 prescriptive U-value of wall assembly for appropriate climate zone.
1. Three-dimensional computer simulated thermal analysis or guarded hot-box test (ASTM C1363-11) results required.
- 2.4 THERMALLY BROKEN RAIN SCREEN COMPONENTS:
- A. Gauge, Configuration, Dimensions, and Spacing: Minimum 18 gauge and as needed to conform to design criteria for each assembly.
- B. Material: ASTM A1046, Commercial Steel (CS), Grade B, 50 ksi Yield, Coating Designation ZM40 minimum.
- C. Wall Brackets:
1. Minimum 0.074-inch-thick (14 gauge) sheet steel.
 2. Pre-Punched Holes: For minimum two wall anchors per bracket.
 3. Stem for Connecting Rail to Bracket: Must not penetrate exterior layer of insulation.
 - a. Dimensions: 1.125-inch-wide by 0.625 inch long
 - b. Pilot Drill Holes: For easy engagement and placement of stainless steel self-tapping hex-head screws for use in attaching horizontal rail.
 4. Dimensions: As needed to offset cladding from wall plane where meeting substrate and to allow for installation of insulation equal in thickness to offset.
 - a. Bracket Base Dimension – Minimum 3.25-inch-high and 2.125 inch wide
 - b. Offset Brackets – 2, 3, 3.5, 4, 5 or 6-inch depth.
 - 1) Align offsets to differing wall planes as shown on Drawings.
 5. Basis-of-Design Product: ThermaBracket-S by Knight Wall Systems.

- D. Horizontal Rail attaching to Bracket: Minimum 0.046-inch thick (18 gauge) cold-formed steel.
1. Profile: C channel, two flanges of equal length and one web.
 2. Nominal Dimensions: 1.0-inch flange for attaching to wall bracket and 1.5 inch at web.
 3. Pre-Punched Attachment Holes: 1.0 inch on center along length of track and oversized allowing for thermal contraction and expansion of rail without placing stress on brackets.
 4. Weep Drains: 0.3125-inch diameter holes at 1.0 inch on center along flanges to allow for free air movement through system and water drainage.
 5. Basis-of-Design Product: S-Rail by Knight Wall Systems.

2.5 RAIN SCREEN COMPONENTS THERMAL ISOLATION:

- A. Material: Injection molded Polyoxymethylene copolymer (POM) non-fiber reinforced
1. Tensile Strength: 9.5 ksi per ISO 527
 2. Melting Temperature: 329 degrees Fahrenheit per ISO 3146
 3. Size:
 - a. Washer Isolation: Designed to thermally isolate fastener heads from metal, minimum 0.125 inch thick
 - b. Framing member to framing member isolation: minimum 0.125 inch thick
 - c. Support wall substrate isolation: minimum 0.375-inch-thick at each wall bracket.
 - d. Bracket shim: must match support wall substrate isolator profile, available in 0.125-inch thickness and does not decrease thermal or structural performance of system.
 4. Basis-of-Design Product: ThermaStop™ Isolators by Knight Wall Systems.

2.6 CONNECTORS AND ANCHORS

- A. Provide wall anchor fasteners of sufficient length to provide solid attachment through rigid insulation to structure as required by manufacture.
- B. For steel stud framing substrate: Self-drill hex-washer-head stainless steel with 1,000 hour salt-spray rated thermoset polyester coating.
1. Embedment depth: 0.625 inches or three full threads minimum, whichever is greater.
 2. Minimum ultimate pull-out capacity from 18-gauge steel: 450 pounds
- C. For concrete and concrete masonry unit substrate:
1. Embedment depth: 1.25 inches minimum
 2. Minimum ultimate pull-out capacity from substrate material: 450 pounds
 3. 1/4-inch Tapcon by Buildex
 4. 1/4-inch UltraCon by Elco Industries
 5. Or approved equal.
- D. For vertical rail to horizontal rail connection: Self-drill hex-washer-head stainless steel with 1,000-hour salt-spray rated thermoset polyester coating.

1. Embedment depth: 0.625 inches or three full threads minimum, whichever is greater.
2. Minimum ultimate pull-out capacity from 18-gauge steel: 450 pounds

2.7 ACCESSORIES

- A. Bracing, Furring, Bridging, Plates, Gussets, and Clips: Formed sheet steel, thickness as necessary to meet structural requirements for special conditions encountered.
- B. Galvanic Protection: Utilize tapes and other methods as necessary to separate and prevent contact between dissimilar metals.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify conditions ready to receive work of this Section before beginning.
- B. Backup Wall: Verify level and plumb, free of defects, and conforming to tolerances suitable for installation of subsequent work.
- C. Air / Water Barrier: Verify complete, cured, and conforming to manufacturer's instructions. Verify fenestrations, transitions, discontinuities, and sills and ledgers flashed and sealed to move moisture to exterior of building as part of air barrier system.

3.2 PREPARATION

- A. Review areas of potential interference and conflicts, and coordinate layout and support provisions for interfacing work.
- B. Shim and perform work as necessary for plumb and true alignments.

3.3 INSTALLATION

- A. Conform to manufacturer's instructions and provisions of Contract Documents.
- B. Erect cold-formed rain screen assembly to be level, plumb, and in alignment with building features including corners, off-sets, and fenestrations.
- C. Wall Brackets and Horizontal Rail:
 1. Mount wall brackets at 16 inches on center horizontally and vertically on support wall (at each stud location), using self-drilling self-tapping screws at metal stud framed walls and expansion or adhesive anchors at concrete and masonry walls.
 - a. Brackets must be laid out at an even 0.5-inch increment vertically or horizontally.
 - b. Tighten snug tight and as instructed by fastener manufacturer instructions.

- c. Where using snug tight criteria, verify torque for each installer using hand tools at beginning of project.
 - 2. Thermally isolate wall bracket attachments by sandwiching thermal break material between metal bracket and support wall substrate.
 - 3. Thermally isolate screw fastener washers using material to thermally isolate fastener heads from metal bracket.
 - 4. Attach horizontal rail to wall bracket stem by use of a self-tapping screw fastener through the pre-punched holes in the rail and into the pre-punched pilot holes on the bracket.
 - 5. Isolate horizontal rail from bracket by sandwiching a thermal break material between rail and bracket stem.
 - 6. Place shims the same size and profile as the isolator between the sheathing and bracket isolator to account for irregularities in support wall.
 - 7. Establish and re-establish and restart vertical bracket locations using laser or chalk-line at fenestrations and other obstructions to establish horizontal alignments. Brackets must be placed at 0.5-inch increments vertically or horizontally.
- D. Insulation: Install to expand into and tightly fit between wall brackets to make continuous, unbroken insulated face of wall.
 - E. Touch-up shop-applied protective coatings damaged during handling and installation.
 - F. Use shearing instruments (i.e. snips, nibbler, etc.) for cutting metal framing components. Saws are not recommended, as the sparks produced during cutting will damage the anti-corrosion coating. If saws are used, surrounded metal coating MUST be protected from sparks.
 - G. Minimum length of installed cut vertical rail is 12" and must be mechanically attached to at least two separate horizontal rails.
 - H. Minimum length of installed cut horizontal rail is 12" and must be attached to at least two separate wall brackets to prevent rotation of rail. Unsupported span of installed horizontal rail that extends past closest wall bracket must not exceed 7.5" in. At opening jambs (i.e. windows, doors, etc) the horizontal rail must not extend past the wall bracket by more than 3" in length.

3.4 ERECTION TOLERANCES

- A. Maximum Framing Member Variation from True Position: 1/4 inch.
- B. Maximum Framing Member Variation from Plane:
 - 1. Individual Framing Members: Do not exceed 1/4 inch in 10 foot.
 - 2. Accumulative Over-all Variation for Wall and Floor System: Do not exceed 1/4 inch.

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Technical Service: Make intermittent and final inspection to verify installation in conformance to manufacturer instructions and suitable as framing assembly for subsequent metal panels, acrylic plastering, and other cladding installations.

1. Confirm snug tight and fastener sizing.
2. Confirm framing members installed in correct orientation.

3.6 ADJUSTING

- A. Inspect and adjust after installation. Replace or repair defective work.
- B. Adjust, and reconfigure as necessary to accommodate cladding systems for installations over work of this Section. Do not reuse pre-drilled holes unless fastener size is increased.

END OF SECTION 07 42 19

SECTION 07 42 93 - SOFFIT PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes
 - 1. Metal Soffit Panels.
- B. Related Sections:
 - 1. Division 07 Section "Formed Metal Wall Panels" for lap-seam metal wall panels.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.
- B. Shop Drawings:
 - 1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
 - 2. Accessories: Include details of flashing, trim, and anchorage systems, at a scale of not less than **1-1/2 inches per 12 inches (1:10)**.
- C. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.
 - 1. Include similar Samples of trim and accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:

1. Metal Panels: 12 inches (305 mm) long by actual panel width. Include fasteners, closures, and other metal panel accessories.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Test Reports: For each product, tests performed by a qualified testing agency.
- C. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal panels to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 1. Build mockup of typical roof eave, including fascia, and soffit as shown on Drawings; approximately four panels wide by full eave width, including attachments and accessories.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.

- D. Retain strippable protective covering on metal panels during installation.
- E. Copper Panels: Wear gloves when handling to prevent fingerprints and soiling of surface.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.10 COORDINATION

- A. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of walls, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

- a. Structural failures including rupturing, cracking, or puncturing.
- b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: Five years from date of Final Acceptance.

- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

- a. Color fading more than 5 Hunter units when tested according to ASTM D2244.
- b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
- c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Fluoropolymer Finish Warranty Period: 20 years from date of Final Acceptance.

3. Anodized Finish Warranty Period: 10 years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E1592:

1. Wind Loads: As indicated on Drawings.
 2. Other Design Loads: As indicated on Drawings.
 3. Deflection Limits: For wind loads, no greater than $1/180$ of the span.
- B. Air Infiltration: Air leakage of not more than $0.06 \text{ cfm/sq. ft. (0.3 L/s per sq. m)}$ when tested according to ASTM E283 at the following test-pressure difference:
1. Test-Pressure Difference: $6.24 \text{ lbf/sq. ft. (300 Pa)}$.
- C. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E331 at the following test-pressure difference:
1. Test-Pressure Difference: $6.24 \text{ lbf/sq. ft. (300 Pa)}$.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): $120 \text{ deg F (67 deg C)}$, ambient; $180 \text{ deg F (100 deg C)}$, material surfaces.

2.2 METAL SOFFIT PANELS

- A. General: Provide metal soffit panels designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners in side laps. Include accessories required for weathertight installation.
- B. Metal Soffit Panels: Match profile and material of metal roof panels.
1. Finish: Match finish and color of metal roof panels.
 2. Sealant: Factory applied within interlocking joint.
- C. Flush-Profile Metal Soffit Panels: Solid panels formed with vertical panel edges and a flat pan between panel edges; with flush joint between panels.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CENTRIA Architectural Systems.
 - b. Fabral.
 - c. Firestone Building Products.
 - d. MBCI.
 - e. Metal Sales Manufacturing Corporation.
 2. Material: Same material, finish, and color as metal roof panels.
 3. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A653/A653M, $G90 (Z275)$ coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A792/A792M, $\text{Class AZ50 (Class AZM150)}$ coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A755/A755M.

- a. Nominal Thickness: 0.040 inch (1.02 mm).
 - b. Exterior Finish: Metallic fluoropolymer.
 - c. Color: As selected by Architect from manufacturer's full range.
4. Panel Coverage: 16 inches (406 mm).
 5. Panel Height: 1.5 inches (38 mm).
- D. Reveal-Joint-Profile Metal Soffit Panels: Solid panels formed with vertical panel edges and a flat pan between panel edges; with recessed reveal joint between panels.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ATAS International, Inc.
 - b. Cheney Flashing Company.
 - c. Firestone Building Products.
 - d. Merchant and Evans.
 2. Material: Same material, finish, and color as metal roof panels.
 3. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A653/A653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A792/A792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A755/A755M.
 - a. Nominal Thickness: 0.040 inch (1.02 mm).
 - b. Exterior Finish: Metallic fluoropolymer.
 - c. Color: As selected by Architect from manufacturer's full range.
 4. Panel Coverage: 16 inches (406 mm).
 5. Panel Height: 1.5 inches (38 mm).

2.3 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C645, cold-formed, metallic-coated steel sheet, ASTM A653/A653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A792/A792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.
- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
1. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

- C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Finish flashing and trim with same finish system as adjacent metal panels.
- D. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
- E. Panel Sealants: Provide sealant types recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
 - 1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape **1/2 inch (13 mm)** wide and **1/8 inch (3 mm)** thick.
 - 2. Joint Sealant: ASTM C920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
 - 3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C1311.

2.4 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate according to equipment manufacturer's written instructions and to comply with details shown.
- C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- D. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
- E. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 - 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 - 3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - 4. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.

5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal soffit panel manufacturer for application but not less than thickness of metal being secured.

2.5 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Steel Panels and Accessories:
 1. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 3. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
 1. Examine framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal panel manufacturer.
 2. Examine sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal panel manufacturer.

- a. Verify that air- or water-resistive barriers been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C754 and metal panel manufacturer's written recommendations.
 1. Soffit Framing: Wire tie furring channels to supports, as required to comply with requirements for assemblies indicated.

3.3 INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 1. Shim or otherwise plumb substrates receiving metal panels.
 2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 3. Install screw fasteners in predrilled holes.
 4. Locate and space fastenings in uniform vertical and horizontal alignment.
 5. Install flashing and trim as metal panel work proceeds.
 6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 7. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners:
 1. Steel Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.
 2. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
 3. Copper Panels: Use copper, stainless-steel, or hardware-bronze fasteners.
 4. Stainless-Steel Panels: Use stainless-steel fasteners.
- C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
- D. Lap-Seam Metal Panels: Fasten metal panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.

1. Apply panels and associated items true to line for neat and weathertight enclosure.
2. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal panels.
3. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
4. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.

E. Watertight Installation:

1. Apply a continuous ribbon of sealant or tape to seal lapped joints of metal panels, using sealant or tape as recommend by manufacturer on side laps of nesting-type panels and elsewhere as needed to make panels watertight.
2. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
3. At panel splices, nest panels with minimum **6-inch (152-mm)** end lap, sealed with sealant and fastened together by interlocking clamping plates.

F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal panel system including trim, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.

G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.

1. Install exposed flashing and trim that is without buckling, and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to achieve waterproof performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of **10 feet (3 m)** with no joints allowed within **24 inches (610 mm)** of corner or intersection. Where lapped expansion provisions cannot be used or would not be waterproof, form expansion joints of intermeshing hooked flanges, not less than **1 inch (25 mm)** deep, filled with mastic sealant (concealed within joints).

3.4 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
- B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

- C. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 42 93

SECTION 07 54 19 - POLYVINYL-CHLORIDE (PVC) ROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Cleaning substrate.
2. Adhered polyvinyl-chloride (PVC) roofing system.
3. Roof cover board.
4. Roof insulation.
5. Vapor barrier and primer
6. Roof substrate board
7. Roof walkway pads.
8. Flashing and sealing membrane to curbs, piles, termination, etc.
9. Installation of roof drains furnished under Division 22.
10. Installation of prefabricated curbs furnished under Division 23.
11. Inspection by membrane manufacturer.

- B. Related Requirements:

1. Division 06 Section "Miscellaneous Rough Carpentry" for wood nailers, curbs, and blocking.
2. Division 06 Section "Sheathing" for wood-based, structural-use roof deck panels.
3. Division 07 Section "Thermal Insulation" for insulation beneath the roof deck.
4. Division 07 Section "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
5. Division 07 Section "Manufactured Roof Expansion Joints" for proprietary manufactured roof expansion-joint assemblies.
6. Division 07 Section "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
7. Division 22 Section "Plumbing Systems" for roof drains
8. Division 23 – HVAC for mechanical penetrations.
9. Division 26 – Electrical for electrical penetrations.

1.3 DEFINITIONS

- A. Roofing Terminology: Definitions in ASTM D1079 and glossary in NRCA's "The NRCA Roofing and Waterproofing Manual" apply to work of this Section.

1.4 PREINSTALLATION MEETINGS

A. Preliminary Roofing Conference: Before starting roof deck construction, conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.
10. Determine whether Owner will require additional testing.

B. Preinstallation Roofing Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.
10. Determine whether Owner will require additional testing.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

- B. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work, including:
 - 1. Base flashings and membrane terminations.
 - 2. Layout and thickness of insulation, including slopes.
 - 3. Flashing details at penetrations.
 - 4. Insulation fastening patterns.
 - 5. Tie-in with air & vapor barrier.
- C. Samples for Verification: For the following products:
 - 1. Sheet roofing, of color required.
 - 2. Walkway pads or rolls, of color required.
- D. Submit manufacturer's instructions for surface conditioner compatibility, elastic flashing, joint cover sheet, and joint and crack sealants, with temperature range for application of roofing membrane.
- E. Wind Uplift Resistance Submittal: For roofing system, indicating compliance with wind uplift performance requirements.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and manufacturer.
- B. Manufacturer Certificates:
 - 1. Performance Requirement Certificate: Signed by roof membrane manufacturer, certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
 - a. Submit evidence of complying with performance requirements.
 - 2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.
- C. Installer Certificates: Signed by roofing installer certifying that the system installed meets all identified code and insurance requirements as required by this Section.
- D. Product Test Reports: For components of roofing system, for tests performed by manufacturer and witnessed by a qualified testing agency.
- E. Research/Evaluation Reports: For components of roofing system, from ICC-ES.
- F. Field Test Reports:
 - 1. Concrete internal relative humidity test reports.
 - 2. Fastener-pullout test results and manufacturer's revised requirements for fastener patterns.
- G. Field quality-control reports.

- H. Sample Warranties: For manufacturer's special warranties.

1.7 CLOSEOUT DOCUMENTS

- A. Maintenance Data: For roofing system to include in maintenance manuals.
- B. Certified statement from existing roof membrane manufacturer stating that existing roof warranty has not been affected by Work performed under this Section.
- C. Warranties: Sample warranties to include in operation and maintenance manuals.

1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is UL listed
- B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty. FMG certified roofing installer.
- C. There shall be no deviation made from the Project Specification or the approved shop drawings without prior written approval by the Architect and Manufacturer.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
 - 1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location.
 - 1. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
 - 2. Adhesives shall be stored at temperatures between 40-degree F and 80 degree F.
 - 3. Flammable materials shall be stored in a cool, dry area away from sparks and open flames. Follow storage precautions supplied by material manufacturer/supplier.
- D. Place all materials on pallets and fully protect from moisture.
- E. Membrane rolls shall be stored lying down on pallets and fully protected from the weather with clean canvas tarpaulins. Unvented polyethylene tarpaulins are not acceptable.

- F. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.10 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.
- B. Perform inspection prior to membrane installation in presence of representative of membrane manufacturer.
 - 1. Verify that drains, sleeves, curbs and other penetrations which pass through surfaces to receive roofing are rigidly installed.
 - 2. Verify flatness and tight joints of deck sheathing.
 - 3. Verify that surfaces are free of cracks, depressions, waves or projections which may be detrimental to successful installation. Remove foreign materials.
 - 4. Starting work of this Section indicates acceptance of substrate and site conditions.
- C. Only as much of the new roofing as can be made weathertight each day, including all flashing and detail work, shall be installed daily. All seams shall be heat welded before leaving the job site that day.
- D. Surfaces to receive new insulation, membrane or flashings shall be dry. Should surface moisture be present, the Installer shall provide the necessary equipment to dry the surface prior to application.
- E. The Applicator is cautioned that certain PVC membranes are incompatible with asphalt, coal tar, heavy oils, roofing cements, creosote and some preservative materials. Such materials shall not remain in contact with PVC membranes. The Applicator shall consult the manufacturer regarding compatibility, precautions and recommendations.

1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.
 - 1. Special warranty includes membrane roofing, base flashings, roof insulation, fasteners, cover boards, substrate board, roofing accessories, roof pavers, vapor barriers and other components of roofing system.
 - 2. Warranty Period: 20 years from date of Final Acceptance.
- B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of roofing system such as membrane roofing, base flashing, roof insulation, fasteners, cover boards, substrate board, roofing accessories, roof pavers, vapor barriers, and walkway products, for the following warranty period:
 - 1. Warranty Period: Two years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain components including roof insulation, fasteners, cover boards, substrate board, roofing accessories, roof pavers, vapor barriers, and walkway products for roofing system from same manufacturer as membrane roofing or manufacturer approved by membrane roofing manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing and base flashings shall remain watertight.
 - 1. Accelerated Weathering: Roofing system shall withstand 2000 hours of exposure when tested according to ASTM G152, ASTM G154, or ASTM G155.
 - 2. Impact Resistance: Roofing system shall resist impact damage when tested according to ASTM D3746 or ASTM D4272.
- B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roofing manufacturer based on testing and field experience.
- C. Roofing System Design: Per ASCE 7 and the information provided on the structural drawings.
- D. Exterior Fire-Test Exposure: ASTM E108 or UL 790, Class A; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- E. Fire-Resistance Ratings: Comply with fire-resistance-rated assembly designs indicated. Identify products with appropriate markings of applicable testing agency.

2.3 PVC ROOFING

- A. PVC Sheet: ASTM D4434/D4434M, Type III, fabric reinforced.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Carlisle SynTec Incorporated.
 - b. Duro-Last Roofing, Inc.
 - c. Flex Membrane International Corp.
 - d. GAF.
 - e. Johns Manville; a Berkshire Hathaway company.
 - f. Versico Roofing Systems.
 - 2. Thickness: 60 mils, nominal.

3. Exposed Face Color: White.

2.4 AUXILIARY ROOFING MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing.
 1. Adhesives and Sealants: Comply with VOC limits of authorities having jurisdiction.
- B. Sheet Flashing: Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as PVC sheet.
- C. Deck Primers
 1. Provide solvent or water-based primer where system manufacturer recommends application.
- D. Bonding Adhesive: Manufacturer's standard, water based.
- E. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately **1 by 1/8 inch** thick; with anchors.
- F. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately **1 inch wide by 0.05 inch** thick, prepunched.
- G. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roofing to substrate, and acceptable to roofing system manufacturer.
- H. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

2.5 SUBSTRATE BOARDS

- A. Substrate Board: ASTM C1177/C1177M, glass-mat, water-resistant gypsum board or ASTM C1278/C1278M, fiber-reinforced gypsum board.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation.
 - b. Georgia-Pacific Gypsum LLC.
 - c. National Gypsum Company.
 - d. USG Corporation.
 2. Thickness: Type X, **5/8 inch**.
 3. Surface Finish: Unprimed.

4. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening substrate board to roof deck.

B. VAPOR RETARDER

1. Self-Adhering-Sheet Vapor Retarder: ASTM D1970, polyethylene film laminated to layer of rubberized asphalt adhesive, minimum **40-mil** total thickness; maximum permeance rating of **0.1 perm**; cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.
2. Self-Adhering-Sheet Vapor Retarder: Polyethylene film laminated to layer of butyl rubber adhesive, minimum **30-mil** total thickness; maximum permeance rating of **0.1 perm**; cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.
3. Temporary Construction Roof: Vapor barrier intended for use as a temporary construction roof by the Contractor shall be product approved in writing by the membrane manufacturer for this purpose.
 - a. The Contractor shall arrange for the roofing system manufacturer's technical personnel to inspect the vapor retarder and recommend required repairs before proceeding with the installation of the permanent roof over the temporary.

2.6 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured by PVC roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated.
- B. Polyisocyanurate Board Insulation: ASTM C1289, Type II, Class 1, Grade 2 or Type II, Class 1, Grade 3, felt or glass-fiber mat facer on both major surfaces.
 1. Manufacturers: Subject to compliance with membrane manufacturer's requirements, provide products by one of the following or an alternate manufacturer approved by the membrane manufacturer:
 - a. Atlas Roofing Corporation
 - b. Carlisle SynTec Incorporated
 - c. Dyplast Products
 - d. Firestone Building Products
 - e. GAF Materials Corporation
 - f. Hunter Panels
 - g. Insulfoam LLC; a Carlisle company
 - h. Johns Manville
 - i. Rmax, Inc.
 2. Compressive Strength: **20 psi**.
- C. Tapered Insulation: Provide factory-tapered insulation boards.
 1. Material: Match roof insulation.
 2. Minimum Thickness: **1/4 inch**.

3. Slope:
 - a. Roof Field: **1/4 inch per foot** unless otherwise indicated on Drawings.
 - b. Saddles and Crickets: **1/2 inch per foot** unless otherwise indicated on Drawings.
- D. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

2.7 INSULATION ACCESSORIES

- A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with roofing.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.
- C. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
 1. Full-spread spray-applied, low-rise, two-component urethane adhesive.

2.8 COVER BOARD:

- A. ASTM C1177/C1177M, glass-mat, mold and water-resistant gypsum substrate, **5/8 inch** thick.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corporation; GlasRoc Roof Board.
 - b. Georgia-Pacific Corporation; Dens Deck.
 - c. National Gypsum Company; Dexcel FA Glass Mat Roof Board
 - d. USG Corporation; Securock Glass Mat Roof Board.
- B. Protection Mat: Woven or nonwoven polypropylene, polyolefin, or polyester fabric, water permeable and resistant to UV degradation, type and weight as recommended by roofing system manufacturer for application.

2.9 WALKWAYS

- A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, solid-rubber, slip-resisting, surface-textured walkway pads, approximately **3/16 inch** thick, and acceptable to membrane roofing system manufacturer.
 1. Size: Approximately **36 by 60 inches**.
 2. Color: Contrasting with roof membrane.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work:
 - 1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
 - 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 - 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Division 05 Section "Steel Decking."
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- D. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- E. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
- F. Installation shall be in accordance with UL **and FMG** requirements.

3.3 ROOFING INSTALLATION, GENERAL

- A. Install roofing system according to roofing system manufacturer's written instructions, assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.
- B. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at end of workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
- C. Coordinate installation and transition of roofing system component serving as an air barrier with air barrier specified under Division 07 Sections Vapor Permeable Barriers.

3.4 VAPOR-RETARDER INSTALLATION

- A. Self-Adhering-Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering-sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of **3-1/2 inches** and **6 inches**, respectively. Seal laps by rolling.
- B. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.5 INSULATION INSTALLATION

- A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
- B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.
- C. Insulation Installation.:
 - 1. Install base layer of insulation with joints staggered not less than **24 inches** in adjacent rows and with long joints continuous at right angle to flutes of decking.
 - a. Adhesively adhered boards shall be 48 inches square. Mechanically fastened boards shall be 48 inches by 96 inches.
 - b. Install insulation in two or more layers under area of roofing to achieve required thickness, where overall insulation thickness is **2 inches** or greater. Install insulation with joints of each succeeding layer staggered from joints of previous layer a minimum of **6 inches** in each direction.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than **1/4 inch** in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus **24 inches**.
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding **1/4 inch** with insulation.
 - g. Cut and fit insulation within **1/4 inch** of nailers, projections, and penetrations.
 - 1) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 2) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
 - h. Mechanically attach base layer of insulation and substrate board using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to metal decks.
 - 1) Fasten insulation according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - 2) Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.

2. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than **12 inches** from previous layer of insulation.
 - a. Staggered end joints within each layer not less than **24 inches** in adjacent rows.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than **1/4 inch** in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus **24 inches**.
 - e. Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding **1/4 inch** with insulation.
 - g. Cut and fit insulation within **1/4 inch** of nailers, projections, and penetrations.
 - h. Adhere each layer of insulation to substrate using adhesive

3.6 INSTALLATION OF COVER BOARDS

- A. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of **6 inches** in each direction.
 1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 2. At internal roof drains, conform to slope of drain sump.
 - a. Trim cover board so that water flow is unrestricted.
 3. Cut and fit cover board tight to nailers, projections, and penetrations.
 4. Adhere cover board to substrate using adhesive.

3.7 ADHERED ROOFING INSTALLATION

- A. Adhere roofing over area to receive roofing according to roofing system manufacturer's written instructions.
- B. Unroll roofing and allow to relax before retaining.
- C. Start installation of roofing in presence of roofing system manufacturer's technical personnel.
- D. Accurately align roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- E. Bonding Adhesive: Apply to substrate and underside of roofing at rate required by manufacturer and allow to partially dry before installing roofing. Do not apply to splice area of roofing.
- F. Fabric-Backed Roof Membrane Adhesive: Apply to substrate at rate required by manufacturer and install fabric-backed roof membrane.
- G. In addition to adhering, mechanically fasten roofing securely at terminations, penetrations, and perimeter of roofing.

- H. Apply roofing with side laps shingled with slope of roof deck where possible.
- I. Seams: Clean seam areas, overlap roofing, and hot-air weld side and end laps of roofing and sheet flashings according to manufacturer's written instructions, to ensure a watertight seam installation.
 - 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet.
 - 2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
 - 3. Repair tears, voids, and lapped seams in roofing that do not comply with requirements.
- J. Spread sealant bed over deck-drain flange at roof drains, and securely seal roofing in place with clamping ring.

3.8 BASE FLASHING INSTALLATION

- A. Install sheet flashings and preformed flashing accessories, and adhere to substrates according to roofing system manufacturer's written instructions.
- B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate, and allow to partially dry. Do not apply to seam area of flashing.
- C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
- D. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.
- E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.9 WALKWAY INSTALLATION

- A. Flexible Walkways: Install walkway products according to manufacturer's written instructions.
 - 1. Install flexible walkways at the following locations:
 - a. Perimeter of each rooftop unit.
 - b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
 - c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
 - d. Top and bottom of each roof access ladder.
 - e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
 - f. Locations indicated on Drawings.
 - g. As required by roof membrane manufacturer's warranty requirements.
 - 2. Provide **6-inch** clearance between adjoining pads.

3. Adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.
- B. Roof-Paver Walkways: Install walkway roof pavers according to manufacturer's written instructions.
1. Install roof paver walkways at the following locations:
 - a. Perimeter of each rooftop unit.
 - b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
 - c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
 - d. Top and bottom of each roof access ladder.
 - e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
 - f. Locations indicated on Drawings.
 - g. As required by roof membrane manufacturer's warranty requirements.
 2. Provide **3 inches** of space between adjacent roof pavers.

3.10 FIELD QUALITY CONTROL

- A. Owner will engage a qualified testing agency to perform the following test:
1. Low-Voltage Electrical Conductance Testing: Testing agency shall survey entire roof area and flashings to locate discontinuity in the roof membrane using an exposed metal electrical loop to create an electrical field tested with handheld probes.
 - a. Perform tests before overlying construction is placed.
 - b. After testing, repair areas of discontinuities, repeat tests, and make further repairs until roofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 - c. Testing agency shall prepare survey report indicating locations of initial discontinuities, if any.
- B. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.
- C. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.
- D. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.11 PROTECTING AND CLEANING

- A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
- B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Final Acceptance and according to warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 54 19

SECTION 07 62 00 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Manufactured reglets with counterflashing.
2. Formed roof-drainage sheet metal fabrications.
3. Formed low-slope roof sheet metal fabrications.
4. Formed steep-slope roof sheet metal fabrications.
5. Formed wall sheet metal fabrications.
6. Formed equipment support flashing.
7. Formed overhead-piping safety pans.

- B. Related Sections:

1. Division 06 Section "Miscellaneous Rough Carpentry" for wood nailers and sheathing installed in support of flashings.
2. Division 04 Section Unit Masonry for materials and installation of manufactured sheet metal through-wall flashing and trim integral with masonry
3. Division 07 Sections "Air and Vapor Barrier" and "Vapor-Permeable Air Infiltration Barrier" for installing sheet metal flashing and trim which interfaces with air barriers.
4. Division 07 Sections "Polyvinyl-Chloride Membrane Roofing" for installing sheet metal flashing and trim integral with low-slope roofing.
5. Division 07 Section "Metal Roof Panels" for sheet metal flashing and trim integral with steep-slope metal roof panels.
6. Division 07 Section "Formed Metal Wall Panels" for sheet metal flashing and trim integral with metal wall panels.
7. Division 07 Section "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, and other manufactured roof accessory units.
8. Division 23 "HVAC" for set-on type curbs and equipment supports.
9. Division 26 "Electrical" for set-on type curbs and equipment supports.

