5	09A Framing	B2/S03.23	On detail B2/S03.23 and other typical parapet details show the bar joist truss setting on the structural I beam and attaching the parapet with a stiff clip.  This causes the bottom track to be cut into 5' pieces to fit in between the bar joists and only a stiff clip to support the parapet. This will cause engineering conflicts that will prevent meeting the wind loads.	Grey Interiors	4/19/2024		LS3P