1.3 COORDINATION

- A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.
- B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
1. Meet with Owner, Architect, Installer, and installers whose work interfaces with or affects sheet metal flashing and trim including installers of roofing materials, roof accessories, unit skylights, and roof-mounted equipment.
 2. Review methods and procedures related to sheet metal flashing and trim.
 3. Examine substrate conditions for compliance with requirements, including flatness and attachment to structural members.
 4. Review special roof details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect sheet metal flashing.
 5. Review construction schedule. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 6. Review requirements for insurance and certificates if applicable.
 7. Review sheet metal flashing observation and repair procedures after flashing installation.
 8. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.5 ACTION SUBMITTALS

- A. Product Data: For each of the following:
1. Sheet metal materials.
 2. Underlayment materials.
 3. Elastomeric sealant.
 4. Butyl sealant.
 5. Epoxy seam sealer.
- B. Shop Drawings: Show fabrication and installation layouts of sheet metal flashing and trim, including plans, elevations, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work. Include the following:
1. Include plans, elevations, sections, and attachment details.
 2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work.
 3. Identification of material, thickness, weight, and finish for each item and location in Project.
 4. Details for forming sheet metal flashing and trim, including profiles, shapes, seams, and dimensions.
 5. Details for joining, supporting, and securing sheet metal flashing and trim, including layout of fasteners, cleats, clips, and other attachments. Include pattern of seams.
 6. Details of termination points and assemblies, including fixed points.
 7. Details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction.
 8. Include details of roof-penetration flashing.
 9. Details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.
 10. Details of special conditions.
 11. Details of connections, transitions and interfacing with adjoining work.
 12. Detail formed flashing and trim at scale of not less than 1-1/2 inches per 12 inches (1:10).

- C. Samples for Initial Selection: For each type of sheet metal flashing, trim, and accessory indicated with factory-applied color finishes.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
 - 1. Sheet Metal Flashing: 12 inches long by actual width of unit, including finished seam and in required profile. Include fasteners, cleats, clips, closures, and other attachments.
 - 2. Trim, Metal Closures, Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: 12 inches long and in required profile. Include fasteners and other exposed accessories.
 - 3. Accessories and Miscellaneous Materials: Full-size Sample.
 - 4. Anodized Aluminum Samples: Samples to show full range to be expected for each color required.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator.
- B. Product Certificates: For each type of coping and roof edge flashing that is ANSI/SPRI/FM 4435/ES-1 tested and FM Approvals approved.
- C. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- D. Evaluation Reports: For copings and roof edge flashing, from an agency acceptable to authority having jurisdiction showing compliance with ANSI/SPRI/FM 4435/ES-1.
- E. Sample Warranty: For special warranty.

1.7 CLOSEOUT DOCUMENTS

- A. Maintenance Data: For sheet metal flashing, trim, and accessories to include in maintenance manuals.
- B. Executed Warranties

1.8 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.
 - 1. For copings and roof edge flashings that are SPRI ES-1 tested and FM Approvals approved, shop shall be listed as able to fabricate required details as tested and approved.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, weather-tight construction and to set quality standards for fabrication and installation.

1. Build mockup of typical roof edge, including fascia and fascia trim, approximately 10 feet (3.0 m) long, including supporting construction cleats, seams, attachments, underlayment, and accessories.
2. Include flashing in mockups required in other sections of the specification where flashing is required to demonstrate weather-tight construction.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.
 1. Store sheet metal flashing and trim materials away from uncured concrete and masonry.
 2. Protect stored sheet metal flashing and trim from contact with water.
- B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to the extent necessary for the period of sheet metal flashing and trim installation.

1.10 WARRANTY

- A. Special Warranty on Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D2244
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal
 2. Finish Warranty Period: 10 years from date of Final Acceptance
- B. Provide Owner with a written warranty from Subcontractor stating that metal flashings will properly shed water and protect base flashings from physical damage for a minimum period of 2 years, and that all work will be repaired to satisfaction of Owner.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Sheet metal flashing and trim assemblies, including cleats, anchors, and fasteners, shall withstand wind loads, structural movement, thermally induced movement, and exposure to

weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.

- B. Sheet Metal Flashing and Trim Standard: Comply NRCA's "The NRCA Roofing Manual: Architectural Metal Flashing, Condensation and Air Leakage Control, and Reroofing" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.
- C. SPRI Wind Design Standard: Manufacture and install copings and roof edge flashings tested according to SPRI ES-1 and capable of resisting the following design pressure:
 - 1. Design Pressure: As indicated on Drawings.
- D. Thermal Movements: Provide sheet metal flashing and trim that allows for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

2.2 SHEET METALS

- A. General: Protect mechanical and other finishes on exposed surfaces from damage by applying a strippable, temporary protective film before shipping.
- B. Aluminum Sheet: ASTM B209 (ASTM B209M), alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required; with smooth, flat surface.
 - 1. Surface: Smooth, flat
 - 2. As-Milled Finish: Standard one-side bright.
 - 3. Alclad Finish: Metallurgically bonded surfacing alloy on both sides, forming aluminum sheet with reflective luster.
 - 4. Factory Prime Coating: Where painting after installation is required, pretreat metal with white or light-colored, factory-applied, baked-on epoxy primer coat; minimum dry film thickness of 0.2 mil (0.005 mm).
 - 5. Clear Anodic Finish Coil Coated: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
 - 6. Color Anodic Finish Coil Coated: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: As selected by Architect from full range of industry colors and color densities to coordinate with adjacent material color and finish.
 - b. Color Range: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
 - 7. Exposed Coil-Coated Finishes:
 - a. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with

- coating and resin manufacturers' written instructions for seacoast and severe environments.
 - b. Mica Fluoropolymer: AAMA 2605. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
 - 8. Color: As selected by Architect from full range of industry colors and color densities to coordinate with adjacent material color and finish.
 - 9. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.
- C. Stainless Steel Sheet: ASTM A240/A240M, Type 304, dead soft, fully annealed; with smooth, flat surface.
- 1. Finish: ASTM A480/A480M, No. 3 (coarse, polished directional satin).
 - a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 - b. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1) Run grain of directional finishes with long dimension of each piece.
 - 2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.3 UNDERLAYMENT MATERIALS

- A. Felt: ASTM D226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
- B. Synthetic Underlayment: Laminated or reinforced, woven polyethylene or polypropylene, synthetic roofing underlayment; bitumen free; slip resistant; suitable for high temperatures over 220 deg F (111 deg C); and complying with physical requirements of ASTM D226/D226M for Type I and Type II felts.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Atlas Roofing Corporation; Summit.
 - b. Intertape Polymer Group.
 - c. Kirsch Building Products, LLC; Sharkskin Comp.
 - d. SDP Advanced Polymer Products Inc.; Palisade.
 - 2. Source Limitations: Obtain underlayment from single source from single manufacturer.
- C. Self-Adhering, High-Temperature Sheet Underlayment: Minimum 30 mils (0.76 mm) thick, consisting of a slip-resistant polyethylene- or polypropylene-film top surface laminated to a layer of butyl- or SBS-modified asphalt adhesive, with release-paper backing; specifically designed to

withstand high metal temperatures beneath metal roofing. Provide primer in accordance with underlayment manufacturer's written instructions.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.; CCW WIP 300HT
 - b. GCP Applied Technologies, Inc. (formerly Grace Construction Products); Ice & Water Shield HT
 - c. Henry Company; Blueskin PE200 HT
 2. Thermal Stability: ASTM D1970; stable after testing at 240 deg F.
 3. Low-Temperature Flexibility: ASTM D1970; passes after testing at minus 20 deg F.
 4. Source Limitations: Obtain underlayment from single source from single manufacturer.
- D. Slip Sheet: Building paper, 3-lb/100 sq. ft. minimum, rosin sized.

2.4 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, solder, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal or manufactured item unless otherwise indicated.
- B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of sheet metal.
 1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
 - a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating.
 - b. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.
 - c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.
 2. Fasteners for Copper, Zinc-Tin Alloy-Coated Copper, Copper-Clad Stainless-Steel Sheet : Copper, hardware bronze or Series 300 stainless steel.
 3. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
 4. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
 5. Fasteners for Zinc-Coated (Galvanized) Sheet: Hot-dip galvanized steel according to ASTM A153/A153M or ASTM F2329 or Series 300 stainless steel.
 6. Fasteners for Zinc Sheet: Hot-dip galvanized steel according to ASTM A153/A153M or ASTM F2329 or Series 300 stainless steel.
- C. Solder:
 1. For Stainless Steel: ASTM B32, Grade Sn60, with an acid flux of type recommended by stainless-steel sheet manufacturer
 2. For Zinc-Tin Alloy-Coated Copper: ASTM B32, 100 percent tin, with maximum lead content of 0.2 percent, as recommended by sheet metal manufacturer

3. For Zinc-Coated (Galvanized) Steel: ASTM B32, Grade Sn50, 50 percent tin and 50 percent lead or Grade Sn60, 60 percent tin and 40 percent lead
 4. For Zinc: ASTM B32, 40 percent tin and 60 percent lead with low antimony, as recommended by manufacturer
- D. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2-inch-wide and 1/8 inch thick.
 - E. Elastomeric Sealant: ASTM C920, elastomeric silicone polymer sealant; low modulus; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
 - F. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.
 - G. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.
 - H. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187.
 - I. Asphalt Roofing Cement: ASTM D4586, asbestos free, of consistency required for application.

2.5 SHEET METAL FLASHING AND TRIM

- A. Through-Wall, Smooth, Sheet Metal Flashing: Manufacture through-wall sheet metal flashing for embedment in masonry. Manufacture through-wall flashing with interlocking counterflashing on exterior face, of same metal as flashing.
- B. Fabricate continuous flashings in minimum 96-inch- (2400-mm-) long, but not exceeding 12-foot- (3.6-m-) long, sections, under copings, and at shelf angles. Fabricate discontinuous lintel, sill, and similar flashings to extend 6 inches (150 mm) beyond each side of wall openings; and form with 2-inch- (50-mm-) high end dams.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cheney Flashing Co.
 - b. Hohmann & Barnard, Inc.
 - c. Keystone Flashing Co.
 2. Stainless Steel: 0.016 inch (0.40 mm) thick.
 3. Source Limitations: Obtain flashing from single source from single manufacturer.
- C. Flashing and Reglets: Units of type, material, and profile indicated, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated with factory-mitered and -welded corners and junctions with interlocking counterflashing on exterior face, of same metal as reglet.
 1. Products: Subject to compliance with requirements, provide one of the following:

- a. Cheney Flashing Co.
 - b. Fry Reglet Corporation
 - c. Hickman, W. P. Company
 - d. Hohmann & Barnard, Inc.
 - e. Keystone Flashing Company, Inc.
2. Material: Stainless steel, 0.016 inch thick.
 3. Source Limitations: Obtain reglets from single source from single manufacturer.
 4. Surface-Mounted Type: Provide with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
 5. Stucco Type: Provide with upturned fastening flange and extension leg of length to match thickness of applied finish materials.
 6. Concrete Type: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
 7. Masonry Type: Provide with offset top flange for embedment in masonry mortar joint.
 8. Accessories:
 - a. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where Drawings show reglet without metal counterflashing.
 - b. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing lower edge.
 9. Finish: With manufacturer's standard color coating. Exposed flashing accessories shall match flashing materials.

2.6 FABRICATION, GENERAL

- A. General: Custom fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, geometry, metal thickness, and other characteristics of item indicated.
 1. Fabricate items at the shop to greatest extent possible.
 2. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
 3. Verify shapes and dimensions of surfaces to be covered and obtain field measurements for accurate fit before shop fabrication.
 4. Form sheet metal flashing and trim without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.
 5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces exposed to view.
- B. Fabrication Tolerances:
 1. Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feet on slope and location lines as indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.
 2. Fabricate sheet metal flashing and trim that is capable of installation to tolerances specified.

- C. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.
 - 1. Where lapped expansion provisions cannot be used, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.
 - 2. Use lapped expansion joints only where indicated on Drawings.
- D. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.
- E. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard and by FM Global Property Loss Prevention Data Sheet 1-49 for application, but not less than thickness of metal being secured.
- F. Seams:
 - 1. Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - 2. Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use. Rivet joints where necessary for strength.
 - 3. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints where necessary for strength.
- G. Do not use graphite pencils to mark metal surfaces.
- H. Parapet Scuppers: Fabricate scuppers of dimensions required with closure flange trim to exterior, 4-inch-wide wall flanges to interior, and base extending 4 inches beyond cant or tapered strip into field of roof. Fasten gravel guard angles to base of scupper. Fabricate from the following materials:
 - 1. Copper: Stainless Steel: 0.0188 inch (0.477 mm) thick.
- I. Conductor Heads: Fabricate conductor heads with flanged back and stiffened top edge and of dimensions and shape indicated complete with outlet tubes, exterior flange trim. Fabricate from the following materials:
 - 1. Aluminum: 0.032 inch (0.81 mm) thick.

2.7 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

- A. Roof-Edge Flashing (Gravel Stop) and Fascia Cap: Fabricate in minimum 96-inches long, but not exceeding 10-foot-long sections. Furnish with 6-inch-wide joint cover plates, with mitered and welded corners.
 - 1. Joint Style: Butted with expansion space and 6-inch- (150-mm-) wide, concealed backup plate with concealed beads of butyl sealant each side (not exposed).
 - 2. Fabricate with scuppers spaced 10 feet apart, of dimensions required with 4-inch-wide flanges and base extending 4 inches beyond cant or tapered strip into field of roof. Fasten gravel guard angles to base of scupper.
 - 3. Fabricate from the following materials:

- a. Aluminum: 0.050 inch (1.27 mm) thick.
- B. Copings: Fabricate in minimum 96-inch-long, but not exceeding 12-foot-long sections. Fabricate joint plates of same thickness as copings. Furnish with continuous cleats to support edges of external leg and interior leg. Miter corners, watertight. Shop fabricate interior and exterior corners.
 - 1. Coping Profile: As indicated on the drawings in accordance with SMACNA's "Architectural Sheet Metal."
 - 2. Joint Style: Butt, with 12-inch-wide concealed backup plate and continuous beads sealant each side (not exposed).
 - 3. Fabricate from the following materials:
 - a. Aluminum: 0.050 inch (1.27 mm) thick.
- C. Roof and Roof to Wall Transition and Roof to Roof Edge Flashing (Gravel Stop) and Fascia Cap Transition Expansion-Joint Cover: Shop fabricate interior and exterior corners. Fabricate from the following materials:
 - 1. Stainless Steel: 0.0250 inch (0.635 mm) thick.
- D. Base Flashing: Fabricate from the following materials:
 - 1. Stainless Steel: 0.0188 inch (0.477 mm) thick.
- E. Counterflashing: Fabricate from the following materials:
 - 1. Stainless Steel: 0.0188 inch (0.477 mm) thick.
- F. Flashing Receivers: Fabricate from the following materials:
 - 1. Stainless Steel: 0.0156 inch (0.396 mm) thick.
- G. Roof-Penetration Flashing: Fabricate from the following materials:
 - 1. Stainless Steel: 0.0188 inch (0.477 mm) thick.
- H. Roof-Drain Flashing: Fabricate from the following materials:
 - 1. Stainless Steel: 0.0156 inch (0.396 mm) thick.

2.8 WALL SHEET METAL FABRICATIONS

- A. Fabricate continuous flashings in minimum 96-inch- (2400-mm-) long, but not exceeding 12-foot- (3.6-m-) long, sections, under copings, and at shelf angles. Fabricate discontinuous lintel, sill, and similar flashings to extend 6 inches (150 mm) beyond each side of wall openings; and form with 2-inch- (50-mm-) high end dams.
- B. Opening Flashings in Frame Construction: Fabricate head, sill, jamb, and similar flashings to extend 4 inches (100 mm) beyond wall openings. Form head and sill flashing with 2-inch- (50-mm-) high, end dams. Fabricate from the following materials:

1. Stainless Steel: 0.016 inch (0.40 mm) thick.
2. Zinc-Tin Alloy-Coated Stainless Steel: 0.015 inch (0.38 mm) thick.
3. Zinc: 0.032 inch (0.80 mm) thick.

2.9 MISCELLANEOUS SHEET METAL FABRICATIONS

A. Equipment Support Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.019 inch thick

B. Overhead-Piping Safety Pans: Fabricate from the following materials:

1. Stainless Steel: 0.025 inch thick

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions and other conditions affecting performance of the Work.

1. Verify compliance with requirements for installation tolerances of substrates.
2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

3.2 INSTALLATION OF UNDERLAYMENT

A. General: Install underlayment as indicated on Drawings.

B. Felt Underlayment: Install felt underlayment with adhesive for temporary anchorage to minimize use of mechanical fasteners under sheet metal flashing and trim.

1. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches.

C. Synthetic Underlayment: Install synthetic underlayment, wrinkle free, according to manufacturers' written instructions, and using adhesive where possible to minimize use of mechanical fasteners under sheet metal.

1. Lap horizontal joints not less than 4 inches (100 mm).
2. Lap end joints not less than 12 inches (300 mm).

D. Self-Adhering Sheet Underlayment:

1. Install self-adhering sheet underlayment, wrinkle free.
2. Apply primer if required by underlayment manufacturer.

3. Comply with temperature restrictions of underlayment manufacturer for installation; use primer rather than nails for installing underlayment at low temperatures.
 4. Apply in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses.
 5. Overlap side edges not less than 3-1/2 inches.
 6. Roll laps with roller.
 7. Cover underlayment within 14 days.
- E. Apply slip sheet, wrinkle free, over underlayment before installing sheet metal flashing and trim.
1. Install in shingle fashion to shed water.
 2. Lapp joints not less than 4 inches (100 mm).

3.3 INSTALLATION, GENERAL

- A. Install sheet metal flashing and trim to comply with details indicated and recommendations of cited sheet metal standard that apply to installation characteristics required unless otherwise indicated on Drawings.
1. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
 2. Install fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
 3. Install sheet metal flashing and trim true to line and levels indicated. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
 4. Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement.
 5. Install sheet metal flashing and trim to fit substrates and to result in watertight performance.
 6. Space cleats not more than 12 inches apart unless indicated to be continuous. Anchor each cleat with two fasteners. Bend tabs over fasteners.
 7. Install exposed sheet metal flashing and trim without excessive oil canning, buckling, and tool marks.
 8. Install sealant tape where required within laps and joints to provide watertight condition.
 9. Torch cutting of sheet metal flashing and trim is not permitted.
 10. Do not use graphite pencils to mark metal surfaces.
- B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating.
1. Coat back side of uncoated aluminum and stainless-steel sheet metal flashing and trim with bituminous coating where flashing and trim will contact wood, ferrous metal, or cementitious construction.
 2. Underlayment: Where installing metal flashing directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet or install self-adhering sheet underlayment.
- C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim.
1. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (600 mm) of corner or intersection.

2. Where lapped expansion provisions cannot be used or would not be sufficiently watertight, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with sealant concealed within joints.
 3. Use lapped expansion joints only where indicated on Drawings.
- D. Fasteners: Use fastener sizes that penetrate wood blocking or sheathing not less than 1-1/4 inches (32 mm) for nails and not less than 3/4 inch (19 mm) for wood screws. Substrate shall be not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.
- E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.
- F. Seal joints as shown and as required for watertight construction.
1. Use sealant-filled joints unless otherwise indicated.
 - a. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch into sealant.
 - b. Form joints to completely conceal sealant.
 - c. When ambient temperature at time of installation is between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement each way.
 - d. Adjust setting proportionately for installation at higher ambient temperatures.
 - 1) Do not install sealant-type joints at temperatures below 40 deg F.
 2. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants."
- G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter.
1. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches, except reduce pre-tinning where pre-tinned surface would show in completed Work.
 2. Do not solder metallic-coated steel and aluminum sheet.
 3. Do not pre-tin zinc-tin alloy-coated copper.
 4. Do not use torches for soldering.
 5. Heat surfaces to receive solder and flow solder into joint.
 - a. Fill joint completely.
 - b. Completely remove flux and spatter from exposed surfaces.
 6. Stainless-Steel Soldering:
 - a. Tin edges of uncoated sheets using solder recommended for stainless steel and acid flux.
 - b. Promptly remove acid flux residue from metal after tinning and soldering.
 - c. Comply with solder manufacturer's recommended methods for cleaning and neutralization.
- H. Rivets: Rivet joints in uncoated aluminum and zinc where necessary for strength.

3.4 ROOF DRAINAGE SYSTEM INSTALLATION

- A. General: Install sheet metal roof drainage items to produce complete roof drainage system according to SMACNA recommendations and as indicated. Coordinate installation of roof perimeter flashing with installation of roof drainage system.
- B. Downspouts:
 - 1. Join sections with 1-1/2-inch telescoping joints.
 - 2. Provide hangers with fasteners designed to hold downspouts securely to walls.
 - 3. Locate hangers at top and bottom and at approximately 60 inches o.c. in between.
 - 4. Provide elbows at base of downspout to direct water away from building, where indicated on the drawings.
 - 5. Connect downspouts to underground drainage system, where indicated on the drawings.
- C. Splash Pans:
 - 1. Install where downspouts discharge on low-slope roofs.
 - 2. Set in elastomeric sealant compatible with roofing membrane.
- D. Parapet Scuppers:
 - 1. Install scuppers where indicated through parapet.
 - 2. Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.
 - 3. Anchor scupper closure trim flange to exterior wall and seal with elastomeric sealant to scupper.
 - 4. Loosely lock front edge of scupper with conductor head.
 - 5. Solder or seal with elastomeric sealant exterior wall scupper flanges into back of conductor head.
- E. Conductor Heads: Anchor securely to wall with elevation of conductor head rim 1 inch below scupper or gutter discharge.

3.5 INSTALLATION OF ROOF FLASHINGS

- A. Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and cited sheet metal standard.
 - 1. Provide concealed fasteners where possible, and set units true to line, levels, and slopes.
 - 2. Install work with laps, joints, and seams that are permanently watertight and weather resistant.
- B. Roof Edge Flashing:
 - 1. Install roof edge flashings in accordance with ANSI/SPRI/FM 4435/ES-1.
 - 2. Anchor to resist uplift and outward forces in accordance with recommendations in cited sheet metal standard unless otherwise indicated. Interlock bottom edge of roof edge flashing with continuous cleat anchored to substrate at staggered 3-inch (75-mm) centers.

3. Anchor to resist uplift and outward forces in accordance with recommendations in FM Global Property Loss Prevention Data Sheet 1-49 for FM Approvals' listing for required windstorm classification.

C. Copings:

1. Install roof edge flashings in accordance with ANSI/SPRI/FM 4435/ES-1.
2. Anchor to resist uplift and outward forces in accordance with recommendations in cited sheet metal standard unless otherwise indicated.
 - a. Interlock exterior bottom edge of coping with continuous cleat anchored to substrate at 24-inch (600-mm) centers.
 - b. Anchor interior leg of coping with washers and screw fasteners through slotted holes at 24-inch (600-mm) centers.
3. Anchor to resist uplift and outward forces in accordance with recommendations in FM Global Property Loss Prevention Data Sheet 1-49 for specified FM Approvals' listing for required windstorm classification.

D. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of 4 inches (100 mm) over base flashing. Install stainless steel draw band and tighten.

E. Counterflashing: Coordinate installation of counterflashing with installation of base flashing.

1. Insert counterflashing in reglets or receivers and fit tightly to base flashing.
2. Extend counterflashing 4 inches (100 mm) over base flashing.
3. Lap counterflashing joints minimum of 4 inches (100 mm).
4. Secure in waterproof manner by means of interlocking folded seam or blind rivets and sealant unless otherwise indicated.

F. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with elastomeric sealant and clamp flashing to pipes that penetrate roof.

3.6 INSTALLATION OF WALL FLASHINGS

- A. Install sheet metal wall flashing to intercept and exclude penetrating moisture according to cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.
- B. Through-Wall Flashing: Installation of through-wall flashing is specified in Division 04 Section "Unit Masonry."
- C. Reglets: Installation of reglets is specified in Division 04 Section "Unit Masonry"
- D. Opening Flashings in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend 4 inches (100 mm) beyond wall openings.

3.7 INSTALLATION OF MISCELLANEOUS FLASHING

A. Equipment Support Flashing:

1. Coordinate installation of equipment support flashing with installation of roofing and equipment.
2. Weld or seal flashing with elastomeric sealant to equipment support member.

B. Overhead-Piping Safety Pans:

1. Suspend pans from structure above, independent of other overhead items such as equipment, piping, and conduit, unless otherwise indicated on Drawings.
2. Pipe and install drain line to plumbing waste or drainage system.

3.8 INSTALLATION TOLERANCES

- #### A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines indicated on Drawings and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.9 CLEANING

- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Clean and neutralize flux materials. Clean off excess solder.
- C. Clean off excess sealants.

3.10 PROTECTION

- A. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended in writing by sheet metal flashing and trim manufacturer.
- C. Maintain sheet metal flashing and trim in clean condition during construction.
- D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures, as determined by Architect.

END OF SECTION 07 62 00

SECTION 07 72 00 - ROOF ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Roof curbs.
2. Equipment supports.
3. Roof hatches.

- B. Related Sections include the following:

1. Division 05 Section "Metal Stairs and Railings" for metal ships' ladders and stairs for access to roof hatches.
2. Division 06 Section "Miscellaneous Rough Carpentry" for roof sheathing, wood cants, and wood nailers.
3. Division 07 steep-slope roofing Sections for ridge vents
4. Division 07 low-slope roofing Sections for roofing accessories
5. Division 07 Section "Metal Roof Panels" for preformed metal roofing, ridge vents, and snow guards
6. Division 07 Section "Sheet Metal Flashing and Trim" for shop- and field-fabricated metal flashing and counterflashing, roof expansion-joint covers, and miscellaneous sheet metal trim and accessories
7. Division 23 Section "HVAC Power Ventilators" for power roof-mounted ventilators.
8. Division 26 Sections for power supply and final connections for automatically operated heat and smoke vents
9. Division 28 Section "Fire Detection and Alarm" for interconnects to automatically operated heat and smoke vents

1.3 COORDINATION

- A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
- B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of roof accessory.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- A. Shop Drawings: For roof accessories.
 - 1. Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.
- B. Samples: For each type of exposed factory-applied finish required and for each type of roof accessory indicated, prepared on Samples of size to adequately show color.

1.5 INFORMATIONAL SUBMITTALS

- A. Delegated-Design Submittal: For roof curbs and equipment supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Detail mounting, securing, and flashing of roof-mounted items to roof structure. Indicate coordinating requirements with roof membrane system.
 - 2. Wind-Restraint Details: Detail fabrication and attachment of wind restraints. Show anchorage details and indicate quantity, diameter, and depth of penetration of anchors.
- B. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:
 - 1. Size and location of roof accessories specified in this Section
 - 2. Method of attaching roof accessories to roof or building structure
 - 3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit
 - 4. Required clearances.
- C. Warranty: Special warranty specified in this Section.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For roof accessories to include in operation and maintenance manuals.
- B. Executed Warranty

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Pack, handle, and ship roof accessories properly labeled in heavy-duty packaging to prevent damage.

1.8 COORDINATION

- A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
 - 1. With Architect's approval, adjust location of roof accessories that would interrupt roof drainage routes and/or roof expansion joints.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify required openings for each type of roof accessory by field measurements before fabrication and indicate measurements on Shop Drawings.

1.10 WARRANTY

- A. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace roof accessories that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D2244
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal
 - 2. Finish Warranty Period: 20 years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General Performance: Roof accessories shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design roof curbs and equipment supports to comply with wind performance requirements, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Wind-Restraint Performance: As indicated on structural Drawings.

2.2 ROOF CURBS

- A. Roof Curbs: Internally reinforced roof-curb units capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings, bearing

continuously on roof structure, and capable of meeting performance requirements; with welded or mechanically fastened and sealed corner joints, stepped integral metal cant raised the thickness of roof insulation, and integrally formed deck-mounting flange at perimeter bottom.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AES Industries, Inc.
 - b. Air Balance; a division of MESTEK, Inc.
 - c. Greenheck Fan Corporation.
 - d. Milcor; Commercial Products Group of Hart & Cooley, Inc.
 - e. Pate Company (The).
 - f. Roof Products and Systems (RPS); a division of Hart & Cooley, Inc.
 - g. Roof Products, Inc.

- B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.

- C. Supported Load Capacity: Coordinate load capacity with information on Shop Drawings of equipment to be supported.

- D. Material: Zinc-coated (galvanized) steel sheet, 0.052 inch thick.
 1. Finish: Mill phosphatized.

- E. Material: Stainless steel sheet, 0.0781 inch thick.
 1. Finish: Manufacturer's standard

- F. Construction:
 1. Curb Profile: Manufacturer's standard compatible with roofing system.
 2. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
 3. Fabricate curbs to minimum height of 18 inches above roofing surface unless otherwise indicated.
 4. Top Surface: Level top of curb, with roof slope accommodated by sloping deck-mounting flange.
 5. Sloping Roofs: Where roof slope exceeds 1:48, fabricate curb with perimeter curb height tapered to accommodate roof slope so that top surface of perimeter curb is level. Equip unit with water diverter or cricket on side that obstructs water flow.
 6. Insulation: Factory insulated with 1-1/2-inch- thick glass-fiber board insulation.
 7. Liner: Same material as curb, of manufacturer's standard thickness and finish.
 8. Nailer: Factory-installed wood nailer along top flange of curb continuous around curb perimeter.
 9. Wind Restraint Straps and Base Flange Attachment: Provide wind restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb, of size and spacing required to meet wind uplift requirements.
 10. Platform Cap: Where portion of roof curb is not covered by equipment, provide weathertight platform cap formed from 3/4-inch- thick plywood covered with metal sheet of same type, thickness, and finish as required for curb.

11. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as curb.

2.3 ROOF HATCHES

- A. Roof Hatches: Metal roof-hatch units with lids and insulated double-walled curbs, welded or mechanically fastened and sealed corner joints, continuous lid-to-curb counterflashing and weathertight perimeter gasketing, stepped integral metal cant raised the thickness of roof insulation, and integrally formed deck-mounting flange at perimeter bottom.
 1. Manufacturers
 - a. Basis of Design: Bilco Company (The)
 - b. Other Acceptable Manufacturers subject to compliance with requirements.
 - 1) Babcock-Davis.
 - 2) J. L. Industries, Inc.; a division of the Activar Construction Products Group.
 - 3) Milcor; Commercial Products Group of Hart & Cooley, Inc. Nystrom, Inc.
 - 4) O'Keeffe's Inc.
 - 5) Pate Company (The).
 - 6) Precision Ladders, LLC.
- B. Type and Size: Single-leaf lid, 30 by 36 inches
- C. Loads: Minimum 50-lbf/sq. ft. external live load and 50-lbf/sq. ft. internal uplift load.
- D. Hatch Material: Aluminum sheet.
 1. Thickness: Manufacturer's standard thickness for hatch size indicated.
 2. Finish: Two-coat fluoropolymer.
 3. Color: As selected by Architect from manufacturer's full range
- E. Construction:
 1. Insulation: 1-inch- thick, glass-fiber board.
 - a. R-Value: 4.3 according to ASTM C1363.
 2. Hatch Lid: Opaque, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
 3. Curb Liner: Manufacturer's standard, of same material and finish as metal curb.
 4. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.
 5. Fabricate curbs to minimum height of 12 inches above roofing surface unless otherwise indicated.
 6. Sloping Roofs: Where slope or roof deck exceeds 1:48, fabricate curb with perimeter curb height that is tapered to accommodate roof slope so that top surfaces of perimeter curb are level. Equip hatch with water diverter or cricket on side that obstructs water flow.

- F. Hardware: Spring operators, hold-open arm, galvanized steel spring latch with turn handles, galvanized steel butt- or pintle-type hinge system, and padlock hasps inside and outside.
- G. Safety Railing System: Roof-hatch manufacturer's standard system including rails, clamps, fasteners, safety barrier at railing opening, and accessories required for a complete installation; attached to roof hatch and complying with 29 CFR 1910.23 requirements and authorities having jurisdiction.
 - 1. Height: 42 inches above finished roof deck.
 - 2. Posts and Rails: Galvanized-steel pipe, 1-1/4 inches in diameter or galvanized-steel tube, 1-5/8 inches in diameter.
 - 3. Flat Bar: Galvanized steel, 2 inches high by 3/8 inch thick.
 - 4. Maximum Opening Size: System constructed to prevent passage of a sphere 21 inches in diameter.
 - 5. Chain Passway Barrier: Galvanized proof coil chain with quick link on fixed end.
 - 6. Post and Rail Tops and Ends: Weather resistant, closed or plugged with prefabricated end fittings.
 - 7. Provide weep holes or another means to drain entrapped water in hollow sections of handrail and railing members.
 - 8. Fabricate joints exposed to weather to be watertight.
 - 9. Fasteners: Manufacturer's standard, finished to match railing system.
 - 10. Finish: Manufacturer's standard.
 - a. Color: As selected by Architect from manufacturer's full range.
- H. Ladder-Assist Post: Roof-hatch manufacturer's standard device for attachment to roof-access ladder.
 - 1. Operation: Post locks in place on full extension; release mechanism returns post to closed position.
 - 2. Height: 42 inches above finished roof deck.
 - 3. Material: Steel tube.
 - 4. Post: 1-5/8-inch- diameter pipe.
 - 5. Finish: Manufacturer's standard baked enamel or powder coat.
 - a. Color: As selected by Architect from manufacturer's full range.

2.4 METAL MATERIALS

- A. Aluminum Sheet: ASTM B209 (ASTM B209M), manufacturer's standard alloy for finish required, with temper to suit forming operations and performance required.
 - a. Two-Coat Fluoropolymer Finish: AAMA 2605. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight.
- B. Zinc-Coated (Galvanized) Steel Sheet: ASTM A653/A653M, G90 coating designation and mill phosphatized for field painting where indicated.
 - 1. Mill-Phosphatized Finish: Manufacturer's standard for field painting.

2. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil.
 3. Exposed Coil-Coated Finish: Prepainted by the coil-coating process to comply with ASTM A755/A755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer Finish: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight.
 4. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils.
 5. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil.
- C. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A792/A792M, AZ50 coated.
1. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil.
 2. Exposed Coil-Coated Finish: Prepainted by the coil-coating process to comply with ASTM A755/A755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer Finish: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight.
 3. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils.
 4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil.
- D. Aluminum Extrusions and Tubes: ASTM B221, manufacturer's standard alloy and temper for type of use, finished to match assembly where used; otherwise mill finished.
- E. Stainless Steel Sheet and Shapes: ASTM A240/A240M or ASTM A666, Type 304.
- F. Steel Shapes: ASTM A36/A36M, hot-dip galvanized according to ASTM A123/A123M unless otherwise indicated.
- G. Steel Tube: ASTM A500/A500M, round tube.

2.5 MISCELLANEOUS MATERIALS

- A. Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
- B. Glass-Fiber Board Insulation: ASTM C26, nominal density of 3 lb/cu. ft., thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F, thickness as indicated.
- C. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, acceptable to authorities having jurisdiction, containing no arsenic or chromium, and complying with AWPA C2; not less than 1-1/2 inches thick.
- D. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.6 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of work.
 - 1. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored and is ready to receive roof accessories.
 - 2. Verify dimensions of roof openings for roof accessories.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install roof accessories according to manufacturer's written instructions.
 - 1. Install roof accessories level; plumb; true to line and elevation; and without warping, jogs in alignment, buckling, or tool marks.
 - 2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
 - 3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
 - 4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.

- B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
 - 1. Coat concealed side of uncoated aluminum roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
 - 2. Underlayment: Where installing roof accessories directly on cementitious or wood substrates, install a course of underlayment and cover with manufacturer's recommended slip sheet.
 - 3. Bed flanges in thick coat of asphalt roofing cement where required by roof accessory manufacturers for waterproof performance.
- C. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.
- D. Roof Curb Installation: Install each roof curb so top surface is level.
- E. Equipment Support Installation: Install equipment supports so top surfaces are level with each other.
- F. Roof-Hatch Installation:
 - 1. Verify that roof hatch operates properly. Clean, lubricate, and adjust operating mechanism and hardware.
 - 2. Attach safety railing system to roof-hatch curb.
 - 3. Attach ladder-assist post according to manufacturer's written instructions.
- G. Seal joints with elastomeric or butyl sealant as required by manufacturer of roof accessories.
- H. Seal joints with elastomeric or butyl sealant as required by manufacturer of roof accessories.

3.3 REPAIR AND CLEANING

- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing according to ASTM A780/A780M.
- B. Touch up factory-primed surfaces with compatible primer ready for field painting according to Section 099113 "Exterior Painting."
- C. Clean exposed surfaces according to manufacturer's written instructions.
- D. Clean off excess sealants.
- E. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION 07 72 00

SECTION 07 81 00 - APPLIED FIREPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes:
 - 1. Preparation of surfaces to receive fire-resistant materials.
 - 2. Sprayed fire-resistant materials (SFRM).
 - 3. Repair of fire-resistant materials damaged or removed after initial installation.
 - 4. Thermal Barrier protection for sprayed polyurethane foam insulation.

1.3 DEFINITIONS

- A. SFRM: Sprayed fire-resistant material.
- B. Cementitious: The term cementitious as defined by ASTM and Underwriters Laboratories Inc. applies to all fireproofing that is wet mixed and then pumped as a slurry. Cementitious does not refer to portland cement content.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Conference shall be scheduled at least 2 week prior to the start of installation.
 - 2. Review products, design ratings, restrained and unrestrained conditions, densities, thicknesses, bond strengths, application parameters and other performance requirements.
 - 3. Conference shall be attended by Architect, Owner's Representative, Owner's Inspection Agent, Contractor, Manufacturer and Installer.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
 - 1. SFRM
 - a. Provide framing plans, based on approved erection drawings, and accompanying schedules indicating the following:

07 81 00 - 1 of 11

- 1) Extent of fireproofing for each construction and fire-resistance rating.
- 2) Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.
- 3) Minimum fireproofing thicknesses needed to achieve required fire-resistance rating of each structural component and assembly.
- 4) Treatment of fireproofing after application.

2. Thermal Barrier

- a. Provide schedule indicating material to be used, surfaces to be protected with thermal barrier, hourly rating and material thickness provided.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and testing agency.
- B. Manufacturer's written installation instructions for each product specified.
- C. Provide certification that the UL Designs selected for the project are not load restricted.
- D. Product Certificates: For each type of fireproofing.
- E. Evaluation Reports: For fireproofing, from ICC-ES.
- F. Preconstruction Test Reports: For fireproofing.
- G. Provide certification that thermal barrier is compatible with substrate to which it will be applied.
- H. Field quality-control reports.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by fireproofing manufacturer as experienced and with sufficient trained staff to install manufacturer's products according to specified requirements.
- B. Pre-Installation Conference: Prior to the beginning of installation, conduct conference at Project Site.
 1. Conference shall be scheduled at least 2 week prior to the start of installation.
 2. Review products, design ratings, restrained and unrestrained conditions, densities, thicknesses, bond strengths, application parameters and other performance requirements.
 3. Conference shall be attended by Architect, Owner's Representative, Owner's Inspection Agent, Contractor, Manufacturer and Installer.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Do not apply fireproofing when ambient or substrate temperature is **44 deg F (7 deg C)** or lower unless temporary protection and heat are provided to maintain

temperature at or above this level for 24 hours before, during, and for 24 hours after product application.

- B. Ventilation: Ventilate building spaces during and after application of fireproofing, providing complete air exchanges according to manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fireproofing dries thoroughly.

1.9 WARRANTY:

- A. Special Warranty: Provide warranty in which installer agrees to repair or replace components of applied fireproofing system that do not comply with requirements or that deteriorate as defined in this Section within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Evidence of corrosion.
 - b. Installation failures including cracking, spalling and delamination.
 - c. Evidence of excessive air erosion.
 - d. Evidence of fungal growth.
 - 2. Warranty Period: 2 years from date of Substantial Completion

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Assemblies: Provide fireproofing, including auxiliary materials, according to requirements of each fire-resistance design and manufacturer's written instructions.
 - 1. Fireproofing assemblies shall be based on the Load and Resistance Factor Design (LRFD) or Allowable Stress Design Method.
 - 2. Assemblies shall not require a "load restricted" design or use the Working Stress Design Method.
- B. Source Limitations: Obtain fireproofing for each fire-resistance design from single source.
- C. Fire-Resistance Design: Indicated on Drawings, tested according to ASTM E119 or UL 263 <Insert requirement>; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Steel members are to be considered unrestrained unless specifically noted otherwise.
- D. **VOC Content**: For field applications, coatings shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits:
 - 1. Flat Paints and Coatings: 50 g/L.
 - 1. Nonflat Paints and Coatings: 50 g/L.
 - 2. Primers, Sealers, and Undercoaters: 100 g/L.

- E. Asbestos: Provide products containing no detectable asbestos.

2.2 SPRAYED FIRE-RESISTANT MATERIALS

- A. SFRM: Manufacturer's standard, factory-mixed, lightweight, dry formulation, complying with indicated fire-resistance design, and mixed with water at Project site to form a slurry or mortar before conveyance and application
- B. Standard Density Gypsum Based Cementitious Products:
 - 1. Basis of Design: GCP Applied Technologies; Monokote MK6 series
 - 2. Other Acceptable Products: Subject to compliance with requirements, the following equivalent products may be provided:
 - a. Isolatek International; Cafco 300
 - b. Southwest Fireproofing Products Co.; Type 5GP.
- C. Medium Density Portland Cement Based Cementitious Products:
 - 1. Basis of Design: GCP Applied Technologies; Monokote Z106 series
 - 2. Other Acceptable Products: Subject to compliance with requirements, the following equivalent products may be provided:
 - a. Isolatek International; Cafco 400
 - b. Southwest Fireproofing Products Co.; Type 5MD
- D. High Density Portland Cement Based Cementitious Products:
 - 1. Basis of Design: GCP Applied Technologies; Monokote Z146 series
 - 2. Other Acceptable Products: Subject to compliance with requirements, the following equivalent products may be provided:
 - a. Isolatek International; Cafco Fendolite M-H
 - b. Southwest Fireproofing Products Co.; Type 7HD
 - 3. Application: Designated for exterior use by a qualified testing agency acceptable to authorities having jurisdiction.
- E. SFRM Performance:
 - 1. Bond Strength:
 - a. Standard Density (structures 0-74 feet in height): Minimum 150-lbf/sq. ft. (7.18-kPa).
 - b. Medium Density (structures greater than 74 feet and up to 420 feet in height): 430-lbf/sq. ft. (20.59-kPa)
 - c. High Density (structures greater than 420 feet in height): 1000-lbf/sq. ft. (47.88-kPa) cohesive and adhesive strength based on field testing according to ASTM E736.
 - 2. Density:

- a. Standard Density as specified in the indicated fire-resistance design, according to ASTM E605: 15 lb/cu. ft. minimum
 - b. Medium Density as specified in the indicated fire-resistance design, according to ASTM E605: 22 lb/cu. ft. minimum
 - c. High Density as specified in the indicated fire-resistance design, according to ASTM E605: 40 lb/cu. ft. minimum
3. Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E605, whichever is thicker, but not less than **0.50 inch (13 mm)**.
 4. Combustion Characteristics: ASTM E136.
 5. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 10 or less.
 - b. Smoke-Developed Index: 10 or less.
 6. Compressive Strength (according to ASTM E761):
 - a. Standard Density: 10 lbf/sq. in. minimum
 - b. Medium Density: 100 lbf/sq. in. minimum
 - c. High Density: 300 lbf/sq. in. minimum
 7. Corrosion Resistance: No evidence of corrosion according to ASTM E937.
 8. Deflection: No cracking, spalling, or delamination according to ASTM E759.
 9. Effect of Impact on Bonding: No cracking, spalling, or delamination according to ASTM E760.
 10. Air Erosion: Maximum weight loss of **0.025 g/sq. ft. (0.270 g/sq. m)** in 24 hours according to ASTM E859.
 11. Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in no growth on specimens per ASTM G21.

F. Thermal Barrier:

1. Basis of Design: GCP Applied Technologies; Monokote Z-3306 Thermal Barrier
2. Other Acceptable Products: Subject to compliance with requirements, the following equivalent products may be provided:
 - a. Isolatek International; Cafco SprayFilm – TB 15
 - b. Southwest Fireproofing Products Co.; Type 7TB
 - c. Specialty Products Inc., Flame Seal TB
3. Performance requirements for Thermal Barrier:
 - a. Dry Density: The field density shall be measured in accordance with ASTM Standard E605. Minimum average density shall be that listed in the UL Fire Resistance Directory for each rating indicated, or as required by the authority having jurisdiction, or a minimum average 22 pcf whichever is greater.
 - b. Bond Strength: Thermal barrier, when tested in accordance with ASTM E736, shall have a minimum average bond strength of 23.9 kN/m² (**500 psf**) and a minimum individual bond strength of 19.2 kN/m² (**400 psf**).

- c. Surface Burning Characteristics: Material shall exhibit the following surface burning characteristics when tested in accordance with ASTM E84:
 - 1) Flame Spread 10
 - 2) Smoke Developed 10
 - d. Resistance to Mold: The thermal barrier material shall be formulated at the time of manufacturing with a mold inhibitor. Thermal barrier material shall be tested in accordance with ASTM G21 and shall show resistance to mold growth for a period of 28 days for general use.
 - e. [USDA and FDA Approval: Thermal barrier shall be tested and approved for use in government inspected meat and poultry facilities.]
4. Fire Resistance Classification: The spray applied thermal barrier material shall have been tested and reported by Underwriters Laboratories Inc. fire exposure in accordance with the procedures of ANSI/ASTM E119 and UL 1715 and shall be listed in the Underwriters Laboratories Fire Resistance Directory.
- a. Fire Rating: 15 minutes.

2.3 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that are compatible with fireproofing and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.
- B. Substrate Primers: Where required by the manufacturer for substrates indicated or included in the UL design, provide primers approved by fireproofing manufacturer and complying with one or both of the following requirements:
 - 1. Primer and substrate are identical to those tested in required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
 - 2. Primer's bond strength in required fire-resistance design complies with specified bond strength for fireproofing and with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction, based on a series of bond tests according to ASTM E736.
- C. Bonding Agent: Where required by the manufacturer for substrates indicated or included in the UL design, provide bonding agent approved by fireproofing manufacturer and complying with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction.
- D. Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required, according to fire-resistance designs indicated and fireproofing manufacturer's written recommendations. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive fireproofing.
- E. Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by fireproofing manufacturer.

- F. Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance design indicated; approved and provided by fireproofing manufacturer. Include pins and attachment.
- G. Sealer: Transparent-drying, water-dispersible, tinted protective coating when recommended in writing by fireproofing manufacturer for each fire-resistance design or where indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of the Work and according to each fire-resistance design. Verify compliance with the following:
 - 1. Substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, paints, and encapsulants, or other foreign substances capable of impairing bond of fireproofing with substrates under conditions of normal use or fire exposure.
 - 2. Objects penetrating fireproofing, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
 - 3. Substrates receiving fireproofing are not obstructed by ducts, piping, equipment, or other suspended construction that will interfere with fireproofing application.
- B. Verify that concrete work on steel deck has been completed before beginning fireproofing work.
- C. Verify that roof construction, installation of roof-top HVAC equipment, and other related work is complete before beginning fireproofing work.
- D. Conduct tests according to fireproofing manufacturer's written recommendations to verify that substrates are free of substances capable of interfering with bond.
- E. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Cover other work subject to damage from fallout or overspray of fireproofing materials during application.
- B. Clean substrates of substances that could impair bond of fireproofing.
- C. Prime substrates where included in fire-resistance design and where recommended in writing by fireproofing manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive fireproofing.

- D. For applications visible on completion of Project, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of fireproofing. Remove minor projections and fill voids that would telegraph through fire-resistant products after application
- E. Clips, hangers, support sleeves and other attachments by other trades penetrating the SFRM shall be installed prior to application of the cementitious materials.

3.3 APPLICATION

- A. Construct fireproofing assemblies that are identical to fire-resistance design indicated and products as specified, tested, and substantiated by test reports; for thickness, primers, sealers, topcoats, finishing, and other materials and procedures affecting fireproofing work.
- B. Comply with fireproofing manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and apply fireproofing; as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.
- C. Coordinate application of fireproofing with other construction to minimize need to cut or remove fireproofing.
 - 1. Do not begin applying fireproofing until clips, hangers, supports, sleeves, and other items penetrating fireproofing are in place.
 - 2. Defer installing ducts, piping, and other items that would interfere with applying fireproofing until application of fireproofing is completed.
- D. Metal Decks:
 - 1. Do not apply fireproofing to underside of metal deck substrates until concrete topping, if any, has been completed.
 - 2. Do not apply fireproofing to underside of metal roof deck until roofing has been completed; prohibit roof traffic during application and drying of fireproofing.
- E. Install auxiliary materials as required, as detailed, and according to fire-resistance design and fireproofing manufacturer's written recommendations for conditions of exposure and intended use. For auxiliary materials, use attachment and anchorage devices of type recommended in writing by fireproofing manufacturer.
- F. Spray apply fireproofing to maximum extent possible. Following the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by fireproofing manufacturer.
- G. Extend fireproofing in full thickness over entire area of each substrate to be protected.
- H. Install body of fireproofing in application thicknesses recommended in writing by fireproofing manufacturer.
- I. For applications over encapsulant materials, including lockdown (post-removal) encapsulants, apply fireproofing that differs in color from that of encapsulant over which it is applied.

- J. Where sealers are used, apply products that are tinted to differentiate them from fireproofing over which they are applied.
- K. Provide a uniform finish complying with description indicated for each type of fireproofing material and matching finish approved for required mockups.
- L. Cure fireproofing according to fireproofing manufacturer's written recommendations.
- M. Do not install enclosing or concealing construction until after fireproofing has been applied, inspected, and tested and corrections have been made to deficient applications.
- N. Finishes: Where indicated, apply fireproofing to produce the following finishes:
 - 1. Manufacturer's Standard Finishes: Finish according to manufacturer's written instructions for each finish selected.
 - 2. Spray-Textured Finish: Finish left as spray applied with no further treatment.
 - 3. Rolled, Spray-Textured Finish: Even finish produced by rolling spray-applied finish with a damp paint roller to remove drippings and excessive roughness.
 - 4. Skip-Troweled Finish: Even leveled surface produced by troweling spray-applied finish to smooth out the texture and neaten edges.
 - 5. Skip-Troweled Finish with Corner Beads: Even, leveled surface produced by troweling spray-applied finish to smooth out the texture, eliminate surface markings, and square off edges.

3.4 APPLIED FIREPROOFING SCHEDULE

A. Standard Density SFRM Products:

- 1. Provide standard density products for surfaces requiring fireproofing throughout the project, including unfinished shell spaces within the finished building and except where indicated otherwise.
- 2. Standard Density products shall not be applied where bond strength does not meet IBC minimum requirements based on building height.
- 3. Standard Density products shall not be applied where density does not meet minimum IBC and approved fire-restive design requirements per ASTM E605.
- 4. Standard Density products shall not be applied where a higher density product has been specified.

B. Medium Density SFRM Products:

- 1. Provide medium density products as follows:
 - a. Surfaces which are exposed and where a specific fireproofing finish has been specified.
 - b. Surfaces which are exposed in elevator shafts and elevator machine rooms.
 - c. Surfaces which are located in horizontal and vertical air plenums.
 - d. Surfaces located in high humidity areas such as pools and greenhouses.
 - e. Surfaces which are installed on exposed interior columns located in areas subject to foot traffic.

2. Medium Density products shall not be applied where bond strength does not meet IBC minimum requirements based on building height.
3. Medium Density products shall not be applied where density does not meet minimum IBC and approved fire-restive design requirements per ASTM E605.
4. Medium Density products shall not be applied where a higher density product has been specified.

C. High Density SFRM Products:

1. Provide High Density Products as follows:
 - a. Surfaces of exposed columns located in areas subject to vehicular traffic.
 - b. Surfaces which will be directly exposed to the weather.
 - c. Surfaces which will be exposed to attack by harsh chemicals and salts.

D. Thermal Barrier Products:

1. Spray apply 15-minute Thermal Barrier on foam plastic insulation and sprayed polyurethane foam insulation materials except where separated from the interior of the building by a minimum ½ inch thickness of gypsum wallboard.

3.5 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
 1. Testing and inspection as required by the IBC, Chapter 17 Structural Tests and Special Inspections and Division 01 Section “Testing and Laboratory Services”.
- B. Perform the tests and inspections of completed Work in successive stages. Do not proceed with application of fireproofing for the next area until test results for previously completed applications of fireproofing show compliance with requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.
- C. Coordinate performance of the work with tests and inspections of completed Work in successive stages. Do not proceed with application of fireproofing for the next area until test results for previously completed applications of fireproofing show compliance with requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.
- D. Fireproofing will be considered defective if it does not pass tests and inspections.
 1. Remove and replace fireproofing that does not pass tests and inspections, and retest.
 2. Apply additional fireproofing, per manufacturer's written instructions, where test results indicate insufficient thickness, and retest.
- E. Prepare test and inspection reports.

3.6 CLEANING, PROTECTING, AND REPAIRING

- A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.
- B. Protect fireproofing, according to advice of manufacturer and Installer, from damage resulting from construction operations or other causes, so fireproofing will be without damage or deterioration at time of Substantial Completion.
- C. As installation of other construction proceeds, inspect fireproofing and repair damaged areas and fireproofing removed due to work of other trades.
 - 1. Patch and original material shall be the same product.
 - 2. Remove loose and damaged material prior to patching.
 - 3. Hand mixed and applied material limited to 144 sq. in.; areas greater than 144 sq. in. shall be sprayed.
 - 4. There are no provisions in the code or this specification which allow for a percentage of exposed steel to remain unprotected.
- D. Repair fireproofing damaged by other work before concealing it with other construction.
- E. Repair fireproofing by reapplying it using same method as original installation or using manufacturer's recommended trowel-applied product.

END OF SECTION 07 81 00

SECTION 07 84 13 - FIRESTOPPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes:

1. Firestop systems for penetrations through fire-resistance-rated constructions and floor to wall joints, including both empty openings and openings containing penetrating items.
2. Floor-to-floor joints
3. Floor-to-wall joints
4. Head-of-wall joints
5. Wall-to-wall joints

- B. Related Sections include the following:

1. Division 07 Section "Thermal Insulation" for spandrel insulation which is a component of floor-to-wall joints indicated as perimeter fire-containment systems between perimeter edge of fire-resistance-rated floor assemblies and back of non-fire-resistance-rated exterior curtain walls.
2. Division 07 Section "Joint Sealants" for non-fire-resistive joint sealants.
3. Division 07 Section "Expansion Control" for manufactured fire-rated expansion joint systems.
4. Division 21 Sections specifying fire-suppression piping penetrations.
5. Division 22 and 23 Sections specifying duct and piping penetrations.
6. Division 26, 27, and 28 Sections specifying cable and conduit penetrations.

1.3 FIRESTOPPING RATINGS:

- A. F-ratings indicate that the firestopping withstood the fire test for the rating period without the following taking place: flames passing through openings, flaming of any element on the unexposed side of the firestopping system, and any openings developing that permit water from the hose stream to project beyond the unexposed side. F-ratings are required by the 2009 IBC for penetrations in fire-resistance-rated walls and horizontal assemblies.
- B. T-ratings signify that heat transmitted through the firestopping during the rating period did not raise the temperature of any thermocouple on the unexposed firestopping system surface or on any penetrating item by more than 325 deg F above its initial temperature. T-ratings are required by the 2009 IBC.

- C. L-ratings indicate the amount of air leakage through the firestopping during testing and indicate how well systems resist the passage of smoke. L-ratings are required by the 2009 IBC for penetrations in smoke barriers.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: For each through-penetration firestop system, fire resistive joint system, and perimeter fire resistive joint system, show each type of construction condition, relationships to adjoining construction, and type of penetrating item. Include firestop design designation of qualified testing and inspecting agency that evidences compliance with requirements for each condition indicated.
 - 1. Submit documentation, including illustrations, from a qualified testing and inspecting agency that is applicable to each through-penetration firestop and fire resistive joint system configuration for construction and penetrating items.
 - 2. Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular through-penetration firestop condition, submit illustration, with modifications marked, approved by through-penetration firestop system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.
- C. Firestop System Schedule: Indicate locations of each firestop system, along with the following information:
 - 1. Types of penetrating items.
 - 2. Types of construction conditions at each penetration or joint, including fire-resistance ratings and, where applicable, thicknesses of construction.
 - 3. Firestop systems for each location identified by firestop design designation of qualified testing and inspecting agency.
 - 4. Firestop System Schedule Nomenclature:
 - a. Designation System for Through-Penetration Firestopping Systems. Alpha-numeric designations listed in UL's "Fire Resistance Directory" under product Category XHEZ.
 - b. Designation System for Joints in or between Fire-Resistance-Rated Constructions: Alphanumeric systems listed in UL's "Fire Resistance Directory" under Product Category XHBN.
 - c. Designation System for Joints at the Intersection of Fire-Resistance-Rated Floor or Floor/Ceiling Assembly and an Exterior Curtain-Wall Assembly: Alphanumeric systems listed in UL's "Fire Resistance Directory" under Product Category XHDG.
 - 5. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping system, submit illustration, with modifications marked, approved by penetration firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent

fire-resistance-rated assembly. Obtain approval of authorities having jurisdiction prior to submittal.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For firestop system products, signed by product manufacturer.
- C. Listed Systems: From a qualified testing agency indicating firestop system complies with requirements, based on comprehensive testing of current products.
- D. Field quality-control test reports.
- E. Research/Evaluation Reports: For each type of firestopping system.

1.7 CLOSEOUT SUBMITTALS

- A. Installer Certificates: From Installer indicating that penetration firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. A firm that has been approved by FMG according to FMG 4991, "Approval of Firestop Contractors" or
 - 2. A firm that has been qualified under UL's Qualified Contractor Program or
 - 3. A firestop specialty contractor qualified under a Firestop manufacturer's training program
- B. Installer Qualifications: A firm experienced in installing firestop systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its firestop system products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.
- C. Installation Responsibility: Assign installation of firestop systems in project to a single qualified installer.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver firestop system products to Project site in original, unopened containers or packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, lot number, shelf life if applicable, qualified testing and inspecting agency's classification marking applicable to Project, curing time, and mixing instructions for multicomponent materials.

- B. Store and handle materials for through-penetration firestop systems to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.10 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install through-penetration firestop or fire resistive joint systems when ambient or substrate temperatures are outside limits permitted by through-penetration firestop or fire resisting joint system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- B. Install and cure penetration firestopping materials per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.11 COORDINATION

- A. Coordinate construction of openings and penetrating items and joints to ensure that firestop systems are installed according to specified requirements.
- B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate through-penetration firestop systems.
- C. Coordinate sizing of joints to accommodate fire-resistive joint systems.
- D. Notify Owner's inspecting agency at least seven days in advance of firestop system installations; confirm dates and times on days preceding each series of installations.
- E. Do not cover up firestop system installations that will become concealed behind other construction until each installation has been examined by Owner's inspecting agency and building inspector, if required by authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Subcontractor or manufacturer shall review all penetrating items and rated penetrated construction, construction joint conditions, and perimeter firestopping conditions and select a UL listed system that provides the required protection for each application. Submittal shall list system and product provided to meet the system test requirements. Provide through-penetration firestop systems, fire resistive joint systems, and perimeter fire resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated.
 - 1. Fire-resistance-rated walls including fire partitions, fire barriers and smoke barriers.
 - 2. Fire-resistance-rated horizontal assemblies including floors, floor/ceiling assemblies and ceiling membranes of roof/ceiling assemblies.
- B. Rated Systems: Provide through-penetration firestop systems with the following ratings determined per ASTM E814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg:

1. F-Rated Systems: Provide through-penetration firestop systems with F-ratings indicated, but not less than that equaling or exceeding fire-resistance rating of constructions penetrated.
 2. L-Rated Systems: Where through-penetration firestop systems are indicated in smoke barriers, provide through-penetration firestop systems with L-ratings of not more than 3.0 cfm/sq. ft at both ambient temperatures and 400 deg F.
 3. W-Rated Systems: Provide through penetration firestop systems with Class 1 W Ratings where water tight ratings for floor penetrations are indicated.
- C. Exposed Penetration Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, per ASTM E84.
1. Sealant shall have a VOC content of 250 g/L or less.
 2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- D. For through-penetration firestop systems exposed to view, traffic, moisture, and physical damage, provide products that, after curing, do not deteriorate when exposed to these conditions both during and after construction.
1. For piping penetrations for plumbing and wet-pipe sprinkler systems, provide moisture-resistant through-penetration firestop systems.
 2. For floor penetrations with annular spaces exceeding 4 inches in width and exposed to possible loading and traffic, provide firestop systems capable of supporting floor loads involved, either by installing floor plates or by other means.
 3. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.
- E. General: Provide fire-resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assembly in which fire-resistive joint systems are installed.
- F. Joint Systems in and between Fire-Resistance-Rated Constructions: Provide systems with assembly ratings equaling or exceeding the fire-resistance ratings of construction that they join, and with movement capabilities indicated as determined by UL 2079 or ASTM E1966.
1. Load-bearing capabilities as determined by evaluation during the time of test.
- G. For through-penetration firestop systems exposed to view, provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E84.
- H. Continuity Head-of-Wall Joint Systems: For joints between fire-rated walls and non-rated floor or roof decks, provide systems with F Ratings equaling or exceeding the fire-resistance ratings of the wall assembly as determined by ASTM E2837.
- I. Fire-Test-Response Characteristics:
1. Perform penetration firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.

2. Test per testing standards referenced in "Penetration Firestopping Systems" Article. Provide rated systems complying with the following requirements:
 - a. Penetration firestopping systems shall bear classification marking of a qualified testing agency.
 - 1) UL in its "Fire Resistance Directory."
 - 2) Intertek Group in its "Directory of Listed Building Products."

2.2 MANUFACTURERS

A. Products

1. Basis of Design: Hilti Construction Chemicals Inc. , Tulsa, Oklahoma
2. Other Acceptable Manufacturers subject to compliance with requirements
 - a. 3M Fire Protection Products, St. Paul, Minnesota
 - b. Nelson Firestop Products, Tulsa, Oklahoma
 - c. STI (Specified Technologies, Inc.)
3. All fire stopping, for each kind of construction condition indicated, shall be from the same manufacturer.

2.3 FIRESTOPPING, GENERAL

- A. Compatibility: Provide through-penetration firestop systems that are compatible with one another; with the substrates forming openings; and with the items, if any, penetrating through-penetration firestop systems, under conditions of service and application, as demonstrated by through-penetration firestop system manufacturer based on testing and field experience. Provide fire-resistive joint systems that are compatible with joint substrates, under conditions of service and application, as demonstrated by fire-resistive joint system manufacturer based on testing and field experience.
- B. Penetrations in Fire-Resistance-Rated Walls: Penetration firestopping systems with ratings determined per ASTM E814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.
 1. F-Rating: Not less than the fire-resistance rating of constructions penetrated.
- C. Penetrations in Horizontal Assemblies: Penetration firestopping systems with ratings determined per ASTM E814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.
 1. F-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated.
 2. T-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.
 3. W-Rating: Provide penetration firestopping systems showing no evidence of water leakage when tested according to UL 1479.
- D. Penetrations in Smoke Barriers: Penetration firestopping systems with ratings determined per UL 1479, based on testing at a positive pressure differential of 0.30-inch wg.

1. L-Rating: Not exceeding 5.0 cfm/sq. ft. of penetration opening at and no more than 50-cfm cumulative total for any 100 sq. ft. at both ambient and elevated temperatures.
- E. Exposed Penetration Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, per ASTM E84.
1. Sealant shall have a VOC content of 250 g/L or less.
 2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- F. Mold Resistance: Provide penetration firestopping with mold and mildew resistance rating of 0 as determined by ASTM G21.
- G. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials, that are needed to install fill materials and to comply with Part 1 "Performance Requirements" Article. Use only components specified by fire-resistive joint system manufacturer and approved by the qualified testing and inspecting agency for systems indicated. Provide components for each through-penetration firestop system that are needed to install fill materials and to comply with Part 1 "Performance Requirements" Article. Use only components specified by through-penetration firestop system manufacturer and approved by qualified testing and inspecting agency for firestop systems indicated. Accessories include, but are not limited to, the following items:
1. Permanent forming/damming/backing materials, including the following:
 - a. Slag-/rock-wool-fiber insulation
 - b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state
 - c. Fire-rated form board
 - d. Fillers for sealants
 2. Temporary forming materials
 3. Substrate primers
 4. Collars
 5. Steel sleeves

2.4 FILL MATERIALS

- A. General: Provide firestop systems containing the types of fill materials indicated in the Through-Penetration Firestop System Schedule as required to comply with Part 1 "Performance Requirements" by referencing the types of materials described in this Article. Fill materials are those referred to in directories of referenced testing and inspecting agencies as "fill," "void," or "cavity" materials.
- B. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.
- C. Latex Sealants: Single-component latex formulations that after cure do not re-emulsify during exposure to moisture.

- D. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.
- E. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized steel sheet.
- F. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.
- G. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.
- H. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.
- I. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives.
- J. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
- K. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:
 - 1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces, and nonsag formulation for openings in vertical and other surfaces requiring a nonslumping, gunnable sealant, unless indicated firestop system limits use to nonsag grade for both opening conditions.
 - 2. Grade for Horizontal Surfaces: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces.
 - 3. Grade for Vertical Surfaces: Nonsag formulation for openings in vertical and other surfaces.

2.5 MIXING

- A. For those products requiring mixing before application, comply with firestop system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configuration, opening configurations, penetrating items, substrates, and other conditions affecting performance of work.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning: Clean out openings immediately before installing through-penetration firestop systems to comply with firestop system manufacturer's written instructions and with the following requirements:
 1. Remove from surfaces foreign materials that could interfere with adhesion of firestop systems.
 2. Clean opening substrates to produce clean, sound surfaces capable of developing optimum bond with penetration firestop systems. Remove loose particles remaining from cleaning operation.
 3. Remove laitance and form-release agents from concrete.
- B. Priming: Prime substrates where recommended in writing by firestop system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- C. Masking Tape: Use masking tape to prevent firestop systems from contacting adjoining surfaces that will remain exposed on completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestop system materials. Remove tape as soon as possible without disturbing firestop system's seal with substrates.

3.3 FIRESTOP SYSTEM INSTALLATION

- A. General: Install firestop systems to comply with Part 1 "Performance Requirements" Article and with firestop system manufacturer's written installation instructions and published drawings for products and applications indicated.
- B. Install forming/damming/backing materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
 1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.
- C. Install fill materials for firestop systems by proven techniques to produce the following results:
 1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
 2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
 3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.
- D. Provide Hilti Speed Sleeve (or equivalent retrofittable) fire rated pathway system for data cable penetrations in size, location, and quantity indicated on Drawings.

3.4 IDENTIFICATION

- A. Identify firestop systems with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of edge of the firestop systems so that labels will be visible to anyone seeking to remove penetrating items or firestop systems. Use mechanical fasteners for metal labels. For plastic labels, use self-adhering type with adhesives capable of permanently bonding labels to surfaces on which labels are placed and, in combination with label material, will result in partial destruction of label if removal is attempted. Include the following information on labels:
1. The words "Warning - Firestop System - Do Not Disturb. Notify Building Management of Any Damage"
 2. Contractor's name, address, and phone number
 3. Firestop system designation of applicable testing and inspecting agency; including system UL Number.
 4. Date of installation
 5. Firestop system manufacturer's name
 6. Installer's name

3.5 FIELD QUALITY CONTROL

- A. Inspecting Agency: Owner will engage a qualified, independent inspecting agency to inspect through-penetration firestops. Independent inspecting agency shall comply with ASTM E2174 or ASTM E2393 requirements including those related to qualifications, conducting inspections, and preparing test reports.
- B. Testing Services: Inspecting of completed installations of fire-resistive joint systems shall take place in successive stages as installation of fire-resistive joint systems proceeds. Do not proceed with installation of joint systems for the next area until inspecting agency determines completed work shows compliance with requirements.
1. Inspecting agency shall state in each report whether inspected fire-resistive joint systems comply with or deviate from requirements.
- C. Keep areas of work accessible until inspection by applicable authorities.
- D. Remove and replace firestop systems where inspections indicate that they do not comply with specified requirements.
- E. Additional inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- F. Where deficiencies are found, repair or replace through-penetration firestop systems so they comply with requirements herein.
- G. Proceed with enclosing firestop systems with other construction only after inspection reports are issued and firestop installations comply with requirements.

3.6 CLEANING AND PROTECTING

- A. Clean off excess fill materials adjacent to openings as Work progresses by methods and with cleaning materials that are approved in writing by firestop system manufacturers and that do not damage materials in which openings occur.
- B. Provide final protection and maintain conditions during and after installation that ensure that firestop systems are without damage or deterioration at time of Final Acceptance. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated firestop systems immediately and install new materials to produce systems complying with specified requirements.

3.7 THROUGH-PENETRATION FIRESTOP AND JOINT SYSTEMS SCHEDULE

- A. See FireStopping Systems Key and Fire Resistant Joint Systems Key, below.

END OF SECTION 07 84 13

SECTION 07 92 00 - JOINT SEALANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Silicone joint sealants.
 - 2. Urethane joint sealants.
 - 3. Polysulfide joint sealants.
 - 4. Butyl joint sealants
 - 5. Latex joint sealants.
 - 6. Preformed joint sealants.
 - 7. Acoustical joint sealants.
 - 8. Sealant backing, primer and other accessory products

1.3 DEFINITIONS

- A. Sealant: Sealant as indicated on the drawings is defined to include all backing, bond breakers, primers and accessories specified herein and as necessary for a complete sealant installation.

1.4 ACTION SUBMITTALS

- A. Product Data: For each joint-sealant product indicated.
- B. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.
- C. Samples for Verification: For each kind and color of joint sealant required, provide samples with joint sealants in 1/2-inch-wide joints formed between two 6-inch- long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
- D. Joint-Sealant Schedule: Include the following information:
 - 1. Joint-sealant application, joint location, and designation.
 - 2. Joint-sealant manufacturer and product name.
 - 3. Joint-sealant formulation.
 - 4. Joint-sealant color.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer and Testing Agency.
- B. Product Certificates: For each kind of joint sealant and accessory, from manufacturer.
- C. Preconstruction Laboratory Test Reports: From sealant manufacturer, indicating the following:
 - 1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
 - 2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
- D. Preconstruction Field-Adhesion Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.
- E. Field-Adhesion Test Reports: For each sealant application tested.
- F. Certification that all sealant products are compatible with surfaces with which they will come into contact.
- G. Warranties: Sample of special warranties.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Product Testing: Test joint sealants using a qualified testing agency.
 - 1. Testing Agency Qualifications: An independent testing agency qualified according to ASTM C1021 to conduct the testing indicated.

1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:
 - 1. Locate test joints where indicated on Project or, if not indicated, as directed by Architect.
 - 2. Conduct field tests for each kind of sealant and joint substrate.
 - 3. Notify Architect seven days in advance of dates and times when test joints will be erected.
 - a. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1.1 in ASTM C1193 or Method A, Tail Procedure, in ASTM C1521.
 - 1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

4. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
5. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.8 FIELD CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.
 2. When joint substrates are wet.
 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.9 WARRANTY

- A. Special Installer's Warranty: Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period: Two years from date of Final Acceptance.
- B. Special Manufacturer's Warranty: Manufacturer agrees to furnish joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period: Silicone sealants: Twenty years from date of Final Acceptance
 2. Warranty Period: All other sealants: Five years from date of Final Acceptance.
- C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
1. Movement of the structure caused by stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
 2. Disintegration of joint substrates from causes exceeding design specifications.
 3. Mechanical damage caused by individuals, tools, or other outside agents.
 4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.1 JOINT SEALANTS, GENERAL

- A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.
- B. VOC Content: Sealants and sealant primers shall comply with the following:
 - 1. Architectural sealants shall have a VOC content of 250 g/L or less.
 - 2. Sealants and sealant primers for nonporous substrates shall have a VOC content of 250 g/L or less.
 - 3. Sealants and sealant primers for porous substrates shall have a VOC content of 775 g/L or less.
- C. Liquid-Applied Joint Sealants: Comply with ASTM C920 and other requirements indicated for each liquid-applied joint sealant specified, including those referencing ASTM C920 classifications for type, grade, class, and uses related to exposure and joint substrates.
- D. Suitability for Immersion in Liquids: Where sealants are indicated for use for joints that will be continuously immersed in liquids, provide products that have undergone testing according to ASTM C1247. Liquid used for testing sealants is deionized water, unless otherwise indicated.
- E. Stain-Test-Response Characteristics: Where sealants are specified to be non-staining to porous substrates, provide products that have undergone testing according to ASTM C1248 and have not stained porous joint substrates indicated for Project.
- F. Suitability for Contact with Food: Where sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600.

2.2 JOINT SEALANT SCHEDULE

- A. Refer to Part 3: Joint Sealant Schedule for installation locations for the sealant materials listed in this section.

2.3 SILICONE JOINT SEALANTS

- A. Exterior Traffic (E/T): Single-Component, Nonsag or Self Leveling, Traffic-Grade, Neutral-Curing Silicone Joint Sealant: ASTM C920, Type S, Grade NS/SL, Class 100/50, for Use T.
 - 1. Products: Subject to compliance with requirements, provide one of the following products:
 - a. Dow Corning Corporation; DOWSIL NS or SL Parking Structure Sealant.
 - b. Pecora Corporation; 300 SL and 301 NS
 - c. Tremco Incorporated; Spectrem 800 or 900 SLL.
 - 2. Joint-Sealant Color: . As selected by Architect from manufacturer's full range of colors including custom color formulations..

- B. Exterior Non-Traffic (E/NT): Single-Component, Non-sag, Neutral-Curing, Non-Traffic Silicone Joint Sealant: ASTM C920, Type S, Grade NS, Class 100/50, for Use NT.
1. Products: Subject to compliance with requirements, provide one of the following products:
 - a. Dow Corning Corporation; DOWSIL 790.
 - b. Pecora Corporation; 890NST or 890FTS.
 - c. Tremco Incorporated; Spectrem 1
 - d. Sika Corporation; WS 290
 2. Joint-Sealant Color: . As selected by Architect from manufacturer's full range of colors, including custom color formulations..
- C. Interior Mildew-Resistant (I/M): Single-Component, Nonsag, Neutral-Curing (or Acid Curing Class 25) Silicone Joint Sealant: ASTM C920, Type S, Grade NS, Class 50, for Use NT.
1. Products: Subject to compliance with requirements, provide one of the following products:
 - a. Dow Corning Corporation; DOWSIL 786 Mildew Resistant.
 - b. Pecora Corporation; 898NST
 - c. Sika Corporation; Sikaflex-15 LM
 - d. Tremco Incorporated; Tremsil 200
 2. Joint-Sealant Color: color as selected by the Architect.

2.4 URETHANE JOINT SEALANTS

- A. Interior Traffic (I/T): Multi-component, Pourable, Traffic-Grade, Urethane Joint Sealant: ASTM C920. Type M, Grade P, Class 25, for Use T.
1. Products: Subject to compliance with requirements, provide one of the following products:
 - a. LymTal International, Inc.; Iso-Flex 880 GB.
 - b. Pecora Corporation; Urexpan NR-200.
 - c. Tremco Incorporated; Vulkem 445SS.
 - d. BASF Building Systems; MasterSeal SL 2.
 2. Joint-Sealant Color: . As selected by Architect from manufacturer's full range of colors including custom color formulations..

2.5 BUTYL SEALANTS

- A. Butyl-Rubber-Based Joint Sealants (BS): ASTM C1311.
1. Products: Subject to compliance with requirements, provide one of the following products:
 - a. Henry; HE 925 BES.
 - b. Pecora Corporation; BC 158.
 - c. Tremco Incorporated; Butyl Sealant.

2.6 LATEX JOINT SEALANTS

- A. Interior Non-Traffic (I/NT): Acrylic latex or siliconized acrylic latex, ASTM C834, Type OP or Type C, Grade NF.
1. Products: Subject to compliance with requirements, provide one of the following products:
 - a. Pecora Corporation; AC-20+ and AC*20+ FTR (Fire rated).
 - b. Tremco Incorporated; Tremflex 834.
 2. Joint-Sealant Color: Provide paint grade white, for field painting.

2.7 PREFORMED JOINT SEALANTS

- A. Sheet Sealant (S/PF): Pre-cured low-modulus silicone extrusion, in sizes to fit joint widths indicated, combined with a neutral-curing silicone sealant for bonding extrusions to substrates.
1. Products: Subject to compliance with requirements, provide one of the following products:
 - a. Dow Corning Corporation; DOWSIL 123 Silicone Seal
 - b. Pecora Corporation; Sil-Span.
 2. Basis of Design: EMSEAL Joint Systems, Ltd.; Emseal 25V.
 3. Properties: Permanently elastic, mildew resistant, non-migratory, non-staining, and compatible with joint substrates and other joint sealants.
 - a. Density: 10 lb/cu. ft

2.8 ACOUSTICAL JOINT SEALANTS

- A. Interior Acoustical (I/A): Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E90.
1. Products: Subject to compliance with requirements, provide one of the following products:
 - a. Accumetric LLC; BOSS 826 Acoustical Sound Sealant
 - b. Hilti Firestop; CP 506.
 - c. Pecora Corporation; AC-20 FTR
 - d. Tremco Incorporated; Tremflex 834
 - e. Specified Technologies, Inc.; Smoke and Acoustic Sealant.

2.9 JOINT SEALANT BACKING

- A. General: Provide sealant backings of material that are non-staining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

- B. Cylindrical Sealant Backings: ASTM C1330, Type C (closed-cell material with a surface skin) or Type B (bi-cellular material with a surface skin) as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
- C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.10 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Non-staining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint width and configuration, installation tolerances, and other conditions affecting joint-sealant performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
 - 1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
 - 2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include, but are not limited to, the following:

- a. Concrete.
 - b. Masonry.
 - c. Unglazed surfaces of ceramic tile.
 - d. Exterior insulation and finish systems.
- 3. Remove laitance and form-release agents from concrete.
 - 4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include, but are not limited to, the following:
 - a. Metal.
 - b. Glass.
 - c. Porcelain enamel.
 - d. Glazed surfaces of ceramic tile.
- B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
 - C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

- A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.
- B. Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
- C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
 - 1. Do not leave gaps between ends of sealant backings.
 - 2. Do not stretch, twist, puncture, or tear sealant backings.
 - 3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.
- D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
- E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
 - 1. Place sealants so they directly contact and fully wet joint substrates.
 - 2. Completely fill recesses in each joint configuration.

3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
1. Remove excess sealant from surfaces adjacent to joints.
 2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
 3. Provide concave joint profile per Figure 8A in ASTM C1193, unless otherwise indicated.
 - a. Use masking tape to protect surfaces adjacent to recessed tooled joints.
- G. Installation of Preformed Urethane Foam Sealants: Install each length of sealant immediately after removing protective wrapping. Do not pull or stretch material. Produce seal continuity at ends, turns, and intersections of joints. For applications at low ambient temperatures, apply heat to sealant in compliance with sealant manufacturer's written instructions.
- H. Where multiple layers of sealant are indicated, install each and allow curing per manufacturer's written instructions before proceeding with the next.
- I. Acoustical Sealant Installation: At sound-rated assemblies and elsewhere as indicated, seal construction at perimeters, behind control joints, and at openings, devices and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and with manufacturer's written recommendations.

3.4 FIELD QUALITY CONTROL: SEALANTS

- A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:
1. Extent of Testing: Test completed and cured sealant joints as follows:
 - a. Perform 10 tests for the first 1000 feet (or portion thereof) of joint length for each kind of sealant and joint substrate.
 - b. Perform 1 test for each 1000 feet (or portion thereof) of joint length thereafter or 1 test per each floor per elevation.
 2. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C1193 or Method A, Tail Procedure, in ASTM C1521.
 - a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
 3. Inspect tested joints and report on the following:
 - a. Whether sealants filled joint cavities and are free of voids.

- b. Whether sealant dimensions and configurations comply with specified requirements.
 - c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.
- 4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.
 - 5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.
- B. Evaluation of Field-Adhesion Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.5 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.6 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Final Acceptance. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.7 JOINT-SEALANT SCHEDULE

- A. Joint-Sealant Application (E/T): Exterior Joints in Horizontal Traffic Surfaces.
 - 1. Joint Locations:
 - a. Control and expansion joints in brick and concrete pavers.
 - b. Isolation and construction joints in cast-in-place concrete slabs.
 - c. Joints between plant-precast architectural concrete paving units.
 - d. Joints between paving and structures.
 - e. Joints in stone paving units, including steps.
 - f. Tile control and expansion joints.
 - g. Joints between different materials listed above.
 - h. Other joints as indicated.

B. Joint-Sealant Application (E/NT): Exterior Joints in Vertical Surfaces and Horizontal Non-traffic Surfaces.

1. Exterior Joint Locations:

- a. Construction joints in cast-in-place concrete.
- b. Joints between plant-precaster architectural concrete units.
- c. Control and expansion joints in unit masonry.
- d. Joints in dimension stone cladding.
- e. Joints in glass unit masonry assemblies.
- f. Joints in exterior insulation and finish systems.
- g. Joints between metal panels.
- h. Exterior perimeter joints of frames of doors and louvers.
- i. Exterior and interior perimeter joints of exterior window, storefront and curtainwall systems.
- j. Sealant installed in conjunction with metal flashing assemblies.
- k. Pipe, conduit, sleeves and other penetrations of materials listed above.
- l. Control and expansion joints in ceilings and other overhead surfaces.
- m. Joints between dissimilar materials.
- n. Full sealant bed for sill, receptor and threshold installations.
- o. Other joints as indicated.

C. Joint-Sealant Application (I/M): Mildew-resistant interior joints in vertical surfaces and horizontal non-traffic surfaces.

1. Joint Sealant Location:

- a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
- b. Tile control and expansion joints where sealant is indicated.
- c. Joints between shower enclosures and fittings and other wet areas and substrate.
- d. Perimeter of ceiling perimeter angles at clean room ceiling systems
- e. Perimeter of countertops and backsplashes to adjacent wall or millwork surfaces.
- f. Other joints as indicated.

D. Joint-Sealant Application (I/FDA): FDA/USDA approved; interior joints where sealant may come into contact with food.

1. Joint Sealant Location:

- a. Counter tops and shelving in contact with food products requiring sealants per FDA Guidelines.
- b. Other joints as indicated

E. Joint-Sealant Application (I/T): Interior joints in horizontal traffic surfaces.

1. Joint Locations:

- a. Isolation joints in cast-in-place concrete slabs.
- b. Control and expansion joints in stone flooring.
- c. Control and expansion joints in brick flooring.
- d. Control and expansion joints in tile flooring.
- e. Joints between dissimilar materials

- f. Other joints as indicated.
- F. Joint-Sealant Application (E/I): Exterior Joints in Horizontal Traffic Surfaces Subject To Water Immersion.
 - 1. Joint Locations:
 - a. Joints in pedestrian plazas.
 - b. Joints in swimming pool decks.
 - c. Other joints as indicated.
- G. Joint-Sealant Application (H/E): Exterior or Interior Joints in Vertical and Horizontal Surfaces Subject to Full Continuous Immersion in Chlorinated Swimming Pools or similar.
 - 1. Joint Locations:
 - a. Swimming Pools subject to chlorine shock
 - b. Where immersed in liquid other than water
 - c. Other joints as indicated.
- H. Joint Sealant Application (BS): Exterior joints in vertical and horizontal unexposed non-traffic surfaces.
 - 1. Joint locations:
 - a. Sealing stainless steel flashing in cavity and joints per Division 04 Section "Unit Masonry."
 - b. Sealing Air/Vapor and Vapor Permeable Barrier, accessory and transition materials per Division 07 Sections "Fluid-Applied Membrane Air and Vapor Barrier (AVB)" and "Fluid-Applied, Vapor-Permeable Membrane Air Infiltration Barrier (AIB)."
 - c. Sealing Roof and Wall Flashings and joints per Division 07 Section "Sheet Metal Flashing and Trim."
- I. Joint-Sealant Application (I/NT): Interior joints in vertical surfaces and horizontal non-traffic surfaces.
 - 1. Joint Locations:
 - a. Control joints on exposed interior surfaces of exterior walls.
 - b. Perimeter joints of exterior openings not otherwise specified to receive joint sealant type E/NT.
 - c. Vertical joints on exposed surfaces of interior unit masonry concrete walls and partitions.
 - d. Perimeter joints between interior wall surfaces and frames of interior doors and sidelights, interior vision panels and elevator entrances.
 - e. Joint between interior drywall ceilings and exposed masonry walls.
 - f. Exposed joints between interior dissimilar materials.
 - g. Base of hollow metal and aluminum door frames at joint to finish floor surface.
 - h. Other joints as indicated.
- J. Joint-Sealant Application (S/PF): Pre-formed product used in exterior joints.

1. Joint Sealant Locations:
 - a. Joints in sheet metal flashing where indicated
 - b. Repair of existing failed sealants where indicated.
 - c. Other details where indicated.

- K. Joint-Sealant Application (U/PF): Pre-formed product used in exterior and interior joints non-traffic horizontal and vertical applications.
 1. Joint Sealant Locations:
 - a. Joints wider than recommended by the sealant manufacturer for gunned or poured sealants.
 - b. Secondary (double) seal behind a backer rod and sealant for precast concrete installation, in a vertical or horizontal application.
 - c. Other details where indicated.

- L. Joint-Sealant Application (I/A): Interior acoustical joints in vertical surfaces and horizontal non-traffic surfaces.
 1. Joint Sealant Locations:
 - a. Top and bottom joints of nonrated interior masonry walls and gypsum board partitions that extend to underside of structure.
 - b. Provide around the perimeter of plumbing, mechanical and electrical devices and equipment, piping, wiring, conduit and other intrusions into and through non-fire rated walls with or without escutcheons, above and below finished ceilings.
 - c. Perimeter of ceiling perimeter angles at gasketed ceiling systems, except clean room.
 - d. Perimeter joints at dissimilar materials of interior non-fire rated gypsum board partitions.
 - e. Control joints in gypsum board partitions.
 - f. Other joints as indicated.

END OF SECTION 07 92 00

SECTION 07 95 13.13 - INTERIOR EXPANSION JOINT COVER ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes interior expansion joint cover assemblies.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for expansion joint cover assemblies.
- B. Shop Drawings: For each expansion joint cover assembly.
 - 1. Include plans, elevations, sections, details, splices, block-out requirement, attachments to other work, and line diagrams showing entire route of each expansion joint.
 - 2. Where expansion joint cover assemblies change planes, provide isometric or clearly detailed drawing depicting how components interconnect.
- C. Samples: For each expansion joint cover assembly and for each color and texture specified, full width by 6 inches long in size.
- D. Samples for Initial Selection: For each type of exposed finish.
 - 1. Include manufacturer's color charts showing the full range of colors and finishes available for each exposed metal and elastomeric-seal material.
- E. Samples for Verification: For each type of expansion joint cover assembly, full width by 6 inches (150 mm) long in size.
- F. Expansion Joint Cover Assembly Schedule: Prepared by or under the supervision of the supplier. Include the following information in tabular form:
 - 1. Manufacturer and model number for each expansion joint cover assembly.
 - 2. Expansion joint cover assembly location cross-referenced to Drawings.
 - 3. Nominal, minimum, and maximum joint width.
 - 4. Movement direction.
 - 5. Materials, colors, and finishes.

6. Product options.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data For Owner: For each type of expansion joint cover system installed in walking surfaces, include Owner's slip and trip -resistance maintenance requirements in maintenance manuals.
- B. Executed warranty.

1.5 QUALITY ASSURANCE

- A. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for materials and execution.
 - 1. Build mockup of typical expansion joint cover assembly as shown on Drawings.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.6 WARRANTY

- A. Special Warranty: The Joint Manufacturer and the Approved Installer shall jointly warrant to the building owner that the products supplied shall be free from manufacturing defects for a period of five (5) years from the date of installation.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

- A. Furnish units in longest practicable lengths to minimize field splicing.
- B. Include factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion joint cover assemblies.

2.2 PERFORMANCE REQUIREMENTS

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of architectural joint systems and are based on the specific systems indicated. Refer to Division 01 Section "Product Requirements."

1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

B. Expansion Joint Design Criteria:

1. Type of Movement: Wind sway.
 - a. Nominal Joint Width: As indicated on Drawings.
2. Type of Movement: Seismic.
 - a. Joint Movement: As indicated on Drawings.

2.3 WALL/ CEILING EXPANSION JOINT COVERS

A. Elastomeric-Seal Wall Joint Cover: Assembly consisting of elastomeric seal anchored to frames fixed to sides of joint gap.

1. Products: Subject to compliance with requirements, provide one of the following products:
 - a. Construction Specialties; FWF series.
 - b. MM Systems; FSW series.
 - c. Nystrom; LCW series.
 - d. Watson Bowman; CWWS series.
 - e. InPro; 101 Recessed Expansion Joint
2. Application: Wall to wall and Wall to corner.
3. Fire-Resistance Rating: Not less than that of adjacent construction.
4. Exposed Metal:
 - a. Aluminum: Manufacturer's standard.
 - b. Stainless steel: Manufacturer's standard.
 - c. Bronze: Manufacturer's standard.
 - d. Brass: Manufacturer's standard.
5. Seal: Preformed elastomeric membranes or extrusions.
 - a. Color: As selected by Architect from manufacturer's full range.

2.4 FIRE BARRIER:

- A. Provide in all horizontal and vertical UL rated floor and wall assemblies indicated on the drawings and as noted above.
- B. Top of Slab: Designed to be installed directly under the horizontal expansion joint.
 1. Basis of Design: Watson Bowman; HFG

2. Fire-Resistance Rating: Not less than that of adjacent construction.
 3. May be installed with or without an expansion joint cover. Provide 18 ga. galvanized steel cover where joint is hidden and behind non-accessible construction.
- C. Under Slab: Designed to be installed under the slab.
1. Basis of Design: Watson Bowman; UFG
 2. Fire-Resistance Rating: Not less than that of adjacent construction.
 3. May be installed with or without an expansion joint cover. Provide 18 ga. galvanized steel cover where joint is hidden and behind non-accessible construction.
- D. Vertical: Designed to be installed directly behind the vertical expansion joint.
1. Basis of Design: Watson Bowman; VFG
 2. Fire-Resistance Rating: Not less than that of adjacent construction.
 3. May be installed with or without an expansion joint cover. Provide 18 ga. galvanized steel cover where joint is hidden and behind non-accessible construction.

2.5 MATERIALS

- A. Aluminum: ASTM B221 (ASTM B221M), Alloy 6063-T5 for extrusions; ASTM B209 (ASTM B209M), Alloy 6061-T6 for sheet and plate.
1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.
- B. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304 for plates, sheet, and strips.
- C. Brass: ASTM B36/B36M, UNS Alloy C26000 for half hard sheet and coil.
- D. Bronze: ASTM B455, Alloy C38500 for extrusions; Alloy C23000 red brass for plates.
- E. Elastomeric Seals: Manufacturer's standard preformed elastomeric membranes or extrusions to be installed in metal frames.
- F. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.6 ALUMINUM FINISHES

- A. Mill finish.
- B. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
- C. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.

2.7 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: No. 4.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

2.8 COPPER-ALLOY FINISHES

- A. Buffed Finish: M21 (Mechanical Finish: buffed, smooth specular).
- B. Medium-Satin Finish: M32 (Mechanical Finish: directionally textured, medium satin).

2.9 ACCESSORIES

- A. Manufacturer's stainless-steel attachment devices. Include anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces where expansion joint cover assemblies will be installed for installation tolerances and other conditions affecting performance of the Work.
- B. Notify Architect where discrepancies occur that will affect proper expansion joint cover assembly installation and performance.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to expansion joint cover assembly manufacturer's written instructions.
- B. Coordinate and furnish anchorages, setting drawings, and instructions for installing expansion joint cover assemblies. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of expansion joint cover assemblies.

- B. Protect the installation from damage by work of other Sections. Where necessary due to heavy construction traffic, remove and properly store cover plates or seals and install temporary protection over expansion joint cover assemblies. Reinstall cover plates or seals prior to Final Acceptance.

END OF SECTION 07 95 13.13

SECTION 07 95 13.16 - EXTERIOR EXPANSION JOINT COVER ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes exterior building expansion joint cover assemblies.
- B. Related Sections include the following:
 - 1. Division 03 Section "Cast-in-Place Concrete" for cast-in architectural-joint-system frames furnished, but not installed, in this Section
 - 2. Division 07 Section "Sheet Metal Roofing" for sheet metal roof joint systems
 - 3. Division 07 Membrane Roof Sections for expansion joints included in roofing sections.
 - 4. Division 07 Section "Sheet Metal Flashing and Trim" for sheet metal wall joint systems

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review manufacturers installation checklist, joint types, movement requirements, loads, joint terminations and transitions and performance requirements.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for expansion joint cover assemblies.
- B. Shop Drawings: For each expansion joint cover assembly.
 - 1. Include plans, elevations, sections, details, splices, block-out requirement, attachments to other work, and line diagrams showing entire route of each expansion joint.
 - 2. Where expansion joint cover assemblies change planes, provide isometric or clearly detailed drawing depicting how components interconnect.
- C. Samples for Initial Selection: For each type of exposed finish.
 - 1. Include manufacturer's color charts showing the full range of colors and finishes available for each exposed metal and elastomeric seal material.

- D. Samples for Verification: For each type of expansion joint cover assembly, full width by **6 inches (150 mm)** long in size.
- E. Expansion Joint Cover Assembly Schedule: Prepared by or under the supervision of the supplier. Include the following information in tabular form:
 - 1. Manufacturer and model number for each expansion joint cover assembly.
 - 2. Expansion joint cover assembly location cross-referenced to Drawings.
 - 3. Nominal, minimum, and maximum joint width.
 - 4. Movement direction.
 - 5. Materials, colors, and finishes.
 - 6. Product options.
 - 7. Fire-resistance ratings.

1.5 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each fire-resistance-rated expansion joint cover assembly, for tests performed by a qualified testing agency.
- B. Manufacturers preinstallation checklist indicating locations, fire-ratings, joint widths, substrates, transitions, joint terminations, etc.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data For Owner: For each type of expansion joint cover system installed in walking surfaces, include Owner's slip and trip -resistance maintenance requirements in maintenance manuals.
- B. Executed warranty.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
 - 1. Installer must have attended an SWRI seminar within the past two years.
- B. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for materials and execution.
 - 1. Build mockup of typical expansion joint cover assembly as shown on Drawings.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 WARRANTY

- A. Special Warranty: The Joint Manufacturer and the Approved Installer shall jointly warrant that the products supplied shall be free from manufacturing defects for a period of five (5) years from the date of installation.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

- A. Furnish units in longest practicable lengths to minimize field splicing.
- B. Include factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion joint cover assemblies.

2.2 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Expansion joint cover assemblies shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 and the information provided on the drawings.
- B. Product Options: Drawings indicate size, profiles, and dimensional requirements of architectural joint systems and are based on the specific systems indicated. Refer to Division 01 Section "Product Requirements."
 - 1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
- C. Accessibility Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines (ADAAG)" and ICC A117.1.
- D. Expansion Joint Design Criteria:
 - 1. Type of Movement: Thermal and Wind sway.
 - a. Nominal Joint Width: As indicated on Drawings.
 - 2. Type of Movement: Seismic.
 - a. Joint Movement: As indicated on Drawings.

2.3 ACCEPTABLE MANUFACTURERS

- 1. Subject to the requirements of this section, provide products and systems from one of the following:
 - a. MM Systems Corporation; 50 MM Way, Pendergrass, GA 30567; (800) 241-3460
 - b. Construction Specialties, Inc.; (800) 233-8493

c. Nystrom; 9300 73rd Ave N, Minneapolis, MN 55428; (800) 547-2635

2.4 EXTERIOR EXPANSION JOINT COVERS

A. Architectural Joint Systems for Exterior Walls:

1. Basis-of-Design Product: MM Systems Corporation; ESS-series
2. Type: Preformed cellular foam
 - a. Foam Material: Manufacturer's standard Polyurethane
 - 1) Color: As selected by Architect from manufacturer's full range
3. Location: Rainscreens; Face Brick layers of masonry cavity walls

B. Insulated Architectural Joint Systems for Exterior Walls:

1. Basis-of-Design Product: MM Systems Corporation; IVB
2. Type: Captured insulation
 - a. Description: engineered expansion joint filler comprised of glass-fiber blanket insulation laminated between two faces of vapor barrier material
 - b. Seal Material: Manufacturer's standard vapor barrier
 - 1) Color: Black
 - c. Insulation: Glass-fiber or Mineral wool blanket insulation
 - 1) R-value: R-15 minimum

C. Architectural Joint Systems for Plaza Floor/Roof Systems:

1. Basis-of-Design Product: MM Systems Corporation; SSD-series
2. Type: Preformed cellular foam with traffic cover plate and secondary gutter
 - a. Foam Material: Manufacturer's standard
 - 1) Color: Manufacturer's standard
 - 2) Cover Plate Anchor: Aluminum or Stainless Steel, integral to poured foam seal
3. Fire-Resistance Rating: Provide joint system and fire-barrier assembly with a rating not less than that of adjacent construction.

D. Architectural Joint Systems for Exterior Roof-Wall:

1. Basis-of-Design Product: MM Systems Corporation; WJL-series
2. Type: Cover-plate
 - a. Exposed Metal: Aluminum
 - 1) Finish: Class I, clear anodic

- b. Secondary Seal: Manufacturer's standard extruded-elastomeric seal designed to prevent water and moisture infiltration

2.5 MOISTURE BARRIER:

- A. Provide where indicated on drawings.
- B. EPDM Bellows:
 - 1. Basis of Design: Watson Bowman; EVS
 - 2. Rubber bellows profile integrally attached to metal flanges.
 - 3. Provide factory prefabricated transitions.
 - 4. Install flanges over waterproofing membrane with self-adhering transition membrane.
- C. Neoprene Gutter
 - 1. Basis of Design: Watson Bowman; BOG
 - 2. Flexible fabric reinforced neoprene gutter that satisfies the required movement criteria and compresses without damage during the full cycle of joint closure.
 - 3. Gutter collects and drains excess amounts of moisture through a drain tube.
 - 4. Gutter is held in place by an expansion joint anchored into a preformed block-out.

2.6 MATERIALS

- A. Aluminum: **ASTM B221 (ASTM B221M)**, Alloy 6063-T5 for extrusions; **ASTM B209 (ASTM B209M)**, Alloy 6061-T6 for sheet and plate.
 - 1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.
- B. Elastomeric Seals: Manufacturer's standard preformed elastomeric membranes or extrusions to be installed in metal frames.

2.7 ALUMINUM FINISHES

- A. Mill finish.
- B. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.

2.8 ACCESSORIES

- A. Manufacturer's stainless-steel attachment devices. Include anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces where expansion joint cover assemblies will be installed for installation tolerances and other conditions affecting performance of the Work.
- B. Notify Architect where discrepancies occur that will affect proper expansion joint cover assembly installation and performance.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to expansion joint cover assembly manufacturer's written instructions.
- B. Coordinate and furnish anchorages, setting drawings, and instructions for installing expansion joint cover assemblies. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of expansion joint cover assemblies.

3.3 INSTALLATION

- A. Comply with manufacturer's written instructions for storing, handling, and installing expansion joint cover assemblies and materials unless more stringent requirements are indicated.
- B. Compressed Foam
 - 1. The contractor shall clean the joint opening of all contaminants immediately prior to installation of expansion joint system.
 - 2. Repair spalled, irregular or unsound joint surfaces using accepted industry practices for repair of the substrates in question. Remove protruding roughness to ensure joint sides are smooth.
 - 3. Ensure that there is sufficient depth to receive the full depth of the size of the Compressed Foam being installed plus at least ¼-inch (6mm) for the application of corner beads.
 - 4. No drilling, or screwing, or fasteners of any type are permitted to anchor the sealant system into the substrate.
- C. Metal Frames: Perform cutting, drilling, and fitting required to install expansion joint cover assemblies.
 - 1. Install in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
 - 2. Adjust for differences between actual structural gap and nominal design gap due to ambient temperature at time of installation.
 - 3. Cut and fit ends to accommodate thermal expansion and contraction of metal without buckling of frames.
 - 4. Install frames in continuous contact with adjacent surfaces.

- a. Shimming is not permitted.
- 5. Locate anchors at interval recommended by manufacturer, but not less than **3 inches (75 mm)** from each end and not more than **24 inches (600 mm)** o.c.
- D. Seals: Install elastomeric seals and membranes in frames to comply with manufacturer's written instructions. Install with minimum number of end joints.
 - 1. Provide in continuous lengths for straight sections.
 - 2. Seal transitions. Vulcanize or heat-weld field-spliced joints as recommended by manufacturer.
 - 3. Installation: Mechanically lock seals into frames or adhere to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.
- E. Install with hairline mitered corners where expansion joint cover assemblies change direction or abut other materials.
- F. Terminate exposed ends of expansion joint cover assemblies with field- or factory-fabricated termination devices.
- G. Moisture Barrier Drainage: If indicated, provide drainage fitting and connect to drains.

3.4 CONNECTIONS

- A. Transition to Roof Expansion Joint Covers: Coordinate installation of exterior wall and soffit expansion joint covers with roof expansion joint covers specified in Division 07 Roofing specifications. Install factory-fabricated units at transition between exterior walls and soffits and roof expansion joint cover assemblies.

3.5 PROTECTION

- A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.
- B. Protect the installation from damage by work of other Sections.

END OF SECTION 07 95 13.16

SECTION 08 11 13 - HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Interior steel doors and frames.
- 2. Exterior steel doors and frames.

- B. Related Sections:

- 1. Division 08 Section "Door Hardware" for door hardware for hollow metal doors
- 2. Division 26 Sections for electrical connections including conduit and wiring for door controls and operators

1.3 DEFINITIONS

- A. Minimum Thickness: Minimum thickness of base metal without coatings according to NAAMM-HMMA 803 or SDI A250.8.
- B. Standard Hollow Metal Work: Hollow metal work fabricated according to ANSI/SDI A250.8.
- C. Custom Hollow Metal Work: Hollow metal work fabricated according to ANSI/NAAMM-HMMA 861.

1.4 COORDINATION

- A. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.
- B. Coordinate requirements for installation of door hardware, electrified door hardware, and access control and security systems.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, core descriptions, fire-resistance ratings, temperature-rise ratings, and finishes.
- B. Shop Drawings
 - 1. Elevations of each door design
 - 2. Details of doors, including vertical and horizontal edge details and metal thicknesses
 - 3. Frame details for each frame type, including dimensioned profiles and metal thicknesses
 - 4. Locations of reinforcement and preparations for hardware
 - 5. Details of each different wall opening condition
 - 6. Details of anchorages, joints, field splices, and connections
 - 7. Details of accessories
 - 8. Details of moldings, removable stops, and glazing
 - 9. Details of conduit and preparations for power, signal, and control systems
- C. Samples for Initial Selection: For hollow-metal doors and frames with factory-applied color finishes.
- D. Samples for Verification:
 - 1. Finishes: For each type of exposed finish required, prepared on Samples of not less than 3 by 5 inches.
 - 2. Fabrication: Prepare Samples approximately 12 by 12 inches to demonstrate compliance with requirements for quality of materials and construction:
 - a. Doors: Show vertical-edge, top, and bottom construction; core construction; and hinge and other applied hardware reinforcement. Include separate section showing glazing if applicable.
 - b. Frames: Show profile, corner joint, floor and wall anchors, and silencers. Include separate section showing fixed hollow metal panels and glazing if applicable.
- E. Product Schedule: For hollow-metal doors and frames, prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final door hardware schedule.

1.7 INFORMATIONAL SUBMITTALS

- A. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
 - 2. Environmental Product Declaration: For each product.
 - 3. Health Product Declaration: For each product.
 - 4. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
- B. Qualification Data: For door inspector.
 - 1. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, section 5.2.3.1.
 - 2. Egress Door Inspector: Submit documentation of compliance with NFPA 101, section 7.2.1.15.4.
 - 3. Submit copy of DHI Fire and Egress Door Assembly Inspector (FDAI) certificate.

- C. Product Test Reports: For each type of fire-rated hollow-metal door and frame assembly for tests performed by a qualified testing agency indicating compliance with performance requirements.
- D. Oversize Construction Certification: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
- E. Field quality control reports.

1.8 CLOSEOUT SUBMITTALS

- A. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.

1.9 QUALITY ASSURANCE

- A. Fire-Rated Door Inspector Qualifications: Inspector for field quality control inspections of fire-rated door assemblies shall meet the qualifications set forth in NFPA 80, section 5.2.3.1 and the following:
 - 1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAI) certification.
- B. Egress Door Inspector Qualifications: Inspector for field quality control inspections of egress door assemblies shall meet the qualifications set forth in NFPA 101, Section 7.2.1.15.4 and the following:
 - 1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAI) certification.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver hollow metal work palletized, wrapped, or crated to provide protection during transit and Project-site storage. Do not use non-vented plastic.
 - 1. Provide additional protection to prevent damage to factory-finished units.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store hollow metal work under cover at Project site. Place in stacks of five units maximum in a vertical position with heads up, spaced by blocking, on minimum **4-inch- (102-mm-)**high wood blocking. Do not store in a manner that traps excess humidity. Provide minimum **1/4-inch (6-mm)** space between each stacked door to permit air circulation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers, subject to compliance with requirements, provide products from one of the following manufacturers:
1. Baron Metal Industries Inc.; an Assa Abloy Group company
 2. Ceco Door Products; an Assa Abloy Group company
 3. Concept Frames, Inc Curries Company; an Assa Abloy Group company
 4. DCI Hollow Metal
 5. Fleming Door Products Ltd.; Assa Abloy Group Company
 6. JR Metal Frames Manufacturing, Inc.
 7. Metropolitan Door Industries Corp.
 8. National Custom Hollow Metal Doors & Frames
 9. Pioneer Industries, Inc.
 10. Republic Doors and Frames
 11. Steelcraft; an Allegion company
 12. Metropolitan Door Industries Corp.

2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings and temperature-rise limits indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
1. Smoke- and Draft-Control Assemblies: Provide an assembly with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105.
 2. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 3. Temperature-Rise Limit: At vertical exit enclosures and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than **450 deg F (250 deg C)** above ambient after 30 minutes of standard fire-test exposure.
- B. Fire-Rated, Borrowed-Lite Assemblies: Complying with NFPA 80 and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for fire-protection ratings indicated, based on testing according to NFPA 257 or UL 9.
- C. Thermally Rated Door Assemblies: Provide door assemblies with U-factor of not more than **0.40 deg Btu/F x h x sq. ft.** when tested according to ASTM C518.

2.3 INTERIOR STANDARD STEEL DOORS AND FRAMES

- A. Extra-Heavy-Duty Doors and Frames: ANSI/SDI A250.8, Level 3; ANSI/SDI A250.4, Level A.
1. Doors:
 - a. Type: As indicated in the Door and Frame Schedule.
 - b. Thickness: 1-3/4 inches.
 - c. Face: Uncoated steel sheet, minimum thickness of 0.053 inch.

- d. Edge Construction: Model 2, Seamless.
 - e. Vertical Edges for Single-Acting Doors: Beveled 1/8 inch in 2 inches.
 - f. Vertical Edges for Double-Acting Doors: Round vertical edges with 2-1/8-in radius.
 - g. Core: Manufacturer's standard.
 - h. Fire-Rated Core: Manufacturer's standard vertical steel stiffener core for fire-rated and temperature-rise-rated doors.
 - i. Thermal-Rated (Insulated) Doors: All exterior doors and interior, where indicated, fabricated with thermal-resistance value (R-value) of not less than 2.1 deg F x h x sq. ft./Btu when tested according to ASTM C1363. Full 1-3/4-inch-thick rigid polyurethane, adhered to inside of door faces core with waterproof adhesive for bond strength and rust prevention.
2. Frames:
- a. Materials: Uncoated steel sheet.
 - 1) Door Frames for Openings 48 Inches Wide or Less: Fabricated from 16G 0.0598-inch-thick steel sheet.
 - 2) Door Frames for Openings More Than 48 Inches Wide: Fabricated from 14G 0.0747-inch-thick steel sheet.
 - 3) Glazed Opening Frames: Fabricated from 16G 0.0598-inch-thick steel sheet.
 - b. Knocked down frames are not an acceptable substitute for welded frames.
 - c. Frames: Fabricated from same thickness material as adjacent door frame.
 - d. Construction: Full profile welded.
3. Exposed Finish: Factory Primed.
- B. Top and Bottom Channels: Closed with continuous channels, 16G minimum 0.0598 inch thick, of same material as face sheets and spot welded to both face sheets. Seal all joints to prevent infestation of insects.
- C. Hardware Reinforcement:
- 1. Doors shall be mortised, reinforced, drilled and tapped at the factory for fully templated hardware only, in accord with the approved hardware schedule and templates provided by the hardware supplier. Where surface-mounted hardware is to be applied, door shall have reinforcing plates only.
 - 2. Minimum gauges for hardware reinforcing plates shall be as follows:
 - a. Hinge and Pivot Reinforcements: 7 gauge
 - b. Reinforcements for Lock Face, Flush Bolts, Concealed Holders, Concealed or Surface-Mounted Closers: 12 gauge
 - c. Reinforcements for All Other Surface-Mounted Hardware: 12 gauge
- D. Provide astragals for all pairs of doors except where specifically omitted.
- 2.4 EXTERIOR STANDARD STEEL DOORS AND FRAMES
- A. Construct hollow-metal doors and frames to comply with standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.
- B. Extra-Heavy-Duty Doors and Frames: ANSI/SDI A250.8, Level 3; ANSI/SDI A250.4, Level A.
- 1. Doors:
 - a. Type: As indicated in the Door and Frame Schedule.
 - b. Thickness: 1-3/4 inches.

- c. Face: Metallic-coated steel sheet, minimum thickness of 0.053 inch, with minimum A60 coating.
 - d. Edge Construction: Model 2, Seamless.
 - e. Edge Bevel: Bevel lock and hinge edges 1/8 inch in 2 inches.
 - f. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.
 - g. Bottom Edges: Close bottom edges of doors with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.
 - h. Core: Manufacturer's standard.
 - i. Fire-Rated Core: Manufacturer's standard laminated mineral board core for fire-rated doors.
- 2. Frames:
 - a. Materials: Metallic-coated steel sheet, minimum thickness of 0.053 inch, with minimum A60 (ZF180) coating.
 - b. Construction: Full profile welded.
 - 3. Exposed Finish: Factory primed.
- C. Hardware Reinforcements
- 1. Frames shall be mortised, reinforced, drilled and tapped at the factory for fully templated mortised hardware only, in accord with approved hardware schedule and templates provided by the hardware contractor. When surface-mounted hardware is to be applied, frames shall have reinforcing plates only.
 - 2. Minimum thickness of hardware reinforcing plates shall be as follows:
- D. Hinge and Pivot Reinforcements: 7 gauge, 1-1/4-inch x 10 inch minimum size
- 1. Strike Reinforcements: 12 gauge
 - 2. Flush Bolt Reinforcements: 12 gauge
 - 3. Closer Reinforcements: 12 gauge
 - 4. Reinforcements For: Surface-mounted hardware - 12 gauge; hold-open arms - 12 gauge; surface panic devices - 12 gauge
- E. Head Reinforcement: Provide minimum 0.093-inch-thick, steel channel or angle stiffener for opening widths more than 48 inches.

2.5 FRAME ANCHORS

- A. Jamb Anchors:
- 1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 16G 0.0598 inch thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long.
 - 2. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 18G 0.0478 inch thick.
 - 3. Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum 3/8-inch-diameter bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.
- B. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor.

- C. Floor Anchors for Concrete Slabs with Underlayment: Adjustable-type anchors with extension clips, allowing not less than **2-inch** height adjustment. Terminate bottom of frames at top of underlayment.
- D. Material: ASTM A879/A879M, Commercial Steel (CS), **04Z (12G)** coating designation; mill phosphatized.
 - 1. For anchors built into exterior walls, steel sheet complying with ASTM A1008/A1008M or ASTM A1011/A1011M; hot-dip galvanized according to ASTM A153/A153M, Class B.

2.6 MATERIALS

- A. **Recycled Content of Steel Products:** Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Cold-Rolled Steel Sheet: ASTM A1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.
- C. Hot-Rolled Steel Sheet: ASTM A1011/A1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
- D. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with minimum A60 metallic coating.
- E. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A153/A153M.
- F. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow metal frames of type indicated.
- G. Mineral-Fiber Insulation: ASTM C665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool with **6- to 12-lb/cu. ft.** density; with maximum flame-spread and smoke-development indexes of 25 and 50, respectively; passing ASTM E136 for combustion characteristics.
- H. Glazing: Comply with requirements in Division 08 Section "Glazing."
- I. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for **15-mil** dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.7 FABRICATION

- A. Door Astragals: Provide overlapping astragal on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum **3/4 inch** beyond edge of door on which astragal is mounted or as required to comply with published listing of qualified testing agency.

- B. Hollow-Metal Frames: Fabricate in one piece except where handling and shipping limitations require multiple sections. Where frames are fabricated in sections, provide alignment plates or angles at each joint, fabricated of metal of same or greater thickness as frames.
 - 1. Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by welding, or by rigid mechanical anchors.
 - 2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 - 3. Door Silencers: Except on weather-stripped frames, drill stops to receive door silencers as follows. Keep holes clear during construction.
 - a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
 - b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.
- C. Hardware Preparation: Factory prepare hollow-metal doors and frames to receive templated mortised hardware, and electrical wiring; include cutouts, reinforcement, mortising, drilling, and tapping according to ANSI/SDI A250.6, the Door Hardware Schedule, and templates.
 - 1. Reinforce doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.
 - 2. Comply with BHMA A156.115 for preparing hollow-metal doors and frames for hardware.
- D. Glazed Lites: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with butted hairline joints.
 - 1. Provide stops and moldings flush with face of door, and with square stops unless otherwise indicated.
 - 2. Multiple Glazed Lites: Provide fixed and removable stops and moldings so that each glazed lite is capable of being removed independently.
 - 3. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames. Provide loose stops and moldings on inside of hollow-metal doors and frames.
 - 4. Coordinate rabbet width between fixed and removable stops with glazing and installation types indicated.
 - 5. Provide stops for installation with countersunk flat- or oval-head machine screws spaced uniformly not more than **9 inches** o.c. and not more than **2 inches** o.c. from each corner.

2.8 STEEL FINISHES

- A. Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.
 - 1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with ANSI/SDI A250.10; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations before frame installation.

- C. Prepare written report, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
- B. Prior to installation, adjust and securely brace welded hollow metal frames for squareness, alignment, twist, and plumbness to the following tolerances:
 - 1. Squareness: Plus or minus **1/16 inch**, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - 2. Alignment: Plus or minus **1/16 inch**, measured at jambs on a horizontal line parallel to plane of wall.
 - 3. Twist: Plus or minus **1/16 inch**, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - 4. Plumbness: Plus or minus **1/16 inch**, measured at jambs on a perpendicular line from head to floor.
- C. Drill and tap doors and frames to receive surface-mounted door hardware.

3.3 INSTALLATION

- A. Install hollow-metal doors and frames plumb, rigid, properly aligned, and securely fastened in place. Comply with approved Shop Drawings and with manufacturer's written instructions.
- B. Hollow-Metal Frames: Comply with ANSI/SDI A250.11.
 - 1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces without damage to completed Work.
 - a. Where frames are fabricated in sections, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces. Touch-up finishes.
 - b. Install frames with removable stops located on secure side of opening.
 - 2. Fire-Rated Openings: Install frames according to NFPA 80.
 - 3. Floor Anchors: Secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with power-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.
 - 4. Solidly pack mineral-fiber insulation inside frames.
 - 5. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout or mortar.
 - 6. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
 - 7. Installation Tolerances: Adjust hollow-metal frames to the following tolerances:
 - a. Squareness: Plus or minus **1/16 inch**, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.

- b. Alignment: Plus or minus **1/16 inch**, measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus **1/16 inch**, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus **1/16 inch**, measured at jambs at floor.
- C. Hollow-Metal Doors: Fit and adjust hollow-metal doors accurately in frames, within clearances specified below.
- 1. Non-Fire-Rated Steel Doors: Comply with ANSI/SDI A250.8.
 - 2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
 - 3. Smoke-Control Doors: Install doors according to NFPA 105.
- D. Glazing: Comply with installation requirements in Section 088000 "Glazing" and with hollow-metal manufacturer's written instructions.

3.4 FIELD QUALITY CONTROL

- A. Inspection Agency: Engage a qualified inspector to perform inspections and to furnish reports to Architect.
- B. Inspections:
- 1. Fire-Rated Door Inspections: Inspect each fire-rated door according to NFPA 80, Section 5.2.
 - 2. Egress Door Inspections: Inspect each door equipped with panic hardware, each door equipped with fire exit hardware, each door located in an exit enclosure, each electrically controlled egress door, and each door equipped with special locking arrangements according to NFPA 101, Section 7.2.1.15.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.
- E. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in NFPA 80 and NFPA 101.

3.5 REPAIR

- A. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.
- B. Metallic-Coated Surface Touchup: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.
- C. Factory-Finish Touchup: Clean abraded areas and repair with same material used for factory finish according to manufacturer's written instructions.
- D. Touchup Painting: Cleaning and touchup painting of abraded areas of paint are specified in painting Sections.

END OF SECTION 08 11 13

SECTION 08 12 16 – GLAZED INTERIOR ALUMINUM PARTITIONS, DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Interior aluminum frames for doors installed in gypsum board partitions.
 - 2. Interior aluminum frames for glazing installed in gypsum board partitions
 - 3. Interior aluminum doors.
- B. Related Sections include the following:
 - 1. Division 06 Section “Miscellaneous Rough Carpentry”
 - 2. Division 09 Section “Gypsum Board Systems”
 - 3. Division 08 Section "Flush Wood Doors" for wood doors installed in interior aluminum frames.
 - 4. Division 08 Section "Door Hardware" for door hardware.
 - 5. Division 08 Section "Glazing" for glass in interior aluminum frames.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of interior aluminum frame indicated.
- B. Shop Drawings: For interior aluminum frames.
 - 1. Include elevations, sections, and installation details for each wall-opening condition.
 - 2. Include details for each frame type, including dimensioned profiles and metal thicknesses.
 - 3. Include locations of reinforcements and preparations for hardware.
 - 4. Include details of anchorages, joints, field splices, connections, and accessories.
 - 5. Include details of moldings, removable stops, and glazing.
- C. Samples for Verification: 12-inch- (300-mm-) long framing member with factory-applied finish for each type of interior aluminum frame indicated.

- D. Fabrication Sample: For each vertical-to-horizontal intersection of systems, made from 12-inch (300-mm) lengths of full-size components and showing details of assembly.
- E. Product Schedule: For aluminum frames. Use same designations indicated on Drawings. Coordinate with door hardware schedule and glazing.

1.5 INFORMATIONAL SUBMITTALS

- A. Manufacturer qualifications.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For interior aluminum frames to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Manufacturer shall demonstrate previous experience in manufacturing of interior aluminum office front framing for a period of not less than 10 years on comparable sized project.
- B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for fabrication and installation.
 - 1. Build mockup of each type of aluminum frame and door in typical wall area as shown on Drawings.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Deliver frames in cartons to provide protection during transit and storage at project site.
- B. Inspect frames upon delivery for damage.
 - 1. Repair minor damage to pre-finished products by means as recommended by manufacturer.
 - 2. Replace frames that cannot be satisfactorily repaired.
- C. Store frames at project site under cover and as near as possible to final installation location. Do not use covering material that will cause discoloration of aluminum finish.

1.9 ENVIRONMENTAL REQUIREMENTS

- A. Do not begin installation of frames or doors until area of work has been completely enclosed and interior is protected from the elements.
- B. Maintain temperature and humidity in areas of installation within reasonable limits, as close as possible to final occupancy. If necessary, provide temperature control and ventilation to maintain required environmental conditions.

1.10 WARRANTY

- A. Warrant against defects in manufacturing of materials for a period of 2 years from date of substantial completion.
- B. Warrant framing finish against defects, including cracking, flaking, blistering, peeling and excessive fading, chalking and non-uniformity in color for a period of 5 years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturer: Basis-of-Design - Wilson Partitions
- B. Subject to compliance with the requirements, other acceptable manufacturers include:
 - 1. Kawneer InFrame Interior Framing System
 - 2. Modulex Products, Inc.
 - 3. RACO Interior Products, Inc.
 - 4. Versatrac Frames; a division of American Door Products Inc.
 - 5. Wilson Partitions; a division of Arcadia, Inc.
- C. Single Source Responsibility: Provide aluminum frames and accessories produced by a single manufacturer for each type of product indicated.

2.2 COMPONENTS

- A. Aluminum Framing, General: **ASTM B221 (ASTM B221M)**, 6063-T5 or with alloy and temper required to suit structural and finish requirements, not less than **0.062 inch (1.6 mm)** thick.
- B. Door Frames: Extruded aluminum, reinforced for hinges, strikes, and closers.
- C. Glazing Frames: Extruded aluminum, for indicated glass thickness.
- D. Doors: As specified in Section 084113 "Aluminum-Framed Entrances and Storefronts."
 - 1. Door Operation: Swinging..

- E. Door Finish: Match frame and trim finish.
- F. Frame and Trim Finish: Clear-anodized aluminum.
- G. Trim: Extruded aluminum, not less than **0.062 inch (1.6 mm)** thick, with removable snap-in casing trim, glazing stops, and door stops without exposed fasteners.

2.3 ACCESSORIES

- A. Fasteners: Aluminum, nonmagnetic, stainless-steel or other noncorrosive metal fasteners compatible with frames, stops, panels, reinforcement plates, hardware, anchors, and other items being fastened.
- B. Door Silencers: Manufacturer's standard continuous mohair, wool pile, or vinyl seals in black color.
- C. Glazing Gaskets: Manufacturer's standard extruded or molded rubber or plastic, to accommodate glazing thickness indicated; in black.
- D. Glazing: Comply with requirements in Division 08 Section "Glazing"
- E. Hardware: Comply with requirements in Division 08 Door Hardware Sections.

2.4 FABRICATION

- A. Factory prepare aluminum frames to receive templated mortised hardware; include cutouts, reinforcements, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in Section 087100 "Door Hardware."
 - 1. Locate hardware cutouts and reinforcements as required by fire-rated label for assembly.
- B. Components: Fabricate components for installation with concealed fastening devices and pressure-fit members that will not damage adjacent construction. Fabricate for installation with continuous seals at floor, ceiling, and other locations where partition assemblies abut fixed construction and for installation of sound attenuation insulation in partition cavities.
- C. Framing:
 - 1. Fabricate components for full-contact hairline joints.
 - 2. Provide internal splines, clips, or reinforcements for alignment of mechanical joints.
 - 3. Fabricate components for concealed anchorage and assembly fasteners.
 - 4. Provide resilient stops or gaskets to prevent door contact with framing in closed position.
- D. Fabricate frames for glazing with removable stops to allow glazing replacement without dismantling frame.
 - 1. Locate removable stops on the inside of spaces accessed by keyed doors.
- E. Fabricate components to allow secure installation without exposed fasteners.

- F. Glass: Fabricate glass to size before delivery.
 - 1. Butt-Glazed Lites: Fabricate to size for uniform joint widths with small chamfers on both sides of joint edges.

2.5 GENERAL FINISH REQUIREMENTS

- A. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls, floors, and ceilings, for conditions affecting performance of work.
 - 1. Verify that wall thickness does not exceed standard tolerances allowed by throat size indicated.
 - 2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with frame manufacturer's written installation instructions.
- B. Assemble components with full-contact, hairline joints that are accurately aligned.
- C. Anchor assemblies rigidly and securely to floor and to concealed framing supports in adjacent partitions and ceilings.
- D. Install aluminum frames plumb, rigid, properly aligned, and securely fastened in place; according to manufacturer's written instructions.
- E. Install frame components in the longest possible lengths with no piece less than **48 inches (1220 mm)**; components **72 inches (1830 mm)** or shorter shall be one piece.
 - 1. Use concealed installation clips to produce tightly fitted and aligned splices and connections.
 - 2. Secure clips to extruded main-frame components and not to snap-in or trim members.
 - 3. Do not leave screws or other fasteners exposed to view when installation is complete.
- F. Glass: Install glass according to Section 088000 "Glazing" and aluminum-frame manufacturer's written instructions.

- G. Doors: Install door-and-frame and glazing-and-glazing-frame assemblies securely anchored to partitions and with doors aligned and fitted. Install and adjust door hardware for proper operation
 - 1. Install doors with uniform jamb and head clearances.
 - 2. Install doors plumb, level, and parallel to partition so that doors have uniform contact with frame stops.
 - 3. Adjust hardware for smooth, quiet, accurate operation and full contact with acoustical gaskets in closed position.

- H. Door Hardware: Install according to Section 087100 "Door Hardware" and aluminum-frame manufacturer's written instructions.

- I. Gasket Glazing:
 - 1. Install gaskets with joints only at corners.
 - 2. Install gaskets with full-contact corner joints.

- J. Butt Glazed Joints:
 - 1. Use temporary spacers to maintain uniform joint width.
 - 2. Mask adjacent surfaces to control size of silicone bead and to prevent misapplications of sealant to framing and vision surfaces of glass.
 - 3. Fill joints with sealant.
 - 4. Extend sealant below sightline of framing and stops.
 - 5. Tool sealant on both sides of glass to ensure complete contact with joint surfaces and to form smooth, concave exposed surfaces. Remove masking immediately after tooling.
 - 6. Provide temporary bracing as needed to maintain joint alignment during sealant curing period.
 - 7. Finished Appearance: Smooth surfaces free of gaps, voids, bubbles, lumps, crevices, runs, drips, striations, and other irregularities.

- K. Tape Glazing:
 - 1. Install tape on fixed stop form continuous airtight seals. Do not stretch tapes to make them fit.
 - 2. Butt tape corners, do not lap.
 - 3. Install tape approximately 1/16 inch below sightline.

- L. Tolerances:
 - 1. Plumb: Within 1/8 inch in partition height.
 - 2. Level: Within 1/8 inch in 12 ft.

3.3 ADJUSTING

- A. Inspect installation, correct misalignments, and tighten loose connections.

- B. Doors: Adjust doors to operate smoothly and easily, without binding or warping. Adjust hardware to function smoothly, and lubricate as recommended by manufacturer.

3.4 CLEANING

- A. Clean exposed frame surfaces promptly after installation, using cleaning methods recommended by frame manufacturer and according to AAMA 609 & 610.
- B. Touch up marred frame surfaces so touchup is not visible from a distance of **48 inches (1220 mm)** as viewed by Architect. Remove and replace frames with damaged finish that cannot be satisfactorily repaired.

END OF SECTION 08 12 16

SECTION 08 14 16 - FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Five-ply flush wood doors for opaque finish.
 - 2. Factory fitting flush wood doors to frames and factory machining for hardware.
- B. Related Sections:
 - 1. Division 08 Section "Hollow Metal Doors and Frames" for metal door frames.
 - 2. Division 08 Section "Door Hardware" for wood door hardware.
 - 3. Division 08 Section "Glazing" for glass view panels in flush wood doors.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including the following:
 - 1. Door core materials and construction.
 - 2. Door edge construction
 - 3. Door face type and characteristics.
 - 4. Door louvers.
 - 5. Door trim for openings.
 - 6. Door frame construction.
 - 7. Factory-machining criteria.
 - 8. Factory-finishing specifications.
- B. Shop Drawings: Indicate location, size, and hand of each door; elevation of each type of door; construction details not covered in Product Data; and the following:
 - 1. Door schedule indicating door and frame location, type, size, fire protection rating, and swing.
 - 2. Door schedule using same reference numbers for details and openings as those on Drawings. Coordinate with hollow metal and hardware schedules.

3. Indicate door elevations, dimension and locations of hardware, lite and louver cutouts, and glazing thicknesses.
 4. Indicate details of frame for each frame type, including dimensions and profile.
 5. Indicate details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
 6. Indicate dimensions and locations of blocking for hardware attachment.
 7. Indicate dimensions and locations of mortises and holes for hardware.
 8. Indicate clearances and undercuts.
 9. Indicate requirements for veneer matching.
 10. Indicate doors to be factory finished and application requirements.
 11. Apply AWI Quality Certification Program label to Shop Drawings.
- C. Door Schedule: Use same reference numbers for details and openings as those on Drawings. Coordinate with hollow metal and hardware schedules.
- D. Samples for Initial Selection: For factory-finished doors.
- E. Samples for Verification:
1. Factory finishes applied to actual door face materials, approximately 8 by 10 inches, for each material and finish. For each wood species and transparent finish, provide set of three samples showing typical range of color and grain to be expected in the finished work.
 2. Corner sections of doors, approximately 8 by 10 inches, with door faces and edges representing actual materials to be used.
 - a. Provide samples for each species of veneer and solid lumber required.
 - b. Provide samples for each color, texture, and pattern of plastic laminate required.
 - c. Finish veneer-faced door samples with same materials proposed for factory-finished doors.

1.5 INFORMATIONAL SUBMITTALS

- A. Quality Standard Compliance Certificates: AWI Quality Certification Program certificates.
- B. Qualification Data: For door inspector.
1. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, Section 5.2.3.1.
 2. Egress Door Inspector: Submit documentation of compliance with NFPA 101, Section 7.2.1.15.4.
 3. Submit copy of DHI's Fire and Egress Door Assembly Inspector (FDAI) certificate.
- C. Field quality-control reports.
- D. Sample Warranty: For special warranty.

1.6 CLOSEOUT DOCUMENTS

- A. Executed Special Warranty

1.7 QUALITY ASSURANCE

- A. Quality Standard: In addition to requirements specified, comply with AWI's "Architectural Woodwork Standards." Provide AWI Quality Certification Label or an AWI letter of licensing for Project indicating that doors comply with requirements of grades specified.
- B. Manufacturer's Certification: Licensed participant in AWI's Quality Certification Program OR WI's Certified Compliance Program.
- C. Fire-Rated Door Inspector Qualifications: Inspector for field quality-control inspections of fire-rated door assemblies shall comply with qualifications set forth in NFPA 80, Section 5.2.3.1 and the following:
 - 1. DHI's Fire and Egress Door Assembly Inspector (FDAI) certification.
- D. Egress Door Inspector Qualifications: Inspector for field quality-control inspections of egress door assemblies shall comply with qualifications set forth in NFPA 101, Section 7.2.1.15.4 and the following:
 - 1. DHI's Fire and Egress Door Assembly Inspector (FDAI) certification.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Comply with requirements of referenced standard and manufacturer's written instructions.
- B. Package doors individually in plastic bags or cardboard cartons.
- C. Mark each door on top and bottom rail with opening number used on Shop Drawings.
- D. Allow doors to acclimate to average prevailing humidity in installation area prior to hanging.

1.9 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Delamination of veneer.
 - b. Warping (bow, cup, or twist) more than 1/4-inch in a 42-by-84-inch section.
 - c. Telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.

2. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
3. Warranty Period for Solid-Core Interior Doors: Life of installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain flush wood doors from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Wood Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated on Drawings, based on testing at positive pressure in accordance with UL 10C or NFPA 252.
 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 2. Temperature-Rise Limit At vertical exit enclosures and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.
- B. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing in accordance with UL 1784 and installed in compliance with NFPA 105.

2.3 FLUSH WOOD DOORS, GENERAL

- A. Quality Standard: In addition to requirements specified, comply with AWI's, AWMAC's, and WI's "Architectural Woodwork Standards or WDMA I.S.1-A, "Architectural Wood Flush Doors."
 1. Provide AWI Quality Certification or WI Certified Compliance Labels indicating that doors comply with requirements of grades specified.
 2. Contract Documents contain selections chosen from options in quality standard and additional requirements beyond those of quality standard. Comply with those selections and requirements in addition to quality standard.
 - a. This project has been registered with AWI as AWI Quality Certification Program Number.
 - b. Contractor shall register the Work under this Section with the AWI Quality Certification Program at www.awiqcp.org or by calling 855-345-099.

2.4 FABRICATION

- A. Factory fit doors to suit frame-opening sizes indicated.
 - 1. Steel frame shop drawings will be furnished showing location and size of hardware preparation.
 - 2. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.
 - 3. Comply with requirements in NFPA 80 for fire-rated doors.
- B. Factory machine doors for hardware that is not surface applied.
 - 1. Locate hardware to comply with DHI-WDHS-3.
 - 2. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W series standards, and hardware templates.
 - 3. Coordinate with hardware mortises in metal door frames to verify dimensions and alignment before factory machining.
 - 4. For doors scheduled to receive electrified locksets, provide factory-installed raceway and wiring to accommodate specified hardware.
- C. Openings: Cut and trim openings through doors in factory.
 - 1. Light Openings: Trim openings with moldings of material and profile indicated.
 - 2. Glazing: Factory install glazing in doors indicated to be factory finished. Comply with applicable requirements in Division 08 Section "Glazing."
 - 3. Louvers: Factory install louvers in prepared openings.

2.5 FACTORY FINISHING

- A. Comply with referenced quality standard for factory finishing.
 - 1. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
 - 2. Finish faces, all four edges, edges of cutouts, and mortises.
 - 3. Stains and fillers may be omitted on top and bottom edges, edges of cutouts, and mortises.
- B. Factory prime doors to receive paint finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine doors and installed door frames before hanging doors.
 - 1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
 - 2. Reject doors with defects.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Hardware: For installation, see Division 08 Section "Door Hardware."
- B. Install doors to comply with manufacturer's written instructions and referenced quality standard, and as indicated.
- C. Install frames level, plumb, true, and straight.
 - 1. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches.
 - 2. Anchor frames to anchors or blocking built in or directly attached to substrates.
 - a. Secure with countersunk, concealed fasteners and blind nailing.
 - b. Use fine finishing nails for exposed fastening, countersunk and filled flush with woodwork.
 - 1) For factory-finished items, use filler matching finish of items being installed.
 - 3. Install fire-rated doors and frames in accordance with NFPA 80.
 - 4. Install smoke- and draft-control doors in accordance with NFPA 105.
- D. Job-Fitted Doors:
 - 1. Align and fit doors in frames with uniform clearances and bevels as indicated below.
 - a. Do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors.
 - 2. Machine doors for hardware.
 - 3. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.
 - 4. Clearances:
 - a. Provide 1/8 inch at heads, jambs, and between pairs of doors.
 - b. Provide 1/8 inch from bottom of door to top of decorative floor finish or covering unless otherwise indicated on Drawings.
 - c. Where threshold is shown or scheduled, provide 1/4 inch from bottom of door to top of threshold unless otherwise indicated.
 - d. Comply with NFPA 80 for fire-rated doors.
 - 5. Bevel non-fire-rated doors 1/8 inch in 2 inches at lock and hinge edges.
 - 6. Bevel fire-rated doors 1/8 inch in 2 inches at lock edge; trim stiles and rails only to extent permitted by labeling agency.
- E. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
- F. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING

- A. Operation: Rehang or replace doors that do not swing or operate freely.
- B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION 08 14 16

SECTION 08 31 13 - ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the access doors and frames for walls and ceilings.
- B. Related Sections include the following:
 - 1. Division 03 Section "Cast-in-Place Concrete" for blocking out openings for access doors and frames in concrete.
 - 2. Division 04 Section "Unit Masonry" for anchoring and grouting access door frames set in masonry construction.
 - 3. Division 07 Section "Roof Accessories" for roof hatches.
 - 4. Division 08 Section "Door Hardware" for mortise or rim cylinder locks and master keying.
 - 5. Division 09 Section "Gypsum Board Systems" for suspended gypsum board ceilings.
 - 6. Division 09 Section "Acoustical Ceilings" for suspended acoustical tile ceilings.
 - 7. Division 23 Section for heating and air-conditioning duct access doors.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of access door and frame indicated.
 - 1. Include construction details, fire ratings, materials, individual components and profiles, and finishes.
- B. Samples: For each type of access door and frame and for each finish specified, complete assembly minimum 6 by 6 inches in size.
- C. Product Schedule: For access doors and frames. Use same designations indicated on Drawings.

1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of access door(s) and frame(s) through one source from a single manufacturer.
- B. Size Variations: Obtain Architect's acceptance of manufacturer's standard-size units, which may vary slightly from sizes indicated.

PART 2 - PRODUCTS

2.1 ACCESS DOORS AND FRAMES FOR WALLS AND CEILINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Babcock-Davis.
 2. Cendrex Inc.
 3. JL Industries, Inc.; a division of the Activar Construction Products Group.
 4. Karp Associates, Inc.
 5. Larsens Manufacturing Company.
 6. Maxam Metal Products Limited.
 7. MIFAB, Inc.
 8. Milcor; Commercial Products Group of Hart & Cooley, Inc.
 9. Nystrom.
 10. Williams Bros. Corporation of America (The).
 11. Wind-lock.
- B. Type shall be as required to accommodate adjacent substrate construction and shall be as least visible as possible. Doors shall be located and sized to provide appropriate access.
- C. Flush Access Doors and Frames with Exposed Trim: Fabricated from steel sheet.
1. Description: Face of door flush with frame, with exposed flange and concealed hinge.
 2. Locations: Wall and ceiling.
 3. Hinges: Continuous piano.
 4. Frame Material: Same material, thickness, and finish as door.
 5. Latch and Lock: Cam latch, screwdriver operated.
- D. Flush Access Doors with Concealed Flanges: Fabricated from steel sheet.
1. Description: Face of door flush with frame; with concealed flange for gypsum board installation and concealed hinge.
 2. Locations: Wall and ceiling surfaces.
 3. Hinges: Continuous piano.
 4. Latch and Lock: Cam latch, screwdriver operated.
- E. Flush Access Doors with Concealed Flanges: Fabricated from stainless steel sheet.
1. Description: Face of door flush with frame; with concealed flange for gypsum board installation and concealed hinge.
 2. Finish: factory-applied powdercoat
 - a. Color: RAL 7046 Telegrau 2
 3. Locations: Ceiling surfaces at showers.
 4. Hinges: Continuous piano.
 5. Latch and Lock: Cam latch, screwdriver operated.

- F. Glass Reinforced Gypsum (GRG) Flush Access Doors and Frames with Exposed Trim: Fabricated from glass reinforced gypsum equivalent to Chicago Metallic Access Door Series 8501 through 8505. Door assembly is to be mudded, grouted and painted under other sections.
1. Locations: Ceiling surfaces.
 2. Door: Flush to frame with rounded corners.
 3. Frame: 1 piece, 3/4 inch deep.
- G. Exterior Flush Access Doors and Frames with Exposed Trim: Weatherproof with extruded door gasket.
1. Locations: Wall surfaces.
 2. Description: Weatherproof assembly, with face of door fit flush with frame and with exposed frame. Include extruded door gaskets and minimum 2-inch-thick fiberglass insulation.
 3. Stainless Steel Sheet for Door: Nominal 0.062 inch 16 gage, ASTM A480/A480M No. 4 finish.
 4. Frame Material: Same material, thickness, and finish as door.
 5. Hinges: Continuous piano, zinc plated.
 6. Latch and Lock: Cam latch, key operated with interior release.
 7. Lock:
 - a. Prepared for cylinder lock, with interior release.
 - b. Prepared for mortise lock, with interior release.
 - c. Lock Preparation: Prepare door panel to accept lock specified in Division 08 Section "Door Hardware."
- H. Exterior Flush GFRC Access Doors with Concealed Flanges:
1. Description: Face of door flush with frame, neoprene gasketed, with concealed flange for gypsum board installation.
 2. Locations: Ceiling.
 3. Door Type: Concealed-hinge, square corner.
 4. Door and Frame Material: Unpainted glass-fiber-reinforced cement, with frames reinforced for hardware and fastenings.
 5. Latch and Lock: Cam latch, key operated with interior release.

2.2 MATERIALS

- A. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- B. Steel Sheet: Uncoated or electrolytic zinc coated, ASTM A879/A879M, with cold-rolled steel sheet substrate complying with ASTM A1008/A1008M, Commercial Steel (CS), exposed.
- C. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with minimum G60 or A60 metallic coating.
- D. Stainless Steel Plate, Sheet, and Strip: ASTM A240/A240M or ASTM A666, Type 304. Remove tool and die marks and stretch lines, or blend into finish.

- E. Stainless Steel Flat Bars: ASTM A666, Type 304. Remove tool and die marks and stretch lines, or blend into finish.
- F. Aluminum Extrusions: ASTM B221, Alloy 6063.
- G. Aluminum Sheet: ASTM B209, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- H. Frame Anchors: Same material as door face.
- I. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A153/A153M or ASTM F2329.

2.3 FABRICATION

- A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.
- B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of supports indicated.
 - 1. For concealed flanges with drywall bead, provide edge trim for gypsum panels securely attached to perimeter of frames.
 - 2. For concealed flanges with plaster bead for full-bed plaster applications, provide zinc-coated expanded-metal lath and exposed casing bead welded to perimeter of frames.
- D. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling. Provide access sleeves for each latch operator and install in holes cut through finish.
- E. Latch and Lock Hardware:
 - 1. Quantity: Furnish number of latches and locks required to hold doors tightly closed.
 - 2. Keys: Furnish two keys per lock and key all locks alike.

2.4 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Painted Finishes: Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Factory Primed: Apply manufacturer's standard, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.
 - 2. Factory Finished: Apply manufacturer's standard baked-enamel or powder-coat finish immediately after cleaning and pretreating, with minimum dry-film thickness of 1 mil for topcoat.
- E. Stainless Steel Finishes:
 - 1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 - 2. Polished Finish: ASTM A480/A480M No. 4 finish. Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's written instructions for installing access doors and frames.
- B. Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finish surfaces.

3.3 ADJUSTING AND CLEANING

- A. Adjust doors and hardware after installation for proper operation.
- B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION 08 31 13

SECTION 08 33 13 - COILING COUNTER DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Counter doors.
- B. Related Sections include the following:
 - 1. Division 05 Section "Metal Fabrications" for miscellaneous steel supports
 - 2. Division 08 Section "Door Hardware" for lock cylinders and keying
 - 3. Division 09 painting Sections for field-applied paint finish
 - 4. Division 26 Sections for electrical service and connections for powered operators and accessories

1.3 ACTION SUBMITTALS

- A. Product Data: For each type and size of overhead coiling shutter and accessory. Include the following:
 - 1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
 - 3. Include description of automatic closing device and testing and resetting instructions.
- B. Shop Drawings: For special components and installations not dimensioned or detailed in manufacturer's product data.
 - 1. Include plans, elevations, sections, and mounting details.
 - 2. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
 - 4. Show locations of controls, locking devices, detectors or replaceable fusible links, and other accessories.
 - 5. Include diagrams for power, signal, and control wiring.

- C. Samples for Initial Selection: Manufacturer's color charts showing full range of colors available for units with factory-applied finishes.
 - 1. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish on the following components, in manufacturer's standard sizes:
 - 1. Curtain slats.
 - 2. Bottom bar.
 - 3. Guides.
 - 4. Brackets.
 - 5. Hood.
 - 6. Laminate-clad counter panel product for each type, color, pattern, and surface finish; laminated to core.
 - 7. Locking device(s).
 - 8. Include similar Samples of accessories involving color selection.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and testing and inspecting agency.
 - 1. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, section 5.2.3.1.
 - 2. Submit copy of DHI Fire and Egress Door Assembly Inspector (FDAI) certificate.
- B. Oversize Construction Certification: For door assemblies required to be fire-rated and that exceed size limitations of labeled assemblies.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For coiling counter doors to include in maintenance manuals.
- B. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.
 - 1. Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.
- B. Fire-Rated Door Inspector Qualifications: Inspector for field quality control inspections of fire-rated door assemblies shall meet the qualifications set forth in NFPA 80, section 5.2.3.1 and the following:

1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAI) certification.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain coiling counter doors from single source from single manufacturer.

2.2 COUNTER DOOR ASSEMBLY CD1, CD2

- A. Counter Door: Coiling counter door formed with curtain of interlocking metal slats.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Alpine Overhead Doors, Inc.
 - b. ASTA Door Corporation.
 - c. C.H.I. Overhead Doors, Inc.
 - d. City-Gates.
 - e. Clopay Building Products.
 - f. Cookson Company.
 - g. Cornell.
 - h. ENTREMATIIC.
 - i. Lawrence Roll-Up Doors, Inc.
 - j. McKeon Rolling Steel Door Company, Inc.
 - k. Metro Door.
 - l. Overhead Door Corporation.
 - m. Wayne-Dalton Corp.
 - n. Woodfold Mfg Co.
- B. Operation Cycles: Door components and operators capable of operating for not less than 100,000. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
 1. Include tamperproof cycle counter.
- C. STC Rating: 26.
- D. Curtain R-Value: 6.0 deg F x h x sq. ft./Btu.
- E. Door Curtain Material: Aluminum.
- F. Door Curtain Slats: Flat profile slats of 1-1/4-inch center-to-center height.
 1. Insulated-Slat Interior Facing: Metal.
 2. Gasket Seal. Manufacturer's standard continuous gaskets between slats.

- G. Bottom Bar: Manufacturer's standard continuous channel or tubular shape, fabricated aluminum extrusion and finished to match door.
- H. Hood: Match curtain material and finish.
 - 1. Shape: Round.
 - 2. Mounting: Face of wall.
- I. Integral Frame, Hood, and Fascia: Stainless steel.
 - 1. Mounting: Face of wall.
- J. Sill Configuration: Integral metal sill.
- K. Locking Devices: Equip door with locking device assembly.
 - 1. Locking Device Assembly: Cremona-type, both jamb sides locking bars, operable from inside and outside with cylinders.
- L. Manual Door Operator: Push-up operation or Manufacturer's standard crank operator.
 - 1. Provide operator with through-wall shaft operation.
 - 2. Provide operator with manufacturer's standard removable operating arm.
- M. Curtain Accessories: Equip door with weatherseals.
- N. Door Finish:
 - 1. Aluminum Finish: Clear anodized.

2.3 MATERIALS, GENERAL

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.4 DOOR CURTAIN MATERIALS AND CONSTRUCTION

- A. Door Curtains: Fabricate coiling counter door curtain of interlocking metal slats in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:
 - 1. Aluminum Door Curtain Slats: ASTM B209 sheet or ASTM B221 extrusions, alloy and temper standard with manufacturer for type of use and finish indicated; thickness of 0.050 inch; and as required.
 - 2. Insulation: Fill slats for insulated doors with manufacturer's standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E84 or UL 723. Enclose insulation completely within slat faces.
 - 3. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face.

- B. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain.

- 1. Removable Posts and Jamb Guides: Manufacturer's standard.

2.5 HOODS

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.

- 1. Aluminum: 0.040-inch thick aluminum sheet complying with ASTM B209 of alloy and temper recommended by manufacturer and finisher for type of use and finish indicated.
 - 2. Include automatic drop baffle on fire-rated doors to guard against passage of smoke or flame.

- B. Integral Frame, Hood, and Fascia: Welded sheet metal assembly of the following sheet metal(s):

- 1. Galvanized Steel: Hot-dip galvanized-steel sheet with G90 zinc coating, complying with ASTM A653/A653M.
 - 2. Stainless Steel: Type 304, complying with ASTM A240/A240M or ASTM A666.

- C. Removable Metal Soffit: Formed or extruded from same metal and with same finish as curtain if hood is mounted above ceiling unless otherwise indicated.

2.6 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.

- B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.

- 1. Lock Cylinders: As specified in Division 08 Section "Door Hardware" and keyed to building keying system.
 - 2. Keys: Three for each cylinder.

- C. Chain Lock Keeper: Suitable for padlock.

- D. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.7 CURTAIN ACCESSORIES

- A. Weatherseals: Equip door with weather-stripping gaskets fitted to entire perimeter of door for air-resistant installation unless otherwise indicated.
 - 1. At door head, use 1/8-inch- thick, replaceable, continuous-sheet baffle secured to inside of hood or field-installed on the header.
 - 2. At door jambs, use replaceable, adjustable, continuous nylon brushes.
- B. Astragal: Equip each door bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.
- C. Push/Pull Handles: Equip each push-up-operated or emergency-operated door with lifting handles on each side of door, finished to match door.
- D. Pull-Down Strap: Provide pull-down straps for doors with head of opening more than 84 inches above finished floor.
- E. Poll Hooks: Provide pole hooks and poles for doors with head of opening more than 84 inches above finished floor.

2.8 COUNTER DOOR ACCESSORIES

- A. Integral Metal Sill: Fabricate sills as integral part of frame assembly of Type 304 stainless steel in manufacturer's standard thickness with ASTM A480/A480M No. 4 finish.

2.9 COUNTERBALANCE MECHANISM

- A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.
- C. Counterbalance Spring: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
 - 1. Fire-Rated Doors: Equip with auxiliary counterbalance spring and prevent tension release from main counterbalance spring when automatic closing device operates.
- D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.10 MANUAL DOOR OPERATORS

- A. General: Equip door with manual door operator by door manufacturer.
- B. Push-up Door Operation: Design counterbalance mechanism so that required lift or pull for door operation does not exceed 25 lbf .
- C. Crank Operator: Consisting of crank and crank gearbox, steel crank drive shaft, and gear-reduction unit, of type indicated. Size gears to require not more than 25-lbf force to turn crank. Fabricate gearbox to be oiltight and to completely enclose operating mechanism. Provide manufacturer's standard crank-locking device.

2.11 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.12 ALUMINUM FINISHES

- A. Mill Finish: Manufacturer's standard.
- B. Clear Anodic Finish: AAMA 611 or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.13 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

2.14 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.

2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 3. Directional Satin Finish: ASTM A480/A480M No. 4.
- C. Bright, Cold-Rolled, Unpolished Finish: ASTM A480/A480M No. 2B.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrate areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install coiling counter doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Install coiling counter doors, hoods, controls, and operators at the mounting locations indicated for each door.
- C. Fire-Rated Doors: Install according to NFPA 80.
- D. Smoke-Control Doors: Install according to NFPA 80 and NFPA 105.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and to furnish reports to Architect.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 1. Test door release, closing, and alarm operations when activated by smoke detector or building's fire-alarm system. Test manual operation of closed door. Reset door-closing mechanism after successful test.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.

- E. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in NFPA 80 and NFPA 101.

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. After electrical circuitry has been energized, operate doors to confirm proper motor rotation and door performance.
 - 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

3.5 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust seals to provide tight fit around entire perimeter.

3.6 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Final Acceptance, maintenance service shall include 12 months' full maintenance by skilled employees of coiling-door Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
 - 1. Perform maintenance, including emergency callback service, during normal working hours.
 - 2. Include 24-hour-per-day, seven-day-per-week, emergency callback service.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain coiling counter doors.

END OF SECTION 08 33 13

SECTION 08 33 23 - OVERHEAD COILING DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Insulated Service doors.

- B. Related Requirements:

- 1. Division 05 Section "Metal Fabrications" for miscellaneous steel supports.
- 2. Division 08 Section "Door Hardware" for lock cylinders and keying.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type and size of overhead coiling door and accessory.

- 1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
- 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
- 3. Include description of automatic closing device and testing and resetting instructions.
- 4. Summary of forces and loads on walls and jambs.

- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.

- 1. Include plans, elevations, sections, and mounting details.
- 2. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
- 3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
- 4. For exterior components, include details of provisions for assembly expansion and contraction and for excluding and draining moisture to the exterior.
- 5. Show locations of controls, locking devices, detectors or replaceable fusible links, and other accessories.
- 6. Include diagrams for power, signal, and control wiring.

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Clopay Building Products.
 - b. Advanced Door Technologies.
 - c. Cookson Company.
 - d. Cornell.
 - e. Overhead Door Corporation

2.2 PERFORMANCE REQUIREMENTS

- A. Structural Performance, Exterior Doors: Capable of withstanding the design wind loads.
 1. Design Wind Load: Uniform pressure of 40 lbf/sq. ft..
 2. Testing: According to ASTM E330.
 3. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.
- B. Air Infiltration
 1. Comply to ASHREA Standard 90.1-2007, 2010 & 2013 requirements of less than .3 cfm/sq.ft.

2.3 DOOR ASSEMBLY

- A. Insulated Service Door: Overhead coiling door formed with curtain of interlocking metal slats.
- B. Operation Cycles: Door components and operators capable of operating for not less than 50,000. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
- C. Air Infiltration: Maximum rate of 1.0 cfm/sq. ft. at 15 and 25 mph when tested according to ASTM E283.
- D. Curtain R-Value: 8.0
- E. Door Curtain Material: Galvanized steel.
- F. Bottom Bar: Two angles, each not less than 1-1/2 by 1-1/2 by 1/8 inch thick; fabricated from aluminum extrusions and finished to match door.
- G. Curtain Jamb Guides:
 1. Thermal break required. Minimum 3/16 inch structural steel angles. Provide windlock bars of same material when windlocks are required to meet specified wind load. Top of inner and outer guide angles to be flared outwards to form bellmouth for smooth entry of curtain into guides. Provide removable guide stoppers to prevent over travel of curtain and bottom bar.

- H. Hood: Match curtain material and finish.
 - 1. Shape: Round.
 - 2. Mounting: Face of wall.
- I. Locking Devices: Equip door with slide bolt for padlock and chain lock keeper.
- J. Manual Door Operator: Chain-hoist operator.
 - 1. Provide operator with through-wall shaft operation.
 - 2. Provide operator with manufacturer's standard removable operating arm.
- K. Curtain Accessories: Equip door with weatherseals

2.4 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA's "Metal Finishes Manual for Architectural and Metal Products (AMP 500-06)" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.5 ALUMINUM FINISHES

- A. Mill Finish: Manufacturer's standard.
- B. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, application, and baking.

2.6 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
 - 1. Prepare galvanized metal for powder coat finishes per manufacturer's written instructions and ASTM D7803.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Install overhead coiling doors, hoods, controls, and operators at the mounting locations indicated for each door.
- C. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.
- D. Fire-Rated Doors: Install according to NFPA 80.
- E. Smoke-Control Doors: Install according to NFPA 80 and NFPA 105.
- F. Power-Operated Doors: Install automatic garage doors openers according to UL 325.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and to furnish reports to Architect.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Test door release, closing, and alarm operations when activated by smoke detector or building's fire-alarm system. Test manual operation of closed door. Reset door-closing mechanism after successful test.
 - 2. Fire-Rated Door Inspections: Inspect each fire-rated door in accordance with NFPA 80, section 5.2.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.

- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.
- E. Prepare and submit separate inspection report for each fire-rated door assembly indicating

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Perform installation and startup checks according to manufacturer's written instructions.
 - 2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
 - 3. Test door closing when activated by detector or alarm-connected fire-release system. Reset door-closing mechanism after successful test.

3.5 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
 - 1. Adjust exterior doors and components to be weather-resistant.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust seals to provide tight fit around entire perimeter.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors. Refer to Division 01 Section "Demonstration and Training."

3.7 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Final Acceptance, maintenance service shall include 12 months' full maintenance by skilled employees of coiling-door Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for door operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
 - 1. Perform maintenance, including emergency callback service, during normal working hours.
 - 2. Include 24-hour-per-day, seven-day-per-week, emergency callback service.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

END OF SECTION 08 33 23.01

SECTION 08 36 13 - SECTIONAL DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes electrically operated sectional doors.
- B. Related Requirements:
 - 1. Division 05 Section "Metal Fabrications" for miscellaneous steel supports.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type and size of sectional door and accessory.
 - 1. Include construction details, material descriptions, dimensions of individual components, profile door sections, and finishes.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.
 - 1. Include plans, elevations, sections, and mounting details.
 - 2. Include details of equipment assemblies. Indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
 - 4. Include diagrams for power, signal, and control wiring.
- C. Samples for Initial Selection: For units with factory-applied finishes.
 - 1. Include Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish on the following components, in manufacturer's standard sizes:
 - 1. Flat door sections with sensor edge on bottom section.
 - 2. Frame for paneled door sections; of each width of stile and rail required.

3. Panel for raised-panel door sections; not smaller than required to show raised-panel profile.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and manufacturer.
- B. Sample Warranties: For special warranties.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sectional doors to include in maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.
- B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC A117.1.

1.7 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of sectional doors that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Failure of components or operators before reaching required number of operation cycles.
 - c. Faulty operation of hardware.
 - d. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use; rust through.
 - e. Delamination of exterior or interior facing materials.
 2. Warranty Period: Two years from date of Substantial Completion.
- B. Special Finish Warranty: Manufacturer agrees to repair or replace components that show evidence of deterioration of factory-applied finishes within specified warranty period.
 1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS, GENERAL

- A. Source Limitations: Obtain sectional doors from single source from single manufacturer.
 - 1. Obtain operators and controls from sectional door manufacturer.
 - 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C.H.I. Overhead Doors, Inc.
 - b. Clopay Building Products.
 - c. Haas Door.
 - d. Overhead Door Corporation.
 - e. Rite-Hite Corporation.
 - f. Windsor Door.
 - g. Renlita Doors.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Sectional doors shall comply with performance requirements specified without failure due to defective manufacture, fabrication, installation, or other defects in construction and without requiring temporary installation of reinforcing components.
- B. Structural Performance, Exterior Doors: Capable of withstanding the design wind loads.
 - 1. Design Wind Load: As indicated on structural Drawings.
 - 2. Testing: According to ASTM E 330.
 - 3. Deflection Limits: Design sectional doors to withstand design wind loads without evidencing permanent deformation or disengagement of door components.
 - a. Deflection of door sections in horizontal position (open) shall not exceed 1/120 of the door width.
 - b. Deflection of horizontal track assembly shall not exceed 1/240 of the door height.
 - 4. Operability under Wind Load: Design overhead coiling doors to remain operable under design wind load, acting inward and outward.
- C. Windborne-Debris Impact Resistance: Provide glazed sectional doors that pass ASTM E1886 missile-impact and cyclic-pressure tests according to **[ASTM E1996 for Wind Zone 1]** **[ASTM E1996 for Wind Zone 2]** **[ASTM E1996 for Wind Zone 3]** **[ASTM E1996 for Wind Zone 4]** **[or DASMA 115]** for basic protection.
- D. Windborne-Debris Impact Resistance: Provide glazed sectional doors that pass missile-impact and cyclic-pressure tests according to **[ASTM E1996 for Wind Zone 1]** **[ASTM E1996 for Wind Zone 2]** **[ASTM E1996 for Wind Zone 3]** **[ASTM E1996 for Wind Zone 4]** **[or DASMA 115]**.

1. Large Missile Test: For overhead coiling doors located within 30 feet (9.144 m) of grade.
- E. Seismic Performance: Sectional doors shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 and the information provided on the drawings<Insert requirement>.
 1. Component Importance Factor: [1.5] [1.0].

2.3 DOOR ASSEMBLY

- A. Full-Vision Aluminum Sectional Door: Sectional door formed with hinged sections and fabricated according to DASMA 102 unless otherwise indicated.
- B. Operation Cycles: Door components and operators capable of operating for not less than 50,000. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
- C. Air Infiltration: Maximum rate of 0.4 cfm/sq. ft. (2.03 L/s per sq. m) at 15 and 25 mph (24.1 and 40.2 km/h) when tested according to ASTM E 283 or DASMA 105.
- D. Installed R-Value: 3 ft²·°F·h/BTU (0.528 m²·K/W).
- E. Aluminum Sections: Full vision.
- F. Track Configuration: Vertical-lift track.
- G. Weatherseals: Fitted to bottom and top and around entire perimeter of door. Provide combination bottom weatherseal and sensor edge.
- H. Roller-Tire Material: Manufacturer's standard.
- I. Locking Devices: Equip door with slide bolt for padlock.
 1. Locking Device Assembly: Cremone type, both jamb sides, locking bars, operable from inside and outside, with cylinders.
- J. Counterbalance Type: Torsion spring.
- K. Manual Door Operator: Push-up operation.
- L. Electric Door Operator:
 1. Usage Classification: Standard duty, up to 25 cycles per hour and up to 90 cycles per day.
 2. Operator Type: Manufacturer's standard for door requirements.
 3. Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use; moving parts of operator enclosed or guarded if exposed and mounted at 8 feet (2.4 m) or lower.
 4. Motor Exposure: Exterior, dusty, wet, or humid.

5. Emergency Manual Operation: Push-up type.
6. Obstruction-Detection Device: Automatic electric sensor edge on bottom section.
 - a. Sensor Edge Bulb Color: Black.
7. Control Station: Interior-side mounted.

M. Door Finish:

1. Aluminum Finish: Clear anodized.
2. Finish of Interior Facing Material: Match finish of exterior section face.

2.4 MATERIALS, GENERAL

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.5 ALUMINUM DOOR SECTIONS

- A. Sections: Extruded-aluminum stile and rail members with dimensions and profiles as indicated on Drawings; members joined by welding or with concealed, **1/4-inch- (6-mm-)** minimum diameter, aluminum or nonmagnetic stainless-steel through bolts, full height of door section; and with meeting rails shaped to provide a weather-resistant seal.
1. Aluminum: **ASTM B 221 (ASTM B 221M)** extrusions, alloy and temper standard with manufacturer for type of use and finish indicated; minimum thickness **0.065 inch (1.7 mm)** for door section **1-3/4 inches (44 mm)** deep, and as required to comply with requirements.
 2. Reinforce sections with continuous horizontal and diagonal reinforcement, as required to stiffen door and for wind loading. Ensure that reinforcement does not obstruct vision lites.
 3. Provide reinforcement for hardware attachment.
- B. Solid Panels: Aluminum sheet, complying with **ASTM B 209 (ASTM B 209M)**, alloy and temper standard with manufacturer for type of use and finish indicated, not less than **0.040 inch (1.02 mm)** thick, set in continuous vinyl channel retained with rigid, snap-in, extruded-vinyl moldings or with rubber or neoprene glazing gasket with aluminum stop.
- C. Full-Vision Sections: Manufacturer's standard, tubular, aluminum-framed section fully glazed with 6-mm-thick, clear acrylic glazing set in vinyl, rubber, or neoprene glazing channel and with removable extruded-vinyl or aluminum stops.

2.6 TRACKS, SUPPORTS, AND ACCESSORIES

- A. Tracks: Manufacturer's standard, galvanized-steel track system of configuration indicated, sized for door size and weight, designed for lift type indicated and clearances indicated on Drawings, Provide complete system including brackets, bracing, and reinforcement to ensure rigid support of ball-bearing roller guides for required door type, size, weight, and loading.

1. Galvanized Steel: ASTM A 653/A 653M, minimum G60 (Z180) zinc coating.
 2. Slope tracks at an angle from vertical or design tracks to ensure tight closure at jambs when door unit is closed.
 3. Track Reinforcement and Supports: Galvanized-steel members to support track without sag, sway, and vibration during opening and closing of doors. Slot vertical sections of track spaced 2 inches (51 mm) apart for door-drop safety device.
 - a. For Vertical Track: Intermittent, jamb brackets attached to track and attached to wall.
 - b. For Horizontal Track: Continuous reinforcing angle from curve in track to end of track, attached to track and supported at points by laterally braced attachments to overhead structural members.
- B. Weatherseals: Replaceable, adjustable, continuous, compressible weather-stripping gaskets of flexible vinyl, rubber, or neoprene fitted to bottom and top of sectional door unless otherwise indicated.

2.7 HARDWARE

- A. General: Heavy-duty, corrosion-resistant hardware, with hot-dip galvanized, stainless-steel, or other corrosion-resistant fasteners, to suit door type.
- B. Hinges: Heavy-duty, galvanized-steel hinges of not less than 0.079-inch- (2.01-mm-) nominal coated thickness at each end stile and at each intermediate stile, according to manufacturer's written recommendations for door size. Attach hinges to door sections through stiles and rails with bolts and lock nuts or lock washers and nuts. Use rivets or self-tapping fasteners where access to nuts is impossible. Provide double-end hinges where required, for doors more than 16 feet (4.88 m) wide unless otherwise recommended by door manufacturer.
- C. Rollers: Heavy-duty rollers with steel ball-bearings in case-hardened steel races, mounted with varying projections to suit slope of track. Extend roller shaft through both hinges where double hinges are required. Provide 3-inch- (76-mm-) diameter roller tires for 3-inch- (76-mm-) wide track and 2-inch- (51-mm-) diameter roller tires for 2-inch- (51-mm-) wide track.
- D. Push/Pull Handles: Equip each push-up operated or emergency-operated door with galvanized-steel lifting handles on each side of door, finished to match door.

2.8 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on single-jamb side, operable from inside only.
- B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded deadbolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
1. Lock Cylinders: Cylinders specified in Section 087100 "Door Hardware" and keyed to building keying system.
 2. Keys: Three for each cylinder.

- C. Chain Lock Keeper: Suitable for padlock.
- D. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.9 COUNTERBALANCE MECHANISM

- A. Torsion Spring: Counterbalance mechanism consisting of adjustable-tension torsion springs fabricated from steel-spring wire complying with ASTM A 229/A 229M, mounted on torsion shaft made of steel tube or solid steel. Provide springs designed for number of operation cycles indicated.
- B. Weight Counterbalance: Counterbalance mechanism consisting of filled pipe weights that move vertically in a galvanized-steel weight pipe. Connect pipe weights with cable to weight-cable drums mounted on torsion shaft made of steel tube or solid steel.
- C. Cable Drums and Shaft for Doors: Cast-aluminum or gray-iron casting cable drums mounted on torsion shaft and grooved to receive door-lifting cables as door is raised. Mount counterbalance mechanism with manufacturer's standard ball-bearing brackets at each end of torsion shaft. Provide one additional midpoint bracket for shafts up to **16 feet (4.88 m)** long and two additional brackets at one-third points to support shafts more than **16 feet (4.88 m)** long unless closer spacing is recommended by door manufacturer.
- D. Cables: Galvanized-steel, multistrand, lifting cables with cable safety factor of at least 7 to 1.
- E. Cable Safety Device: Include a spring-loaded steel or spring-loaded bronze cam mounted to bottom door roller assembly on each side and designed to automatically stop door if either lifting cable breaks.
- F. Bracket: Provide anchor support bracket as required to connect stationary end of spring to the wall and to level the shaft and prevent sag.
- G. Bumper: Provide spring bumper at each horizontal track to cushion door at end of opening operation.

2.10 MANUAL DOOR OPERATORS

- A. General: Equip door with manual door operator by door manufacturer.
- B. Push-up Operation: Lift handles and pull rope for raising and lowering doors, with counterbalance mechanism designed so that required lift or pull for door operation does not exceed **25 lbf (111 N)**.

2.11 ELECTRIC DOOR OPERATORS

- A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and "operation cycles" requirement specified, with electric motor and

factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.

1. Comply with NFPA 70.
 2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6; with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.
- C. Door-Operator Type: Unit consisting of electric motor, gears, pulleys, belts, sprockets, chains, and controls needed to operate door and meet required usage classification.
1. Trolley: Trolley operator mounted to ceiling above and to rear of door in raised position and directly connected to door with drawbar.
 2. Jackshaft, Center Mounted: Jackshaft operator mounted on the inside front wall above door and connected to torsion shaft with an adjustable coupling or drive chain.
 3. Jackshaft, Side Mounted: Jackshaft operator mounted on the inside front wall on right or left side of door and connected to torsion shaft with an adjustable coupling or drive chain.
- D. Motors: Reversible-type motor with controller (disconnect switch) for motor exposure indicated.
1. Motor Size: Minimum size as indicated. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than **8 in./sec. (203 mm/s)** and not more than **12 in./sec. (305 mm/s)**, without exceeding nameplate ratings or service factor.
 2. Operating Controls, Controllers (Disconnect Switches), Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
 3. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
 4. Use adjustable motor-mounting bases for belt-driven operators.
- E. Limit Switches: Equip motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- F. Obstruction Detection Device: External entrapment protection consisting of indicated automatic safety sensor capable of protecting full width of door opening. Activation of device immediately stops and reverses downward door travel.
1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction.
 - a. Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, door closes only with sustained pressure on close button.

2. Electric Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom section. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
 - a. Self-Monitoring Type: Four-wire configured device designed to interface with door-operator control circuit to detect damage to or disconnection of sensor edge.
 3. Pneumatic Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device.
- G. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure, push-button control labeled "Close."
1. Interior-Mounted Units: Full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
 2. Exterior-Mounted Units: Full-guarded, standard-duty, surface-mounted, weatherproof type, NEMA ICS 6, Type 4 enclosure, key operated.
- H. Emergency Manual Operation: Equip electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed **25 lbf (111 N)**.
- I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.
- K. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with regulatory requirements for accessibility.

2.12 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA's "Metal Finishes Manual for Architectural and Metal Products (AMP 500-06)" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.13 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

- B. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, application, and baking.

2.14 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install sectional doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Tracks:
 - 1. Fasten vertical track assembly to opening jambs and framing, spaced not more than **24 inches (610 mm)** apart.
 - 2. Hang horizontal track assembly from structural overhead framing with angles or channel hangers attached to framing by welding or bolting, or both. Provide sway bracing, diagonal bracing, and reinforcement as required for rigid installation of track and door-operating equipment.
- C. Accessibility: Install sectional doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.
- D. Power-Operated Doors: Install doors openers according to UL 325.

3.3 STARTUP SERVICES

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

3.4 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust doors and seals to provide weather-resistant fit around entire perimeter.
- D. Touch-up Painting: Immediately after welding galvanized materials, clean welds and abraded galvanized surfaces and repair galvanizing to comply with ASTM A 780/A 780M.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain sectional doors.

END OF SECTION 08 36 13

SECTION 08 41 13 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Storefront framing.
2. Manual-swing entrance doors.
3. Installation of engineered transition assembly (ETA).

- B. Related Sections:

1. Division 08 Section "All-Glass Entrances and Storefronts" for systems without aluminum support framing.
2. Division 08 Section "Interior Aluminum Frames" for interior aluminum framing.

1.3 DEFINITIONS

- A. ADA/ABA Accessibility Guidelines: U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disability Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities."

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for aluminum-framed systems.

- B. Shop Drawings: For aluminum-framed entrances and storefronts. Include plans, elevations, sections, full-size details, and attachments to other work. Shop drawings shall be signed and sealed by the manufacturer's structural engineer.

1. Include details of provisions for system expansion and contraction and for drainage of moisture in the system to the exterior.

2. Include full-size isometric details of each vertical-to-horizontal intersection of aluminum-framed entrances and storefronts, showing the following:
 - a. Joinery, including concealed welds.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Glazing.
 - e. Flashing and drainage.
 3. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
 4. Include point-to-point wiring diagrams showing the following:
 - a. Power requirements for each electrically operated door hardware.
 - b. Location and types of switches, signal device, conduit sizes, and number and size of wires.
- C. Samples for Initial Selection: For units with factory-applied color finishes.
- D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- E. Fabrication Sample: Of each vertical-to-horizontal intersection of aluminum-framed systems, made from **12-inch (300-mm)** lengths of full-size components and showing details of the following:
 1. Joinery, including concealed welds.
 2. Anchorage.
 3. Expansion provisions.
 4. Glazing.
 5. Flashing and drainage.
- F. Entrance Door Hardware Schedule: Prepared by or under supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.

1.6 INFORMATIONAL SUBMITTALS

- A. Design Data for Aluminum-Framed Entrances and Storefronts: Design aluminum-framed entrances and storefronts under direct supervision of the manufacturer employed Engineer. Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers. Design Data submittal shall be signed and sealed by a qualified professional engineer licensed in the state or district in which the project is located. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect. Design Data submission must be concurrent with the submission of corresponding Fabrication drawings. Fabrication drawings submitted without corresponding Design Data will be returned as "Not Reviewed".

1.8 CLOSEOUT DOCUMENTS

- A. Maintenance Data: For glazed aluminum curtain walls to include in maintenance manuals.
- B. Warranties: Final warranties to include in operation and maintenance manuals.

1.9 QUALITY ASSURANCE

- A. Manufacturer Qualifications: The product manufacturer shall have a minimum of 10 years of experience in the manufacturer of exterior metal wall panel system and shall have successfully manufactured a minimum of 5 projects similar to this project.
 - 1. Qualified according to ASTM E699 for testing indicated and accredited by the International Accreditation Service or the International Laboratory Accreditation Cooperation Mutual Recognition Arrangement as complying with ISO/IEC 17025.
- B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project, with a minimum of 5 years of experience in installation of similarly sized products.
- C. Professional Engineer's Qualifications: A Professional Engineer, who is licensed to practice in the state where the work will be performed, and who is experienced in providing engineering services of the kind indicated, shall seal all shop drawings, and provide calculations for wind loading for all wall system components.
- D. Testing Agency Qualifications: Qualified according to ASTM E699 for testing indicated and accredited by the International Accreditation Service or the International Laboratory Accreditation Cooperation Mutual Recognition Arrangement as complying with ISO/IEC 17025.
- E. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 - 1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

1.10 MOCKUPS

- A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical wall area as shown on Drawings.
 - 2. Testing shall be performed on mockups according to requirements in "Field Quality Control" Article.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Final Acceptance.

1.11 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of structural supports for aluminum-framed systems by field measurements before fabrication and indicate measurements on Shop Drawings.

1.12 WARRANTY

- A. Special Warranty: Manufacturer and Installer agree to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

- a. Structural failures, including, but not limited to, excessive deflection.
- b. Noise or vibration created by wind and thermal and structural movements.
- c. Water penetration through fixed glazing and framing areas.
- d. Failure of operating components.

2. Warranty Period: Five years from date of Final Acceptance.

- B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:

- a. Color fading more than 5 Hunter units when tested according to ASTM D2244.
- b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
- c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Fluoropolymer Warranty Period: 20 years from date of Final Acceptance.

3. Anodic Warranty Period: 10 years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain all components of aluminum-framed entrance and storefront system, including framing and accessories, from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design aluminum-framed entrances and storefronts.

- B. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed entrances and storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
1. Aluminum-framed entrances and storefronts shall withstand movements of supporting structure, including, but not limited to, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 2. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.
- C. Structural Loads:
1. Wind Loads: As indicated on Drawings.
 2. Other Design Loads: As indicated on Drawings.
- D. Deflection of Framing Members: At design wind pressure, as follows:
1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans of up to **13 feet 6 inches (4.1 m)** and to 1/240 of clear span plus **1/4 inch (6.35 mm)** for spans greater than **13 feet 6 inches (4.1 m)** or an amount that restricts edge deflection of individual glazing lites to **3/4 inch (19.1 mm)**, whichever is less.
 2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than **1/8 inch (3.2 mm)**.
 - a. Operable Units: Provide a minimum **1/16-inch (1.6-mm)** clearance between framing members and operable units.
- E. Structural: Test according to ASTM E330/E330M as follows:
1. When tested at positive and negative wind-load design pressures, storefront assemblies, including entrance doors, do not evidence deflection exceeding specified limits.
 2. When tested at 150 percent of positive and negative wind-load design pressures, storefront assemblies, including entrance doors and anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
 3. Test Durations: As required by design wind velocity, but not less than 10 seconds.
- F. Air Infiltration: Test according to ASTM E283 for infiltration as follows:
1. Fixed Framing and Glass Area:
 - a. Maximum air leakage of **0.06 cfm/sq. ft. (0.30 L/s per sq. m)** at a static-air-pressure differential of **1.57 lbf/sq. ft. (75 Pa)**.
 2. Entrance Doors:

- a. Single Doors: Maximum air leakage of **0.5 cfm/sq. ft. (2.54 L/s per sq. m)** at a static-air-pressure differential of **1.57 lbf/sq. ft. (75 Pa)**.
- G. Water Penetration under Static Pressure: Test according to ASTM E331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas, including entrance doors, when tested according to a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than **10 lbf/sq. ft. (480 Pa)**.
- H. Water Penetration under Dynamic Pressure: Test according to AAMA 501.1 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than **10 lbf/sq. ft. (480 Pa)**.
 2. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.
- I. Seismic Performance: Aluminum-framed entrances and storefronts shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
1. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.6 at design displacement.
- J. Energy Performance: Certify and label energy performance according to NFRC as follows:
1. Thermal Transmittance (U-factor): Fixed glazing and framing areas as a system shall have U-factor of not more than **0.41 Btu/sq. ft. x h x deg F (2.33 W/sq. m x K)** as determined according to NFRC 100.
 2. Solar Heat Gain Coefficient (SHGC): Fixed glazing and framing areas as a system shall have SHGC of no greater than 0.25 as determined according to NFRC 200.
 3. Condensation Resistance: Fixed glazing and framing areas as a system shall have an NFRC-certified condensation resistance rating of no less than 65 as determined according to NFRC 500.
- K. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.
1. Temperature Change: **120 deg F (67 deg C)**, ambient; **180 deg F (100 deg C)**, material surfaces.

2.3 STOREFRONT SYSTEMS

A. Exterior Storefront Fixed Framing

1. Basis of Design Product: Kawneer; Trifab 601 UT.
2. Manufacturers: Subject to compliance with requirements, products from the following manufactures may be provided:
 - a. Kawneer North America
 - b. Tubelite, Inc.

- c. Oldcastle Building Envelope.
 - d. YKK AP America.
- B. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
- 1. Exterior Framing Construction: Thermally broken.
 - 2. Interior Vestibule Framing Construction: Nonthermal.
 - 3. Glazing System: Retained mechanically with gaskets on four sides.
 - 4. Glazing Plane: Center.
 - 5. Exterior Finish: High-performance organic finish.
 - 6. Interior Finish: Baked-enamel or powder-coat finish.
 - 7. Fabrication Method: Field-fabricated stick system.
 - 8. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - 9. Steel Reinforcement: As required by manufacturer.
- C. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.
- D. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

2.4 ENTRANCE DOOR SYSTEMS

- A. Interior and Exterior Single Glazed Entrance Doors; Medium stile doors:
- 1. Basis of Design Product:
 - 2. Manufacturers: Subject to compliance with requirements, products from the following manufactures may be provided:
 - a. Kawneer North America
 - b. Tubelite, Inc.
 - c. Oldcastle Building Envelope.
 - d. YKK AP America.
- B. Exterior Thermal and 1 Inch IGU Glazed Entrance Doors:
- 1. Basis of Design Product: Kawneer; 350T Entrance Doors.
 - 2. Manufacturers: Subject to compliance with requirements, products from the following manufactures may be provided:
 - a. Kawneer North America
 - b. Tubelite, Inc.
 - c. Oldcastle Building Envelope
 - d. YKK AP America
- C. Interior and Exterior Single Glazed Entrance Doors and Frames
- 1. Storefront Entrance Framing: Entrance framing to be heavy duty framing.
 - 2. Non-Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

3. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials. Where exposed shall be stainless steel.
 - a. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - b. Reinforce members as required to receive fastener threads.
4. Perimeter Anchors: When steel anchors are used, provide insulation between steel material and aluminum material to prevent galvanic action

D. Exterior Thermal and 1 Inch IGU Glazed Entrance Doors and Frames

1. Thermally Broken entrance Framing - High-performance plastic connectors separate aluminum members exposed to the exterior from members exposed to the interior.
2. Doors: **2 inches (50 mm)** thick for **1 inch** Insulated Glass Units.
3. Non-Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
4. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials. Where exposed shall be stainless steel.
 - a. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - b. Reinforce members as required to receive fastener threads.
1. Door Design: Medium stile; **3-1/2-inch (88.9-mm)** nominal width.
2. Glazing Stops and Gaskets: Square, snap-on, extruded-aluminum stops and preformed gaskets.
3. Perimeter Anchors: When steel anchors are used, provide insulation between steel material and aluminum material to prevent galvanic action.

2.5 ENTRANCE DOOR HARDWARE

- A. Entrance Door Hardware: Hardware not specified in this Section is specified in Division 08 Section "Door Hardware."
- B. General: Provide entrance door hardware and entrance door hardware sets indicated in door and frame schedule for each entrance door, to comply with requirements in this Section.
 1. Entrance Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and named manufacturers' products.
 2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
 3. Opening-Force Requirements:
 - a. Egress Doors: Not more than **15 lbf (67 N)** to release the latch and not more than **30 lbf (133 N)** to set the door in motion and not more than **15 lbf (67 N)** to open the door to its minimum required width.
 - b. Accessible Interior Doors: Not more than **5 lbf (22.2 N)** to fully open door.

- C. Designations: Requirements for design, grade, function, finish, quantity, size, and other distinctive qualities of each type of entrance door hardware are indicated in "Entrance Door Hardware Sets" Article. Products are identified by using entrance door hardware designations as follows:
 - 1. Named Manufacturers' Products: Manufacturer and product designation are listed for each door hardware type required for the purpose of establishing minimum requirements. Manufacturers' names are abbreviated in "Entrance Door Hardware Sets" Article.
- D. Mortise Auxiliary Locks: BHMA A156.5, Grade 1.
- E. Automatic and Self-Latching Flush Bolts: BHMA A156.3, Grade 1.
- F. Removable Mullions: BHMA A156.3 extruded aluminum.
 - 1. When used with panic exit devices, provide keyed removable mullions listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing according to UL 305. Use only mullions that have been tested with exit devices to be used.
- G. Weather Stripping: Manufacturer's standard replaceable components.
 - 1. Compression Type: Made of ASTM D2000 molded neoprene or ASTM D2287 molded PVC.
 - 2. Sliding Type: AAMA 701/702, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.
- H. Weather Sweeps: Manufacturer's standard exterior-door bottom sweep with concealed fasteners on mounting strip.
- I. Thresholds: BHMA A156.21 raised thresholds beveled with a slope of not more than 1:2, with maximum height of **1/2 inch (12.7 mm)**.

2.6 GLAZING SYSTEMS

- A. Glazing: As specified in Division 08 Section "Glazing."
- B. Glazing Gaskets: Manufacturer's standard compression types; replaceable, molded or extruded, of profile and hardness required to maintain watertight seal.
- C. Spacers and Setting Blocks: Manufacturer's standard elastomeric type.
- D. Glazing Sealants: Comply with Division 08 Section "Glazing."
 - 1. **Sealant shall have a VOC** content of 250 g/L or less.
- E. Weatherseal Sealants: ASTM C920 for Type S; Grade NS; Class 25; Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant, weatherseal-sealant, and structural-sealant-glazed storefront manufacturers for this use.

2.7 MATERIALS

- A. Sheet and Plate: **ASTM B209** (ASTM B209M).
- B. Extruded Bars, Rods, Profiles, and Tubes: **ASTM B221** (ASTM B221M).
- C. Extruded Structural Pipe and Tubes: ASTM B429/B429M.
- D. Structural Profiles: ASTM B308/B308M.
- E. Steel Reinforcement:
 - 1. Structural Shapes, Plates, and Bars: ASTM A36/A36M.
 - 2. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.
 - 3. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.
 - 4. Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM, and prepare surfaces according to applicable SSPC standard.

2.8 ACCESSORIES

- A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
 - 1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - 2. Reinforce members as required to receive fastener threads.
 - 3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.
- B. Anchors: Three-way adjustable anchors with minimum adjustment of **1 inch (25.4 mm)** that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
 - 1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A123/A123M or ASTM A153/A 153M requirements.
- C. Bituminous Paint: Cold-applied asphalt-mastic paint containing no asbestos, formulated for **30-mil (0.762-mm)** thickness per coat.
- D. Rigid PVC Filler.

2.9 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

- C. Framing Members, General: Fabricate components that, when assembled, have the following characteristics:
1. Profiles that are sharp, straight, and free of defects or deformations
 2. Accurately fitted joints with ends coped or mitered
 3. Means to drain water passing joints, condensation within framing members, and moisture migrating within the system to exterior
 4. Physical and thermal isolation of glazing from framing members
 5. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances
 6. Provisions for field replacement of glazing
 7. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible
- D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
- E. Structural-Sealant-Glazed Framing Members: Include accommodations for using temporary support device to retain glazing in place while structural sealant cures.
- F. Storefront Framing: Fabricate components for assembly using shear-block system including subsills, sill flashings, receptors, closures, etc. for a complete installation.
- G. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
1. At interior and exterior doors, provide compression weather stripping at fixed stops.
- H. Entrance Doors: Reinforce doors as required for installing entrance door hardware.
- I. Entrance Door Hardware: Factory fabricate entrance door hardware cutouts to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.
1. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.
 2. At exterior doors, provide weather sweeps applied to door bottoms.
- J. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.10 ALUMINUM FINISHES

- A. High-Performance Organic Finish: 2-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General:
 - 1. Comply with manufacturer's written instructions
 - 2. Do not install damaged components
 - 3. Fit joints to produce hairline joints free of burrs and distortion
 - 4. Rigidly secure nonmovement joints
 - 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration
 - 6. Seal joints watertight unless otherwise indicated
- B. Metal Protection:
 - 1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or applying sealant or tape, or by installing nonconductive spacers as recommended by manufacturer for this purpose.
 - 2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- C. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.
- D. Set continuous sill members and flashing in full sealant bed as specified in Division 07 Section "Joint Sealants" to produce weathertight installation.
- E. Install components plumb and true in alignment with established lines and grades, and without warp or rack.
- F. Install glazing as specified in Division 08 Section "Glazing."
- G. Entrance Doors: Install doors to produce smooth operation and tight fit at contact points.
 - 1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
 - 2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware according to entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.
- H. Install perimeter joint sealants as specified in Division 07 Section "Joint Sealants" to produce weathertight installation.

- I. Install shadowbox panel with concealed fasteners from exterior view.
 1. Install as indicated on the drawings.
 2. Allow vent holes as indicated to prevent overheating between panel and glazing.

3.3 ERECTION TOLERANCES

- A. Install aluminum-framed systems to comply with the following maximum erection tolerances:
 1. Location and Plane: Limit variation from true location and plane to **1/8 inch in 12 feet (3 mm in 3.7 m)**; **1/4 inch (6 mm)** over total length.
 2. Alignment:
 - a. Where surfaces abut in line, limit offset from true alignment to **1/16 inch (1.5 mm)**.
 - b. Where surfaces meet at corners, limit offset from true alignment to **1/32 inch (0.8 mm)**.
- B. Diagonal Measurements: Limit difference between diagonal measurements to **1/8 inch (3 mm)**.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency who shall perform field tests and inspections.
- B. Testing Services: Testing and inspecting of representative areas to determine compliance of installed systems with specified requirements shall take place as follows. Do not proceed with installation of the next area until test results for previously completed areas show compliance with requirements. Field testing for air infiltration and water penetration performance shall be conducted by one of the agencies listed in Paragraph 2.05.B. above.
 1. Entrances and storefronts shall be tested in accordance with AAMA 501, AAMA 502 Test Method B and AAMA 503.
 2. Testing shall occur at one typical exterior door and one typical exterior fixed glass unit including their perimeter and any special connections. The exact location and extent will be determined by the Architect. Testing shall occur after all the entrance/storefronts have been installed and sealed, but prior to installation of interior finishes. The Contractor shall schedule the testing giving both the testing agency and Architect 14 days advance notice.
 3. Perform testing in accordance with the test specified herein in the presence of the Owner, the Architect and the Testing Agency and in each case evidence of satisfactory performance as specified shall be required as a condition of acceptability. Testing procedures shall include the following tests:
 - a. Air infiltration
 - b. Water penetration
 4. Report results in accordance with AAMA 502 and 503.
 5. If any tests are unsuccessful, the Testing Agency/Architect shall require revisions to the entrance/storefront system and/or enough additional testing/modifications to the extent to assure the entrance/storefronts meet the performance criteria of the project.

6. Installation of interior finishes in vicinity of entrance/storefronts shall not proceed until the test results are acceptable.
 7. The cost of all testing, all modifications required to pass the test, subsequent modifications required to the entire system, and all retesting shall be paid for under this section.
 8. Air Infiltration: Areas shall be tested for air leakage of 1.5 times the rate specified for laboratory testing under "Performance Requirements" Article, but not more than 0.06 cfm/sq. ft. of fixed wall area when tested according to ASTM E783 at a minimum static-air-pressure difference of 6.24 lbf/sq. ft. (300 Pa).
 - a. Test Area: One bay wide, but not less than 30 feet (9 m), by 1 story of aluminum-framed systems as indicated on the drawings.
 - b. A minimum of two tests in areas indicated.
 9. Water Penetration: Areas shall be tested according to ASTM E1105 at a minimum uniform static-air-pressure difference of 8.00 psf, and shall not evidence water penetration.
 - a. Test Area: One bay wide, but less than 30 feet (9 m), by 1 story of aluminum-framed systems.
 - b. A minimum of two tests in areas as directed by Architect.
- C. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.
- D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- E. Aluminum-framed assemblies will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.5 MAINTENANCE SERVICE

- A. Entrance Door Hardware:
1. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of entrance door hardware.
 2. Initial Maintenance Service: Beginning at Final Acceptance, provide six months' full maintenance by skilled employees of entrance door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper entrance door hardware operation at rated speed and capacity. Use parts and supplies that are the same as those used in the manufacture and installation of original equipment.

3.6 ADJUSTING

- A. Adjust operating entrance door hardware to function smoothly as recommended by manufacturer.

1. For entrance doors accessible to people with disabilities, adjust closers to provide a 3-second closer sweep period for doors to move from a 70-degree open position to 3 inches (75 mm) from the latch, measured to the leading door edge.

END OF SECTION 08 41 13

SECTION 08 71 00 - DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes:

1. Mechanical door hardware for the following:
 - a. Swinging doors.
 - b. Sliding doors.
2. Electronic access control system components, including:
 - a. Electronic access control devices.
3. Field verification, preparation and modification of existing doors and frames to receive new door hardware.

- B. Related Sections:

1. Division 08 Section "Hollow Metal Doors and Frames" for astragals provided as part of labeled fire-rated assemblies.
2. Division 08 Section "Flush Wood Doors" astragals and integral intumescent seals provided as part of labeled fire-rated assemblies.
3. Division 08 Section "Overhead Coiling Doors" for door hardware provided as part of overhead door assemblies, except cylinders.
4. Division 08 Section "Aluminum-Framed Entrances and Storefronts" for entrance door weather stripping, sweeps, thresholds and finger guards.
5. Division 28 Section "Access Control" for access control devices installed at door openings and provided as part of a security system.

1.3 COORDINATION

- A. Floor-Recessed Door Hardware: Coordinate layout and installation with floor construction.

1. Cast anchoring inserts into concrete.

- B. Installation Templates: Distribute for doors, frames, and other work specified to be factory prepared. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.

- C. Security: Coordinate installation of door hardware, keying, and access control with Owner's security consultant.
- D. Electrical System Roughing-In: Coordinate layout and installation of electrified door hardware with connections to power supplies and building safety and security systems.
- E. Existing Openings: Where hardware components are scheduled for application to existing construction or where modifications to existing door hardware are required, field verify existing conditions and coordinate installation of door hardware to suit opening conditions and to provide proper door operation.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Conference participants shall include Installer's Architectural Hardware Consultant.
- B. Keying Conference: Conduct conference at Project site.
 - 1. Conference participants shall include Installer's Architectural Hardware Consultant.
 - 2. Incorporate conference decisions into keying schedule after reviewing door hardware keying system including, but not limited to, the following:
 - a. Flow of traffic and degree of security required.
 - b. Preliminary key system schematic diagram.
 - c. Requirements for key control system.
 - d. Requirements for access control.
 - e. Address for delivery of keys.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include construction and installation details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: Details of electrified door hardware, indicating the following:
 - 1. Wiring Diagrams: For power, signal, and control wiring and including the following:
 - a. Details of interface of electrified door hardware and building safety and security systems.
 - b. Include details of interface of electrified door hardware and building safety and security systems.
 - c. Electrical Schematic and Point-to-Point drawings as required to interface electrical hardware with other electrical systems.
 - d. Elevations doors controlled by electrified door hardware.
 - 2. Operation Narrative: Describe the operation of doors controlled by electrified door hardware.

- C. Samples: For each exposed product in each finish specified, in manufacturer's standard size.
 - 1. Tag Samples with full product description to coordinate Samples with door hardware schedule.
- D. Samples for Initial Selection: For each type of exposed finish.
- E. Samples for Verification: For each type of exposed product, in each finish specified.
 - 1. Sample Size: Full-size units or minimum 2-by-4-inch Samples for sheet and 4-inch long Samples for other products.
 - a. Full-size Samples will be returned to Contractor. Units that are acceptable and remain undamaged through submittal, review, and field comparison process may, after final check of operation, be incorporated into the Work, within limitations of keying requirements.
 - 2. Tag Samples with full product description to coordinate Samples with door hardware schedule.
- F. Door Hardware Schedule: Prepared by or under the supervision of Installer's Architectural Hardware Consultant. Coordinate door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
 - 1. Submittal Sequence: Submit door hardware schedule concurrent with submissions of Product Data, Samples, and Shop Drawings. Coordinate submission of door hardware schedule with scheduling requirements of other work to facilitate the fabrication of other work that is critical in Project construction schedule.
 - 2. Format: Use same scheduling sequence and format and use same door numbers as in door hardware schedule in the Contract Documents.
 - 3. Content: Include the following information:
 - a. Identification number, location, hand, fire rating, size, and material of each door and frame.
 - b. Locations of each door hardware set cross-referenced to Drawings on floor plans and to door and frame schedule.
 - c. Complete designations, including name and manufacturer, type, style, function, size, quantity, function, and finish of each door hardware product.
 - d. Description of electrified door hardware sequences of operation and interfaces with other building control systems.
 - e. Fastenings and other installation information.
 - f. Explanation of abbreviations, symbols, and designations contained in door hardware schedule.
 - g. Mounting locations for door hardware.
 - h. List of related door devices specified in other Sections for each door and frame.
- G. Keying Schedule: Prepared by or under the supervision of Installer's Architectural Hardware Consultant, detailing Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations that are coordinated with the Contract Documents.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For electrified door hardware, from the manufacturer.
 - 1. Certify that door hardware approved for use on types and sizes of labeled fire-rated doors complies with listed fire-rated door assemblies.
- C. Product Test Reports: For compliance with accessibility requirements, for tests performed by manufacturer and witnessed by a qualified testing agency, for door hardware on doors located in accessible routes.
- D. Field quality-control reports.
- E. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of door hardware to include in maintenance manuals. Include final hardware and keying schedule.
- B. Schedules: Final door hardware and keying schedules.

1.8 QUALITY ASSURANCE

- A. The hardware specified in this section is intended to include the complete hardware requirements of the project, except for those items of hardware specified in other Sections. For each hardware unit, provide required accessories and incidental parts necessary for a complete and functioning installation.
 - 1. If a hardware device is required for proper functional or code-compliant door operation, but is not specified in this Section or indicated in the Hardware Sets, furnish items of like design, finish and quality to other items specified for similar locations, of suitable type, size, weight and code compliance to perform the services required and intended
- B. Installer Qualifications: Supplier of products and an employer of workers trained and approved by product manufacturers and of an Architectural Hardware Consultant who is available during the course of the Work to consult Contractor, Architect, and Owner about door hardware and keying.
 - 1. Warehousing Facilities: In Project's vicinity.
 - 2. Scheduling Responsibility: Preparation of door hardware and keying schedule.
 - 3. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
- C. Architectural Hardware Consultant Qualifications: A person who is experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project and who is currently certified by DHI as an Architectural

Hardware Consultant (AHC) and an Electrified Hardware Consultant (EHC) or Architectural Openings Consultant (AOC).

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Inventory door hardware on receipt and provide secure lock-up for door hardware delivered to Project site.
- B. Tag each item or package separately with identification coordinated with the final door hardware schedule, and include installation instructions, templates, and necessary fasteners with each item or package.
- C. Deliver keys to manufacturer of key control system for subsequent delivery to Owner.
- D. Deliver keys and permanent cores to Owner by registered mail or overnight package service.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of door hardware that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including excessive deflection, cracking, or breakage.
 - b. Faulty operation of doors and door hardware.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
 - 2. Warranty Period: Three years from date of Substantial Completion, unless otherwise indicated.
 - a. Electromagnetic and Delayed-Egress Locks: Five years from date of Substantial Completion.
 - b. Exit Devices: Two years from date of Substantial Completion.
 - c. Manual Closers: 10 years from date of Substantial Completion.
 - d. Concealed Floor Closers: 10 years from date of Substantial Completion.
 - e. Locks and Latches: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Door Assemblies: Where fire-rated doors are indicated, provide door hardware complying with NFPA 80 that is listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

- B. Smoke- and Draft-Control Door Assemblies: Where smoke- and draft-control door assemblies are required, provide door hardware that complies with requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105.
 - 1. Air Leakage Rate: Maximum air leakage of 0.3 cfm/sq. ft. at the tested pressure differential of 0.3-inch wg of water.
- C. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Means of Egress Doors: Latches do not require more than 15 lbf to release the latch. Locks do not require use of a key, tool, or special knowledge for operation.
- E. Accessibility Requirements: For door hardware on doors in an accessible route, comply with the ABA standards of the Federal agency having jurisdiction ICC A117.1.
 - 1. Provide operating devices that do not require tight grasping, pinching, or twisting of the wrist and that operate with a force of not more than 5 lbf.
 - 2. Comply with the following maximum opening-force requirements:
 - a. Interior, Non-Fire-Rated Hinged Doors: 5 lbf applied perpendicular to door.
 - b. Sliding or Folding Doors: 5 lbf applied parallel to door at latch.
 - c. Fire Doors: Minimum opening force allowable by authorities having jurisdiction.
 - 3. Bevel raised thresholds with a slope of not more than 1:2. Provide thresholds not more than 1/2 inch high.
 - 4. Adjust door closer sweep periods so that, from an open position of 90 degrees, the door will take at least 5 seconds to move to a position of 12 degrees from the latch.
 - 5. Adjust spring hinges so that, from an open position of 70 degrees, the door will take at least 1.5 seconds to move to the closed position.

2.2 MANUFACTURERS

- A. Source Limitations: Obtain each type of door hardware from single manufacturer.
 - 1. Provide electrified door hardware from same manufacturer as mechanical door hardware unless otherwise indicated. Manufacturers that perform electrical modifications and that are listed by a testing and inspecting agency acceptable to authorities having jurisdiction are acceptable.

2.3 SCHEDULED DOOR HARDWARE

- A. Provide door hardware for each door as scheduled in Part 3 "Door Hardware Schedule" Article to comply with requirements in this Section.
 - 1. Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and named manufacturers' products in compliance with Owner's Preferred Brand program.
 - 2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.

- B. Designations: Requirements for design, grade, function, finish, size, and other distinctive qualities of each type of door hardware are indicated in Part 3 "Door Hardware Schedule" Article. Products are identified by using door hardware designations, as follows:
1. Named Manufacturers' Products: Manufacturer and product designation are listed for each door hardware type required for the purpose of establishing minimum requirements. Products of Other Acceptable Manufacturer may be provided subject to compliance with requirements. The submission of a non-equivalent product of an Acceptable Manufacturer does not meet the intent of the established standard.
 2. Manufacturers' names are abbreviated in Part 3 "Door Hardware Schedule" Article.

2.4 HINGES

- A. Hinge Manufacturers: As indicated in door hardware schedule.
- B. Hinges: BHMA A156.1. Provide template-produced hinges for hinges installed on hollow-metal doors and hollow-metal frames.
- C. Self-Closing Hinges and Pivots: BHMA A156.17.
- D. Continuous Hinges: BHMA A156.26; minimum 0.120-inch thick, hinge leaves with minimum overall width of 4 inches; fabricated to full height of door and frame and to template screw locations; with components finished after milling and drilling are complete.
1. Continuous, Gear-Type Hinges: Extruded-aluminum, pinless, geared hinge leaves joined by a continuous extruded-aluminum channel cap; with concealed, self-lubricating thrust bearings.
- E. Center-Hung and Offset Pivots: BHMA A156.4.

2.5 MECHANICAL LOCKS AND LATCHES

- A. Lock Functions: As indicated in door hardware schedule.
- B. Lock Manufacturers: As indicated in door hardware schedule.
- C. Lock Throw: Comply with testing requirements for length of bolts required for labeled fire doors, and as follows:
1. Bored Locks: Minimum 1/2-inch latchbolt throw.
 2. Mortise Locks: Minimum 3/4-inch latchbolt throw.
 3. Deadbolts: Minimum 1.25-inch bolt throw.
- D. Lock Backset: 2-3/4 inches unless otherwise indicated.
- E. Lock Trim:
1. Description: As indicated in door hardware schedule.
 2. Levers: Cast.

3. Escutcheons (Roses): Cast.
 4. Dummy Trim: Match lever lock trim and escutcheons.
- F. Strikes: Provide manufacturer's standard strike for each lock bolt or latchbolt complying with requirements indicated for applicable lock or latch and with strike box and curved lip extended to protect frame; finished to match lock or latch.
1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
 2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
 3. Aluminum-Frame Strike Box: Manufacturer's special strike box fabricated for aluminum framing.
 4. Rabbet Front and Strike: Provide on locksets for rabbeted meeting stiles.
- G. Bored (Cylinder) Locks: BHMA A156.2; Grade 1; Series 4000.
- H. Mortise Locks: BHMA A156.13; Security Grade 1; stamped steel case with steel or brass parts; Series 1000.
- I. Interconnected Locks: BHMA A156.12; Grade 1; Series 5000.
- 2.6 ELECTRIC STRIKES
- A. Electric Strikes: BHMA A156.31; Grade 1; with faceplate to suit lock and frame.
- 2.7 ELECTROMAGNETIC LOCKS
- A. Lock Manufacturers: As indicated in door hardware schedule.
- B. Electromagnetic Locks: BHMA A156.23; electrically powered; with electromagnet attached to frame and armature plate attached to door; full-exterior or full-interior type, as required by application indicated.
- C. Delayed-Egress Electromagnetic Locks: BHMA A156.24, electrically powered, with electromagnet attached to frame and armature plate attached to door; depressing push bar for more than three seconds initiates irreversible alarm and adjustable time delay for egress. When integrated with fire alarm, fire alarm voids time delay.
- D. Electromechanical Locks: BHMA A156.25; Grade 1; motor or solenoid driven; with strike that suits frame.
1. Type: Mortise deadlocking latchbolt.
- E. Self-Contained Electronic Locks: BHMA A156.25, [bored] [mortise]; with internal, battery-powered, self-contained electronic locks; consisting of complete lockset, motor-driven lock mechanism, and actuating device; enclosed in zinc-dichromate-plated, wrought-steel case, and strike that suits frame. Provide key override, low-battery detection and warning, LED status indicators, and ability to program at the lock.

2.8 EXIT LOCKS AND EXIT ALARMS

- A. Manufacturers: As indicated in door hardware schedule.
- B. Exit Locks and Alarms: BHMA A156.29, Grade 1.

2.9 SURFACE BOLTS

- A. Manufacturers: As indicated in door hardware schedule.
- B. Surface Bolts: BHMA A156.16.

2.10 MANUAL FLUSH BOLTS

- A. Manufacturers: As indicated in door hardware schedule.
- B. Manual Flush Bolts: BHMA A156.16; minimum 3/4-inch throw; designed for mortising into door edge.

2.11 AUTOMATIC AND SELF-LATCHING FLUSH BOLTS

- A. Manufacturers: As indicated in door hardware schedule.
- B. Automatic Flush Bolts: BHMA A156.3, Type 25; minimum 3/4-inch throw; with dust-proof strikes; designed for mortising into door edge. Include wear plates.
- C. Self-Latching Flush Bolts: BHMA A156.3, Type 27; minimum 3/4-inch throw; with dust-proof strikes; designed for mortising into door edge. Include wear plates.

2.12 EXIT DEVICES AND AUXILIARY ITEMS

- A. Manufacturers: As indicated in door hardware schedule.
- B. Exit Devices and Auxiliary Items: BHMA A156.3.

2.13 LOCK CYLINDERS

- A. Manufacturers: As indicated in door hardware schedule.
- B. Lock Cylinders: Tumbler type, constructed from brass or bronze, stainless steel, or nickel silver. Provide cylinder from same manufacturer of locking devices.
- C. Standard Lock Cylinders: BHMA A156.5; Grade 1 permanent cores; face finished to match lockset.
 - 1. Core Type: Removable.

- D. High-Security Lock Cylinders: BHMA A156.30; Grade 1 permanent cores that are removable; face finished to match lockset.
 - 1. Type: M, mechanical.
- E. Construction Master Keys: Provide cylinders with feature that permits voiding of construction keys without cylinder removal. Provide 10 construction master keys.
- F. Construction Cores: Provide construction cores that are replaceable by permanent cores. Provide 10 construction master keys.

2.14 KEYING

- A. Keying System: Factory registered, complying with guidelines in BHMA A156.28, appendix. Provide one extra key blank for each lock. Incorporate decisions made in keying conference.
 - 1. No Master Key System: Only change keys operate cylinders.
 - a. Provide three cylinder change keys.
 - 2. Master Key System: Change keys and a master key operate cylinders.
 - a. Provide three cylinder change keys and five master keys.
 - 3. Grand Master Key System: Change keys, a master key, and a grand master key operate cylinders.
 - a. Provide three cylinder change keys and five each of master and grand master keys.
 - 4. Great-Grand Master Key System: Change keys, a master key, a grand master key, and a great-grand master key operate cylinders.
 - a. Provide three cylinder change keys and five each of master, grand master, and great-grand master keys.
 - 5. Existing System:
 - a. Master key or grand master key locks to Owner's existing system.
 - b. Re-key Owner's existing master key system into new keying system.
 - 6. Keyed Alike: Key all cylinders to same change key.
- B. Keys: Brass.
 - 1. Stamping: Permanently inscribe each key with a visual key control number and include the following notation:
 - a. Notation: Information to be furnished by Owner.

2.15 KEY CONTROL SYSTEM

- A. Key Control Cabinet: BHMA A156.28; metal cabinet with baked-enamel finish; containing key-holding hooks, labels, two sets of key tags with self-locking key holders, key-gathering envelopes, and temporary and permanent markers; with key capacity of 150 percent of the number of locks.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Key Boxes and Cabinets.
 - b. GE Security, Inc.
 - c. HPC, Inc.
 - d. Lund Equipment Co., Inc.
 - e. MMF Industries.
 - f. TelKee; Oasis International.
 2. Multiple-Drawer Cabinet: Grade 1 cabinet with drawers equipped with key-holding panels and key envelope storage, and progressive-type ball-bearing suspension slides. Include single cylinder lock to lock all drawers.
 3. Wall-Mounted Cabinet: Grade 1 cabinet with hinged-panel door equipped with key-holding panels and pin-tumbler cylinder door lock.
 4. Portable Cabinet: Grade 1 tray for mounting in file cabinet, equipped with key-holding panels, envelopes, and cross-index system.
- B. Key Lock Boxes: Designed for storage of two keys.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. GE Security, Inc.
 - b. HPC, Inc.
 - c. Knox.
- C. Key Control System Software: Multiple-index system for recording and reporting key-holder listings, tracking keys and lock and key history, and printing receipts for transactions. Include instruction manual.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Allegion plc.
 - b. Best Access Systems; Stanley Security Solutions, Inc.
 - c. GE Security, Inc.
 - d. HPC, Inc.
 - e. TelKee; Oasis International.

2.16 ACCESSORIES FOR PAIRS OF DOORS

- A. Coordinators: BHMA A156.3; consisting of active-leaf, hold-open lever and inactive-leaf release trigger; fabricated from steel with nylon-coated strike plates; with built-in, adjustable safety release; and with internal override.

- B. Carry-Open Bars: BHMA A156.3; prevent the inactive leaf from opening before the active leaf; provide polished brass or bronze carry-open bars with strike plate for inactive leaves of pairs of doors unless automatic or self-latching bolts are used.
- C. Astragals: BHMA A156.22.

2.17 SURFACE CLOSERS

- A. Surface Closers: BHMA A156.4; rack-and-pinion hydraulic type with adjustable sweep and latch speeds controlled by key-operated valves and forged-steel main arm. Comply with manufacturer's written instructions for size of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Provide factory-sized closers, adjustable to meet field conditions and requirements for opening force.
- B. Manufacturers: As indicated in door hardware schedule.

2.18 CONCEALED CLOSERS

- A. Concealed Closers: BHMA A156.4; rack-and-pinion hydraulic type with adjustable sweep and latch speeds controlled by key-operated valves. Comply with manufacturer's written instructions for size of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Provide factory-sized closers, adjustable to meet field conditions and requirements for opening force.
- B. Manufacturers: As indicated in door hardware schedule.

2.19 CLOSER HOLDER RELEASE DEVICES

- A. Closer Holder Release Devices: BHMA A156.15; Grade 1; closer connected with separate or integral releasing and fire- or smoke-detecting devices. Door shall become self-closing on interruption of signal to release device. Automatic release is activated by smoke detection system.
- B. Manufacturers: As indicated in door hardware schedule.

2.20 MECHANICAL STOPS AND HOLDERS

- A. Wall- and Floor-Mounted Stops: BHMA A156.16.
- B. Manufacturers: As indicated in door hardware schedule.

2.21 ELECTROMAGNETIC STOPS AND HOLDERS

- A. Electromagnetic Door Holders: BHMA A156.15, Grade 1; wall-mounted electromagnetic single unit with strike plate attached to swinging door; coordinated with fire detectors and interface with fire-alarm system for labeled fire-rated door assemblies.

- B. Manufacturers: As indicated in door hardware schedule.

2.22 OVERHEAD STOPS AND HOLDERS

- A. Overhead Stops and Holders: BHMA A156.8.
- B. Manufacturers: As indicated in door hardware schedule.

2.23 DOOR GASKETING

- A. Door Gasketing: BHMA A156.22; with resilient or flexible seal strips that are easily replaceable and readily available from stocks maintained by manufacturer.
- B. Manufacturers: As indicated in door hardware schedule.
- C. Maximum Air Leakage: When tested according to ASTM E283 with tested pressure differential of 0.3-inch wg, as follows:
 - 1. Smoke-Rated Gasketing: 0.3 cfm/sq. ft. of door opening.
 - 2. Gasketing on Single Doors: 0.3 cfm/sq. ft. of door opening.
 - 3. Gasketing on Double Doors: 0.50 cfm per foot of door opening.

2.24 THRESHOLDS

- A. Thresholds: BHMA A156.21; fabricated to full width of opening indicated.
- B. Manufacturers: As indicated in door hardware schedule.

2.25 SLIDING DOOR HARDWARE

- A. Sliding Door Hardware: BHMA A156.14; consisting of complete sets including rails, hangers, supports, bumpers, floor guides, and accessories indicated.
- B. Manufacturers: As indicated in door hardware schedule.

2.26 FOLDING DOOR HARDWARE

- A. General: BHMA A156.14; complete sets including overhead rails, hangers, supports, bumpers, floor guides, and accessories indicated.
- B. Manufacturers: As indicated in door hardware schedule.

2.27 METAL PROTECTIVE TRIM UNITS

- A. Metal Protective Trim Units: BHMA A156.6; fabricated from 0.050-inch thick stainless steel; with manufacturer's standard machine or self-tapping screw fasteners.

B. Manufacturers: As indicated in door hardware schedule.

2.28 AUXILIARY DOOR HARDWARE

A. Auxiliary Hardware: BHMA A156.16.

2.29 AUXILIARY ELECTRIFIED DOOR HARDWARE

A. Auxiliary Electrified Door Hardware:

2.30 FABRICATION

A. Manufacturer's Nameplate: Do not provide products that have manufacturer's name or trade name displayed in a visible location except in conjunction with required fire-rated labels or as otherwise approved by Architect.

1. Manufacturer's identification is permitted on face of lock cylinders only.

B. Base Metals: Produce door hardware units of base metal indicated, fabricated by forming method indicated, using manufacturer's standard metal alloy, composition, temper, and hardness. Furnish metals of a quality equal to or greater than that of specified door hardware units.

C. Fasteners: Provide door hardware manufactured to comply with published templates prepared for machine, wood, and sheet metal screws. Provide screws that comply with commercially recognized industry standards for application intended, except aluminum fasteners are not permitted.

1. Concealed Fasteners: For door hardware units that are exposed when door is closed, except for units already specified with concealed fasteners. Do not use through bolts for installation where bolt head or nut on opposite face is exposed unless it is the only means of securely attaching the door hardware.

2. All plates (kick, push, mop, etc.) shall be fastened with Phillips oval head screws, oval head, undercut and countersunk.

3. Provide Phillips flat-head screws with finished heads to match surface of door hardware, unless otherwise indicated.

4. Fire-Rated Applications:

a. Wood or Machine Screws: For the following:

1) Hinges mortised to doors or frames; use threaded-to-the-head wood screws for wood doors and frames.

2) Strike plates to frames.

3) Closers to doors and frames.

5. Steel Through-Bolts or Sex-Bolts: Are not permitted. Doors to be provided with reinforcing.

6. Fasteners for Wood Doors: Comply with requirements in DHI WDHS.2, "Recommended Fasteners for Wood Doors."

7. Gasketing Fasteners: Provide noncorrosive fasteners for exterior applications and elsewhere as indicated.

2.31 FINISHES

- A. Provide finishes as indicated in door hardware schedule.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire-rated door assembly construction, wall and floor construction, and other conditions affecting performance.
- B. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Steel Doors and Frames: For surface applied door hardware, drill and tap doors and frames according to ANSI/SDI A250.6.
- B. Wood Doors: Comply with door and hardware manufacturers' written instructions and DHI WDHS.5 "Recommended Hardware Reinforcement Locations for Mineral Core Wood Flush Doors."

3.3 INSTALLATION

- A. Mounting Heights: Mount door hardware units at heights to comply with the following unless otherwise indicated or required to comply with governing regulations.
 - 1. Standard Steel Doors and Frames: ANSI/SDI A250.8.
 - 2. Custom Steel Doors and Frames: HMMA 831.
 - 3. Wood Doors: DHI's "Recommended Locations for Architectural Hardware for Wood Flush Doors."
- B. Notify the Architect immediately for direction if for any reason a hardware item cannot be mounted to the heights recommended above, may be seen through a glass door or might interfere with the proper look or function of the item or assembly.

- C. Install each door hardware item to comply with manufacturer's written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing. Do not install surface-mounted items until finishes have been completed on substrates involved.
1. Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
 2. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.
- D. Hinges: Install types and in quantities indicated in door hardware schedule but not fewer than the number recommended by manufacturer for application indicated or one hinge for every 30 inches of door height, whichever is more stringent, unless other equivalent means of support for door, such as spring hinges or pivots, are provided.
- E. Intermediate Offset Pivots: Where offset pivots are indicated, provide intermediate offset pivots in quantities indicated in door hardware schedule but not fewer than one intermediate offset pivot per door and one additional intermediate offset pivot for every 30 inches of door height greater than 90 inches.
- F. Lock Cylinders: Install construction cores to secure building and areas during construction period.
1. Replace construction cores with permanent cores as directed by Owner.
 2. Furnish permanent cores to Owner for installation.
- G. Boxed Power Supplies: Locate power supplies as indicated or, if not indicated, above accessible ceilings. Verify location with Architect.
1. Configuration: Provide least number of power supplies required to adequately serve doors with electrified door hardware.
- H. Door Closers and Hold Opens: Unless specifically noted otherwise, shall be mounted toward the room side of the door (not the corridor side).
- I. Thresholds:
1. Set thresholds for exterior doors and other doors indicated in full bed of sealant complying with requirements specified in Section 079200 "Joint Sealants." Remove excess sealant.
 2. Cut and fit thresholds and floor covers to profile of door frames, with mitered corners and hairline joints. Join units with concealed welds or concealed mechanical joints. Cut smooth openings for spindles, bolts and similar items.
 3. Screw thresholds to substrate with No. 10 or larger screws, of the proper type for permanent anchorage and of the same or compatible type metal as the threshold.
- J. Stops: Provide wall stops for doors unless other type stops are indicated in door hardware schedule. Floor stops shall not be permitted unless specifically included in the schedule.
- K. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.

1. Perimeter gasketing is required to be installed in the frames of all openings located in STC rated assemblies of STC 50 or above.
- L. Meeting Stile Gasketing: Fasten to meeting stiles, forming seal when doors are closed.
- M. Door Bottoms: Apply to bottom of door, forming seal with threshold when door is closed.
- N. The Contractor shall verify that all necessary wiring and connections between the electrified hardware products specified herein, and the operational systems will function as they were intended. This includes the integration of such items as electric exit devices, electric strikes, electric door openers, electromagnetic floor and wall hold-open devices, magnetic switches, card readers, etc., into the fire alarm, security alarm or operating systems. He shall also verify that power has been provided to the specified low voltage power supplies.

3.4 FIELD QUALITY CONTROL

- A. Independent Architectural Hardware Consultant: Owner will engage a qualified independent Architectural Hardware Consultant to perform inspections and to prepare inspection reports.
 1. Independent Architectural Hardware Consultant will inspect door hardware and state in each report whether installed work complies with or deviates from requirements, including whether door hardware is properly installed and adjusted.

3.5 ADJUSTING

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.
 1. Spring Hinges: Adjust to achieve positive latching when door is allowed to close freely from an open position of 30 degrees.
 2. Electric Strikes: Adjust horizontal and vertical alignment of keeper to properly engage lock bolt.
 3. Door Closers: Adjust sweep period to comply with accessibility requirements and requirements of authorities having jurisdiction.
- B. Occupancy Adjustment: Approximately six months after date of Substantial Completion, Installer's Architectural Hardware Consultant shall examine and readjust each item of door hardware, including adjusting operating forces, as necessary to ensure function of doors, door hardware, and electrified door hardware.

3.6 CLEANING AND PROTECTION

- A. Clean adjacent surfaces soiled by door hardware installation.
- B. Clean operating items as necessary to restore proper function and finish.

- C. Provide final protection and maintain conditions that ensure that door hardware is without damage or deterioration at time of Substantial Completion.

3.7 MAINTENANCE SERVICE

- A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.
- B. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door and door hardware operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain door hardware and door hardware finishes. Refer to Section 017900 "Demonstration and Training."

3.9 DOOR HARDWARE SCHEDULE

Hardware Group No. 01

Provide each PR door(s) with the following:

QTY		DESCRIPTION	CATALOG NUMBER	FINISH	MFR

1		DOOR CONTACT	FURNISHED AND INSTALLED BY ACCESS CONTROL PROVIDER	⚡	
1	EA	DIAGRAM	ELEVATION		DLR
1	EA	DIAGRAM	POINT TO POINT		DLR

COORDINATE WITH ELECTRICAL AND SECURITY. ENTRY BY CREDENTIAL OR KEY OVERRIDE.

PRESENTING VALID CREDENTIAL TO READER WILL MOMENTARILY UNLOCK LOCK AND ALLOW ENTRY.

UPON LOSS OF POWER DOOR IS LOCKED. DOOR IS ALWAYS AVAILABLE FOR FREE EGRESS.

DOOR CONTACT TIED TO ACCESS CONTROL SYSTEM FOR MONITORING.

Hardware Group No. 16

Provide each SGL door(s) with the following:

QTY		DESCRIPTION	CATALOG NUMBER	FINISH	MFR
2	EA	HINGE	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	ELECTRIC HINGE	5BB1 4.5 X 4.5 CON TW12	⚡ 652	IVE

HARDWARE BY DOOR SUPPLIER

END OF SECTION 08 71 00

SECTION 08 71 13.13 - AUTOMATIC SWING DOOR OPERATORS - LOW ENERGY & POWER ASSIST

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Low-energy door operators for swinging doors.
- 2. Power-assist door operators for swinging doors.

- B. Related Sections:

- 1. Division 08 Sections for doors and entrances that need reinforcement for automatic door operators.

1.3 DEFINITIONS

- A. AAADM: American Association of Automatic Door Manufacturers.
- B. Activation Device: A control that, when actuated, sends an electrical signal to the door operator to open the door.
- C. Safety Device: A control that, to avoid injury, prevents a door from opening or closing.
- D. For automatic door terminology, see BHMA A156.19 for definitions of terms.

1.4 COORDINATION

- A. Templates: Distribute for doors, frames, and other work specified to be factory prepared and reinforced for installing automatic door operators.
- B. Coordinate hardware for doors with operators to ensure proper size, thickness, hand, function, and finish.
- C. Electrical System Roughing-in: Coordinate layout and installation of automatic door operators with connections to the following:
 - 1. Power supplies.
 - 2. Access-control system.
 - 3. Remote activation devices.

- 4. Remote monitoring systems.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic door operators.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

- B. Shop Drawings: For low-energy automatic door operators.

1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Indicate locations of activation and safety devices.
4. Include diagrams for power, signal, and control wiring.

- C. Samples: For each exposed product and for each color and texture specified, manufacturer's standard in size.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and Certified Inspector.

- B. Product Certificates: For each operator for fire-rated door assemblies, signed by product manufacturer. Certify that operator is listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for use on types and sizes of labeled fire doors required.

- C. Field quality-control reports.

- D. Warranty: Sample of special warranty.

1.8 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For automatic door operators, safety devices, and control systems, to include in maintenance manuals.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer for installation and maintenance of units required for this Project and who employs a Certified Inspector.
 - 1. Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.
- B. Certified Inspector Qualifications: Certified by the AAADM.

1.10 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of door frames by field measurements before fabrication of exposed covers for automatic door operators.

1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of automatic door operators that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Faulty or sporadic operation of automatic door operator, including activation and safety devices.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal weathering or use.
 - 2. Warranty Period: Two years from date of Final Acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - 1. Operators: LCN.
 - 2. ADA Operator Switches:
 - a. Camden 331-41S-SGLR
 - b. LCN
 - c. BEA
 - 3. Wireless ADA Operator Switches:
 - a. Camden 330-41S
 - b. LCN
 - c. BEA
 - 4. Power Supplies: Von Duprin
- B. Source Limitations: Obtain automatic door operators, including activation and safety devices, in accordance with Owner's Preferred Brand Alternates list.

2.2 AUTOMATIC DOOR OPERATORS, GENERAL

- A. General: Provide operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated; and complying with UL 325. Coordinate operator mechanisms with door operation, hinges, and activation and safety devices.
 - 1. Emergency Breakaway: Where indicated for center-pivoted doors, provide emergency breakaway feature for reverse swing of doors. Equip system to discontinue power to automatic door operator when door is in emergency breakaway position, and to return to closed position after breakaway and automatically reset.
 - 2. Fire-Rated Doors: Provide door operators for fire-rated door assemblies that comply with NFPA 80 for fire-rated door components and are listed and labeled by a qualified testing agency.
 - 3. Wind Load: Provide door operators on exterior doors that will open and close doors and maintain them in fully closed position when subjected to wind load of <Insert wind load>.
- B. Electromechanical Operating System: Self-contained unit powered by permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor, connections for power and activation- and safety-device wiring, and manual operation including spring closing when power is off.
- C. Hinges: See Division 08 Section "Door Hardware" for hinge type for each door that door operator shall accommodate.
- D. Housing for Overhead Concealed Operators: Fabricated from minimum **0.125-inch- (3.2-mm-)** thick, extruded or formed aluminum and extending full width of door opening including door jambs to conceal door operators and controls. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.
- E. Cover for Surface-Mounted Operators: Fabricated from **0.125-inch- (3.2-mm-)** thick extruded or formed aluminum; manufacturer's standard width; with enclosed end caps, provision for maintenance access, and fasteners concealed when door is in closed position.
- F. Brackets and Reinforcements: Manufacturer's standard, fabricated from aluminum with nonstaining, nonferrous shims for aligning system components.
- G. Fire-Door Package: Consisting of UL-listed latch mechanism, power-reset box, and caution signage for fire-rated doors. Latch mechanism shall allow door to swing free during automatic operation; when fire is detected, latch actuator shall cause exit hardware to latch when door closes. Provide latch actuators with fail-secure design.

2.1 LOW-ENERGY DOOR OPERATORS FOR SWINGING DOORS

- A. Standard: BHMA A156.19.
- B. Performance Requirements:

1. Opening Force if Power Fails: Not more than 15 lbf (67 N) required to release a latch if provided, not more than 30 lbf (133 N) required to manually set door in motion, and not more than 15 lbf (67 N) required to fully open door.
